THE programmes of the courses at the Collège de France and the Sorbonne for the second semester of the academical year have just been published. Among those of special interest from the historical point of view may be mentioned the following:—At the Collège de France M. Alf. Maury deals with the History of England from the sixteenth to the eighteenth century. M. Réville begins his course of the History of Religions (the recent creation of which gave rise to warm debates in the Senate) with "Prolegomena to the History of Religions." M. Léon Benier treats of Senatorial Magistracies at Rome; M. Guillaume Guizot, of English Literature and Society in the eighteenth century; and M. J. Flack, in place of M. Laboulaye, traces the history of Landed Property in Europe. At the Sorbonne, M. Mézières lectures on Spanish Literature at the beginning of the seventeenth century; M. Bouché-Leclerc on the history of Democratic Institutions at Athens from the time of Pericles to the Battle of Chaeronea. M. Lavissee, who succeeds M. Fustel de Coulanges, begins his course with studies on the Royal Power in France under Charles V.; and M. Lacroix treats of the Diplomatic and Military history of France between 1774 and 1783.

It is proposed to form a Topographical Society of London, the objects of which will be the collection of books, drawings, prints, maps, &c., relating to London topography; of documents, deeds, &c. (original and copied), and of extracts relating to the history of and associations connected with places in and around London, arranged in an accessible form; and of information relating to the etymology of London place-names, and the preparation of a record of changes in London nomenclature; the preparation of maps and plans showing the position of public buildings, streets, &c., at various periods; the representation of churches and other buildings before they are demolished; the preparation and publication of a bibliography of London topography; the preparation and publication of an index of London drawings, prints, antiquities, tokens, &c., in various collections; the publication of copies of old London engravings; and the publication of documents relating to London. Mr. Henry B. Wheatley acts as secretary.

MRS. MOLESWORTH's new novel, *Miss Bouverie*, will be published by Messrs. Hurst and Blackett early in May in three volumes.

WE hear that since the beginning of the General Election the sale of the *Daily News* has been increased by more than one-fourth.

STUDENTS of our foreign State papers must often have regretted the little use which has been made of them by foreign historians for the history of their own countries. Dr. Schybergson in his *Underhandlingar om en Evangelisk Allians, åren 1624-1625* (Helsingfors), has found much that is valuable for his purpose. His little book is an admirable specimen of a monograph on a portion of history which has been much written on, but which he has succeeded in treating afresh with lucidity. He shows that the part of France in promoting the Danish War was far less than is usually supposed. The general result of the story is that the time had not come when it was possible to form a combined resistance against the Catholic attack. It required the stress of actual danger, and not merely that of prospective risk, to neutralise the diverging tendencies produced by self-interest.

WE have received the programme for the spring term of the Holborn Literary and Debating Society, embracing a large variety of subjects, literary, social, and philosophical. The opening lecture was on "The Morality of Shakspeare's Works," by Mr. W. A. Casson.

As of old, Mr. Ruskin's Sheepfold tract still puzzles the cataloguers. In the April number of our excellent contemporary the *Bookseller*, we find under the head of "Botany, Farming, and Gardening," p. 362, col. 2:—"Ruskin (J.). Notes on the Construction of Sheepfolds. 4th ed. 8vo. Allen (Orpington). . . . 1s." And is it not a work on spiritual husbandry and ecclesiastical edification?

MESSRS. KERBY AND ENDEAN will publish in a few days a pamphlet entitled *Helps for Ireland*, by an Anglo-Irish gentleman, resident in Ireland for forty years, and actively engaged in agriculture.

M. CH. DELAGRAVE, of Paris, has issued the prospectus of *Géographie Artistique* by René Ménard, which will be illustrated with upwards of six hundred engravings and maps, and will be published in fifty or sixty numbers. The first part of this work will be devoted to describing the general aspect of the world, and to showing the interpretation that artists have given to the different epochs in its history. A description will then be given of the different countries, commencing with those in which art is still in its infancy.

OUR able contemporary, the Russian *Revue Critique* of February 15, says that M. Ketchev's translation of Shakspeare is the first complete and correct rendering of our great English poet that has appeared in Russian.

MISS EMILY FAITHFULL will leave for America in September, having accepted an engagement to lecture there during the autumn and winter. She will take for her subject "Modern Extravagance: its Cause and Cure"—a lecture which she has given here at our leading literary institutions.

THE Rev. Ernst Faber, a Rhenish missionary in Canton, has issued at Hongkong a "critique of Prof. Max Müller and other authors," under the title of an *Introduction to the Science of Chinese Religion*.

MR. HENRY DUNNING MACLEOD'S *Principles of Economical Philosophy and Theory and Practice of Banking* have just been translated into Italian under the direction of Prof. Gerolamo Boccardo, and form vols. iii. and vi. of his "Bibliotheca dell' Economista."

THE trustees of the late Mr. Hudson Gurney have been kind enough to deposit at the British Museum, for Mr. Furnivall's use, their unique MS. of the three fifteenth-century Moralities formerly in the collection of Dr. Cox Macro. These Moralities were described shortly in Mr. J. P. Collier's *History of Dramatic Poetry* (1833), and will, when printed, form the second number of the Seventh Series of the New Shakspeare Society's publications, the first number being the *Digby Mysteries*, with the Burial and Resurrection of Christ from a unique MS. in the Bodleian Library. These are now all in type. Mr. Furnivall edits them.

AN exhibition of bookbinding, ancient and modern, and of the materials employed, will be held at Vienna from April 18 to September 30, under the auspices of the Archduke Regnier, and in connexion with the Vienna Museum of Art and Industry.

AN English edition of Schubert's *Musical Dictionary*, adapted to the wants of the American public, is being prepared by Dr. F. Louis Ritter, of Vassar College, N.Y. All the principal musicians in the United States, whether of native or foreign birth, will be

noticed in the Dictionary, as well as all topics relating to American musical culture.

WE have received *Sunday Snowdrops*, by Walter L. Bicknell (Masters); *The Living Epistle; or, the Influence of Christian Character* (Whittingham); *The Legend of St. Olaf's Kirk*, by George Houghton (Boston: Estes and Lauriat); *Notes to Chapters on Catholicity*, by A. Clergyman (Trübner); *The Creed of Non-Belief* (Griffith and Farran); *Atheism and Morality*, by the Rev. A. H. Craufurd (O. Kegan Paul and Co.); *Our Old Bible: Moses on the Plains of Moab*, by the Rev. Dr. A. Moody Stuart (Nisbet); *Dickens und Daudet in deutscher Uebersetzung*, von L. Weismann (Berlin: Hermann); *Series of Arithmetical Exercises*, Book I. (Edinburgh: Cameron); &c.

MAGAZINES AND REVIEWS.

THE *Dublin Review* for April has an exhaustive article, by the Bishop of Ossory, on "The Birthplace of St. Patrick." After a survey of all the evidence and all the arguments which have been adduced on all sides, the writer sums up in favour of Kilpatrick, near Dumbarton. Under the title of "A New Light on an Old Subject," there is an excellent article on the controversy respecting the authorship of the *De Imitatione Christi*, in which attention is called to the curious question of mediaeval punctuation, and the fact is noticed that the MS. of 1441 discloses an uncommon method of punctuation, which may be described as rhetorical rather than grammatical.

THE February number of the *Library Journal* continues Mr. Axon's "Notes on Chinese Libraries." Mr. W. E. Foster, of the Providence Public Library, contributes an article on his method of supplying his readers with "Reference Lists on Special Topics" which happen from time to time to be of more or less general interest. They include references to all the best books on these subjects, with useful notes, and are distributed in a lithographed form to those readers who apply for them. Mr. Foster has prepared and circulated thirty-seven such lists within fourteen weeks. The two or three specimens which he gives afford a striking illustration of the usefulness of such aids to readers and of the public spirit of the librarian who has carried out the idea. That this spirit is not confined to librarians is shown by the accounts in this same number of the recent Niblo bequest of 150,000 dollars for library purposes, and of the noble Lenox foundation, where, apart from the books, the site and building have cost more than 1,000,000 dollars, and the endowment fund amounts to 250,000 dollars more. Mr. Lenox died on February 17.

THE *Antiquary*, April. (Elliot Stock.) Mr. John Henry Parker, C.B., contributes a paper on the early history of Rome. It is needless to say that he cannot but be instructive on a subject which he has made so entirely his own. It is perhaps hardly necessary to remark that he finds far more truth in the old family legends, fragments of which seem to have been incorporated in the writings of Livy and Dionysius, than has been detected by the more recent students of the history and topography of Rome. There is an instructive paper on the expenditure of Edward III. by Sir James Ramsay, and the conclusion of the almost contemporary account of the Siege of Colchester. Mr. Brock makes some wise remarks on church restoration with which cultivated people cannot fail to agree. We fear, however, they will have but little influence on those who need instruction the most. Mr. Harrington Beaumont finishes his paper on the ancient earldom of Mar. There cannot be a shadow of doubt that justice lies on the side he so ably champions. The most entertaining thing

by far, however, in this month's issue is a paper on "Some Northern Ministers," by Mr. Mackenzie E. C. Walcott, in which he quotes a sixteenth-century letter as having been written "to the Lord Protector Oliver Cromwell." It was really addressed to Thomas Cromwell, the hammer that knocked down the abbey, and may be seen at length in the Camden Society's imprint of *Letters relating to the Suppression of Monasteries*, p. 158. This wonderful misconception is the more strange as the words he gives are in undoubted sixteenth-century spelling, and ought alone to have convinced anyone that they could not have been penned during Oliver's lifetime. There is another error nearly as strange and more wilful. The words quoted do occur in the letter, but they do not occur as given in the pages of the *Antiquary*. If historical documents are to be tampered with in this manner, and passages left out without dots or other indication that the sentence is a made-up one, serious persons will turn to the pages of the *Antiquary* when they require amusement only.

WE have received the four numbers of the *Revista Contemporanea* for February and March. In them Revilla has two papers on the necessary reforms in secondary and superior education in Spain. From MSS. in possession of the Palafox family, J. Gomez de Arteche gives the history of two abortive attempts to procure the escape of Ferdinand VII. from France. C. F. Duró has a short account of one of the unknown districts of Spain, the Sayago, between Zamora and the Portuguese frontier, where tribal customs are still preserved, and the public lands are divided by lot. In a discourse on Spanish and foreign painting, delivered in Valencia, Luis Alfonso counsels Spanish artists to study English and German rather than French and Italian contemporary paintings. Millais and Herkomer are especially proposed as models. The school of Fortuny is said to be already on the decline. There is a too laudatory sketch of the dramatist Garcia Gutierrez by J. del Castillo y Soriano; while a slighter one of the Premier, A. Cánovas del Castillo, by J. Buisan, entirely omits his claims as writer and historian. The "Cronica politica, interior," by Javier Ugarte, has become a marked and valuable feature of this journal, and bids fair to rival the well-known "Chronique" of the *Revue des Deux-Mondes*.

THE *Deutsche Rundschau* has an article by Dr. Curtius on "The Development of the Prussian State regarded from the Analogies of Ancient History." Dr. Curtius draws a rather far-fetched parallel between the old Hellenic Amphictyonies and the formation of the "Reich." Dr. Brandes ends an excellent critical paper on "Prosper Mérimée," whose reserve and fineness of touch he contrasts with the passionate romanticism of his chief contemporaries. Herr O. Lorenz illustrates from Wallenstein's letters his general attitude of mind regarding the possession of Mecklenburg. From an otherwise trivial article on "Wilhelmine von Hillern" we learn the important fact that that remarkable writer was for some years an actress, which accounts for her striking sense of powerful situations in her novels.

OBITUARY.

MR. NICHOLAS MICHELL, who died at Falmouth on the 6th inst., was a member of a family long connected with the tin-smelting trade in Cornwall. He was born at Truro in June 1807, and received his education at the Grammar School of that city under a master who delighted in poetry and the local history of Cornwall. Through his connexion with the Shoberls, one of whom was the editor of a newspaper in his native town, his poetical

contributions were admitted to a place in the *Forget me Not* and other annuals of Ackermann. An introduction to Thomas Campbell opened to Mr. Michell other fields of authorship. His first separate work (*The Siege of Constantinople*) appeared in 1831, and in the next twenty years he published many other poems and novels. His most successful volume, an elaborate and comprehensive description of the ruined cities of both hemispheres, was published in 1849, and has passed through five editions. In a subsequent poem he portrayed the characters of the *Famous Women and Heroes* of all ages. Some years later he wrote a poetical tale entitled *The Sibyl of Cornwall*, laying the scene of the narrative on the wild northern coast of that romantic county; to this were appended many other poems on the most striking beauties of his native shores. One of his most popular ventures was a little poem on *The Wreck of the "Homeward Bound."* A complete collection of his poems was issued in seven volumes in 1871.

OLD Oxonians will read with regret the announcement of the death at Hammersmith, on the 9th inst., of the Rev. John Brande Morris, formerly a Fellow of Exeter College. His father was the Rev. John Morris, D.D., of Brentford, and his mother was a Miss Brande, sister to William Brande, the eminent chemist. He was born at New Brentford in September 1812, and matriculated at Balliol College in 1830. In 1837 he was elected to a fellowship at Exeter College which had been vacated by the present Bishop Jacobson. Mr. Morris was one of the early converts to the Roman Catholic Church, resigning his fellowship in January 1846. In the same year he published a translation of S. Chrysostom on the Epistle to the Romans and the select homilies of S. Ephrem from the Syriac. Subsequently he wrote a dramatic poem on Our Lady's assumption, and so recently as 1878 he published an Introduction to the Eucharist.

THE death is likewise announced of Mr. Thomas Allsop, author of *Recollections of S. T. Coleridge* and *The Goldfields of California*, and the friend of Charles Lamb, Coleridge, and Barry Cornwall; of Mr. Robert Fortune, author of *Three Years' Wanderings in Northern China*, *Two Visits to the Tea Countries of China*, *Residence among the Chinese, Inland, on the Coast, and at Sea*, and *Yedo and Peking*; of Dr. William Sharpey, F.R.S.; of M. Auguste Colomb-Grenier, of Clos, in the Canton of Vaud; of M. Henri Serment, author of *Le Libéralisme* and of *Dialogues d'un Pauvre d'Espirit*; of Dr. Frensdorff, distinguished for his intimate acquaintance with Masoretic literature; and of Prof. M. Wiener, of Hanover.

DR. SELIGMANN'S LECTURES.

THE lectures on Shakspeare lately given by Dr. Leopold Seligmann on the trilogy or three plays, *Lear*, *Macbeth*, and *Hamlet*, have been decidedly well received and successful.

The subjects of the plays were carefully worked out, and no portion or incident omitted. The audience, which was a general one, required not only that such lectures should show an entire knowledge of the subject and of its literature, but also that the general features of the subject should be brought out in salient relief. Dr. Seligmann lectured in English, which was, perhaps, unfortunate for his audience, as, although he is perfectly acquainted with the language, his pronunciation and accent occasionally jarred upon the ear.

Apart from the historical reflections on the position in which each of these tragedies stands to its origin and author, the lecturer carefully reviewed its composition from the original germ or source, and traced the alterations made by Shakspeare and the reason of these alterations.

The principal characters of each play were analysed in the style of the German philosophical school, and their peculiarities brought by the lecturer before the eye. The great psychological knowledge displayed by Shakspeare in all his compositions was illustrated by German criticism. Hence in *Lear* was traced the poet's profound knowledge of madness in its different stages, the beginning of the disease, its development, and cure, all which the poet portrays in his tragedy in a manner which almost demands a special study.

Dr. Seligmann delineated with equal acumen and scholarship the principal features of the character of Macbeth in his second lecture, which was presided over by Mr. Bond, the Principal Librarian of the British Museum. The criticism of the character of Lady Macbeth extended to the whole sex, as in her was heard "the seductive voice of woman fatal since creation."

The third lecture, on *Hamlet*, was the most profound of all, and the most philosophical in its criticism. Mr. Bullen, the Keeper of the Printed Books in the Museum, who was chairman on the occasion, gave expression to the powerful effect which these lectures had produced on his mind, and hoped to listen hereafter to Dr. Seligmann's observations on the comedies of the great author.

LETTER FROM PEKING.

WHEN the death of the Archimandrite Palladius was announced by telegraph last winter there was a common sentiment of deep regret. He was very highly respected for his thorough scholarship and love of antiquarian research. In the autumn of 1878 he had left us in failing health, in the hope that his strength would be restored by a residence in the south of Europe. He died almost at once after reaching Marseilles. In him we have lost the greatest of Russian scholars in the Chinese field. He combined an excellent judgment with great industry, and a special fondness for the study of old books. By this combination of scholarly qualities he was able to obtain from his contemporaries the acknowledgment that he was a greater scholar than any that had preceded him.

He was born in December 1818, at Kazan. His surname was Kaffaroff. Coming to China in 1840 he was in constant contact with the Chinese language and literature for thirty-eight years, with an interval of five years spent in Rome, during which the habit acquired while in China would not allow him to intermit Chinese reading. Returning to Peking in 1865 he continued his patient research for a few years, and then devoted his whole strength to the compilation of a dictionary on an extensive plan.

His papers on Buddhism were inserted in the earlier volumes of articles published by the Russian Government from the writings of members of the Russian mission in Peking, among which they deserve the palm for thoughtfulness and careful study. Buddhism has been investigated by Hyacinthe, Vasilieff, a bishop of Irkutsk, and Schmidt; but Palladius went deeper than they in his enquiries into its philosophical schools with regard to their differences and their history. He had the advantage of the use of the Chinese library belonging to the Russian mission in Peking, and for many years the additions made to it were in consequence of his recommendation.

He also studied Taoism, but has left little behind him on the subject of this religion. He translated the travels of a Taoist priest who, about the time of Jenghiz Khan, went on a mission to the countries bordering on the Caspian Sea.

His account of the traces of Nestorian missions and converts in China under Jenghiz Khan's descendants is very full and valuable. He made a close study of the books of that time, and collected many new facts, both on Nestorianism and on the history of the Mohammedans in China.

He wrote little, and much that he knew is therefore lost to us. His contributions to our treasury of information in China could be easily contained in two octavo volumes. These are not adequate as the outcome of the labours of so learned a scholar during nearly forty years. A quarter or a third of them have been translated into German. That is almost all that Western Europe can know of them except by learning Russian, but there is one article by him in English on the Nestorian Christians.

His dictionary will be his chief work. It is in Chinese and Russian, and deals with the book language of China. Quotations from the literature of the Chinese are given in great abundance. For learning and accuracy it is expected to prove the best of Chinese dictionaries, but its not being in English will prevent its becoming useful to more than one in forty of the foreigners resident in China. Mr. Weber, Russian Consul at Tientsin, is preparing it for the press.

A French work on the history of the study of foreign languages in Peking is being printed at the press of the Lazarist Mission in that city. The author is M. Deveria, Chinese Secretary to the French Legation. The author's researches in this field have been very successfully and zealously carried on for several years past, and the work will be both curious and valuable. Under the Ming Dynasty the Chinese had in Peking classes in Siamese, Birmese, Persian, Turkish, Tibetan, and the languages of two mountain tribes bordering on south-western China. At present the languages taught are Manchu, English, French, German, and Russian. The Mongol language, and the Turkish also, should be taught, but it is doubtful whether there is any instruction given at all in these languages at present. There ought also to be a class of pupils in the Ghoorka language, that they may be able to take duty afterwards in Nepal, which is properly a subject kingdom; but this dropped through many years ago, and will never be resumed.

We have lately had a visit from a Japanese author, Mr. Takazui. He was commissioned by the Mikado to purchase here a copy of the same voluminous work which was bought for the British Museum last year. He also purchased other works. Probably he came with instructions respecting the Loochoo dispute between China and Japan, but of this we cannot learn anything certain. We only know that Mr. Takazui was entertained at a banquet by the Governor-General of Chili in his way through Tientsin. There is an old tie of friendship between this distinguished Japanese scholar and the Viceroy. When the former published in Chinese an account of his travels in Western China, the Viceroy contributed a preface. This book contains an account of the famous gorges in the mountains of Northern Szechwen. The reason that led the Japanese Government to buy the enormous work, *Koo kin too shoo tai cheng*, was apparently the fact that the English had done so. According to one rumour, they had to pay double the price paid by Mr. Mayers, but another rumour represents the price as less than one-half. This Japanese envoy was the same who was sent with money to the extent of £30,000 to the Viceroy in 1878, a present from sympathising Japan to help in saving the lives of the perishing multitudes in famine-stricken China. Surely war on account of Loochoo is impossible after that generous action!

M. Billequin has translated the Code Napoléon into Chinese. He is professor of chemistry in the college known as the "Tung wen kwan." After preparing a copious work on his own subject, he has now carried through this Code, and the Code Pénal is already printed. Other professors are preparing works on various subjects, which will in succession be printed at the college press and at the expense of the Government.

Dr. Bretschneider, of the Russian Legation, is preparing a work on Chinese botany.

JOSEPH EDKINS.

SELECTED BOOKS.

General Literature.

- BERLIN U. PETERSBURG. Preussische Beiträge zur Geschichte der russisch-deutschen Beziehn. Leipzig: Duncker & Humblot. 6 M.

CORRESPONDENCE.

MR. DAVIES ON THE CELTIC LANGUAGES.

16 Belsize Square, South Hampstead: April 3, 1880.

I must ask that you will courteously allow me to offer a reply to some remarks on a paper of mine—"On the Celtic Languages"—that were made in your last issue.

I am an Englishman, but, if this fact is urged against me as implying an incapacity for the study of the Celtic languages, I may remind my critic that the scholars who have most successfully analysed these languages have not been Celts, but Germans. He must surely be familiar with the names of Bopp, Zeuss, Ebel, and Windisch in this class. My English instincts would not lead me to derive the Teutonic or other languages from the Celtic, and there is nothing in my paper to justify so

strange a misrepresentation. My object is mainly to show that words which are common to the Sanskrit and the Celtic languages must have been the property of the latter by virtue of a common inheritance; the Sanskrit race, which moved from Central Asia southward to the Punjab, and the Celtic, which journeyed westward to Europe, being the earliest offshoots from the great Aryan stock. It is from ignorance of Sanskrit, and a lax application of the rules of letter-change ("lautverschiebung") that some of our modern Celts have made such unscientific derivations as that of the Welsh *paes* (Old-Norse *peis* and *peysa*) from the Latin (tunica) *peza*, and of the Irish *fescar* from Latin *vesper*; the Irish form being, in this instance, the older, answering to the Lithuanian *vakara-s* and the Sanskrit forms *vas-kara*. If we were to accept such derivations as these, there would indeed be a "return to chaos."

It is charged against me, as a violation of a well-known law, that I have connected the Welsh *fiasg*, *fiasged*, a vessel of wicker-work, with the Irish *fleasg* (*flaske* or *flaski*?), a wand, an osier. I am quite aware of the fact that the Irish *f* as anlaut is often represented by Welsh *gw*, but this is not a law of universal application. Prof. Pictet has shown that *p*, as an anlaut, is often changed into *f* in Irish and *ff* in Welsh. He mentions that this anlaut was maintained for the most part, as it was a favourite letter ("ein sonet beliebter laut") and often took the place of an older *k*.

"In einigen Fällen aber," he continues, "wird im anlaut das *p* in *f* (oder *ff* nach jetziger Schreibung) verwandelt, und, wunderlicher Weise, gerade wo das irische neben dem *f* auch noch das ältere *p* behauptet hat. Dieses *f*, *ff* scheint dann wieder manchmal sich zu *gw* = *v* erweicht zu haben."

"Beispiele der ersten wandlung sind folgende:

IRISCH.	CYMRISCH.
pillim, fillim, I turn.	filliaw, to turn about.
pill, peall, feall, a horse.	ffilawg, a mare.
pasgaim, fassgaim, I bind.	ffasgu, to bind; fäs, band = Sans. <i>pāsa</i> ;
	Arm. <i>feskad</i> garbe.
pulur, plúr, flúr, flower.	fflur, bloom."

He also equates the Irish *fras* (ready, active) with Welsh *ffres* (*Beiträge z. verg. Sprach.*, ii. 88). I have violated, therefore, no law of sound philology in connecting the Irish *fleasg* with Welsh *fiasged* (provincial English *flasket*, a large wicker basket), for the anlaut here is *p*, in the root-form. The Irish *fleasg* means primarily moisture, and is connected with the Sanskrit *plush*, to be moist or wet (Burnouf), from the root *plu*. The true rule is that where the anlaut of the root is *v* or *w*, we may expect to find *f* in Irish and *gw* in Welsh, but we shall sometimes find *f* the anlaut in both (changing in Welsh into *gw* in some instances, by the influence of the more general law) when *p* is the anlaut of the root-form. JOHN DAVIES.

April 6, 1880.

When we noticed Mr. Davies's paper on "The Celtic Languages in Relation to other Aryan Tongues" in the *Cymmrodor*, we thought it necessary to warn our readers against the tendency of his views. We wished to pass over it as gently as possible, and Mr. Davies must hold himself responsible for our having to speak of him again.

When we pointed out that he is an Englishman, we yielded to our feeling of natural surprise at his encouraging in their beliefs those of the Welsh who have been used to fancy that most of the languages of the West of Europe are derived from, or very largely indebted to, Welsh. That this would be the effect of the paper on Welsh readers, we firmly believe, so we cannot admit that we have misrepresented it. Besides this, we had in view what we could not enter into within the compass of a short paragraph, namely, that the writer was neither a Welshman nor an Englishman who had so far

mastered Welsh as to be a safe guide in dealing with the subject he had chosen to write upon. In a word, we had found that he was at the mercy of dictionary makers. We take the first instances that offer themselves in the paper, and challenge him to prove that the Welsh language knows any such words as *ffol*, meaning "prim, a block or something round," and *mal*, meaning "small, fine;" or that *cocw*, "a round lump," exists anywhere except in Pughe's Dictionary. Besides, the paper does not give evidence of a sufficient mastery over Welsh to keep its author from falling into the mistake of treating as genuine Welsh words which, like *potio* and *potes*, have not yet been so far naturalised as to be used by any author who aims at writing good Welsh prose. It is needless to observe that we had no notion of implying that being an Englishman incapacitated Mr. Davies "for the study of the Celtic languages," but what we do maintain is that his study of them is not sufficiently advanced to enable him to dispose of some of the most difficult questions connected with them.

So far of Mr. Davies as a Welsh scholar; but we join issue with him also when he lays it down as his main object "to show that words which are common to the Sanskrit and the Celtic languages must have been the property of the latter by virtue of a common inheritance." Are we really to suppose that he would assert that no words which are common to Sanskrit and the Celtic languages are the property of the latter by virtue of having borrowed them from a kindred language, such as Latin? As a matter of fact it is not a rare thing to find the borrowed and native words side by side, as we believe the case to be with one of Mr. Davies' instances, namely, Welsh *ucher*, "evening," and *goesper*, "evening prayer," the latter of which, being omitted in Pughe's Dictionary, does not seem to be known to him; here *ucher* is the native word, while *goesper* is, in all probability, borrowed from the same source as English *vepers*: in Irish, only the form *fescar* or *fescor* seems to be known, and the question arises as to which of the two Welsh forms it corresponds to—that is to say, is it a borrowed or a native word? We believe it to be the former, though others have maintained the contrary. We mention it, however, merely as a typical instance of the most difficult class of questions which can arise in Celtic phonology, that is to say, the one which Mr. Davies undertakes to deal with. How far, then, can he be safely followed? He may be right in some of his criticisms on the etymologies he disapproves of. We think there may be something, for example, in what he says about Welsh *paes* and Norse *peisa*, though Dr. Vigfusson's account of the latter is very different from his. But when he comes to propound etymologies of his own we are at an entire loss to know what his ideas of the laws of linguistic sounds may be. The instance we pointed out in our notice was by no means the most singular in his paper, as it is beaten hollow by such as Welsh *tagu*, "strangle," from an imaginary *tarcu*; but the former has led Mr. Davies to let us have a look at the inside of his workshop. Now Celts hold the name of Pictet very dear; his fame, however, did not rest on his knowledge of the rules of Celtic phonology, but was achieved in spite of a very imperfect appreciation of them, and, if Mr. Davies had taken the trouble to acquaint himself with what Windisch, whose name he flourishes before us, had written on the consonant *p* in Celtic, he would probably have hesitated to quote Pictet to prove that Aryan *p* may become *ff* in Welsh. As his letter stands, it shows that he is over twenty years behind-hand in matters of Celtic philology, and especially the laws of letter-change, of which he speaks with something of the confidence of the ignorance he so jauntily ascribes to others. In

a word, nothing could have been more disastrous to him except an appeal to Donaldson.

THE WRITER OF THE NOTICE.

"LORD DUTTON."

Magdalen College, Oxford: April 8, 1880.

On p. 227 of the number of the ACADEMY for March 27, Mr. Percy E. Pinkerton remarks, "a Lord Dutton there has never been." Reference to Sir Harris Nicolas' *Historic Peerage of England* (revised edition in 1857, by W. Courthope, Somerset Herald), and to any current peerage, would have shown him that not only has there been a Lord Dutton, but that there still is a Lord Dutton. Let me explain. On September 10, 1712, James, fourth Duke of Hamilton (in the peerage of Scotland), was created Duke of Brandon, Co. Suffolk, and Baron of Dutton, Co. Chester, both in the peerage of England, and these titles are now enjoyed by the present Duke of Hamilton, the representative in the fifth generation of the original grantee. It may be objected by Mr. Pinkerton that he was perfectly aware of all this, and meant only to state that the title of Lord Dutton had never been borne as an independent title. This notion, however, is also quite wrong, for we find that on November 4, 1806, Alexander, the eldest son of the third Duke of Brandon and ninth Duke of Hamilton, was summoned by writ to the House of Lords in his father's barony of Dutton, and sat in that name until he succeeded his father on February 16, 1819, as a "double-barrelled duke." The date of this summons is later than the mention of "Lord Dutton" in the story of Caroline von Linsingen, April 13, 1790. Mr. Pinkerton's attempt to solve the difficulty by supposing this "Lord Dutton" to be a member of Lord Sherborne's family is not very lucky. James Dutton, M.P. for Co. Gloucester, was indeed created Lord Sherborne of Sherborne, Co. Gloucester, on May 20, 1784; but his only son and heir, John, was born on June 24, 1779, and would, therefore, be not quite eleven years of age at the time of the Duke of Clarence's visit to Hanover. If I may venture a guess myself, I should be inclined to say that it is not impossible that the "Lord Dutton" was none other than the first Lord Sherborne, who might have been called by Germans "Lord Dutton of Sherborne," the family name being substituted for the territorial designation. This, however, I throw out merely as a suggestion.

W. A. B. COOLIDGE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 19, 4 p.m. Asiatic.
8 p.m. Society of Arts: "Decoration and Furniture of Town Houses," III., by R. W. Edis.
8 p.m. British Architects.
8 p.m. Victoria Institute: "On the Religion and Mythology of the Aryans of Northern Europe," by R. Brown.
TUESDAY, April 20, 3 p.m. Royal Institution: "Wind and Weather," by R. H. Scott.
7.45 p.m. Statistical: "On the Education and Training of the Children of the Poor," by Dr. J. F. Mout.
8 p.m. Civil Engineers: Discussion on "Sewerage and Drainage Works," "The Amsterdam Ship Canal," by H. Hayter.
8 p.m. Colonial Institute: "Jamaica," by Sir Anthony Musgrave.
8 p.m. Spelling Reform Association: "On International Spelling Reform," by the Rev. W. S. Lach-Seyrma.
8.30 p.m. Zoological.
WEDNESDAY, April 21, 7 p.m. Meteorological.
7.30 p.m. Education Society: "Educational Principles of the Jesuits," by the Rev. R. H. Quirk.
8 p.m. Society of Arts: "The Present System of Obtaining Materials in Use by Artist Painters, as compared with that of the Old Masters," by W. Holman Hunt.
8 p.m. Archaeological Association: "Recent Discoveries at Wolsey Castle," by the Rev. Dr. Ridding and the Rev. C. Collier; "The 'Martel de Fer,' or War Hammer," by H. Syer Cuming.
THURSDAY, April 22, 3 p.m. Royal Institution: "Light as a Mode of Motion: Theories of Light and Colours," by Prof. Tyndall.
4.30 p.m. Royal,

8 p.m. Society of Arts: "On Some Recent Advances in the Science of Photography," by Capt. Abney.
FRIDAY, April 23, 2 p.m. Antiquaries' Anniversary.
8 p.m. Quaker: "On an Undescribed British Sponge of the Genus *Raphioderma*," by J. G. Waller; "On the Mechanism of the Stomata of the Holly," by A. Martinelli.
9 p.m. Royal Institution: "Dumas père," by W. H. Pollock.
SATURDAY, April 24, 3 p.m. Royal Institution: "Art and Vision," by Jas. Sully.
3 p.m. Physical.
3.45 p.m. Botanic.

SCIENCE.

THE ETHICS OF ARISTOTLE.

The Moral Philosophy of Aristotle: Consisting of a Translation of the Nicomachean Ethics and of the Paraphrase attributed to Andronicus of Rhodes, with an Introductory Analysis of each Book. By the late Walter M. Hatch, M.A. Completed after his death by others. (Murray.)

Aristotelian Studies. I. On the Structure of the Seventh Book of the Nicomachean Ethics (Chapters I.—X.). By J. Cook Wilson, M.A. (Oxford: Clarendon Press.)

THE conclusion which will most probably force itself upon all competent readers of Mr. Hatch's work will be a regret that the volume had not reduced itself by 500 pages, and instead of containing 589 consisted only of the eighty-nine or ninety pages which comprise the introductory analyses. The analysis prefixed to each book shows considerable insight into the general meaning of the author, and will no doubt be useful to junior students in following the argument. But of the translation it is difficult to say much in the way of commendation. While, of course, free from considerable blunders, it is wanting in simplicity and directness; it distorts an ancient text by the constant use of modern phraseology; and it cannot but perplex a general reader by its *varying* equivalents for fixed Aristotelian terms, and weary him by its translation of a paraphrase upon a translation which is itself most paraphrastic. It is painful to have to write in this way about one who is no longer able to defend his work, and who, had his days been lengthened, would probably have amended many of the points which will be mentioned. But it would be an injustice to others to pass over the inadequacies of Mr. Hatch's work. The problem of Aristotelian translation—no one will grant more readily than the present writer—is one marked by almost insuperable difficulties. The translator has to express in intelligible English a chain of reasoning which is in its original little else than a series of notes or jottings, and which swarms with philosophical terms that convey different shades of meaning in different contexts and have no direct equivalents in modern languages. But anyone who undertakes the task must expect to be judged without much regard to such considerations; and Mr. Hatch's attempt to give an English version of the Nicomachean Ethics must be pronounced, whether such a result be inevitable or not, a failure.

This judgment will be corroborated both from the standpoint of the Aristotelian scholar and from that of an English reader. It is of course the latter whom the work has chiefly in view. "Its aim," says the Preface, "is to make the Nicomachean

Ethics of Aristotle intelligible to a modern reader." But it is extremely doubtful whether Mr. Hatch's work will secure this result. No doubt it will in many cases help a student to trace the links of thought which bind together Aristotle's somewhat disconnected sentences. But it will often, on the other hand, render it almost impossible for him to follow Aristotle's argument. This is particularly the case with those passages in which the translator uses different expressions for one and the same distinct word in Aristotle's terminology. How, for instance, will the reader apprehend an argument of Aristotle's in which he finds an enumeration of certain intellectual "virtues" (at p. 318), as science, prudence, and insight (*voûs*), followed by a detailed account of "scientific mind," "practical wisdom," and "intuition;" or how is he to know that what has been called in the text "confirmed" virtue is in the paraphrase represented as virtue "in the perfect sense of the term" (the Greek being the same)—to say nothing of the confusion caused by the fact that this paraphrase is often admittedly at variance with the interpretation followed in the translation of the text? What estimate, again, will an ordinary reader form of Aristotle's reasoning when he finds him credited with arguing that, because philosophy entails pleasure, therefore philosophy is pleasurable (x. 7, 3, p. 565), where the Greek says distinctly *σοφία* in the one case, *φιλοσοφία* in the other, and reasons from the pleasure found even in the search for truth of the latter to the full fruition of truth in the former? Nor is the translator always happy in his attempts at tracing the connexion of the thought. Take, for instance, his interpretation of a difficult passage in the fifth book (v. 6, 3). Here the translation regards the first clause of the sentence as merely parenthetical, and renders the passage as follows:—

"[It has been already shown how the principle of retaliation in such cases bears upon the principle of justice.] But we must not lose sight of the fact that the 'Right' which we have under investigation is Right used in the strict sense of the term—the Right which is bound up with the life of citizens."

But a little consideration will convince most readers that to break up the clauses in this manner is to divide what was never meant to be divided; and, as the passage is also one of Mr. H. Jackson's "dislocations," I may perhaps be allowed to attempt to explain it. The sixth chapter asks the question—What sort of actions make a man unjust? and the answer given is that it is not acts, as such, at all, but the motive and the spirit of them that produce this result. "Now," Aristotle goes on, "we have previously stated the relation in which retaliation stands to justice"—that is, we previously (chap. 5, § 5) had occasion to point out the difference between voluntary and involuntary actions as connected with retaliation—only, Aristotle continues, the account there given is not sufficient for our present purpose because the question now before us is not only that of justice in the abstract (*ἀπλῶς*) for which *ἀντιπαιονόως* served as formula, but also justice in its bearings on society (*πολιτικόν*)—a change of view which, he goes on to show, involves a consideration of law, and consequently pre-

vents him from returning to his original problem till chap. 8. But of such a concatenation of thought there is no hint in Mr. Hatch's volume. Nor can the translation be regarded as successful even from the side of English style. Little or no attempt is made to resolve the lengthy hypotheses and frequent parentheses in which Aristotle indulges, and the "modern reader" is met by many a paragraph which is nothing short of cumbrous. For example, I may refer to the translation of i. 7, § 14 (p. 37), iii. 5, § 17 (p. 149), x. 7, § 7 (p. 567).

The classical scholar and Aristotelian student will be able to form no better an estimate of Mr. Hatch's labours. He will wonder why τὸν ἐσχάτων should be rendered "every shade of moral distinction" (vii. 2, 5); why τὸ εἶναι should mean "formal definition" in vi. 8, § 1 (p. 332) and be translated (rightly enough) "mode of its manifestation" in v. 1, § 20 (p. 254); or why ἐπαγωγή should mean "mental association" in i. 7, § 21, and "immediate inference" in vi. 3, § 3. He will complain, too, not unreasonably, that modern ideas and phrases are continually foisted into Aristotle's arguments; and he will doubt whether the historical is not the only standpoint from which an ancient thinker can be studied to advantage. Phrases such as "conscience" (vii. 2, § 5, p. 368) and "moral sense" (ii. 9, § 8, p. 107; vi. 11, § 4, p. 345) belong to the eighteenth and nineteenth centuries after Christ rather than to the fourth century B.C. The passage last-mentioned it will be not inadvisable to quote, in order to indicate the way in which Mr. Hatch has managed to transmute the words of Aristotle. The translation runs as follows:—

"But these 'ultimate facts' come within the cognizance of the moral sense in a double aspect—in their widest comprehension and in their narrowest extension. The moral sense is not a process of formal reasoning, but an intuitive perception as well of the primary axioms as of the simplest details. In one aspect, therefore, the moral sense is an immediate consciousness of eternal and immutable first truths such as are applicable to demonstrations of geometry. In the other aspect, it is the intuition of the meaning of the particular fact and of what is within the power of man to compass, and of the minor premisses in the moral syllogism. These particular facts are indeed the starting-points from which we mount up to the final cause or 'summum bonum.' It is necessary, then, that we should have an immediate consciousness of these particular truths, and this immediate consciousness is the 'moral sense' or 'intuition of morality.'"

It is scarcely too much to say that this paragraph is from first to last a misrendering of Aristotle's meaning. The writer says nothing, at starting, of a "moral sense"; indeed, anyone who considers the manner in which Aristotle distinguishes between a νοῦς κατὰ τὰς ἀποδείξεις and ἐν ταῖς πρακτικαῖς will see that such an interpretation is almost impossible. What Aristotle says is that reason is not only like φρόνησις and other states connected with facts which are ultimate in the sense of being particular and individual, but also with those which are ultimate in the sense of being universal and primary; that therefore reason is at once speculative and practical; and that this practical reason shows itself particularly in rightly reading

facts (cf. i. 4, § 6) and so framing a moral universal. But, however Mr. Hatch might interpret the text of Aristotle, he might at least have been expected to give a more or less literal translation of the paraphrase upon it—otherwise, in fact, it is difficult to understand the object of translating it. But what is the value of a version which translates νοῦν δὲ λέγω, τὸν πρακτικόν, ὃς ἀρχὰς ἔχει τὰ μερικὰ καὶ αἰσθητά, by writing, "I here refer to the moral sense as synonymous with the 'practical reason' which has for its principles particular facts which come under the cognizance of the moral instinct"?

Mr. Wilson's *Study* belongs to that kind of minute criticism of which it is difficult to give a satisfactory estimate in the small space which is here available. Briefly, the work is an attempt to show that the seventh book of Aristotle's *Ethics* is a "compilation" from two or more sources, and that it abounds in duplicate, or even triplicate, passages which may be regarded as alternative versions of the same argument. The general idea of such a "resolution" of the text is, of course, not altogether new. Torstrik in his *De Anima* tried as early as 1862 to distinguish between an earlier and a later version in various passages of the third book; and Rassow in his *Forschungen* has traced at considerable length the repetitions and dislocations of the Nicomachean *Ethics*. The chief characteristics of Mr. Wilson's *Study* as compared with the work of Torstrik and Rassow, are to be found in the extreme care with which he marks the verbal similarities in the duplicate passages, the great number of such passages to which he calls attention, and the somewhat skilful way in which he resolves a single chapter into a complete series of duplicate passages, so that, out of what is presented by the vulgate as one single argument, we may re-construct two independent versions of one and the same train of reasoning. Thus, in the third chapter of the seventh book, Mr. Wilson seeks to show that upon the alternative introductions—πρῶτον μὲν οὖν : ἔστι δ' ἀρχή—we may take either §§ 3, 5, 6, 13, 14, or §§ 4, 7, 8, 9–12, as containing the argument of the chapter, while chap. iv. repeats in §§ 5, 6, the arguments of §§ 2, 3, 4; and in chaps. v. and vi. we have no less than three parallel versions of the same subject. And there can be no doubt but Mr. Wilson makes his case both in these and in other passages extremely plausible. At the same time, our ignorance about the manner of composition of Aristotle's works makes such results of rather questionable value; and, though Mr. Wilson's criticism cannot be said to be one-sided, he cannot be altogether acquitted of a tendency to argue from a somewhat narrow standpoint. Thus, for example, his elaborate argument against the Aristotelian origin of chap. iii. rests upon a narrow theory of consistency which can hardly be applied to a many-sided and continually progressive thinker like Aristotle; and his objections to chap. viii., §§ 4, 5, are, I think, met by understanding σῶφρων in some such way as Mr. Hatch has done in his translation (p. 397). But it is undoubtedly a good thing that we should be accustomed to apply the freest criticism to an author who has been too often the object of

undiscriminating veneration; and Mr. Wilson's results, whether accepted or not, must lead to a clearer understanding and truer appreciation of the *Ethics*.

EDWIN WALLACE.

NOTES OF TRAVEL.

MANY African explorers have since the commencement of the year passed through Cairo, on their way to the interior. Dr. Matteucci, accompanied by Don Giovanni Borghese and Lieut. Massari, has gone to Dar-Fur, and hopes to be able to reach Wadai. Unfortunately for these Italian travellers, their fellow-countryman, Messidaglia, has recently been dismissed from the post of Governor of that outlying province, which was entrusted to him by Gordon Pasha, and they will sadly miss the powerful aid which he could have rendered them. Baron Müller, a young German, has gone to Northern Abyssinia. He purposes to spend three years in Africa, his ultimate destination being Kafa, recently reached by Oecchi and Chiarina, concerning whom no information has been received for a considerable time. Dr. Junker, who left Khartum on January 31, has probably ere this reached the Mashra-el-Bek, at the head of the Bahr-el-Ghazal. He proposes to visit the Niam-Niam, thus completing his explorations of the regions to the west of the Upper Nile. The country through which he has to pass is in a peaceable condition just now, and the natives, in consequence of the energetic extermination of the slave-traders by Gessi Pasha, are stated to be favourably disposed toward Europeans. M. Bocha, a young photographer, who until recently resided at Dem Suleiman, the old headquarters of Siber, whom Gessi had fusiladed, has forwarded a valuable collection of photographs to Cairo.

M. SOLEILLET left Ndiago on the Senegal on February 18. He is full of confidence as regards the success of his venture, hoping to spend the summer at Timbuktu, and to turn up in Algeria before the close of the year.

A FOURTH reinforcement is about to be despatched to the East Coast of Africa by the Brussels Committee of the African Association, whose task it will be to carry a steamer from the coast to the Karima station on Lake Tanganyika. Captain Baemakers, of the Belgian army, will take the command of this expedition, and we trust he is capable of making scientific observations. An auxiliary station is to be established at Simba, a place on the road to Karima, for the purpose of capturing and breaking-in African elephants. Dr. Dutrieux, of the Belgian expedition, has returned to Europe. He speaks in no very flattering terms of his late leader, Capt. Cambier. We cannot conceal from ourselves the fact that the work hitherto done by this expedition is quite out of proportion to the number of persons connected with it and the vast expense incurred on their behalf. Young Thomson, who, after the death of his lamented companion, trod a new path on his way to Lake Nyassa, and then traversed the country intervening between that lake and Tanganyika, has done more toward the enlargement of our geographical knowledge of Eastern Africa in the course of a year than this many-headed Belgian expedition in more than two years. At all events, if good work has been done the geographical world has not hitherto been allowed an opportunity to become acquainted with it. Cambier's map of his route from the coast to Karima adds to no appreciable extent to our knowledge of the region traversed.

THE Italian Geographical Society has issued, in its *Memorie*, the first instalment of the "Risultato Zoologici" obtained by the Marchese Antinori during several years' residence in Shoa. Signor dalla Vedova, in an intro-

ductory chapter, presents us with a succinct account of the operations of the Italian expedition for the exploration of equatorial Africa. This is illustrated with a map of Abyssinia. The butterflies are described by M. Ch. Oberthür, of Rennes. They include 118 species, many of them restricted to Africa, but others spread over a vast extent of country, ranging from India in the East to Senegambia in the West, and along the whole of Eastern Africa from the Red Sea to Natal. M. Oberthür considers that this wide distribution of certain species is a distinguishing feature of the Lepidopterous fauna of Africa. Shoa, where African and Arabian species intermingle, appears to be a most fertile field for the zoological collector.

THE forthcoming number of Petermann's *Mittheilungen* contains a valuable map of the Binue River, as far as Ribago, in long. 13° 30' E., resulting from a survey made by Herr Flögel, who ascended the river in the *Henry Venn* and but for whom this trip was likely to have been barren of geographical results; and an account of Count Zichy's journey along the Danakil coast from Edd to Hamfala Bay.

In concluding his paper in the *Bollettino* of the Italian Geographical Society on Italian Navigators during the Middle Ages, P. Amat di Filippo thus sums up the results of his researches:—(1) The Genoese, in the middle of the thirteenth century, navigated the West Coast of Africa as far as Cape Non, and there is reason to believe that in the fourteenth century Italian vessels sailed beyond Cape Bojador, which the Portuguese only doubled in 1433. (2) The brothers Vivaldi, in 1291, made a serious effort to reach India by sailing round the Southern cape of Africa, but one of their galleys was lost near Cape Non, the other near the Senegal, where Usodimare, 164 years later, met a descendant of these shipwrecked Ligurian mariners. (3) About the close of the thirteenth, or at the beginning of the fourteenth, century Genoese navigators rediscovered the Canary Islands, and soon afterwards they discovered Madeira and the Azores. (4) In 1428, Bartolomeo Perestrello, a gentleman of Piacenza, in the service of Portugal, offered to colonise Porto Santo. (5) The Cape Verde Islands were discovered in 1460 by Antonio da Noli, a Genoese.

DR. M. LINDEMANN'S "Die Seefischereien" forms Supplement No. 60 of Petermann's *Mittheilungen*. The author deals in a very full manner with the sea fisheries in all parts of the world, and furnishes ample details on the various methods employed for catching fish, the equipment of the fishing-boats, the produce of the fisheries, and the number of persons employed in them. A very large amount of the information presented has been procured from private sources; and altogether this essay possesses a very high value, and is deserving of attentive study. There can be no doubt that the fisheries are still capable of almost unlimited development; but even now they add very substantially to the wealth of several States, foremost among which are Norway, the United Kingdom, France, Italy, British North America, and the United States. Vast portions of the ocean, though abounding in animal life, still remain "unexploited," and a glance at the interesting maps accompanying this essay informs us that it is our Northern hemisphere where fishing is carried on most extensively. In Europe alone these sea-fisheries afford employment to at least 250,000 persons.

THE following are the principal collections made by Prof. Nordenskiöld and his staff during their recent expedition:—A rich collection of invertebrate animals made in dredging by Dr. Struxberg, the zoologist; a collection of flowering plants, lichens, and algae, made by Messrs. Kjellman and Almqvist; bones of the

Rhytina Stelleri, from Behring Island; fossil plants from Japan and Borneo; and a fine collection of various articles in use among the Chukche and Esquimaux.

MM. MONTANO AND REY are engaged on an expedition in the Philippine Islands, chiefly with a view to making anthropological observations.

MR. B. ARTHINGTON, of Leeds, the originator of the London Missionary Society's expeditions to Lake Tanganyika, has lately offered the Church Missionary Society £1,000, if a further sum of £4,000 could be obtained, for the purpose of opening a direct road from the East Coast of Africa, by way of the River Dana, to the Victoria Nyanza. The inability of the Society to accept this offer is the more to be regretted as the greater part of the country that would have been traversed is entirely unknown, and many travellers, among others Col. Grant and the late Mr. Keith Johnston, have urged its exploration as likely to yield most interesting results.

M. DUFOUR, a French traveller in Africa, is engaged on a journey in Damara-land.

HERR J. M. HILDEBRANDT, who is well known for his journeys during the last few years in Arabia, Abyssinia, and portions of East Africa, is now engaged on a series of explorations in Madagascar, under the auspices of the Berlin Akademie der Wissenschaften.

BISHOP STEERE, of the Universities' Mission at Zanzibar, has sent home an account of a journey which he lately made into the Zaramo country to the south of the Kingani River in East Africa. He started from Dar-es-Salaam along the road which has for some time been under construction in the direction of Lake Nyassa. Along the coast there is usually a belt of unoccupied country between the settlements and the inland tribes, in some places twenty miles broad, which here, however, is inhabited by a colony of Gindos, who have emigrated from the neighbourhood of Kilwa. From this tract Bishop Steere passed through a flat country, with bushes and scrubby timber, and after a slight rise reached the first Zaramo village, called Ukonga, which is considered the gate of the country. Rising gradually over a broad ridge, and afterwards more sharply, he arrived at a well-defined mountain pass, from which fine views were obtained. After resting at Salawa, he went on still up and down and skirting hills, through scenery which reminded him of Devonshire, to Kola, his destination, near which it is proposed to establish a station in order to attempt the civilisation of the Zaramo people. Bishop Steere describes them as very slender, with small heads; when well filled out they are graceful, and some are handsome; they are mostly of a lightish brown colour, with not very thick lips. While at Kola, Bishop Steere took down a number of words and phrases, with a view to obtaining some knowledge of the Zaramo language.

THE publication of a new periodical devoted to Africa has been commenced at Vitoria, under the title of *Boletín de la Exploradora*, being the organ of the "Asociacion Euskara para la Exploracion y Civilizacion del Africa Central."

SCIENCE NOTES.

The Jurassic Dinosaurs of America.—In the last number of the *American Journal of Science*, Prof. O. C. Marsh continues his series of papers on this subject. The present communication, which is illustrated by six plates, is devoted to a description of some of the peculiar features in the structure of the sub-order *Stegosauria*—a group founded on Marsh's genus *Stegosaurus*, from the upper jurassic beds of Colorado and Wyoming. The skull in this group was small,

and agreed more closely with that of the New Zealand genus *Hatteria* than with that of any other living reptile. Little has hitherto been known of the brain in the dinosaurs, but in one species of *Stegosaurus* the brain case is well preserved, and apparently not distorted. Casts of the interior have been taken, and compared with those of the brain cases of other reptiles. The comparison has led to the conclusion that *Stegosaurus* had the smallest brain of any known land vertebrate.

On Tuesday next, April 20, Mr. Robert H. Scott, F.R.S., will give the first of a course of four lectures at the Royal Institution on "Wind and Weather."

THE remarkable comet, whose enormous tail attracted the attention of observers in the Southern hemisphere at the beginning of February, has remained in view only for a short time. The head seems to have been first seen by Gould, at Cordoba, on February 4, when, through the haze and twilight, it appeared like a coarse, ill-defined mass of dull light, two or three minutes in diameter, and without any visible nucleus. But regular observations of it begin only on February 6, and may, perhaps, not extend much beyond February 17, the date of the last observation hitherto received, when at the Melbourne Observatory the comet was barely visible, and the measures were considered little better than guess-work. The appearance of the comet was very remarkable, on account of the great length of the narrow tail, and, at the same time, the great faintness of both tail and head. No nucleus has been discernible in the telescope, the head always appearing cloud-like and filmy, and elongated in the direction of the tail, which it did not very much surpass in brightness. Though accounts apparently differ, it seems that the tail was brightest on February 2, when only a portion of it was visible, stretching upwards to 20° above the horizon, shining with a light of pale straw-colour about equal in brightness to that of the Milky Way. On February 5 it spread out from the head as a fan till it attained a breadth of about 1° at a distance of about 20° from the head, and preserved this breadth with but small, if any, increase to about 50° from the head, where it faded away from sight. The outline throughout the whole length was tolerably well defined, and to the naked eye that part of the tail appeared brightest which lay between 5° and 10° from the head. On subsequent evenings the comet seems to have become rapidly fainter. The difficulties of observing the positions of the head must have prevented the attainment of accuracy in the results, and the short extent of the observations allows no hope that it will be possible to determine the orbit with exactness. Yet even the approximate observations hitherto known are sufficient to render it not only probable, but to leave little doubt, that the comet is identical with the great comet of 1843, whose enormous tail startled observers in March of that year. The distance of the perihelion, and its direction, and the position of the plane of the orbit are similar; the observations of 1843 will be found reconcilable with a period of 36.9 years, and the apparent difficulty that such a period, when traced back in the cometary records, does not indicate previous returns vanishes before a simple consideration of the effect of the extraordinary closeness of the comet to the sun when it passes its perihelion. The crude observations of a comet seen at Goa in 1668 can be sufficiently represented by the elements of the comet of 1843. Suppose the two to be the same, and that there has been no intermediate return invisible from the earth, the period would have been one of 175 years. How can it be accounted for that the next time the comet returns to perihelion after only thirty-seven years? Simply enough. When on February 27, 1843,

the comet passed the sun's surface at the distance of about one-fifth of the sun's radius, it raced along with a velocity of 303 nautical miles in one second of time. If it there encountered resistance which diminished this velocity by fifty yards, or by one yard in six miles, this small retardation was sufficient to allow the sun's attraction to convert the orbit from one of 175 to one of thirty-seven years' period. And such a degree of resistance may well have been offered by the sun's corona, however attenuated that may be assumed to be. It is likely that this highly interesting comet will return to the sun before the close of the century, and it is to be wished that it may do so at a season when the earth is favourably placed for observation, so that science may get full benefit.

MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, April 6.)

THE following paper:—"Description of the so-called Tomb of St. Luke at Ephesus," by Prof. G. Weber, was read by the Secretary, Mr. W. H. Rylands, F.S.A. This communication resulted from the papers on the same subject read before the society at the meeting held February 5, 1878, and a correspondence printed in the ACADEMY during July and August in the same year. The correspondence was carried on between Dr. Richter, Mr. J. T. Wood, and Mr. William Simpson, the author of the paper read before the society. Mr. Simpson had, in his letter to the ACADEMY, expressed the wish that a more accurate plan of the monument could be obtained, and Prof. Weber made a number of visits to Ephesus, and sent in a series of letters, the results of a careful examination and survey, from which the present paper has been compiled, the problem being to find out whether the building is of purely Christian character, as stated by Dr. Richter and Mr. J. T. Wood, or an ancient Greek tomb converted into a place of Christian worship, as supposed by Mr. Simpson and others. The writer commenced by quoting what has been written on the subject by Fr. Adler, which quite agrees with the supposition that there exist the remains of two separate buildings of different epochs, but expresses the opinion that from the treatment of the carvings on the door-jamb, "both of which are in true ancient style," "the Christian origin and the traditional designation are out of the question." Prof. Weber stated that, with regard to the traditional designation of a tomb of St. Luke, there could be no tradition, since Mr. Wood was the first who gave the building that name in 1865. A full and careful description, with measurements, was then given, which showed that the early building had been circular, as it is described by Mr. Simpson, with an interior passage concentric with the outer wall, from which a number of cells radiated outwards. Upon clearing away a quantity of the debris that closed up the passage, a second small cell, placed at right angles to the first, was discovered on the west side; also evidences that there existed another similar one on the south side. From this it would appear that, when complete, four cells had been built from the passage, placed nearly to the four cardinal points, that on the east side having been cleared away to make room for the Christian chapel, cut into the older monument. Prof. Weber supposed about the fourth century. On the north side, remains of a flight of steps still exist, leading up to the platform, between the sixteen surrounding columns and the centre pillar of the monument. The monument appears to have been noticed by Chandler, and is figured in the sketch plan in Mr. Falkener's work on Ephesus. Other interesting features were pointed out by the Secretary, and a letter from Mr. Falkener was read discussing the question of its original structure, which will be given, as well as plans and drawings, in a future part of the *Transactions*. In the discussion which followed, M. Ernest Renan, the well-known Oriental scholar, who was present, made some remarks, and expressed himself as being entirely in favour of the theory of the monument given in the paper.—A paper entitled, "Preliminary Notes on the

Characters, Phonetics, and Language of the Akkadians and the pre-Akkadians," by Hyde Clarke, was read. The author contended that the words and characters were not of Akkad origin, but derived from some language or languages of earlier date, and connected with the epoch of the foundation of syllabic characters, from which were derived the cuneiform, the Khita, the Egyptian, the Chinese, as well as the American characters.—Also some notes from Prof. Wright, of Cambridge, on the Palmyrene monument bearing an inscription recently sent by Mr. Henderson to the British Museum.—The interesting translation by M. Paul Pierret of the "Libation Vase of Osor-ur, preserved in the Museum of the Louvre," was, on account of the lateness of the hour, postponed till the next meeting.

SOCIETY OF ANTIQUARIES.—(Thursday, April 8.)

EDWIN FRESHFIELD, Esq., V.-P., in the Chair.—Mr. Bloxam read a paper upon the site of the Roman station Tripontium, which is mentioned in the sixth Antonine Itinerary from London to Lincoln as being nine miles from Venonis, where the Foss Way crosses Watling Street. After referring to the localities suggested by Talbot, Harrison, Camden, Horsley, and others, and showing that neither Towcester, Lilburne, nor Kington could be the site of the station, Mr. Bloxam gave his reasons for supposing it to be at a place called Caves Inn, where recently some Roman *fibulae*, pottery, glass, and coins have been found. The distance of eight miles should be corrected to twelve.—Mr. Westropp exhibited a bar of iron for making a sword, found near Ventnor, which Mr. Franks believed to be of the late Celtic period.—Mr. Franks exhibited some silver Saxon ornaments found near St. Austell, and described in *Archæologia*, vol. ix.—Mr. Wylie exhibited some blocks of smelted iron found in Switzerland.

FOLK-LORE SOCIETY.—(Tuesday, April 13.)

EDWARD SOLLY, Esq., F.R.S., in the Chair.—The Rev. J. Long read a paper on the importance of publishing a complete collection of proverbs in English, Welsh, Erse, Gaelic, and Cornish, classified according to subjects, with explanatory notes. The question in its various aspects was illustrated by quotations from proverbs, European and Asiatic; a reference was also made to the gipsies, whose line of route along the Danubian valley can be traced by the Slavonic and Greek proverbs they have incorporated into their language. Mr. Long submitted to the meeting proposals for the best mode of collecting and classifying the proverbs of England and their parallels in other lands.—Mr. J. S. Udall then read a paper on "Dorsetshire Mummy Plays." After pointing out the general importance of the subject, Mr. Udall proceeded to give an account of a play now acted in Dorsetshire.

FINE ART.

The Figure Painters of Holland. By Lord Ronald Gower. (Sampson Low & Co.)

WE are glad that there has been included in the "Illustrated Biographies of the Great Artists" a volume, however brief, on the great painters of Holland. Lord Ronald Gower's study of the Dutch artists has been careful, and he has approached them with open mind. Indeed, the width of his sympathy in matters of art constitutes one of his best qualifications for the criticism of painters many of whom repel at first sight, either by coarseness of theme or by frankness of treatment. The volume, as a comprehensive sketch of the Dutch figure painters, suffers a little by being one of a series in which some of the very greatest of those painters—Rembrandt, for example, and Frans Hals—have been discussed separately, so that the author of the present little book must needs be deprived of what might fairly have been a part of his own theme. And these great men being excluded,

we do not welcome the inclusion in the volume of the few pages devoted to Bol and some others. In a word, the book suffers for want of a *raison d'être* for its precise limits—its precise range. It does not cover the history of one national school nor of one department of painting. But it is none the less acceptable as a sympathetic attempt to set down in matter-of-fact fashion many things worth knowing about artists certainly worthy to engage the most serious attention.

Upon the author there seems to have pressed a little the consciousness of his task—of its purely popular and elementary character. He, no doubt, distinguishes and discriminates far more in his own mind than he has here allowed himself to do upon paper between the work of those Dutch figure painters whose aims were dignified—who battled at least with artistic problems, who studied character, who had almost a landscape painter's feeling for the subtlety of varying lights—and those others who won a cheap success by a facile adaptation of their talent to quite vulgar requirements, such as the demand for the literal imitation of matter, and the demand for the artificial compression of an extended scene into the given inches over which the magnifying glass will be destined to play. But these distinctions are made but insufficiently in the volume, if we are to regard the volume as a serious criticism. If, on the other hand, we are, as is indeed likely, to consider it as a popular statement of admitted facts, gathered together in their present form by a man of culture, taste, and range, then the absence of much thoughtful and suggestive criticism is not to be held as any fatal fault. The facts, as we have in many cases taken trouble to ascertain, are stated with accuracy and care. The criticism, if slight, is never pretentious, and generally judicious.

Here and there Lord Ronald, warming with his subject, becomes descriptive—seeks to convey in words some idea of the kind of charm exercised by a particular picture, or by the life work of a given master. Wouvermanns, for instance, moves him particularly; he does justice to Wouvermanns, to whom no justice has hitherto been done. And Isaac van Ostade, whose name has been overshadowed by that of Adrian, as Solomon Ruysdael's has been overshadowed by that of Jacob, is fairly classed here by a writer whose thought upon matters of art has been independent and individual. This is how he speaks of Wouvermanns, and how he brings his work before the mental eye of the readers who do not know it:—

"What a charm there is ever in the name of Philip Wouvermanns! It brings before the mind's eye pictures and scenes of the brightest and most animated kind; of cavaliers and their dames hunting the deer or hawking the heron; cantering across the pleasant sunny fields, under the shadowy woods, and down amid the cool glens, or pacing slowly by the reedy ponds or sedgy streams. Of halts of cavalry beneath gay pavilions, and tents spread below the leafy branches of ancient oaks and hoary elms; of wild charges and forays in which the fiery Rupert would have felt at home; here and there the smoke has cleared showing the varied fortunes of the fight; a dozen pistols are levelled towards that pennon that still remains the centre

of the combat; riderless horses plunge madly away, and one feels as if one heard all the wild turmoil of the hand-to-hand encounter. Or, again, in another and more peaceful scene, we enter with some troopers the vast barn which they have converted into a stable. Or, again, a view opens full of pomp and of pleasure; it is a wide landscape; in the foreground a palace with terraces and fountains; beyond, a luxurious champaign. The furthest distance, bounded by a range of soft blue mountains; on the terraced slopes, ladies in splendid dresses animate the scene, attended by pages who bear aloft huge parasols; in the courtyard below, a gay cavalcade is preparing to join another mounted party that is winding down the avenue; thirsty dogs are quenching their thirst in the marble fountains, and a huntsman is blowing his bugle to collect the stragglers of the pack."

Of Lord Ronald's chapter on Wouvermanns let us further note that it properly names the wonderful and exceptional series of engravings after the master's works. But it should also have mentioned the master's drawings, in red chalk or in black. Some of them are, as examples of composition, almost as perfect as, though certainly less intricate than, his finished paintings. Mr. Malcolm possesses one, for instance, which was specially remarked at the Burlington Club Exhibition of Dutch Drawings—a small red drawing of grouped men and dogs, composed faultlessly, drawn without faltering, and sculptural in the perfection of its modelling.

If it is, unhappily, within Lord Ronald's power to be almost original nowadays in the selection of Wouvermanns for praise, he is, fortunately, only able to be judicious, and cannot be new, in his eulogies of Jan Steen. Observers of life, as well as of art, have long agreed on the excellence of a painter so variously gifted—a *peintre débraillé* who was able to produce an almost baffling amount of thoughtful work, an artist who photographed debauchery, and was so refined that he caught better than any one of his contemporaries the expression of happy children and of vivacious girls. To the merits of Jan Steen, both as a reader of various character, and as, at need, a master of technique, the writer of this little book is fully alive. An incidental statement with regard to his drawings—that "many exist," and are scattered among private collections—is open to exception. Relatively to those of many contemporary masters, the drawings of Jan Steen are assuredly few. To a few other remarks of a similar kind, exception may also be taken. The information with regard to the money value of Ostade's etchings is rather old. These works—albeit the most pointed expression of Ostade's skill in composition, and of his penetration into character not always, though generally, vulgar—are now less sought for by collectors than they were a few years since. With respect to the engravings after Gerard Dou, the author is ambiguous when he says that they have been "among the finest works in black and white with which the Dutch school has enriched the world of engraving." He may be thought to be referring to Dutch engravers; that, indeed, would be the obvious interpretation of his remark; but Lord Ronald must be perfectly aware that few of the best engravings after Dutch masters were executed by Dutchmen. Wille, who was of German birth and

French artistic education, is generally accepted as the first interpreter—certainly the most brilliant, if also at times the coldest—of the Dutch Genre pictures. One or two of his plates after Gerard Dou are among the most famous triumphs of eighteenth-century engraving. And, along with Wille, or close behind him, it is only Frenchmen who are to be mentioned. Again, we would suggest as matter that might be added to another edition of this very useful little handbook some mention of another portrait of Ostade, quite as well, if not better known, than the one here cited and reproduced; it throws a very different light on Ostade's character, and is probably faithful to a different period in the character and the career. Further, there is an effort—necessarily incomplete—to chronicle, at the end of the volume, the pictures of each master written about, and to state what pictures have been engraved. Much of this information has been, doubtless, and rightly, obtained from the publicly issued catalogues of the national collection. In mentioning the De Hoochs of our National Gallery, it should not be forgotten that the finest of all—the *Court-yard of a Dutch House*—has been etched by a modern engraver, Rajon, in a fashion which his more recent work has seldom approached. And of the noblest Metsu of the Peel collection there exists also a most admirable etching—a genuine triumph of reproductive work—which will one day be better known.

FREDERICK WEDMORE.

ANCIENT WALLS ON THE MONTE-LEONE, MAREMMA TOSCANA.

RATHER more than a year ago Mr. R. P. Pullan contributed to the ACADEMY an interesting description of these walls. They had been mentioned to me by some Italian friends who had frequently visited the forest on Monte Leone in search of game, and they described them in terms which induced me to think that they were probably older than any Etruscan remains which I visited in the Maremma in 1832. Mr. Pullan, being similarly impressed, resolved to inspect them, which I was unable to do. According to his description, the two walls were at least fourteen miles in extent, measuring both of them; they were not parallel, but the distance between them varied in extent; they had been at least twelve feet in height, and were so still in parts. Of their great antiquity he felt assured, but he did not find any trace of a cemetery, the discovery of which—if any existed—was an obvious necessity. He established the fact that these walls were known in the fifteenth century, and were believed to be those of Vetulonia.

Mr. Stillman, who is also well known for his archaeological researches, has been requested by an American geographical society to visit the Monte Leone. He has done so, and communicated to me *in viva voce* the results of his observations. He must reserve his elaborate Report for the society, but he has generously permitted me to communicate to the ACADEMY his statements to me. The Monte Leone was at one time a peninsula, its sides to the west and south being washed by the sea, which then covered the Maremma near it, including the present Lake of Castiglione and the site of Grosseto, the sea no doubt extending over the plain beyond towards the Albarese. On the east side the promontory was bounded by the River Ombrone, as it is now called. The mountainous land thus enclosed measured about twenty-five square miles in extent, in-

cluding the height on which stand the Etruscan walls of Rusellae. The gorge of this extensive peninsula was eight miles in width, and across this the two walls still remaining were built by the prehistoric race which inhabited the promontory. No other defence was necessary, with the sea on one side and the deep Ombrone on the other. The antiquity of these walls is therefore carried back to a period when the geological aspect of the country differed from that now presented. The walls are roughly built, and contain stones which would require at least twelve men to lift. Mr. Stillman examined their entire length as well as the thick forest would permit. He is of opinion that they were twelve feet high and as many in thickness; the statement that they were thirty feet thick has arisen from observations made of parts which have fallen. The appearance of extreme antiquity Mr. Stillman described as very remarkable. On the highest summit of Monte Leone there is a round tower, and near this Mr. Stillman found the missing cemetery, marked by cairns of loose stones, much ruined and overturned in parts by the grubbing of animals, such as the wild boars, which are very numerous. One of the graves was excavated. No human remains were found, but a strong sepulchral odour prevailed, and various fragments of pottery of extreme antiquity were discovered, marked by no adornment of any kind, even of the most primitive character, and in a state of absolute decay.

We must now await Mr. Stillman's Report on these interesting vestiges, apparently the oldest existing in Italy, in comparison with which the most ancient Etruscan walls are modern. The defences were built by a race which was numerous, capable of combined labour, and of the necessary order and discipline as well as building skill necessary to erect them.

CHARLES HEATH WILSON.

NOTES ON ART AND ARCHAEOLOGY.

THE Duke of Norfolk has kindly lent his Holbein portrait of *Christina Duchess of Milan* to the Trustees of the National Gallery, to be exhibited to the public, and it will be placed in Room XII.—that is, the great east gallery—at once. This is the picture from Arundel Castle which excited so much interest in the recent exhibition of "Old Masters" at Burlington House.

THE *Athenaeum* announced some time ago that the Burlington Fine Arts Club was intending to have an exhibition of the works of early Flemish Masters; but this exhibition, we believe, will not take place. We hear that there will be, during the season, an exhibition of drawings in water-colour by English artists born in, or subsequent to, 1800, and now deceased, or who, born previous to that date, have died since the water-colour exhibition at the Club in 1871.

MR. ALMA TADEMA, B.A., has been elected an honorary member of the Society of British Artists.

Two cartoons, of St. Matthew and St. John, much larger than life, have just been placed on the inner west wall of the fine church of St. Mary Ottery, Devon. These two originally formed part of a set of six, executed in chalk and wax, for Wilton Church, by the late Sir Wm. Boxall, and at his death left by him to Lord Coleridge, by whom they have now been placed in their present position. Though they are stately, well-balanced compositions—St. Matthew especially being full of vigour and nobility of gesture—their black frames and funereal aspect scarcely harmonise with the bright scheme of colour in the stained window

of Warrington just above them; while they positively kill the Apostles' window, painted by Wailes, in the Dorset Chapel, on a line with them towards the north. A blank wall, or at least a position where they would not interfere with the effect of painted glass, would be better fitted to receive such large and dark compositions.

WE understand that Herr Makart's most celebrated work, *The Entry of Charles V. into Antwerp*, has arrived in London, and is to form the exhibition in the newly completed "Hanover Gallery," 47 New Bond Street, in a week or two. This large work, full of splendid material and endless variety, painted from Albert Dürer's Journal, it will be remembered, raised Herr Makart to the high position he now occupies among Continental artists. He was made gold medallist of the Paris Exhibition of 1878.

AN extensive exhibition has just been opened in Newcastle-on-Tyne. It is the spring loan collection of the "Arts Association" in that town, and not only comprises ancient masters, water-colour pictures, engravings of early schools, porcelain and needlework, but illustrates, by many examples, the landscape painting and wood-engraving that formerly distinguished the locality.

A COLLECTION of fifty-six works by Mr. G. F. Watts, R.A., belonging to Mr. Charles H. Rickards, is now exhibited at the Royal Manchester Institution. Any surplus funds accruing from the exhibition will be appropriated to the building fund of the new School of Art, and the General Hospital and Dispensary for Sick Children, Pendlebury.

WE understand that an early number of the *Magazine of Art* will contain a paper on "Queen Victoria and Art," which, by the express permission of her Majesty, will be illustrated by copies of sketches by her Majesty and by the Prince Consort.

THE *Nation* announces that Messrs. Gebbie and Barrie, of Philadelphia, will soon begin issuing in parts *The Art Treasures of America*, selected and described from public and private collections by "Edward Strahan" (Mr. Earl Shinn). Each part will contain two photographs, a full-page woodcut, and facsimiles in the text.

MR. B. W. MACBETH sends to the Grosvenor this year a large and striking canvas. It is entitled *A Fen Flood*, and alike from its conception and execution the picture will be regarded as doing full credit to Mr. Macbeth's powers. The scene is fixed on the low lands of Norfolk, and the wide sweep of devastating waters is well rendered. The foreground is occupied with high artificial banks on which the survivors from the flood have taken refuge, with such portions of their property as they could save. In a conspicuous position, but with his back to the spectator, stands the squire contemplating the destruction of his property. Not far from him are two or three labourers driving in stakes to preserve the banks from further damage by the waters. In the centre of the picture is the carefully painted portrait of a woman wistfully surveying the scene; her two children stand by her side, one of them bearing in her arms precious salvage from the flood in the shape of a kitten. In the corner of the foreground there is an admirable study of a bed-ridden old woman; while in her immediate vicinity is a cradle containing a little child with a young woman bending over it. A number of cattle and sheep are also crowded together upon the bank. A fire which has been lit gives a capital piece of colour in the foreground, but this, together with the other effects of colour, is tempered by the somewhat sullen gloom of the distant sky, though there is a line of light on the far horizon.

THE well-known firm of Alinari, in Florence, have issued photographic reproductions of all the most celebrated works in the San Donato collection. These are to be had in two sizes for ten or six francs, and include not only the pictures, but all the more striking works of sculpture, ceramic, and tapestry.

WE learn with regret from the *Kunst-Chronik* that Nürnberg has parted with another of her art treasures. This is the celebrated centrepiece by Wenzel Jamitzer, which had so long been preserved as an heirloom in the Merkel family in Nürnberg, and has lately been exhibited at the Germanisches Museum. If this splendid example of sixteenth-century workmanship could be alienated from the family to whom it belonged, it was natural to suppose that it would pass, like Dürer's portrait of Jerome Holzschuher, into the National Museum; but instead of this it has been sold privately for an enormous sum to one of the Rothschilds, and the museum has not been allowed any opportunity of acquiring it. If this is true, it is, to say the least, very unpatriotic conduct, but it seems more probable that the Nürnberg Museum could not afford such an extensive purchase. In any case this remarkable work, which may vie in its way with any of the same kind by Benvenuto Cellini, is now lost to Nürnberg.

THE *Gazette des Beaux-Arts* opens this month with an account, by the Baron Portalis, of the Walferdin collection, a collection chiefly of works by Fragonard, which is soon to be sold in Paris. M. Walferdin was an old connoisseur who, for the last half-century, had devoted himself to the worship of two men—Fragonard and Diderot. He died lately at the age of eighty-five, and his heirs, not having the same somewhat peculiar tastes, are about to dispose of his cherished acquisitions. A few other French masters of the same epoch are represented in the Walferdin collection, but Fragonard forms the basis of it. Several illustrations are given from his works in the *Gazette*. In the second article of the number, M. Benjamin Fillon considers the disputed question for whom the celebrated portrait of Erasmus by Holbein, now in the Louvre, was painted, and brings forward as evidence the three rings Erasmus wears on his fingers, which are those stated in an old inventory of his possessions to have been given him by Sir Thomas More. Erasmus was apparently very fond of rings, and had a number given by various persons, and M. Fillon concludes, from his choice of these three in the portrait by Holbein, that the picture was most probably intended for the English Chancellor. M. Eugène Müntz contributes some new information regarding the houses occupied by Raphael in Rome. M. Paul Gout begins a series of articles entitled "Notes historiques et descriptives sur le Casque depuis l'Antiquité jusqu'à nos Jours," and M. A. Baignières accords a highly complimentary notice to the second exhibition of the French Water-Colour Society.

THE death is announced of M. Théodore Gudin, the well-known sea-painter, in his seventy-eighth year.

ON April 3, the monument to Alexander Calame in the English Garden at Geneva was unveiled and delivered over to the municipal authorities. The artist's widow and family and the members of the Genevan Société des Arts and of the administrative and municipal councils of the city had seats round the monument. M. Th. de Saussure, President of the Société des Arts, in the name of Calame's widow, handed to the President of the city the legal document conferring the monument. He observed that Calame, although not born in Geneva, had become the great pillar of the so-called Genevan school of painting, whose main characteristic

was an idealised representation of Alpine nature and scenery. The monument consists of a large bronze bust of Calame by his fellow-countryman, Ignel, the sculptor of several of the best statues on the Brunswick monument. The roof and pillars of the canopy over the bust are of white and coloured marble, and the pedestal contains a palette and the simple inscription, "Alexander Calame, 1810-1864."

A FEW good pictures, and several examples of uninteresting schools and masters, were sold on Saturday last at Messrs. Christie, Manson and Woods'. Among the best were some pictures from the collection of Mr. George Smith, of Campden. These were chiefly, though not exclusively, Dutch and Flemish. Among them we note a rustic landscape with a peasant and dog on a road—an attractive example of Patrick Nasmyth. It fell for £99 15s. There followed another example of the same master, *Spring Time*, with figures cutting down trees. It fetched £68 5s. Both were small pictures, and of the high order of finish for which the master is noted. There was likewise a landscape with a boy driving cows and a peasant leading a horse. It realised £131 10s. A portrait of a gentleman in a black dress and white collar—the frequent garb of the persons of his day—was assigned to Frans Hals, and was stated to have come from Sir Charles Eastlake's collection. It fetched but £42. By Jan Steen there was a portrait, said to be of the artist's mother playing the mandoline, which was knocked down at £115 10s. By W. van de Velde, a coast scene with a man-of-war, boats, and figures, £59 17s. By Backhuizen, a sea-piece with man-of-war and smaller boats, £64 12s. By J. van Os—known as one of the later Dutch flower painters—a group of flowers and a bird's nest on a marble slab, £63. By Artus van der Neer, a river scene by moonlight with windmill, from the Novar collection, £59 17s. Among the Rev. J. M. Heath's pictures, sold the same day as Mr. Smith's, we note: by Jacob Buydael, a landscape with an old oak near a pool, described by Dr. Waagen (who, however, did not confine himself to the description of the best pictures), £73 10s. By van der Meere de Gand, the Virgin and Child with St. Elizabeth, seated on a throne, and other saints, and with a landscape background, £267 15s. It was exhibited at the famous Leeds Exhibition of 1868. By Hans Memling, an altar-piece with the dead Christ, the wings painted with figures of St. James and St. Christopher, £246 15s. Of the school of Roger van der Weiden the elder, an Altar-Piece with wings, £220 10s. Many early German pictures were disposed of on the same occasion at prices too insignificant to chronicle. The great sales of the season—if any are forthcoming—have yet to occur. Many "remaining works" of recently deceased artists are announced, but the studios thus to be emptied include hardly any of the highest note.

THE STAGE.

THE revival of Buckstone's somewhat farcical but undeniably humorous comedy, *Married Life*, took place at the Vaudeville Theatre on Saturday night, with every sign of success, and there can be no doubt that it will hold the stage satisfactorily until a more remote date than that at which a new comedy may be expected to be ready. The piece contains nothing that is not thoroughly within the range of the Vaudeville company, and the players engaged in the performance suffer nothing to be lost. Messrs. James, Thorne, Howe, Herbert, and Hargreaves, and Miss Larkin and Miss Cicely Richards, are seen to particular advantage.

MR. DION BOUQUAULT's return to the London stage is fixed for Saturday next. It is not thought necessary to produce any new piece on

this occasion at the Adelphi—the scene of earlier successes by the same actor; but the revival of *The Shaughraun* is looked to as affording sufficient attraction, coupled with that of the appearance of a popular and skilled performer still, it seems, in the prime of his powers.

MRS. BATEMAN has arranged to produce *Romeo and Juliet* for six nights at New Sadler's Wells Theatre, commencing on Monday next. Mr. Clifford Harrison plays Romeo, and Miss Isabel Bateman Juliet. A great novelty is in store for London playgoers, and one of which the inhabitants of the district of the New River may be expected to take full advantage. We refer to the production at Sadler's Wells, the week after next, of Joaquin Miller's play, *The Danites*. This piece, which is said to present the most complete picture of the wilder American life, will be performed by the whole troupe of American artists who have already appeared in it in distant places, and by this means the full flavour of the drama and of the life it depicts will no doubt be preserved.

At the Olympic Theatre, *Partners for Life*, by Mr. Byron, has taken the place in the bills lately held by *Little Em'ly*, and *Robbing Roy* has taken the place of *Little Faust*. Gaiety burlesques—and both these latter pieces are Gaiety burlesques—do not seem to the outsider to differ very much. In all, Mr. Terry is quaintly humorous and agile, Miss Vaughan graceful, and Mr. Royce funny. But a change of programme affords to the patrons of the entertainment that excuse for seeing their favourites again which might otherwise be lacking, and the patrons of the entertainment appreciate the advantage of this. Mr. Hollingshead long ago discovered the secret of popularity. Gaiety burlesques, wherever presented, are sure of commercial success. They are invariably lively, and not merely spectacular.

MR. JOSEPH HATTON has been giving Readings from *The Queen of Bohemia* at Bath and Bristol this week, and contemplates further public appearance in the provinces.

It is announced that Miss Ada Fellowes, who is a descendant of the celebrated Mrs. Litchfield—the great Emilia of *Othello*—will make her first appearance at the Imperial Theatre on Thursday night, the 29th. The play selected is *Romeo and Juliet*, and the lady will perform Juliet.

MDME. MODESKA appears at the Court Theatre on the 1st of May in Mr. J. Mortimer's adaptation of the *Dame aux Camélias*.

MUSIC.

The National Music of the World. By the late Henry Fothergill Chorley. Edited by Henry G. Hewlett. (Sampson Low & Co.)

FOUR lectures on the subject of National Music were read by the late Henry Chorley at the Royal Institution in 1862. He resolved to publish them, and had partially prepared them for the press not long before his death. The MS. was placed by Chorley's legal representative in the able hands of Mr. H. G. Hewlett for publication. The result is the present work, which the editor trusts "will be equally welcomed by those who liked and disliked Chorley, as a contribution of real value to musical literature."

In a short Prelude the author touches upon some of the difficulties connected with the subject of National Music, such as the uncertainty of memory, the possible and

frequent inexactness of notation, and the influence of feeling.

In the first essay, "Music from the East," we are asked to distinguish between a *chant* and a *melody*. A chant, says our author, "originated unconsciously in verbal recitation." Chants are "calls," and these "strange barbaric sequences of sound" have been erroneously defined as melodies. National melody has been formed by the aid of instrumental music employed for march and dance. For these there must be rhythm, and without rhythm melody cannot be distinct, regular, or intelligible.

This is, of course, the first form which melody assumed, and which Wagner speaks of as "the first narrow form."

The music of China and Japan is noticed as "primitive and uncouth." Turkish music is "limited and monotonous," but "available to devices of science." It has been turned to good account by Mozart, Weber, and Rossini. The last is spoken of as a "less correct but more brilliantly gifted writer" than Mozart.

We next come to the music of the Hebrews and that of the Gipsies. The former is "excellent in its glory;" the latter is of "very limited value." Mendelssohn, Meyerbeer, Ernst, and Moscheles are mentioned as some of the "most complete creators and interpreters that have ever existed." Such remarks are not calculated to please the disciples of Wagner and Liszt. The music of Spain is touched upon with reference to Eastern origin and influences, and its rhythmical or dance music is described as "capital, quaint, and altogether peculiar."

The second essay, "Music from the South," deals with national music in Italy and France. The *tarantella*, *barcarole*, and *Siciliana* are described, but it is truly said that Italy, as compared with the North, "has very little national music that does not come within the circle of regular art." A long and interesting explanation is given of this fact. French music has two characteristics—monotony and piquancy. It is, however, a subject "full of matter, curious, interesting, and replete with instruction."

In speaking of Italian popular melody, Chorley thinks that as a rule it is in *triple* time. It is, however, curious to note that some old *tarantella* melodies given by Kircher in his book *Magnes; sive de Arte magnetica*, published in 1654, are all in *common* time.

The third essay is entitled "Music from the North." It opens with some peculiar remarks on the subject of keys. Chorley thinks they have not much intrinsic value beyond that of the player's or singer's convenience. This opinion of Chorley is perhaps not of "much intrinsic value," as in the Prelude he informs us that his memory for tone is "organically incorrect." Again, he says that every composer in these days of ours who attempts a funeral march thinks it necessary to pile flat upon flat in the minor key because Beethoven did so in his sonata op. 26. This is rather unfair to modern composers, as Beethoven used *seven* flats, whereas a funeral march has been written by Mendelssohn in a key with one sharp, by Raff with one flat, by Wagner with three flats, and Chopin, at any rate, only used five in his celebrated march.

He takes a glimpse at various Northern countries—Russia, Sweden, Poland, and Germany—and gives some very interesting specimens of national melodies from them. In speaking of Germany he has much to say about Weber, that most national of composers.

The fourth and last essay is "Music from the West"—England, Wales, Ireland, and Scotland. The first place is given to the tunes of Wales, full of grandeur and pathos, very regular as regards structure and intervals. Chorley thinks that "no tunes have been so little tinctured by strange influences."

Crossing the Channel, we come to Irish music, a wild world, "full of tune, full of capacity." The harp is the national instrument of Wales and Ireland. The Welsh harp was a complete instrument, the Irish harp imperfect and inconsistent; hence, according to our author, the symmetrical formation of Welsh tunes and the caprice of Irish tunes, especially the more ancient ones. Special notice is taken of old and irregular rhythms of Irish music. Peculiar rhythms are to be found more or less in all national music, and the subject is altogether one of great interest.

Chorley remarks truly that, on the Continent, Scottish music is the term applied to all the national airs of this country.

He does not find many traces of the harp-spirit in the tunes of Scotland beyond similarity in the omission of certain intervals which has reference to one common origin. We may notice that Irish and Scotch music has this in common with Eastern music, and that the connexion between Eastern and Western national music has still to be worked out. The peculiarity in Scottish music—the *snap* or rapid succession of two notes—is ingeniously explained by Chorley "as an attempt on the part of singers to reproduce a harmony to the melody by catching at either the principal or the accessory note."

Finally, English music is spoken of—the glee, the catch. Bishop and Horsley are specially mentioned. We have never produced a great instrumental composer; neither a *towering* player on any instrument. "Why this should be," says Chorley, "others must decide." He intended to give an outline of American music, but found such a heap of disconnected elements that he "forbore to enter a maze of which no living person seems as yet to hold the clue."

MAYFAIR, W.

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.

Strengthens the Nerves and Muscular System.

Promotes Appetite and Improves Digestion.

Animates the Spirits and Mental Faculties.

Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A

fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fullness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 6d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

THE CAMBRIDGE BIBLE FOR SCHOOLS.

GENERAL EDITOR: J. J. S. PEROWNE, D.D., DEAN OF PETERBOROUGH.

Subject for Cambridge Local Examinations, 1880.

With Four Maps, price 4s. 6d.

THE GOSPEL ACCORDING TO ST. LUKE.

By the Rev. F. W. FARRAR, D.D.,

Late Fellow of Trinity College, Cambridge, Canon of Westminster, and Chaplain in Ordinary to the Queen.

"We are free to confess that this new work of Canon Farrar's is characterized by a remarkably happy combination of conciseness and fullness: while in addition to this, as one might expect, it betrays everywhere the touch of a refined classical scholar and a master of graceful English. . . . Taken as a whole, we regard this commentary as one well worthy of Canon Farrar's high reputation, and sure to be eminently useful, not merely to scholars and their teachers, but to Bible students generally."—*Baptist*.

"We were quite prepared to find in Canon Farrar's 'St. Luke' a masterpiece of Biblical criticism and comment, and we are not disappointed by our examination of the volume before us. It reflects very faithfully the learning and critical insight of the Canon's greatest works, his 'Life of Christ' and his 'Life of St. Paul,' but differs widely from both in the terseness and condensation of its style. What Canon Farrar has evidently aimed at is to place before students as much information as possible within the limits of the smallest possible space, and in this aim he has hit the mark to perfection. . . . It is only fair to say that, as a series, the 'Cambridge Bible for Schools' has no equal in point of excellence and usefulness, and that Canon Farrar's work is quite the best of the series."—*Examiner*.

THE CAMBRIDGE BIBLE for SCHOOLS.

"The value of the work as an aid to Biblical study, not merely in schools, but among people of all classes who are desirous to have intelligent knowledge of the Scriptures, cannot easily be over estimated."—*Scotsman*.

Shorty.

THE FIRST BOOK of SAMUEL. By the

Rev. A. F. KIRKPATRICK, M.A., Fellow of Trinity College.

THE CAMBRIDGE BIBLE for SCHOOLS.

"The Cambridge Bible promises to be a valuable addition to school textbooks."—*Educational Times*.

THE BOOK of JOSHUA. Edited by the

Rev. G. F. MACLEAH, D.D. 2s. 6d.

"The book ought to be in the hands of every teacher, and even clergymen will find it a valuable accession to their list of commentaries."—*Weekly Review*. "Enriched with notices of the most recent discoveries in Biblical archaeology and geography."—*John Bull*. "The Introductions and notes are scholarly."—*Nonconformist*.

THE CAMBRIDGE BIBLE for SCHOOLS.

"The series will be valuable to schools, but it will by no means exhaust its usefulness there."—*John Bull*.

THE BOOK of JONAH. By Archdeacon

PEROWNE. 1s. 6d.

"Written in a graceful, lucid, and cheerful style, which will be attractive to young readers."—*British and Foreign Evangelical Review*.

THE CAMBRIDGE BIBLE for SCHOOLS.

"We would especially recommend its use to Sunday-school teachers."—*Cambridge Chronicle*.

THE GOSPEL ACCORDING to ST. MAT-

THEW. Edited by the Rev. A. CARR, M.A. 2s. 6d.

"All matters of editing are faultless."—*Nonconformist*. "The volume before us condenses in the smallest possible space the best results of the best commentators on St. Matthew's Gospel."—*English Churchman*. "We should doubt whether any volume of like dimensions could be found so sufficient for the needs of a student of the first Gospel, from whatever point of view he may approach it."—*Saturday Review*.

THE GOSPEL ACCORDING to ST. MARK.

Edited by the Rev. G. F. MACLEAH, D.D. 2s. 6d. "I can very heartily commend it to Sunday-school teachers, who may get from it the very kind of knowledge they often find it hardest to get."—*Expositor*. "It is a very business-like little book."—*Contemporary Review*. "A publication which will be of the highest value for all teaching purposes: it is beautifully executed in all respects, and deserves a high recommendation."—*Literary Churchman*. "With the help of a book like this an intelligent teacher may make Divinity as interesting a lesson as any in the school course."—*Academy*. "A mine of information, although contained in a succinct and handy volume."—*English Churchman*.

THE CAMBRIDGE BIBLE for SCHOOLS.

"Older folks than the youths who study for the University examinations—even ministers themselves—will be glad to use such helps to the critical study of the Divine Word."—*Daily Review* (Edinburgh).

THE ACTS of the APOSTLES. By the

Rev. Professor LUMBY, D.D. Part I. Chaps. I.—XIV. 2s. 6d.

"With the help of such books Divinity is made a most interesting study, and no one connected with tuition, either in our Sunday or day schools, but will here find helpful assistance."—*Cambridge Chronicle*. "Indeed it would be difficult to speak too highly of the volumes before us, especially that edited by Professor Lumby."—*Educational Times*.

THE CAMBRIDGE BIBLE for SCHOOLS.

"Its unsectarian spirit will recommend it to all classes and denominations."—*Cambridge Chronicle*.

THE EPISTLE to the ROMANS. By the

Rev. H. C. G. MOULE, M.A. 3s. 6d.

"His (Mr. Moule's) work is scholarly, clear, full, and devout, and we are thankful that such volumes find their way into our schools."—*Freeman*. "It is as lively and pleasant to read as if two or three facts had not been crowded into well-nigh every sentence."—*Expositor*.

THE CAMBRIDGE BIBLE for SCHOOLS.

"The Cambridge University Press has not made of late years a more valuable contribution to the literature of the age than this series of books of the Bible, which has been prepared specially for schools."—*Sunday School Chronicle*.

THE FIRST EPISTLE to the CORIN-

THIANS. By the Rev. Professor LIAS, M.A. 2s.

"The analysis of its contents is very full and clear, and will be found of great service to the teachers of the more advanced classes in Sunday-schools and to the leaders of Bible-classes."—*Nonconformist*.

IN PREPARATION.

STUDIO, with Ante-Rooms, &c., in

Pembroke-place, Baywater. Specially built for the purpose. lofty and well lighted.—Apply to E. & F. SWAIN, 85, High-street, Notting-hill, W. (7, 37s.)

THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 331, OXFORD STREET, W.C. (twenty doors west of Muddie's Library).
The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawry's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.
Facsimiles of Manuscripts and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.
Note.—The special advantages of the Autotype Process for Book Illustrations are—
1st. The absolutely facsimile nature of the result.
2nd. Its cheapness for Small Editions of 500, 500, &c.
3rd. The Prints being direct on the Paper there is an absence of all cutting and that disagreeable effect inherent to all Mounted Prints.
* For Terms and Specimens apply to the Manager.

"THE PIED PIPER OF HAMELIN," illustrated by Jane E. Cook.

Second Edition (1880). Published with the kind permission of Mr. Browning.
Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."
Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."
Standard, December 17th, 1879.—"There is life and vigour in all the characters."
To adorn the Walls of Home at little cost with Artistic Masterpieces, visit the AUTOTYPE FINE-ART GALLERY, 331, OXFORD STREET.
General Manager, W. S. BIRD. Director of Works, J. M. SAWYER.

LONDON: MACMILLAN & CO.

HURST & BLACKETT'S NEW WORKS.

13, Great Marlborough-street.

THE VILLAGE of PALACES; or,

Chronicles of Chelsea. By the Rev. A. G. L'ESTRANGE. 2 vols., crown
8vo, 21s.
"This is a work of light antiquarian, biographical, and historical gossip.
Mr. L'Estrange is inspired by interest in his subject. The names of Chelsea
celebrities, dead and living, including poets, novelists, historians, states-
men, and painters, will be found thickly clustering in these volumes, to
which we refer the reader."—*Daily News*.

ROYAL WINDSOR. By W. Hep-

WORTH DIXON. Vols. III. and IV., demy 8vo, 30s. Completing the
Work. Second Edition.
"Readers of all classes will feel a genuine regret to think that these
volumes contain the last of Mr. Dixon's vivid and lively sketches of English
history. His hand retained its cunning to the last, and these volumes show
an increase in force and dignity."—*Dictionnaire*.

CONVERSATIONS with DIS-

TINGUISHED PERSONS during the SECOND EMPIRE, from 1861 to
1863. By the late NASSAU W. SENIOR. Edited by his Daughter,
M. C. M. SIMPSON. 2 vols., demy 8vo, 30s.
"It is impossible to do justice to these 'Conversations' in a brief notice,
so we must be content to refer our readers to volumes which, wherever they
are opened, will be found pregnant with interest."—*Times*.

LODGE'S PEERAGE and BARON-

ETAGE for 1880. Under the Especial Patronage of HER MAJESTY.
Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the
Arms beautifully engraved, 31s. 6d., bound gilt edges.

THE NEW NOVELS.

POET and PEER. By Hamilton

AIDR, Author of "Penny-docke," &c. 3 vols. Dedicated to LORD
LITTON.

"A thoroughly readable and attractive novel."—*Morning Post*.
"If Mr. AIDR's aim in writing his 'Poet and Peer' was to produce a clever,
readable novel, he has succeeded in it remarkably well. In this entertaining
and interesting book there are numerous cleverly and carefully sketched
figures of modern life, and the arrangement of the story is artistic and well
composed."—*Daily News*.

POOR ZEPH. By F. W. Robinson,

Author of "Grandmother's Money," &c. 3 vols.

THREE RECRUITS, and the

GIRLS THEY LEFT BEHIND THEM. By JOSEPH HATTON. 3 vols.
"Mr. Hatton's new story is likely to become very popular, for it contains
stirring incidents, delightful love episodes, bright descriptions, and a most
interesting plot."—*Westminster Review*.

"This novel is a great advance on anything that we have before seen
from Mr. Hatton's pen. We congratulate him heartily on this work."—*Spectator*.

FOR HER DEAR SAKE. By Mary

Cecil Hay, Author of "Old Myddleton's Money," &c. Second Edition.

"It is very seldom that a novel has appeared more deserving of popu-
larity than this unusually interesting story."—*Post*.
"For 'Her Dear Sake' is a decided success."—*John Bull*.
"Miss Hay undoubtedly has advanced considerably in this her latest con-
tribution to the novels of the day."—*Sunday Times*.

LILY of the VALLEY. By Mrs.

RANDOLPH, Author of "Gentianella," &c. 3 vols.

"A very clever novel. The plot is marvellously ingenious, and is
worked out with singular skill."—*Sunday Times*.

A SYLVAN QUEEN. By the

AUTHOR of "RACHEL'S SECRET," &c. 3 vols.

MISS BOUVERIE. By Mrs. Moles-

WORTH, Author of "Hathercourt Rectory," "The Cuckoo Clock," &c.
3 vols. [Just ready.]

CHEAP EDITIONS.

Each Work complete in 1 vol., price 5s. (any of which can be had
separately, elegantly printed and bound, and illustrated by
Mr. J. GILBERT, MILLAIS, HUNT, LEECH, POYNTER, FOSTER,
TENNIEL, BARNES, E. HUGHES, SAMBOURNE, &c.)

LITERATURE.

A Short History of India, and of the Frontier States of Afghanistan, Nipal, and Burmah. By J. Talboys Wheeler. With Maps and Tables. (Macmillan.)

THE history of India on a large scale still remains to be written, and yet the subject is by no means so vast as might appear at first sight. The materials lie within a comparatively narrow compass. No very great research would be required into unedited documents, nor any unusual acquaintance with Oriental languages. Sanskrit literature has already been sufficiently disclosed to serve the purposes of the historian; and the MSS. of Mohammedan chroniclers have also been in great part placed at our service through the labours of Elliot and Dowson. It is time that someone should arise with more of the scientific spirit than Elphinstone, and with less of bitterness than Mill, to compile a work which might at once become the standard authority. The subject has many attractions. It may almost be called an epitome of the history of Asia, and a drama of the human race. As the birthplace of two of the greatest religious systems; as the scene of one of the grandest monarchies, after the Roman, that the world has known; as the chief theatre of British arms and British administration, India appeals strongly to the popular imagination. If it be true that the public take no interest in India, the blame rests with those who ought to enlighten them, for Macaulay has proved that Indian episodes can be made as interesting as a romance. Above all, to the student of sociology a real history of India is a most pressing want. Underneath the rise and fall of countless dynasties, the constant clash of arms, and the changes of religious faith, the life of the Hindu peasant has remained almost unaltered for at least thirty centuries. The communal type of Aryan society is still to be seen here in archaic simplicity, side by side with the ruder organisation of the hill-tribes, with the semi-feudalism of the Rajput clans, and with the officials of Moghul and British centralisation. In a special sense it may be repeated that the history of the Indian people has not yet been written.

This somewhat long prelude has been suggested to us by the perusal of Mr. Talboys Wheeler's *Short History of India*. It was a bold undertaking to choose a title that inevitably challenges comparison with Mr. Green's *Short History of the English People*. The observant reader, however, will notice that there is a difference between the wording of the two titles; and, if he bears this difference in mind, he will be saved from a good deal

of disappointment. Mr. Wheeler is well known as an Oriental student, who has laboriously toiled upwards from the lowest strata of Sanskrit and Persian literature; and also as an official who has taken some part in the later events which he describes. Knowledge, therefore, he has in abundance; but, unfortunately, he does not possess the art of marshalling his facts in order and attracting the reader by his style. Like everybody else, he picks holes in Macaulay's famous essays on *Clive* and *Hastings*. But it is just the existence of these little mistakes that throws into greater relief the general faithfulness of Macaulay's historical vision. Mr. Wheeler, on the other hand, if accurate in his facts, becomes highly untrustworthy whenever he indulges in generalisation. For example, he permits himself to endorse the idle tradition that the Afghans are descended from the lost ten tribes, and improves upon his original by drawing a parallel between the situation of Afghanistan and that of Palestine, and between the characters of the Durani dynasty and of the house of David. Granting that points of similarity may be discovered, it is sufficient to point out as a dominant mark of distinction that the Afghans have little national feeling, and are more at home as conquerors in the plains of Hindustan than on their own hills. Mr. Wheeler is singularly unfortunate also in his etymological speculations concerning these same Afghans. He suggests that they may have given the name of their stronghold "Ghor" to their early capital in Bengal, "Gaur." Now, there is no reason to suppose that Ghor was ever the name of a town, or of anything but a region; while we have abundant evidence for saying that Gaur existed under that name long before the Mohammedan invasion. Similarly with the name of Patans, or rather "Pathans," by which Afghans are commonly known throughout India. This is said to be derived from an early Afghan dominion at Patna. No authority is given for this assertion, and it is on the face of it highly improbable. Both "Pathan" and "Afghan" are words of comparatively recent origin. The former is usually regarded as an Hindustani form of Pashtu or Pakhtu, the only general term which the Afghans recognise among themselves.

But it is not on such little points as these that Mr. Wheeler may fairly claim to be criticised, though there are many similar matters both of omission and commission on which we should like to join issue with him. He has undertaken to compress the entire history of India, from the War of the Mahabharata to the massacre of Sir L. Cavagnari, into a single volume; and he has attempted to make that volume interesting to the general reader. Praise or blame must be awarded according to the general mode of execution of this design. Of Mr. Wheeler's claims to learning and industry we have already spoken. But something more is wanted in order to satisfy the part of a popular historian. It is necessary to be acquainted with the weaknesses of one's audience, to attract them to read by all the legitimate artifices of arrangement and style, and to be oneself in sympathy with the subject. We fear that Mr. Wheeler is not adequately endowed with any of these

qualifications. He begins his first page by plunging at once into the story of the Mahabharata, just as historians of Greece before Grote used to open with Homer. It does not seem to have occurred to him that the Mahabharata, like the *Iliad*, represents a comparatively late stage of civilisation; indeed, he ignores altogether the priority of the Vedic hymns. But, quite apart from priority in order of time, there is a certain priority in exposition which cannot be prudently neglected. The main achievement of the modern historical school is the reconstruction of the prehistoric past, partly from the evidence of language, partly from the laws of external nature. Before we are introduced to the products of the adult Hindu mind, as revealed in its celebrated epics, we want to be told something about the human family to which the Hindus belong, and about the country which they inhabit. A writer who wishes to catch the public ear should first have struck the key-note of sympathy by pointing out the community of origin between the Hindu and the English stocks, as attested not only by language, but also by social institutions; and he should then have proceeded to describe the grand physical features of the peninsula, which have had so much to do with the formation both of Indian character and of Indian history. In this connexion, it would have been pardonable to err, with Max Müller and with Buckle, on the side of exaggeration, rather than omit the fundamental framework which alone gives meaning to events and names.

Coming down to more modern times, we again find Mr. Wheeler deficient in the element of sympathy. He is too disposed to judge native governments, whether past or present, by the rigid standard of our own administration. The Moghul empire was, no doubt, an Oriental despotism, marked by frequent internecine wars and by occasional scenes of horrible bloodshed. Similarly, the rise of Jung Behadur to power in Nepal was effected by means of a massacre without parallel in European annals. But to dwell upon these aspects of native rule is the least important duty of an historian. We in Europe are also able, if it were profitable, to "tell sad stories of the deaths of kings." It would be far more interesting, and far more useful, to attempt to discover the secret of Akbar's revenue system, by which he obtained a larger income than we can raise at the present day; or to examine the process by which Nepal has been welded into a compact state, flourishing at home, and powerful abroad. The inhabitants of India are not a mere herd of human units, whose highest destiny is to provide a career for enterprising English and Scotch officials. They cherish the memories of bygone greatness, and count among their number individuals born with the capacity to rule and to command. We are now placing in the hands of the people the powerful weapon of education. If we desire to render our alien rule not altogether intolerable, it can only be by studying more deeply the development of native character, and by fostering such indigenous institutions as may be found worthy to live. To Anglicise India is a vain dream of the present generation. How to teach the

natives to govern themselves is the problem which our descendants will have to learn; and we regret that Mr. Talboys Wheeler has not used his experience and learning to contribute toward the solution of this problem.
JAS. S. COTTON.

Bulgaria since the War: Notes of a Tour in the Autumn of 1879. By James George Minchin. (C. Kegan Paul & Co.)

THE letters which make up this unpretending little book "were written," the author tells us, "for the *Morning Advertiser* during a hurried tour through the countries that formerly constituted European Turkey." They have the two conspicuous merits that they are written in a clear and natural style, and that they comprise in a short compass the conclusions of an intelligent and singularly impartial political observer as to lands and peoples with whose future the peace and happiness of half Europe is bound up at the present moment.

The larger part of the book is devoted to Bulgaria and its severed province of Eastern Roumelia, but the first letter sums up the author's observations as to the present condition of the principality of Serbia. Considering that this letter appears to embody a few days' experiences at Belgrade, it can surprise no one that the picture Mr. Minchin draws of Serbia and the government is anything but favourable. As to the present system of government in the principality, it deserves all, and more than all, that Mr. Minchin has said about it, though he might have mentioned the fact that the experiment of an independent newspaper is now being tried in the *Vidjelo*. So far as the Serbian people are concerned, it is to be hoped that at some future period the author may be tempted to renew his acquaintance with them elsewhere than at Belgrade, in which case his candour will not fail to recognise among them a free national spirit of real calibre, which in fact stands to them in place of the supernatural religion the absence of which he laments. He will further understand that the present régime, which approaches martial law in its despotic severity, is voluntarily submitted to by the great mass of the people, independent peasant-farmers as they are for the most part individually, because they believe that the present crisis in Eastern affairs can best be met, and the national aspirations after union with the Serbian populations under Turkish and Austrian rule can best be realised, by practically entrusting the executive to the hands of a Dictator. It is an instinct of national self-preservation, which, whether wise or unwise, has shown itself before now among peoples far more civilised than the Serbs. The extreme unreasoning jealousy of foreigners should likewise only be regarded as a phase in the historical development of a semi-barbarous people just emerging into independence after centuries of foreign oppression, and surveying the other half of their nation still under an alien yoke, and dreading at the same time the extension of that yoke over themselves from a new direction. The commercial highway between Vienna and the Aegean runs through the heart of the Serbian principality.

Mr. Minchin's experiences of the Bulgarians to the north of the Balkans are extremely hopeful. The progress of education in the new principality is indeed little short of marvellous. Schools after the model of the German "Realschulen" have been founded in all the chief Bulgarian villages, and the teaching includes history, foreign languages, natural science, music, and drawing. The amount paid by those who can afford it is only twenty francs a year; and when the parents are too poor to pay even this small fee their children get education, books, and stationery gratis. Mr. Minchin, who visited some of these schools, found their excellent programme in full working order. The schoolmasters are mostly Bohemians, whose Czech mother-tongue enables them easily to master Bulgarian. Visiting a school in the Bulgarian village of Lom Palanka, Mr. Minchin found the building large, the rooms lofty and scrupulously clean.

"I noticed that the stuffed and preserved objects in the natural science room were elaborate and expensive. In fact, the specimens were far beyond my ken in science. . . . I also inspected the drawings of the school-boys from the flat; they were creditable. At the end of the room hung a drop-curtain, and the schoolmaster told me that on last New Year's night the boys acted among themselves a Russian comedy of Poushkin. One can scarcely be surprised that Russian influence is paramount in Bulgaria. It could scarcely be otherwise. Yet in their school arrangements they are guided more by practical than political considerations. At Lom Palanka, which is close to the Austrian frontier, German is the foreign language taught; in other villages it is French." These schools are completely undenominational, and no priest is admitted within their precincts.

"The Jews [continues Mr. Minchin] send their children to school with the Christians, but the Turks do not. They will not even send their children to the elementary school in Lom Palanka, which the Bulgarian Government has built for them. This is not from any spirit of disaffection, but from sheer incapacity to progress with the times."

In Eastern Roumelia Mr. Minchin met with a far less satisfactory outlook than in the Bulgarian principality.

"And what is the reason [he asks] that, while in the neighbouring State all is order and tranquillity, in Eastern Roumelia there is nothing but violence and confusion? The reason is clear. In Bulgaria and Eastern Roumelia you have one and the same race, speaking the same language, having suffered alike in the past, and looking forward to triumph together in the future. But the statesmen of Europe have ordered it otherwise. They have divided a people whom God and Nature intended to be one."

"Magna est veritas et praevalabit!"

ARTHUR J. EVANS.

Elizabethan Demonology: an Essay in Illustration of the Belief in the Existence of Devils, and the Powers possessed by them, as it was generally held during the Period of the Reformation, and the Times immediately succeeding; with Special Reference to Shakspeare and his Works. By T. Alfred Spalding, LL.B. (Chatto & Windus.)

THIS is a very thoughtful and weighty book

of Shakspeare criticism. To treat and review it—as one of its "careless, indolent reviewers" has done—as a mere folk-lore treatise is to miss its aim and wilfully disregard its declared purpose. Shakspeare is the centre of Mr. Spalding's work, which is a recast and expansion of two papers read before the New Shakspeare Society "On the Devils in Shakspeare." Its object is to find out what the popular belief about demons and spirits was in Shakspeare's time, how far Shakspeare shared that belief, and how he dealt with it, how he grew out of it, as his own mind and spirit developed. By far the most interesting part of the book is, of course, part iv., in which Mr. Spalding deals with the demon belief as that affects Shakspeare himself. This has won the warm approval of Mr. Robert Browning, to whom the book is dedicated, and cannot but be welcome to every earnest student who takes Shakspeare's plays as the revelation of Shakspeare himself, and not as mere amusing toys to while away the dull hours of evening with.

Mr. Spalding has first an argument to show Victorian readers of Shakspeare that they must take themselves out of themselves, their present notions of things and understandings of words, if they want to know what Shakspeare felt and meant. Here is one instance: "A very striking illustration of the manner in which a word may mislead is afforded by the oft-quoted line,

'Assume a virtue, if you have it not.'

By most readers, the secondary and, in the present day, almost universal meaning of the word *assume*—"pretend that to be which in reality has no existence," that is, in the particular case, 'ape the chastity which you do not in reality possess'—is understood in this sentence; and consequently Hamlet and, through him, Shakspeare, stand committed to the appalling doctrine that hypocrisy in morals is to be commended and cultivated. Now, such a proposition never for an instant entered Shakspeare's head. He used the word 'assume' in this case in its primary and justest sense—*ad-sumo*, take to, acquire; and the context plainly shows that Hamlet meant that his mother, by self-denial, would gradually acquire that virtue in which she was so conspicuously wanting. Yet, for lack of a little knowledge of the history of the word employed, the other monstrous gloss has received almost universal and applauding acceptance."

As with words, so is it with customs, morals, and beliefs in spiritual agencies, rightly says Mr. Spalding. Let every reader of the extract above ask himself whether he has not always given the Victorian meaning to the Elizabethan "assume;" let him ask himself again whether he has ever recognised that Puck's "swifter than the moon's sphere" involves Shakspeare's acceptance of the Elizabethan Ptolemaic, and not our Victorian Copernican, system of astronomy; and then let him acknowledge that he may want some teaching as to the Devil-belief in Shakspeare's days, and some preparation for judging of what the successive phases of Shakspeare's dealing with that belief, with the working of spiritual agencies on man and woman, mean. If he is honest enough to confess that he does, let him put himself under Mr. Spalding's guidance, and watch the gradual growth of the belief in Devils in olden time; the classification of them into Greater and Lesser

Devils, Good and Bad Angels; the popular belief about them in England, and especially Scotland, under James I., who revived, or at least brought more prominently forward, faith in the existence of Witchcraft and the need of punishing Witches. Let him witness the trials read by Shakspeare himself for *Macbeth*, and be convinced of the nonsense of the "Norn" theory proposed by some late critics.

Then let him turn to the application of this to Shakspeare himself in his three Demon, or Fairy, plays—for, as Mr. Spalding will prove to him, "fairies and devils differ in degree and not in origin"—the *Dream*, *Macbeth*, and *The Tempest*. Let him learn how the history of Shakspeare's life, as well as the growth and changes of his mind, is reflected in his plays, and lies embosomed in those fair mirrors for the eye that has power of vision to see. Let him find that, as most men go through three stages of religious creed—hereditary belief, scepticism, reasoned belief or rest—so Shakspeare went through them, as his dealings with the spiritual world in his three plays above named show: the *Dream* accepting the fairy-world of his day, and making men the sport of fairy whims; *Macbeth*, of the great Third Period of Scepticism, in which man is "juggled with and led to destruction by fiends, in which an undistinguishing fate sweeps away at once the good with the evil—Hamlet with Claudius, Desdemona with Iago, Cordelia with Edmund;" lastly, *The Tempest* of the calm Fourth Period of Reconciliation and Peace.

"Man is no longer the plaything, but the master, of his fate, and he, seeing now the possible triumph of good over evil, and his duty to do his best in aid of this triumph, has no more fear of the dreams—the something after death. Our little life is still rounded by a sleep, but the thought which terrifies Hamlet has no power to affright Prospero. The hereafter is still a mystery, it is true; he has tried to see into it, and has found it impenetrable. But revelation has come like an angel, with peace upon its wings, in another and an unexpected way. Duty lies here, in and around him in this world. Here he can right wrong, succour the weak, abase the proud, do something to make the world better than he found it, and, in the performance of this, he finds a holier calm than the vain strivings after the unknowable could ever afford. Let him work while it is day, for 'the night cometh when no man can work.'"

Among all that I have read on Shakspeare I know nothing deeper or truer than Mr. Spalding has written in the fourth part of his excellent book. I hope he will put it into a cheap form, with his article of 1878 on Shakspeare's *Sonnets*, or weld both into a short sketch of the man Shakspeare.

F. J. FURNIVALL.

The Bible Doctrine of Man. The Seventh Series of the Cunningham Lectures. By John Laidlaw, M.A. (Edinburgh: T. & T. Clark.)

THE enquiries to which these lectures introduce us are comparatively strange to English theology. It has been left to Germany to do the pioneer work and make the first substantial contributions. Among ourselves they have remained an almost unvisited region.

Unfortunately, too, the little that has been attempted has taken so extravagant a direction, or has proceeded on principles so unscientific, that discredit has fallen on the entire subject. It is Mr. Laidlaw's wish to vindicate for it a position of some importance, and to exhibit its value both in apologetical interests and in the comprehension of Christian doctrine. He adopts an independent line. He does not deal with the Bible doctrine of man in the general sense in which it has been customary to find in the Bible "a discovery of man as unique and divine, as truly a revelation, as its discovery of God." His object is to "fix attention on the natural presuppositions and principles of the Scripture writings concerning man." With such predecessors in view as Roos, Olshausen, Beck, Hofmann, Delitzsch, Lüdemann, Hausrath, Pfeiderer, and others not less distinguished, he is modest enough to claim no novelty for his discussions. He is entitled at least to the credit of supplying in some measure what has been a vacant place in our home theology. Different estimates will be made of the idea he has formed of his task. There will be still greater variety of opinion on some of his conclusions. It may be doubted even by those who are at one with him on the whole, whether on particular points, like the complex conceptions of *death*, *flesh*, *spirit*, he has taken in all the elements of the case, and whether, on larger exegetical issues, as in the *quasi*-ideal rendering of the Pauline conflict of principles in Rom. vii., he has made his positions good. But his book will not be denied the merit of stimulating investigation in an interesting Biblical field, and directing attention to questions which lie at the root of many of the problems most agitated in theology. Candour, sobriety, and information distinguish it throughout. It brings us across some of the chief debates at present in process between the physicist and the theologian. Without pretending to enter exhaustively into these, it handles them with a fair and intelligent desire to ascertain what is due to science, ethics, and revelation respectively, what questions they are severally competent to solve, and how they may meet in a *philosophia prima*. Its criticisms of writers like Darwin, Pfeiderer, and Edward White exhibit the author's ability to recognise what is true in alien theories. His attitude towards opponents is uniformly just and appreciative.

The success of an attempt to verify and value those views of man's nature and constitution which the Bible inculcates or presupposes must depend greatly on the anticipations formed as well as on the method pursued. What a treatise of this kind has to determine is not only the existence of certain ideas, expressly taught or obviously implied, but the *genesis*, growth, and connexions of these ideas, the construction, history, and explanation of the terms also in which they are conveyed. To these points of properly Biblical enquiry Mr. Laidlaw has added others more strictly dogmatic. He is at pains to show how the findings of Biblical psychology bear on cardinal topics of Christian doctrine, the consequences of the Fall, the nature of sin, the problems of regeneration, the revelation of immortality. These are among the ablest sections of the

volume. It may be questioned, however, whether the dogmatic has not been allowed too much space. At the cost of something there, a more rigorous adherence to the historical and critical investigation of Biblical *data* might have been advantageous. In his studies of the psychological terms of the new life, the primary expressions of man's constitution, and the idea of *pneuma* in the characteristic place it holds all through Scripture, the author has given us examples of careful analysis. All the more should we have welcomed greater concentration of attention on the rise and expansion of the Biblical ideas, their *lie* in the several strata of records, the influences which moulded their enunciation, the relations in which the different parts of Scripture stand to the exhibition of these ideas, and on the question how far the sectional unities of Hebrew history, poetry, and prophecy, Christian gospel and epistle, combine in a higher unity. There is much still to accomplish. There is room for fresh studies of particular terms, such as *συνέδησις*. We should expect, too, not only statements of how the facts stand with peculiar usages, like Paul's antithesis of the *psychical* and *pneumatic*, but further explanations of the process by which the developments took place, and their points of contact with prior occurrences. It would be unfair, however, to speak of the book as seriously defective in scientific method. On the contrary, Mr. Laidlaw is free from the unhistorical conception of Scripture which has vitiated treatises otherwise so acute as Beck's. He sees laws of growth and change in operation on the psychological terms, due both to external influences and to progress within the Scriptures. He admits that "acquaintance with culture outside of the Hebrew nation has left its evident impress on the New Testament writers, and even on the later Old Testament writers as compared with the earlier" (p. 51). He cannot allow that the force of individual genius goes the length of establishing radical differences between Pauline thought and what appears in John or the Synoptists. But he recognises how "the individuality and training of St. Paul have influenced very deeply the form of revealed doctrine which the Church has received by him" (p. 373). He separates what belongs to natural sentiment, traditional conception, or the colouring of the utterances of psalmist and prophet from the truths taught and adhered to. He holds that "we are fairly entitled to distinguish in the Old Testament between the ideas of the after-life current in the age of the writers and the revealed hopes to which they clung" (pp. 245, 246). He says much to good purpose on the personal and historical character of the revelation held to be contained in the Scriptures, and on the errors which enter attempted constructions of the Bible doctrine of immortality when that is forgotten. A completer comparison between the Bible *data* and current beliefs in Egypt, Assyria, Persia, and Greece with which Hebrew thought may have come in contact would make the induction still more satisfactory.

But what is it that Mr. Laidlaw expects from a Biblical psychology? He is not one of those who commit the folly of extracting a

philosophy of man from the Bible. He looks for as little of that as of a science of geology, because he sees that what has any bearing on the matters with which such studies are conversant is given, not in the form of a doctrine of man's constitution or man's world, but in the form of a history and doctrine of man's relation and ethical attitude to God. If, on the one hand, he judges Delitzsch to go too far when he claims for this study the rank of an independent science, he thinks that Hermann Schultz overlooks the unity of Scripture when he objects to the reception of a "Biblical notion of man on the ground that on all topics of natural knowledge the standpoint of each Scripture writer must be considered independent" (p. 24). He occupies the mediate position of one who finds a notion of man pervading both the Old Testament and the New, "popularly expressed, indeed, but uniform and consistent, though growing in its fulness with the growth of the Biblical revelation itself" (p. 25). Sometimes it may seem as if he discovered more of a system than he theoretically contemplates. But his general principle appears sound. It can hardly be doubted that, though it teaches nothing like a science of man, the Bible has certain views of man's nature underlying its proper message, and it is reasonable enough to look for some degree of uniformity in these views. All depends, of course, upon the kind of view discovered and the nature and measure of consistency supposed. Here, however, Mr. Laidlaw adopts in the main a very moderate position. It is in respect only of a few broad and simple conceptions—man's unity, the dual aspect of his being, his formation in the Divine image, and the like—that he claims uniformity of teaching. He shows very well how essential to the whole theology of the Bible is its assertion of the *solidarité* of man's constitution—"that human individuality is of one piece and is not composed of separate independent parts" (p. 55). But he points out how it is also pervaded by an equally consistent duality in its conception of man's nature, which is opposed to monism, as well as by a view of man's origin which is adverse to the theory of pre-existence, the dogma of emanation, and the entire ethnic notion of a distinction between soul and body amounting to a degradation of the latter.

We heartily agree with Mr. Laidlaw's rejection of the theory of *trichotomy*. He gives a clear account of the forms which that ancient speculation of some Greek thinkers has assumed on its recent revival, from the comparatively sober views of Beck and Delitzsch, who assign to the *soul* the position of uniting band between the two elements of body and spirit, or attempt a combination of the dual with the tripartite division of man's constitution, on to the extravagant doctrine of Mr. Heard. But he shows with great force how impossible it is to carry this tripartite view through Scripture without importing the complex philosophical notions of later times into its simpler conceptions. It requires a fine hand to trace out the varied usages of the primary terms as they stand alone or in antithesis to each other. The prevalent distinctions are followed here in the main, between *spirit* as the principle of life, *soul* as

the subject of life, and *heart* as the organ of life; between *flesh* as the life-environment and *heart* as the life-organ; and again between *flesh* as an "embodied, perishable creature," *soul* as a "living being, an individual, responsible creature," and *spirit* as the God-derived principle of life which makes the creature what he is. However it may stand with these distinctions, Mr. Laidlaw is right in construing the several terms as notes not of different natures, but of different aspects of the same nature. He is emphatically right in affirming the Biblical antithesis of body and soul, or body and spirit, to be the expression, not of two separate or antagonistic factors in man's constitution, but of the twofold origin of a constitution which links its possessor on the one hand with the animal creation and on the other with God, and in expounding this antithesis as one peculiar to Scripture, in no way to be identified either with later notions of the material and immaterial, or with the distinctions of the schools between soul and body.

Mr. Laidlaw's criticism is often at its best when applied to dogmatic questions. He deals effectively with Mr. Heard's attempt to lighten the doctrine of original sin by the theory that the *pneuma* is a distinct constituent, lost or rendered dormant by the Fall, and restored by grace. His examination of the doctrine of conditional immortality deserves consideration. He is acute enough to see, and candid enough to acknowledge, the advantages which, in its recognition of a judgment and in the place it gives to conscience, it may claim to possess over the rival theory of the Restorationists. But he shows how superficial it is in some respects and how repugnant in others; how perverted a view it implies of the operation of the Spirit, and how far it is from doing justice to the Bible statement of Christ's relation to man's future. To the professed theologian the discussion of the subject of the Divine Image will be specially interesting. The idea is a fundamental one. There is not a Biblical doctrine into which it does not enter. There are few points, however, on which greater confusion prevails. Mr. Laidlaw does not exhaust the enquiry. But he has made a contribution which will help to clearness and sobriety of view on a topic on which there has been such a tendency to exaggeration. On other subjects, too, this book will be serviceable in liberating the forms of Christian doctrine from an association with the *dicta* of dominant philosophies, which has been harmful to their true character and inconsistent with their concrete and practical presentation in the Scriptures.

S. D. F. SALMOND.

Gertrude Coldbjørnsen. Novelle af A. O. E. Skram. (Köbenhavn: Hegel.)

THIS is a novel by a new hand and in a new manner. It is not merely interesting on account of its intrinsic merit, but it marks a starting-point in a direction hitherto untried in Denmark. The school of Walter Scott, which resembled the master very much as Mrs. Norton resembled Byron, has lingered on in Scandinavia long after its decease elsewhere. In the last generation, Ingemann

lifted it to its highest pitch of romantic innocence; in our own, Ewald has surpassed all his fellow-disciples in laborious antiquarian triviality. A few years ago J. P. Jacobsen recalled Danish readers to a juster treatment of historical romance in his remarkable story *Fru Marie Grubbe*, and now Herr Skram has adopted a similar method in a work of domestic fiction. The originality of the novel before us is due less to its story—which, as is often the case in books by new writers, is simple and a little thin—than to its style and intention. The adventures of Gertrude are few and almost commonplace; it is the analysis of her emotions which interests the reader most. The book is a psychological and social study, and more closely resembles *Griffith Gaunt*, the best of Mr. Charles Reade's many excellent romances, than any other novel known to me. It is the remarkable force with which the portraits of three or four figures have been drawn, and the true life and fire put into their actions, which raises *Gertrude Coldbjørnsen* above the rank of commonplace stories, and gives us reason to look forward anxiously for a second book from this new writer.

The outline of the story is briefly given. A famous lawyer, Mr. Feddersen, falls in love, in middle age, for the first time, with a lovely girl of seventeen, Gertrude Coldbjørnsen, whose father and aunt, two aged persons, have brought her up in utter ignorance of the world. Armed with his great reputation, Mr. Feddersen ventures to ask Mr. Coldbjørnsen for his daughter's hand, and Gertrude, ignorant of what love really is, consents to marry him. He is very kind to her during their engagement, and contrives to amuse and please her. But they go away into the country to stay at a house where they meet a brilliant young painter, Mr. Fabricius, and, without their being conscious of it, Gertrude and Fabricius become absorbed in one another. Fabricius comes first to his senses, but, considering that Feddersen is quite unfitted to comprehend Gertrude, he feels it a sort of duty to try and break off the engagement. However, they return to Copenhagen, and see no more of one another until one day they meet, and he asks her to visit his studio with a friend of hers. In this way the acquaintance is renewed. But meanwhile all preparations for Gertrude's marriage with Feddersen are being pushed forward, and Fabricius is in despair. Then suddenly the war with Germany breaks out, and Fabricius is ordered off to Jutland. He comes to Gertrude, insists upon a private interview, and declares his love with all passion and insistence. She accepts it at once—having long secretly loved him—and then they part, promising to write to one another. But the aunt persuades Gertrude that she has acted very wickedly, refuses to let her see the letters of Fabricius, and dictates a letter to him forbidding him to write. Gertrude is then married to Feddersen, but runs away from him, back to her father's house, the day after the wedding. She is persuaded to return, and a change seems to come over her whole character; she becomes frivolous, exacting, and "fast." Meanwhile, the war is raging, and Fabricius lies in hospital grievously wounded, and crying, in his delirium, for Gertrude. She and her hus-

band are persuaded to come down to the camp, and Gertrude goes to see Fabricius in the sick ward. His delight at recovering her is changed into an agony of rage when he finds the wedding-ring upon her finger. He starts up in bed, and breaks a blood-vessel while he is cursing her for her infidelity. She is taken away more dead than alive, and positively refuses to see her husband any more. Some old friends take her back to Copenhagen, and Fabricius is carefully nursed and recovers. He marries a kind, motherly sort of girl who has tended him, while Gertrude obtains a legal separation from her husband and lives in seclusion. Fabricius and Gertrude meet once more, later in life, and are surprised to find themselves become almost indifferent to each other, and by no means inclined to repeat the stormy complications of their youth.

Herr Skram succeeds best in depicting critical situations. His narrative is occasionally a little tiresome, but we wake up when he gives us such scenes as the visit of Feddersen when he comes to ask Gertrude's hand in betrothal; or the walk taken by Fabricius and Gertrude round and round the garden, where the girl puts such embarrassing questions about love and duty to the painter; or, best of all, the secret interview between Gertrude and Fabricius on the night of the declaration of war, a scene which is imagined and carried out with consummate skill and sympathy. On the other hand, the author is sometimes awkward and even ludicrous in his attempt to be extremely subtle or extremely realistic. One case of this kind, which has given great scandal in Denmark, is the scene in which a picnic is disturbed by the advent of a group of hussars who bathe in the lake below, at which vision all the persons of the picnic take to flight, except Fabricius and Gertrude, who stay to appreciate the aesthetic value of the composition. Even this shows more youthful rebellion against conventional prudery than positive want of literary tact, and perhaps Herr Skram had been reading his Walt Whitman. Of more importance is a tendency to language which, if a foreigner may judge, seems occasionally affected, and a too great fondness for such exotic forms as *dekorationen*, *akkompagnement*, and *koketteri*. These barbaric words are, of course, creeping into general use in Danish society, but it would be well to exclude them from book-language as long as possible.

EDMUND W. GOSSE.

SCHOOL BOOKS.

An English Grammar for Beginners, by H. Courthope Bowen (C. Kegan Paul and Co.), being colloquial in style, is suited especially to middle-class schools, or, indeed, to any pupils of twelve or fourteen. Punctuation is well done, and compound and complex sentences well distinguished, as are the two meanings, so often confused by the beginner in Latin prose, of such a word as *ruling*, though a good opportunity of doing the same for words like *after*, which are both prepositions and conjunctions, has been missed. The chapters on inflection would have been improved by a hint as to its origin, and, to come to details, we protest against such a plural as *terminuses*, and the needless disguise of possessive adjectives as demonstratives. The book might be shortened

by the omission of the nineteen classes of words which are mentioned only to be replaced by the usual eight, and it might be added that a sentence can consist of one word if that is imperative.

Of an *Elementary English Grammar*, by O. W. Tancock, now head-master of Norwich School (Clarendon Press Series), about four-fifths are devoted to accidence, and there is a very good collection of exercises on both accidence and syntax. The book has the advantage of being in large and small print, which extends its usefulness. The section on transitive and intransitive verbs is good, as is that on *shall* and *will*. So much space is devoted to tables of declension and conjugation that the book might be tried in India.

Grammar through Analysis, by G. F. K. Sykes (Daldy, Isbister and Co.), consists of lessons actually given orally. Their publication is less likely to educate pupils than teachers, who will find admirable models of brisk lessons, sure to catch the attention of children from nine to twelve years old. It is, however, wrong to treat the verb-noun after the gerund, and then say we are using the verb in quite a new manner. The last two chapters are far beyond most pupils of the age for which Mr. Sykes writes.

The Beginner's Drill Book of English Grammar, by James Burton (Rivingtons), takes first analysis of simple sentences, then inflection, then complex sentences, with a few pages on the alphabet. The list of plurals of irregular and double nouns is unusually full and accurate, and indirect objects are well done, though we do not care for the use of such Latin-grammar terms as dative objects; but Mr. Burton does not pass by such constructions as cognate objects and absolute clauses. He assigns the confusion in English spelling to the six superfluous letters—o, j, g, x, y, w—and he would, we presume, spell jam *dzham*, and wicks *usticks*. The book is, however, vigorous, but the ascent over which the author leads his pupils is too steep for average boys.

We hardly know to what class of students we could recommend Mr. C. D. Yonge's *Short English Grammar* (Longmans). In spite of this professed brevity we find Caesar and Agricola, Hengist and Ida, Shakspeare and Hooker, figuring in the first twenty pages. There is nothing to be gained by declining English nouns with six cases, the fallacy being exposed on the next page, where to *Paris* is called an accusative. The only part we like is the chapter on Prosody. The rest is verbose and unmethodical.

A Shorter English Grammar, by C. P. Mason (Bell and Sons), contains an immense amount of compressed knowledge. It is better suited to Civil Service candidates than to boys and girls; but its arrangement in large and small type, with numbered sections, makes it easy to select parts of the book. We prefer the etymology to the rest of the work. It gives Anglo-Saxon declensions and conjugations, yet condescends to the plurals and possessive cases of complex names—the *Miss Smiths* being defended against their more prim title—and it traces the feminine suffix *ess* to Greek *-issa* and *-essa*, though we have found nothing as to the date of the word *its*; but *lists*, *worth*, *needs*, *hight*, and *dight* are not omitted, nor the formation of such adverbs as *whilom*, *piecemeal* (Anglo-Saxon *maelum*, by portions). There is also a useful list of compound nouns, one element of which has become obsolete, and, in an Appendix, are grouped miscellaneous words from foreign languages, though some of the Hindustani words are indeed half-caste—e.g., *toddy* is merely an English corruption of *tūrī* from *tār*, a palm, and punch is from *pachlonā*. The analysis of sentences does not seem to be simplified by Mr.

Mason's elaborate system of underlining, and too much space is given to elliptical sentences. A good Index would much improve this book.

The Advanced English Grammar (Laurie's Series) contains quite as much as the ordinary student of seventeen will take in, and, in about a hundred pages, includes Anglo-Saxon declensions, a good many well-chosen derivations of words in common use, with simple rules for the use of each part of speech, not massed together, but following each part of the accidence. There is also a simple system of analysis, but we think the tabular system attempted on p. 94 somewhat confusing, though not more so than the "tree of the one speech."

A Brief History of the English Language, by James Hadley, Professor of Greek at Yale College (Bell and Sons), is merely a reprint of part of the Introduction to *Webster's Dictionary*.

Mr. J. ROBERTSON, late Lecturer in Glasgow Training College, has produced an *Analysis of Sentences* (Murby), price one penny, which really contains enough work for a middle-school form for one term, but his tabular analysis of complex sentences is far from clear.

We consider that Mr. W. M. Ramsay's *Analysis of Sentences* (Whitaker) is quite the best text-book on the subject which we have yet seen. It is brief and simple in language, but on phrases, complex and subordinate sentences, Mr. Ramsay's teaching is plain and complete. On the latter his examples are very happy—"You know where I am going—You know the place where I am going—You cannot come where I am going." Perhaps he is not quite so successful with the infinitive mood, where he might emulate the terseness of *The Public School Latin Primer*, nor with such peculiar expressions as "You had better do this," of which the simplest explanation is that *you'd*, i.e., you would, has been wrongly lengthened into *you had*.

We fail to see why Messrs. Collins should have been sponsors to such twins as the Grammars by the Rev. A. M. Trotter and Mr. T. Morrison. The weakling of the pair is the former, which, though so hypercritical as to object to the phrase "the then king," is so inaccurate as to say that *bowels*, *morals*, and *compasses* have no singular, to make *so that* a co-ordinate conjunction, and to assume that "we met the boy who told us the story" must mean "we met the boy and he told us . . ." But each book has a useful chapter on figures of speech, and Mr. Trotter gives an amusing list of Scotticisms, omitting, however, to tell us what he has to his tea; while Mr. Morrison's most original point is an exercise on the combination of given elements into compound sentences, the inability to do which distinguishes a child's letter from a man's.

MESSRS. SAMPSON LOW AND CO. have imported from Harvard the *Principles of Rhetoric* by Prof. A. S. Hill, which is entitled to a more full notice than space allows. Less than a third of the book is devoted to rhetoric proper, the best chapters being those on arguments by sign and on persuasion. But Mr. Hill is more amusing on solecisms and improprieties of style and diction. Few writers escape. Mr. Freeman's general correctness in style does not excuse some inconsistencies in classical spelling, while Anthony Trollope, Miss Austen, the (London) *Spectator*, Swift, George Eliot, Sir G. C. Lewis, Charles Reade, and even Macaulay appear in Mr. Hill's black-book. Of commoner errors he marks *demean* as being derived from French *demener*, and having nothing to do with *mean* (perhaps there are two words, the younger of which has ousted the elder); *verbal* as not synonymous with *oral*, but including written words; the vulgar use of *transpire* for *happen*, though he is wrong in inferring that French

transaction never has the meaning of the English word, and absurd in objecting to the fairest of her daughters Eve, which is, of course, merely an imitation of prolepsis. He is as severe upon Americans as upon English: "We are at peace with all the world, and maintain relations of amity with the rest of mankind" (Pres. Taylor's Message to Congress, 1849); and he cannot reconcile himself to *casket* for coffin, nor *sample-room* for a drinking-bar, nor to such an *affiche* as "pianoforte taught and tuned," but "Boyle the father of chemistry and brother to the Earl of Cork" is rather a Joe Miller. For an ironical anti-climax he goes to *Middlemarch*, where the date of Mr. Casaubon's marriage is fixed as being when George IV. was King, the Duke of Wellington Prime Minister, and Mr. Vincy Mayor of Middlemarch.

MR. UNGER'S *English Orthography* (Trübner) consists of two hundred lists of long words strung together almost hap-hazard, and, being based on no principle whatever, is not likely to remove any difficulties. The riding-master does not begin by taking the recruit to see all the vicious horses in the regimental stables.

MR. LAURIE'S *New Manual of Spelling* is much more likely to be useful in schools, and, if the two parts were sold separately, the second would help candidates for Civil Service examinations, for whom also is intended Hunter's *Indexing and Précis of Correspondence* (Longmans), which consists of five sets of parliamentary papers on well-known subjects, with index and *précis* subjoined, followed by nine other sets as exercises. The book would be improved by criticism upon the specimen indexes and *précis*, so as to let the student see wherein excellence in such work consists.

WE have also received *Shorthand for General Use*, by Prof. Everett (Marcus Ward). The advantage claimed for this system is the insertion of vowels at the time of writing, so as to obviate the necessity of going through the copy a second time.

The Merchant of Venice and *Julius Caesar* have been annotated by Prof. Meiklejohn of St. Andrews (Chambers). It may be difficult to say anything new in the introduction to such a play as the *Merchant*, but there seems more than a chance resemblance between Prof. Meiklejohn's remarks and those of Prof. Dowden in the *Shakespeare Primer*, the cheapness and excellence of whose introduction to the whole makes introductions to school editions of particular plays quite unnecessary. Again, many of this editor's notes upon one play are mere reproductions of those on the other. Inaccuracies are not wanting, *quaestum* appearing as the supine of *quero*; no one need be told that *truth* often means honesty, nor the meaning of *spurn*, and of *piece it out*, while a note on *breed for barren metal* would have been improved by a hint as to *rékos*, and the *martlet* is called a kind of swallow instead of a diminutive of martin; *cater-cousins* is possibly fourth cousins, and the word "cater" may come from the messes of four as still kept up in the Inns of Court; while nothing is said as to the derivations of *hearse* and *napkin*, nor is "mantle like a standing pool" compared with Gray's "mantling in the goblet," though we are told that the late Earl Russell always said Boom for Rome, and the derivation of *reek* from German *rauch* (smoke) is well illustrated by Auld Reekie, and Reikiavik (Smoke Town).

THERE are three new editions of Milton, *L'Allegro*, *Il Penseroso*, and *Lycidas* being done by Mr. E. Storr—an Indian civilian (Rivingtons). The biography is too heavy for school purposes, but the notes are complete and accurate, though "fontesque lymphis obstreperant manentibus somnos quod invitet leves" from the Epodes might have been quoted as having possibly

suggested "the waters murmuring entice," &c., while the note on junket (from *juncus*, the rushes on which cream cheeses are laid) would have been improved by mention of the verb to junket, and it is a far cry from *lap* to *envelope* without allusion to the root *wlap* ("He was wlapplid in a sack"), whence Italian *involupare*, French *envelopper*; and nun is derived from Italian *nonna*, grandmother. The notes on "as some sages sing" and on dearest *pledge* (cf. *pignora*, children) are good, as is the contrast between not unseen in *L'Allegro* and *I walk unseen* in *Penseroso*.

THE *Samson Agonistes* of Collins' School Series, price fourpence, fulfils at least one requirement of modern school books. It is well printed, and contains nearly twenty pages of notes, with, however, too few derivations, which are often omitted when they would have filled an unfinished line, nothing being said of *thrall*, *craze* (though "craze their chariot-wheels, from *Paradise Lost*, is quoted, where the word is very near the simple sense of crack), while *blab* is compared with a German word, and not with the English *blab*, *blubber-lip*; and it is needless to call attention to a phrase as wanting a verb (line 474).

THE edition of *Comus* by Messrs. B. M. and D. F. Ranking (Hackney: West) is disappointing. The three essays on the Masque and on *Comus* are pointed and as original as could be, but the notes and parallels, of which the latter are far too numerous for a school book, are by no means so good. For instance, nothing is said on *pert* fairies, *spets* her gloom, *single darkness*, *long levelled rule* of streaming light (*ἡλίου κέντρον*), nor *purified scarf*, nor on the derivations of *urchin* and *julep* (? Arabic, *jullab*, a purge; not *gulab*, rose-water).

MR. F. STORR prefixes to his edition of Gray (Rivingtons) very good hints as to the method of an English literature lesson for boys, and for introduction reprints Johnson's Life of the poet, with notes of his own, and he appends a dozen of Gray's letters, considering him the best of English letter-writers. His notes are well spoken of by those who teach from the book, but to quote Petrarch in the original to boys only encourages them to skip; though, on the other hand, it must be said that Mr. Storr is often very happy in suggesting lines of thought by means of occasional questions for boys to consider for themselves. To his note on "still *hail* she gazed" might be added as illustration, "Me truncus illapsus cerebro sustulerat;" but the edition is far better than Mr. Laurie's (both are shilling books), the latter being spoilt for school purposes by foot-notes. Mr. Laurie's illustration of *madding*, "Paul, thou maddest," from Wickliff's Bible, is better than Mr. Storr's, which is made up for by the latter's "stemmata quid faciunt" for "the boast of heraldry," and Mr. Laurie says nothing on *characters* (which might also be illustrated by the metaphorical use of *παράσημος*), nor on *Taliessin*.

MR. LAURIE'S series includes an edition of Parnell's *Hermit*, with a good short Life, but with foot-notes again. The poem will hardly bear the weight of notes necessary for book-making. To quote a most superfluous note—"Ivory.—The use of ivory was a mark of luxury among the Romans, e.g., Horace, *Odes*, ii. 18. Non ebur . . . lacunar." And, again, on *thy fellow-servant* I he inflicts upon us a verse from the Acts; and upon *bursts the bands of fear* is hung a note of ten lines. *Deceives the road* might well be illustrated by Horace's *laborum decipitur*. Of forty-five pages sixteen are occupied by advertisements.

GOLDSMITH'S *Traveller* has been done by Mr. H. Littledale (Dublin: Ponsonby). His foot-notes are in the form of question and answer, for which we can see no good reason, and they

are of the most feeble kind. He tells us that temples had no spires (but Goldsmith did not say that they had), and that *wave* means water; and Mr. Littledale's frequent geographical notes are, as far as boys' memories are concerned, strung together, we fear, with "fruitless skill," or, as he paraphrases it, "unavailing knowledge."

MESSRS. LONGMANS are publishing a series edited by Messrs. E. T. Stevens and D. Morris. *Cowper's Task, Book I.*, has an excellent introduction, not too long, but, as the notes are printed below the text, the books could not be used in school. From its great variety of topics the *Task* makes a more interesting reading book than the *Hermit*, for instance. The notes in this edition are usually accurate and complete; indeed, we have looked in vain for scarcely one derivation. This book costs ninepence, but the same series contains *The Ancient Mariner* at fourpence, the notes to which are equally good.

SOUTHEY'S *Life of Nelson* (Rivingtons), by W. E. Mullins, has for frontispiece a plan of the *Victory*, with key, describing nearly two hundred parts of a man-of-war, while no naval terms which occur in the text are passed over by the editor, who explains "vail topsails" and "mizen chains" with as much ease as "Greek fire" or a "pasquinade." The Caraccioli affair is elucidated by a reference to the "despatches," to which source Mr. Mullins goes for an account of the circumstance of Lady Nelson's leaving her husband. Bright's History is referred to throughout for the politics of the time.

MR. H. O. BOWEN is editing *Simple Poems* in four parts (O. Kegan Paul and Co.), of which two are before us. His Introduction might well be studied by teachers who find English lessons difficult or unsatisfactory. The selection includes Blake's "Dream," Tennyson's "Brook" and "Dora," "Ohevy Chase," the "Pied Piper," and "Hart Leap Well," so there is no fear of dullness, and the notes seem just what is wanted. For example, in "John Gilpin" there are good notes on *trainbands*, *calender*, *guise*, in *merry pin*, and from those on "Dora" most people would learn something, for they are full of feeling, and bring out all the little points, yet are as simple as the poem itself. But the series does not appear progressive, and it is better suited for boys of twelve or thirteen than of ten, which is the age for which Mr. Bowen writes.

FOR younger children Messrs. Chambers have two Primers and two Readers, edited by Prof. Meiklejohn; and Mr. Murby has an Imperial Primer.

The Student's Reminder, by Thomas Marsh, "Private Tutor" (Stevens and Haynes), professes to teach everything from geography to Spanish grammar. To do this in seventy pages recalls the feats achieved by a certain private tutor at one of the universities, who can cram a man in seven weeks either in Greek, Botany, Law, Theology, or Mathematics. Upon examining a few of Mr. Marsh's subjects we find that his teaching is not up to modern standards, and that there is little or no method in his work. Geography is taught by a string of names and figures, an inaccurate description of Bombay is cut short to make room for four lines on the Habeas Corpus Act, which gives way before an addition table. If competitive examinations have brought us to this, we could almost endure to return to the old order of things.

SOMEWHAT of the same type is a *Handbook to the First B.A. Examination in the London University*, by a Private Tutor (Manchester: Heywood). But though its ultimate aim is the conquest of examiners, it contains useful specimen papers, lists of text-books, and some

honest teaching on various subjects, especially on mathematics. The book concludes with good advice to candidates as to punctuality and management of time in the examination hall.

MUCH sterner is the *Student's Handbook to Cambridge*, by A. P. Humphry, Esquire Bedell (Deighton), upon which we need only remark that it is difficult to keep pace with Cambridge reforms. Nothing is said, however, about the exhibitions granted to needy students by some of the London companies.

THE National Society's "Manuals of the Science and Art of Teaching" (Advanced Series) include *English Literature, Mechanics*, and, in two branches, *Domestic Economy*. In the first of these a rough, but accurate, sketch, with a chart, of the growth of English literature is intended to guide the teacher in the selection of pieces for his pupils, and to guard him against errors and anachronisms in his explanations. The editor is an enthusiast, and some of his fire will be caught by any reader, while his few specimens are certainly not commonplace. For three contemporary religious authors he selects Newman, Pusey, and Lightfoot, the Dean of Westminster acquiring fame as a traveller along with Kinglake, and as the only biographer worthy of mention. Among late religious writers F. W. Robertson might well have been included. The manuals on *Domestic Economy* are most amusingly practical. That on *Food* is not so simple as it might be.

MR. G. O. ASPLET has brought out a *Complete French Course*. Its completeness is somewhat disguised by its want of arrangement. For instance, *lequel* and its cases are concealed between *y avoir* and some good idiomatic rules about time and hours, while patient search has failed to discover any rule about the gender of past participles.

How to teach and learn Modern Languages successfully, by Francis Lichtenberger (Newman and Co.), is a book which is neither original nor useful. Everyone concerned in the teaching of French knows how English teachers have, in many cases, superseded Frenchmen, and the causes need no explanation. Nor will any who are trying to improve their teaching find any practical hints here either for themselves or their agents. The author's most original remark is that the mere breathing of Parisian air will not inspire anyone with the French language, but his only alternative is life in a school. He says nothing of such well-known aids to learning French as the performances at the Théâtre Français, the play having been previously well read; nor does he mention any of the lectures to which English students can gain access, nor does he put the stranger into the way of obtaining a really good teacher in Paris. He would probably be surprised to learn how many English graduates have, solely for teaching purposes, perfected themselves in modern languages within a few years after leaving college.

The German Declensions, by J. Eisner (Williams and Norgate), contains nearly two hundred pages of useful accidence, including the adjectives and pronouns, with a synopsis of weak and strong verbs.

MR. HUNTER's last contributions to English school books are Pope's *Essay on Man*, Milton's *Arcades and Sonnets*, and a "Study" on *Julius Caesar* (Longmans). The notes in the two former are printed below the text. His illustrations and notes are always good.

OF Blackie's "Comprehensive School Series" the most important books seem to be the *Biographic Reader*, including selections from some of the best English writers. For Prince Albert and Lords Russell and Derby, the editor has gone to the *Times*, while Taine is drawn upon more than once; Sir A. Helps supplies Dickens and

Kingsley, and Macaulay, De Quincey, Carlyle, Guizot, Emerson, Hazlitt, and many others, appear either as artist or sitter, or both. We have also in the same series *Myths and Legends of Greece and Rome*, a *Shakespeare Reader*, and books on Algebra, Arithmetic, Geography, and English History.

NOTES AND NEWS.

MR. THOROLD ROGERS, M.P., is printing for the Delegates of the Oxford University Press a volume of extracts from the great Lincoln College MS., "Gascoigne's Liber Veritatum." These extracts will put in a perfectly new light the condition of England in Church and State during the darkest period of English history, the first half of the fifteenth century, and especially for the few years immediately preceding the civil war of the Succession. Gascoigne's MS., which is in two folio volumes, double columns, of about seven hundred pages each, deals primarily with theological topics, but the writer was a very keen though orthodox observer of events which came before him in his own times. The MS. was examined by Anthony Wood and Hearne, but chiefly for Oxford notes. It will be remembered that Gascoigne is almost the only authority for the facts of Pecok's trial and deprivation. But his notes are invaluable as illustrating the state of things which preceded and indeed brought about the Reformation in North-western Europe.

FATE seems to work against the publication of some volumes. This is especially true of the long-projected *Dictionary of Anonymous and Pseudonymous Literature of Great Britain*. Such a work was suggested a century ago in the pages of the *Gentleman's Magazine*, but no steps were taken in the matter until Mr. Halkett, of the Advocates' Library, undertook collecting the materials about the year 1852. At his death the matter which he had diligently culled from a variety of sources came into the hands of Mr. T. H. Jamieson and the Rev. John Laing, the latter being the librarian of the New College Library at Edinburgh. Mr. Jamieson was cut off at an early age, and his partner was left alone to plod on industriously at the Bodleian and other libraries without any coadjutor. Mr. Laing had with great pains collected the titles of many thousand volumes, and would soon have brought them into a state fit for printing, but for some years he had been in declining health, and now his death is announced. Has any other literary antiquary the courage to take up the task of superintending the publication of the volumes?

The New Parliament is the title of a work by Mr. William Saunders to be published early in May by Messrs. Cassell, Petter, Galpin and Co. Among its prominent features will be a history of the Dissolution, special biographies of new members, and election incidents.

THE increasing number of Spelling Reformers in England and America and on the Continent has created a desire among the members of the various associations for some means of strengthening the bond of union. There is some talk of an International Congress of Spelling Reformers to be held in London or on the Continent in the autumn.

MR. EGMONT HAKE, the author of *Paris Originals*, is, we understand, at work upon a volume of stories to be called *Flattering Tales*.

MESSRS. PECK AND SON, of Hull, will soon have ready an important local work entitled *Memoirs of the Life of Master John Shawe, sometime Vicar of Rotherham, afterwards Minister of St. Mary's Church, Lecturer at Holy Trinity Church, and Master of God's House Hospital (the Charterhouse), at Kingston-upon-Hull*, written by himself in the year

1663-64. The work has been carefully collated with the original MS. in the British Museum, and elaborately edited by the Rev. J. R. Boyle. All the valuable topographical and biographical information contained in the notes of the late John Broadley, Esq., F.S.A., has been embodied in the Notes and Appendices to this edition. Exhibiting a genuine picture of Old Hull at the interesting period of its siege, and describing the stirring events of English society in the times of Charles I. and the Commonwealth, Master Shawe's book has ever been a favourite with the fortunate few who have enjoyed its possession. The former edition (1824), having been printed for private distribution only, has become excessively rare.

WE drew attention some weeks ago to the *Treasury of Ancient Arabian Poetry* which Mr. W. A. Clouston, of 137 Cambridge Street, Glasgow, contemplated publishing. He has since determined to enlarge his scheme by including in the compilation a selection from the poetry found in the English translation by Terriek Hamilton of the Bedouin romance of *Antar*. It will also contain some of the passages of the *Moallakat* which have been imitated in English verse. Most of the copies of Mr. Clouston's *Treasury* have now been subscribed for.

ON Tuesday, April 20, under the special rule relating to "persons of distinguished eminence in science, literature, or art, or for public services," the committee of the Athenæum Club elected Sir John Strachey, G.C.S.I., Mr. Lewis Morris, the poet, and Mr. John Whitaker Hulke, F.R.S., the eminent anatomist and palaeontologist.

THE first edition of M. François Lenormant's book, *Les Origines de l'Histoire d'après la Bible et les Traditions des Peuples orientaux*, was entirely exhausted in less than a fortnight. A second edition is in the press, to appear on May 10.

M. ZOLA and his pupils have just published jointly a volume of novelettes entitled *Les Soirées de Médan* (Charpentier). Médan is the name of the village near Paris where M. Zola has a country house.

PROF. EDWARD WOELFFLIN, the well-known student of vulgar Latin and author of a comprehensive paper on "Lateinische und romanische Comparation," has been lately called from Erlangen to Munich University.

MESSRS. SAMPSON LOW AND CO., who are now publishing Mr. William Black's new novel, *Sunrise*, will also publish Mr. B. D. Blackmore's new novel, *Mary Anerley: a Yorkshire Story*, very shortly.

PROF. SCHIPPER, of Vienna, is preparing an historical and scientific treatise on English metre, which will appear in two parts, each comprising about fifteen sheets. The first part, treating of the Anglo-Saxon and Middle-English period, is in the press.

IT is proposed to hold an Exhibition and Market of Machinery, Implements, and Material used or sold by Printers, Stationers, Papermakers, and Kindred Traders at the Agricultural Hall from July 5 to July 17. A copy of every newspaper published in the United Kingdom will be exhibited, and any profits resulting will be handed over to the Printers' Pension, Almshouse, and Orphan Asylum Corporation. Mr. Robert Dale is the secretary and manager.

MESSRS. HACHETTE are publishing, in parts, a new edition of Vapereau's useful *Dictionnaire des Contemporains*, which will contain the alterations rendered necessary by the events of the last ten years. The editor and publishers will be glad to receive any communications or suggestions tending to promote the efficiency of the work.

AN interesting address recently delivered before the members of the Hull Literary Club, by the president (Dr. Fraser), on "Clubs," giving particulars of the most famous of those of England, Scotland, and Ireland, will shortly be issued in book form.

MR. CASHEL HOEY'S novel, *A Golden Sorrow*, has just been added to Messrs. Sampson Low and Co.'s series of six-shilling novels.

THE Rev. Alfred J. Church has been appointed Professor of Latin in University College, London.

PROF. FAUSTO LASINIO will shortly publish a memoir on *Italian Words derived from the Arabic*.

MR. J. B. GOOD has just published at Victoria, British Columbia, a *Vocabulary and Outlines of Grammar of the Nillakapamuk, or Thompson Tongue*, the language spoken by the Indians between Yale, Lilloet, Cache Creek, and Nicola Lake, to which is added a phonetic Chinook dictionary, adapted for use in the province of British Columbia.

A MEETING will be held at Regent's Park College on Wednesday next to inaugurate the "Angus Lectureship Fund," towards which the sum of £2,000 has already been contributed. The lecturer is to be a minister or a member of the Baptist denomination, or occasionally of some other religious body, and he is to hold the appointment for not less than two years and not more than three. The subjects chosen are to be at the discretion of the lecturer, subject to the consent of the council. This lectureship is founded chiefly to preserve in remembrance the name of the Rev. Dr. Angus, Principal of Regent's Park College, and one of the New Testament Company of Bible Revisers. Dr. Angus is also the author of several theological and miscellaneous works.

Communism and Socialism: their History and Theory, is the title of an opportune new work, just ready, by Theodore D. Woolsey, President of Yale College. It will be published by Messrs. Sampson Low and Co.

THE Imperial Academy of Sciences of St. Petersburg has lately published a *Zirian-German Dictionary* compiled by F. Wiedemann. A Zirian, G. S. Luitkin, has written to the *Novoe Vremya* to complain that, although the Academy has long been in possession of the MS. of a Zirian-Russian Dictionary by N. P. Popof, it has never made it public, but has allowed M. Wiedemann to make use of it for the benefit of a work which is to the great majority of Russians useless. The Zirian language, one of the sections of the Permian division of the Finnic class, has hitherto been somewhat neglected. A Zirian version of the Gospel of St. Matthew was made, rather more than half-a-century ago, by a priest named Shergin, and published by the short-lived Russian Bible Society. This translation has been revised by M. Luitkin at the request of our own Bible Society, but his work has not yet been published. The Zirian-Russian Dictionary, to which N. P. Popof had devoted the labour of ten years, was offered by him to the Academy of Sciences in 1846, returned to him for revision accompanied with notes by Sjögren, and a second time offered by him to the Academy, enriched by the fruits of his studies during ten years more. The only result, says M. Luitkin, has been the benefit which may have accrued from it to the Zirian-German Dictionary of M. Wiedemann. The Academy probably considers that it deserves the thanks of foreign linguists for having made its Zirian Dictionary generally accessible. But M. Popof seems to have been unfortunate.

A CORRESPONDENT writes:—

"*Ruskin's Sheep-Folds* is not the only book that

serves as a stumbling-block to cataloguers, as may be seen from the following extract from the Index to the English Catalogue for 1878:—

'Cricket, Base Ball, &c., by Planché, &c.
Field, Curious Adventures, &c.
Marylebone Scores and Biog., &c.
Scoring Book, &c., &c.'

No. 2 is, of course, *Curious Adventures of a Field Cricket*, and has nothing to do with either Lord's or the Oval."

IN the course of last month the annual meeting of the learned societies of the provinces took place in Paris. A considerable number of important works bearing on general history or the history of France were read by their authors. We may particularly mention the *Essai sur les Etats provinciaux du Périgord*, by M. de Montégut; that of M. Bandel on *Les Etats du Quercy*; the new studies on Communes, by M. Fierville; the *Histoire des Démêlés entre Louis XIV. et la République de Genève*, by M. Combes (from the Geneva archives); M. d'Aussy's study, entitled *Henri de Rohan en Saintonge (1611-20)*; and, finally, a *Chapitre de l'Histoire des Communes de la France aux Echelles du Levant et en Barbarie*, by M. de Grammont. The meeting closed with a speech by M. Ferry, Minister of Public Instruction, in which he dwelt on the suggested reforms in the subjects now included under secondary education in France. The current is setting strongly in the direction of a simplification of programmes, and of giving greater importance to history, to physical science, and to modern languages; while the study of ancient languages will be curtailed, and Latin prose and verse will lose the preponderance which they have hitherto possessed.

WE have received *The Social and Political Dependence of Women*, by Charles Anthony, jun., fifth edition (Longmans); C. H. May and Co.'s *Press Manual, 1880* (78 Gracechurch Street); *The Sunday School Gift*, by the Rev. C. Bullock, new edition (*Home Words Publishing Office*); *The Buried City of Jerusalem: a Sermon*, by the Rev. James King (Stanford); *The Anglers' Diary for 1880* (*Field Office*); *Lamartine and his Friends*, by Henri de Lacretelle, trans. Maria E. Odell (New York: G. P. Putnam's Sons); *William Ellery Channing: a Centennial Memory* (Boston: Roberts Bros.); *The Irish Question*, by the Earl of Dunraven (Stanford); *De Civium Atheniensium Muneribus eorumque Immunitate*, scripsit V. Thumser (Wien: Gerold's Sohn); *Les Juifs de la Roumanie*, par T. Georges Djuvara (Paris: 48 Rue Gay-Lussac); *Notes on Prisons*, by G. R. Vickers (Cambridge: Macmillan and Co.); &c.

MAGAZINES AND REVIEWS.

IN the current number of the *China Review* Mr. Watters continues his criticisms on the translations, by Beal and Giles, of Fa-hsien's travels. Neither translator finds favour with him. With both he has fault to find, and many of his suggested readings are valuable as corrections. But the tone of his criticisms is certainly not all that could be desired. To call Mr. Beal an "old sea-priest," in reference to his past services as naval chaplain, is not in good taste; and to speak of one of Mr. Giles' notes as "muddy" may be descriptive, but the expression is not one usually found in English journals. With reference to the quarrel between China and Japan on the Liuchiu question, Mr. Allen contributes a short and explicit history of the relations existing between those islands and China from the year 610 down to the present day. Mr. Macintyre's "Notes on the Korean Language" are interesting, but the title is somewhat misleading, and might more appropriately have been "Notes on the Sinico-Korean Dialect," since the texts he deals with are but transliterations

of Chinese works with Korean case and tense suffixes attached to mark the grammatical value of each Chinese word. Mr. Hirth's "Notes on Chinese Grammar," which are continued in this number, are carefully prepared, and by beginners in the study of the language will doubtless be found useful. Mr. Kingsmill contributes a paper on the ancient geographical names in Central Asia, which embodies some of his well-known views on that subject.

WE offer a cordial welcome to a new periodical devoted to the science of religion, entitled *Revue de l'Histoire des Religions*. The first number has just appeared, under the editorship of M. Maurice Vernes, who is assisted by a number of eminent and well-known scholars. If the numbers that follow keep up the reputation of the first, the new Review will have a great and well-deserved success. After an introduction by the editor, explaining that all theological controversy will be carefully excluded from the Review, which will be wholly confined to the scientific and historical aspects of religion, M. Bouché-Leclercq has an interesting article on Italian Divination. Then comes an account of Wellhausen's researches into the history of Worship among the ancient Hebrews, the part of them selected for the present number of the Review relating to the gradual absorption of the high places by the temple at Jerusalem. M. Spooner follows with an account of the Religious Monuments of Cambodia; then M. Barth and Maspero sketch in a masterly way the chief results acquired by recent investigations into Aryan mythology and the religion of ancient Egypt. Next come some hitherto unpublished documents on Witchcraft in Switzerland in the seventeenth century, and an article by M. Vinson on the mythological elements contained in the Basque Pastorals, upon which he and Mr. Webster have bestowed so much attention. Lastly, M. Clermont-Ganneau's late publication on the Bowl of Palestrina is reviewed; and the volume concludes with references to articles in periodicals relating to the science of religion, a chronicle of events, and a list of new works bearing on the subject to which the Review is devoted. It is highly satisfactory to find that the science of religion has at length an organ of its own, at once ably conducted and full of promise.

THE April Quarterly Statement of the Palestine Exploration Fund contains a paper on the Tyropoeon Valley; a register of the Rock Levels at Jerusalem; notes on Col. Wilson's paper on the Masonry of the Haram Wall; various minor notes; and two reprinted articles—one on the Colonisation of Palestine, containing details on Mr. Oliphant's well-devised scheme, from the *Jewish Chronicle*, and the other on the Empire of the Hittites, from the *Times*.

THE *Russische Revue* contains an interesting biographical sketch of the late Prof. Franz Anton Schiefner, by F. Wiedemann, who gives a useful list of the miscellaneous writings of that great scholar, more than ninety in number. Of considerable interest, also, is the article on Prof. Samokvasof's investigations of the "Kurgans" and "Gorodishches" of Russia, mounds to the exploration of which he has devoted many years and volumes. It was long a disputed point whether the "Gorodishches" were originally intended to serve as fortified camps or heathen high-places. Prof. Samokvasof seems to have proved by his excavations that they were used as strongholds. The name *gorodishche* is derived from *gorod*, a word which now means a city, but which formerly signified, among other things, an inclosure or an inclosing hedge, wall, or other protection. The "Kurgans," on the other hand, of which Prof. Samokvasof had, up to August 1874, explored no less than 313, are funeral mounds, some of them containing the ashes, and others the

skeletons, of the dead. The oldest and most interesting among them, those connected with cremation, the professor attributes to Slavonic hands, and supposes that most of those which he explored in South-west Russia were raised by the heathen Severians not very long before the introduction of Christianity into Russia.

THE current monthly number of the *Journal des Economistes* contains a careful investigation of the state of manufacturing industry in the United States, by M. Adalbert de Fontpertuis. Of all French economists, M. de Fontpertuis is the one who has most widely studied the material condition and industrial and commercial progress of foreign countries, and English free traders will find encouragement in his account of the results of protection in America. M. Henri Baudrillart's article on "The Economical Condition of the Agricultural Population of Normandy" has also a particular interest for English readers at the present time, in relation to the effects of the subdivision of landed property. He shows that the ownership even of a minute parcel—a cottage and strip of garden, for instance—is a material aid to the labourer, both in the labour market and when out of work. The number contains several other instructive articles.

OBITUARY.

WE regret to announce that a well-known geologist, the Rev. J. Clifton Ward, has suddenly passed away. Mr. Ward was for many years an officer of the Geological Survey, and has left his enduring mark on the rocks of the lake district of Cumberland. Enthusiastic as a worker in the field, he was also a frequent contributor to scientific literature, especially on the subject of the glaciation of his district and on the microscopic structure of its rocks. Mr. Ward was the author of some elementary textbooks on geology and physics, but was perhaps better known as editor of the *Transactions* of the Cumberland Association for the Advancement of Literature and Science. It is not long since Mr. Ward relinquished the labours of a professional geologist and took holy orders. He died at Rydal Parsonage on the 15th inst., leaving behind him a name which will long be remembered in the district for geniality and earnestness, for industry and enthusiasm.

INTELLIGENCE has reached the Société Académique Indo-Chinoise which, it is to be feared, leaves little doubt as to the fate, not only of M. Louis Wallon, but of MM. Jules Guillaume and Courret, the naturalist and photographer with him, who have all been murdered while ascending the River Huela to Achin, in Northern Sumatra. M. Wallon was engaged on a scientific and economic mission in that island, of which he had been directed to study the geography, geology, and natural history. His loss is the more to be regretted as he had already acquired familiarity with the language and customs of the Achinese during a previous expedition in 1876-77, and would, no doubt, have done good scientific work had his life been spared.

As we have already mentioned, Dr. S. Frensdorff, a learned Jewish scholar, whose critical edition of the *Massora Magna* anticipated, but will not supersede, Dr. Ginsburg's forthcoming *opus magnum*, died at Hanover towards the end of March at a great age.

THE death is likewise announced of Dr. Kenealy; of Mr. J. B. Kenyon, Q.C., Vinerian Professor of Common Law in the University of Oxford; of M. Edmond Duranty, author of *Le Malheur d'Henriette Gérard* and other novels, and a well-known writer on art; and of the Rev. Dr. Raleigh, author of *Quiet Resting Places*, *The Story of Jonah*, &c.

PARIS LETTER.

Paris: April 16, 1880.

SINCE my last letter, the great literary event here has been the representation of M. Victorien Sardou's comedy, *Daniel Rochat*. It was published in book form three or four weeks ago, and deserves attention on several grounds. For it throws much light on M. Sardou's talent on the one hand, and on the state of men's minds in France on the other. M. Sardou is, I need scarcely say, with M. Alexandre Dumas and M. Emile Augier, about the most popular dramatic author of our time. He has had brilliant successes, among which may be mentioned *La Famille Benoiton*, a comedy of manners in which he trenchantly satirised the corruption of the wealthy middle class under the Second Empire; *Patrie!* an heroic drama wherein he showed himself capable of making men weep as he had made them laugh; and *Rabagas*, an Aristophanic piece directed against democracy. M. Sardou's success is principally due to his marvellous skill in tangling and unravelling the web of an intrigue. He has no equal in bringing out of a peculiarly complicated situation a *dénouement* alike simple and ingenious. He has no equal in catching the public ear and wakening its attention from act to act by adroit and appropriate imagination. He is the master of second-class comedy, what we call *comédie de genre*; and on this ground no one dreams of disputing the first place with M. Sardou.

But it is just this position with which M. Sardou refuses to be satisfied. A member of the French Academy and universally known, he desires, like MM. Dumas and Augier, to take up social and philosophical comedy, that which conceals a moral while only seeming to amuse, and which maintains some proposition of great national interest. M. Sardou has accordingly looked out among the ideas that are stirring France in our day for the one that would best lend itself to a piece of the kind, and he has had no difficulty in discovering that, through a chain of very widely differing circumstances, the religious question is at the present moment the one of most absorbing interest for a Frenchman. He has therefore chosen as the subject of *Daniel Rochat* the divergence in religious opinion between a married couple, and has undertaken to show what deep distress was brought into their relations by the scepticism of the husband confronting the piety of the wife. It was open to discussion whether such a subject were not more suitable to a novel, but, at all events, it was a serious one, and required to be treated seriously, with great simplicity of means, and, above all, with great psychological skill. But, so far from this, M. Sardou has retained all the processes which he had hitherto employed for his *genre* comedies; he has shown himself, as in his other pieces, ingenious, subtle, adroit, where he should have been thoughtful, serious, and almost severe. The result is a comedy that has pleased nobody, and the more so as, coming out when the struggle over the Ferry Bills was at its height, it gave rise to noisy manifestations on the part of the supporters and the opponents of those measures. The Théâtre Français, accustomed to the discreet applause of an audience of taste, rang with hisses. In a word, the public verdict was unfavourable to M. Sardou; and his friends and enemies alike are agreed in wishing that he may return to comedy without a moral and without pretensions, with nothing but playful wit and delicate observation in its composition, such as he had written hitherto.

I must not leave the subject of dramatic literature without mentioning the recent representation at the Odéon of a tragedy in verse by M. Henri de Bornier, entitled *Les Noces d'Attila* (Dentu). The Odéon is, as a rule, the theatre for beginners. M. de Bornier, however, is not what is called in Parisian literature

un jeune. He gave us at the Théâtre Français a drama which met with considerable success, *La Fille de Roland*. Probably *Attila*, though the second in representation, was the first in order of composition, for it betrays far more inexperience. M. de Bornier has chosen, from among the legends that gather round the death of the famous conqueror, that which represents him as slain by a captive queen, a second Judith, on his wedding night. The drama contains a few very fine passages, but very little that is original. M. de Bornier sometimes imitates M. Victor Hugo's lyric verse, sometimes the harsh and powerful versification of Corneille. Too often he seems to imitate only Ponsard, the correct but ponderous writer who is now so utterly forgotten. Yet the sincerity of the artist, the elevation of his ideas, and even the applause of a sympathetic audience have given rise, since the first representation, to very serious discussions of M. de Bornier's candidature for the French Academy. His candidature would be favourably received by the public, but much less favourably by men of letters, who know that the first three poets of the new generation—MM. Leconte de Lisle, Coppée, and Sully-Prudhomme—are not members of the Academy.

I now come to the great success of the close of the winter, the famous novel of *Nana*, which M. Emile Zola has just added to his long series of studies on the manners of the Second Empire. Opinions have been very much divided on the subject of this book, in which some have seen simply a series of repulsive pictures, while the author's partisans have considered this novel to be one of the most powerful pieces of analysis which have appeared for a long time. It is not my duty to take a side on this point, but I should like to place accurately before the eyes of the English reader the reasons which have induced M. Zola to give this minute description of Parisian vice. The school to which he belongs, and which he has himself called the naturalistic school, makes Balzac's ideas its starting-point. That great writer, full of the natural sciences, sought to introduce their exact methods into the novel. He wished his work to be a history of the manner of his time, full of true details of circumstantial information, so that in a later age it might be possible, with the aid of his works alone, to reconstruct the entire system of private life in the nineteenth century in France. But this scientific conception was corrected in Balzac's case by many other qualities, and his powerful imagination was continually bursting the too narrow mould of his theory. Two writers of laborious and individual genius, MM. Flaubert and de Goncourt, adopted this theory as a secondary one. They assigned to the novel as its sole object that it was to be an enquiry instituted into public manners, a rigorous statement of all the detail of daily life. These are the masters of the naturalistic school, and M. Zola is their direct descendant. This author has indeed exaggerated the rigour of the doctrine, and in his eyes modern art is but an appendage of science. He has set forth this view in a series of very curious articles, the title of which is enough to show their tendency—*Le Roman expérimental*. Just as the physician submits his patient to certain conditions to see what will happen, so, according to M. Zola, the novelist submits the character of his heroes to such and such circumstances, and describes the results. He produces by means of his imagination the experiences which cannot be produced artificially in real human life. It will be seen how open to discussion is this aesthetic theory. It must, however, be understood in order to gain a full appreciation of M. Zola's aim in his *Rougon-Macquart*, of which *Nana* forms the ninth volume. This history of a courtesan is full of information of all kinds

concerning the depths of Parisian life, which the author has catalogued, without repugnance and without enthusiasm, with the severe conscientiousness of an artist too fondly devoted to his own theories. It proves to be simply from a sense of duty, if one may so say, and the sense of an exalted mission, that he wrote this book, so severely censured by the almost unanimous opinion of the critics. No one can enjoy its perusal, but we must recognise the logical manner in which it is composed, and the mass of patient labour it represents. The most curious thing is that M. Zola, the painter of vice, lives like a Benedictine, locked into his study, and never appearing in public. His mode of work is a very strange one. It consists in taking masses of notes on the class of society he wishes to paint; then, when his notes are put together, he composes his novel page by page, never casting his eye over the back pages, and thus writing about five a day with the utmost care.

While the naturalistic novel represented by M. Zola and his friends is little by little acquiring an unparalleled vogue among our younger men of letters, the romantic school is by no means without its champions, and one of the most ardent, M. Catulle Mendès, has just published through Dentu a volume the epic character and romantic episodes of which forcibly remind the reader of the novels of M. Victor Hugo. Under the title of *Les Mères ennemies*, M. Catulle Mendès describes one of the risings of Lithuanian Poland toward the end of the reign of Catherine II. This narrative is of high dramatic interest; it is very gracefully executed in prose tinged with poetry, and so reminds us that the author was one of the most eminent leaders of the French poetical movement about the year 1865. It is even a little too gracefully written, with refinements of style that often border on mannerism. But the Polish character is marvellously well depicted in two aspects—in its weaknesses, that are akin to effeminacy; and its heroism, that is akin to infatuation. It contains also the figure of a high-born Russian lady, haughty and elegant, which is strikingly true to history, if we go back in imagination to that period in which the influence of the French eighteenth century penetrated into Russia without bringing anything save corruption into the prevalent barbarism—a period briefly characterised by Diderot when he said, "Russia is a fruit rotten before it is ripe." M. Catulle Mendès, I may add, had already shown himself a very skilful painter of the excessive delicacy and too advanced civilisation of the eighteenth century, and herein he has a bond of union with several other writers who are directly occupied with the period in question. I may instance the collection of novelettes and *pensées* just published by M. Octave Uzanne through Rouveyre under the title of *Le Calendrier de Vénus*. It consists of tales which might be signed by Crébillon fils, and maxims which might be attributed to the famous Duc de Richelieu. M. Octave Uzanne is likewise superintending the reprint of the lesser authors who were contemporary with Madame de Pompadour and Watteau. A distinguished bibliomaniac, he revels in these *jeux d'esprit* with their charm of antiquity. M. Octave Uzanne is already favourably and widely known in England as the editor of *Le Livre*.

The English reader who wishes to form a complete idea of the various classes of French novels at the present day may add to the three works above mentioned two other novels—one by M. Albert Delpit, *Le Mariage d'Odetta* (Plon), and the other by M. Emile Richebourg, *Un Culvaire* (Dentu). The first is the type of the novel that now finds favour with our Reviews. It appeared in the *Revue des Deux-Mondes*. The other is the type of the *feuilleton* novel. The success attained by M. Emile Richebourg in

this popular class of work is prodigious. One of his stories is enough to send up the circulation of the lesser papers to 50,000 copies. An utter want of style impairs the merit of these compositions, but their highly moral character is a symptom deserving of attention. M. Delpit belongs to the idealistic school of which George Sand was so long the most glorious representative. His comedy, *Le Fils de Coralie*, won considerable success at the Gymnase two months ago. He is equally remarkable for the excellent moral tone of his novels.

A very interesting work just published by M. Valléry-Radot (Hetzel), under the title of *L'Étudiant d'aujourd'hui*, is partly romance and partly philosophy. M. Valléry-Radot's object is to picture the manners of the young men who study law or medicine at Paris in the Quartier Latin, round the Panthéon and the Sorbonne. He has given us sketches delicately touched in, perhaps too favourably coloured, but, so far as I can judge from my own experience, sufficiently faithful to be consulted without misgiving. The pictures of student-life left by Balzac, Musset, and Henry Murger have become obsolete, like Gavarni's drawings relating to the same subject. It would seem that, since the war more especially, the youth of Paris has become less frivolous and more attentive to the things of thought. M. Valléry-Radot shows most skilfully the sensations of the young provincial who comes to Paris. The interior of various boarding-houses, and among others of a clerical *hôtel*, is very successfully represented. He takes the reader through the lectures attended by the future advocates, through the garden of the Luxembourg where they chat, and the furnished lodgings where they live. He has adopted a form of narrative without incidents but with proper names, so that the work as a whole forms a semi-novel, more entertaining than a dry statement would have been.

The romance then has been, it will be perceived, pretty brilliantly represented during the last month, as well as the novelette, for I was on the point of forgetting *Les Amours fragiles*, a collection of novelettes by M. Oberbuliez (Hachette), which shows once more the author's characteristic qualities of over-exquisite distinction and over-subtle observation. Again, an important poetical work has appeared which deserves a careful study—I refer to M. Jean Aicard's poem *Miette et Noré* (Charpentier). M. Aicard has undertaken to revive the rustic and familiar style. A Provençal by birth, and possessing a thorough knowledge of the dialects and scenery of the South of France, he was peculiarly qualified for this difficult task of a peasant epic. We possess a finished model of this style, unfortunately written in a dialect which is intelligible to few foreigners and scarcely even to Frenchmen at a distance from Lyons—*Mireio*, by Mistral. M. Aicard has evidently been inspired by this poem. His subject is the love story of a peasant and a peasant woman, Noré and Miette, the diminutives of Honoré and Marie. This return to simple poetry has been almost uniformly successful. Possibly fault might be found with the poet for laying too much stress on description, and also for not being sufficiently true to life in certain highly idealised portraits. But such a criticism cannot prevent this new book from placing M. Aicard in a very high rank among our younger poets. I may add, for the benefit of those who are interested in personal details, that M. Aicard is an admirable reader of his own verses, and that, before giving his poem to the press, he declaimed it himself with remarkable success in one of the literary *salons* of Paris, that of Madame Edmond Adam (Juliette Lamber), editor of the *Nouvelle Revue*. While M. Aicard is effecting a return to rustic poetry, M. Charpentier likewise gives

us M. Maurice Bouchor's *Contes Parisiens*. This poet, half an Englishman by birth, and thoroughly imbued with the study of your authors, possesses qualities of humour which are not often to be found in France. His book consists of stories half fantastic, half satirical, written with wild vigour and unreserved audacity. Finally, a new-comer, M. Godin, has brought out (Lemerre) a collection of poems, *La Cité Noire*, which heralds the advent of a genuine poet in the energy of its verse and the depth of its emotion. He possesses as yet neither the breadth of M. Jean Aicard nor the remarkably fresh imagination of M. Bouchor: but he feels keenly and writes vigorously. If he adds labour to his natural gifts, he may go far in poetry.

I have left myself but little space to speak of books on philosophy and history. First and foremost must be noted *La Psychologie*, just published by M. Paul Janet (Delagrave). This work, which is intended alike for students and men of the world, attests considerable progress in the teaching of this science in France. Hitherto, and under the protracted influence of Victor Cousin, French official philosophy has remained outside the European movement. The works of Hamilton, Lewes, J. S. Mill, Alexander Bain, Herbert Spencer, were known only to a few choice spirits. The new theories on the association of ideas were not taught. Physiology was so completely divorced from psychology that no notion was given to students on the subject of the nervous system and the brain. The study of sensations was thus completely isolated from the study of sense. The publication twelve years ago of a book by M. Ribot on English psychology was the beginning of a salutary reform, which is officially completed by M. Janet's work. M. Janet, in fact, who is a professor in the Paris Faculty and a member of the Institute, is qualified to represent in some measure the whole of the university; and the introduction of the newest theories into his book is enough to prove that the old method of teaching has had its day. This symptom must be noticed with great satisfaction, for the real remedy for what our statesmen call the clerical danger is not to be found in laws of repression, but rather in a solid philosophical education of our young students which will deliver them from that dread of ideas which has caused all the reactions of the present century.

I will close my letter by mentioning the publication of the third volume of the *Mémoires* of Madame de Rémusat (Lévy), already so fully discussed, and of the appearance of the second volume of the *Chansonnier historique du XVIII^e Siècle* (Quantin). This volume comprises the political poems of the years 1716 and 1717, which enable us to follow step by step the popular sentiments of the day. The earliest pieces attest the confidence of the French people in the Regent; then come the disillusionings; the Prince's cynical contempt for morality, the follies of the Ministers, the gallantries of the princesses, are each in their turn the subjects of the most bitter jests. Finally, the financier Law, the author of a fearful public catastrophe, becomes almost the sole object of satire. M. Victor Hugo is publishing with the same firm a final edition of his works, with variants from the original MSS. Two volumes have already appeared.

CORRESPONDENCE.

THE "EIKON BASILIKE."

British Museum: April 19, 1880.

May I be allowed a little space in your columns to reply to two remarks made by Mr. Rawson Gardiner last week in his friendly criticism on my Preface to Mr. Stock's reprint of the *Eikon Basilike*, because it seems to me that, owing to my having expressed myself somewhat obscurely, he has consequently reversed my argument and its intended meaning? When I say that "the discovery of the identity of the Record Office prayer with one of the prayers at the end of the *Eikon* gives indubitable authenticity to what has always, from Milton down to Mr. Pattison, been looked upon as parcel of the *Eikon* itself," I do not mean at all to imply that all the writers on the authorship of the *Eikon* hold those prayers to be part and parcel of the book, but only those who are opposed to the royal authorship of it, and who think that the plagiarism of the first prayer destroys the claim of the King to any part of the work; and I contend that henceforth all such persons must hold that this discovery of the Record Office prayer indubitably authenticates, not only that portion of the *Eikon*, but also all the former part. As I do not myself consider the prayers to be part of the *Eikon*, I accordingly argue in my Preface that "a subsequent Appendix cannot have anything to do with the authentic character of a work of which, at the time of publication, it formed no portion."

In the second place, Mr. Gardiner's supposition (arguing for the moment on the Gauden side), "that Gauden obtained a copy of the prayers from Juxon through Duppa, seeing that, according to Mrs. Gauden's story, her husband employed Duppa to show the *Eikon* to Charles I.," is exceedingly easy of refutation, and cannot be entertained for one single moment if it be remembered that, according to Mrs. Gauden's story, Royston, not Dugard, printed the *Eikon* for her husband, and we know that Dugard, not Royston, printed the prayers in the Appendix. EDWARD J. L. SCOTT.

THE SITE OF RAAMESSES.

The Larches, Westbury-on-Trym: April 16, 1880.

While fully endorsing Prof. Sayce's acceptance of Brugsch's theory of the Exodus, I venture to think that he does less than justice to the claim of Tel-el-Masrouta (or Masrouta) to be identified with the site of the Raamses of the Bible. Few topographical puzzles have been more discussed than this. May I take leave briefly to state the *pro* and *contra* of the case?

The Bible-text runs thus:—"And they built for Pharaoh treasure-cities Pithom and Raamses" (Exod. i. 11). "Pithom" transcribes Pi, or Pa-Tum, the city, or abode, of Tum, a solar deity chiefly worshipped in the East of the Delta; "Raamses" transcribes Pa-Rameses, the city, or abode, of Rameses, Rameses being a royal and divine name, signifying the son of Ra. Here it is well to remark that this juxtaposition of names is by no means fortuitous. Tum represents the setting, Ra the rising sun; for which reason these deities are often represented, as it were antithetically, on funeral stelae. Also, as M. Grébaut has shown, Ra and Tum were held reciprocally to engender each other. Pa-Tum and Pa-Rameses were therefore twin cities, doubtless containing twin-temples, in which the cult of the one would be the complement of the cult of the other. Hence it may reasonably be concluded that Pa-Tum and Pa-Rameses were situate not very far apart. That they were cities of Goshen is certain; and Brugsch opines that Pa-Tum, at all events, belonged to the Sethroitic Nome, the position of which is not yet determined. The names of both occur in the Anastasi papyri (British Museum), which documents date from the Nineteenth Dynasty, and are contemporary with Rameses II.

The most salient feature of the Bible-text is the name of "Raamses," which unquestionably points to a city built by a Pharaoh of that name. If we assume that Pharaoh to be Rameses II. (a point upon which Egyptologists are mostly unanimous), we are at once confronted by the fact that this ruler gave his name to several Egyptian cities. There was a Pa-Rameses at Abou Simbel, a Pa-Rameses near Memphis, and no less than three Pa-Rameses in the Delta. Of course, this complicates the question as to which Pa-Rameses the Israelites laboured to build. Herr Brugsch, having discovered a hieroglyphic text which shows that Rameses II. gave his own name to Tanis (San = Zoan), concludes that this famous and magnificent city was the "Raamses" of the Bible; but then Rameses II. was a notorious usurper of the works of his predecessors. M. Chabas identifies "Raamses" with Pelusium. Others have proposed Heliopolis, Baboon (old Cairo), and Toosoom, on the Suez Canal. Lepsius gives his verdict in favour of Tel-el-Masrouta, better known to travellers as *Ramsis* station on the railway line between Zagazig and Ismailia. This last identification has been warmly disputed; but I scarcely think that every point in its favour has yet been stated, or that those already stated have been fully considered. For my own part, I incline to believe that Tel-el-Masrouta is not only the "Raamses" of the Bible, but that it is also the *Pa-Rameses* of the Third Anastasi papyrus.

(1) Prof. Sayce objects that the mound of Tel-el-Masrouta is too small to be the site of Pharaoh's "treasure-city;" but I fail to see why a treasure-city (in Egyptian a *bekhen*) should necessarily be very large. In the simplest acceptation of the word, a *bekhen* would seem to be a military storehouse and stronghold, where provisions and arms might be kept, and booty safely deposited. The mound of Tel-el-Masrouta is quite large enough to cover not only the ruins of a very large fortress, but

also of a considerable town. Also, as shown below, important remains which prove the city to have extended beyond the fortified enclosure have been discovered under the alluvial deposit surrounding the actual mound.

(2) Prof. Sayce contends that there is no evidence to show that the ancient town on this site was named after Rameses II. Now, the name of *Ramsis* does not appear to have been given to the railway station, as is generally supposed, by the French constructors of the line. In the *Guide Johanne* (Egyptologically edited by Prof. Maspero) we read:—"près du canal Abou-Dibab, se trouve *Ramsis*, qui rappelle évidemment une ancienne ville de Ramsés, passée sous silence par les historiens profanes." This passage clearly shows the name to be a Pharaonic survival, and not modern French. Again, some pages farther on:—"Ce lieu [Tel-el-Masrouta] répond d'après les distances de l'itinéraire d'Antonin à l'emplacement de l'antique Rameses construite par les Hébreux" (p. 417). Had the name been modern, and given by the French, it is clear that these passages could not occur in a volume compiled by Prof. Isambart, and revised by Prof. Maspero. Bricks stamped with the name of Rameses II., and a sculptured block representing that Pharaoh enthroned between Ra and Tum, have been found on the spot. Also, when the new fresh-water canal, which here runs parallel with the railway, was in course of excavation in 1876 there were discovered in a spot closely adjoining the mound, under a deep alluvial deposit, two fine sphinxes engraved with the cartouches of Rameses II. These sphinxes apparently formed part of a *dromos*, and would probably have led to the discovery of the foundations of a temple had the ground been laid open in that direction.

(3) The evidence of the Anastasi papyrus (No. III., British Museum) remains to be taken. This papyrus contains a letter written by one Panbesa, a scribe, in which he narrates the abundance and pleasantness of a certain Pa-Rameses built by Rameses II., and supposed by Brugsch to be identical, not only with the "Raamses" of the Bible, but with the city of Tanis, to which, it will be remembered, Rameses II. attached his own name. This letter speaks of Pa-Rameses as a "port," at which ships discharged all kinds of rare delicacies, including fish from the Euphrates; and shows it to have been in the neighbourhood of various lakes, one of which "furnished nitre." It was also adjacent to the Shet Hor or sacred Pool of Horus—a piece of water which is again mentioned in a celebrated lapidary inscription at Karnak. The Karnak text likewise shows that, to the north of the Pool of Horus, there ran a canal called Shakana, which is not mentioned in the letter of Panbesa. Now the mound of Tel-el-Masrouta answers to these descriptions with singular accuracy. It is situate on the borders of an ancient canal begun by Seti I., and carried on by Rameses II. This canal, which various classical writers mention as designed to unite "the two seas," was, at all events, completed between the Nile and the Bitter Lakes, so communicating with the Gulf of Suez, the Red Sea, the Persian Gulf, and the mouths of the Euphrates. The lake which "furnished nitre" would be one of these natron lakes. Tel-el-Masrouta is also not far from a sheet of water (Lake Mahsamah) formerly filled by the high Niles, but now utilised by the Canal Company. The ancient canal runs precisely to the north of this lake, which I take to be the Pool of Horus.

If Tel-el-Masrouta may on the foregoing grounds be entitled to identification with "Raamses," two other mounds, both on the line of the ancient canal, have been proposed as the probable site of Pa-Tum. The nearest, Tel-el-Kebeer (the "Big Mound"), lies seven

miles west of Lake Mahsabah, and in the centre of the valley through which the ancient canal was carried. I scarcely suppose that I can be the first to whom it has occurred that the name of this valley, *Wady Tamldt*, almost as certainly perpetuates the name of *Tum* as *Ramsis* perpetuates the name of *Ra*. Again, there is surely some local significance in the sculpture before mentioned, which represents *Rameses II.* in company with *Tum* and *Ra*.

It will, doubtless, be objected to these identifications that, according to the topographical information derived from the monuments by Brugsch, *Pithom* must be sought in the *Sethroitic Nome*, of which he makes a littoral province, deriving its name from *Sethro-hata*, the Land of the Mouths: i.e., the Tanitic, Pelusiac, and Mendesian mouths of the Nile. Among other proposed derivations are "the place of the worship of *Seth-Ra*" (*Birch*) and "*Seth of the Outlet*" (*Bunsen*). I would, however, with the utmost diffidence, submit that this *Nome* may have been named after the *Sacred Pool*, and that *Sethroites* might possibly be a Greek rendering of *Shet-Hor*. "*Pithom* and *Raameses*" being thus brought down some thirty miles farther inland, it follows that *Sethro-hata* would cease to be applicable as a derivation.

Finally, "*Pithom* and *Raameses*" are said to have been "built for *Pharaoh*;" therefore they were *new* cities. *Tanis* (*Zoan*), which contains remains of the *Twelfth* and *Thirteenth* Dynasties, and is mentioned in *Numb. xiii. 23* as built seven years after *Hebron*, could in no sense have been said to be "built for" *Rameses II.* of the *Nineteenth* Dynasty. This alone, I venture to think, disposes of the theory which would identify the capital of the *Hyksos* with that "treasure-city" for which the *Israelites* were condemned to make those "huge bricks stamped with the cartouche of *Rameses II.*" which *Prof. Ebers* observed in the great wall of circuit at *Tel-el-Masroota*.

AMELIA B. EDWARDS.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 26, 7 p.m. Acturaries: "The Division of Surplus," by Mr. Toiss.
8 p.m. Society of Arts: "Decoration and Furniture of Town Houses," by R. W. Edis.
8.30 p.m. Geographical: "On Uganda (Victoria Nyansa) and its People," by the Rev. C. T. Wilson.
TUESDAY, April 27, 1 p.m. Horticultural.
8 p.m. Royal Institution: "Wind and Weather," by R. H. Scott.
8 p.m. Society of Arts: "Iceland and its Resources," by C. G. W. Lock.
8 p.m. Civil Engineers: "The Amsterdam Ship Canal," by H. Hayter.
8 p.m. Anthropological Institute.
WEDNESDAY, April 28, 12 noon. London Institution: Annual General Meeting.
4.30 p.m. Literature: Annual General Meeting.
7.30 p.m. Education Society: "Anthropometric Observations on School Children," by Dr. Leefeld.
8 p.m. Society of Arts: "Recent Improvements in Gas-Furnaces," by T. Fletcher.
8 p.m. Telegraph Engineers: "On the Resistance of Galvanometers," by O. Heaviside; "On the Determination of the Position of Faults in a Cable when Two exist at the Same Time," by C. Hockin; "On Testing by Received Currents," by H. R. Kempe.
8 p.m. Geological: "Description of Parts of the Skeleton of an Anomodont Reptile from the Trias of Graaf Reinet, South Africa," by Prof. R. Owen; "Note on the Occurrence of a New Species of *Iguanodon* in the Kimmeridge Clay at Oumnor Huret," by Prof. J. Prestwich; "On *Iguanodon Prestwichii*," by J. W. Hulke.
THURSDAY, April 29, 1 p.m. Zoological: Annual General Meeting.
8 p.m. Royal Institution: "Light as a Mode of Motion: Theories of Light and Colours," by Prof. Tyndall.
4.30 p.m. Royal.
8.30 p.m. Antiquaries.
FRIDAY, April 30, 8 p.m. Philological: "On the Cree Language, and the Use of the Syllabic Characters in Teaching it to the Natives," by the Ven. Archdeacon Kirby; "On *J* in Latin," by J. Pearson.
8 p.m. Civil Engineers: "Description of a Light-draught Steel Paddle Steamer," by J. A. Thompson.
9 p.m. Royal Institution: "Electricity in transitu," by W. Spottiswood.
SATURDAY, May 1, 2 p.m. Royal Institution: Annual Meeting.

SCIENCE.

Problems of Life and Mind. Third Series. By George Henry Lewes. In 2 vols. (Trübner and Co.)

In these two volumes we have all that the author achieved towards the completion of his great work, and there is every reason to be grateful that so much has been done. Though not actually complete—for the editor tells us that the last problem is but a fragment, and there is no internal evidence to show that this was to have been the last—the work sufficiently makes known the author's later and riper views on the province of philosophy in general and more particularly on the scope and method of biology and psychology. To say that these views are, as a whole, bold and original on the one hand and carefully founded on scientific research on the other, is to deal them but scanty praise. These five volumes conserve the well-matured thought of one who has hardly an equal in recent philosophical literature in breadth and accuracy of knowledge, and to whose restless and versatile mind originality of conception was a necessity. Combining this volume of special knowledge, biological, psychological, historical, and literary, with a high degree of generalising power, he has struck out conceptions which, while closely related to the scientific ideas of the hour, are also far in advance of them. Thus he is commonly looked on as heterodox in biology, though some of his ideas, as, for example, that of the fundamental identity of all nervous structures, are slowly being taken up by specialists. Whether such a range of exact special information as Mr. Lewes possessed is compatible with the highest quality of philosophical synthesis may perhaps be doubted. Our modern field of research may have become too finely sub-divided to allow of a second philosophic achievement comparable with that of Aristotle. However this may be, Mr. Lewes sometimes seems to show in his treatment of properly metaphysical questions an inability completely to transport himself from the scientific to the philosophic point of view. Yet, if he is now and again too speculative for the specialist, and not speculative enough for the metaphysician, he has at once served both science and philosophy by that large and luminous treatment of ultimate scientific ideas which is eminently fitted to become the basis of a sound philosophy.

After laying the foundations of his creed, and discussing the physical basis of mind, Mr. Lewes deals in this third series of problems with the special questions of psychology. The First Problem, published in a separate volume, treats of "the object, scope, and method" of the science. The author believes in a common objective science of psychology, which is to take the place of the individual subjective psychologies "of Kant and Hegel, Locke and Spencer." And, what is more, he believes in a separate science of mind apart from biology, though closely related to this. Thus he moves away from his old Comtean standpoint. Such a science must, he thinks, be constituted by consistently combining introspection with objective observation. He has a good word to say for introspection, not only as against the Comteists, but as against

those physiologists who are apt to write as if nerve cells and nerve fibres had divulged to them in the very act of microscopic inspection the secrets of their conscious life. On the other hand he opposes himself to those who, like J. S. Mill, do not carry out the idea of a physiological psychology to its logical conclusions, but who continue to talk of "mental causation" apart from the determining physical conditions.

Mr. Lewes takes a more independent view of the relation of human to animal psychology. When he set out in his researches, as he tells us, impressed with the importance of studying the manifestations of mind in the lower animals as the simplest order of phenomena. But later on he found this method to be the wrong one. Investigation must proceed, not from the simple to the complex, but from the more easily accessible to the less easily accessible. And in the nature of things, the feelings of the lower animals are very imperfectly known to us, and recent attempts to reason from them show, he thinks, how easy it is to fall into a subjective anthropomorphic illusion respecting their real character. Yet while the psychologist can obtain but scanty aid from this source, he must survey the human mind itself in its historical aspects. The study of psychological conditions can only be carried on with respect to the fundamental functions of mind; the study of the faculties involves a constant reference to the social medium and the modifications effected by experience and history, to influences which must be distinguished as "spiritual." History is "an experiment instituted by society, since it presents conspicuous variations of mental reactions under varying social conditions, and exhibits on a large scale the evolution of sentience and conceptions from germs of emotional and intellectual experiences" (pp. 152, 153).

In these views on the scope and method of psychology, there is nothing, I think, to take exception to. They are just in themselves and forcibly expressed. More particularly, it may be said that those of Mr. Lewes's readers who thought he was bringing confusion into the arrangement of the moral sciences by making psychology depend on sociology will be relieved to find that this threatened revolution resolves itself into a harmless assertion of the dependence of the higher phenomena of mind on the processes of historical development. But when, *à propos* of Mr. Spencer's definition of psychology, the author seeks to define the subject in relation to the objective sciences generally, his argument seems to me to be much less convincing.

"The antithesis [he writes] between objective and subjective may serve to distinguish psychology from psychology, but it does not mark out psychology as totally opposed to all other sciences, for the simple reason that they likewise deal with phenomena having the twofold aspect. The motions of the heavenly bodies, the motions of minerals and gases, and the motions of organic bodies are objective aspects of our sensible affections" (p. 66).

This is far from being clear. When we talk of the relations of psychology to physiology we are thinking of the coincidence in time of the two classes of events—physical processes

in the nervous system, and mental processes confined to the individual mind. When, on the other hand, Mr. Spencer sets psychology in antithesis to the physical sciences as a whole, including physiology, he does so because of the radical distinction between subject and object, feeling in any number of minds and thing felt, that underlies all our conscious states. Mr. Lewes here makes the relation of particular feeling to its physiological conditions identical with that of feeling in general to the thing felt, regarding them both as cases of a twofold aspect. By so doing he seems to me, as he seems to Mr. Shadworth Hodgson, to confuse the scientific question of "conditions" with the philosophic question of "aspects." We mark off psychology from all the physical sciences just because it is here allowable to abstract from the subjective aspect, which is common to all minds, and therefore taken for granted. When, on the contrary, the physiologist studies nervous processes he is compelled on scientific grounds to take account of the particular individual feelings which accompany these processes. The relation of psychology to the physical sciences in general is thus quite unlike its relation to physiology in particular.

To attempt to reduce the concomitance of feeling and nervous change to a case of a "twofold aspect" is distinctly extra-scientific. There is no such thing as a "scientific monism," however much it may be the vogue to talk of it just now. Whether such a reduction is philosophically possible under the form of a metaphysical monism I do not now enquire. The important thing to be remembered is that any attempt at such a reduction is metaphysics and not science. Science proceeds on the well-recognised distinctions of common-sense, and common-sense is yet a long way from believing that when a man has a sensation of red the object of his sensation is a nervous action in the optic centre. This nervous process is, no doubt, a possible object of perception to minds generally under certain barely conceivable circumstances, but its subjective correlate would, in this imaginable case, be nothing like a sensation of red. I do not dwell on this without good reason. The confusion of metaphysics and science respecting the relations of the mental and the physical led, if I am not mistaken, in the case of Mr. Lewes, to hasty and inadequate scientific construction. His conception of the invariable concomitance of feeling or sentience with nervous action is of course a thoroughly legitimate one if it be well established. But is it well established? I fully agree with him that consciousness is made up of a vast number of very imperfectly distinguished feelings, a proposition which is further ably illustrated in the Second Problem (vol. ii.). But his repeated discussions of the relation of feeling to consciousness, and of that remarkable endowment, "sensibility," which seems to be always becoming something purely physical in spite of all the author's efforts to breathe a soul into it, serve, so far as I can see, only to make more clear the fact that the author, without sufficient scientific evidence, projects feeling behind nerve-process just because there is in his mind the foregoing metaphysical conclusion

that the two things are but complementary aspects of the same ultimate reality.

Let us, however, leave these difficult metaphysical points, and turn to the author's working out of the details of psychology in the second and larger volume. Here, where he is on more scientific ground, his exposition becomes full of interest and instruction. In its assemblage of novel and striking facts, and in its rich and fruitful suggestions, this volume appears to me to be the most interesting of all. The fundamental conception that the nervous organism is a unity, and that what we speak of as the series of distinct states of consciousness stands out from a dark background of vaguely recognised feelings, is here made good use of to counteract the too analytical and abstract method current among psychologists. Mr. Lewes shows that the result of any given stimulus is always determined to some extent by the general state of tension of the organism, or the "psychostatical condition" of the moment. The results of all past experience and development show themselves in this "sensorial attitude." Our perceptions are determined by "preperceptions," so that we often only see what we expect to see. Moreover, every single perception depends on a previous process of "orientation," or taking our bearings as to our actual surroundings.

"The objective landscape of sense is determined by this orientation, whereby each object has its relative position, and all positions are connected with our own; the subjective landscape of thought is also then determined, each image and idea having its relative position, and its connexion with the *system*, or series, of consciousness" (ii. 109).

The sum of this predetermining influence is our personality. "Every sensible impression, every proposition, every social action, is *apperceived* by this personal centre." This same disposition to recognise the organic complexity of mental phenomena is seen in the account of memory and association. Here the author does good service by laying emphasis on those subtle analogies of feeling which often help to determine the sequence of our ideas, as also on "the ground tone of feeling or mental disposition of the time," which exercises so great an influence on the course of our thoughts both in waking and in dreaming consciousness.

Under Problem iii., "The Sphere of Sense and the Logic of Feeling," our author investigates the process of grouping or the co-ordination of nervous elements in the region of sensation and instinctive action. Here the mental operation is as much "logical" as in the region of intellect proper, in so far as it is the determination of one state of feeling by antecedent states. Animal inference consists of "intuitive" as distinguished from "critical" judgments. Even sensation involves a like process of grouping. Here the author refers to the curious experiments of Meyer, confirmed by Helmholtz and others, by which the phenomenon of colour-contrast is produced on a piece of gray paper laid on a coloured ground and covered with a thin sheet of white paper. The explanation of the phenomena is that the eye supposes the intervening sheet of paper to be coloured and so *misjudges* the

actual colour of the underlying scrap. These experiments, says Mr. Lewes,

"prove that even in sensations of colour commonly held to be simple affections of the retina, or simple impressions on the organ of sight, there is involved such a co-operation of the sentient organism, such a reaction of the sensorium, as would if considered by itself be termed an intellectual act, a judgment" (ii. 275).

In other words the predisposing conditions of the moment may overpower the effect of the stimulus disposing the reaction of the centre to take the form of a particular sensation. And Mr. Lewes rightly connects this production of an illusory sensation by a false judgment in normal circumstances with the hallucinations of abnormal life.

Among the many curious questions raised in the Third Problem, that of double sensation deserves to be specially referred to. Mr. Lewes (pp. 280, *et seq.*) narrates a remarkable case of two brothers, Nussbaumer by name, who have always had sensations of colour simultaneously excited by sensations of sound, notes of a certain pitch having their special concomitant colours. This curious fact is by no means isolated, but seems to have its analogues in some of the strange discoveries recently made by Mr. Galton respecting people's idiosyncrasies in the manner of visualising numbers, &c. Mr. Lewes seeks to bring the phenomenon under his general principle of nervous irradiation, or a total excitation of the nervous organism in sensory stimulation, though he offers no suggestion in explanation of the particular connexion of tone and colour formed in this case. It may be added that throughout this volume the author's knowledge of abnormal mental phenomena is made to throw an interesting light on normal mental processes. Mr. Lewes was profoundly impressed with the value to the psychologist of a study of the pathological phenomena of mind.

Another point of great interest discussed under this Problem is that of the muscular sense. There is a very careful re-investigation of this question in the light of recent clinical evidence. Mr. Lewes holds that the two ways of explaining the sensations accompanying muscular activity, by passive and by active stimulation—that is, excitation through sensory and through motor nerves—are each one-sided.

"The evidence proves that muscular adjustments and motor feelings may exist where there is anaesthesia of the passive sensibilities; therefore these latter cannot be the sole sources of the co-ordination and muscular feeling. But the evidence also shows that the passive sensibilities normally enter into the complex feeling, and any diminution of them is a disturbance of the co-ordination, and a variation in the quality of the feeling" (pp. 321, 322).

He thinks that the motor feeling is an accompaniment, not of the outgoing current in the motor nerve, as Profs. Bain, Wundt, and others hold, but of a reflected current through this nerve, sensory and motor nerves being supposed to be capable of transmitting an excitation in either direction. The reasoning is very ingenious and forcible, though perhaps the author hardly distinguishes sufficiently between muscular sensations proper and those tactile and other sensations which normally

assist in motor co-ordination just as the sensations of the ear assist the co-ordinations of the motor nerves of the vocal organ. In close connexion with the nature of muscular sensation the author gives us a very interesting account of motor perceptions and hallucinations, in which he shows himself fully alive to the important part taken by active sensations in our habitual conception of the self and not self.

Space does not allow me to follow Mr. Lewes any farther into the discussion of the interesting details of his Third Problem, nor to do more than barely allude to the pregnant hints on the relation of different mental processes as after-sensation and image, image and idea, thrown out in the last Problem ("The Sphere of Intellect and the Logic of Signs"). Throughout, the writer never fails to be luminous and stimulating in thought and picturesque and forcible in language. No student of psychology who wants to be abreast with recent researches will be able to dispense with a repeated reference to this concluding volume of the series. Though deprived of artistic completeness, it is a worthy conclusion to a literary activity of a remarkable range and of a uniformly sustained earnestness.

JAMES SULLY.

NOTES OF TRAVEL.

THOUGH, perhaps, it would hardly be safe to place implicit reliance on the rumours which have reached the Indian Press Commissioner from Nepalese sources, that Col. Prejevalsky and his party had reached the northern border of Tibet, we are glad to learn that no anxiety is felt by Russian geographers about the expedition on the ground of Col. Prejevalsky's long silence. We hear on good authority that they do not expect to receive any intelligence from him before May, but that, if nothing is heard then, it is possible that there may be some foundation for the rumour which reached Count Szechenyi, probably in Eastern Tibet, and was transmitted by him in a roundabout way to Europe.

COL. MOUKTAR-BEY, an Egyptian staff officer of considerable scientific attainments, left Cairo on March 18 in company with Col. Gordon's successor in the government of Soudan, in which region he has been directed to undertake a series of geographical and economic investigations.

M. GEORGES REVOIL, who has been engaged for some years in explorations on the East Coast of Africa, and has already made two journeys to the Somali country, will shortly start on a third expedition among the Mijertain tribes who occupy the coast line of that region.

MM. SARGÈRES AND BLOYET, of Marseilles, are about to undertake an expedition in East Africa with a view to the establishment of a line of direct communications from Zanzibar to Tabora and Uganda, in order to facilitate the operations of explorers.

M. DE LAMOTHE is carrying on some explorations in Upper Egypt in connexion with a projected scheme for the canalisation of the Nile, the idea being that it is quite possible to make the Albert Nyanza accessible from the sea.

THE Société Académique Indo-Chinoise have recently issued (Paris: Challamel aîné), as the second volume of their "Mémoires," a work entitled *L'Ouverture du Fleuve Rouge et les Événements de Tong-King, 1872-73: Journal de Voyage et d'Expédition de J. Dupuis*, with a Preface by the Marquis de Croizier, president

of the society. The work is illustrated by a map of Tong-King and the basin of the Red River, from a political and commercial point of view, which M. Dupuis claims to have constructed from previously unpublished material; there are also two inset maps, the one showing the commercial routes of South-western China, and the other being a plan of Hanoi. M. Dupuis, we believe, was for some time engaged in the junk-trade on the Yangtze-kiang, and afterwards devoted himself to the exploration of a trade-route by the river-system of Tong-King into South-western China, a subject which has lately given rise to some discussion in the French press.

It is stated that M. de Brazza, who has gone to West Africa to form a station for the French branch of the International African Association either on the Upper Ogowe or the River Alima, which he and Dr. Ballay discovered, is strongly in hopes that he will succeed in finding a practicable route through the interior to the Upper Congo before Mr. Stanley overcomes the difficulties presented by the cataracts with which he is now contending.

COUNT H. D'ARPOATRE, a distinguished botanist, will shortly leave Europe for Cape Verd in Senegambia, having been requested by the Portuguese Government to undertake the study of the flora of the adjoining archipelago as well as of the coast of Guinea.

PROF. WAGNER is to leave St. Petersburg at the end of next month on an expedition to the White Sea.

MR. WENNICKE, who has been surveying in South Australia between Tennant's Creek and the Herbert River, gives on the whole a favourable account of the country he has visited. One level tract, which was estimated to be about 30,000 miles in extent, was found to consist of rich alluvial soil, covered with magnificent grass.

THE French Government have decided to send a scientific expedition to Mexico, and more particularly Yucatan, and it is stated that Mr. Peter Lorillard, of New York, who is interested in the subject, has offered to contribute £6,000 towards its cost. In all probability the expedition will be under the command of M. Désiré Charnay, who is already favourably known for his archaeological explorations in Yucatan and Southern Mexico, as well as in Madagascar, Java, &c.

THE Rev. C. T. Wilson, whose journey from the Victoria Nyanza northwards through Egypt we have more than once alluded to, has arrived in England, and will read a paper on Uganda and its people before the Royal Geographical Society on Monday next. The three Waganda chiefs who are the bearers of letters from King Mtesa to the Queen, and who accompanied Messrs. Wilson and Felkin on their journey, will be present on the occasion.

SCIENCE NOTES.

Discovery of the Glutton in the Forest-bed.—In a paper contributed to the current number of the *Geological Magazine* by Mr. E. T. Newton, of the Geological Survey, the writer announces the interesting fact that a portion of a lower jaw which has lately been obtained from the "Forest-bed" of Mundesley, on the Norfolk coast, belongs to the glutton or wolverine (*Gulo luscus*). It is true that the occurrence of this species in the pleistocene deposits of ossiferous caverns in this country had been previously known. Thus Prof. Boyd Dawkins has described a fine lower jaw of the glutton which was obtained some years ago during the exploration of the Plas Heaton cave near St. Asaph by Mr. Heaton and Prof. Hughes. But, until Mr. Newton's discovery, the glutton had not been

detected in the preglacial, or early pleistocene, fauna of our East Anglian "Forest-bed."

PREPARATIONS are being made for the holding of an Archaeological Congress at Tiflis in August 1881. The Governor of the Caucasus has assigned the sum of 15,000 roubles expressly for this purpose. He has also assigned a further sum of 40,000 roubles to be expended in enlarging the museum of Tiflis in view of the considerable collections already received, and which are being continually augmented by fresh excavations. Last summer, Profs. Antonovich, Berenstam, and Polyakof were engaged in prosecuting archaeological researches in the Caucasus. Prof. Antonovich excavated the mounds in the north-eastern district, between Vladikavkaz and Mozdok. He succeeded in collecting many interesting data regarding the ancient civilisation of these localities. M. Berenstam explored the mounds of North-western Caucasus—the Kuban district—the articles found in which appear to belong to the Scythian epoch. M. Polyakof examined many of the caves in the Transcaucasian region, particularly near the base of Ararat, but found few traces of the remotest stone period. Count Uvarof conducted excavations in several localities—among others, in the ancient grave mound of Santavirsk, near Mtskhét, not far from Tiflis, as also in the vicinity of Kazbek. These researches will be continued during the approaching summer. In addition, M. Simonovich has been directed to explore the site of the ancient Armenian capital, Armavir, and Prof. V. Kovalevsky intends making palaeontological observations in the same region. It is also proposed to examine the mounds near the town of Derbent, and in several parts of Armenia.

THE Russian Geographical Society has assigned the sum of 14,000 roubles yearly, for a term of three years, in aid of the establishment and maintenance of a meteorological station at the mouths of the Lena, and of an affiliated station in New Siberia.

PHILOLOGY NOTES.

M. STANISLAS GUYARD writes in reference to our note on the Babylonian word *imga*, defending his opinion that it represents the Assyrian *emku* or *enku*, "wise." His reasons are (1) that the Accadian word for "glory" was not pronounced *im* but *ni*; (2) that the accusative in *-a* frequently takes the place of the nominative in *-u*, especially in Babylonian inscriptions; (3) that *enku*(*ti*) has actually been found on a brick of Nebuchadnezzar; and (4) that just as we find *mudu*, "knowing," combined with *emku* or *enku*, so in one Babylonian inscription (*W. A. I.*, i. 51-54) we actually find the epithet *mudā e-im-ga* given to Nebo. We must still, however, maintain the correctness of our note. *Im*, or rather *imi*, along with the allied *mir* (for *imr*) is given as the Accadian equivalent of *nahdutu*, "brightness," as well as *nd*. The form *enkuti* found on the lost brick of Nebuchadnezzar shows that the Babylonian form of the Assyrian word signifying "wise" was the same as the Assyrian, *emku* or *enku*, and not *imgu* or *emgu*; while the epithet given to Nebo should rather be read *mudā kaba imga*, "knowing speech, the glorious." In philology, as in other matters, the simplest hypothesis is the best, and when we find in an Assyrian inscription a word which offers difficulties if derived from a Semitic source, and no difficulties if regarded as of Accadian origin, it is plain that we ought to choose the second alternative.

THE *Journal of the Royal Asiatic Society*, 1880, part i., commences with an article by Mr. Redhouse on "The Most Comely Names"—that is, on the various epithets applied by orthodox Muhammadan writers to their god. The author gives a list of 552 such epithets, compiled from

various previous lists, explaining each epithet, with references, where necessary, to the Kurān. It is abundantly evident, therefore, that the number of "the most comely names" has by no means been confined to any sacred number, such as 77, 99, 101, or 1,000, in spite of the frequent reference to the "ninety-nine names of God." The utility of such a list is as questionable as that of the two hundred "names of Christ" prefixed to Cruden's Concordance; but in Mr. Redhouse's notes to each so-called name will be found several interesting points of Moslem superstition. The next article is a gratifying proof that Sir Henry Rawlinson has not entirely forsaken the field of enquiry in which he has rendered such unequalled service. In this paper, which is modestly entitled "Notes on a Newly Discovered Clay Cylinder of Cyrus the Great," he gives a complete transliteration and translation of the highly interesting Inscription referred to, together with a most useful historical Introduction, which only errs, if it errs at all, on the side of brevity. The cylinder records in effect an edict issued by Cyrus after his conquest of Babylon and of the reigning king, Nabu-Nahid (the Nabonidus of the Greeks). There is a curious similarity between several passages in the edict referring to the Babylonian god Merodach and corresponding passages in Isaiah referring to Jehovah. The cylinder settles or contributes to the solution of several important points in geography and history; but the theological passages are unfortunately, for the most part, fragmentary or obscure. Mr. Sewell, of the Madras Civil Service, follows with a note on an obscure passage in Hiouen Thsang's account of Dhanakacheka, and Mr. Fergusson gives expression to the doubt with which he—very rightly, as it seems to us—regards Mr. Sewell's proposed explanation. M. Sauvaire completes, from a newly discovered MS. at Gotha, his translation of the interesting treatise on Weights and Measures by Mār Eliya, Archbishop of Ne-side. The number closes with a lengthy discussion as to the age of the Ajantā Caves, consisting of a paper by Rājendralāl Mitra, Rai Bahadur, followed by a note by Mr. Fergusson. It is a contest between those who trust rather to inscriptions and those who trust rather to architectural style and details in determining the age of an ancient monument. The result seems to be that in the particular instances discussed no absolute certainty is as yet attainable, but it is impossible to follow the Bāhu in the exclusive importance he attaches to the mere forms of letters in inscriptions of doubtful import, and written in an alphabet that was in use for so long a period. It was scarcely worth while to attack Mr. Fergusson's ingenious and striking hypothesis on such slender grounds as this.

THE *Indian Antiquary* for February 1880 contains a transliteration and translation by Mr. Kāsināth Trimbak Telung, M.A., of "A New Silāra Copper-plate Grant," dated in Saka 1016, giving a series of kings from about Saka 720 down to that date. The historical results of the grant are critically and successfully elucidated. The second paper is one by the Rev. Thomas Foulkes on a "Grant of Vira Ohola," inscribed in Grantho characters on two copper plates. It was issued in the reign of Parakesari Varma, whose date is at present uncertain; but it is probably of the ninth century. Mr. Fleet, of the Bombay Civil Service, has a useful article identifying a supposed Tagiri with the modern Yata giri, a town on the Great Indian Peninsular Railway, the correct reading of the ancient name being Etāgiri. There are several minor articles, of which the most important are a long review of Zimmer's *Altindisches Leben*, by Dr. Muir, and one of Miss Stokes's modern Bengali "Fairy Tales," and a note on "Folk-lore Parallels"

by Mr. C. H. Tawney. This comparison of Indian tales with European ones promises to yield important evidence as to the intercommunion of East and West.

THE *Gadalādeni Sannaya* is an edition by Sumangala Unnāse, the learned Chief Priest of Ceylon, of the most important native commentary on the well-known Pāli Grammar entitled *Balivātāra*. There are four such commentaries known, called respectively "Balana Sannaya," "Liyana Sannaya," "Sūtra Nirdeśaya," and the one in question. Of these the *Gadalādeni Sannaya* is the oldest and most complete, following the original word for word. Its date and author are both unfortunately unknown, and there seems to be little ground for the current tradition, accepted by Sumangala, which assigns it to the fourteenth century, save the common custom of assigning every Sinhalese work of unknown date to the time of that great patron of Sinhalese literature, Wijaya Bāhu the Second. The *Balivātāra* itself is much more nearly allied, in technical phraseology and general features, to the Kātantra Grammar than it is to Pālini; and it differs in several respects, and especially in the examples attached to the rules, from the grammar of Kaccāyana, to whose school it belongs.

MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, April 16.)

DR. J. A. H. MURRAY, President, in the Chair.—The paper read was "History of English Sounds and Dialects," II., by H. Sweet. Mr. Sweet showed by an examination of the accentuation of the MSS. that vowels were regularly lengthened in Old English before liquids and nasals followed by a voice consonant in such words as *word*, *child*, *lang*, *land* (*long*, *lōnd*). In some of the Middle-English dialects these long vowels were kept; in others they were shortened; standard English showing the usual mixture of dialects. The present *long* is not the result of retention of *o*, but comes from the Midland *laug*, just as *staen* became *stone*, *laug* being shortened into *long*. Un- and the preposition on had long vowels in Old English, the lengthenings having begun in such combinations as *anbindan*, *on dæge*. The history of the diphthongs *eo*, *eo*, was then traced through *æ*, *æe*, and then by unrounding to *e*, *ee*, the former stage being preserved in such spellings as *horte*, *dop*, *doep*, *dup*, *chusen* (= *chyyzen*), whence the modern *chuse*, *choose*.

ROYAL ASIATIC SOCIETY.—(Monday, April 19.)

SIR H. C. RAWLINSON, K.C.B., President, in the Chair.—Prof. Vambéry read a paper "On the Uzbek Epos," in which he pointed out that the MS. containing these poems was wholly different from the small treatise edited some years since by M. Berezin, in that it contains seventy-nine cantos and nearly 8,000 lines. The subject of it is the wars of Sheibani Khan, the famous conqueror of Central Asia, and rival of Baber Mirza, which are reported with an often tedious prolixity. Considered as a poem, it is inferior to some other similar Oriental compositions; but it gives a most valuable account of many events which were previously known to us only through the medium of partial Persian writers, or from the memoirs of Baber himself. It gives, at the same time, many and various interesting details of the ethnology and ethnography of Central Asia, so that we thus gain a clear insight into the ethical and social life of that portion of the globe at the beginning of the sixteenth century. The author of this epic was Muhammad Khan, a Prince of Khiva, and Court-poet to, and one of the generals of, Sheibani. He is believed to have met with a premature death on the battle-field.

SPELLING REFORM ASSOCIATION.—(Tuesday, April 20.)

A. J. ELLIS, Esq., F.R.S., in the Chair.—The Rev. W. S. Lach-Szyrma read a paper on "International Spelling Reform." In it he discussed the possibility of framing a system which, beyond English, should include all the important languages of the civilised world. Systems hitherto proposed

for that object were too complicated for general use; even that of Lepsius, which the lecturer preferred, erred in the multitude of its diacritics. The lecturer then expounded his own suggested alphabet, in which the vowel signs were used for the short Italian vowels, and the long vowels and various modifications of the consonants were indicated by simple diacritical marks, such as a dot or an accent. Mr. Lach-Szyrma pointed out the great advantages that would result in learning to read one's own and foreign languages, and concluded by suggesting a Congress of Spelling Reformers for the discussion of questions relating to international reform. In the discussion which followed, Messrs. Pfoundes, Ball, Pagliardini, Fleay, and Long, and the Chairman took part.

FINE ART.

ART BOOKS.

Handbook of Pottery and Porcelain. By Hodder M. Westropp. (Chatto and Windus.) This book is so nicely got up and so prettily illustrated that it is a disappointment to find that it has been hastily and inaccurately compiled. Some parts of it are fairly well done, especially that which deals with Greek pottery, but even here we find such mistakes as the worship of "Dionysios." The chapter on Italian majolica is very unsatisfactory. What is to be understood by such a sentence as this: "Previously Andrea Mantegna, Marc Antonio, whose works had become familiar by engravings, were the type of nearly all the early majolica paintings"? The account of French pottery is still more confused—e.g., the following consecutive sentences, in this same paragraph:—"This manufactory [Nevers] has continued down to the present day. About the same period good pieces were also made at Rouen." Doulton ware is described under the head of Staffordshire; Japanese pottery is dismissed in a page; and the short notice of Persian and its allied wares contains about as many errors as lines. We have not had patience to follow Mr. Westropp through the rest of his book, which is devoted to porcelain, but a quick glance at a page here and there has seldom failed to find some omission or inaccuracy, as, for instance, that the only known colour, till recent discoveries, which could be painted on the body before glazing, without being impaired or altered by firing, was "the céladon." How about blue?

We have to acknowledge *John Heywood's (Second Grade) Freehand Test Papers*, designed by J. O. Thompson, Master of the School of Art, Warrington, and numbers of the *Young Artist* (Murby), which has entered its second year of usefulness. We are glad to see that it is somewhat enlarged, and that each number will contain an original drawing from that clever designer, John Proctor. These, with occasional original drawings from other living men, and reproductions of drawings by Harding, Prout, and others, should ensure it an increased circulation.

ART SALES.

THE sale of the many drawings of Samuel Prout which had remained so long in the possession of his family took place last week at Christie and Manson's and attracted, no doubt, more interest than would have been the case a twelvemonth ago. Also, the prices were by no means inconsiderable. Mr. Ruskin's recent advocacy of the artist—an advocacy almost always discriminating—had doubtless done much to enhance the value of the drawings. Many of the best of those displayed at the Prout Exhibition in Bond Street were now offered for sale. They comprised what are accurately enough described as "views" in France, Germany, the Low Countries, and Italy, as well as in certain English shires. Some were in water-colour, and others were in pencil. Most displayed, along with the artist's indubitable

able skill in record, his wearisome mannerism of interpretation—his curious broken line, so much better fitted to express ancient Gothic architecture than the more delicate architecture of the early Renaissance. Masses of small sketches were sold as they were turned out from the folio; others were framed, and these, when in colour, were fairly decorative. We note especially the following:—*Wreck of an Indian Shore*, in colours, £17 17s.; *Harfleur*, an early drawing in colours—one which the artist is stated to have cherished much and declined to part with—£42; *The Frauen-Kirche, Nuremberg*, £15 2s. 6d.; *The Bridge of Sighs*, £17 2s. 6d.; *Ghent*, £25 4s.; *Prague*, £21; *Bayeux*, £18 17s.; *Strasbourg*, £23 4s.; *Como*, £25 4s.; *The Ducal Palace, Venice*, £40. The excellent washed drawing of *Calais Town and Pier*, which had been much noticed at the Prout Exhibition by the lovers of the freest, most unmannered, and most suggestive art, fell for £11 11s. Its cheapness is to be attributed to the fact that it was almost too good for Prout. It was without the characteristics by which he is most widely known, and, accordingly, it was sold below its value. In the commercial valuation of works of art, a man's faults, when once they have been recognised, and are looked for and expected, count for almost the same as his virtues. The public wants the autograph, so to say, of the artist, and cares little whether it is a good or a bad one, so long as it is unmistakable.

THE engravings of the late Thomas Landseer, A.R.A.—principally after the popular works of Sir Edwin—have been sold by Messrs. Christie at very high prices, which appear to indicate the undiminished acceptability of Sir Edwin's work to an extensive if not always a chosen public. Thus, a proof before letters of *Dignity and Impudence* sold for £55 13s.; *Laying Down the Law*, proof before letters, £33 12s.; *The Monarch of the Glen*, an artist's proof, signed by the artist, £66 6s.; and *The Stag at Bay*, an artist's proof, signed by the artist and by the engraver, £74 11s. There should apparently be much money to spare in a country in which modern interpretations of a popular artist fetch the price of Albert Dürers.

ON Saturday last, Messrs. Christie sold the pictures and water-colour drawings which had been the property of the late Mr. Thomas Williams, and many of which that amateur had commissioned from the artists. We note a drawing of *The Thames at Twickenham*, by Peter Dewint, sixty-two guineas; *A Straw Yard*, painted for Mr. Williams by Mr. Birket Foster, 100 guineas; *The Thames at Twickenham*, by J. M. W. Turner, thirty-five guineas; *The First of September*, by Frederick Tayler (a drawing of the year 1852), seventy-five guineas. Among the pictures most remarked were Creswick's *Sunset near Hillingdon*, from the collection of the late John Philip, B.A., and exhibited among the Creswicks at the International Exhibition, 157 guineas; Creswick and W. P. Frith's *Cornfield with Figures*, 165 guineas; John Linnell's admirable picture, painted in 1858, and described as *The Brow of the Hill*, 510 guineas (Vokins); his *Gleaners Returning*, 350 guineas. By Maclise there were two notable examples, *The Play Scene from Hamlet*—the original sketch for the celebrated work finished for Mr. Williams by the artist—and the *Banquet Scene from Macbeth*. Of these, the first attained the sum of 405 guineas, and the second that of 550 guineas. Immediately after, an interesting example of Morland, which had been approved at Burlington House, was knocked down for thirty-three guineas. It was styled *The Passing Shower*. By Paul Falconer Poole, R.A., *A Girl at a Mountain Spring* sold for 115 guineas; by David Roberts, *The Temples at Paestum*, 140 guineas. The late Mr. E. M. Ward was

strongly represented by some of his most inventive and dramatic works. Thus, his *Charlotte Corday: La Toilette des Morts*, reached 310 guineas; his *Fall of Clarendon*, painted in 1862, 170 guineas; and his often-exhibited picture of *Marie-Antoinette listening to the Act of Accusation*, 240 guineas.

NOTES ON ART AND ARCHAEOLOGY.

AN excellent, if sometimes too emotional, contemporary has been taking the patrons of the Watson-Gordon Professorship to task for the conditions of candidature which they have put forth for applicants for the professorship—in other words, they are reprimanded because they have not expressed their determination to elect a drawing and painting master rather than a critic who has made it his business to try to know art and the history of art, should such a one care to present himself. But the now familiar error of the *Athenaeum* in considering as “the newest branch of *belles lettres*” (and therefore valueless) nearly all writing or talking upon art that does not proceed from a practising painter with a little leisure to criticise, if with but scanty time to learn, is not, we trust, likely to be shared by the patrons of the professorship, who have indeed already shown that they take into account the demands of modern culture—the preference of an increasing public to know something of the history and merits of the great body of art that has been accomplished, rather than, by a little technical training, to add indefinitely to the number of third-rate painters. In these columns, and nearly everywhere else where this not unreasonable desire of the public is calmly recognised, it has been urged before that among professors of fine art there is room for two kinds. If a school of design is wanted—if it is the training of the hand that is sought—there is room for the practical teacher who has spent his life in doing his best—though it may not always be very good—with pencils and brushes. If mental cultivation is preferred—the unbiased estimate of many kinds of artistic excellence, and the curious knowledge of the *connoisseur*, which, wherever it exists, gives new interest to the leisure hours of life, and the sharpening of the senses to the appreciation of beautiful things—then there is room for the critic who has been spending time over these matters and learning how best to express them, while the painter in his studio has been engrossed with problems of the brush. There need be no sort of clashing between the claims of the two teachers, who indeed “profess” very different things, and both valuable. But it boots much to know, in each given case, which kind of teacher is desired. “Which Sir J. W. Gordon intended we need not say,” observes our excellent contemporary, promptly deciding for the drawing master. But are we to be so sure that this characteristic decision is one from which the patrons of the professorship have no right of appeal? Was our excellent contemporary really entrusted with the exclusive confidences of Sir Watson as to “which he intended,” or is it but instinctively that in its art columns it exalts the dexterity of the hand above the insight of the mind?

THE March number of the *Journal* of the Royal Institution of Cornwall contains some interesting biographical details of Henry Bone, the celebrated enamellist, and of his sons and grandsons. Henry Bone exhibited over two hundred and forty works at the exhibitions of the Royal Academy, and nearly a hundred at the British Institution. He and his descendants produced more than a thousand works in all, most of which will always possess a high value in the picture market. Henry Bone is usually considered a native of Truro, but there is no record of his baptism in Truro church. At an

early age he was apprenticed to Richard Champion, of Bristol, the celebrated china manufacturer.

THE new addition to Messrs. Sampson Low and Co.'s “*Illustrated Biographies of the Great Artists*” is the volume containing Horace Vernet and Paul Delaroche, by J. Runtz Rees.

MR. W. ROBINSON, F.L.S., has written and will publish an illustrated essay entitled *God's Acre Beautiful; or, the Cemeteries of the Future*. It will treat of the numerous improvements which the practice of urn-burial would make possible in cemeteries, both in town and country.

MR. BIRKET FOSTER will contribute an etching to the forthcoming number of the *Etcher*.

THE *Artist* hears that it is whispered that Lord Hardwicke's collection of works of art will come to the hammer next month.

WE are glad to learn that a second edition of Mr. Cosmo Monkhouse's *Life of Turner* has been called for, and is already almost exhausted.

THE annual dinner of the Hogarth Club will take place at the Criterion on the 29th inst. Mr. Alma-Tadema, R.A., will preside. The invitation card is a charming etching by Mr. J. D. Watson.

MESSRS. SAMPSON LOW AND Co. announce as forthcoming a new work called *The Great Historic Galleries of England*, edited by Lord Ronald Gower. It will be published in monthly parts and illustrated by permanent photographs. The size chosen is imperial quarto, and three illustrations will be given in each part, the price of which will be three and sixpence. Among the owners of “historic galleries” who have given their consent to allow reproductions of their celebrated pictures to be made for this work may be mentioned the Queen (who has given permission for the miniatures at Windsor Castle to be copied), the Dukes of Norfolk, Sutherland, and Westminster, the Earl of Ellesmere, the Earl of Denbigh, and Earl Spencer, Lord Lanerton, and Sir Richard Wallace. The first part will contain photographs of Raphael's *Virgin with the Palm-Tree* from the Bridgewater Gallery, van Dyck's portrait of *Thomas Howard, Earl of Arundel and Surrey, K.G.*, from Stafford House, and Sir Joshua Reynolds' portrait of *Caroline, Countess of Carlisle*, from Castle Howard.

THE remarkable collection of pictures and sketches which the well-known Russian artist, Basil Vereshchagin, exhibited last year at South Kensington has just been sold by auction at St. Petersburg. That is to say, most of them have been thus disposed of, 110 having been sold out of 135 which were put up for sale. They realised about 120,000 roubles, equivalent at present to about £12,000. The absence of *milords* and other foreign purchasers was much regretted. Before being sold, the pictures were exhibited for some time at St. Petersburg. The critics were unanimous in their praise of those representing Indian subjects. But the vivid representations of “the seamy side” of the Russo-Turkish War, such as that entitled *Our Captives*, for instance, called forth many reproaches from journalists who seem to have recognised in them a want of patriotism; reproaches to which the artist replied in print with characteristic energy.

THE picture by her Imperial Highness the Crown Princess of Germany which will be exhibited in the forthcoming collection of the Institute of Painters in Water-Colours is entitled *Roma, 1880*.

SIR NOËL PATON, R.S.A., has recently finished another of those large symbolical works which

have mainly occupied him of late years. The two life-sized figures of the picture are relieved against a gloomy background—the Valley of the Shadow of Death, through which the human soul, seen under the image of a slim female form, is passing. Her celestial guide is by her side, clad in the Resurrection robes of purple and white, and bearing the staff of the faithful Shepherd, heavenly radiance streaming from his thorn-crowned head and illuminating the darkness. He has been with her all the way, holding her by the hand, but only now, as he turns to her with a look of quiet and faithful compassion, does the soul indeed know her divine companion. Laying her right hand upon his wrist with significant gesture, she meets his gaze with her wild dark eyes which are yet full of the terrors of this last journey, her pallid lips half parted in the joy of recognition. In the two faces there is finely expressed the contrast between mortal weakness and fear and the calm power of him who has "overcome the world." The unbound hair of the female figure floats in the chill, mist-charged wind which sweeps through the valley of death shrivelling the dead leaves beneath her feet, and the thin, white drapery in which she is clad is driven into long trembling folds; while the locks of her companion cluster closely about his head, and his robes fall quietly to the ground, undisturbed by any mundane influence. Around are strewed rusting armour, decaying human bones, and a regal crown with the broken jewels falling from it. A mossed sepulchral cross and an altar tomb are seen near the figures. Beneath is a flat carven grave-slab, but the stone is rent and inscribed with words of hope. The picture has the fine technical qualities which are characteristic of the artist, his accustomed beauty of draughtsmanship and modelling. The faces are profoundly pathetic, and the whole work is full of suggestiveness through the richness of its symbolism.

SINCE the completion of this picture, Sir Noël has been at work upon a model for a piece of sculpture to be placed in a church which has been erected by Sir Peter Coats at Auchendrane, Ayrshire, in memory of his late wife. It shows, in high relief, a head of Christ crowned with thorns. The delicate features of the face are full of grave beauty; the nail-pierced hands are seen crossed in front and gently pressed upon the breast as though to emphasise the words that are carved above—"I am the Resurrection and the Life."

MR. W. E. LOCKHART, R.S.A., has all but finished a figure-picture of more than usual size and importance. Its subject has been suggested by one of the poems of the Cid, which relates his victory over five Moorish kings; but the artist has made no very elaborate effort to reproduce the exact costumes and accessories of the remote period of the half-mythic Spanish hero, and the picture may be regarded simply as an illustration of the mediaeval chivalry of the East and the West. To the right is the youthful knight, his form clad in complete plate-armour, but his head uncovered. He stands beside the chair of his mother, and introduces into her presence his conquered enemies, his courteous gesture and blonde locks contrasting with the swarthy complexions and haughty attitudes of the Moorish kings, who prepare, with ill-concealed reluctance, to make their obeisance to the Christian lady. Mr. Lockhart's power of dealing with intense and vivid harmonies of colour is seen to great advantage in the rich robes of the group of Easterns.

THE National Exhibition of Fine Arts to be held at Turin will be opened officially tomorrow. This exhibition will, it is said, be the most important of its kind ever held in Italy.

Italian artists, as a rule, have not hitherto taken kindly to exhibitions, the more eminent of them preferring that their works should be seen and judged in their own studios rather than that they should share the chances of a general exhibition. They seem, however, to have departed from their usual custom on this occasion, for so many works of merit have been sent in that another annex has had to be built on to the palace in which the exhibition is held. More than four thousand works of art have been accepted.

THE exhibition of the work of M. Viollet-le-Duc was opened to the public on the 21st inst.

THE sale at the Hôtel Drouot for the benefit of the family of the deceased painter Edouard Blanchard realised the sum of 108,900 frs.

SOME new regulations have just been issued with regard to the Sevres manufacture which it may be interesting to collectors to know:—Art. 1. The old Sevres mark under the glaze is re-established. Art. 2. Dating from March 18, 1880, the sale of the white porcelain of the national manufacture of Sevres is interdicted. Art. 3. Defective works of this manufacture are to be destroyed. Art. 4. Objects that are not considered sufficiently fine to be decorated will be given gratuitously to the hospitals of Paris, the mark being obliterated. Art. 5. Objects which, although sufficiently good to be decorated, yet do not present all the qualities necessary to be classed in the category called *de choix*, may be sold under the following conditions: they may be decorated with colour or with colour and gold, but they are not to bear a decoration of gold only; they must receive, beneath the fire mark, another mark on the glaze bearing these words—*Elèves de la manufacture de Sevres*.

LUCIUS ROSS, an Italian painter who has won considerable reputation on the Continent, and has recently become known a little even in England, is the contemporary artist who is illustrated in the *Portfolio* this month. The etching given, which is by Dupont, is from a large and very clever picture, called *Les Femmes Savantes*, and represents two fashionable ladies taking their ease, while they listen to the discourse of a learned professor. It is a little reduced in the etching by some of the background being left out. Rembrandt's magnificent portrait of Jacob Oats, the moralising poet of Holland, is finely reproduced by Amand Durand. Mr. Olark has now reached the fourth chapter of his "Cambridge," and gives in it the history of Trinity College, founded by Henry VIII. "to the glory of God and advantage of the realm for the promotion of science, philosophy, liberal arts, and theology." A few facts respecting Turner have been communicated to Mr. Hamerton by Mr. B. Atkinson for a future edition of his *Life of Turner*. As this first appeared in the *Portfolio*, Mr. Hamerton likewise publishes this account of "Turner at Bristol" in the same journal.

Les Maîtres Ornemanistes is the title of a comprehensive work which is about to be published in fifteen parts by Messrs. E. Plon and Co. The text is written by M. D. Guilmard, author of the *Connaissance des Styles de l'Ornementation*, who has collected more than eleven hundred names of master ornamentists of various schools, and has described their works and catalogued them in chronological order. The book will be illustrated with 180 plates *hors texte* and numerous other engravings, giving in the whole as many as 250 specimens of the ornamental work of the different schools dealt with. These include the French, Italian, German, Flemish, and Dutch, but the plan of the work does not extend beyond Europe. An introduction to it has been written by M. le Baron Davillier. The first number is published

this month, and it is advertised to appear regularly on the first Thursday of every month at a cost of three francs the number.

STRENGTH and weakness have hitherto been combined in the *Etcher*—the generally excellent magazine of etchings now published by Sampson Low and Co. But this month the strength is uppermost. Mr. Robertson's child portrait has about it an agreeable quietude and contentment. Mr. David Law contributes a sea piece not unsuccessful in tone, though the wave-drawing leaves something to be desired; it is perhaps a little too full of detail meant to be imitative, and has not enough of masculine and suggestive sketchiness. Lastly, Mr. Buxton Knight furnishes a work at once poetical and sturdy. It is called *The Haymaker*, and reveals a peasant girl in the familiar attitude of a tosser of hay, other comrades behind her in the distant field, and the level light of the setting sun passing over the land. A most agreeable etching, whether or not it happens to conform to this or that man's more or less arbitrary views on the particular province of the art: Mr. Knight, working with the etching needle, has produced a comely picture.

THE STAGE.

OBER-AMMERGAU competes with the Lyceum and the Imperial, and stalls will soon be at a premium in the Bavarian village. It will be curious to see whether the devotional impulses which the English discoverers of the Passion Play delight to dwell on in its players will remain unimpaired when the players are subjected to the keenest criticism from famous comedians who have journeyed from London or Dresden, and to the somewhat less critical admiration of the Oook's tourist. The *Daily News* has pointed out that the erection of a larger temporary theatre will do something to enrich Ober-Ammergau or its actors: four thousand five hundred persons can be accommodated, and it seems that for all the performances together something like eleven thousand pounds can be taken at the doors. Mr. Blackburn's new edition of his book points out many interesting and useful things which the intending playgoer ought to know; and as the English public—the travelling public included—likes nothing better than "some new thing," and especially when that new thing is from a foreign source, the chances are that the Ober-Ammergau performance will have a successful run. Whatever may be the desire of the authorities of that distant region to put money in their purse by keeping the piece as long as possible "in the bills," it is to be remembered to their credit that they declined one easy means of money-getting. They, at least, did not bring their sacred traditions from the mountains to the Aquarium, or propose to "share profits" with Zazel or Ceterwayo's daughters.

A DRAMA which has long been a sure success of Emile Augier's has just been revived at the Théâtre Français. *L'Aventurière*—like all that comes from its author or from the younger Dumas—will always be good reading, but, as a stage performance, its success hangs upon the presence of a capable actress to interpret the character which suggested the title of the play. The infinite stage art of M^{me}. Arnould-Plessy, which became greater with her years, and was greatest at the moment of her retirement, long sufficed to ensure a welcome for a drama whose heroine is bound to be profoundly unsympathetic. And it did not follow, because M^{lle}. Sarah Bernhardt had hardly less art than M^{me}. Plessy, and a good deal more of the electrical quality we call genius, that this phenomenal performer—the witch of the French stage—would satisfy good judges in the

"adventuress's" rôle. Perhaps it cannot be said, indeed, that she has thoroughly done so. She makes very apparent the fascination of the character for the man with whom the character is chiefly anxious to be on the best of terms; but she hides far less than did her predecessor the sources of that fascination. M^{me}. Arnould-Plessy, as the adventuress, was a partially evil woman, suppressing much in her of what was evil. M^{lle}. Sarah Bernhardt spreads out somewhat too visibly the wiles of the courtesan, so that the man of the world with whom she had to deal would have known them for what they were. The part next in importance is played by Coquelin, who is of course as droll as could be desired; and the charm of M^{lle}. Baretta and the discretion and experience of M. Febyre assist the attractiveness of the revival.

OF Miss Litton it may hereafter be said, as of Joubert, that she "*s'inquiétait de perfection bien plus que de gloire.*" Here is everybody taking seats at the Imperial to see a revival of *As You Like It*, which is confessedly the daintiest thing now on the stage; here is everybody well pleased with the general tone of the performance, and not alone with the exceptional excellence of this or that favourite of the public; and Miss Litton proceeds quietly to introduce what must be called a novel feature in the performance of *As You Like It* in our day—the presentation of the character of Hymen. For the part of the play now happily restored, Mrs. Tom Taylor has written a wedding march and chorus which catch pleasantly the spirit of our older English music. It is not as purists battling for the scrupulous preservation of the Shakesperian text that we commend Miss Litton's proceeding, but rather because it happens that the restoration to its proper place of such a rôle as that of Hymen tends to emphasise the fanciful and poetical side of the conception of the play, and removes it further, in the eyes even of the most materialistic of modern playgoers, from the position of a comedy of actual life. *As You Like It*, as seen at the Imperial, becomes more of a romantic idyl. It claims kinship not with *Twelfth Night* but with *A Midsummer Night's Dream*; or, again, not with *The Merchant of Venice* but with *The Tempest*—with a world of enchantment and supernatural power.

MUSIC.

RECENT CONCERTS.

THE first concert of the thirty-sixth season of the Musical Union was given at St. James's Hall on Tuesday, April 13. The music included Mozart's quintet in D, well played by Signor Papini and Messrs. Wiener, Holmänder, Mann, and Lasserre. Herr Oscar Beringer was the pianist. He took part in Schumann's quartet, op. 47, and played as solos a small piece by Kirchner and Chopin's first *scherzo*. The difficulties of the last piece afforded Herr Beringer an opportunity of displaying his fine technique, and his interpretation of the work was most satisfactory. Prof. Ella, now in his seventy-eighth year, has definitely announced the present series as the last. M^{me}. Montigny-Réaury will be pianist at the next concert, April 27, and Dr. Bülow will appear in the month of May.

Dr. Bexfield's oratorio *Israel Restored* was performed by Mr. Carter's Choir on Thursday, April 15, at the Albert Hall. This work was first performed at the Norwich Festival in 1852, and the composer died in the following year. It proves him to have been a thoughtful, and very clever and accomplished musician. There are, here and there, traces of individuality, but the scientific element is

throughout too predominant. The performance was not a good one, but the solos were well rendered by Miss Anna Williams, M^{me}. Mary Cummings, Mr. Vernon Rigby, and Mr. Robert Hilton.

At the Crystal Palace Concert on April 3, Mr. Dannreuther gave a very fine performance of a new and very difficult piano concerto in F sharp by Mr. C. H. E. Parry. With the exception of the middle movement, the work may be described as somewhat dry, but the composer has an original manner of expressing his ideas. The workmanship is sound and musicianlike: a little less labour and a little more humour would, however, be acceptable. The last concert of the series took place on the 17th. The programme included the Jupiter-Festival march for orchestra and chorus from Gounod's *Polyeucte*, and a symphonic prelude to Byron's *Mafred* by F. Praeger. The prelude is well written and pleasing. The concert concluded with Beethoven's choral symphony. The soloists were Miss Annie Marriott, Miss Orridge, Mr. H. Kearton, and Mr. F. King. The performance was very good, but the instrumental portion superior to that of the vocal. Mr. Manns will take his annual benefit next Saturday, and the programme will consist of pieces selected by a *plébiscite*, particulars of which were given in a circular issued at the concert we have just noticed.

Mr. Ganz has announced a series of five orchestral concerts at St. James's Hall. The first took place on the 17th. M. Emile Sauret was solo violin, and the programme included a first performance of Rubinstein's symphony in F major, op. 40. It was written about the year 1850, and is the first of four he has written and published. The dates of the remaining concerts are May 1 and 29, June 12 and 26.

At Mr. Faulkner Leigh's benefit concert at St. James's Hall on Wednesday, April 14, was performed for the first time in England a second suite for orchestra, *L'Arlesienne*, by Bizet. It is in four movements, *pastorale*, *intermezzo*, *minuet*, and *farandole*. The music is charmingly fresh and original, the orchestration most delicate and effective. This suite and a pleasing bagatelle, *Elle et Lui*, by Mr. L. Engel, were admirably played by the orchestra under the direction of Mr. Weist Hill. The programme, which was a long one, included also M^{me}. Sainton Dolby's pleasing and melodious cantata, *The Story of the Faithful Soul*, performed for the first time with full orchestra, and conducted by M. Sainton. The solo parts were taken by Miss Jose Sherrington and Mr. Faulkner Leigh. The concert concluded with a first performance of *Imogene*, a new cantata (*seria buffa*) by George Fox.

Programmes have been issued of the Richter Concerts (second season). There are to be nine in all, on the following dates: May 10, 20, 24, 27, and 31; June 3, 7, 10, and 14. As at the Crystal Palace, the nine symphonies of Beethoven will be given in chronological order. The following artists have been engaged:—Pianoforte—Mr. C. Hallé, Herr Grünfeld, Herr Barth, Herr X. Scharwenka, and Mr. E. Dannreuther; violin—M^{me}. Néruda and Signor Sarasate; violoncello—Herr B. Hausmann; vocalists, Miss Bailey, Frl. Friedländer, Frl. Hohenschield, Signor Candidus, and Herr Henschel. The orchestra will consist of one hundred artists. J. S. SHEDLOCK.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRITT.
To-night, at 8, a Play, in five acts,
THE OLD LOVE and the NEW.
By BROOKS HOWARD and J. ALBERT. Messrs. Coglian, Fisher, Lenth, Price, Dacre, Holman, Benn, Douglas, Phelps, and Anson; Mesdames A. Roselle, Emery, Gifford, J. Roselle, and White.
Morning Performance of "The Old Love and the New," Saturday, April 3, at 2. Box-office from 11 till 5. No fees.

DURRY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.
To-night, at 8.40, LA FILLE DE MADAME ANGOÛT.
M^{lle}. Corneille d'Anka, Alice Burville, Kate Sullivan, Hodgson, Ewell, M^{lle}. Naima, Fisher, He's Mapleson, Percival, Hudson, and M^{lle}. Palladine (première danseuse); Messrs. Wilford Morgan, J. A. Arnold, Wallace, Bradshaw, F. Wyatt, Marler, &c.
Preceded, at 7, by LADY AUDLEY'S SECRET.
Box-office open from 10 till 5. No booking fees.

DUKE'S THEATRE, Holborn.

Managers, HOLT and WILMOT.
Every evening, at 8, Baker and Farron, the favourite musical comedians, in their speciality Dramatic Vaudeville, in five acts,
CONRAD and LIZETTE.
CONRAD (a German), with songs and dances—Mr. F. P. BAKER.
LIZETTE (a German girl) and TIM FLAHERTY (an Irishman), with songs, dances, duets, &c.—Mr. T. J. FARRON.
Preceded at 7.30, by BUCKSTONE'S Farce of A ROUGH DIAMOND.

FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.
To-night, at 8, a new and original Comedy, in three acts, called
THE UPPER CRUST.
By HENRY J. BYRON.
Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D. Ward; Misses Ellen Cavalier, Holland Phillips, and Emily Thorne.
Preceded, at 7.30, by DEAF AS A POST.
Concluding with
A MARRIED BACHELOR.
Doors open at 7. Prices 1s. to 25 3s. Box-office open 10 till 5. No fees for booking.

GLOBE THEATRE.

Manager, Mr. ALEX. HENDERSON.
To-night, at 8, A V. A. L. CADET.
Opera Comique, in three acts, composed by RICHARD GIBBER.
Supported by Mesdames Selma Dolero, St. Quentin, Violet Cameron; Messrs. Harry Paulson, Lorian, W. E. Gregory, Danbigh Newton, Mitchell, and powerful company. New and magnificent scenery by Messrs. E. Ryan, Spong, and W. Hann. Costumes by Messrs. and M^{me}. Alais. Furniture by Mr. S. Lyon. Full band and chorus. Conductor, Mr. Edward Solomon.
Preceded, at 7.15, by the celebrated Oriental Extravaganza,
THE HAPPY MAN,
in which Mesdames Graham, Chorley; Messrs. Wilton, Hill, Craven, & Henry, and Mr. John Barry will appear. The whole produced under the direction of Mr. H. B. Parlo. Acting Manager, Mr. E. D'ALBERTON.
Box-office open daily from 11 till 5. Doors open 6.45.

IMPERIAL THEATRE.

Shakespeare's Comedy, AS YOU LIKE IT.
Every afternoon at 3, in which Messrs. Lionel Brough, Herman Vedia, W. Farren, Kyrie Bellow, F. Everill, E. P. Edgar, J. Bannister, C. Cox, G. Coventry, F. Charles, E. Allbrook, F. Stephens, G. Trevor, C. Bunck, and Miss Litton, Miss Crosswell, Miss Branton, Miss Sylvia Hodson will appear.
The doors open at 2.30; Overture at 2.45; Comedy precisely at 3; Carriages 3.45.
Night Performances on Wednesdays and Saturdays. Doors open at 7.30. 1 ROUND the CORNER, at 7.30; "AS YOU LIKE IT," at 8.15, with the same powerful cast as in the afternoon.

LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.
MERCHANT OF VENICE, 166th time.
Every evening, at 8.15,
SHYLLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Morning Performances of the MERCHANT OF VENICE Saturdays, 24th April and 1st and 8th May, at Two o'clock.
SHYLLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Box Office open Ten to Five, under the direction of Mr. J. HUMST.

NEW SADLER'S WELLS.

Proprietor and Manager, Mrs. S. F. BATEMAN.
THE DIANITES.
JOAQUIN MILLER'S famous American play descriptive of life in the Far West as depicted by Bret Harte. In order that the peculiar dialect and manner should be accurately given, the characters will be represented by the same Company of American artists who have, under the management of Mr. McKee Rankin, performed them in all the chief cities of the United States for the past three years.
SANDY MCGREE (a Miner)—Mr. RANKIN.
Messrs. W. E. Sheridan, G. Waldron, M. Lingham, E. Holland, L. Harris, J. Peakes, H. Lee, J. Richardson, and Harry Hawk; Mrs. McKee Rankin, Messrs. Tanager, J. Waldron, and E. Marble.

SOLE ADDRESS:—

11, LITTLE STANHOPE STREET,
MAYFAIR, W.

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.
Strengthens the Nerves and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A

fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with indications of Dyspepsia, are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTS

ROUGHOUT on

F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862

PAINLESS DENTISTRY.

MR. G. H. JONES,
Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury
(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent), Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name."
"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen."

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

Food, Water, and Air, Edited by Dr. HASSELL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT.

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

NELSON'S GELATINE.—For JELLIES.

An Economical Recipe in each packet.

NELSON'S CITRIC ACID.—For

JELLIES, with their Gelatine and Essence of Lemon.

NELSON'S ESSENCE of LEMON.—For

JELLIES, with their Gelatine and Citric Acid.

NELSON'S PURE BEEF TEA.—In 1/2

pint packets.

The *Lancet* says—"An excellent preparation. Is very portable. Its flavour is all that could be desired."

The *Medical Press* says—"One of the best articles of the class we have ever examined."

NELSON'S SOUPS.—BEEF with PEAS or

LENTILS and VEGETABLES.—In 1/2-pint packets.

Miss MARY HOOPER says—"I have found your Beef Tea and Soup excellent.—Indeed, in my opinion, they are by far the best things of the kind ever before the public."

"The Soup is, besides, so cheap that it cannot fail to be appreciated by all classes of the community."

ASK YOUR CHEMIST or GROCER

for the above.

"HOME COMFORTS."

This book, neatly bound in cloth, and illustrated with numerous woodcuts, will be found very useful to Ladies, or anyone interested in home comforts. A copy will be sent, post-free, for seven stamps, on application to the Publishers.

THE AUTOTYPE COMPANY

has REMOVED from Bathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Muller's Library).
The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Colotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.
Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.
Note.—The special advantages of the Autotype Process for Book Illustrations are:—
1st. The absolutely facsimile nature of the result.
2nd. Its Cheapness for Small Editions of 250, 500, &c.
3rd. The Prints being direct on the Paper there is an absence of all oozing and that disagreeable effect inherent to all Mounted Prints.
* For Terms and Specimens apply to the Manager.
Now ready, price One Guinea.

"THE PIED PIPER OF HAMELIN." Illustrated by Jane E. Cook. Second Edition (1880). Published with the kind permission of Mr. Browning.
Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."
Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."
Standard, December 17th, 1879.—"There is life and vigour in all the characters."
To adorn the Walls of Home at little cost with Artistic Masterpieces, visit the AUTOTYPE FINE-ART GALLERY, 531, OXFORD STREET.
General Manager, W. S. BIRD. Director of Works, J. H. SAWYER.

LITERATURE.

Miracle Plays and Sacred Dramas. Translated from the German of Prof. Hase by A. W. Jackson, and Edited by the Rev. W. W. Jackson. (Trübner.)

It is supposed to be hard measure, critically speaking, to bring general objections against a book before giving the results of detailed critical examination of it. There are, however, as it seems to us, some rather grave general objections to be brought against *Miracle Plays and Sacred Dramas* in its present English dress. In the first place, the lectures which are here translated were delivered by Prof. Hase twenty-three years ago, and it is no shame to any man that a book dealing with mediæval literature, written at that time, should be hardly up to the level of the increased knowledge which a quarter of a century of laborious work has given us. In the second place, by changing the title from "The Religious Play" to its present form, the translator and editor have handicapped their author still further and still more unfairly, for the "Miracle Play" is exactly the point upon which Prof. Hase is weakest. He seems at the time of his lectures to have honestly consulted most of the authorities then available, though in the list we observe one great omission, that of Onésyme Leroy's *Études sur les Mystères*. But the almost more important work of MM. Marius Sepet and Léon Gautier was not open to him, for the excellent reason that it did not then exist; while it was only the other day that MM. G. Paris and Raynaud made the great *Mystère de la Passion* of Greban accessible in its entirety, and that the Old-French Text Society began the publication of the vast collection of *Miracles* of the Virgin as a whole. This being the case, and the professor having, as it would appear, no specially wide or accurate first-hand knowledge of Old-French literature, his account of the birth and early fortunes of the religious play is necessarily defective. Writing with a view to the present revival of the Ober-ammergau Mystery, as the translators do, they have naturally, but we think unwisely, laid stress in their title on the connexion of the book with the history and ancestry of that institution. In reality, the original title of Prof. Hase's work describes it much better. His book is really an account, not elaborately scholarly or accurate at this date, but interesting enough, of the religious play in the various forms (or some of them) which it has assumed in Europe. The most interesting chapter by far, as it seems to us, is that which contains abstracts of the plots of many of the works

of Calderon and Lope; the least are those which deal with the Miracle Play and the French classico-sacred drama of the sixteenth and seventeenth centuries. Unluckily, these are among the most important for an accurate knowledge of the subject and its history.

To come down from generalities to particulars, it does not appear that Prof. Hase had, when he wrote in 1857, by any means a clear or accurate knowledge of the history of the French Mystery, which is, it need hardly be said, much more important than that of any other European nation. This is evident at once from the way in which he speaks of the Mystery of the Ten Virgins, which he says is written in scriptural Latin except that Christ repeats his words and the virgins answer "in Provençal verse." Now it is quite true that some forms in this piece are of a Southern complexion, but no one who knows Old French could possibly call the dialect Provençal. A subsequent reference to "Provençal Mysteries" tells the same tale. We have not Prof. Hase's original before us, and it is therefore possible that his translator has done him injustice in making him call Philippe de Remy a Troubadour instead of a *Trouvère*. Considering that in Monmerqué and Michel's book (which is cited) a long extract from the *Roman de la Manekine* is given in the purest Northern French, it seems impossible that the professor can have made such a blunder as this. More important, perhaps, than these minute errors is the confusion of the whole account of the early French plays. As far as a reader of these lectures would be likely to judge, the Morality was an early development of the scriptural Mystery and the Miracle Play strictly so called was a hybrid between the two. Nothing can be farther from the truth. It is possible that there may have been Moralities of the fourteenth century, when allegory and abstract personages were in high favour, but there is not one tittle of evidence to show that there were any, and the earliest existing Morality dates from a time well within the fifteenth. On the other hand, the *Miracles* of Théophile and St. Nicholas are of the thirteenth century, and the vast collection of *Miracles de la Vierge* which, as before mentioned, the Old-French Text Society is now for the first time publishing complete is of the fourteenth. To do Prof. Hase justice, it must be said that his language is not always inconsistent with a knowledge of these facts, but it does not convey them by any means clearly. Nor, had he (as his translators have made him design in their title) designed a formal account of the Miracle Play, could he have omitted something like an analysis of the two most remarkable of all such performances—the vast Mystery of the Passion of A. Greban and the equally vast *Mistère du Vieil Testament* of unknown authorship. Similar lacunæ, too, are found in the notice of the French sacred tragedies of the sixteenth and early seventeenth century, in which Prof. Hase was evidently guided at second-hand by the meritorious but summary sketch of Ebert. The dismissal of Garnier's masterpiece with a bare mention, and the omission of all mention of Montchrestien's *Aman*, are particularly unfortunate, because they tend by republication to perpetuate the absurd notion that Corneille and

Racine were in some sort mysterious *autochthones* without literary father or mother.

The translators, with creditable industry, have endeavoured to complete the notes as well as they could, especially in reference to English matters. Their efforts are praiseworthy, if not in all cases according to knowledge. It would have been much better to refer readers anxious for information about the *Gesta Romanorum* to Oesterley and Sir F. Madden than to Warton and Mr. Herbage. Nor, had they been acquainted with the literature of French sacred drama, would they have ventured the statement that "the amount of the grotesque element in the Mysteries is relatively small," and that farce was "not of common origin with the Mystery." That the germ of the independent farces is to be found, from the dramatic point of view, in the comic interludes of the religious dramas, which long preceded any secular ones, seems, on the other hand, probable, if not certain. However, the real fault lies not so much in these almost unavoidable errors of detail as in the attempt, by patching up and altering the title, to make work which was designed for one purpose subserve another. There is plenty of interesting matter in this book, but it is ill suited for an introduction to the Ober-ammergau play, and was evidently never intended as such by its author, though it contains some good remarks on the play itself. Next to the section on Spanish drama, that on Hans Sachs may be read with most pleasure, the extracts given from the good master-singer being both characteristic and attractive. We can also speak very well of the last chapter, which discusses the modern aspect of the religious drama in Germany and the connexion between the Church and the stage generally. The translation is, on the whole, very good, Germanisms being not indeed wholly absent, but avoided to a very creditable extent. If the translators merely wished to give English readers the opportunity of acquainting themselves with a pleasant and instructive work they have done well. But if they wished to supply a really valuable introduction to the intelligent study of the Ober-ammergau play they would have done much better to translate the dramatic section of Aubertin's recent *Histoire de la Littérature française au Moyen Age*, adding in notes Prof. Hase's instances from German and Spanish literature and their own from English, with additional remarks on the Breton and Basque Mysteries, which continued to be acted, the former till half-a-century ago, and the latter to the present day. Somebody might still do this, and it would be a useful work. GEORGE SAINTSBURY.

Imperial England. By Prof. Montagu Burrows, R.N., M.A. (Cassell, Petter, Galpin & Co.)

THOUGH some parts of the work of Prof. Burrows were written many years ago, it possesses a particular interest at the present time. An opportune moment has been chosen for its publication. Not since the close of the Crimean War has the nation been so profoundly stirred by external politics as during the last three years. The course of the conflict between the two ancient antagonists in Eastern Europe has been followed by

the English people with the keenest attention, through a deep-seated conviction that their own interests and the safety of their empire might be seriously endangered. Prof. Burrows entertains a strong belief that the history of the growth of the "British empire" is but imperfectly grasped by the popular mind, and that amid the strife of parties an improper meaning has been assigned to the word "imperialism." The aim of his work is to show as concisely as possible the means by which the successive acquisitions of this country have been obtained, and the treaties by which they have been secured. The doctrine of the balance of power has been fiercely assailed by some of our most powerful orators during the last twenty years, and has become somewhat unpopular. A feeling is fast gaining ground that most of the wars in which England spent her blood and her treasure were entered upon in a mistaken course of policy. Prof. Burrows labours assiduously to prove that English Ministers have acted wisely in striving to maintain this balance, and that their successors should be animated with like views in the future. With this belief he passes in review the countless wars which have been waged in Europe during the last two centuries, and criticises the treaties which have afforded the combatants a few short years of quiet to recruit their armies and husband their resources. The result of this "extensive view" is satisfactory. Wars and treaties alike are all pronounced good. Even the seizure of the Danish fleet at Copenhagen is justified on the plea of necessity. True that "it was too successful, too barefaced a robbery," and committed by a nation which had only recently entered upon a nobler system of policy. Granted that it was an imitation of the most discreditable and lawless proceedings of the French; all this will be forgotten, thinks Prof. Burrows, by those who rightly consider the necessities of the case. Even the effects of the American war are regarded with satisfaction. In that disastrous contest there were sunk a hundred millions of money, and many thousands of lives were wasted; but we are called upon to look at the other side of the picture—to remember that a war against France and Spain was inevitable, and that it occurred at a convenient moment in the history of this country. Prof. Burrows quotes with approval the opinion of Mr. Massey that Englishmen obtained from free America "a commerce of a hundred millions in lieu of a barren sovereignty;" but neither of these gentlemen has attempted to show that such an increase in trade could not equally have been obtained had the war been brought to a conclusion two years previously or never been entered upon at all.

A considerable portion of this historical treatise is devoted to the consideration of the characters of the first three Georges. There is much to praise in either king, and, in dwelling on their merits, Prof. Burrows has but directed attention to some qualities ignored by preceding historians. The good sense of George II. in selecting his Ministers and in yielding a ready compliance to the wishes of his people is justly insisted upon; but it is somewhat overshooting the mark to

allege that his parsimony was forgotten by his subjects when they found that the whole of the royal savings passed to the treasury of his fondly beloved Hanover. Nor can we admit the absolute correctness of the author's enthusiastic admiration for George III. His capacity for work and his powers of memory were unsurpassed by any of his Ministers; his firmness under the galling yoke of the governing families of England, and his courage when it seemed that the contest between people and Parliament over the body of Wilkes might lead to a civil war, are points on which Prof. Burrows dwells with delight. But, in estimating the value of that King's influence on the history of this country, he repeats the error which detracts from his praise of the other monarchs. By affecting to dispute the justice of the popular accusations he weakens the force of his criticism. It is idle at this date to attempt to deny that George III. endeavoured to introduce into public life the system of personal government, or to ignore the part played by the "King's friends" in opposition to the measures of his responsible Ministers. This indiscriminate eulogy diminishes the value of the arguments of Prof. Burrows. We can sympathise with him in his enthusiasm for the vigorous policy of Chatham and the financial ability of the younger Pitt, but must at once repudiate the assertions that the Reform Bill of 1832 was based on the proposals of the latter, and that the peerages which he scattered abroad among his faithful followers were created with the deliberate intention of converting a close chamber into a representative institution. Against the popular opinion which persists in assigning to the heaven-born statesman the chief blame for the failure of his foreign alliances and for the mistakes of his generals, Prof. Burrows enters a firm and decided protest. But is not the view of the multitude more reasonable than that of the professor? The power of the Prime Minister was greater than that of his royal master. If Pitt had shown a fixed determination that the command of the British army in the Low Country should be entrusted to Cornwallis, the man of his choice, and should not be conferred on an incapable prince, the threat of a ministerial resignation would soon have reduced the King to an agreement with his Minister and spared the nation an inglorious campaign. The failure of such measures must fall on the subject, and if Prof. Burrows insists, as he may with every reason, on our assigning to Chatham the credit for the noble warriors who responded to his genius, he must not be surprised if we refuse to withhold from other Ministers their due share of the blame for the faults of their servants. At a time when foreign affairs have engrossed a large, possibly an undue, share of public attention, such a treatise as this is of especial value. Prof. Burrows has selected a good subject, and has compressed considerable information into a small compass without overcrowding his pages with detail. But his views are those of a politician of the past rather than of the school destined to determine the foreign policy of England in the future.

W. P. COURTNEY.

The Odyssey of Homer. Done into English Verse by Avia. (C. Kegan Paul & Co.)

MR. MATTHEW ARNOLD has told us that "in a verse translation no original work is any longer recognisable." It is due to Avia to say at once that, although he writes not only in verse but in rhyme, he has struggled manfully with the difficulties which he has imposed upon himself. He has translated, it is true, with a mill-stone about his neck, and has failed to give us the truth, or even half the truth, about Homer. No one who "both knows Greek and can appreciate poetry" will receive from it "the same feeling which the original gives him," or anything like it. But Avia is a fluent, easy writer, who handles a swinging, flexible metre with considerable skill and force, and has clearly taken pains, under adverse circumstances, to keep close to the Greek; indeed, in the mere numerical faithfulness of line-for-line rendering, *si quis est ea gloria*, he is almost as laudable as Voss. The following extracts will give a fair idea of his performance (xiii. 75):—

"Then aboard did the hero go, and silently down
he lay:
And along the thwarts arow all orderly ranged
were they:
And the hawser loose they cast from the stone
where through it was passed;
And they bent to the stroke and they tore the
white foam up with the oar.
Then the dew of a dreamless sleep o'er his
weariful eyelids streamed;
Most sweet, unbroken and deep, and likest to
death it seemed.
And as all together dash four stallions over the
plains
At the toss of the whistling lash, at the toss of
the glancing reins,
And they bound thro' the air, and they fly, as
borne on the wings of the wind,
So was the stern tost high as the good ship leapt,
and behind
Rushing the dark wave sped of the manifold-
roaring sea;
And unswervingly onward she fled: so swiftly,
so surely went she."

Or again, in a higher flight (xx. 345):—

"Then from the suitor throng, by Pallas Athens
raised,
Pealed laughter loud and long, and their wildered
thoughts were dazed.
And their laughter grew frenzied and wild, with
a weird unnatural sound,
And the meats were blood-defiled that they
gorged, and their eyes were drowned
With tears, and their souls were a-dread with a
horror of death-wails near.
And aghast Theoclymenus said to the rest, the
godlike seer:
'Ah! wretches, what doom is upon you? with
night are your heads overlouded,
And your faces and knees beneath are with black-
ness of darkness enshrouded:
There is wildfire of shrieking and moaning, and
tears on your cheeks as a flood;
And the walls and the mid-pillar spaces fair are
bedabbled with blood:
With phantoms the porchway is thronged, and
the court from wall to wall,
Rushing forth to the nether world gloom, and
the sky blackens down as a pall,
For the sun is dead, and a mist and a death-
damp swept over all.'"

These passages are spirited and powerful, and may be taken as favourable specimens; but it will be observed that they have some metrical peculiarities. Now, without entering upon the vexed question as to the ideal metre for the translation of Homer, we may safely say that any metre which is intended

to produce on the ear of the English reader something like the effect of the Homeric hexameter must be flowing, must be rapid, and must lend itself readily to variety of scansion and variety of pause. But this is not all. Homer's metre is uniform—that is to say, the reader knows, within certain narrow and well-understood limits, exactly what to expect; he cannot by any possibility be in doubt, when he has read twenty lines, how the twenty-first line will be framed or into what form the rhythm will be thrown. Let the reader of a translation once become uncertain about the metrical structure of the poem, let him once begin to doubt which is to be the emphatic syllable and where he is to expect a rhyme, and the even, continuous flow, which is characteristic of Homer above all poets, is gone at once.

Now it is obvious that this rule is continually violated in the translation before us. We begin the poem with a metre of six stresses in each line, rhymed as in the following couplet:—

"The Héro of cráft-*renbun*, O Sóng-goddess, chánt
me his *fámes*,
Who, when lów he had laíd Troy-*tówn*, unto
mány a fár land *cáme*."

This scheme appears to us to be objectionable from the first, the effect of the rhyme at the *caesura* being virtually to break up the couplet into four short lines, beside imposing a heavy and most unnecessary burden upon the rhyming ingenuity of the translator. But, such as it is, it is not long maintained. When we come to Zeus's speech (line 30), the caesural rhyme is suddenly dropped, and is not resumed until line 98. Soon other irregularities appear, "with fear of change perplexing" the reader. In line 101 we find a new movement,

"Of heroes that kindle the ire of the child of a mighty sire,"

to the utter destruction of the continuous flow of the verse. And so on, through passages such as the following, which is really a stanza of six lines (xi. 138):—

"Even so, I ween, have the high Gods spun my destiny thread.
But come, without fail, tell this unto me, for thereof am I fain:
Yonder the spirit I see of mine own dear mother dead;
But she silently sitteth anigh to the blood, and she doth not deign
To look on the face of her son, or to utter a word of greeting.
King, tell me how shall she know me again at this last meeting?"—

to this rendering of the song of the Sirens:—

"O come hither, and bring thy ship to the strand,
O Hero and King of Achæa-land,
For never was wight that sped onward his flight by the Siren-band
But he heareth our voices heart-thrilling uprise,
And his spirit rejoiceth, his soul is made wise,
And he leaveth our shore made rich with our love as with treasures of price"—

which is a mere jingle.

It follows that, where the scheme of metre is so variable, there is all the more need that each line should "*read itself*"—should explain its own structure at a glance. Unfortunately this is by no means always the case in Avia's translation. What is to be said of verses such as these?—

"Father stranger, the house I will show thee whereof thou enquirest: it lies"—

or,

"Out of reverence we did it, because he dwelt mid the grove of trees"—

or,

"Stark mad is the stranger: witless he came from the alien shore."

Dr. Johnson remarked that "Lay your knife and your fork across your plate" might, from one point of view, be held to be a verse; and as much, we suppose, might be said for the lines which we have just quoted.

Another questionable practice, which is carried to a great extent in this work, is the use of double rhymes. Such rhymes in any non-lyrical metre should certainly be employed very sparingly. They are apt, at best, to mar the dignity of a line by causing it to end, not with a step, but with a stumble. Here they are exceedingly common, and, combined with what we have called the caesural rhyme, they produce a metre which might fairly be printed as follows:—

"Or to spare it, an offering to be
To the gods, and a propitiation:
But the last of the counsels three
Was to seal the fate of the nation"

(viii. 509)—

a metre which certainly does not represent the Homeric hexameter, but does forcibly remind us of the Scottish Metrical Psalter:—

"In them the birds of air have made
Their habitation,
Which do among the branches sing
With delectation."

The worst case, however, occurs in the rendering, which we forbear to quote, of (v. 125) *ὡς δ' ὅπότε 'Ιασίωνι ἐπὶ λόκαμος Δημήτηρ κ.τ.λ.*, where "fashion" (*horresco referens*) rhymes with "passion."

It is the doom of those who translate Homer into verse that they must needs be constantly adding and importing words, ideas, and forms of speech which not only correspond to nothing in the Greek, but strike those who know the original with the effect of a false note in music. Avia, to do him justice, has tried to keep close to Homer; but the tyranny of rhyme and metre has been too much for him. Thus, for instance, Homer wrote (ix. 486), "and the backward flow of the wave bare the ship quickly to the dry land. . . . Then I caught up a long pole in my hands," &c. Avia throws this into a melodramatic form:—

"Backward, still backward urging—the ship is aground on the strand!
No! for with desperate grip I seized the pole," &c.

It is not easy to conceive anything more unlike the manner of Homer's narrative. This is a strong instance; but similar cases are not uncommon, and we may notice, in passing, what a curiously un-Homeric effect is produced by Avia's frequent use of the "historic present" tense. "A glory of golden sheaves" (*τεθαλνία δώρη*) and "the wings of the night" (*κνέφας*) suggest reminiscences of Clough and of Longfellow; in a translation of the *Odyssey* such expressions are patches of new cloth on an old garment. Again, Homer tells us simply that Teiresias "went back, when he had told all his oracles." Avia amplifies from *Paradise Lost*:—

"The words of the prophet ended, yet lived they still in mine ear."

While for the familiar line—

οἷς ἀγανοῖς βελέουσιν ἐπιοχομένη κατέπεφεν,
we have

"And softly ohill me to death with arrows like falling snow."

Homer wrote nothing about chilling and nothing about snow; but we must have a rhyme to "bow" in the line before. Equally un-Homeric are such phrases as "beshrew thee" (*σχετλίος εἰς*), "the storm-fiends," "the rock of his spirit," and "to be drunk with my wrath;" and we must protest against "Heavens!" for *ὦ πρόπο*. In x. 556 (*καταντίκρυ τέγος*), why should all mention of the roof be omitted in order to insert the words "with horror-struck thrill," which answer to nothing in the Greek? As for such compound formations as "the renowned Lame-on-either-side," "god-strong," "man-beast," "cloud-rack-clad," "curse-cup," "acre-abiding," they appear to us to be objectionable because they are odd, if for no other reason.

Avia austere absters from preface, dedication, and notes. Left thus to our own judgment, we should say that this translation was intended for those who, delighting in the poetry of Mr. William Morris, look upon Homer as a saga-man or a ballad-writer; and, if this is so, such expressions as "the folk-mote-place," "the house-carles," and "the salvage man" are no doubt in keeping. But we fear that, for want of real resemblance to Homer, this work will fail to attract scholars; and that the uncouthness of its versification and the frequent affectations of its style will prevent it, in spite of many merits, from attaining wide popularity.

J. A. GODLEY.

BYGONE MANCHESTER.

Memorials of Bygone Manchester, with Glimpses of Environs. By Richard Wright Procter. (Manchester: Palmer & Howe.)

A PREVIOUS work by Mr. Procter, also referring to the memories of the past of the cotton metropolis, was reviewed in this journal on August 14, 1875. The words then written of the *Memorials of Old Manchester* would apply with equal force to its companion volume now before us. It is not an exhaustive history or an exact topographical delineation of either the past or the present of Manchester, but it is a volume of pleasant gossip which cannot fail to charm and instruct local readers, and is not without interest even for those who are remote from the streets whose historical and romantic associations have been chronicled by Mr. Procter. Whoever dips into these pages, whether Mancunian or stranger, will continually be reminded of the great changes that have come over the capital of the cotton kingdom within sixty years, to which Mr. Procter's reminiscences and gleanings are for the most part confined. The cost of compiling the Manchester Directory for 1811 was £20, while that of 1879 was £1,188 (pp. xix., xx.). The first contained about 11,600 names, the last about 198,000. It would be strange indeed if the rapid change indicated by these figures had not been accompanied by many notable incidents. We soon find that Mr. Procter has had both humorous and pathetic events

to chronicle, and that the time and place alike were favourable to the development of what is called "character." Of this a notable example is afforded by the Rev. Joshua Brooks, who was satirised in *Blackwood's Magazine* of sixty years ago, and who forms a prominent character in Mrs. Banks' well-known novel of *The Manchester Man*. There are endless stories told of his odd humour and quaint eccentricity. Instead of repeating these, Mr. Procter is content with a very cursory notice, supplemented by an admirable portrait, of this clergyman, who united the erudition of a scholar to the manners of a boor, who was unfeignedly pious and yet pushed rough disregard to the verge of indecorum and irreverence. Joshua Brooks must have married no inconsiderable part of the population of Lancashire, for the people flocked from all the neighbouring towns and villages to the "old church" at Manchester, where Hymen did business by wholesale. One reading of the marriage service sufficed for a confused mob of lads and lasses, who were told to "couple as they went out"! Mr. Procter has revived the fading memory of the weird murder at Winton already immortalised by De Quincey, the fatal launch of the *Emma*, the sad fortune of the "Manchester Ophelia," the food and machinery riots of 1826 and 1829, and other occurrences, some of which throw a certain vivid light upon the past. Thus we read of the twelfth Earl of Derby driving in a carriage and four to the cockpit (p. 24). Even where the incidents are slight they are invested with a certain grace by the manner of their narration. Mr. Procter writes well. He is one of the few who realise that gossip is a fine art, and has in a marked degree that last gift of literary expression, the art that conceals art, so that the reader admires the general colour and effect without being too conscious of the cunning skill with which the separate pieces of the mosaic have been put together. Occasionally he trips, as when he speaks of Egyptians and Romans worshipping the "goddess" of Silence (p. 24). The singular misapprehension which converted the younger Horus into Harpocrates is a curious episode in mythology; but the dumb deity of the Greeks and the child-god of the Egyptians were both of the masculine gender. Indeed, misogynists would at once declare that there was an obvious impropriety in symbolising silence by a woman! Mrs. Browning did not think so, for she speaks of

"... a marble Silence, sleeping! (Lough the sculptor wrought her.)
So asleep, she is forgetting to say, Hush! a fancy quaint."

It would be possible to point out certain errors and omissions, as the name of the character—James Bagot—described on p. 30; that of Mr. W. H. Dixon; and the doubt as to the locality of Dr. Whitaker's house, which good authority declares to have been in Salford. The statement about transfusion of blood (p. 278) requires a good deal of confirmation before it can be accepted.

Some of the illustrations to Mr. Procter's volume are too slight and trivial—as, for instance, the very odd assortment of books facing p. 122—but others will be highly prized. Topographers will value the repro-

ductions of the maps and views of Manchester in 1751 and 1819, and the valuable monograph upon them contributed to the Appendix by Mr. John Leigh. Many more will see with pleasure the characteristic portrait of John Critchley Prince (p. 172), whose unfortunate career is one of the saddest episodes in the literary annals of Manchester. Mr. Procter's account of Prince and of the aspirants for poetic fame who met for kindly conference and friendly rivalry at "Poets' Corner" is a part of his book that will be welcome to many who have no inheritance in "Bygone Manchester." It is an interesting chapter in the history of provincial culture. Manchester had produced theologians like Bradford and Nowell, scholars like Whitaker and Travis, and men who had proved their valour alike at the stern siege of Gibraltar and on the bloody field of Carabobo. Its devotion to commerce and manufactures had never been entirely without a tincture of the humanities; but thirty or forty years ago there swelled a wave of literary enthusiasm which is not yet spent. The group of poetical aspirants included Mr. Hepworth Dixon, Mr. Charles Swain, Bamford the Radical, John Critchley Prince, and others whose names have not penetrated so far. Some "settled down" into merchants and bankers, some went hopelessly to the dogs, and others were cut off in the bright promise of youth. Many of them were remarkable for the energy that enabled them to surmount the depressing influences of their early surroundings. It may be said that none of them have attained high rank in the poetical hierarchy, but it is equally certain that some of the lyrics of Swain, Rogerson, and Prince have become household words wherever the English language is spoken.

NEW NOVELS.

Jezebel's Daughter. By Wilkie Collins. In 3 vols. (Chatto & Windus.)

An Australian Heroine. By R. Murray Prior. In 3 vols. (Chapman & Hall.)

Loyal and Lawless. By Ulick Ralph Burke, Author of "Beating the Air." In 2 vols. (Chapman & Hall.)

Mary Browne. By L. E. Wilton. In 3 vols. (Smith, Elder & Co.)

Three Shots from a Popgun. By James Prior. (Remington & Co.)

MR. WILKIE COLLINS, in dedicating *Jezebel's Daughter* to Alberto Caccia, throws down the gauntlet to his critics with appalling fierceness. Who, under penalty of being called a "nasty Tartuffe," will dare to question the moral purpose or aesthetic propriety of Mr. Collins's last book, though its very title is a challenge to the class of readers he designates "narrow-minded"? Assuming, then, that Mr. Collins has a right to weave as much crime as he pleases into his story, provided that it is artistically satisfactory, we are constrained, by innumerable resemblances of character, incident, and even expression, to try it by the severest of all tests—comparison with one of his own finest creations, *Armadale*. The name *Jezebel's Daughter* will at once recal to every reader of faithful memory Mrs.

Oldershaw, the hateful, inimitable "Mother Jezebel" of the earlier work; while a faint and faded reflex of Miss Gwilt will be recognised in Mdme. Fontaine. They have the same snake-like, sensual grace; the same subtle and deadly influence over all male creatures; the same stormy gusts of affection and spasms of ineffective remorse; while both are occasionally on the verge of self-betrayal through bursts of furious temper. Like Miss Gwilt, Mdme. Fontaine has a senile lover, the close of whose harmless life she steeps in bitterness; and, like her prototype, she does not scorn to subjugate even servants. Like Miss Gwilt, Mdme. Fontaine marries unhappily, and early learns to tamper with human life; she keeps a diary apparently for the express purpose of condemning herself, and has a stock of poison ready for emergencies. The gravest reader must smile at the circumstantially described "Borgia poisons" of which Mdme. Fontaine possesses herself; and surely Mr. William Gilbert will enter the lists against the inventor of "Alexander's wine," and the "Looking-glass drops" whose receipt was concealed behind Lucrezia's mirror! The crisis of Mdme. Fontaine's career, like that of Miss Gwilt, is hastened by her notes of hand falling due; and both criminals (if Mr. Collins will permit the word) are killed by the means they had prepared for killing other people. Here, however, all resemblance ends. *Armadale* is a highly finished work of art, in which every situation is necessary and every character striking. *Jezebel's Daughter* is hurried and rough-hewn; suggestions are made (such as the employment of women clerks) which lead to nothing; and but one character excites the smallest interest. Mdme. Fontaine is a very clumsy culprit, who might have been baffled at any moment if David Glenney had opened his lips; her daughter, Minna—typifying youthful innocence—is a shadow; while Minna's lover is a buffoon, given up to beer, tears, and kisses. Mr. Collins's object in creating Mdme. Fontaine, we are told, was to show "the restraining and purifying influence of maternal love" over "an otherwise cruel and degraded nature." But the maternal love which prompts to poisoning for the sake of the beloved object can scarcely be said to "purify." Jack Straw, introduced with tender pride as "the exhibition of an enfeebled intellect" in its "lightest and happiest aspect," is the least effective study in that gallery of grotesques with which Mr. Collins has amused or provoked a patient public; and Jack's change of aspect through poison irresistibly reminds us of the chemical experiment which turns "Poor Miss Finch's" luckless lover blue. Jack Straw's madness is feeble, his affection repulsive; and it is hard to sympathise with the philanthropy which induces a cultivated woman like Mrs. Wagner to have him always about her. The scene in the deadhouse at Frankfort should have afforded a splendid opportunity for the terrible, in which Mr. Collins was once *facile princeps*; but it only shows that he has now let fall his sceptre. Mrs. Wagner, a supposed corpse, is left in the mortuary, watched furtively by Mdme. Fontaine, who believes she has murdered

her, and openly by Jack Straw, who believes he has saved her. Had M^{me}. Fontaine secreted herself for the purpose of removing the senseless fingers from the brass thimbles which afford means of summoning help should consciousness revive, there would have been an object in assembling them all in this ghastly *rendezvous*. But Jack is drawn from the side of his mistress to share the drunken orgies of the night watchman; and M^{me}. Fontaine, joining them, has the fatal dose of "Alexander's wine" which she had prepared for Jack given accidentally to her. When at last Mrs. Wagner revives and rings the bell, the reader is out of patience with watching for it; and the toll, which would have been solemn during silence, is drowned in the coarse riot and general blue-fire of a catastrophe worthy of a "penny dreadful." At the same time, we are bound to confess that, however wearied or irritated we may be, Mr. Collins, like the Ancient Mariner, still holds us with his glittering eye while he tells his story, and compels us to listen till every word of his story is told.

"An Australian Heroine," while she remains in Australia, gives her name to a fresh, powerfully written story in which the landscapes are bold and clear, the characters original and consistent, and the incidents, though dramatic, not incredible. Esther Hagart—beautiful, sensitive, refined, and uneducated—lives on Mundoolan Island, protected from the violence of a dipsomaniac convict father, once a gentleman, by Joe Bride, a rough sailor. Joe is a reflective man, who wonders "whether the Almighty took drink into consideration" when he ordered wives to cleave to their husbands so long as they both should live. He tells a ghost story of admirable novelty, and we are sorry to lose sight of him in the first volume. A Ferdinand for the Miranda of the island is found in Captain Brand, a handsome, shallow youth, whose mixture of fleeting enthusiasm with deep-rooted selfishness is well conceived and maintained. He visits Mundoolan Island with Mr. Lydiard, a speculative positivist, who, having wrecked his individual happiness, devotes himself to humanity at large, and contemplates founding a colony of unorthodox and unsuccessful men. That destiny should have led Lydiard to the very spot at the Antipodes where his faithless wife lies buried and her seducer is hastening to a tragic death is, of course, possible—there is no limiting the coincidences of life; but that Lydiard should thenceforward devote all his affection and most of his fortune to their child is a stretch of generosity almost superhuman. Mr. Overstone, of Bully Wallah, the only settler on the island, with his hatred of men who "come to free select," his belief in salt as the universal panacea, and his quaint characteristic talk, is a more original portrait than is often found in a modern novel. The prairie fire and storm which bring to a climax of passionate avowal the nascent love of Esther and Captain Brand are realistic in their vivid colouring. But when, Hagart having killed himself in a fit of *delirium tremens* on Mrs. Lydiard's grave, Esther is found to be a niece of Sir Emilius Isherwood, and summoned to England by her

rich relations, the "middle period" of the book lags perceptibly. The weakly, kind-hearted little baronet (with his passion for *bric-à-brac*) and the brainless, faded beauty, Lady Isherwood (who "utters incisive platitudes with the tactless freedom of a spoilt child"), are cleverly drawn. But the social distresses of an *ingénue* are hackneyed, and Esther's blunders have not the delicious colonial quaintness of Gerty's in *The Hillyars and the Burtons*. Esther's school life, and the friendship with the Talmadges to which it leads, are tediously detailed. Theodosia Talmadge, one of those decayed gentlewomen who have become perennial since Mrs. Gaskell photographed their varieties in *Cranford*, is quite vulgar, with her eternal reminiscences of "Beau Talmadge" and "my dear friend and connexion Lady Susan Starkie." Had the strong points of *An Australian Heroine* been condensed into two volumes it would have merited unqualified praise, for the interest revives with Esther's marriage and the struggles through which, after finding herself "cursed with a granted prayer," she recovers self-respect and peace of mind.

In the Introduction to *Loyal and Lawless*, Mr. Burke, after expanding an old joke with which *Punch* amused us in 1861, has anticipated criticism by making a "candid friend" remark: "People who might care for your politics won't read your novel, and people who might read your novel will be deterred by your politics." We may assure the former class of objectors that there is very little story indeed to interfere with their enjoyment of some vigorous political dissertations and shrewd sketches of "patriots" at home and abroad. The author's conclusions as to the vexed question of Irish discontent and absenteeism may be summarised thus:—Ireland is completely in the wrong, but England has made her so. India is loyal because England has uniformly been to her severe but just; Ireland is lawless because England has treated her alternately with irritating restrictions and unwise concessions. Still, we can hardly suppose that Mr. Burke seriously recommends us to blow our Irish cousins from a cannon's mouth whenever "the green" becomes abnormally demonstrative.

Mary Browne: an Autobiography, is apparently the first work of a very young writer. The ways and tempers of mistresses and pupils at Victoria College, probably studies from nature, are very well described. The incidents of later life, where imagination has been relied on, are both absurd and inartistic. There is a modern pair of brothers Antipholus, whose mistaken identity leads to nothing; there is a long-lost brother, who returns in disguise, and holds Mary over the brink of "a stream," while he compels her to take an oath too terrible to be repeated not to betray a secret which she has not found out—though it is patent to the reader from the hour when Louis sings the songs of his infancy in the *salon* of his betrothed. There is a high-souled woman, Mary's bosom friend, who, after being raved at by the latter for "robbing her of the affections" of Mr. Harrop (both of them knowing perfectly well that he has never thought of Mary), runs

away from him on their wedding morning with Mary's disguised brother, by that time himself the deserted husband of Mr. Harrop's niece; and reappears as an angel of purity—with a dead baby in her arms—at the end of the third volume, to die, after a recital of her woes covering five-and-twenty pages. It is a pity to see Miss Wilton's unquestionable talent employed in elaborating incidents which would be revolting but that their extravagance provokes amusement. As a first work, *Mary Browne* has abundant promise. Miss Wilton draws such real school-girls now that some day she will certainly put before us less impossible men and women.

Three Shots from a Popgun are three stories whose harmless inanity is well conveyed by their title. They are perfectly inoffensive, but for an exasperating struggle to be smart which has made all the characters in "Wise or Otherwise" and "Home Again" talk in such "quips and quirks" as we are only accustomed to hear from the lips of Mr. Merryman. The third tale, "The Tug of War," is free from these blemishes, and up to the average of magazine stories.

TOWNSHEND MAYER.

CURRENT LITERATURE.

My Wanderings in Persia. By T. S. Anderson. With Illustrations and Map. (James Blackwood and Co.) This is a genuine and interesting book by an utterly unpractised writer. Mr. Anderson is no hurried tourist; he has no particular views to urge upon the Perso-Afghan or any other Eastern question. He was an *employé* of the Indo-Persian Telegraph Department, which is a Government concern as far north as Teheran, to which city it passes *via* Kurrachee and the Persian Gulf. The wire is landed about Bushire, and is carried through Shiraz and Ispahan to the Shah's capital. What Mr. Anderson is as a writer may be seen in a single sentence. Referring, on his outward journey, to the streets of Malta, he says: "Next would be seen some half-dozen nuns, whose monotonous tread speaks ill of the highly religious training they are supposed to be endowed with." After that sample, one need say no more of Mr. Anderson's literary and descriptive powers. Of the Persians, Mr. Anderson says "they are totally unacquainted with honesty, truthfulness, and other similar virtues;" "from the King to the lowest fakir there is scarcely a man worthy of trust." Such indiscriminate judgments, made with no reference to the atrocious circumstances of tyranny in which the people dwell, are to be placed among the disfigurements of this volume which the reader will do well to disregard. But take out all Mr. Anderson's political and moral reflections, and all his attempts, which are but few, at fine writing, and the residue, which we are happy to say will form the great bulk of the work, is well worth reading as a truthful, simple account of life and wanderings in Persia. The Shah's dominions are, for the most part, arid desert, dotted with oases, which produce the finest fruits; the outside edge of Persia is low ground, with tropical climate; the centre a high plateau, often snow-covered throughout two or three months of the year. Mr. Anderson refers to his reception of Mr. and Mrs. Arthur Arnold, "during these terrible months of frost and snow," at his station in Central Persia—a time "when it is astonishing by what means the wretched inhabitants" of Persian villages find sustenance. "Their food is chiefly made from acorns and dried dates, a little goat's milk, and sometimes rice. The bread is of a most miserable, unpalatable kind;

it is extremely bitter, about the thickness of cow-hide. From November to March these poor villagers are compelled to live as best they can. They remain shut up in a room, perhaps two yards square, frequently without fire; and in every village a great number annually succumb, and die of starvation in their own homes. . . . In most cases the goats, cows, and fowls are sheltered beneath the same roof as the family. I have turned away from such sights with unutterable loathing—because of the abhorrent stench."

That is the normal condition in winter of the majority of the Persian people, described by one who has passed months in Persia without seeing the face of a European. Mr. Anderson touches upon Baron Reuter's relations with Persia, and appears strongly anti-Russian in his views. He says:—

"It is publicly acknowledged in Persia and Russia that the contract made between the Shah and Baron Reuter would have been carried out had it not been for the intriguing of Russian diplomacy. The King was advised to abandon the idea as costly and worthless; that the railway, when completed, would be of no practical utility. The project was given up at Baron Reuter's expense, who had despatched an entire working staff and material; in fact, all had been prepared for the commencement of the permanent way, when the result of Russia's secret scheming threw all aside. The debt of such costly and foolish experiments has not yet been paid; his Majesty the Shah is still a debtor of a good round sum to Baron Reuter."

We fancy this is not quite correct, and that the railway proposal referred to was for a line between Teheran and the Caspian Sea, which would certainly have been of the greatest possible advantage to Russian commerce and to Russian military plans. Surely it is true that Baron Reuter's project would have benefited Russia at the expense of England with regard to influence in Persia; surely it was rather simple-minded in a British capitalist to suppose that the English Government would aid, and that Englishmen would give their money to assist in, the construction of a railroad connecting the Russian steam-boat service of the Caspian with the Persian capital. If Baron Reuter had from the first concentrated his operation upon that most reasonable project, the opening and improvement of the navigation of the Karún, the only navigable river in Persia, and in the construction of the best form of road from Shuster, on the Karún, to Ispahan, he might have been more successful.

The Dead Hand: Addresses on the Subject of Endowments and Settlements of Property. By Sir Arthur Hobhouse, Q.C., K.C.S.I. (Chatto and Windus.) This is an able work, or rather a collection of able works, by an able man. It is a useful work, but it would have been more interesting had the learned author recast, and not simply reprinted, addresses delivered during the last eleven years. But Sir Arthur Hobhouse is a reformer who is much more than eleven years in advance of legislation, and none of his recommendations have been made obsolete by recent enactments. His address on "Charitable Foundations in England" is full of valuable suggestion, and will remove a good deal of misapprehension from the minds of those to whom the word charity is indicative of nothing but virtue, self-denial, and beneficence. Naturally, Mr. Gladstone is one of Sir Arthur's favourite witnesses. Mr. Gladstone said in 1863:—

"I believe there is no city in the country which is richer in these charities than Coventry. Well, was there ever a case of a city where, upon the first arrival of distress, the labouring class were so rapidly and so entirely laid prostrate? Compare the case of Coventry, where these charities abound, with the case of the towns of Lancashire, in most of which they are comparatively few. Distress appears in Coventry and, before it has been there a month, the whole country is solicited, and solicited

with too good cause, to subscribe for its relief. Distress stalks into Lancashire, and remains there for six, nine, or twelve months before any appeal whatever is made to the public at large."

The main value of Sir Arthur's work is that it abounds with authentic examples and with learned comment. Sir Arthur imputes that too great respect is shown to the authority accorded to founders of endowments; and, among others, cites the case of Thomas Seckford, who, in 1587, gave some land in Clerkenwell to found an almshouse at Woodbridge, a small town in Suffolk. At the date of the foundation the rent of the land was £112 13s. 4d. The present income is about £3,600. Lately it was found that the almshouse could not possibly dispose of this large sum, and reference was made to the Court of Chancery. Lord Hatherley then decided that the inhabitants of Woodbridge should have preference; and of this decision Sir Arthur says:—

"Practically, it is altogether in favour of the Woodbridge people; they get the whole; and I have the opinion of a gentleman with the best means of judging that the place, which has less than five thousand inhabitants, is thereby extensively demoralised."

Sir Arthur Hobhouse is a most uncompromising reformer of endowments. His postulate is that "property is not the property of the dead, but of the living," and he regards even Mr. J. S. Mill as too respectful to the language of founders of endowments. First among the average motives of founders he places

"the love of Power and certain cognate passions: Ostentatiousness, which is gratified by the perpetuation of one's name and memory; and Vanity, which induces a man to think that he can judge better what society is likely to want than society itself can."

We are inclined to think that the address on the burning question of "The Devolution and Transfer of Land" is, perhaps, the least valuable in the collection. Yet there is no mistaking the thoroughness of the author's sentiments in regard to reform. It is an admirable observation that,

"just as the feudal law required that the freehold should always be filled by one capable of contributing to national defence and performing the duties of a feudal follower, so the spirit of commerce now demands that for its purposes also the fee simple in land shall always be represented and be in possession of persons capable of fulfilling the new duties and offices which the ownership of land in the present state of society entails or involves."

It is when Sir Arthur Hobhouse proceeds to specific recommendations that his dealing with this great matter is found in one respect unsatisfactory. He inveighs through pages against "the law of perpetuity or of settlement," and exposes, in regard to the operation of that law, "the cold and numbing influence of the dead hand." But it is, of course, upon his propositions for dealing with that law that attention must be chiefly fixed. He says:—

"A clear, obvious, natural line is drawn for us between those persons and events which the settlor knows and sees and those which he cannot know and see. Within the latter, natural affection does not extend, and the wisest judgment is constantly baffled by the course of events. I submit, then, that the proper line of perpetuity is that of lives in being at the time when the settlement takes effect."

But then, after referring to marriage settlements, he adds:—"If it is thought desirable to make an exception in favour of expected offspring, it could, as a matter of law, be easily effected, and, as a matter of policy, be managed without any great encroachment on the general principle." It was surely incumbent on Sir Arthur Hobhouse to have explained this vital interference with the general principle. If land may be settled at the time of marriage upon unborn persons, what is the value

of the change he proposes to make, and how is the husband in that marriage to be more than a tenant for life of the land, subject to the marriage settlement? This is of the essence of land tenure reform.

Memoir of Sir Francis H. Goldsmid, Bart., Q.C., M.P. (O. Kegan Paul and Co.) Lady Goldsmid was fully justified in thinking that this simple, modest record of her late husband's life would prove interesting, not only to the members of his own communion, but also to many students of the political history of our time. Francis Goldsmid was born in 1808, and died from the effects of an accident at the age of seventy. He and his father, Sir Isaac, were among the foremost advocates of the emancipation of the Jews from the many disabilities, social, political, and municipal, to which they were subjected. He himself was the first of his race who, in England, was admitted to the bar, and one of the first to enter Parliament. He possessed vast wealth, and applied it generously and intelligently to public objects. As a founder of the West London Synagogue he devoted much time and money to the purpose of infusing new life into the traditional Jewish worship. He made great efforts to improve the education of his own people, and was the founder of the first Jewish infant school in London. He also took a constant and munificent interest in larger measures of public education, and especially in University College, of whose Senate he became the president. His exertions on behalf of his brother Israelites in foreign States are well summarised in the chapter contributed by Mr. Löwy; and Prof. Marks has, in a well-written and concise narrative, told the story of his social and political life in England. It may well be doubted whether it was wise or needful to swell the size of the book by the insertion of the sermon preached after his funeral, or of numerous sympathising letters to the widow from persons of more or less distinction. Such utterances have their value at the time to private friends, but they are essentially unfitted to serve as part of permanent history; and the growing habit of publishing such letters in posthumous memoirs is likely to lead to a good deal of well-meant, but somewhat mischievous, insincerity. This small and very pardonable error of judgment appears to be the only drawback to the value of the book as a record of an active, honourable, and eminently useful life.

Memoir of the Life and Work of Philip Pearsall Carpenter. Chiefly derived from his letters. Edited by his brother, Russell Lant Carpenter. (O. Kegan Paul and Co.) It is difficult to understand the *raison d'être* of this bulky book. Mr. Philip Carpenter was a Unitarian minister and schoolmaster of blameless life and of amiable character; and it is intelligible that some of his nearest private friends should desire to possess a brief record of his career. The brotherly affection which has produced this book is worthy of all praise. But neither his life nor character possessed any feature of much public interest. As a preacher to small congregations at Stand and at Warrington he was not very successful. His biographer tells us that he did not devote the time which many ministers think requisite to render the Sunday services effective. He had little inclination for pulpit composition. Indeed, he preferred to preach the sermons of others, and in the course of a ministry of five years at one place preached fifty-two of his father's sermons and about a hundred of his brother's. He was much interested in conchology, arranged several collections of shells in the museums at Warrington and at the Smithsonian Institution at Washington, and he himself speaks of his catalogue of shells, and of his report to the British Association on the Mollusca of California, as "two works of great scientific research;" but

the biography affords no information or extracts which will enable a reader to judge of the permanent scientific value of either of them. He was a teetotaler and a vegetarian. He objected to war and to the use of oaths in any form, and declined on principle to prosecute a burglar who had robbed his house. Little or no evidence is given, however, of the effective advocacy of his peculiar views on these points; and, although he was earnestly interested in temperance and sanitary reform, and is said to have exerted great influence in their promotion, there are no selections from his speeches or writings which suffice to explain that influence, or any success he may have met with. The book is filled with extracts from his letters and diaries which have, for the most part, little but a private and sectarian interest, and which are largely filled with personal talk about the members of his own religious communion. Except in a few of the letters from America, which show how his tender and impressionable nature was touched by magnificent scenery, and by the grander forms of Roman Catholic worship, it is rare to find in his writing any trace of descriptive power, or any sentence which is not prosaic and commonplace. The incidents recorded are generally trivial, the style is destitute of humour or literary charm, and the personal experience narrated throws little or no light on the events of the day, on literature or politics, or on any subjects of permanent public interest. His biographer says in the Preface, "Little mention is made of his fellow-labourers in the scientific and other fields, because the book is already longer than I wish." One is fain to enquire why it is so long; and why the important task of showing the relation in which Mr. Carpenter's efforts stood to the larger work of the world has been set aside in favour of so much that is trifling and ephemeral, and only interesting to personal friends. No one can read this book without real admiration and some love for its subject—for his gentleness, piety, and simplicity of character, for his conscientious industry, for his resolute adherence to unfashionable beliefs. But it did not need a volume of 350 pages to convey this impression. "We should be modest," says Charles Lamb, "for a modest man."

ANOTHER biography of a member of the same family—that of *Mary Carpenter*, by her nephew, Prof. J. Estlin Carpenter, M.A. (Macmillan)—will be read with interest by a wider circle. It is not wholly free from the same tendency to set forth insignificant details with needless amplification; but it narrates the story of a singularly active and beneficent life which well deserves a permanent place in the annals of philanthropy. Miss Carpenter was born in 1807, and received, chiefly from an erudite father, a much more scholarly education than usually falls to the lot of girls. She early interested herself in teaching, in religious and other movements for the social improvement of those around her, and especially in the Anti-Slavery question. As life went on she studied with special care the subject of prison discipline, the reformation of juvenile criminals, and the promotion of education, at first among the lowest classes of the English poor, and afterwards among the girls and women of India. On all these subjects she wrote with clearness, force, and with a statesmanlike grasp of the meaning of the problems which had to be solved. On all of them her writings and personal efforts did something to arouse and afterwards to shape public opinion and to influence legislation. Mr. Carpenter's narrative is gracefully written, well arranged, and illustrated by copious quotations from letters and diaries. He has had the candour to point out both the light and the shade of a very remarkable character. His book enables the reader to appreciate Miss

Carpenter's clear aims, her steadfast persistency, and the devotion of her life to useful and unselfish objects. But it also reveals that morbid habit of introspection and self-analysis which led her to form an exaggerated estimate of the importance of her own thoughts and doings, and to the last appears to have rendered it difficult for her to co-operate with other people on equal terms. Measured by any merely mechanical standard, the practical outcome of her efforts may appear insignificant. She made strenuous and repeated efforts to induce the Education Department to recognise ragged schools as entitled to a share of the public grant, while conducted by unqualified teachers and fulfilling very low educational conditions. But her views failed to win the sympathy of statesmen on either side of the House; and the subsequent experience of school boards has proved that to perpetuate an inferior class of schools for the instruction of the lower stratum of children would have been a grave mistake. Her visits to India, though useful in directing the attention of the public and of official people to the low state of education among women, do not appear to have resulted in the permanent establishment of any institution or plan. And the one measure which is regarded by the author of this book as the crowning achievement of her life—the introduction, at her instance, by Lord Sandon, into his Act of 1876 of a special clause permitting the establishment of "day feeding schools" is well known to have proved almost a dead letter. The real value of her biography is not, therefore, to be found in any visible result of her exertions, but rather in the picture it presents of a woman of great intellectual energy and high purpose whose life was consecrated to noble uses, and completely filled with schemes, speculations, and efforts for the public welfare.

Fighting and Farming in South Africa. By Fred. G. Browning. (Remington.) Mr. Browning, when barely twenty, was tempted to seek his fortune at the Cape by the following advertisement: "If you've got any money put it into ostriches." From ostrich farming he turned to soldiering, then returned to farming, and ended his career in South Africa with more military service against Moirosi. He seems to have been an active and good-natured young fellow, and bears his ill-success without grumbling; but we gather from his account that he left South Africa poorer than when he went there. The most interesting part of the book is that relating to ostrich farming. Our author tried his hand at it on a farm near the Groote River, about 150 miles from Port Elizabeth. He was unlucky in coming in for a year of drought which is supposed to have been fatal to 20,000 ostriches, and which prevented his making anything by his birds; but when circumstances are favourable he considers ostrich farming a lucrative concern. He himself saw £1,000 refused for a pair of breeding birds; and the chickens at six days old are worth from £3 to £5 a-piece. Mr. Browning's account of his farming between his two military services gives a very good example of the difficulties with which settlers have to contend. Of the crops first sown, oats alone survived; these grew to a height of near eight feet, and the straw was as thick as a man's little finger, but there was hardly any ear. The crops which had failed were replaced by mealies, pumpkins, water and sweet melons. These all came up well; but, alas! the melons and pumpkins succumbed to a hot, scorching, north wind, and the mealies were destroyed by an inroad of Kaffir cattle. It will be seen that Mr. Browning was not fortunate, and the conclusion he came to was this:—

"It appeared to me that to make money in South Africa you must put yourself on a level with

persons whose ways and habits you can only condemn; you must not be particular how you make money; you must fling away a good many scruples and prejudices; and, above all, you must not forget that those with whom you have to deal have flung them away also."

More's Utopia. Robinson's Translation. Edited by J. R. Lumby. (Cambridge: Pitt Press.) This edition of the *Utopia* has many features which will make it more valuable to students than Mr. Arber's bare reprint, though it must not be forgotten that it was that reprint which first redirected public attention to More's masterpiece. Dr. Lumby has prefixed Roper's Life of More, and has added a short Introduction and excellent explanatory notes. He has also given what he is well qualified to give—a short survey of the characteristics of Robinson's English. Altogether, the book is—except for its binding of silky cloth, from which the touch revolts—all that can be desired by those who are "getting up" the *Utopia* for an examination or any such purpose. There is still room, however, for a scholar's edition of this great book, showing in detail its relation to the other works of the Renaissance in England and in Europe. More's own reading and the influence of Erasmus on him have never been thoroughly explored. Has it ever, for example, been noticed that his first public appearance was when

"to his great commendation he read for a good space a public lecture of St. Augustine de Civitate Dei in the church of St. Laurence in the Old Jurye, whereunto there resorted Doctor Grosyn, an excellent cunning man, and all the chief learned of the cittie of London" (Roper)?

That was nearly twenty years before the *Utopia* was written; and during all that time, we may fancy, the Utopian form of philosophising must have slumbered in his mind.

Cradle Land of Arts and Creeds, by Charles J. Stone, Barrister-at-Law (Sampson Low and Co.), is a bold attempt to disprove the view now generally entertained that the Aryans separated on the high lands of Asia and proceeded some to Persia and others down into India. The writer maintains that the Ganges Valley was the original seat of the Aryans and, at the same time, the cradle land of all Western arts and creeds. The author, notwithstanding his very wide and varied reading, seems to be in complete ignorance of the method and of the simplest rules of that criticism by which alone such questions can be solved. Uncritical works, though without any scientific value, are sometimes amusing, and occasionally point out some fact or give the authorities for some coincidence of which better trained minds can make some use. The present book is as dull as it is long, and we have failed to discover any grains of wheat in its endless rambling pages. No authorities are given, and there is no index.

NOTES AND NEWS.

PROF. SAYCE is preparing a thoroughly revised edition of George Smith's *Chaldean Genesis* for Messrs. Sampson Low and Co. The translations as well as the text will be corrected and enlarged, and full use will be made of the tablets recently acquired by the British Museum which relate to the earlier chapters of Genesis.

THE *Journal of Education* has been adopted as the organ of the Education Society, and is now published by Messrs. John Walker and Co., 96 Farringdon Street. To the current number Dr. J. F. Payne has contributed an article on the "The Connexion of Physiology and Education," and the Rev. W. A. Fearon, of Winchester, one on "The Monitorial System."

Mervyn O'Connor, by the Earl of Desart, will shortly be issued by Messrs. Hurst and Blackett in three volumes.

THE seventh volume of the late Mr. Lane's *Arabic Lexicon* will shortly be ready for publication under the editorship of Mr. Stanley Lane Poole.

AN unknown MS. of Saint-Simon has just been discovered in the archives of the French Ministry for Foreign Affairs. It is entitled *Henri IV., Louis XIII. et Louis XIV.*, and contains details and criticisms of great historical interest.

WE have received from America a new poem on the Life of Buddha, by E. D. Root, who boldly calls himself an American Buddhist. The poem is called *Sakya Buddha: a Versified, Annotated Narrative of his Life and Teachings* (New York). The author tells us that his poem was nearly finished when he received Edwin Arnold's *The Light of Asia*; or, *the Great Renunciation*. Being himself a working-man, and not a scholar, he speaks with great modesty of his own poem, as compared with Mr. Arnold's. But his veneration for the great founder of the Buddhist faith, he says, would not allow him to suppress his tribute of gratitude to the memory of Buddha Sakya Muni.

MESSRS. BICKERS AND SON will publish shortly *Samuel Pepys and the World he lived in*, by Henry B. Wheatley, F.S.A.

M. DE SAULCY is about to publish a *History of the Maccabees*, a sequel to his *History of Herod*.

THE following works are in the press, and will be issued during May by Messrs. Wm. H. Allen and Co.:—*Twenty-one Days in India: being the Tour of Sir Ali Baba, K.C.B.*, by George Aberigh-Mackay; *Destruction of Life by Snakes, Hydrophobia, &c., in Western India*, by an Ex-Commissioner; *The Conjuror's Daughter: a Tale*, by J. W. Sherer, C.S.I., author of *Who is Mary?*; *Indian Industries*, by A. G. F. Eliot James; *Indian Reminiscences*, by Col. F. D. White; *A Pleasure Trip to India during the Visit of H.R.H. the Prince of Wales, and afterwards to Ceylon*, by M. E. Corbet, illustrated with photographs; *The Garden of India; or, Chapters on Oudh History and Affairs*, by H. C. Irwin, Bengal Civil Service; and *The Challenge of Barletta*, by Massimo d'Azeglio, rendered into English by Lady Louisa Magenis.

THE *Revue Critique* mentions among recent Spanish publications *Inscripciones arabes de Cordoba, precedidas de un Estudio historico-critico de la Mezquita-Aljama*, by José Amador de los Rios y Villalta; *Vida y Escritos de D. Fr. Bartolomé de las Casas, Obispo de Chiapa*, by A. M. Fabie; vol. vi. of the *Diccionario general de Bibliografía española*; and vol. i. of the *Historia de los Heterodoxos españoles*, by Marcelino Menéndez Pelayo.

UNDER the general title of *Ancient Philosophies for Modern Readers*, the Society for Promoting Christian Knowledge is bringing out a series of small monographs on the chief systems of ancient philosophy. The following volumes are in preparation, and will shortly appear:—*Stoicism*, by the Rev. W. W. Capes, M.A., Reader of Ancient History in the University of Oxford; *Platonism*, by R. L. Nettleship, Esq., M.A., Balliol College, Oxford; *Epicureanism*, by W. Wallace, Esq., M.A. (author of the article "Epicurus" in the new edition of the *Encyclopædia Britannica*); and *Aristotelianism*, by the Rev. J. Gregory Smith, M.A., Rector of Great Malvern. The subjects will be treated in their bearing upon modern speculation.

THE *Novoye Vremya* published in a recent number Russian translations of Mr. D. C. Boulger's biographical sketches of Abdul Rahman Khan, who is at present the actual ruler of Afghan Turkestan, and of Noor Verdi Khan, the Akhal chief, taken from his *Central Asian Portraits*.

WE understand that Mr. H. B. Baildon, author of several volumes of poems, has in the press a series of essays, which will be published shortly by Messrs. J. and A. Churchill under the title of *The Spirit of Nature*.

THE forthcoming number of the *Revue Historique* will contain "Le Siège et la Prise de Constantinople par les Turcs, d'après des Documents originaux," by Henri Vast; "La Diplomatie française en Espagne de 1792 à 1796; 3^{me} Partie—Le Traité de Bâle du 4 Thermidor An III. entre la France et l'Espagne," by Albert Sorel; "Une Réhabilitation de César Borgia," by Alfred Maury; "Documents inédits relatifs au Premier-Empire, à Napoléon et le Roi Louis; 4^{me} Partie—de 1810 à 1846," by Baron du Casse; &c.

MESSRS. GRIFFITH AND FARRAN will publish immediately a new book by Ascott R. Hope entitled *Seven Stories about Old Folks and Young Ones*. A common idea runs through them all—viz., that of exhibiting young people and old people in some natural relations, with the purpose of showing that they often fail to understand each other from want of sympathy, and that in the case of both it is as true as ever that more evil is wrought by want of thought than by want of heart.

AMONG those who have given in their adhesion to the spelling reform movement in the United States are the following:—President Chamberlain, of Bowdoin; President Chadbourne, of Williams; Profs. Child and Goodwin, of Harvard; Whitney, of Yale; Harkness, of Brown; North, of Hamilton; and professors in Dartmouth, Cornell, the University of Pennsylvania, the University of Michigan, Princeton, Johns Hopkins University, the University of New York, and many other leading colleges.

THE ninth annual Report of the Historisch-antiquarische Gesellschaft Graubündens has just been published. The antiquarian collection of the society has been substantially increased during the year; and eight lectures on subjects connected with Rhaetian history, biography, and archaeology have been delivered by the members. Only one of these is printed as an Appendix to the Report, a documentary study of the second "Misser Krieg in 1531" by the cantonal archivarius, Herr Christ. Kind. The titles of some of the unprinted lectures, and the names of their authors, raise a wish that the funds of the society would enable it to publish them. We may mention, among others, a lecture by Herr Kind on the treaty between Spain and the Republic of the Three Leagues in 1620; Dr. P. C. Planta's lecture on the "Leibeigenen in Cur-Raetien" and the different stages of "Unfreiheit" in the Middle Ages; and another by the same author on the *Quarta Falcidia* and the "Freiheitsverjährung" of the Leibeigenen (by a thirty years' use of freedom) in the *Lex Romana Curiensis*. The author traced the operation of this custom until the end of the twelfth century. Herr Kind lectured on Graf Hartmann II., of Werdenberg-Sargans, Bishop of Chur, and the beginnings of the Rhaetian league. Prof. Muoth elucidated the "Process of Germanisation in Cur-Raetien."

WE understand that the fifth edition of Mr. Barnett Smith's *Life of Mr. Gladstone* is now in the press, and that the third and fourth large editions were entirely exhausted in less than three weeks.

THE Society for Promoting Christian Knowledge has in the press two more volumes belonging to the series of "Natural History Rambles," viz.:—*In Search of Minerals*, by Prof. Ansted, F.R.S., and *Ponds and Ditches*, by M. C. Cooke, Esq., LL.D.

A BOHEMIAN translation of Dante's *Purgatorio* is in the press at Prague, the first part of

the *Divina Commedia* having been published last year. The metre and versification of the original have been carefully preserved. The translator is Jaroslav Verchlicky, one of the most prominent living poets of Bohemia, who, beside his valuable original works, has enriched Bohemian literature with a translation of Victor Hugo's poems and those of Giacomo Leopardi.

THE *Tales of Shoshana* is the title of a volume containing three poetical pieces written in Bohemian prose by Julius Zeyer. The first, "The Death of Eve," is a Biblical dream, as the author himself calls it; the second, "King Menhaura," is taken from old Egyptian life; and the third, "Tilottama," is a beautiful dramatic tale, founded on some verses from the Vedas. The thorough knowledge of a student and the tender sentiment and skill of a poet are the characteristics of these masterpieces of Bohemian literature. The same author has just published a cycle of epic songs, the *Vyszehrad*, this being the name of the ancient stronghold to which the Bohemian people are still endeared by the recollections of their semi-mythical heroes, Krok, Libusza, Przemysl, &c. The *Vyszehrad* are intended to be to the Bohemians what the *Idylls of the King* are to ourselves.

LONGFELLOW'S *Hiawatha* and *Evangeline* have been translated into Bohemian, and a second edition of the Bohemian translation of Shakespeare's *Othello* and *The Merchant of Venice* has appeared.

MESSRS. DIDIER are about to publish *Études et Glanures pour servir à l'Histoire de la Langue française*, by E. Littré.

M. ROTHSCHILD announces for the beginning of May the first part of a new work on *Florence*, by Charles Yriarte, whose *Venice* is as well known to the English as to the French public.

PROF. MEIKLEJOHN writes:—

"In your number of April 24 your reviewer, in a notice of my edition of *The Merchant of Venice*, says:—'There seems more than a chance resemblance between Prof. Meiklejohn's remarks and those of Prof. Dowden in the *Shakespeare Primer*.' As this statement might draw after it a conclusion which would be both erroneous and injurious, I beg to be allowed to state—(1) That the Introduction to this edition of *The Merchant of Venice* is the old Introduction, which appeared in the first edition of 1862. Prof. Dowden's *Primer* was published in 1877, fifteen years after. (2) I am not the author of that Introduction. I am responsible only for the Notes and the Examination Papers."

MAYPOLE SONG.

WHEN ashen buds are big to burst,
And sunshine hotter every day,
And nurses sour and grannams curst
Begin to thaw as well they may;
Then lads and lasses surely know
'Tis time they all a-Maying go.

When in the shade the gentle doves
Are frightened by the bold cuckoo;
When bird and beast each minds its loves,
Nor minds at all what others do;
Then lads and lasses fall to sport,
And round the maypole kiss and court.

When sea-blue eggs are chipping fast,
And nestlings quarrel in their bed,
And Winter's slough is throngedly cast,
While Autumn still is far a-head;
Then lads and lasses plainly see
That they can never younger be.

E. PURCELL.

MAGAZINES AND REVIEWS.

NOT to speak of two or three good articles, the new number of the *New Quarterly* has three contributions of high merit, and thus maintains its excellent position. Dr. Jusserand continues to be interesting as well as learned in his treatise on the roads of England and on way-faring life in the Middle Ages. The paper on "Illusions of Perception," which is very lucid as well as subtle, shows a hand now familiar to readers of the better magazines. And "Fellow Townsmen"—the novelette of the number—is an extremely interesting story, and shows Mr. Hardy's skill in the more mechanical part of his craft, if it lacks the profounder qualities which belong to his genius and are most apparent in the larger novels—in the *Pair of Blue Eyes* and in the *Return of the Native*. We see very little of the heroine of "Fellow Townsmen," and so Mr. Hardy deprives himself of the opportunity which he generally takes—that of compelling us to fall in love with a young woman whom he has graced with the charm of imperfection. Of sentiment and passion, which Mr. Hardy so finely understands and so deeply and subtly renders, there is little here. But there is irony, and more of it than usual—the irony of fate and the conscious irony of the novelist. Of the first, an example is the unhappy ending of the story, which a word spoken pleasantly of the now middle-aged heroine might have changed. Of the second, an instance is in the ardent affection of the worthy solicitor, which cools gradually after the death of its object, and is numbered, with tolerable promptitude, among the loves that do not wear.

THE *Rivista Europea* for April 16 contains a continuation of Signor Silingardi's interesting account of "Ciro Menotti and the Revolution of 1831 in Modena." Signor Emiliani gives a pleasant account of life in Sardinia on the Gulf of Palmas. An article on "The Formation of Character" is a curious example of the moral platitudes with which it still seems necessary to feed the Italian public. A sound national public opinion is still in a rudimentary state of development, and needs careful fostering.

THE *Preussische Jahrbücher* for April has an article which will be read with interest in England by Dr. Kreyenberg on "The Work of the late Grand Duchess Alice of Hesse Darmstadt." The writer gives an account of the philanthropic labours of the late Princess Alice, which were animated by a spirit worthy of all admiration. "We must first become the friends of the poor if we wish to be their benefactors," was her excellent motto. Herr von Bojanowski writes on "Etienne Marcel and the Paris Commune." He draws a parallel between the events of Etienne Marcel's movement and the proceedings of the Commune in 1870. He remarks with truth that the existence of the idea of an independent municipal organisation for the State is peculiar to France, and is connected with the French conception of the State as a unity embracing the community, not as an organisation of parts which have a completeness of their own.

THE *Alt-Preussische Monatsschrift* has two articles dealing with two of the Grand Masters of the Teutonic order—Konrad of Wallenrod, 1391-93, and Heinrich von Plauen, 1410-13. Dr. Leon von Poblocki begins a valuable series of contributions towards a criticism of the sources of early Lithuanian history.

OBITUARY.

MR. JOHN JOPE ROGERS died at his seat of Penrose, near Helston, on April 25. He was the eldest son of the Rev. John Rogers, a canon of the cathedral church of Exeter, and a scholar of considerable reputation for his

translations from the Hebrew. Mr. J. J. Rogers was born in 1816, at the rectory house of Mawnan, a family living then held by his father. He took his degree of B.A. at Trinity College, Oxford, in 1838. For a few years, from 1859 to 1865, he represented in Parliament the borough of Helston, near which the family property is situate; but the duties of the position were not congenial to his tastes and habits, and he did not solicit the honour of sitting in Parliament a second time. During the last twenty-five years Mr. Rogers has contributed numerous papers on architectural and historical subjects to the *Archæological Journal* and the *Journal of the Royal Institution of Cornwall*. They included a biography of John Trevisa, one of the earliest writers in English, and an extensive pedigree of the family of Carminow. Mr. Rogers held for several years the posts of honorary secretary and treasurer to the Arundel Society. Two painters, eminent in the history of English art (both of them born in the county of Cornwall), have formed the subjects of valuable biographical notices by Mr. Rogers. His sketch of Opie, with a catalogue of seven hundred and sixty pictures painted by him, was published by Mr. Colnaghi in 1878; his *Memoir of Bone* was referred to in these columns only last week. The family of Rogers was for many generations intimately connected with that of Godolphin, and the papers at Penrose contained much curious information relating to the reigns of the Stuarts and the Georges. They are described in the second and fourth Reports of the Royal Commission on Historical Manuscripts.

THE SOUTH AFRICAN FOLK-LORE JOURNAL.*

A "FOLK-LORE JOURNAL," edited by the working committee of the South African Folk-lore Society, has now been in existence a year. Conducted under great difficulties, it deserves the sympathy and the approval of all who care for the preservation of the traditions and the recording of the customs of those wild tribes with which it deals; all who wish to secure, ere it be too late, something at least approaching to "a representative collection of the traditional literatures existing among the South African aboriginal races, but allowed to be rapidly passing away under the influence of European ideas and the spread of European civilisation." South African folk-lore is, as the Preface to the Journal says, "plain and primitive in its simplicity;" but it is "descriptive in great measure of the events of every-day life," and it often affords interesting comparisons with the similar products of more cultured minds. To all students of savage life may be commended, for instance, the very interesting essay by the Rev. G. Viehe, occupying the whole of the third part, on "Some Customs of the Ovaherero, or Damaras," "the first of the black races we meet after passing through the yellow races which lie scattered over that wide tract of country which extends for two hundred miles north of the Orange River." Their ideas about ghosts are worthy of notice. Some of their dead, they believe, rise again. Such ghosts have their eyes on the back of the head, and their skin is the hairy hide in which their corpses have been wrapped. Ghosts of persons who have not been buried in the ground are of the usual stature of human beings, but those of buried people are "about the size of a little dog." Some of the tales contributed by Bishops Callaway and Steere and other collectors are very remarkable. The story of "Little Red Stomach" is a quaint addition to the great cycle of myths descriptive of apparent destruction but ultimate restoration. The youth in question, refusing to listen to his mother's warning against drink-

* *Folk-Lore Journal*. Vol. I. (Cape Town: Darter Brothers and Walton; London: Nutt.)

ing out of a certain pool, was swallowed by a beast which haunted that pool. "On account of the weight of his stomach," the beast then remained above water. About sunset that animal said, "I have a stomach-ache," and died. And Little Red Stomach cut his way out of its inside, as Thumbling did under similar circumstances, and returned home unhurt. The story (p. 75) of the murdered wife whose *Isala* fell from her head while her husband was killing her, then turned into a bird, and, by its oft-repeated song, revealed the crime, is singularly like several tales, known in most European lands, turning on similar disclosures of murders. The *Isala*, it seems, is "a bunch made of feather or other material, worn on the head by a person who is passing through the preliminary stage of becoming a diviner." The "Story of a Dam" is a curious beast-fable, with a new feature in the capture of the selfish and greedy jackal by a tortoise, over whose shell has been spread a thick coating of "bee-glue." The opening, in which the jackal refuses to assist in making a reservoir, closely resembles the tales told in many countries about the similar refusal of the woodpecker. Among the best of the tales are two contained in the fifth part. One of these, told by a native of the Batlaping tribe to Mr. S. H. Edwards, is an interesting savage variant of the world-wide moral tale of the good-natured girl who behaves kindly to an old woman and is rewarded, and her ill-natured relative who acts quite differently and is consequently punished. A new feature in the African story is that the old woman in question "had only one arm and one leg," having been "half eaten up by Dimo," a species of ogre. The other tale, Um-ambakamaqula, "The Bewitched King," literally, "The Umamba [a kind of snake] of Maqula," is a most valuable variant of the mythological story which we know so well under the forms of "Cupid and Psyche," "Beauty and the Beast," "The Frog Prince," and countless other versions of the ancient legend of how a mortal wife broke the spell which had transformed her supernatural husband, or had separated him from her. In this Zulu variant the husband has been turned into a snake, his relations having employed witchcraft for the purpose. The wife breaks the spell by burning him in his hut, and then applying medical herbs to his bones. The story is one of six which were collected in Zululand by a Norwegian missionary, the Rev. O. Stavem, chiefly taken down from the lips of a native who had been a diviner before "he learned to understand the folly of the 'smelling'."

Full of interest, though of a different kind, is the "Story of the 'Sandhlwana' Tragedy," contributed by Mr. W. G. Stanford, and called "News from Zululand." It was narrated by a native policeman belonging to the Zizi clan of Fingoes, who heard it told by Zulus. "At one of the camps of the white people in Zululand," it begins, "as the white men were lying comfortably about, there came a decrepit old man, a Zulu." After talking with them he went away, and when he was at a distance he began to dance with the vigour of youth, brandishing his stabbing assegai, "making feints towards the camp, singing the praises of his Chief Cetywayo." In vain did the Englishmen fire at him. "Not a bullet touched him." Presently he entered a forest, whence soon came out a blue-buck, which ran toward the camp. The white people attacked it, some firing, some throwing stones;

"there were others who, at last, threw dishes at it, but no one hit it. In the confusion they suddenly saw that the blue-buck had become a young man, a Zulu, with a shield and stabbing assegai. This young man attacked them with his assegai, and stabbed them. While he was killing them, they not being able to do anything to him,

Cetywayo's army came in sight. The white people did not know it; but this army was close by. The white people begin to be on the alert; the army is amongst them, it killed them all! Not one escaped!"

Of most of the stories the original texts are given as well as literal English translations. They are, therefore, of great philological as well as mythological interest. And they all have an evidently trustworthy appearance which makes them contrast very favourably with the decidedly suspicious tales we often see quoted from a purely literary magazine, or from such records of travel as do not inspire implicit confidence. By way of conclusion, a few of the Setshuana proverbs contributed by Mr. S. H. Edwards may be mentioned—"The bitter heart eats its owner," "The well-a-head is not to be depended upon," and "The lion which kills is the one which does not roar," are wise saws which need no comment. Our own proverb about "a creaking gate" may be compared with "The first lame is not the first to die;" and "The breast is an intricate net" is the general expression of an idea which takes a special and poetic form in the Russian saying that "A maiden's heart is a dark forest." Let us hope that all who care for South Africa will support the truly meritorious South African *Folk-Lore Journal*. W. B. S. BALSTON.

CORRESPONDENCE.

REVISED ZIRIAN VERSION OF THE GOSPEL OF ST. MATTHEW.

London: April 24, 1880.

The Zirian version of the Gospel of St. Matthew made by a priest named Shergin, and published by the Russian Bible Society rather more than half-a-century ago, was revised, at my request, by Mr. F. J. Wiedemann, and published by me in London in 1864. The revision of Shergin's version made by G. S. Luitkin at the request of the Bible Society, mentioned at p. 304 of the ACADEMY of last week, not only has not yet been published, but is a posterior revision, quite different from that of Mr. Wiedemann. L.-L. BONAPARTE.

SETTING UP THE MAYPOLE.

London: April 22, 1880.

That Maypole poem that I had not seen printed, and that I sent you some stanzas of for your number of April 10, greets me to-day in the Museum as part of "*Funebris Florae*," the Downfall of May-Games: | wherein | Is set forth the rudeness, prophaneness, | stealing, drinking, fighting, dancing, whoring, | misrule, mis-spence of precious time, contempt of | God, and godly Magistrates, Ministers and People, which | oppose the Rascality and rout, in this their open | prophaneness, and Heathenish Custom. | Occasioned by the general complaint of the rudeness of | people in this kinde, in this Interval of Settlement. | Here you have Twenty Arguments against these pro- | phane Sports, and all the Cavills made by the Belialists of the | Time, refuted and Answered. | Together with an Addition of some Verses in the close, | for the delight of the ingenious Reader. | By Tho. Hall, B.D., and Pastor of Kings-norton. | London, Printed for Henry Mortlock. . . 1660." The book is A-G in fours, and on the back of G the Maypole poem begins, headed thus: "As a Mantissa, and a little Over-weight, I shall give you a | Copy of Verses, which have lain long by me, they will | give some light and some delight to the inge- | nious and ingenuous Reader." The line "So have I to it watch and ward" got wrong from the MS. copiers making y^t "it," instead of "that;" the printed copy reads:—

"Hath holy Pope his noble guard?
So have I too, that watch and ward."

F. J. FURNIVALL.

RESEN AND BETH-EL IN THE ASSYRIAN INSCRIPTIONS.

Queen's College, Oxford: April 26, 1880.

Two results I have recently obtained in the field of Assyrian research, though small in themselves, will probably have some interest for Biblical students. One is the identification of the city of Resen, mentioned in Gen. x. 12 as situated between Nineveh (Kouyunjik) and Calah (Nimrud). The name has been looked for in vain in the Assyrian inscriptions, though, as Sir H. Rawlinson long ago pointed out, it is probably the Larissa of Xenophon's *Anabasis* (iii. 4), six parasangs distant from Mespila. Larissa seems to be the Assyrian Al Resen or "City of Resen," while Mespila is *Muspilu*, "the low ground," a name which shows that its site lay near the river. Both cities, according to Xenophon, had been occupied by the Medes after the fall of Nineveh. Now, in the Bavarian inscription (L. 9), Sennacherib states that one of the sixteen cities from which he brought water to the Khosr, the river of Nineveh, was

the city of Reseni. This corresponds with the Biblical Resen, letter for letter, the Assyrian *Res* having come to be represented by the Hebrew *Res* in proper names. The meaning of the name is simply "the head" or "source of the spring," Assyrian *res eni*, Hebrew *רֵשׁ עֵינַי*.

My other little discovery relates to a passage, unfortunately mutilated, in the eleventh tablet of the Gishdhubar legends, col. vi., ll. 1-4. It was misunderstood by George Smith, who therefore did not perceive the reference. The translation of the passage ought to be as follows:—

Col. v. 52. (Gishdhubar) bound together the heavy stones . . .

Col. vi. 1. (he and Nis-Hea the pilot of Xisathrus) dragged it and to . . .

2. he, even Gishdhubar, took the animal . . .

3. he cut the heavy stones . . .

4. one homer he poured out in libation to it for his ship.

Here we have an allusion to the ancient Semitic practice of setting up a Beth-el, or Baetylus, in the shape of a large stone, and pouring out a libation to it. First of all a cairn was erected, then an animal was sacrificed, and finally the offering was made to the great stone or Beth-el itself.

In the same series of tablets (tablet x., col. iii., ll. 11-17) there occurs a reference to another ancient custom which was also misunderstood by Mr. Smith. The Assyrian reads:—

11. (Nis-Hea says:) Take, Gishdhubar, an axe in thy hands . . .

12. go down to the forest and (make) a clearing of 5 gar;

13. bury and make a tumulus; carry . . .

14. Gishdhubar, on his hearing this,

15. took the axe in his hands, . . .

16. he went down to the forest and (made) a clearing of five gar;

17. he buried and made a tumulus; he carried . . .

The tumulus is called a *tulu* or *tel*, and it is plain from this statement that burial mounds once existed in Babylonia, and may exist there still, if only we knew where to look for them.

A. H. SAYCE.

ON A PASSAGE IN "HAMLET," III. iv. 160.

Cambridge: April 26, 1880.

The new interpretation of the familiar line,
"Assume a virtue if you have it not,"

by which it is made to signify, "acquire a virtue if you do not already possess it," sounds to me suspiciously like a platitude, and appears to miss the whole point of Hamlet's speech. He appeals to his mother, whose conscience is now thoroughly awakened, to refrain from the further indulgence of her guilty passion:

"Good-night; but go not to mine uncle's bed;"

and to strengthen her weak will he urges that this abstinence, though not the immediate offspring of a virtuous purpose, will yet grow into a virtuous habit, which by custom will become a second nature, and the virtuous principle will follow. The word "assume," therefore, as it is commonly understood, is completely in accordance with the lines immediately following, in which Hamlet shows the enormous power of custom for good or evil. In one aspect a malignant demon, "damned custom," as he calls it in his opening appeal, it deadens and destroys all moral sensibility. But in this it is an angel,

"That to the use of actions fair and good
He likewise gives a frock or livery
That aptly is put on."

This "frock or livery" is the external practice of virtue which Hamlet implores his mother to "put on," or "assume," that the virtuous act may generate a virtuous habit, and the virtuous

habit be confirmed so as to have the force of virtuous principle. This is very different from teaching hypocrisy in morals.

In no instance, so far as I am aware, does Shakespeare use "assume" in the sense of "acquire," and I even venture to doubt whether this is its "primary and justest sense." His usage completely confirms the common interpretation of the passage in question, according to which "to assume" signifies to put on something external to oneself, a form or shape, not to get or acquire anything as a possession or inward principle. For instance, when Benedick says (*Much Ado*, II. i. 249), "My very visor began to assume life," he does not mean that it became alive, but that it seemed alive. The word, moreover, occurs in three other passages in *Hamlet*, and always in connexion with shape or form (see I. ii. 244; I. iv. 72; II. ii. 629). But the best illustration of what Shakespeare understood by "assume" is furnished by the well-known passage of Bassanio's speech (*Merchant of Venice*, III. ii. 81-88), where the word is twice used.

"There is no vice so simple but assumes
Some mark of virtue on his outward parts:
How many cowards, whose hearts are all as false
As stairs of sand, wear yet upon their chins
The beards of Hercules and frowning Mars,
Who, inward search'd, have livers white as milk;
And these assume but valour's excrement,
To render them redoubt!"

W. ALDIS WRIGHT.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, May 3, 5 p.m. Royal Institution: General Monthly Meeting.
8 p.m. Society of Arts: "Decoration and Furniture of Town Houses," V., by R. W. Edis.
8 p.m. British Architects: Annual General Meeting.
8 p.m. Victoria Institute: "The Life of Joseph illustrated from Sources external to Holy Scripture," by the Rev. H. G. Tomkins.
TUESDAY, May 4, 8 p.m. Royal Institution: "Wind and Weather," by R. H. Scott.
8 p.m. Civil Engineers: Discussion on "The Amsterdam Ship Canal."
8.30 p.m. Zoological.
8.30 p.m. Biblical Archaeology: "Libation Vase of Osurur preserved in the Museum of the Louvre," by Paul Pierret; "New Text of Tirhakah (Twenty-fifth Dynasty)," by Dr. S. Birch; "An Examination of the Assyrian Ideograph *M₄*," by Robert Brown, jun.
4.30 p.m. Archaeological Association: Annual Meeting.
WEDNESDAY, May 5, 5 p.m. Entomological.
7.30 p.m. Education Society: "Education of the Imagination," by Dr. F. Hohlfield.
8 p.m. Society of Arts: "The last Forty Years of Agricultural Experience," by J. C. Morton.
THURSDAY, May 6, 3 p.m. Royal Institution: "Light as a Mode of Motion: Theories of Light and Colours," by Prof. Tyndall.
4 p.m. Archaeological Institute.
8 p.m. Linnean: "The extinct Walrus of Suffolk and Antwerp," by Prof. E. Ray Lankester; "On Algae from the Amazon and its Tributaries," by Prof. G. Dickie; "On an unusual Form of the Genus *Hemipholis* Agass. from off the Agulhas Bank," by Prof. F. M. Duncan; "Irregularity in a Species of *Amblypneustes*," by C. Stewart.
8 p.m. Chemical.
FRIDAY, May 7, 8 p.m. Society of Arts: "Present Condition and Prospects of Agriculture in South India," by W. Robertson.
8 p.m. Geologists' Association.
8 p.m. Philological: "On a Difficulty in Russian Grammar," by O. B. Cayley; "On the Middle Voice in Virgil's *Aeneid*, Book VI.," and "On Quicherat's Latin Etymologies," by Benj. Dawson.
9 p.m. Royal Institution: "Mental Evolution," by G. J. Romanes.
SATURDAY, May 8, 8 p.m. Royal Institution: "The Dramatists before Shakspeare," by Prof. H. Morley.
8 p.m. Physical.
8 p.m. Botanic.

SCIENCE.

Mind in the Lower Animals in Health and Disease. By W. Lauder Lindsay, M.D., &c. In 2 vols. (C. Kegan Paul & Co.)

DR. LAUDER LINDSAY had long promised a volume under the above title to the committee of the International Scientific Series, but his materials have far outgrown the

modest limits he originally proposed to himself, and his completed work now occupies two very portly volumes of about six hundred pages each. It is a matter of some regret that he should so greatly have exceeded his first ideas in the matter of space, for, though a short treatise on the subject of animal insanity might have been acceptable and useful to the psychological student, the work as it stands is unnecessarily large, and will deter many intending readers by the mere labour involved in perusing it throughout. Moreover, the mass of undigested fact which it contains is too unwieldy for popular acceptance; while the same stories or theories are again and again brought up in different connexions, till we long for a more vigorous pruning-hook to lop off a little of the superfluous matter. Nevertheless, Dr. Lauder Lindsay has, on the whole, performed a good work in collecting a considerable body of useful materials, though they must be simply regarded (as the author allows) in the light of *mémoires pour servir*, and not accepted as throwing any fresh light upon the questions of comparative psychology in their synthetic aspect.

The first volume deals with Mind in Health, and has for its main object to prove that mind in the lower animals is the same in kind as in man, though differing more or less in degree. Dr. Lindsay himself takes a very extreme view of the supposed identity, and even hardened evolutionists might hesitate to endorse many of his opinions. Because the human intelligence has been slowly evolved from that of an ape-like ancestor, it does not necessarily follow that the gap between existing human minds and existing animal minds is a comparatively insignificant one. On the contrary, the vastness of this gap, even when we contemplate the cases of the lowest savages and the highest quadrumana, has not unnaturally driven many good observers, such as Mr. A. R. Wallace, familiar with both savages and monkeys, into somewhat crude hypotheses of supernatural intervention. The interval which seems so small to Dr. Lauder Lindsay seems so great to other competent authorities that they feel compelled to call in the aid of a *deus ex machina* to account for the mental differences between a naked Veddah and a sensible chimpanzee. Even those evolutionists who do not consider a divine intervention necessary for the explanation of the wide interval are yet prepared to allow that it does really exist. It is quite true that the intellect of a Newton or a Darwin differs more vastly from that of an Andamanese, or perhaps of an average coal-heaver, than the intellect of a savage differs from that of any ordinary mammal; but we have still to face the fact that the savage is far more elevated above all other animals than any of the other animals above its fellows. Palaeolithic man himself, with his shapely flint weapons, his bone needles, his musical implements, his spirited sketches, his obvious intellectuality and aesthetic feeling, is already so highly raised above the mere forest brutes that we cannot regard him as in any sense truly primæval. Rather does he represent the result of a long previous culture, the final outcome of ages of development from the common anthropoid ancestor. To most evolutionists,

the Abbé Bourgeois' fire-split flints from the Miocene *calcaire de Beauce* must seem like happy outlets from a difficult situation. Whether or not they be genuine products of human handicraft, we can hardly doubt that long centuries of previous evolution must have led up to the very human dwellers in the Dordogne caves.

Dr. Lauder Lindsay is troubled with none of these difficulties. "Even as regards *man himself*," he observes, "it must be borne in mind that there are countless thousands—*many whole races*—that are intellectually and morally the *inferiors* of many well-trained mammals, such as the chimpanzee, orang, dog, elephant, or horse; or birds, such as the parrot, starling, magpie, jackdaw, and various crows." To sustain this thesis he presses into his service an immense number of stories, well or ill authenticated, of animal intelligence and morality. With regard to some of these we must confess ourselves a little sceptical. To be sure, Dr. Lindsay professes to have exercised great caution in sifting his evidence; but when we find vague references to *Cassell's Natural History*, the *Percy Anecdotes*, the *Animal World*, the Hon. G. F. Berkeley, Figuier, Pouchet, and the somewhat imaginative Houzeau, side by side with those to scientific observers like Darwin, Wallace, Bates, Romanes, and Lubbock, we cannot but feel dubious as to his perfect discrimination. Nor can we unhesitatingly accept the stories of the collie dog which shipped itself from Calcutta to Dundee, and then changed to another ship bound for Inverkeithing, its native port; of the Catholic dogs which fast and keep festivals, with their Presbyterian counterparts, given to kirk-going and psalm-singing; or of the deliberative meetings held by the dogs of Paris during the siege, when "messengers appeared to bring *news*, and the assembly made *comments* thereon." In short, Dr. Lindsay rides his hobby to death; and we fear that one result of his book will be to afford a not unwelcome handle to the scoffers rather than to strengthen the cause for which he pleads.

In the second volume, on Mind in Disease, the author largely supplements the important observations already carried on by Pierquin. He has accumulated a vast mass of varied facts, of which it may indeed be said, as of *Paradise Lost*, that they "prove naething;" but which will nevertheless afford good material for future workers. Indeed, if we discard the obviously exaggerated stories, and cut out many of the hyperbolic expressions, we shall find the whole work instructive and suggestive reading. Yet there are innumerable points on almost every page from which a candid critic can hardly fail to dissent. Thus, Dr. Lindsay has an awkward habit of sometimes stating most important conclusions in a numbered string, as though he intended afterwards to bring up facts for their support; but when we get to the end of his list, we find that he means to put us off with his mere authoritative *ipse dixit*. We should like to know, for example, the grounds for his dogmatic statement that in the human infant "*consciousness* is only gradually developed;" and we fail to perceive the aptness of the parenthesis in the very next phrase, "There are no *innate ideas* (Melia)."

The remark that the Veddahs of Ceylon "are quite unable to discriminate between colours" is entirely disproved by experiments expressly made at the request of the present writer. We cannot consider "the labourer of Dorsetshire" at all below the average intellectual level of the English race—or rather, we should put him considerably above it. Testimony to the "non-improvability" of the African negro, given by men like Livingstone, Burton, and Baker, is obviously prejudiced, and is clearly opposed to the evidence in our own West Indies, where the negro, though by no means miraculously transformed into an intelligent and earnest Christian as missionaries would fondly hope, has certainly progressed most steadily ever since and even before emancipation. It is difficult to understand why Dr. Lindsay should sneer at the "worthy people" who believe "that a 'potentiality' for culture and civilisation exists in all races of mankind, however primitive"—a belief surely in strict accordance with the doctrine of evolution—and yet should make the almost grotesque suggestion that "the patient efforts of our missionaries . . . on 'our anthropoid 'poor relations,' instead of on their fellow-creatures and countrymen, the negro, might produce results of a startling character—results that might put an end, once and for all, to current sneers as to the psychical connexion between men and monkeys."

Again, the author often shows much want of discrimination in the choice of possible explanations for stories of animal sagacity. In the case of the migrations of birds, he does not allude at all to Dr. Weissmann's extremely probable and ingenious theory; he classes the massacre of the drones by the worker-bees among "unsolved problems," though Mr. Darwin has made its usefulness perfectly apparent; and he supposes that the travelling dogs which get out at the proper station "probably count the number of previous stoppages," an hypothesis far less likely than Prof. Croom Robertson's suggestion that they are guided by a smell-memory analogous to our sight-memory, which receives great countenance from the full development of the olfactory centres in the dog. Nor does it seem probable that mules take "a pride in the horse as a 'distinguished relative,'" considering that they cannot very seriously be credited with a knowledge of their own parentage; while insects cannot fairly be said to "commit suicide" in the flame to which they are automatically drawn by the connexion between their optic nerves and the motor centres.

Even in small matters, errors or doubtfully correct statements occur at every turn. "Dog cheap" has nothing to do with dogs, but is simply a transposition of the proper phrase, "good cheap." Cannibal is not derived from *canis*, but from the *Caribs*. The latter cannot properly be lumped with "the negroes of the Antilles and the other aboriginal races of the West Indian Islands" under the general heading of "American races;" nor can this heterogeneous mixture be honestly set side by side, in a list of the lowest human beings, with the Andamanese, the Hill Tribes of Bengal, and the Digger Indians.

Dr. Lindsay's style—or absence of style—

can only be described as irritating. Apart from the frequent use of such monsters as "theftuous" and "succussion," we are wearied by constant endless lists, numbered classifications, and minute distinctions between apparently identical mental characteristics. The author observes complacently that, "after a special study of several of the fashionable modern systems of psychology—of mental or moral philosophy—such as those of Herbert Spencer and Professor Bain," he does not think "anything would be gained by attempting, in such a work as the present, the strict definition of terms" like *will*, *feeling*, *thought*, and *consciousness*. For our own part, we cannot help fancying that a competent knowledge of psychology would be useful to a psychological writer; and that a little of the method which Dr. Lindsay despises would have saved him from such muddled, rambling, and incoherent statement. As it is, we can only say that his book displays an immense deal of industry, but a singularly small amount of either philosophical insight or common-sense judgment. GRANT ALLEN.

Un Papyrus inédit de la Bibliothèque de M. Ambroise Firmin-Didot. Nouveaux Fragments d'Euripide et d'autres Poètes grecs, publiés par M. Henri Weil. Deux Planches photoglyptiques. (Paris: Firmin-Didot.)

THE above-mentioned papyrus originally belonged to the collection of M. Champollion-Figeac, from which it came into the possession of M. Firmin-Didot. On one side it contains in three columns forty-four *senarii* of Euripides; then in two columns and a third and imperfect one forty-six more *senarii*; on the last column is written an account of certain payments made to the Didymæe at the Serapeum of Memphis. The reverse side of the papyrus contains four columns, the first three of which are a second copy of the Euripidean fragment; the fourth consists of two epigrams in elegiac metre.

The date of the papyrus is fixed by the document with which the last column of the front or first side ends. It is a statement of the amount of bread paid for the support of two females, called *Δίδυμαι*, "the Twins," connected with the religious functions of the Serapeum at Memphis, from the eighteenth to the twenty-first year of the reigning King. As the name of one of these *Δίδυμαι*, Taous, is mentioned in the last line of the document, and coincides with a Taous who, with her sister Taues, occurs in other papyri as addressing petitions to Ptolemy Philometor, it seems a natural inference that the *Δίδυμαι* of our papyrus are the Taous and Taues of that reign. The papyrus would thus belong to the year 161 B.C., a date confirmed by other circumstances—e.g., the identity of the years (eighteen to twenty-one) mentioned in the same connexion in the other papyri, and of the name of the *οικονόμος* of the temple as given in our papyrus, Achamanres, with that of the *ἐπιστάτης* τοῦ ἱεροῦ, as given in a papyrus in the Louvre (n. 26), Achomarres. So great an antiquity necessarily gives M. Weil's publication more than ordinary importance.

What would not scholars pay to have unearthed anything of this age in Latin?

Of the two copies in which the fragment of Euripides is preserved, the first (A) is written in tolerably large uncials, without accents, spiritus, or punctuation, except that occasionally the paragraph—a horizontal stroke drawn above the beginning of a line—marks a transition in the sense. The second copy (B) has preserved the writing better, but is less correct. The subject of the fragment is the protest which a daughter makes against her father's withdrawing her from a husband who has fallen into poverty and marrying her to a new and wealthier mate. M. Weil considers this situation to correspond most nearly with that of Hymetho, daughter of Temenos and wife of the Epidaurian prince Deiphontes, whom her brothers, according to Pausanias, counselled to leave her husband and wed a richer mate of their own choosing. This was the subject of Euripides' *Temenidae*. But, as M. Blass objects, Temenos would seem, from the account of Pausanias as well as of Apollodorus and others, to have sided with his daughter against his sons; nor is there any ground for supposing Hymetho's husband to have become poor. If, therefore, this fragment is from the *Temenidae*, Euripides must have followed the story in outline only, and altered it where it suited his purpose. In any case the play would seem to have been a late composition, as it abounds in resolved feet—e.g.,

τῶν μὲν ἀγαθῶν με τὸ μέρος ὧν εἶχεν λαβεῖν
τοῦ συναπορηθῆναι δὲ μὴ λαβεῖν μέρος.

The next fragment is from the *Medea*, vv. 5-12. It is full of errors, and is stigmatised by Blass as "the oldest and worst" of existing MSS. Yet it is something to know that what till now was only a conjecture of Wakefield's, ἀρίστων for ἀριστεῶν, can henceforth claim the support of a document dating before the Christian era, and that the strange attraction *πολιτῶν* in v. 12 is certainly what Euripides wrote. Then come twenty-three more *senarii* of unknown authorship, perhaps by Aeschylus, and possibly from the drama known as *Kāpes ἡ Εὐρώπη*. Blass has exerted himself to restore the corrupt passages of this fragment, more happily, we think, than M. Weil, even if sometimes his restorations seem over-venturous. Thus in vv. 12, 13, the papyrus gives in uncials—

Ραδαμανθον ὡς περ ἀφθίδος παιδῶν ἐμῶν
ἀλλακεμαγισταίσεμαίσεως εχει

which Blass corrects to—

Ῥαδάμανθον ὅσπερ ἀφθίτους παιδῶν ἐμῶν
εἴληχ' ἐπ' αἴας τέρμασι ζῶας ἔχει

following *Od.* iv. 563, where Rhadamanthus is said to dwell at the ends of the earth. The alteration, though rather far from the papyrus, is tempting and not unlike Aeschylus. In two passages I venture to offer an emendation which approaches the original more closely than any I have seen.

V. 7.—καί τριαγωνεῖσιν γυναικεῖς πόνους
ἐκατέρησιν ἀρουρα

Weil emends καὶ τρισὶν ἀγῶσι, Blass καὶ τρεῖς ποιοῦσα. May not the right reading be καὶ τρεῖς ἀγῶνας, τρεῖς γυναικεῖς πόνους?

Again, in v. 22, the papyrus gives

λεπτή γὰρ ἐλπίς ᾗ ἐπιζυρημένη

which Weil alters to ἐπὶ ξυροῦ πάλαι, Blass to ἐπὶ ξυροῦ μένει. I suggest that the original was really ἐπεξυρμένῃ, "closely shaved," though I am not aware of any author who uses the word.

The fourth fragment is from a comedy. It consists of fifteen iambs in a light and lively style. The fifth is thus given in the papyrus:—

πανηγῆκτο το καλον τοαγαθον το σεμνον.

Weil reads παρέκειτο, Blass ἤλλακτο. A slighter change would be παρήκτο, "was altered," "perverted."

The two epigrams which form the last portion of this valuable discovery are by Poseidippus. The first describes the celebrated lighthouse constructed by Sostratus of Cnidos on the eastern extremity of the island of Pharos, opposite Alexandria. The second commemorates the erection by Calliocrates of the temple of Aphrodite Arsinoe on the African promontory of Zephyrium. Callimachus' epigram on the same subject (*Athen.* 318 D) is well known.

R. ELLIS.

NOTES OF TRAVEL.

COL. STRELBITZKY, of the Russian staff, has recently published an atlas of fifteen maps, accompanied by explanatory text, in which he shows the extent of the Turkish possessions in Europe as settled by the chief treaties signed during the past 180 years. From this it appears that they have gradually decreased from 15,454 square miles in 1698 to 4,559 in 1879.

AN important Russian expedition under Gen. Gluchowsky, with M. Holmstrom as engineer-in-chief, is about to make surveys and levellings on the middle course of the Oxus, besides undertaking geological investigations. The labours of this expedition in connexion with the project for diverting the Oxus to the Caspian Sea are expected to last three years.

IN the course of his explorations last year in Mongolia, Col. Pevtsor made rich collections in the departments of geology, mineralogy, and botany. He afterwards spent two months at Kalgan (Chang-chia-kow), 150 miles north-west of Peking, studying the commercial relations between China and Mongolia at that important gate of the Great Wall. Among his other scientific work he determined astronomically the positions of twelve points in the neighbourhood of Urga, and also of other places on the road to Kobdo.

THE national congress of French geographical societies is to be held at Nancy from August 5 to 10. An exhibition of maps, &c., will be opened on August 1, and will continue during the session of the congress.

THE French Geographical Society have recently determined to award certificates to such intending travellers as have passed through a satisfactory course of scientific instruction at the Montsouris Observatory. Our own society, on the contrary, give the instruction, and, in the place of honorary distinctions, grant travellers substantial assistance by lending them good and trustworthy instruments.

MR. F. A. A. SIMONS, who last year sent home from the United States of Colombia some useful notes on the topography of the Sierra Nevada de Santa Marta, has for some time past been engaged in mapping the watershed of that little-known region. Mr. Simons obtained his first experiences as a traveller as Mr. H. B. Cotterill's companion in East Africa in 1876.

THE German branch of the International

African Association, which has not hitherto undertaken any exploring work in East Central Africa, is about to establish a station near the south end of Lake Tanganyika. It is to be hoped that they will take warning by the recent experiences of Messrs. Thomson and Stewart, and avoid Pambete, which, though conveniently situated, is emphatically condemned by both those travellers on the ground of its insalubrity.

IN consequence of a suggestion made by M. van Volxem at the recent meeting of the International African Association at Brussels, an experiment is to be made whether the buffalo is liable to be attacked by the *tsetse* fly, with a view to its employment as a beast of burden in East Africa.

BY last accounts from the West Coast of Africa, the Rev. T. J. Comber, whose departure for the Congo we recorded last year, was intending to start on a journey to the great ivory trading-mart of Zombo from San Salvador, where he has been settled for some months. Zombo, which is almost, if not quite, unknown to European travellers, lies to the north-east of San Salvador, beyond a range of mountains of the same name, in about E. long. 15° 35', S. lat. 5° 40'. If successful in his attempt, Mr. Comber will make Zombo a station on the road to Stanley Pool, the point which he eventually hopes to reach on the Congo.

THE Council of the Royal Geographical Society have awarded their gold medals for the present year to Lieut. A. L. Palander, of the Swedish Navy, for his services to geographical science as commander of the *Vega* in the Swedish Arctic Expedition of 1878-9, and to Mr. Ernest Giles for leading various expeditions in Australia and making valuable route surveys, as well as scientific collections. A gold watch was also awarded to Bishop Crowther for his services to geography during his numerous journeys in the Niger region in the past forty years, and for the additions he has made to our knowledge of the country and the language and customs of the people.

SCIENCE NOTES.

Observations made during Total Solar Eclipses, collated by A. C. Ranyard.—The publication of vol. xli. of the *Memoirs* of the Royal Astronomical Society places at the service of readers a vast amount of information respecting the physical observations which have been made during total eclipses of the sun, and which have been collated and arranged by Mr. Ranyard from many hundreds of published and unpublished reports. When, in 1860, numerous observers went to Spain in the *Himalaya* for the purpose of taking part in the eclipse observations of that year, they agreed to send their reports to the leader of that expedition, so that their accounts, instead of being published separately, might appear together, broken up and properly arranged according to the different classes of phenomena which had been observed. But when, ten years later, it turned out that not much progress had been made in the execution of the plan, Mr. Ranyard undertook, in 1871, to give his assistance, and, at the same time, to embody the observations of the eclipse of December 1870 with those of 1860. In proceeding with the work, its plan was gradually further enlarged so as to include observations made during other eclipses, as the advantages of bringing together all the observations referring to doubtful or varying phenomena became more apparent. And the result of all this increased voluntary labour and trouble is now contained in a substantial volume of nearly eight hundred pages, in which the scattered evidence of very many witnesses is gathered together, so

that it may be studied with comparative ease. The observations of the different phenomena are arranged in forty-four chapters, of rather unequal length, the last three filling two-thirds of the volume. But as these chapters refer to the polariscopic and spectroscopic observations, and to the photographs and drawings of the corona, it will be easily understood that they are concerned with a wide field of investigations of great interest. Eighteen beautifully executed plates and numerous woodcuts illustrate the text, and bring vividly before the reader the entangled and conflicting evidence which scientific research has to disentangle, and out of which it will have to find the way to a better knowledge of the nature of the sun and his surroundings. The great value of Mr. Ranyard's volume will be appreciated by all who avail themselves of the result of his labours in this interesting study.

Geology of Geneva.—Prof. Alphonse Favre has just published, in two volumes, a detailed description of the geology of the canton of Geneva. The work has been prepared for the Agricultural Committee of the Société des Arts de Genève, and is issued as a companion to Favre's geological map of the district which appeared in 1878. The author commenced to collect materials for this work as far back as 1841, and from his intimate acquaintance with the structure of the country has been able to produce a monograph of unusual merit.

DR. GÜNTHER has chosen from the zoological collections of the Indian Museum the specimens required for the British Museum, and a selection of the remainder has been offered in succession to, and accepted by, the Indian Museum (Calcutta), the Indian Institute (Oxford), the South Kensington Museum, the Dublin Museum, and the museums of Scarborough and Maidstone. The British Museum has accepted the documents relating to the zoological collections.

PHILOLOGY NOTES.

THE *Indian Antiquary* for March 1880 contains articles by Mr. Thomas on Andhra coins and on the sun symbol, so well known under the name of Swastika, on which a further note by Mr. Beal is adjoined. The latter scholar has a second paper, reprinted from the *Oriental*, on the Branchidae, a Greek tribe carried off by Xerxes from Miletus, in Ionia, and located in Sogdiana. Their descendants were treacherously massacred by Alexander a hundred and fifty years afterwards; and Mr. Beal is inclined to attach importance to their long residence in the East as a possible explanation of the Ionian character of Buddhist architecture in Afghanistan. Mr. Walhouse compares some of the most beautiful of the ethical verses of the celebrated Tamil poets, Tiruvallavar and Vemāna, with similar sentiments in Christian books. Mr. Fleet, of the Bombay Civil Service, continues his valuable series of translations of Sanskrit and Old-Canarese inscriptions. There follows an account, not apparently very trustworthy, of the Perumal Princes of Malayalam, extracted from the Administration Reports of the native State of Travancore; and Mr. Goonetilleke (Gunatilaka's) paper on the Grammar of Chandra is reprinted from the *ACADEMY* of last January. A translation by Mr. Beal of the Chinese version of a Buddhist legend about purgatory, with some minor notes, and a review of Forbes's *Burma*, concludes a number of unusually varied interest.

Das Altindische Neu- und Vollmondsopfer in seiner einfachsten Form, by Dr. Alfred Hillebrandt (Jena: Fische), is the title of a monograph on the ritual of a post-Vedic sacrifice of the pre-Buddhistic Hindus. Dr. Hillebrandt, who is a *privat-docent* at Breslau, has collected from various books of ritual the details of these

important new- and full-moon sacrifices, including the preparation of the materials for sacrifice—the wood, the milk, the butter, the corn, and the cakes—the exact preparation of the site of the offering (of which a plan is given), the libation of the melted butter, the offering and cutting of the cakes, the communion by the priests, and the invocation of the gods. At almost every step in the lengthy ceremony sacred words have to be spoken and mystical actions performed by the priests, whose position at each stage in the proceedings is carefully determined; and all these sacred words and ritualistic observances are carefully related and described in order by Dr. Hillebrandt. The account of the ceremony is thus lengthened out to no less than 175 pages, authorities being given in the notes for each statement; and, as the new- and full-moon offerings were by no means the most intricate or most important of the Brahman sacrifices, some idea may be gathered of the extent which ritual had reached among them. For this reason, though there are a multitude of questions more attractive and more instructive than such detailed enquiries into ancient rubric and ritual, it is of great value to have the actual facts of the Brahman sacrificial ceremonies brought so clearly to light as they are in this careful and scholarly essay. It will probably be very long before anyone will feel himself drawn to undertake a similar elucidation of more intricate services—the Soma sacrifice, for example; and the thanks of Indianists are due to Dr. Hillebrandt for his performance of the unenviable task of investigating these ancient follies. It is the greater pity that the use of his laborious work as a book of reference is rendered almost impossible by the absence of any index, even of the most meagre kind.

FINE ART. EXHIBITIONS.

THE INSTITUTE OF PAINTERS IN WATER-COLOURS.

THE summer exhibition of this society, which is now open, is good, there being many pictures worth seeing, although the collection as a whole is not as interesting as its predecessor.

The Crown Princess of Germany, who is an honorary member of the society, sends a powerful study, called *Roma*, a spirited head of the true Italian type. Mr. Tenniel has here the drawing for one of his famous political cartoons for *Punch*, entitled *Which Goes Back?* the Russian bear and English lion meeting on a narrow path overhanging a precipice, at an angle of a rock; the characteristics of the two animals are given in Mr. Tenniel's most masterly way. Mr. Wolf has but one work, *Grave and Gay*, a brown owl sitting in the shady recess of a tree, blinking at some gorgeous but frivolous butterflies fluttering about in front of him. The attempt to suggest the motion of the wings by giving the outline dimly or double is new, but the effect produced is not satisfactory. By Mr. J. D. Linton are three drawings, of which *Peveril of the Peak* is the most important. It is rather pretty than powerful. The two young people in green and white, against green tapestry, make an attractive group; but the old man to the left who issues from behind a curtain could not in real life accomplish this without making some noise, and thereby interrupting *Peveril*. It would be pretty if arranged as a *tableau vivant*. Mr. Linton's other contributions are studies of colour, *In Red* and *In White*, of which the former is good, while in the latter the face of the lady in white, turned sideways, is almost black in shadow, which, although it may be true as an accidental effect seen in nature, is here disturbing to the general tone

of white; the pale green substance of the satin body is well given, and the bare arm and neck are excellent. Mr. Linton understands well how to paint firm and healthy-looking flesh. By Mr. Henry Stock are four works, very different in subject from any others here; they deal with expiring life and spirits. Of these, *Lovers Meeting after Death* is the most original, although not a good composition; it shows two forms stepping briskly up on either side of a cloud to meet one another. *The Soul leaving the Body* is too suggestive of William Blake, without his wonderful mystery, to be satisfactory. *The Guardian Angel* is more pleasing; it shows a rosy maiden with an expression in the far open eyes of inward listening, attended by a spirit that floats above her. In Mr. Stock's other work the figure of Eurydice has too evidently been inspired by Mr. Watts' painting of the same subject in last year's exhibition of the Grosvenor Gallery. By Mr. Boughton is a pretty country scene of a labourer returning from work, whose three ruddy children peep through the bars of the farm-gate looking for him. Mr. Seymour Lucas's *Captain of the Guard* shows a standing figure adroitly painted, whose ugly and blood-stained face it is not pleasant to look upon, although, no doubt, it is in keeping with the character of a warrior. Mr. Israel's two drawings here without titles, of a pig and a pick-a-back, are clever, and less gloomy than the subjects usually chosen by this artist. The best of Mr. Townley Green's several small works is one called *Despatches*, a study of a man in red; one other, *Good-night*, a young lady pausing, with the handle of the door in one hand and a lighted candle in the other, to say "Good-night," would be better if the face were not so large and round, or so luminous, the whole light of the candle being concentrated on it. There are two large landscapes here, one, by Mr. H. G. Hine, of *The View from Mount Harry, near Lewes*, showing the fine sweep of the downs, the simplicity and grandeur of which are excellently given; the sheep seen below as mere specks help to carry out the general impression of space. *From Heddon Hill, looking towards Maidenhead*, by Mr. Aumonier, is a very charming landscape; the river winds through it between a hill covered with trees on one side and meadows partly under water on the other, while in front is a field of corn with reapers at work; the whole effect of this picture is very impressive. There are here three of Mr. Fulleylove's charming scenes of the gardens at Hampton Court, with figures introduced clad in the costume of the time, by which, however, is raised a doubt whether the buildings are not too aged for that time, and the trees of too great luxuriance. One of them, *A Lover's Quarrel*, shows a delightful tree-enclosed lawn, in the centre of which is a stone-encircled pool, with an elegant swain seated on a bank, and a plump little red-clad dame in anger upbraiding him. The sequel to this is given in another view of the garden, where the same red-clad—but no longer so plump—dame walks pensively and regretfully alone; but we cannot share her regret, as the youth seemed spiritless and impassive. *The Fisherman's Last Voyage*, by Mr. T. Walter Wilson, shows the funeral of one of the toilers of the deep: the corpse is borne along the river from the sea to the little village churchyard in a boat; a group of sorrowing fisher-folk, in their every-day dress and great wooden shoes, accompany it, trudging along the river bank, while a little girl of the party, understanding but slightly what has happened, turns aside to gather wild flowers. The feeling of grief and the sense of rapid motion are well suggested. Mr. Clausen's *Back to their Homes* shows a company of fishwives and children returning across the white sands from helping in the landing of a take of fish; it is very sunny in effect and refreshing,

and the children in particular are delightful. By Mrs. Elizabeth Murray is a scene of a *Jewish Marriage Festival at Morocco*, wherein professional musicians are entertaining the guests while the bride is being painted; the face of the man who plays on a guitar is admirable, and the merry twinkle of the eye full of humour. By Mrs. Oliver are two successful views of Italian towns, of which that of the market-place at Verona is spoilt by the too great brilliancy of the groups of people under the umbrella-like booths, the perspective of which is good. Miss Gow's *Fairy Tales* shows dexterity in treatment of surface effects and textures. The many paintings here of landscape with reeds are fatiguing to the eye from their great similarity and utter badness; the reeds are all painted with the same touch, and resemble nothing so much as the strokes in a child's first writing book, except that those would be less regular than are these wearisome reeds.

HANOVER GALLERY.—MAKART'S PICTURES.

THIS new gallery, admirably arranged for the exhibition of paintings and sculptures, opened its first season by the private view of the great picture of *The Entry of Charles V. into Antwerp*, the series of processional costume pictures showing the celebration of the "Silver Wedding" of the Emperor of Austria last year, and a selection of French pictures, on Saturday last. Excellently fitted for its object, and situated in Bond Street at the corner of Maddox Street, nearly opposite the Grosvenor, it could not have begun its career with a more striking display than that now to be seen there. Herr Makart's immense historic spectacle being the crowning triumph of the present Bavarian, or, we ought to say, of the young German, school. In all regions of taste, especially in the highest, where the aesthetic motive is in most absolute command, reaction follows quickly on extreme development of any kind, and here we have one of the most emphatic examples of the law that the history of art can show. The ascendancy of uncoloured design as the highest element of art and of purism in sentiment and in drawing sixty years ago has died out, the revival of fresco having been tried with every possible advantage except that of climate, and found wanting in the pleasure-giving charm of colour; we have in Makart's works the exact opposite to the cold and pious scholasticism of Cornelius. It is sufficiently wonderful, but certainly true, that the genius appears able to express such a change when he is required—that is to say, when the public want the change. In the day of Overbeck and Cornelius, Makart would have been helpless, but at the present moment he takes Europe in a certain way by storm.

This most able and really surprising picture was in the Paris International Exhibition two years since, and there received the highest award the jurors could bestow. The excellent photographs and etchings since published have made us all acquainted with the composition, especially the etching just issued in *L'Art*. But we would advise all who care for the art of our time to visit the new gallery. The massive richness of handling, the splendour of colour, surpassing that of Rubens, united with sensational romance and the modern charms of sentiment and knowledge, make *The Entry of Charles V. into Antwerp* superlatively interesting. We are quite aware that Makart's style of work is not only objected to, but violently opposed and treated as almost entirely deleterious in its influence, by men, critics and painters alike, who believe only in one province, or form, or motive, in the representation of Nature by brush or chisel, and who object to everything which they find unsympathetic with their theories or practice. We remember

Cornelius being similarly objected to, and, after his, Kaulbach's quasi-intellectual productions. Nevertheless, these names remain the great names in modern art; and here again in the history of painting appears a painter by the gift of Nature, endowed by constitution and temperament, not trained painfully and timidly by academic process. We might object loudly enough to points and characteristics, but with that conviction of the birthright of Makart we shall not.

When the city of Vienna celebrated the "Silver Wedding" of the Emperor and Empress of Austria in March last year, Herr Makart was deputed to contrive a costume procession of the guilds and other bodies willing to join. To effect this, he executed thirty-three brilliant compositions, long-shaped pictures, which are here exhibited. This fantastic mode of celebrating a festival has always had a great charm for German artists, who used to indulge in it, perhaps do still, in Rome and elsewhere, once a year; and this brilliant succession of masquerading merchants and architects, bakers and butchers, recalls the similar celebration under Kaiser Max represented by Burgmaier. These thirty-three pictures show all the daring *bravura* of hand, if we may use the phrase, possessed by the artist, and the endless resources of his invention.

Of the French school, as here displayed, we can only speak briefly. Nearly all the works collected on the dais, or upper portion of the gallery, may be said to be representative. They show the art of the several painters at their best, for the most part; Meissonier especially (No. 52), *Musketeers on the March*; Millet (57), *The Turkey Farm*; Rosa Bonheur and Henriette Browne in various subjects, Théodore Rousseau, Daubigny, and others. Two pictures by Alfred Stevens we must more particularly mention. One is No. 41, *Mother and Child*, painted in his usual manner, or even with more than usually careful *finesse* and finish, without the hardness so often marring our English elaborations. The other is a *tour de force* cutting out all the Impressionist performances it has been our fortune to see. It is, curiously enough, painted on glass placed over a canvas on which the whole of the details have first been most carefully drawn. The subject is *A Morning Call*; the scene a sumptuous Parisian drawing-room, in which are three ladies correspondingly attired in sumptuous fashions. These, with the mirrors, pictures, carpet, all the surrounding objects, are painted at once, without revision and with astonishing force. At the distance demanded by the artist, the effect is perfect.

THE collection of Mr. Watts' works now exhibiting at the Royal Manchester Institution is well worth a journey to the North to see, even though most of them may have been already seen in London. It consists of no less than fifty-four oil paintings, beside two heads in marble; and it is entirely lent by a single owner, Mr. Charles H. Rickards. Rarely, if ever, has so valuable an opportunity been given for examining the development of a living artist. Mr. Watts may here be studied in some of his earliest efforts, in the ripe work of his full age (which as yet shows no faltering); in many of his most successful portraits, and in those allegorical subjects which even his admirers confess to be of unequal merit. This is not the occasion either for praise or criticism. Mr. Watts' position is well established. Others may have been more successful in attracting the public eye; none has been more true to himself and to his art. And it is just this quality which renders the present collection so important for the student. It might perhaps be possible to learn from a single picture the sense of rich colour and the mastery over light

and shade which are among Mr. Watts' highest gifts. But only after the comparative examination of a long series of works can we bring away the true lesson—that no honest attempt to realise the product of the imagination, though in some respects unsuccessful, can be unworthy or valueless.

THE loan exhibition of gold and silver work at Amsterdam, opened on April 15, is well worthy of a visit from English amateurs of plate. The two large picture galleries of the Artists' Club, "Arti et Amicitiae," are filled with cases in which book-covers, caskets, maces, horns, *plaques*, official chains and badges, tankards, beakers, cups, *tazze*, and vases, mainly of Dutch origin, are arranged with judgment and taste. Many small objects, such as watches, medals, and toys, are also exhibited. The treasures of almshouses, guilds, corporations, and private collections have been laid under contribution. A careful examination of the exhibition will greatly increase our appreciation of the Dutch silversmiths' work. A good Catalogue, describing 336 specimens, has been printed. From time to time supplements will be published giving accounts of the more important pieces not included in the first edition of the Catalogue. The collection will be on view during May and June, and possibly for a longer time. Of course it is not free from rubbish and forgeries, but the many Gothic works of the fifteenth century, and such splendid pieces as the St. Sebastian drinking-horn of the year 1565 and the "Popta" ewer and salver of the seventeenth century, more than compensate for the inevitable intrusion of a few productions of the nineteenth century with which one would have gladly dispensed.

ART SALES.

DURING the last days of last week, Messrs. Sotheby, Wilkinson and Hodge were engaged in selling the very interesting collection of an amateur. There were rare specimens of Lukas of Leyden, Albert Dürer, Marc Antonio—including what is probably the finest impression of the *St. Cecilia* known, both as regards condition and state—Rembrandt, Hollar, and other masters. French portraiture, chiefly of the seventeenth century, was represented by its greatest masters; and there was a fine collection of the works of Faithorne, and many other noticeable prints. But to the student of English art the assemblage was perhaps chiefly remarkable by reason of the presence of what must surely have been the most splendid collection in existence of the mezzotints after Constable by David Lucas. We append the prices and some details of these, as they rarely occur in the print market in similar condition, and are less known and less valued than they ought to be. It is not perhaps generally known that David Lucas, who, to begin with, was an excellent artist in mezzotint, executed these plates under the immediate supervision of Constable, much as the mezzotint engravers of the *Liber Studiorum* executed theirs under the close correction of Turner. But, unlike the plan followed in *Liber Studiorum*, no etched line traced by the painter himself gave firmness of contour to the objects on these plates of Lucas's. The work, like the *Rivers of England* and the *Ports of England*, is a pure mezzotint. Again, the colour of the ink selected for the prints after Constable was almost always black, or as near to black as may be; while the prints of *Liber Studiorum* are all of brown, though of browns of differing shades—some delightfully low toned and cool, and some much too nearly approaching a carotey red. But these things, which create a particular divergence between the effects attained in *Liber Studiorum* and those reached in the mezzotints after Constable, do not hide

from us the fact that in each case—in Turner's and in Constable's—the object of the series of prints was to give full expression to the power and to the range possessed by each of the two painters. Constable's prints often, though not always, make delightful or strongly impressive pictures; but with regard to them nothing is more noticeable than their limitations of theme. To Turner all atmospheric effects and all combinations of line were interesting, and were available in his art. The comparatively formless art of Constable—dealing with nature not subtly, but heavily and in great masses—confined itself generally to effects of storm and shower, strong shadow or vivid sunlight. It renders with skill, and sometimes even with passion, what it essays to render, but its representation of nature is partial and incomplete. Constable's own art is wonderfully reflected in these mezzotints of Lucas, done, as it were, under his eye. The little mezzotints, therefore, will be increasingly valuable as records of the master's work, however faulty or deficient that work may in some respects be. At the sale of Thursday last, the David Lucas appeared often two or three impressions in a lot. These were proofs in various stages. The changes in the effects were very frequent, for, as the delicate plate wore or as improvements suggested themselves, alterations were made. It will be seen that the prices realised were often not high. Some of the more noticeable were as follow:—*A Summer Land*, five proofs in progressive states, £3 17s. (Colnaghi); *Yarmouth*, two excessively beautiful proofs, with a refinement and subtlety of effect seen only rarely and in the best works of the master, £3 19s. (Noseda); *Summer Morning*, in all six proofs, £6 2s. 6d. (Noseda); *Summer Evening*, three proofs in progressive states, £5 7s. 6d. (Noseda); *A Dell, Helmingham Park*, eight proofs, £8 5s. (Colnaghi); *A Heath*, seven proofs, some very fine, £10 15s. (Colnaghi); *Stoke-by-Neyland*—a subject which appears more theatrically treated—£8 8s.; *a Sea Beach*, four proofs in progressive states, £10 10s. (Colnaghi); the *River Stour, Suffolk*, six proofs, £7 10s. (Noseda); *Old Sarum*, six impressions of this solemn and weird subject, £13 2s. 6d. (Noseda); *Weymouth Bay*, two proofs, one of which was certainly unsurpassable, £6 6s. (Colnaghi); *Salisbury Cathedral*, one proof near completion, £6 10s. (Thibaudau); *Spring*—three proofs of one of the calmest and most cheerful of the subjects of Constable, showing exquisitely a great stretch of flat arable land under gray March skies, broken with sunshine—£5 2s. 6d. There were others of somewhat less importance which we need not cite.

THE Trustees of the British Museum sold on Wednesday in last week the collection of duplicate impressions of etchings and line engravings which has been the theme of conversation for some considerable time. A few important lots were, however, withdrawn almost at the last. The sale was conducted by Messrs. Sotheby, Wilkinson and Hodge. The rare *Sibyls* of Baccio Baldini, of which certain French criticism has declared that some of them were designed by Botticelli, were the first important lots; but the condition of some of the impressions occurring at the British Museum print sale left something to be desired. The *Sibylla Chimica* fetched £19 (Davidsohn); the *Sibylla Eritea*, £8; the *Sibylla Elisopolica*—which the *Standard* has stated sold for £70 at the Durazzo sale about eight years ago—sold for £22, and was certainly cheap; *Sibylla Phrygia*, in the first state, fetched £15 10s., and in the second state it was knocked down for £7; *Sibylla Agrippa* sold for £10. The etchings of Nicolaas Berchem are remarked to have fetched high prices: *A Drinking Cow* sold for £88; *The Shepherd playing the Flute*, first state, and with ample margin, £22 1s.; and *The Shepherd*

by a *Fountain* from the Sheepshanks collection—a large print, broad in treatment—£12. By Jacob Binck, the portrait of *Christian III.* of Denmark sold for £35. By Wenceslas Hollar, a first state of *Antwerp Cathedral* sold for £24; *The Royal Exchange*, a subject of peculiar interest to the lovers of London topography, £30 (Harvey). By Karel du Jardin, *Two Donkeys* fetched £11 5s.; a *Landscape with a Church*, first state, with an ample margin, £14 10s.; and a *Landscape with Two Donkeys in the Foreground*, a brilliant impression of the first state, £9 10s. Domenico Campagnola's beautiful print of an Italian genre subject—*The Musical Party*—sold for £44. Antony Vandyke's *Portrait of Paul Potter* fetched no less a sum than £52 in the second state. Of Lukas of Leyden's works there were but three, but all were important: *The Christ shown to the People* fetched £28; *The Poet Vergil suspended in a Basket*, an impression from the Harding collection, realised the same sum; while the extremely rare *Portrait of the Emperor Maximilian* was knocked down for £80 (Noseda). Of the works of Mair von Landshut we note *The Adoration of the Magi*, a fine impression, £47; and the print somewhat lengthily entitled *A Young Lady receiving a Gentleman at the Door of a Gothic Mansion*, £34. By Israel van Meekenen there were to be noted *The High Priest refusing the Offering of Joachim*, £30; *The Virgin, St. Anne, St. Catherine, and St. Barbara*, £30, and two or three others. By Paul Potter, *Le Berger*, with the address of Clément de Jonghe, fetched £24; and the *Head of a Cow*, a rare work, £25—both high prices for the prints of Paul Potter. Marc Antonio was unrepresented, but by a member of his school there was the *Venus and Cupid accompanied by Pallas*, from the centre groups of the well-known *Judgment of Paris* by Marc Antonio Raimondi, £35. Coming to the etchings of Rembrandt, of which there were not very many, we should chronicle the *Portrait of Rembrandt leaning on a Stone Sill*, a fine impression of the rare first state, £116 (Thibaudeau); *Abraham entertaining the Three Angels*, £27; the *Rest in Egypt*, £27; the *Baptism of the Eunuch*, £11; the *View of Amsterdam*, a fine impression, £34 (Thibaudeau); the *Goldweaver's Field*, a warmly toned impression of this masterly landscape, £40 (Davidsohn); *Dr. Faustus*, a really brilliant impression and full of burr, £44; *Clément de Jonghe*, third state, after the first changes in the plate, £16—a fine impression of that rather late state. Again there was the *Goldweaver*, second state, £124—a fine impression of this doubtful plate. Finally, among the Rembrandts, *The Great Jewish Bride*, a fourth state, £50. By Martin Schongauer, we note *The Crucifixion* (from the Conyngham collection), £72; the *St. Barbara*, likewise from the Conyngham collection, and an early impression of this pretty little print, £20; *The Virgin seated on a Throne near the Saviour*, rare and fine, £60. By Adriaan van de Velde, a brilliant impression of the *Cow and Two Sheep at the Foot of a Tree* fetched £10. Among the works of the great artist known under three styles—Jacob Walch, Jacopo de' Barbari, and the "Maitreau Caducée"—there occurred the *Judith* (£21), and a brilliant impression of the *Three Men tied to a Tree*, £35 (Thibaudeau). By Johann Wächter, of Strassburg, the three-coloured print of *Orpheus playing to the Animals* sold for £46. It is stated to have been bought for the Berlin Museum. Of English last-century works there occurred hardly any, but a magnificent proof of John Spilsbury's mezzotint after Sir Joshua Reynolds—the portrait of *Miss Jacobs*—sold for £65 (Colnaghi). It has been announced in the press that a certain number of prints were bought in; but, however this may be, the purchase of the Grace collection of views and plans of Old

London—a collection unequalled of its kind—must have been greatly facilitated by this sale of duplicates.

THE sale of the Walferdin collection caused considerable interest among connoisseurs and dealers in Paris last week. The paintings by Fragonard, which formed the chief feature of the sale, fetched high prices. Two decorative works, painted by him for M^{me}. du Barry, were particularly warmly contested, and sold for 30,000 frs. *Les Amants heureux*, one of the most admired works in the collection, sold for 20,000 frs.; *L'Etable*, for 15,000 frs.; *Le Début du Modèle*, for 15,000 frs.; and *Le Vœu de l'Amour*, for 10,000 frs. The two busts by Houdon of Mirabeau, one in terra-cotta and the other in marble, were both bought by the State for 8,000 frs.

NOTES ON ART AND ARCHAEOLOGY.

MANY of our readers who are interested in Venetian art are doubtless aware that Mr. Bunney has for the past three years been engaged on a large painting of the west front of St. Mark's. They will be glad to hear that the picture is approaching completion, and will probably be exhibited in London in the course of the summer. The effect chosen by Mr. Bunney is that of early morning, the façade being in tone against a luminous sky; this has enabled him to give the full depth of porphyry and serpentine, marble and mosaic, relieved by the occasional golden flashes, which is, perhaps, the most impressive aspect of the wondrous Basilica. With the exception of the background of Gentile Bellini's picture in the Accademia, we believe St. Mark's has never before been painted on so large a scale; and the singular force and accuracy of Mr. Bunney's work will enable those who have not seen the original to realise it as it actually stands. The picture is a commission for Mr. Ruskin, and we understand will find a permanent resting-place in his museum at Sheffield.

MESSRS. BICKERS AND SON have in the press for speedy publication the *Lectures on Art* delivered at the Royal Academy by Henry Weekes, R.A., with a portrait and short biographical sketch of the author and eight selected photographs of his works.

AT a general assembly of the Royal Academy, held on the evening of Friday, the 23rd ult., Mr. Charles B. Birch, sculptor, was elected an Associate, and Mr. Frederick Stacpoole, an Associate Engraver.

THE front pillars of Torregiano's altar, which Mr. J. H. Middleton discovered a few months ago in the Ashmolean Museum, and which the university authorities have since given up to the Dean and Chapter of Westminster, were replaced in their old position in the Chapel of Henry VII. on Monday last. The altar to which they originally belonged was destroyed in 1643.

MR. W. HOLMAN HUNT delivered a lecture on the colours used by artists on Wednesday last, the 21st ult., at the Society of Arts, Sir Coutts Lindsay in the chair. The lecture had been carefully written, was of considerable length, and gave the audience the result of something like twenty years' experiments and observations. After some account of Theophilus, Cennini, and other early writers, Mr. Hunt described the ignorance of the materials he used and of the chemistry of his pigments now experienced by the painter, resulting from the facilities afforded him by the colourman and canvas preparer. He dwelt upon the practice of Reynolds and later men, showing that the experience of painter after painter was

lost from the want of united action, and of any record of their practice; and ended by advising a remedy for this state of things in the shape of a society possessing a library and a laboratory for testing and preparing materials. The last portion of the lecture, which was listened to with great attention by a full audience, was illustrated by several sheets of trials of colours and tints applied to the canvas, some of them as long ago as 1860, showing, as far as possible, the mutual destruction of certain pigments and the changes of others. These sheets were exhibited by means of a colourless light of intense brilliancy. We understand that the lecture will be published.

THE fifth volume of the *Catalogue of Oriental Coins in the British Museum*, by Stanley Lane Poole, will be published in May, succeeding the fourth volume at an interval of four months. The present volume describes the coins of the various Mohammedan dynasties of North Africa and Spain from the conquest of the Peninsula and Morocco by the Almoravides to the present day. The rich series of these princes, and of the Almohades, the Hafsides of Tunis, the Merinides and Sherifs of Morocco, form one of the most remarkable sections of the Oriental side of the national collection. The square coinage of the Almohades was the parent of the *Millarès* of Marseilles and the Riviera; while the *Maravedi*, or Almoravide denarius, is well known to mediaeval students as the only gold currency of Europe between the time of Charlemagne and the thirteenth century that could presume to compete with the *bezant* or Byzantine solidus. At the end of the volume are described some thirty coins of the Yemen, some of which are unique, and all of which illustrate a most obscure portion of Oriental history. A lengthy Introduction deals with the historical bearings and inscriptional difficulties of the coinage. The sixth volume of the Catalogue, comprising the Mongol issues, is, we understand, in the press.

WE have received a dainty volume which leads us to hope that Messrs. Sampson Low and Co. propose to issue *éditions de luxe* of at least some of their series of "Biographies of Great Artists." Mr. W. B. Scott's *Little Masters*, beautifully printed on thick paper, neatly bound in Roxburghe style, and containing several inserted permanent photographs admirably executed, deserves to be called by this name. It is a great boon to be able to possess at a small cost such a little treasury of early German art. Among the new illustrations are Barthel Beham's *Fight of Naked Men*, Sebald Beham's *Melencolia* (very interesting from its likeness to Dürer's famous print), Aldegrever's *Frieze of Dancing Children*, Binck's fine portrait of *Christian III.* of Denmark, and two interesting Brosamers. The last-named add greatly to the value of the book, as no example of Brosamer is given in the ordinary edition. We are also glad to see that opportunity has been taken to correct several errors in the list of wood engravings.

MR. WENTWORTH COLE has offered space on the walls of the Royal Albert Hall for the exhibition of a certain number of works rejected from the Royal Academy. We fear that with the increase in the number of exhibitions the case of the rejected becomes more hopeless every year. The Royal Albert Hall would be an honourable asylum, but it is scarcely the place to focus attention upon neglected merit.

THE death is announced of Mr. John Lomax, the well-known dealer in pictures and works of art, and head of the firm of John Lomax and Son, of Cross Street, Manchester. He was himself an artist, and was especially successful in his paintings and drawings of woodland scenery.

THE forty-seventh meeting of the French Archaeological Society, founded by M. de Caumont, will begin at Arras on June 29. The programme is chiefly occupied with questions relating to the history and archaeology of the North of France.

THE electric light will be again used at the French Salon this season, although the jury of painting have protested strongly against this mode of lighting as being too unequal and glaring, injuring almost invariably the effect of painting and not improving that of sculpture. M. Turquet expressed his regret that the jury had not made known their opinion last year when the experiment was tried. It was now, he stated, too late to go back, for the Government had signed an agreement with the Jablochkoff Society which bound them to a second experiment. Every modification, however, would be tried, such as using yellow globes, altering the disposition of the candles, &c., so that it might be hoped that a greater success would be gained than was achieved last year.

MEYER's picture of the view from the Rigi, which is upwards of seven feet in length and printed in colours, excels anything which has hitherto been published as a memorial of that amazing prospect. It is too unwieldy to use upon the spot, unless it be first cut to pieces. It has been printed in four sections, which have been afterwards pasted together, but the printers must be a little more careful in their selection of colours, for the copy sent to us registers execrably, a hard blue-green line of grass being joined to a hard yellow-green line of grass. Every mountain, peak, hillock, forest, group of trees, lake, town, or village which one can see from the Kulm is faithfully represented, the names being indicated on the margin. The artist has been over-ambitious to make his panorama look like a picture; the former, especially where the range is so enormous and so infinitely detailed, requires a Japanese severity; the crudeness and conventionality which are out of place in landscape are here in place. Herr Meyer has probably aimed at making the spectator imagine that he is on the summit of the Rigi; and, to do him justice, he has almost succeeded.

THE new arrangements at the Uffizi Museum and Galleries have now been made, and all the appointments filled up. By the new regulations, permission to copy will be given only to applicants who can give proofs of capacity and training. They must produce certificates from such public bodies as our Royal Academy or Science and Art Department, and it is hoped that these certificates will be given with due care to competent persons only. They must be presented through a consul.

"These regulations," our correspondent at Florence writes, "if not especially directed against British applicants, will certainly affect them more than any others. Generally speaking, the English are the only people who venture to apply for permission to copy in public galleries abroad without a knowledge of, at least, the rudiments of art. They, however, make no scruple of occupying places and taking up the keeper's time while they make daubs which help to render English art and taste a matter of ridicule to foreigners. A copyist of six years' standing in our National Gallery was sharply dismissed a short time ago from the Uffizi for incapacity. There is, indeed, no test required by the National Gallery with regard to capacity or efficient training on the part of copyists, and, this being the case, the Florentine authorities refuse to admit any certificate coming from that quarter."

This is not a pleasant reputation to have as a nation, but it is to be feared it is deserved, for, while in general English applicants are the most incompetent, they are, at the same time, the most confident. It is to be hoped that these new regulations will open their eyes a little to their own shortcomings, and teach them

the desirability of knowing the elements of art before they sit down to copy the works of the Great Masters.

VICTOR HUGO, even by his most devoted admirers, has not hitherto been reckoned as an artist, in the limited sense in which the term is generally used. Yet it would seem from six drawings by him which are published in last week's *L'Art* that he is well entitled to the name, for these drawings are remarkably effective works conceived in a weird poetic spirit, somewhat in the style of Gustave Doré, who also seeks to convey impressions rather than absolute facts. His artistic processes are peculiar. "I generally," he explained laughingly to a questioner, "make use of my ink bottle as a palette, and then in order to make my tints lighter I throw half a glass of water over my paper, or sacrifice a few drops of coffee to my drawing." Often it is mere accident that decides the nature of his work. The ink makes a blot upon the paper, and this blot is immediately made to take a form, and is "metamorphosed into a castle, a rock, or *silhouette*; it becomes a veritable design, it extends, and in the end covers just as much space as the sheet of paper on which it has fallen will permit." It would appear from the drawings reproduced in *L'Art* that Victor Hugo is especially fond of ruined castles with storms passing over them, displaying powerful contrasts of light and shade. Unfortunately most of his sketches have been destroyed, he attaching no importance to them. Many of them were done simply for the amusement of children, who have afterwards torn them up. They do not, of course, pretend to any great skill in execution, being merely rough transcripts of impressions, but everything that comes from so great a hand is interesting. The history of Victor Hugo as an artist is contributed to *L'Art* by M. Alfred Barbou, and is well worth reading, though unfortunately it is written with an irritating imitation of Victor Hugo's own style, which becomes intolerable when adopted by a smaller man.

THE series of four pictures lately exhibited in Burlington House by Mr. Alma-Tadema, representing the four *Seasons* by classic incidents proper to each quarter of the year, has been engraved in the pure-line manner by A. Blanchard, of Paris, with his usual excellence, and published by Messrs. Pilgeram and Lefevre. *The Seasons: a Roman Idyl*, is a publication of sufficient importance and beauty to make a longer review desirable than we are at present able to give it. The first picture is *Spring*, in which we see young Roman maidens gathering the flowers for the *festa* to celebrate the opening year. These flowers, that thickly cover the ground like our daisies and buttercups, are the star anemone, which attracts the attention of travellers to the Eternal City. The principal figure is a tall girl in a pale dress, making, as far as the painter's part of the work goes, perhaps the most lovely picture of the four. The engraving, however, is equally admirable, and the tenderness of the tone of the light drapery deserves the highest commendation. The next, *Summer*, is a luxurious subject, as it ought to be, but a little difficult to read at first sight. In the heat of Southern Italy, what can be more desirable than the bath? Accordingly, we find that the Romans in the time of the Caesars esteemed the bath, frigid in summer and warm in winter, one of the great necessities of life. Summer is here represented by a lady languidly reclining in a brazen laver, rose leaves swimming on the surface of the water; an attendant, sitting on the bench above, gently dropping asleep. This engraving, dexterous in the highest degree and charming in texture, is a little ambiguous, inasmuch as the white and red rose leaves obscuring the figure of the bather want the

colour to make them quite understood. The third, *Autumn*, shows us the wine chamber after the vintage, where the large *amphorae*, filled for future use, have been deposited, and the daughter of the house offers the pious libation to the god of wine for his generous gifts. This we consider the weak picture of the series. The damsel is not in front of the terminal of the god, nor of the smoking bason into which she pours her offering; she holds a flaming torch, but it has no illuminating effect, and casts no shades. The last of the four, *Winter*, is another contrast. At the foot of one of the columns of a gallery or porch are three women round a brazier, who beguile the time by conversation and a mess of some sort, which one of them stirs on the fire and another tastes. M. Blanchard's share in this concluding design is perhaps his greatest triumph. The purity of the subdued tones and the texture of the marble base of the column that forms the background, by the side of which we have a glimpse of the snowy landscape, are beyond all praise.

DR. J. P. RICHTER continues in the *Zeitschrift für bildende Kunst* this month his careful "Leonardo-studies." He deals this time with the various drawings and MSS. at Windsor that relate to the celebrated model for the equestrian statue of Francesco Sforza, concerning which so much has been written with so little result in the way of proof. Dr. Richter is of opinion, notwithstanding the numerous designs for statues with horses on the gallop at Windsor, and Paolo Giovio's description of Leonardo's horse as being "vehemently incited and snorting," that Leonardo represented his horse as standing firmly on his legs, with the rider turned somewhat in his saddle, holding his staff in his hand, in the act of giving the word of command, following in this the motive of his master, Verrocchio. M. Courajod's hypothesis, lately stated in *L'Art*, whereby a drawing by Pollajuolo, preserved at Munich, is supposed to be a copy from Leonardo's statue, is dismissed by Dr. Richter as "too improbable;" but it certainly fits in far better with the received traditions of the work than Dr. Richter's hypothesis, which is founded on certain sentences in the MSS. at Windsor.

THE STAGE.

George Barnwell has been quite a success at the Gaiety, and those who went to laugh remained to applaud. At least this is true of the visitors to the gallery, some of whom were much moved by the diffuse eloquence characteristic of the "palmy days," and by the extremely virtuous sentiments of which modern dramatists are so sparing. But those who were not moved were nevertheless somewhat mistaken if they saw in *George Barnwell* nothing but an exhibition of the ridiculous and the dull. The dramatist of "the palmy day" had at least a habit of building up the interest to a climax, and not allowing it to fritter away and die out before the end of the piece—its place supplied by the development of curious character and the play of the dramatist's humour and his gift for repartee. Again, the tall language of the drama is no inherent defect; the expression of sentiment in that fashion suited the taste of the day, and seemed natural to it. We cannot blame it now for being inherently bad, but simply for being out of the mode; and thus its distastefulness to us does not condemn the piece, but points merely to the passage of time and the change of manners. Moreover, this tryingly eloquent language is not peculiar to the class of drama to which *George Barnwell* belongs. The conversation of Julia and Falkland, the model lovers in *The Rivals*, is not a little high-flown; its measured grace and careful artificiality have nothing in common with the elliptical utterances and, we fear, the somewhat prosaic sentiments of the

lovers of the moment. Yet it has never occurred to the most cynical or the most candid of managers to offer the public *The Rivals* as an ironical commentary on the dramatic produce of "the palmy day."

The events of the week have been the revival of *The Shaughraun* at the Adelphi and the first representation in England of *The Danites* at New Sadler's Wells. The Adelphi revival is a consequence of the engagement of Mr. Dion Boucicault, and a fair share of popularity seems to await it. Mr. Boucicault himself has not visibly aged or lost his vigour, and his sketch of Irish character is nearly as vivid as it was many years ago. The cast of the piece is generally strong. At least, Mr. Boucicault is supported by the possessors of important names: among them are Mr. Henry Neville, Miss Lydia Foote, and Mrs. Alfred Mellon. Mr. Neville succeeds Mr. Terriss as Molineux, and he has more force, but necessarily less of the grace of youth, than Mr. Terriss possessed some six years ago. Miss Foote follows Mrs. Boucicault as Moya, but with an interpretation that is her own, and of course not inefficient, though lacking Mrs. Boucicault's simplicity of tenderness and cheeriness. Mrs. Mellon's is a small part for a long-approved and excellent actress; but the public is the gainer, in the rare opportunity of seeing a small part well played. Mr. E. H. Brooke, Mr. James Fernandez, Mr. Pateman, Miss B. Pateman, and other players complete the cast, and, in a measure, contribute to the success of the piece. *The Shaughraun* is inevitably without the freshness that characterised such Irish dramas as *Arrah-na-Pogue*. The kind of life it deals with had on its production already become familiar to the spectators of *Arrah-na-Pogue* and *The Colleen Bawn*. But there is always enough of interest in the piece and in the playing to save it from the category of failures.

The Danites was brought out this week at Sadler's Wells, and its scenes were watched on the opening night with extreme interest by an audience to whom the life depicted was wholly new. We shall next week be enabled to present our readers with a more detailed record of this production.

Mrs. SARAH BERNHARDT may possibly be induced, by persuasion or pressure, to resume her place in the Théâtre Français, but at present her departure is an accomplished fact. Mme. Arnold Plessey left the theatre in like manner some thirty years ago, and on her return to it, when she had become an excellent artist, it was only as a *pensionnaire* that she was received, and as a *pensionnaire* that she continued.

MUSIC.

RECENT CONCERTS.

THE second concert of the Bach Choir at St. James's Hall, on Wednesday, April 21, was one of unusual interest. Cherubini's *Messe Solennelle* in D was performed for the first time in London. We learn from the composer's own catalogue that this noble specimen of ecclesiastical music was written in the year 1811. It is the second of nine Masses composed between the years 1808 and 1836. In Cherubini's church music the sixteenth and eighteenth centuries are wonderfully combined—on the one hand, the solemn and severe style of Palestrina and his school; on the other, the charm, sweetness, and also dramatic power of Haydn and Mozart. Cherubini was, however, no mere imitator; he was an original thinker, and possessed the gift of melody; his deep knowledge of counterpoint and fugue enabled him to express his ideas in the clearest form, and to develop them in a powerful and effective manner. He made use of his learning only as a means to an end. The

Mass in D is very long, but never tedious; and the result of great labour, yet never laboured. The orchestration is throughout very fine. We cannot enter into details respecting the music further than to mention specially the magnificent fugal writing in the *Kyrie*, the *Cum sancto Spiritu* and the *Amen* chorus, the beautiful *Et incarnatus* for six solo voices, and the lovely *Dona Nobis* for solo voices and chorus. The soloists were Mrs. Osgood, Mme. Patey, Mr. Shakespeare, and Herr Henschel. Middle. Hohenschild and Mr. Beckett took part in the sextet. The performance of the work was excellent, and more than maintained the high reputation already earned by choir and conductor. The programme included, beside Bach's *Sanctus* in D major—the score of which was carefully rewritten by Mr. Ebenezer Prout—Beethoven's *Meeresstille* and Mendelssohn's *Walpurgisnacht*.

Mr. Oscar Beringer gave his third annual pianoforte recital at St. James's Hall on the afternoon of the same day. The concert commenced with a quintet in F by Rubinstein for pianoforte, flute, clarinet, horn, and bassoon—an interesting but unequal composition. Mr. Beringer's first solo was Liszt's sonata in B minor. The music rests on a poetical basis, but the programme is supplied to us, not by the author, but by one of his friends, Herr Louis Köhler. The work contains much that is interesting and much that is beautiful, but at times it seems to us commonplace, and even ugly. The other solos were a small piece by Kirchner, and Weber's *Invitation* with arabesques by Carl Tanzig. It might be called a "metamorphosis" of Weber's *Invitation*. This last piece, and the Liszt sonata, both of which are replete with difficulties, were magnificently played by Mr. Beringer. We had occasion only last week to speak of his fine playing, and are pleased to have to refer to it so soon again. A *chaccone*, by Raff, for two pianos, was played by Mr. Beringer and his clever pupil, Miss Randegger. Miss Antonette Stirling was the vocalist, and sang songs by Brahms, Franz, Liszt, and Schumann.

A large audience assembled at the Crystal Palace on the occasion of Mr. Manns' benefit concert. The programme *Plébiscite* was as follows:—Beethoven's pastoral symphony (247 votes), Wagner's *Tannhäuser* overture (also 247), Handel's *largo* in G (239), and Mendelssohn's concerto in G minor (223). This last piece was, however, changed for the violin concerto played by M. Emile Sauret. The symphony which obtained the fewest votes was Hofmann's *Erithhof* (10); of overtures Bazzini's *King Lear*, Bennett's *prelude Ajax*, and Heap's concert overture had each only three; while of miscellaneous pieces for orchestra, Mr. Davenport's prelude and fugue in C only received one vote. On the voting paper were given all the pieces performed during the last season at the Crystal Palace. J. S. SHEDLOCK.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.
To-night, at 8, a Play, in five acts,
THE OLD LOVE and the NEW.
By BRONSON HOWARD and J. ALBERT. Messrs. Coghlan, Fletcher, Leatham, Price, Deane, Holman, Benn, Douglas, Phipps, and Anson; Mandames A. Roselle, Emery, Gifford, J. Roselle, and White.
Morning Performance of "The Old Love and the New," Saturday, April 3, at 2. Box-office from 11 till 5. No fees.

DRURY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.
To-night, at 8, LA FILLE DE MADAME ANTOINE.
Mdlles. Coraella d'Anka, Alice Barville, Kate Sullivan, Hodgson, Ewell, M'Namara, Fisher, Hebe Mapleson, Percival, Hudson, and Middle. Palladino (première danseuse); Messrs. Wilford Morgan, J. A. Arnold, Wallace, Bradshaw, P. Wyatt, Marley, &c.
Preceded, at 7, by LADY AUDLEY'S SECRET.
Box-office open from 10 till 5. No booking fees.

DUKE'S THEATRE, Holborn.

Managers, HOLT and WILMOT.
Every evening, at 8, Baker and Farron, the favourite musical comedians, in their specialty Drama, in four acts,
CONRAD and LIZETTE.
CONRAD (a German), with songs and dances—Mr. P. F. BAKER.
LIZETTE (a German girl) and TIM FLAHERTY (an Irishman), with songs, dances, duets, &c.—Mr. T. J. PARROTT.
Preceded at 7.30, by BUCKSTONE'S Fables of A ROUGH DIAMOND.

FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.
To-night, at 8.30, a new and original Comedy, in three acts, called
THE UPERCUTS.
By HENRY J. BYRON.
Messrs. J. L. Toole, John Billington, E. W. Garden, T. Skidney, and E. D. Ward; Misses Lillian Cavaller, Roland Phillips, and Emily Thorne.
Preceded, at 7.30, by DEAF AS A POST.
Concluding with A MARLBOROUGH BACHELOR.
Doors open at 7. Prices 1s. to 2s. 6d. Box-office open 10 till 5. No fees for booking.

GLOBE THEATRE.

Manager, Mr. ALEX. HENDERSON.
To-night, at 8, NAVAAL CADETS.
Opera Comique, in three acts, composed by RICHARD GRAY.
Supported by Mesdames Belina Dolara, St. Quinten, Violet Camerons; Messrs. Harry Paulson, Lordan, W. E. Gregory, Denbigh Newman, Mitchell, and powerful company. New and magnificent scenery by Messrs. E. Hyatt, Spang, and W. Llanan. Costumes by Messrs. and Mrs. Alas. Furniture by Mr. S. Lyon. Full band and chorus. Conductor, Mr. Edward Solomon.
Preceded, at 7.15, by the celebrated Oriental Extravaganza,
THE HAPPY MAN.
In which Mesdames Graham, Chorley, Messrs. Wilton, Hill, Craven, Henry, and Mr. Shiel Barry will appear. The whole produced under the direction of Mr. H. B. Farrie. Acting Manager, Mr. R. D'ALBERTSON.
Box-office open daily from 11 till 5. Doors open 6.45.

IMPERIAL THEATRE.

Shakespeare's Comedy, AS YOU LIKE IT.
Every afternoon at 3, in which Messrs. Lionel Brough, Herman Vesta, W. Parrott, Kyrie Bellier, F. Everitt, E. F. Edgar, J. Bannister, C. C. G. G. Coventry, F. Charles, E. Allbrook, F. Stephens, G. Trevor, C. Busch, and Miss Litton, Miss Creswell, Miss Brandon, Miss Sylvia Hodson will appear.
Stage Manager, Mr. COE.
The doors open at 2.30; Overture at 2.45; Comedy precisely at 3; Carriages 5.45.
Night performances on Wednesdays and Saturdays. Doors open at 7. "NO. 1 HOUSE" at 7.30; "AS YOU LIKE IT," at 8.15, with the same powerful cast as in the afternoon.

LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.
MERCHANT OF VENICE—17th time.
Every evening, at 8.15.
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Morning Performances of the MERCHANT OF VENICE, Saturdays, May 1st, 8th, and 15th, at Two o'clock.
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Box Office open Ten to Five, under the direction of Mr. J. BURT. No fees.

NEW SADLER'S WELLS.

Proprietor and Manager, Mrs. S. F. BATEMAN.
THE DANITES.
JOAQUIN MILLER's famous American play descriptive of life in the Far West as depicted by Bret Harte. In order that the peculiar dialect and manner should be accurately given, the characters will be represented by the same Company of American artists who have, under the management of Mr. McKee Rankin, performed them in all the chief cities of the United States for the past three years.

THE GREAT HISTORIC GALLERIES OF ENGLAND.

Edited by LORD RONALD GOWER, F.S.A.,

TRUSTEE OF THE NATIONAL PORTRAIT GALLERY.

"Of all the countries in the world, Great Britain is the richest in art treasures; no one knows what England possesses in painting, sculpture, carving, gems, and prints." Thus wrote M. Bürger, the celebrated French art critic, in his notice of the Exhibition at Manchester in 1857. And it would, indeed, be the work of a lifetime to become fully acquainted with the treasures, even of painting only, in this country. Although it is impossible that everyone should be able to visit the GREAT HISTORIC GALLERIES OF ENGLAND, and judge for himself of the beauty of their contents, yet—through the permission of their owners—representations of many of these noble works of art will be given in the publication about to be issued. And, among others, reproductions from the following collections will be included in the first parts of the series:—

WINDSOR CASTLE (Miniatures) ...	By permission of HER MAJESTY THE QUEEN.
ALTHORP ...	" " EARL SPENCER, K.G.
ARUNDEL CASTLE ...	" " THE DUKE OF NORFOLK.
BRIDGWATER HOUSE ...	" " THE EARL OF ELLESMERE.
CASTLE HOWARD ...	" " LORD LANERTON.
GROSVENOR HOUSE ...	" " THE DUKE OF WESTMINSTER, K.G.
HERTFORD HOUSE ...	" " SIR RICHARD WALLACE, Bart., K.C.B.
NEWHAM PADDOX ...	" " THE EARL OF DENBIGH.
STAFFORD HOUSE ...	" " THE DUKE OF SUTHERLAND, K.G.

This work will be published in monthly parts. Part I. contains—in addition to the three permanent photographs, with their description and history—an Introductory Essay, by Lord RONALD GOWER, giving a brief historical account of the origin of many of the principal picture galleries belonging to the English Nobility, and the dates of their acquisition. The illustrations will be—

THE VIRGIN WITH THE PALM-TREE ...	By RAPHAEL ...	Bridgwater House.
THOMAS HOWARD, EARL OF ARUNDEL ...	" VAN DYCK ...	Stafford House.
CAROLINE, COUNTESS OF CARLISLE ...	" REYNOLDS ...	Castle Howard.

Part II., which will be published at the end of May, will contain:—

THE DUCHESS OF MILAN ...	By HOLBEIN ...	Arundel Castle.
THE PRODIGAL SON ...	" MURILLO ...	Stafford House.
INNOCENCE ...	" GREUZE ...	Hertford House.

Published Monthly, imp. 4to, price 3s. 6d.

THE ETCHER:

A Magazine containing the Original Etched Work of Artists. Part XI., for May, contains:—

SHEEP FEEDING ...	Etched by BIRKET FOSTER.
TWICKENHAM ...	" J. LUMSDEN PROPERT.
HONFLEUR ...	" C. N. STORM VAN S'GRAVESANDÉ.

A Series of PRACTICAL NOTES on ETCHING, by R. S. CHATTOCK, will be commenced in this Part.

NEW NOVELS AT ALL LIBRARIES.

BY THE AUTHOR OF "UNCLE SILAS."
THE PURCELL PAPERS.

By the late J. SHERIDAN LE FANU, Author of "Uncle Silas," "The House by the Churchyard," &c. 3 vols., crown 8vo.

BY THE AUTHOR OF "VIRGINIA: A ROMAN SKETCH."

HONOR CARMICHAEL.

By HENRIETTA A. DUFF, Author of "Virginia: a Roman Sketch." 2 vols., crown 8vo.

"This story is skilfully narrated, and well worth reading. The plot is ingenious, and the hero admirably drawn. The heroine, Honor, is a powerfully conceived character who soon commands respect and interest."—*Morning Post*.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE."

NO RELATIONS.

By HECTOR MALOT. Translated by the Author of "Hogan, M.P.," &c. 3 vols., crown 8vo.

"Full of striking and effective incidents, and contains some exceedingly powerful situations. . . . All the details are vividly picturesque."—*Globe*.

BY MISS CRAIK.

TWO WOMEN.

By GEORGIANA M. CRAIK. 3 vols., crown 8vo.

"Dorothy's character is so charming that by itself it would be sufficient to give Miss Craik's story a high place among the novels of the day; and there are other characters besides, which, though not equally important, are yet very cleverly drawn."—*Saturday Review*.

AT ALL BOOKSELLERS.

THE INGOLDSBY LEGENDS; or, Mirth and Marvels.

"Abundant in humour, observation, fancy; in extensive knowledge of books and men; in palpable hits of character, exquisite grave irony, and the most whimsical indulgence in point of epigram. We cannot open a page that is not sparkling with its wit and humour, that is not ringing with its strokes of pleasantries and satire."—*Examiner*.

I.—The Victoria Edition.

A Pocket Edition, in fcap. 8vo, with Frontispiece, 2s., cloth.

II.—The (New) Popular Edition.

In crown 8vo, 3s. 6d., cloth.

III.—The Edinburgh Edition.

An entirely new Edition, in large type, with Thirty-two Illustrations by Cruikshank, Leech, Tenniel, and Du Maurier, especially Re-engraved for this Edition by Mr. George Pearson. In crown 8vo, 6s., cloth.

IV.—The Carmine Edition.

In large crown 8vo. With a carmine border line around each page. Seventeen Illustrations by Cruikshank and Leech. Gilt edges and bevelled boards, 10s. 6d.

V.—The Burlington Edition.

A Cabinet Edition in 3 vols., fcap. 8vo, 10s. 6d.

VI.—The Illustrated Edition.

With Sixty Illustrations by Cruikshank, Leech, and Tenniel; and cover designed by John Leighton, F.S.A. Crown 4to, cloth, bevelled boards, gilt edges, 21s.

The same Edition, bound in the Ely pattern, 21s.; or in white cloth, Ely pattern (for presentation), 22s. 6d.

"A series of humorous legends, illustrated by three such men as Cruikshank, Leech, and Tenniel—what can be more tempting?"—*Times*.

VII.—The Annotated Edition.

A Library Edition, with a History of each Legend, and other Notes, and some Original Legends now first published, Edited by the Rev. RICHARD DALTON BURNHAM. 2 vols., demy 8vo, with an original Frontispiece by George Cruikshank; and all the Illustrations by Cruikshank and Leech. 24s.

LONDON:

RICHARD BENTLEY & SON,
NEW BURLINGTON STREET,
Publishers in Ordinary to Her Majesty the Queen.

REMINGTON'S

NEW BOOKS AT ALL LIBRARIES.

NOW READY, THE FIFTH EDITION OF GEORGE AUGUSTUS SALA'S NEW WORK,

PARIS HERSELF AGAIN, with

400 Illustrations by the first French Artists of the day. 2 vols., demy, handsomely bound, 25s.

"For those who do and those who do not know Paris these volumes contain a fund of instruction and amusement which can be 'drawn' at almost any page with the certainty of a 'find.'"—*Saturday Review*.

"Such a pleasant mixture of anecdote, observation, experience, knowledge, intelligence, and insight as none but Mr. Sala could supply."—*Pall Mall Gazette*.

HERMANN: a Novel. By E.

WERNER, Author of "Under a Charm," "Success, and How He Won It," "Riven Bonds," &c. 1 vol., 10s. 6d.

"A powerful tale, and, like most of the productions of its prolific author, very readable."—*Athenaeum*.

FOLLY: a Novel. By Mrs.

NEWTON SEARS, Author of "Kismet," "Cleansing Fires," &c. 3 vols., 21s.

"It is smoothly told and has a decided interest."—*Athenaeum*.

TENDER and TRUE: a Novel.

By WM. ARTHUR LAW, late 21st R. S. Fusiliers. 1 vol., 7s.

"Author and publishers alike have combined to make this work readable. It is a very charming volume."—*Graphic*.

ILL WEEDS: a Novel. By

MADAME FOLL, Author of "The Spanish Cousins." 1 vol., 7s.

"Told with a degree of vivacity that well suits so highly spiced a plot."—*Scotsman*.

A TANGLED WEB: a Novel from

the French of Madame Nelly-Lieutier. By MARY DICK. 1 vol., 7s.

"In a 'Tangled Web' Messrs. Remington have again lent their powerful aid towards ensuring the success of Miss Dick's capital translation of Madame Lieutier's pretty little novel. . . . It is just the novel to place in a young girl's hands."—*Graphic*.

EL DORADO: a Novel. By Alfred

LEIGH, Author of "Maud Atherton." 2 vols., 14s.

"Mr. Leigh writes with power and deep feeling, whilst his books betray in every line a refinement rarely to be met with in the ordinary novel."—*Graphic*.

FIGHTING and FARMING in

SOUTH AFRICA: a Narrative of Personal Experiences in the Colony during the years 1877-8-9. By FRED. G. BROWNING, late of the Frontier Light Horse and 3rd Cape Yeomanry. 1 vol., large post 8vo, handsomely bound, 10s. 6d. [Now ready.]

MARRIAGE à la MODE: a

Romance in the Life of a Yorkshire Squire. By "INCOG." 3 vols., 21s. [Next week.]

A SON of MARS: a Novel. By

MAJOR ARTHUR GRIFFITHS, Author of "The Queen's Shilling," "Lola," "A Wayward Woman," &c. 2 vols., 14s. [Shortly.]

MY ONLY LOVE: a Novel. By

E. AYLMER BLAKE, Author of "A Life Race," "A Crown for Love," "Nelson," &c. 3 vols., 21s. [Shortly.]

TIMES WHISPERINGS: Sonnets

and Songs. By GEORGE BARLOW, Author of "Through Death to Life," &c. 1 vol., fcap. 8vo, 3s. 6d.

"Written in fluent, musical fashion, ringing the changes on love in many of its moods."—*Literary World*.

THE TALE of THREE TINKERS.

With Glossary and Notes. By EUGENIO. 1 vol., 3s. 6d.

"Clever, witty, and amusing."—*Queen*.

"To those persons who like to peruse works of undiluted fun we heartily commend the book."—*Public Opinion*.

REMINGTON & Co., 5, Arundel-street, Strand, W.C.

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.

Strengthens the Nerves and Muscular System.

Promotes Appetite and Improves Digestion.

Animates the Spirits and Mental Faculties.

Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A

fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of dyspepsia, are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTS

THROUGHOUT on
MOEDER'S HIRE SYSTEM.

Morwell-street, W.C. Established 1862

REMARKABLE CURE OF CLERGYMAN'S SORE THROAT by

DR. LOCOCK'S PULMONIC WAFERS.

Mr. JOHNSON, M.P.S., 191, Meanwood-road, Leeds, writes:—"I had made up several prescriptions for a Clergyman's Sore Throat, but nothing seemed to touch it until I advised him to try DR. LOCOCK'S WAFERS, and less than one box cured him."

They taste pleasantly. Price 1s. 1½d. per Box.

PAINLESS DENTISTRY.**MR. G. H. JONES,**

Surgeon-Dentist, of 57, Great Russell Street, Bloomsbury

(IMMEDIATELY OPPOSITE THE BRITISH MUSEUM),

Will be glad to forward his New Pamphlet gratis and post-free, which explains the only perfectly painless system of adapting ARTIFICIAL TEETH (protected by Her Majesty's Royal Letters Patent),

Which have obtained Five Prize Medals—London 1862 Paris 1867 Philadelphia 1876, Vienna 1873, and New York 1853.—Consultation daily free.

TESTIMONIAL.—"Jan. 27, 1877. My dear Sir,—Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which render my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name."

"G. H. Jones, Esq."

Acidity of the Stomach, Heartburn, Headache

Gout, and Indigestion,

And as the safest Aperient for Delicate Constitutions, Ladies,

Children, and Infants.

DINNEFORD'S MAGNESIA,

STANDARD EDUCATIONAL WORKS.

DR. DE FIVAS' FRENCH CLASS BOOKS.

"The educational works of Dr. De Fivas have been so long before the public that we need not do more here than add our testimony to that of our confrères, whose favourable verdict has already accounted for their popularity. The 'Grammaire des Grammaires' is remarkable for its conciseness and its simplicity. The rules are very properly reduced to their minimum, and illustrated by a number of examples and exercises. The 'Introduction,' especially prepared for beginners, contains a carefully selected series of extracts, both in prose and in poetry, with a dictionary. In the 'Trésor National' we have a graduated set of exercises to be translated at sight by the help of a vocabulary at the end of the volume. Under the title of 'Beautés des Écrivains Français, Anciens et Modernes,' Dr. De Fivas has published a reading-book of a higher standard than the 'Introduction,' and meant to suit the requirements of pupils who have already made some progress in the knowledge of the language."

SCHOOL BOARD CHRONICLE.

DE FIVAS.—NEW GRAMMAR of

FRENCH GRAMMARS. Comprising the substance of all the most approved French Grammars extant, but more especially of the Standard Work, "La Grammaire des Grammaires," sanctioned by the French Academy and the University of Paris. With numerous Exercises and Examples illustrative of every Rule. By Dr. V. DE FIVAS, M.A., F.E.S., Member of the Grammatical Society of Paris, &c. Forty-fourth Edition, Enlarged and Improved, 2s. 6d., strongly bound.

A KEY to the same, 3s. 6d., bound.

EXTRACT FROM PREFACE TO THIS EDITION.

"The Académie française having, in 1877, issued a new edition of their Dictionary, introducing many innovations, the opportunity has been taken to thoroughly revise this Grammar in accordance therewith.

"Many other improvements and amplifications have at the same time been effected, with a view to maintaining the long-established reputation of the New Grammar of French Grammars as a thoroughly reliable modern class-book, acceptable to teachers and masters throughout the British Empire."

"Its precision and conciseness are admirable."—*Standard*.
 "At once the simplest and most complete Grammar of the French language. To the pupil the effect is almost as if he looked into a map, so well defined is the course of study as explained by Dr. De Fivas."—*Literary Gazette*.

DE FIVAS.—LE TRÉSOR NATIONAL;

or, Guide to the Translation of English into French at Sight. Sixth Edition. 12mo, 2s. 6d., bound. KEY, 12mo, 2s., cloth.

DE FIVAS.—NEW GUIDE to MODERN

FRENCH CONVERSATION; or, the Student and Tourist's French *Vade Mecum*. Containing a Comprehensive Vocabulary, and Phrases and Dialogues on every Useful or Interesting Topic; together with Models of Letters, Notes, and Cards; and Comparative Tables of British and French Coins, Weights, and Measures, &c. Twenty-eighth Edition, thoroughly Revised, with many Additions. 18mo, 5s. 6d., strongly half-bound.

"Perspicacious, plain, and easy to understand."—*Bookseller*.
 "De Fivas' has the advantage over other French conversation books of indicating the *raison* and giving other helps to pronunciation."—*Academy*.

DE FIVAS.—BEAUTÉS DES ÉCRIVAINS

FRANÇAIS, ANCIENS ET MODERNES. Ouvrage Classique à l'Usage des Collèges et des Institutions. Quinzième Edition, augmentée de Notes Historiques, Géographiques, Philologiques, Littéraires, Grammaticales, et Biographiques. 12mo, 3s. 6d., bound.

"A selection of pieces both in prose and verse, which while it furnishes a convenient reading-book for the student of the French language, at the same time affords a pleasing and interesting view of French literature."—*Observer*.

DE FIVAS.—INTRODUCTION à la

LANGUE FRANÇAISE; ou, Fables et Contes Choisis, Anecdotes Instructionnelles, Faits Mémorables, &c. Avec un Dictionnaire de tous les Mots traduits en Anglais. A l'Usage de la Jeunesse et de ceux qui commencent à apprendre la Langue Française. Twenty-fifth Edition. 12mo, 2s. 6d., bound.

"Besides its suitability for the learner, we do not know a book better adapted than this for brushing up the neglected French of those whose school-days, like ours, have been over for some little time past."—*Scotsman*.

ETYMOLOGICAL COMPANION to DE FIVAS' GRAMMAR.

THE FRENCH LANGUAGE: a Complete

Compendium of its History and Etymology. For the use of Colleges, Public and Private Schools, and Students. By E. ROUBAUD, B.A., Paris, Professor of the French Language, Author of "The French Pronunciation," &c. Fca., 1s. 6d., cloth.

"A most desirable, indeed a necessary, book for students who wish to perfect themselves in a scientific knowledge of French."—*School Guardian*.
 "A serviceable introduction to French etymology, and a useful companion to French accidence for schoolboys."—*Journal of Education*.

comprises, besides the above, upwards of 200 Books in all Departments of SCIENCE, ART, and EDUCATION. Complete Detailed Lists of the whole Series post-free on application to the Publishers.

LOCKWOOD'S SERIES OF CIVIL SERVICE HANDBOOKS.

"The work of the Civil Service Commissioners has called into existence a series of Civil Service Handbooks, published by Messrs. Crosby Lockwood & Co., which have the exceptional merit of being the work of experts, who have themselves passed through the competitive examinations to which they offer a practical guide. For general use, but especially for candidates for examinations, these volumes will be found to have many points of usefulness not found in ordinary educational books."—*PUBLISHERS' CIRCULAR*.

DOBSON.—ENGLISH LITERATURE. By

H. A. DOBSON, Board of Trade. Second Edition, Revised and Extended. Fcap. 8vo, 3s. 6d., cloth.
 "An excellent handbook of English literature."—*Athenæum*.
 "It is with especial pleasure that we can direct attention to Mr. Dobson's work. The author is no mere compiler. He evidently appreciates the higher beauties of literature. He is, too, critical, and quotes from the best authorities."—*Westminster Review*.

MONKHOUSE.—THE PRÉCIS BOOK; or,

Lessons in Accuracy of Statement and Precision of Expression. For Civil Service Students, Self-Education, and use in Schools. By W. COSMO MONKHOUSE, Board of Trade. Second Edition, Revised. Fcap. 8vo, 2s. 6d., cloth.

* KEY to the above. Fcap. 8vo, 2s. 6d., cloth.

"Cannot fail to shorten and make more pleasant the novitiate of anyone proposing to enter the public service."—*Contemporary Review*.

SPENCE.—GEOGRAPHY: General and

Political. By the late L. M. D. SPENCE. Revised by THOMAS GRAY, Board of Trade. Sixth Edition. Twenty-fourth Thousand. Woodcut and Six Maps. Fcap. 8vo, 2s. 6d., cloth.
 "A good manual for practical purposes, adapted to the present state of knowledge."—*Athenæum*.

WHITE.—HISTORY of ENGLAND; being

a Fact-Book of English History. By F. A. WHITE, B.A. Third Edition. Revised by H. A. DOBSON, of the Board of Trade. With Four Maps. Fcap. 8vo, 2s. 6d., cloth.
 "We do not remember to have seen anything of the kind so complete, complete, accurate, and convenient for use."—*Athenæum*.
 "A medium in *parvo* of historic knowledge, invaluable to all who desire a ready reference to the annals of their country."—*Civilian*.

YATES.—ENGLISH GRAMMAR: being

Notes on the History and Grammar of the English Language. By W. V. YATES, Windermere Grammar School. Fcap. 8vo, 1s. 6d., cloth.
 "This text-book will supply a want much felt, and it is so capably arranged that we have no hesitation in recommending it to our readers."—*Civil Service Gazette*.

"I never before saw the chief points both of accidence and history put in so nice, concise, and comprehensive a form. Any student who has paid his attention to it must attain a high position in any competitive examination."—*C. Bell, B.A., Head Master, Grammar School, March*.

MOTTEAU.—FIRST FRENCH BOOK;

being a Practical First Course of French Grammar, with Exercises combined for the Use of Civil Service Candidates, Classes, and Private Students. By ACHILLE MOTTEAU. Second Edition, Enlarged. Fcap. 8vo, 1s. 6d., cloth.

* KEY to the above. Fcap. 8vo, 2s. 6d., cloth.

"A clear and compact little treatise."—*Civilian*.
 "Well arranged on an easy, simple plan."—*Scotsman*.

CHRONOLOGY of HISTORY, ART,

LITERATURE, and PROGRESS, from the Creation to the Conclusion of the Franco-German War. The Continuation by W. D. HAMILTON, F.S.A., of H.M. Public Record Office. Fcap. 8vo, 3s. 6d., cloth.
 "Accurate, wide, and thorough. Most useful to those who are reading up for examinations."—*English Churchman*.

ORTHOGRAPHY: a Handy Book of English

Spelling. With Rules and Exercises. By E. S. H. B. Second Edition, Revised and Corrected. Fcap. 1s. 6d., cloth.
 "A very handy, carefully written, and complete little book."—*Pall Mall Gazette*.

BOOK-KEEPING: its Principles popularly

Explained, and the Theory of Double Entry Analyzed. By an EXPERIENCED BOOK-KEEPER. Third Edition. Fcap. 1s. 6d., cloth.
 "It is clear and concise, and exactly such a text-book as students require."—*Quarterly Journal of Education*.

WORKS BY THE LATE JOSEPH PAYNE,

Professor of the Science and Art of Education to the College of Preceptors, &c.

PAYNE'S SELECT POETRY for

CHILDREN. With brief Explanatory Notes arranged for the Use of Schools and Families. Now ready, Part I., imp. 4to, price 3s. 6d.

THE GREAT HISTORIC GALLERIES OF ENGLAND.

Edited by LORD RONALD GOWER, F.S.A.,

TRUSTEE OF THE NATIONAL PORTRAIT GALLERY.

"Of all the countries in the world, Great Britain is the richest in art treasures; no one knows what England possesses in painting, sculpture, carving, gems, and prints." Thus wrote M. Bürger, the celebrated French art critic, in his notice of the Exhibition at Manchester in 1857. And it would, indeed, be the work of a lifetime to become fully acquainted with the treasures, even of painting only, in this country. Although it is impossible that everyone should be able to visit the GREAT HISTORIC GALLERIES OF ENGLAND, and judge for himself of the beauty of their contents, yet—through the permission of their owners—representations of many of these noble works of art will be given in the publication about to be issued. And, among others, reproductions from the following collections will be included in the first parts of the series:—

WINDSOR CASTLE (Miniatures) ...	By permission of HER MAJESTY THE QUEEN.
ALTHORP	" " EARL SPENCER, K.G.
ARUNDEL CASTLE	" " THE DUKE OF NORFOLK.
BRIDGWATER HOUSE	" " THE EARL OF ELLESMERE
CASTLE HOWARD	" " LORD LANERTON.
GROSVENOR HOUSE	" " THE DUKE OF WESTMINSTER, K.G.
HERTFORD HOUSE	" " SIR RICHARD WALLACE, Bart., K.C.B.
NEWHAM PADDOX	" " THE EARL OF DENBIGH.
STAFFORD HOUSE	" " THE DUKE OF SUTHERLAND, K.G.

This work will be published in monthly parts. Part I. contains—in addition to the three permanent photographs, with their description and history—an Introductory Essay, by Lord RONALD GOWER, giving a brief historical account of the origin of many of the principal picture galleries belonging to the English Nobility, and the dates of their acquisition. The illustrations will be—

THE VIRGIN WITH THE PALM-TREE ...	By RAPHAEL ...	Bridgewater House
THOMAS HOWARD, EARL OF ARUNDEL ...	" VAN DYCK ...	Stafford House.
CAROLINE, COUNTESS OF CARLISLE ...	" REYNOLDS ...	Castle Howard.

Part II., which will be published at the end of May, will contain:—

THE DUCHESS OF MILAN	By HOLBEIN	Arundel Castle.
THE PRODIGAL SON	" MURILLO	Stafford House.
INNOCENCE	" GREUZE	Hertford House.

Published Monthly, imp. 4to, price 3s. 6d.

THE ETCHER:

A Magazine containing the Original Etched Work of Artists. Part XI., for May, contains:—

SHEEP FEEDING	Etched by BIRKET FOSTER.
TWICKENHAM	" J. LUMSDEN PROPERT.
HONFLEUR	" C. N. STORM VAN S'GRAVESANDE.

A Series of PRACTICAL NOTES on ETCHING, by R. S. CHATTOCK, will be commenced in this Part.

LONDON: SAMPSON LOW, MARSTON, SEARLE, & RIVINGTON,

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Old Glasgow: the Place and the People. From the Roman Occupation to the Eighteenth Century. By Andrew Macgeorge. (Glasgow: Blackie & Son.)

THE present city is so essentially modern that to many the very idea of *Old Glasgow* will be a novelty. There are towns whose continued existence depends more or less upon their past reputation; but Glasgow is not one of them. Neither architectural antiquities nor historical association form an appreciable part of its present attractions. Socially and intellectually it is of the nineteenth century, utilitarian; and the home of its inhabitants is therefore utilitarian—and modern. For the pulse of life that beats in its streets is the vigorous throb of modern civilisation, impatient of all that hampers its course, and ready to remove the ancient landmark long before it has had time to become venerable. The map which is placed at the end of the present volume affords sufficient proof of this characteristic. There, in the centre of a large double-page plan of Glasgow in 1879, a few red dots scattered about the intersection of two streets indicate its size only a hundred years ago; and the population, which was then little over 4,000, is now estimated at more than 740,000. To the outward eye, therefore, *Old Glasgow* is now almost invisible. For modern Glasgow has done more than engulf the ancient city; the City Improvement Trust has well-nigh improved it off the face of the earth. Since the college buildings were turned into a railway station, the grand old cathedral is almost the sole remaining monument of the past; and its patron, St. Mungo, though he yet remains in name at least the city's tutelary guardian, has long since been supplanted in the commercial affections of its inhabitants by his brother-saint, Rollox—whose name, by-the-way, the author shows to be a corruption of St. Roche—of evil chemical odour, very different from the appropriate one of sanctity in which he doubtless died.

But the grimy embodiment of nineteenth-century utilitarianism has a past, and an interesting one, as readers of the present volume cannot fail to discover. Its author, a local "writer"—*anglice* solicitor—of well-known antiquarian knowledge, in an account of the armorial bearings of Glasgow, privately published by him some thirteen years ago, indicated his conviction that the early history of the city had still to be written, and expressed the hope that it might soon be undertaken. No one, probably, is more competent for the work than Mr. Macgeorge, and by the

present handsome quarto in which he has embodied the results of his labours he has placed under a deep debt of gratitude, not only his fellow-citizens, but all who are interested in the antiquarian history of the district, or, indeed, in that of the South-west of Scotland generally. For it is really only by a figure of speech that one can talk of Glasgow in the time of the Roman occupation; and the first six or eight chapters of Mr. Macgeorge's book, in which he discusses the legend of the first bishop, the name of the city, the early church, the early inhabitants, their language and houses, and the tenure of property, contain remarks and illustrations more or less applicable to the whole of the Lowlands of Scotland at that time. Indeed, as he himself observes, even in the eighth century Glasgow must have been all but unknown, and its municipal history may properly be said to commence only with the charter of William the Lion, which, in 1175, constituted it a Bishop's Burgh. But the opening chapters are, nevertheless, among the most interesting in the book, no less from their wide scope than from the range of authorities and varied sources of information from which they are compiled. Beginning with the landing of Kentigern, and his establishment, about A.D. 560, of a mission station on the shores of the Clyde, just within the great Roman wall which stretched from that river to the Forth, and on the very confines of civilisation at that time, Mr. Macgeorge describes the condition of the country under the British kings whose dominion succeeded the departure of the Romans a hundred years before. It does not appear that Roman civilisation made any lasting impression on this part of the country; and if the "weems" and "crannogs" which have been of late discovered in this and similar districts are referable to this period, the houses of the inhabitants certainly do not show much amenity in their mode of life. For his account of these "Ancient Britons" Mr. Macgeorge lays an immense variety of sources under contribution, including one or two pieces of Roman sculpture which he describes with considerable vividness, drawing inferences from the figures upon them even as to the moral qualities of the British captives supposed to be represented which do at least as much credit to his own imagination as to the powers of the Roman artist. With regard to the language spoken in these times, Mr. Macgeorge shows that, while at first it was undoubtedly Keltic, and differed probably little from that now spoken in Wales, the Anglo-Saxon tongue soon became the vernacular of the lowlands of Scotland; and, indeed, the English of Canute's song was, allowing for provincial differences, "the same language that was spoken at that time in the little fishing village founded by Kentigern on the banks of the Clyde." Of the remains of the ancient Welsh or Keltic speech some interesting instances are given, notably in the names of the city and its patron saint. Kentigern is derived from two words, *cyn*, a Welsh word meaning chief or principal, its Gaelic equivalent being *ceann*, a head—and *teyrn* or *deyrn*—in the Gaelic *tighearn*—a lord. The saint's other and commoner name is pure Welsh, being derived from *mwyn*,

gentle or friendly, and *cu* or *chu*, dear, which in composition becomes *gu*; hence Mungu or Mungo means simply "dear friend," and remains a common enough name in Glasgow and its neighbourhood to this day, an evidence of the extent to which the Welsh vernacular was anciently in use in the district. For the name of the city various derivations have been sought, the favourite being from the Gaelic branch of the ancient language; but Mr. Macgeorge shows that it also is pure Welsh, meaning "beloved green place," from *glas*, green, and *cu* or *gu*, dear, as in Mungu. He also clears up a difficulty, which has puzzled many archaeologists, with regard to the name Glasgow, which appears as *deschu* in the MS. life of Kentigern by Jocelyn, the Monk of Furness, in the British Museum; by showing that what there appears a *d* is nothing but a careless joining by the transcriber of the letters *c* and *l*; the word really being *cleschu*, the same as *glaschu*, which Jocelyn says it was called in his time. Once introduced, Anglo-Saxon rapidly became the Lowland Scottish vernacular, and the specimens of it given by Mr. Macgeorge—the oldest being from among the papers of the family of Murray of Auchtertyre in Perthshire, of date 1385, and thus older than the oldest given by Prof. Innes—are readily intelligible to the English reader who has a slight familiarity with the broader sounds of the Scottish accent. An older one still, of date 1379, is worth quoting as a specimen of the language of Glasgow people five hundred years ago. It is given by Thomas of Walsingham in his *Chronicles*, where, describing the inroads of the Scots into England, he tells us that they found a pestilence prevailing in the country, which they were told by the pious inhabitants had come upon them by "the special grace of God," and quotes in the vernacular the invocation which the Scots adopted against it:—"Gode and Sainet Mungo Sainet Romayn and Sainet Andrew schield us this day fro Goddis grace and the foule death that Englissh men dien upon." The early intimacy between France and England soon led to the introduction of many French words and idioms, of which Mr. Macgeorge gives various examples from the town council records, such as the prohibition of "doyts" and "dinnaries"—the former still surviving in the colloquialism, "not worth a dite," the expression "paises," for "weigh," and words such as "asheet," "jigot," "caraffe," and others still familiar enough to Scotchmen, though unknown south of the Tweed. A good many of these terms date from the time when Queen Mary's Court at Edinburgh was more directly under French influence, such as the old cry of "gardylloo" (*gardez l'eau*), with which the housewives of the capital accompanied the discharge of dirty water from their windows into the street below. And Mr. Macgeorge might also have cited that typical Scotch coin, the "bawbee" (*basse pièce*), as a familiar instance of the admixture of the French language with the Scotch.

The social and political condition of the people does not seem to have been much better than that of their houses, which, so late as 1661, are described by a traveller as

covered in front with "fir-boards, nailed one over another, in which are often made round holes or windows to put out their heads;" for Mr. Macgeorge is unable to agree with Prof. Innes in supposing that serfdom died out in Scotland soon after 1864, when the last claim of "neyfship" was proved in a Scotch court. He quotes a charter of James VI. in 1584, *veteri nativo*—i.e., as he explains, to one of the old native population who had long been in a state of slavery; and it is certain that till the Act of George III. in 1799 a species of property in the persons of salters and colliers was recognised by the law, they passing as *fundo annexa* in a sale of the ground on or in which they worked. Mr. Macgeorge also points out how small were the rights of the "bishop's men" as compared with those of the king's burghesses, differing on this point, and apparently with reason, from Prof. Innes' opinion that there was little distinction between the two classes; and shows that the government by "provosts, aldermen or wardens, and bailies," of which some of the city's historians have boasted as showing its comparative independence so early as the year 1268, was more nominal than real. The term *propositus*, indeed, seems to have been a generic name for representatives of the bishops appointed by themselves to rule the city. In one charter of 1322 quoted by the author, the word does not occur at all, although the bailies are mentioned; and he tells us that there was no "provost" of Glasgow, as we understand the term, till the middle of the fifteenth century.

The tenure of property was, of course, strictly feudal, held of the bishop, as afterwards of the king, for the services of watch and ward, the rural proprietors being termed "rentallers"—a species of copyholders, who paid a small rent or, in certain cases, rendered services for the land. These latter had no written title, their names being simply entered by the archbishop himself in the rental book of the diocese, a volume of which, in the handwriting of three successive archbishops from 1509 till 1570, is still preserved. Their tenure was also subject to several local customs, one of the most curious of which was that called "Sanct Mungo's Wedo," by virtue of which the widow of a rentaller was entitled to retain possession of the lands during her widowhood.

But the condition of the burghesses under the bishops, though nominally one of dependence, was favourable enough to their material prosperity. The prelates were in a position to secure for their burgh many valuable privileges, and their rule was notoriously more benignant than that of the feudal barons—as the saying "better under the crozier than under the lance" testifies. It is scarcely surprising, then, that "in Glasgow there was an influential party by no means favourable to that great movement which resulted in the reformation of religion and the subsequent abjuration of episcopacy." And, indeed, as Mr. Macgeorge goes on to say,

"the effect of the Reformation was at first very injurious to the prosperity of Glasgow. The seizure by the Crown and the great barons of property which had originally been gifted by private liberality for the benefit of the people,

and which belonged to the Church, after as before it was reformed, by a title as indefeasible as that by which the lords held their own lands, was an act of unjustifiable spoliation. And it was rendered still more oppressive by the mode in which the lords exercised their usurped rights."

Mr. Macgeorge is evidently a warm friend of the Church as by law established, and the defence he makes for it is worthy the notice of Scottish ecclesiastical politicians as at least novel. In discussing the inquisition of David I. and its effect on the see of Glasgow, he takes occasion to protest against the common idea of a State Church.

"With certain trifling exceptions in our own day—so small as not to be worth mentioning—the Church in Scotland has never received any endowment either from the Crown or from the State. If David was 'a sair saunt for the Crown,' the see of Glasgow certainly experienced none of his bounty. It was endowed, as all the other parishes both in England and Scotland were endowed, by the private voluntary liberality of the great landowners, and it is a remnant of these grants, and that a very small one, which now forms the endowment of the Church of Scotland—a Church whose doctrine has been from time to time modified or reformed, but which in historical continuity and in a strictly legal sense, is identically the same Church as that on which the endowments were first bestowed."

It would be interesting to hear the criticism of the "great landowners" themselves upon these observations. They might possibly have a word to say about the *preces et lachrymæ* for which they all—with the exception, perhaps, of the late Mr. Baird—carefully stipulated in making their grants, and, in this view, "historical continuity" seems a rather dubious defence for the present Kirk of Scotland in its legal aspect.

Passing from the "bishop's burgh" to the "royal burgh," which Glasgow was created by the charter of Charles I. in 1636, Mr. Macgeorge describes in detail the municipal and social condition of the "king's burghesses;" the ecclesiastical discipline after the Reformation; the early history of trade and commerce, and the successive improvements upon the River Clyde; the sanitary condition of the town at different times, and its police arrangements; the amusements and education of the citizens and their literary activity; and the value of property and prices of commodities in the city at various times—all subjects of interest to present-day Glaswegians; and concludes with a comparison—eminently flattering to them—between the former and present condition of the city. In all this we have a minute and most interesting picture of the every-day life of Old Glasgow from the earliest times, drawn from a varied collection of sources, among which the most important are probably the Selections from the Town Council Records, recently edited for the Scottish Burgh Record Society by the present town clerk of Glasgow; but it is impossible within present limits to do more than mention the mass of useful and interesting information thus presented. From the chapter upon the university the curious fact may be mentioned that its constitution and discipline appear to have resembled, even more closely than now, those of the German universities of the present day, even

to the *carcer*, a room in the old tower now demolished. And Mr. Macgeorge mentions a trial of a student for murder, conducted by the rector, the dean of faculty, and three regents as assessors, with the help of "ane inqueist of honest men," who, however, having doubts of the competency of the court's jurisdiction, carefully stipulated beforehand that the university should hold them free of all cost, danger, and expense

"in regaird they declaired the caice to be singular never having occurred in the aidge of befor to ther knowledge, and the rights and privileges of the universitie not being produced to them to cleir ther priviledge for holding of criminall courts and to sitt and cognose upon cryms of the lyke natur."

With the cathedral Mr. Macgeorge deals from a point of view too exclusively antiquarian, and it is at least difficult to sympathise with his wholesale condemnation of the authorities for the time who, some thirty years ago, removed the last of the two towers which formerly disfigured its western front. That these were of an age at least equal to that of the nave itself there is perhaps little doubt, but that they were as certainly an after-thought appears from the pages of Mr. Macgeorge himself. For

"the jambs of the west window of the north aisle, which was covered up by the tower, were found when exposed to be quite fresh. There was no chase cut for glazing, and evidently the window had never been used before the erection of the tower."

Even, therefore, had western towers formed part of the original design, the idea was, perhaps from want of means, subsequently abandoned, and though re-adopted was certainly not in the contemplation of the builders of the nave. In a series of skilful architectural drawings of the cathedral published in 1835 by a Mr. Collie (from which, by-the-way, some better views might have been obtained than the tame and somewhat exhausted-looking plates of the crypt and Lady Chapel which Mr. Macgeorge gives), the towers appear overlapping the central western window on both sides, and their style is certainly little in keeping with that of the body of the church, as, indeed, may be seen from the frontispiece to the present volume. Demolition to some extent is perhaps inseparable from restoration, but visitors to the most perfect ecclesiastical structure in Scotland may be safely left to judge for themselves whether or not, in Mr. Macgeorge's words, "the mutilated building remains a disgrace to the city and a monument of bad taste and ignorance." It does not, certainly, follow that demolition is restoration; but Mr. Macgeorge appears in his antiquarian zeal to have rather overstated a case for which a more moderate advocate would probably have obtained a better hearing. It would have been interesting, too, to have had from the author some explanation of the curious irregularity which exists in the outside wall of the chancel or Lady Chapel at its south-east corner. Apparently there has been an error committed in laying off the site, which it is just possible some old records might mention.

It is impossible here to discuss *Old Glasgow* at greater length, but enough has

probably been said to show that it in all respects realises the promise of its Preface.

It only remains to add that the book is printed and bound with taste and elegance, and illustrated with a number of woodcuts and engravings of various degrees of artistic and antiquarian merit. In the former respect perhaps more might have been desired. The frontispiece is said by the author to be from a drawing by "my friend Mr. W. L. Leitch, one of the greatest of living artists." It is a rather unfortunate specimen upon which to maintain so high a title, for which, indeed, the author's friendship appears a much more probable foundation. If the view of the Old Bridge on p. 166 is really printed, as Mr. Macgeorge believes, from the original plate, it is certainly to be regretted that all the qualities of an etching have been lost by the glaze put over it, which gives it the appearance of an ordinary *facsimile*. But this is perhaps hypercriticism, and it is a pleasure to speak of *Old Glasgow* as the careful handling of an interesting subject by one who knows and loves it well.

GEO. BURNET.

Path and Goal. A Discussion on the Elements of Civilisation and the Conditions of Happiness. By M. M. Kalisch, Ph.D., M.A. (Longmans.)

THE first and strongest impression of most readers of this book is likely to be surprise at its having proceeded from its author. Everyone knew that Dr. Kalisch was a man of candid and open mind—a man, moreover, not afraid to confess to having changed the opinions that he had once not only held, but published; but few would be prepared to expect from a German Jewish scholar either the encyclopaedic culture or the thorough and hearty sympathy with the most opposite schools of thought that characterise this work.

For it would be scarcely possible for any one man to give a clearer or fairer summary and statement—it would be difficult for anyone to give a more temperate or more judicious estimate—of the various forms in which the thought of the present day is cast. Orthodox and liberal Jews, Christians of various degrees of orthodoxy and liberalism, German Biblical critics, Hellenising neopagans, a Materialist of the school of Haeckel, a Moslem, a Parsee, a Buddhist, and a member of the Brahmo Somaj are made to state and advocate their respective views as to the end and the conditions of human life in terms which can hardly be thought inadequate by the actual adherents of the systems represented. If we think that the author has not been as successful in harmonising the elements of truth and goodness in every system as in doing justice to each separately, this is no more than saying that his book is not the last word of speculation—not the final and supreme solution of all the problems of religious and philosophical thought.

But judged as a statement of the present "situation" in the world of thought, the book is excellent, though even so not perfect. For one thing, the form is not as good as the matter. The book is "a discussion" or dialogue between a wealthy and cultivated

London Jew, and fifteen of his "native and foreign guests" "during the year of the last International Exhibition." Now the form of a dialogue is not only a difficult one to treat artistically; it forces on the author a sort of dilemma—either the parties to it must be mere dummies, or their individual characters will modify, and their individual frailties impair, their mode of advocating their opinions. Dr. Kalisch has chosen the latter alternative, and perhaps it is well for his readers that he has. The characters introduced cannot, indeed, as in the *New Republic*, be identified with living persons, though in one or two individual features may be recognised; yet they are not mere conventional types, but men as much alive as the author could make them. The dramatic power displayed is not perhaps very high; still, each of the speakers is pretty well individualised; and there are occasional touches of a rather elephantine humour—especially where the self-confident and jovial Materialist thinks himself called upon to preach the formulae of a solemn pessimism. And but for such relief as these features give, the learning, and even the cleverness, of the book would not prevent its being dull; as it is, it is readable enough, and is written (with a few exceptions) in very good English. Only one could wish that the interlocutors were rather more courteous in their manner toward each other, and gave less frequent occasion for the host to intervene as Moderator. It is no more than natural, indeed, that some of them should sometimes lose their tempers—it is, perhaps, in accordance with probability that the rigidly orthodox Humphrey and the materialist Attinghausen should do so oftenest; but it gives to the host (and perhaps to the author) an unfair advantage when those he criticises rouse prejudice against them by their bad manners, while he himself is made by his position secure of the last word.

Still it is not easy to name more than two points in which the argument seems unfair or defective. One is, that Christianity is treated throughout as synonymous with Protestantism. Most Catholic and all liberal Christians would feel that their faith was misrepresented in Mendoza's argument (pp. 175 *et seqq.*) against the doctrine of the Atonement in its crudest "Evangelical" form; while most liberal and all Catholic theologians would feel untouched by the arguments that follow against the Calvinistic doctrine of Election and the Lutheran one of Justification. It is a double unfairness when "Christianity" is held responsible at once for the intolerance of Catholics toward Jews and others and for the rash and crude over-statements of Protestant controversialists.

A more subtle and perhaps less certain objection may be made to the author's attitude towards Theism, which, together with the doctrine of a personal immortality, is treated as an open question, the solution of which is not essential to the attainment of the highest religious life. It is argued powerfully that a philosophic explanation of the universe is possible—perhaps in our time is easier—without the hypothesis of a Creator; it is shown practically, by the tone of this book itself as well as by the extracts from Spinoza, that an earnest and high-minded

religion is possible without it; while the existence of Buddhism has long been known to prove that such a religion may not only be formulated, but may stand being preached and popularised. But the history of Buddhism might also prove that, though a religion may exist without a god for the beginning or the end of life, it cannot dispense with one as the guide of life; if not wanted as an answer to speculation, he is needed as an object for affection. It is useless to denounce the deification of the Buddha as inconsistent with his own teaching; the question remains, Why was he deified in spite of it? After all, the thoughtful religions of the world have agreed in this—they have offered a supreme object to the emotions (in their higher forms especially to the love) of their adherents; and a religion which gives us no one and nothing to love is, *ipso facto*, unable to claim the whole heritage of the existing "positive" religions. The want is half acknowledged in the last sentence of the book, where it is hinted that sexual or conjugal love may supply the void. Now most religions (Buddhism is an important exception, Christianity an important instance) have yielded to the instinct which bids us consecrate and idealise that passion, and have faced the moral risk involved in doing so. But have they justified this consecration to the intellect—have they even escaped the moral risk—except so far as they have represented the sacredness of the passion as typical or sacramental? And what means are to be found for doing so apart from Theism?

WILLIAM HENRY SIMCOX.

History of the Zulu War and its Origin. By Frances E. Colenso. Assisted in those portions of the work which touch upon military matters by Lieut.-Col. Edward Durnford. (Chapman & Hall.)

WE have no hesitation in pronouncing the present work the fairest, the most complete, and altogether the most valuable which has appeared on the Zulu War and its antecedents. The subject is one so full of painful matter from beginning to end that the natural desire to put it aside, and if possible forget it, may be pardoned. But it is not by forgetfulness that wrongs can be redressed, or a vicious policy reversed. The more the true facts of the case are laid clearly and impartially before the public, freed from the verbiage under which interested parties well know how to hide them, the better prospect there is of such a change being brought about in the management of South African affairs as to make a recurrence of such events as Miss Colenso treats of impossible.

Miss Colenso apologises for undertaking a work which her father or sister would have done so much better. No apology is necessary on her part. It would have been difficult to set out the causes of the Zulu War with greater clearness and ability, or to expose with a firmer hand the long course of chicanery, misrepresentation, and double-dealing which brought that war about.

The relations between the Zulus and the colonists had for twenty years before the war been those of perfect peace and quiet. The tranquillity of their border was a matter of

pride as compared with the disturbed and uncertain boundaries between Zululand and the Transvaal. These peaceful relations might have been maintained to the present day had not the project of a South African empire dazzled the eyes of certain politicians at home and in Africa. Once started, their project was to be carried into effect at all hazards, and it found able as well as unscrupulous supporters. We agree with Miss Colenso in thinking this project the first cause, but it was not the only cause of the Zulu War. In our opinion the long hostility to the Boers and the greed of the colonists had their share in the deplorable result, though she does not dwell on them.

The first in the chain of events which led up to the war is the so-called coronation of Cetewayo (Miss Colenso endeavours to indicate the sound by writing Cetshwayo) by Sir T. (then Mr.) Shepstone. It was frequently asserted at the time in Natal that this coronation ceremony was nothing better than a farce, and so indeed it was if we only look at the coronation robe of a lady's opera cloak and the pasteboard and tinsel crown (the meanness of which was not lost on the King); but it was undertaken with a purpose, and was part of a policy which bore bitter fruit.

The next act in the drama was the destruction of the Ama-Hlubi tribe, and the trial and condemnation of Langalibalele, to be immediately followed by the attack on the well-to-do and quiet little tribe of the Putini. These wretched creatures, taken by surprise, hardly made any resistance. The whole tribe, men, women, and children, were taken prisoners, and carried down to Pietermaritzburg, their cattle and goods confiscated, their homes destroyed. For this act the Lieut.-Governor of Natal, Sir B. Pine, was recalled. The gallant Col. Durnford, as long as he lived, spared no pains, and risked his popularity, to obtain some recompense for the Putini. Up to the present time but scanty justice has been done them. What Lord Carnarvon thought of these two outrages is clear, but how is his own subsequent conduct to be accounted for? Was his keen sense of right and justice dazed by the splendour of the South African empire?

We now come to the annexation of the Transvaal. Miss Colenso writes:—

"It has been amply shown since that the real feeling of the country was exceedingly averse to English interference with its liberties, and that the congratulatory addresses presented, and demonstrations made in favour of what had been done, were but expressions of feeling from the foreign element in the Transvaal, and got up by a few people personally interested on the side of English authority."

The one excuse, and the only one, in Miss Colenso's eyes, for our seizure of the Republic was the ill-treatment of the natives by the Boers, in which she entirely believes; but the mouths of those men who brought about the annexation are shut on this point. No sooner was that violation of international law perpetrated than its authors, partly to pacify the Boers, but chiefly to carry into effect the policy of which the annexation was a part, adopted the quarrels of the Boers, turned against the very people whom the Boers were accused of ill-treating, and, by the wars

against Sikukuni and the Zulus, caused more misery, shed more blood, and destroyed more property than can be laid to the charge of the Boers since they first set foot in the Transvaal.

The chapters on "the disputed territory" and "the Boundary Commission" are perhaps the ablest in the whole book. The authoress has thoroughly grasped a very intricate subject, has mastered its details, and made it clear to all who choose to follow her. The Boundary Commissioners did their work thoroughly and honestly; and had their award, which was approved of by Sir Henry Bulwer, been carried out, peace would have been maintained. Miss Colenso is clear that long ere this Sir Bartle Frere had resolved on war. Her reasons will not easily be opposed, and certainly the way in which Sir Bartle shifted his ground and altered the award is capable of no other construction. The ultimatum he issued, containing thirteen demands, was such as no independent potentate could possibly have agreed to. One of these demands was, "Observance of the coronation 'promises.'" Now we have the authority of Sir B. Pine and the three secretaries for the colonies—Lord Kimberley, Lord Carnarvon, and Sir M. Hicks-Beach—that no such promises were ever made. The Zulu King was pressed in the harshest way, all explanations disregarded, all requests for time treated as insolent pretexts, and our preparations for invasion hurried on. Yet he had attempted to fulfil some of the conditions demanded, and it was plain enough, according to Miss Colenso, that, even when he found that war would be forced upon him, he only contemplated self-defence. Up to this time his anxious wish, during his whole reign and previously while he governed for his father, was to live on good terms with the colonists. He seems to have listened patiently to the lectures of Sir T. Shepstone, and to have trusted him as long as possible; he led, according to Miss Colenso, a simple, moderate, useful life, and ruled his people well according to his lights. She asserts that he was not a treacherous and bloodthirsty Sovereign, and shows how much his military organisation and the number of his troops were exaggerated, and even makes no allusion to the commonly received stories of the necessity for his young men "washing their spears." She considers all the charges against him *seriatim*, and upon every one of them makes a very good case for him. The epithet of "bloodthirsty" is unfortunately more applicable to some of the missionaries who urged on Sir Bartle Frere the utter destruction of the Zulus.

We have no space left to go into the war itself, and yet this part of the book is not less interesting than the other. The authoress very wisely did not trust herself to enter into military details, but has been so fortunate as to obtain the assistance of Lieut.-Col. Edward Durnford, brother of him who fell at Isandhlwana, and who is responsible for this part of her work. The conduct of the campaign is unsparingly criticised and Lord Chelmsford severely dealt with. Miss Colenso carries her history down to the settlement of Zululand by Sir Garnet Wolseley, and concludes with a very remark-

able letter from the Dean of Pietermaritzburg to Mr. Gladstone.

WILLIAM WICKHAM.

"ENGLISH MEN OF LETTERS."

Cowper. By Goldwin Smith. (Macmillan.)

THIS is, we believe, the first time that Mr. Goldwin Smith has essayed to write on a purely literary subject. He has won his spurs on another field, and it may be doubted whether this new adventure will enhance his reputation. The merits of this monograph are chiefly negative. That the book is written in good English and with adequate care need not be said. There is much in the narrative that is admirable in thought and utterance, but it conveys the impression that the author has accomplished a task instead of writing about Cowper because he is interested in the subject. Of Cowper as a humourist, as a wit, as a writer of inimitable letters, Mr. Goldwin Smith's estimate is far from satisfactory. It may be questioned, too, whether he appreciates correctly the strength of Cowper's position in the line of our poets; and his slighting allusions to Pope seem to show a lack of sympathy for different forms of poetical development. It may be true that Pope was an "arch-versifier," and the term "hard glitter" when applied to that poet may not be wholly inappropriate; but the impression conveyed by such designations is, we conceive, a false one, just as false as the general allusion to Pope's great critic and biographer as "the tasteless and illiberal Johnson." When, by-the-way, the writer observes that the relations of man with Deity transcend and repel poetical treatment, and that there is nothing in them on which the creative imagination can be exercised, one recalls instantly the sonorous, well-balanced, but illogical assertions on the same subject in Johnson's *Lives of the Poets*. It would be easy to point out trifling statements in the biography which are fairly open to discussion. Such statements must occur in every book in which the author exercises an independent judgment. If the story told by Mr. Goldwin Smith is less attractive than some of the earlier narratives in this series of "Men of Letters," its fault may be due partly to the theme. The pathetic life of Cowper has been written so often, and in a few instances so well, that the author may have found it difficult to treat a subject already familiar to his readers.

Whether Cowper's religion sent him mad or was the means of restoring him to sanity has been discussed again and again by "old women of both sexes." Those of us who believe that Christianity is divine may allow that the form in which it was presented to Cowper had many aspects that were far from godlike. The sensitive poet was nurtured in a religious school that is apt to mistake Calvin for Christ; and, generous as was John Newton's friendship for Cowper, it was not likely, by his own confession, to minister to a mind diseased. Nothing, too, could well have been less fortunate than the physical conditions under which the poet fought with the melancholy that embittered his life; but he did fight bravely almost to the last; and, considering the vast relief he found in the trans-

lation of Homer, we cannot agree with the biographer that in undertaking that work he was under an evil star. "The translation of Homer is," he says pithily, "the Polar Expedition of literature, always failing, yet still desperately renewed;" and he adds that although Cowper preserves at least the dignity of the original, and never lacks the guidance of good taste, his translation, while commending itself in a certain measure to the taste of cultivated men, "delights nobody." The assertion is inaccurate. Cowper's *Homer* has charmed many men of culture. Thomas Campbell, among others, expressed for it the warmest admiration; and Rogers, who could not read Pope's translation, said:—"I delight in Cowper's *Homer*; I have read it again and again."

It is difficult to judge of Cowper's poetry apart from the author. In perusing his verses we remember the man, and read between the lines the principal incidents of his life. In relating one of the earliest and saddest scenes in the tragedy the writer observes:—"Let those whom despondency assails read this passage of Cowper's life, and remember that he lived to write *John Gilpin* and *The Task*." But he lived also to write *The Castaway*, and died "in the depth of hypochondria"—"so near was he," says one of the best of his biographers, "to the eternal sunrise, and yet not a ray of its light appeared to herald the day-dawn." Melancholy as Cowper's biography is it has many lovely gleams of brightness, pictures which live in the memory and make the poet's name dearer to some of us than an impartial criticism of his poetry would justify. Mrs. Browning has expressed this feeling in tender, womanly verse; and in his graceful prose Southey has shown how even this mournful lot had its exquisite alleviations. Truly does he say that sad as Cowper's story is it is not altogether mournful. No man had ever more loving friends, he had never to complain of injuries or neglect, men had no part in bringing on his calamity, and "he would not have found the way to fame unless he had missed the way to fortune." Some of Cowper's characteristics as a poet are thus defined by Mr. Goldwin Smith:—

"Of the lyrical depth and passion of the great Revolution poets Cowper is wholly devoid. His soul was stirred by no movement so mighty, if it were even capable of the impulse. Tenderness he has, and pathos as well as playfulness; he has unfailing grace and ease; he has clearness like that of a trout stream. Fashions, even our fashions, change. The more metaphysical poetry of our time has, indeed, too much in it besides the metaphysics, to be in any danger of being ever laid on the shelf with the once admired conceits of Cowley; yet it may one day in part lose, while the easier and more limpid kind of poetry may in part regain, its charm."

This is true, and might perhaps have been put more strongly. It was said by a critic of the last century that after a certain period men grow weary of the natural and search after the singular. Happily, what is fantastic in literature, however attractive for the hour, makes no lasting impression. If a poet be led astray by false lights, the deception soon ceases to deceive, and men return gladly to the old paths of simplicity and truth. There

is much in Cowper that the world will readily let die, but there is much also which goes to the heart of nature, and it is impossible to believe that he can ever fall into the rank of poets whose works still stand upon our shelves but are read only by the curious.

JOHN DENNIS.

Euvres de Millevoye. Edition publiée avec des pièces nouvelles et des variantes. Par P. L. Jacob, Bibliophile. (Paris: A. Quantin.)

ALTHOUGH there have appeared at least eight or ten editions of the collected works of Millevoye since his sad and premature death, the present one is in reality the first which can be called complete; all its predecessors have been more or less wanting; some have monstrous typographical errors, others are faulty in the important matter of punctuation, while none have comprised many of the poet's loveliest *jeux d'esprit* scattered and forgotten amid the mass of ephemeral literature of his time. The volumes before us altogether eclipse all previous attempts to present one of the most versatile of French poets. M. Quantin, the intelligent and enterprising Paris publisher, has added another triumph to his recent publications; the text is a masterpiece of accuracy and care; the seven etchings by Lalauze are among the best we know of his exquisite illustrations. But the editors, in their attempts to adequately present the poet, have had no easy task before them. Millevoye, who foresaw his early death, set himself manfully to the task of preparing a posthumous edition of his works; and, tormented as he was, according to Nodier, by the demon of correction, his MSS. must have been left in most perfect condition. Yet, though it is known that these came into the possession of the poet's old tutor and of Charles Nodier, not a vestige of them has yet been found. This edition, therefore, has been based with great care upon that of 1822, while a number of neglected or forgotten verses have, after careful authentication, been added. A similar destiny has befallen the story of the poet's life; it had been undertaken by those who were competent to tell it, but these have passed away before the fulfilment of their task. Under these circumstances, the notes of the Bibliophile Jacob and the notice by M. Louandre are most praiseworthy.

Charles Hubert Millevoye was born at Abbeville on December 24, 1782. He studied at the college of that town, where he found professors who encouraged him to follow those antiquarian studies for which he early manifested a great liking. These, however, received a sudden check through the political stir of the moment, which led to the closing of all schools. In 1793 he went to Paris and entered the Ecole des Quatre Nations, where he carried off the first prize for literature. It was here that he had for professor M. Dumas, who afterwards proved his counsellor and friend, and who brought out the first edition of his works. Millevoye had started with the idea of qualifying himself for a *procureur*, but, like so many poets before him, his spirit rebelled against the dry details of the law. In 1801, thinking to

find the work more congenial to his tastes, he entered a bookseller's. But the new vocation proved not much better than the old. His master, finding that he pored over the books in the shop, one day said to him, "Jeune homme, vous lisez; vous ne serez jamais libraire." It is said that this remark decided him as to his unfitness for affairs, and he then threw himself into literature heedless of the consequences. His first attempt was the essay, *Le Plaisir du Poète*, which was received with some favour, and followed up by greater successes. Millevoye had now gained for himself quite a name, when the Government offered him a pension of 6,000 francs. With this he was enabled to follow his bent freely, and to see something of the world. But, during the First Empire, the pleasures of society and the town were as fatiguing as at most times, if not more so; and Millevoye, finding that the whirl of Paris life was wearing him out and interfering with the realisation of his hopes, left the city for his native place. Here he married a Mlle. de la Molière, and took a charming little house bordering on the valley of the Somme. At this place he lived in almost perfect happiness, dividing his time between work and long rides in company with his young wife over the lovely country around. But a similar fate was awaiting him to that which befel a brother poet, Gilbert, whose dying words, "Au banquet de la vie," are among the finest of his inspirations. On one of these rides Millevoye had a severe fall and broke his thigh bone. The shock to his system brought on pleurisy. He returned to Paris in the hope of checking the progress of the disease by better advice. But all was to no purpose. He grew worse and worse, and on August 11, 1816, he pressed his young wife's hand and bade her a last farewell.

It is not easy in so brief a notice to dwell at any length on the numerous productions of this poet, whose versatility was so great. At a time when translations from the classics were much in vogue, he took precedence even of Delille by publishing the *Bucoliques*, the *Idylles de Théocrite*, and the *Dialogues des Morts*. In his laudable attempts to present pictures from the Middle Ages, however, he met with less success; his *Charlemagne à Pavie*, his *Emma et Eginard*, &c., met with the reception usually given to innovations, and Sainte-Beuve reproached him with having "enjolivé le moyen-âge." But Nodier has explained the anomalous position of the young poet. "Living at a time," he says, "difficult both for men of imagination as for statesmen, Millevoye appeared romantic among the classicists and classical among the romanticists." But whatever difference of opinion there may have existed as to his efforts to resuscitate the Dark Ages, all agreed that he was a master of *poésie légère*; indeed, the admiration expended on *La Chute des Feuilles*, *Le Poète Mourant*, &c., has led to the neglect of his other works.

Millevoye is in a sense the Keats of France. There is about his work the same yearning love of the past, the same deep veneration for the great dead; the same worship of the "vaste Homère," as he calls him. It might almost be said of him, as it has been said of André Chénier, that the Muses pushed him

into a sleep of two thousand years. No crown of thorns reddened his brow; the tears of a Madeleine never fell on his hands. Theocritus gave him his flute. He snatched Apollo's golden bow from the hands of Orpheus. He turned towards the past as did Prudhon and Pradier; he discovered that the dead lived more than the living.

A. EGMONT HAKE.

NEW NOVELS.

The Felmores. By S. B. Elliott. (New York: Appleton & Co.)

Eldorado. By Alfred Leigh. In 2 vols. (Remington & Co.)

Honor Carmichael. By Henrietta A. Duff. In 2 vols. (R. Bentley & Son.)

Three Recruits, and the Girls they left behind Them. By Joseph Hatton. In 3 vols. (Hurst & Blackett.)

THE real divergence of English and American taste is naturally more clearly marked in novels than in poetry, where the temptation to follow, if not to exaggerate, a few popular models may account for much, both of coincidence and dissimilarity. Unfortunately, in our estimate of even the best American work we are so keenly alive to the sinfulness of little sins, especially of those we ourselves have no mind to, that we seldom pause to enquire whether that which our fixed canons, our instincts, our prejudices, forbid us to regard as written aright is, or is not, worth writing at all. To this rule *The Felmores* is only at first sight an exception, for, though its style is always pleasant, sometimes even eloquent, and never in the least smart or flippant, the pervading tone somehow jars upon what we cannot but call our healthier religious prejudices. Our first thought is that an Englishman could have written it much better; our second that he never would, and probably never could, have written it at all. While in form a legitimate novel, it is really a study of a single character—a good and noble woman whose lofty and exquisite nature finds expression less in high-flown sentiments than in fearless candour and masculine sense. She has been educated in complete seclusion by her father, an enthusiastic materialist. Strengthened by her reverence for his memory and example, her convictions remain proof against the assaults of the Christian superstition which she finds strangely rife in the new world and new family to which her marriage introduces her. Her grave surprise at the hollowness of fashionable New York piety is soon exchanged for sharper trials. She has to endure with a good conscience the horror of her genteel relations; her mother-in-law's steady hatred; her husband's cowardly and superstitious desertion; her old lover's reproaches—for he, too, is a Christian, and, unlike the rest, a real one; the loss of her child, rescued from her contaminating influence; and at last the persuasive eloquence, both of speech and life, of her own brother, whom she recognises in a fervid parish priest to whom she has gone for advice. Again and again she wavers as her ideal of life crumbles beneath her, but to the last she refuses to sacrifice, to what she regards as an unmeaning

formula, her reasoned opinions and her father's memory. As a Christian, her gain must be his loss; if she is saved, she must believe him damned. Here we cannot but own that an English writer would inevitably have lost the unity and symmetry of art in an orthodox conclusion. Deserted, hopeless, and dying—the eager advocate of Christ kneeling beside her in the person of her only friend, the brother she had for years longed and hoped to meet, and imploring her for her own sake, for his, for their father's—she would assuredly have found peace at the last. But she dies without a sign. This is at least real tragedy, but it is attained at a heavy cost. For as the authoress clearly assumes the standpoint of Christianity, if of a somewhat vague and Deistic type, art is for her but a poor excuse for a drama so sombre and distressing. It is in these deeper instincts and susceptibilities rather than in mere superficial peculiarities that we must seek the real characteristics of American literature. This book raises a phantom it cannot lay, morbidly pursues a problem which it owns insoluble, and is finally lost in a dilemma from which it does not even try to escape. The wan light of its assured faith pales before the glory of its Atheist martyr; which in its turn but serves to show that, if Christianity is absurd though comfortable, Atheism is, though reasonable, essentially unhappy, and so by its own materialistic laws equally untenable. This profound inconsistency—the mark of a mind acute, candid, and untrammelled, but not yet rightly or firmly poised—lends peculiar interest to a work otherwise of considerable merit.

Eldorado is prettily printed and neatly bound. Beyond this all is vanity and intensest vexation of spirit. If one feels sometimes inclined to remind some authors of the golden rule, and to ask them how they would like to read such books themselves, one can at least cheat one's misery by the revengeful illusion that to write them must be at any rate as exhaustive an exercise as to read them. Wearily and hopelessly have we voyaged on with Mr. Claridas, the consumptive epic poet, over well-known seas, strewn with familiar wreck—lost wills, cruel parents, blind heroines, and derelict peers—till at length we reached the Golden Shore, when not a little to our relief, as often happens after more real journeys, he took a hasty and unceremonious leave—in other words, when Miss Constance Vivian, after long delays, at last says "Yes," Mr. Claridas falls down dead in the "*Eldorado*" of her dignified embrace. Few are the distractions we met with on our course. Travellers tell that the monotony of a long voyage blends all its events in a hazy paralysis of memory. We can well believe it; for at this moment we are only dimly conscious of having quite early in the book "passed the line," as it were, in the following tropical description of a parent's feelings at the prospect of becoming the father-in-law of an earl:—

"The enraptured Peri, as she sped heavenward on eager pinions, bearing the penitential tear that was to remove the crystal bar excluding her from Eden, heard already the musical ripple of the river by Allah's throne, and bathed her senses in the odours of the celestial flowers; even so Mr. Vivian heard already the envious con-

gratulations of friends, the courtesy of aristocratic connexions, and the rustling sound of rich marriage settlements."

Honor Carmichael is a study after Miss Broughton, chastened by devotional feeling; in other words, the clerical element prevails over the military. Though weak and conventional, it is neither dull nor in its way uninteresting, apart from the plot, which is of the unwieldy three-generations-curse type. Of this the sand-built foundations are laid in a sort of prologue or first book describing the very surprising *ménage* of two extremely young orphaned French countesses in their ancestral *château*, free from the encumbrance of a *chaperon*; the still more surprising conversations they held there, in which a profuse sprinkling of French words and scraps lends local colour to general imbecility; and the by no means surprising effrontery of "*Comtesse Arlotte*," the younger sister, who numbers among her perfections a "bell-shaped face," and who at the age of sixteen dances in one evening from an assignation in the garden with the announcement that she has just engaged herself to her sister's former lover, a villanous English colonel endowed with "a nose fashioned after a well-known ducal model, and a fine aristocratic air generally." Negligences and ignorances are by no means rare. The later part is far better, especially the home scenes in a poor London vicarage. Certainly one feels all the time that one has read it all before elsewhere; but some of it is of the sort which is pleasant in repetition. Of course this does not apply to those parts of the book—about a third in all—which consist of the usual moralisings, or rather vapourings, with which ladies now love to pad their books, and which will hardly bear reading more than once in the longest lifetime.

Mr. Hatton's new work is of an unambitious order, and its workmanship coarse and commonplace enough, but it is pleasant reading. There runs throughout a thread of melodramatic villany, in which upon the stock scene of the ruined chapel and secret passage appear the usual wicked earl, scheming lawyer, and adroit Bow Street runner; hence the third volume flags seriously during the clearing up of this heavy business. Otherwise the interest of the book is fresh and healthy. One feels at least that one is dealing with real people and places, for the characters are familiar Derbyshire types, and the scene is laid at Chesterfield somewhere about the beginning of the century. At all events, it was before steam and telegraphs, as the author is perpetually reminding us in long passages of *radotage*, where he often flounders among dates and fashions. Nor is he always free from obscurity. We may guess that by a "lace pillorine" is meant a *pèlerine*, and by a "mocking miasma," the phantasmagoria, but we cannot even try to guess why a kingfisher should be called a "winged ruby." The serious blemish of the book is, as usual, the padding, which here is peculiarly tiresome, being copied, at a long interval, from Thackeray's "roundabout" style. The merit of the *Three Recruits*—and it is a high one—lies in the simplicity and freshness of the characters, and in the

manly, spirited, and straightforward tone which pervades its best pages.

E. PURCELL.

CURRENT LITERATURE.

A Turkish Manual, by Captain C. F. Mackenzie (W. H. Allen and Co.), is a book which ought never to have been published. The author apologises for his work by saying

"we have striven to the best of our ability to place before the British public as briefly as possible, for their guidance amongst their future fellow subjects in the Levant, such Turkish as we ourselves picked up in the old Turkish Contingent, and therefore far from immaculate, or free from the hypercriticism of 'midnight-oil' linguists!"

Then, referring to the origin of the Turks, he says:—"Their origin is a mystery, lost in by-gone ages, and all the theories which have been started by the learned, either of their own or of other nations, are naught but flatulencies." After reading this renunciation of the pedantry of learning, we are a little surprised at finding him define the dative case as "the indirect regimen which expresses a movement of tendency." In reality, the book is not only imperfect and superficial in its treatment, but full of blunders, some of which can only be referred to extraordinary carelessness. We have noted down a few of these. On p. 18, *odah-dah* is translated "to the room" instead of "in the room." On p. 24, *leri* is translated "yours" instead of "theirs." On p. 85, "mid-day" is translated by *euileh* and *ikindi*, the latter of which words means "afternoon;" and on the same page both "Monday" and "Tuesday" are rendered by *Bazar ertesi*, the name of the former of these days. Among the adjectives, *güzel* is made to represent not only "pretty" but "strong," with which word it has nothing to do; and among the verbs, *kesmek* "to cut" is given as "to eat." And what are we to say to the following sentence from the Preface?—

"Confounded by the earliest known Muhammadan writer (Rashid-ud-Din) with the Mongols, and by subsequent scribes with the same race, we shall do little good and waste much time by following any of these so-called authorities; we purpose equally to omit Chinese and other authors—until, in the year 1299 of the Christian era, Osman, or Othman, first invaded the territory of Nicomedia."

The book does not even possess a table of contents.

THE same unpardonable carelessness is found in *The Levant Interpreter: a Polyglot Dialogue Book for English Travellers in the Levant*, by the Rev. Anton Tien, Ph.D. (Williams and Norgate). This consists of conversations in four languages—English, Turkish, Italian, and modern Greek—arranged in parallel columns. The Greek, as well as the other languages, has been given in English characters with an attempt at phonetic spelling; and on first dipping into the book we began by debating with ourselves whether any reader could be the gainer by this, and whether, for instance, it was necessary to spell the Greek for "a tailor" as *ipodimatopioo*. Our conclusion was that, as no Greek grammars are published, so far as we know, without the Greek character, so that every one who learns the language must learn the character also; and, as on the other hand the Greek words in this book are unaccented, so that, if pronounced by a person unacquainted with Greek, they are certain to be pronounced wrongly, the employment of the English character was no advantage, but the reverse. A little further inspection, however, taught us that such investigations were unnecessary, because of the number of mistakes with which the book teems. Thus, in the table of contents, "to buy several articles" is translated *aghorasis diafora pragmata*; and "landing" is *okata-*

bloos, in one word; and later on we find *skonia* for *σκούφια*, "a cap"; *koorosenos* for *κουρασμένος*, "tired"; *plokhos* for *πλωχός*, "poor"; *etekostos* for *εξηκοστός*, "sixtieth," to *fltheuoporon* for *φθινόπωρον*, "autumn," and in the next line *o kheernon* for *χειμών*, "winter," and so on. Similarly in the Italian part we meet with such forms as *alsare*, *moztarda*, *colbevole*, *tristro*, *diocinove*; and other careless mistakes, though not perhaps so numerous, in the Turkish. Such inaccuracy renders the book altogether untrustworthy, and some of the errors seem to proceed from a more deep-seated cause than mere hurry.

Climate and Health in South Africa. By James Bonwick, F.R.G.S. (S. W. Silver and Co.) This little compilation has the appearance of being made to order. It consists mainly of short extracts from various writers relating to the climate and salubrity of the different districts of South Africa; with a few statistical tables. It contains no original matter. We cannot see that it will be of any use to an invalid, beyond suggesting enquiries to be pursued further. The compiler puffs his wares throughout, and verges on the ludicrous when he recommends invalids to go to South Africa in preference to the usual resorts of consumptive patients, as being a British colony where they may secure British society, British customs, and British comforts. We should suppose Cannes alone would furnish more British society, as the word *society* is usually understood, than the whole colony of Natal. And we should certainly prefer French and Italian customs and comforts to the customs which obtain and the comforts which are provided in the greater part of our South African possessions.

England and the Holy See. By Willis Nevins. (Williams and Norgate.) This book seems to be intended for an historical essay, written with the object of showing the advantage which the State has derived in the past from its connexion with an infallible Church. Mr. Nevins begins with some strange political philosophy. He says that every State claims to be infallible, inasmuch as it enforces obedience to its laws; but its infallibility needs limitation by an infallible Church, to see that its laws are in accordance with the laws of God. We always thought that the State rested its laws on expediency, and was ready to change what was less expedient for what could be shown to be more expedient for the community, and that its objection to the infallible Church rested on the fact that the Church did not care for what was expedient for the community, but what was expedient for itself. Mr. Nevins gives a capricious selection of facts bearing on the relations between England and the Papacy from the time of William the Conqueror to the end of the reign of Elizabeth. We fail to see any method in his book, half of which consists of translations of papal bulls, which are not a very entertaining form of literature. Mr. Nevins does not seem to be a great scholar, as he tells us with care that some of these translations have been made by his friend, "J. C. Earle, Esq., and so can be relied on as perfectly exact." Indeed, exactness is not Mr. Nevins' strong point, nor is moderation of language. He thinks that the fact that a cat was hung up in Cheapside, shaved and habited like a priest, amply justified Mary's persecution of the Protestants. "Such," he says, "the act of creatures whose death by burning was no more than they deserved." When we remember the rough, coarse play with things sacred which the mediaeval Church allowed, we think that it is a little hard to condemn the Protestants because they did not at once rise to an unknown standard of reverence. We were a little surprised to read that "Mary was requested to put Jane Grey to death, but refused." A

note, however, reconciled us to the accuracy of this remark. "Her implication in the Wyatt rising of course made it hopeless to suppose that the Protestant clergy would cease to bring her forward. They, not Mary, are responsible for her death." Those who are amused or interested by reading history written on such a method will find abundant gratification in Mr. Nevins' book.

The Seven Heroines of Christendom, by Charles Duke Yonge (Mullan), is a somewhat arbitrary piece of bookmaking. We fail to see why the mystic number seven should be applied to heroines selected at the present day; it is a corrupt following of antiquity which rested on tradition. Moreover, we cannot see in what sense the heroines selected are called heroines of *Christendom*. Charlotte, Countess of Derby, Flora Macdonald, even Margaret of Anjou, are of very local and partial importance. The other four are Joan Darc, Isabella of Castile, Maria Teresa, and Marie Antoinette. It is rather difficult to find a common factor among these heroines, or to discover the conception of the heroic element of character which dictated their choice. As regards the book itself, it is too dull for a story book and too slight to rank as anything higher. The greatest praise that we can accord to Prof. Yonge is that he is bold enough to try and set the name *Joan Darc* in place of the popular error *Joan of Arc*.

IN *Exemplaria Cheltoniensia* (Macmillan) Mr. Kynaston, the accomplished head-master of Cheltenham College, gives fifty-three specimens of translations into Latin verse of various English passages, many of them familiar to schoolboys and undergraduates through Holden's well-known *Foliorum Silvula*. The metres selected are very various, including some of the most difficult, e.g., that of *Lydia dic per omnes*, into which Euripides' lyric to Peace is translated, and *Non ebur neque aureum*. The iambic trimeter, followed by a dimeter, as in Horace's Epodes, occurs frequently, and is managed with considerable skill. No. xxxiii., *Happy the first white age, when we*, from H. Vaughan, is felicitously modelled on *Beatus ille*, which it closely resembles in subject; xxxiv., Bryant's ode, *'Tis sweet in the green spring*, is given in very charming sapphics, part of which we should be glad to quote if space were allowed us; the same metre is used for H. Vaughan's *'Tis not rich furniture and gems*. Less successful, in our judgment, are the alcaics, No. ix., *Paeana clare cor vacuum metu*, in which seven triplets from *The Two Voices* of Tennyson are rendered, often, indeed, with much happiness of individual expression, but with some loss of the nervous strength of the original. If Mr. Kynaston has any fault, it is perhaps more perceptible in this metre than elsewhere—a tendency to let the stanzas flow on too uninterceptedly, and a marked disinclination to let the sentence close with the end of the fourth line. The hexameters are, we think, all admirable, especially xliii. and xxv., with the last part of xvii. The least satisfactory verses in the volume are perhaps the hendecasyllables xviii.

An English Garner: Ingatherings from our History and Literature. By Edward Arber. (Southgate, N.) More than a half of this volume is occupied with a reprint of Prince's *Chronological History of New England*, and, as that work has never before been published in this country, Mr. Arber has supplied his readers with an entertainment alike novel and delightful. Prince poured a wealth of learning into that part of his history which dealt with the progress of Puritanism in England; and, in the narrative of the troubles of the first settlers of New England, he, with consummate judgment, used the very words of the writers who themselves shared in the sufferings and ultimate

triumph. Is there a more affecting story in all literature than that of the founders of New England? They were a handful of men in the midst of enemies; they were often without resources, even destitute of bread for their daily food, yet they wavered not in their high purpose. To the student of our early history this will form the most gratifying part of Mr. Arber's "ingatherings," though in the rest of his selections there will be found many curious and interesting pieces. The excerpt from the *Historia histrionica* (1699) compresses into a small compass the chief points in the history of the London actors from the days of Ben Jonson to those of Jeremy Collier. The *Paladis tamia* of Meres briefly compares the chief poets and musicians of England with those of Greece and Rome, and shows us the estimates formed by contemporary opinion on the chief writers of the sixteenth century. To the "best wits of both our universities" Warner appeared our English Homer. Numerous extracts from Byrd's collection of psalms, sonnets, and songs are given by Mr. Arber, who announces his intention of including in subsequent volumes a large selection from the printed madrigal literature which was produced in that great era of English poesy from 1588 to 1640. His poetical subscribers will derive further gratification from Constable's *Diana* and Sir Philip Sidney's *Sonnets and Translations*. If the poetry and prose which Mr. Arber has culled from so many sources were grouped together in one harmonious whole there would be no room for the only objection which criticism can now make against his labours. As it is, these volumes are marvels of cheapness.

How to get Strong. By William Blaikie. (Sampson Low and Co.) It is a pity that this book, which is in other respects excellently calculated to impress the importance of physical education upon young Englishmen, should be written in such an abstruse American dialect that it is more than doubtful whether any Britisher not given to the study of comparative philology will have patience to read it. What with "ball-nine," "coasting," "pitcher," and such-like mysteries, the mere English reader is very likely to put the book down as applying to some other race and sphere than his. It is also unfortunate, though perhaps unavoidable, that Englishmen should be held up through the book as models of muscular development, which we fear, except in some very limited classes, they can hardly be said to be. Still, Mr. Blaikie's interest in his work is so great, his knowledge of the subject so extensive, and his hints as to the erection and utilisation of cheap gymnastic apparatus so clear and good that we cannot but hope his book may have some circulation on this side of the water. It is dedicated, as it should be, to Mr. Archibald McLaren, from whose work and practice not a few of the hints and illustrations are drawn.

Miecislus. From the original. By T. L. Oxley. (Kerby and Endean.) Some similarity in his own circumstances to those of the author seems, as far as we can understand, to have prompted Mr. Oxley to translate this little book, and publish it in luxurious type on glossy but otherwise attractive paper. It is the history of a young Polish volunteer, Miecislus Kamienski, who joined the French army in 1859, was wounded in the arm at Magenta, and, an amputation having been resorted to with unfavourable results, died, to the great grief of his father, the author. The narrative, though very slight, is touching enough, but neither the facts related nor the manner of relation seem to us to have sufficient elevation above the common to deserve the trouble of translation and republication.

At the Lion. By the Author of "An Elder Sister." (Bemrose.) This is a pretty little

story enough of the parochial kind, telling the fortunes of an innkeeper's family. It begins better than it goes on, the author having apparently the knack of describing childish days and childish things. Afterwards, the interest lessens, and the characters and facts introduced are treated with much less raciness. But the writer seems to have some faculty of writing books of the kind—a kind for which there is an unceasing demand, and in which there is no small scope for improvement and for the display of power.

Erchomenon; or, the Republic of Materialism. By * * * * (Sampson Low and Co.) Mr. Fourstars' work is one of the kind which a few years ago the example of *The Coming Race* made common for a time. *Erchomenon* does not display great liveliness of fancy or a very intimate acquaintance with "advanced" opinions, but the imaginary world which it draws is depicted with a flowing pen and with some narrative power. The "coming" republic of materialism has adopted free love, general adoption of children by the State, the practice of killing off incurables, aerial navigation, &c., &c. The author exhibits as best he can the inconveniences of these practices. By a certain inconsistency his English communards of the twenty-fifth century believe the Bible to be an almost lost work, of which a copy or two survives in the British Museum, and yet have in their midst more than one Christian community retaining the liturgy and the Bible itself in full use. The dream (for the author of *Erchomenon* has followed Bunyan in his machinery) winds up a little audaciously with the Last Judgment; and a comic episode about the descendants of Darwin is not in the best taste. Also, though the author attempts to disarm verbal criticism by mentioning that circumstances have prevented him from correcting the proofs, it must be admitted that "Grand d'Etre" several times reprinted is a curiously unhappy misprint.

Belmere. By Mrs. Townshend Mayer. (Moxon, Saunders and Co.) This second of Messrs. Moxon's new venture of original sixpenny novels is not so good as the first. It is a story of the course of true love and inheritance failing to run smooth, as the course of inheritance and true love has very frequently failed before. If we were not afraid of insulting the author we should say that it was not bad for the price, just as its forerunner, *My Sweetheart when a Boy*, was remarkably good therefor. Mr. J. Moyr Smith, who has illustrated it, cannot, we think, be an expert in boating. His frontispiece represents an oar in a position wherein a real oar would pretty certainly snap or wrench the rowlock off.

The Life of Joseph, illustrated from Sources external to Holy Scripture, is the title of a very interesting paper lately read by the Rev. H. G. Tomkins before the Victoria Institute. The sources are naturally for the most part Egyptian, and Mr. Tomkins has brought together a great deal of curious matter which he has extracted with considerable care and labour from the best authorities on the subject. Higher praise cannot be awarded to the monograph than that it forms a worthy pendant to the author's *Studies on the Times of Abraham*.

Definite Reform in English Land Law. By Alfred Hopkinson. (Simpkin, Marshall and Co.) The writer of this little pamphlet has a threefold qualification to be heard. He is both a practising conveyancer and a professor of jurisprudence, and his sympathies are on the side of reform. His suggestions are no less thorough than practical. First, simplification of title; then, transfer by registration. The former would be by itself an unmixed advantage. The latter will become possible only when the former has been accomplished. The

details of Mr. Hopkinson's plan need not be alluded to here; our only criticism is that he seems disposed to leave registration optional. He has appended a series of tables showing how his scheme would work in the complicated case of land cut up for building purposes.

Our Scientific Frontier. By W. P. Andrew. (W. H. Allen.) Mr. Andrew is not unfavourably known as an enthusiast for improved railway communication in the East. He has here collected a good deal of information from various quarters bearing upon the question of the Candahar Railway now in course of construction. The title of the book is confessedly misleading, for Mr. Andrew has as poor an opinion as could be wished of the strategic value of the line laid down by the Treaty of Gandamak. But his labour will not be lost if he succeeds in fixing the attention of the public upon the gross neglect displayed by successive Indian Governments in the matter of railway communication on our own side of the frontier. That the Indus should be still unbridged is the most damaging criticism that can be passed upon the rash plans of the extreme party of advance. We strongly object to the Star of India upon the outside of this volume, unless perchance the publishers intend to adopt it as a species of trade-mark. No firm has a better right than Messrs. Allen and Co. thus to identify themselves with India and things Indian.

NOTES AND NEWS.

It has been decided that the memorial to the late Prof. Clerk Maxwell shall take the shape of a bust and a collected edition of his scientific papers. The cost of these projects will be about £700, and if the sum of £900 should be realised (as is hoped) a commission will be given to some prominent artist for an oil portrait of the deceased professor.

We understand that Dr. James Geikie, F.R.S., will shortly send to press a work entitled *Prehistoric Europe: a Geological Sketch*, which treats of the principal climatic and geographical changes which have taken place in our continent since the commencement of the Pleistocene or Quaternary period. Mr. Stanford will be the publisher.

MR. JAMES T. FIELDS, the well-known American author, possesses among other literary curiosities, original MSS. by Thackeray, Dickens, Hawthorne, and Whittier; books once belonging to distinguished authors, and having their pencillings in the margin; a copy of Boccaccio (printed 1684) given by Leigh Hunt to his wife; Charles Lamb's copy of Pope's *Rape of the Lock*; Southey's copy of "Ben Jonson," marked by Coleridge; and many other works equally valuable.

MR. QUARITCH bought, on the 29th ult., at the Walpolean sale in the rooms of Messrs. Sotheby, Wilkinson and Hodge, a not quite perfect copy of the celebrated Chronicle of St. Albans, printed in the abbey about 1483. It had been described in the auction catalogue, and was sold, as a Caxton; but was discovered by the purchaser to be an article of much rarer occurrence than a specimen of Caxton's press. The half-dozen books which issued from the monastery of St. Albans are perhaps the rarest of all the productions of early English typography.

THE American edition of Mr. Austin Dobson's poems is prefaced by an appreciative and beautifully written essay by Mr. E. C. Stedman. It is dedicated to Mr. Oliver Wendell Holmes, and has been awarded a very cordial welcome by the American press. It is published by Mr. Holt, of New York, and contains the best poems in *Vignettes in Rhyme* and *Proverbs in*

Porcelain, beside a few which are not included in either of those volumes. The book is charmingly printed and bound.

TWELVE months ago a journal under the title of *Replies* was started for the purpose of furnishing "answers to correspondents" on a wide range of subjects. The novelty of the idea excited some attention, and the response it met with showed that such an organ was wanted. But on the completion of the second volume, it was decided to re-organise the venture on a more popular basis, and the paper will in future be published by Mr. H. J. Infield, 160 Fleet Street, under the title of *The Oracle and Correspondent*, the price being reduced to 1d.

MESSRS. J. AND R. MAXWELL intend to publish at an early date a new novel in three volumes, by a new author, entitled *Matrimonial Bonds*, by "Florian."

THE *Revista Euskara* announces the discovery by the Jesuit Father F. Fita, in Santiago de Compostella, of a MS. of the middle of the twelfth century which contains a *diccionario vasco-navarro*. If true, this antedates by nearly three centuries the earliest Basque document known, and will be of the greatest importance to philology. We hope for a speedy publication of this valuable text.

MR. WESTWOOD will be glad to receive the particulars of local and privately printed publications for insertion in a new edition of his *Bibliotheca Piscatoria* which he is preparing. This work has been long out of print. Mr. Satchell will be the publisher.

M. MILITCHEVITCH, Under-Secretary of State in the Servian Ministry of Education, is publishing at Belgrade a collection of biographies of the most important personages in the history of Servia.

THE following scholars have been entrusted with missions by the French Government:—M. Menant to England, to pursue his studies on the Assyrio-Chaldean cylinders; M. Maurice Faucon to Italy, to examine documents relating to the French domination at Asti, in the fifteenth century; and M. Lartet to Syria, to carry out excavations in a Phœnician necropolis.

M. JULES BRETON, the eminent painter, has just published (Charpentier) a rustic poem entitled *Jeanne*.

At the meeting of the Clifton Shakspeare Society held on April 24, *3 Henry VI.* was the play for critical consideration. Mr. E. Thelwall brought up a report on the grammar of the play. Dr. J. E. Shaw gave "A Further Note on the 'Farmyard and Menagerie Man.'" Miss Florence O'Brien read a paper "On Some of the Characters in *3 Henry VI.*" Mr. P. A. Daniel's time-analysis of the play (read with the time-analysis of the other histories before the New Shakspeare Society on June 13, 1879) was brought before the society.

Studies of the Eighteenth Century in Italy—a work treating of the plays of Metastasio and Goldoni, and the music of Marcello and Pergolesi—by Vernon Lee, will be issued next week by Mr. Satchell.

THE first Report of the Mitchell Library, Glasgow, has just been published, and contains an interesting account of the establishment and progress of the public library due to the bequest of £70,000 by the late Mr. Stephen Mitchell. The library opened in 1877 with 14,432 volumes, which, by the end of 1879, had increased to 28,532. They include three special collections—one of books, &c., relating to Glasgow; one to illustrate the early history of printing in Glasgow; and one which has attained considerable dimensions, and some fame—the "Poets' Corner." The "Corner" contains already the works of 1,222 Scottish poets in

1,920 volumes and tracts. A notable feature is that the library authorities determined to buy no fiction. Nevertheless, the issues are already very large, and, together with the general management of the institution, reflect great credit upon the committee and the chief librarian, Mr. F. T. Barrett.

M. BERENSTAM, of Tiflis, announces the publication of an important work on the Caucasus, which is to appear about the beginning of next year. It will be published in Paris, and in the French language, under the title of *Le Caucase*. It will comprise an account, not only of the history, geography, and natural features of the Caucasus, but also of its commerce and administration, and will be illustrated by numerous engravings, plans, and maps. The price is fixed at ten roubles.

M. ODOBESCO has published in the Roumanian language a costly work which treats comprehensively of the relics of Scythian antiquity discovered in Russia.

THERE was opened on April 13, in the principal archives of the Ministry of Foreign Affairs at Moscow, an exhibition of plans and views of remarkable localities and buildings in that city during the various epochs of its existence. The plans date from the year 1497, and the views from the year 1634. The entire collection consists of upwards of a hundred MSS., engravings, photographs, and reliefs, the last named being the results of recent investigations made by MM. Bashkof and Zharkof. M. Bashkof's reliefs, which are formed of plaster of Paris, indicate the course of the rivulets which no longer exist; while those of M. Zharkof, executed in *papier maché*, mark the direction of the streets. The grouping of the plans is so arranged as to show clearly the gradual development of the ancient Muscovite capital.

THE May number of *Scribner* contains a very careful and exhaustive study of Edgar Allan Poe from the pen of Mr. E. C. Stedman, an author who exhibits the rare combination of poet and critic unbiassed by prejudice against any particular school.

M. ANDRÉ THEURIET is publishing with M. Charpentier a volume of novelettes called *Toute Seule*, from the title of the first.

M. VICTOR WILDER, the musical critic of *Le Parlement*, has just published a very interesting history of Mozart, considered in his life and writings, under the title of *Mozart: l'Homme et l'Artiste*.

THE first elections for the Conseil Supérieur de l'Instruction Publique took place in France during the month of April. The great establishments for the higher education, such as the Collège de France and the Ecole des Chartes, as well as the faculties of Paris and the provinces, as a rule nominated their deans and directors, MM. Laboulaye, Quicherat, Vulpian, &c. The Institute elected MM. Jules Simon, Bertrand, Giraud, Delaborde, and Egger. The votes of the electors in the department of secondary education were for the most part given to professors whose names are less known, but who, there is reason to believe, are generally chosen from the candidates favourable to the proposed reforms in secondary education.

M. PAUL VIOLLET is about to publish, through Champion, a French adaptation of Adolph Schmidt's book on *France during the Revolution*, from the Reports of the Secret Police. It will be remembered that the invaluable documents on which that work is based were destroyed in the fires of the Commune in 1871.

THE death is announced of Prof. Wilhelm Wagner, of the Johanneum, Hamburg, best known for his publications of mediæval Greek texts; and of Michael Mesropovich Miansaroff, author of the *Bibliographia Caucasica et Transcaucasica*.

WE have received *A Golden Sorrow*, by Mrs. Cashel Hoey, new edition (Sampson Low and Co.); *My Lady Greensleeves*, by the author of *Comin' thro' the Rye* (Sampson Low and Co.); *To Oberammergau and Back*, by McQueen Gray (142 Strand); *The World as it is, and the World as it might be*, by R. T. Stothard (E. West and Co.); *Sketches of Parochial Life and Character*, by the Silent Member (E. W. Allen); *The Scientific Structure of the Universe*, by James A. Moncrieff (Marcus Ward and Co.); *Our Public Offices*, by Charles Marvin, second edition (Sonnenschein and Allen); *Politics and Art*, by T. H. Hall Caine (Liverpool); *Four Addresses on the Sacrifice of the Cross*, by the Rev. H. S. Holland (Rivingtons); *The United States of Europe*, by James Bryce Killen (J. A. Brook and Co.); *The Children of the Street*, by Mary H. Hart (Sonnenschein and Allen); &c.

AFRICAN EXPLORATION.

THE Royal Geographical Society have received from Mr. Joseph Thomson, leader of the East African Expedition, an account of his journey along the western side of Lake Tanganyika, in the course of which he traversed a line of country unexplored for the most part by any European traveller.

Leaving Pambete near the south end of the lake on November 10, Mr. Thomson ascended the precipitous face of the hills bordering its shore, and passed along a barren, slightly undulating country to the River Lofu at a point where it forms a lake eight miles long, tapering towards the west. Here he camped the majority of his porters at Liendwé, and started on his northward journey with only thirty-seven men. On entering Itawa, the next country, he found a region more difficult than any of the mountainous tracts he had previously traversed. He was not very hospitably received at the capital, Pamilo (Cameron's Akalunga), and had some difficulty in getting a guide. From Pamilo he marched to the Lonangwa, which flows through a deep marshy valley. That part of the Itawa country through which the expedition passed is a hilly plateau rising in altitude from 500 feet near the Lofu to 2,000 feet or more at the Lonangwa, with the exception of which river almost every stream disappears in the dry season. Mr. Thomson states that it is impossible to give an adequate idea of the physical difficulties of his route; there was not a mile of level ground, hills following hills of the most precipitous nature, with only here and there a lower ridge. The population of Itawa is small, and chiefly located at the *embouchures* of small streams. The people are, on the whole, comparatively good-looking, and very dark in colour. In some places game is plentiful, but, as is mostly the case near the lake, the elephant is nearly exterminated. The next country, Marungu, presented even greater difficulties, from the nature both of the ground and of the inhabitants. The mountains rise to a height of 7,000 feet, with smooth rounded outlines, except where they face the lake; large streams are numerous, and difficult to ford; and the climate on the mountains is damp and rainy. The people are most excitable and suspicious from rarely seeing strangers, but were eventually made friends of; they are extremely dark-coloured, especially those living on the mountains, who are much afflicted with swellings in the throat, a disease not seen on the borders of the lake. They dress in goat-skins and bark-cloth, the latter being chiefly used in the low grounds. Marungu is separated by the Lofuko from Mpala, a narrow strip of rich alluvial ground along the lake shore. Marching northwards from a place called Tembwe, Mr. Thomson found that the mountains decreased very much in altitude, and that along all the streams there were broad rich alluvial tracts

supporting a large population. Early on Christmas-day Mr. Thomson had the pleasure of seeing in the distance the Lukuga, as a noble river, flowing with rapid movement away to the west. Examining the part where Mr. Stanley places a barrier, he found that the river narrowed to half its breadth, and rushed through with the force and noise of a mountain torrent. The barrier of mud and papyrus had been swept away two or three years previously, and the level of the lake had consequently fallen seven feet. Mr. Thomson next went on to Ujiji for about a fortnight, and left on his return journey on January 12. He purposed passing down the Lukuga for three or four days, and then his intention was to strike straight across the unknown country south of it to Liendwé. He would there collect all his porters, march by way of Marema and Lake Hikwa, through Uhéhé to the Urunga, following it to its junction with the Ruaha, and then strike for the sea-coast at Kilwa.

MAGAZINES AND REVIEWS.

THE most noteworthy article in this month's *Contemporary Review* is the first instalment of one on the "Eleusinian Mysteries," by Prof. Lenormant. The author argues, against Lobeck and his followers, in favour of their antiquity, and endeavours to weaken the argument against it derived from the silence of Homer and Hesiod by an appeal to the Homeric hymn to Demeter. It must be confessed, however, that, so far as the evidence from the use of the digamma goes, this particular hymn must be one of the latest, and must belong to a far later date than either the Homeric or the Hesiodic poems. M. Lenormant traces, clearly and learnedly, the gradual amalgamation of Eleusinian and Athenian worship, the introduction of a moral element into the mysteries, the association of Dionysiac rites and myths with them, and finally the influence exercised upon them by the Orphics. This influence, no doubt, was at first subtle and almost insensible in its action, but in the fourth century B.C. was suddenly and powerfully aided by two causes. One of these was the completion of the new temple of Eleusis, which was planned by Iktinos and finished by Xenokles of Kholargé; the other the extinction of the ancient family of the Daduchi, which claimed descent from Triptolemos, and its replacement by the Lykomidae, who brought with them the tenets and books of Orphism from Phrya. The severity of the punishments decreed and enforced against anyone who had been unfortunate enough to fall under the displeasure of the priests of Eleusis is very curious, and shows that in the heyday of Athenian power the life of a freethinker was not altogether a comfortable one. Diagoras, who had scoffed at the mysteries, for instance, "found a price set on his head by a special decree engraved on a table of bronze, which promised a reward of one talent to anyone who should kill him, and two to anyone who should bring him alive."

In the *Library Journal* for March, Mr. Cornelius Walford writes on "The Longevity of Librarians," and suggests that "there may be a well-defined law of mortality applicable to each specific class of brain-workers." At present, at all events, this is but an anticipation, and Mr. Walford only attempts to consider the conditions of the librarian's life and to put together statistics of longevity in librarians as a basis for a future induction. Surely, however, a very little labour might have considerably increased a list which offers only forty-three names. Several of these are misprinted—unfortunately a too common failing of the *Library Journal* even when dealing with the best-known names in literary history. The remaining contents of this number are chiefly of technical interest. Mr. Foster prints four

of the "Reference Lists on Special Topics" to which we referred last month. Mr. Melvil Dui reports that it is "a new Boston idea" to convert a church which has proved useless for its intended purpose into a Public Library.

Mind opens with a clever criticism of Mr. Balfour's *Philosophic Doubt* by Mr. Leslie Stephen, and there are at least two other articles in the number deserving of attention. Mr. Balfour, it will be remembered, sought to direct attention to the contradiction of the empirical, transcendental, and common-sense philosophies, and to place theology on a level, at all events, with science in its explanation of the world. But Mr. Leslie Stephen carries the argument a little farther. He does not, indeed, accept Mr. Balfour's results as to the postulates of knowledge; he argues with his usual acuteness against the views expressed in *Philosophic Doubt* about the uniformity of Nature and historical evidence. But his main point is that Mr. Balfour's scepticism cannot stop with science. Either, he argues,

"theology is a scientific theory—in which case any mode of comparing between different scientific theories is equally applicable to deciding upon this theory, and, if there be no method, we are driven to 'suicidal' scepticism—or theology must escape by retiring altogether to the metempirical world, where it can have no relation to any scientific doctrine, that is, in Mr. Balfour's acceptance of the word, no relation to any particular facts."

The dilemma is probably not more cogent than dilemmas usually are—but it is effective enough as against Mr. Balfour. Probably of more absolute value is Mr. H. Sidgwick's criticism of Mr. Herbert Spencer's Ethical System. Mr. Spencer's claims to have given a "scientific" treatment to ethics must be allowed to be considerably invalidated by the points to which Mr. Sidgwick calls attention. Thus he notices—though this is only in a foot-note—the different attitudes towards teleological explanations of phenomena adopted in the *Data of Ethics* and in the *Principles of Biology*; observes that Spencer's short way of confuting pessimism by the common moral judgments of mankind is "not establishing morality on a scientific basis;" and concludes that "the imagination which Mr. Spencer has exercised in constructing his ideal society has none of the characteristics of a really scientific imagination," and that "a society in which there is no such thing as punishment is necessarily a society so unlike our own that it would be idle to attempt any close imitation of its rules of behaviour." Mr. Spencer's doctrine that pain is the correlative of actions injurious to the organism, pleasure of actions conducive to its welfare, may be said to be the text of Mr. Grant Allen's discourse on "Pain and Death." It is an interesting bit of writing, but can hardly be said to throw much new light on the subject. Mr. Sully discusses with his customary ability the "Pleasure of Visual Form" (as contrasted with that of colour); but most readers will, we expect, find more interest in Mr. Shadworth Hodgson's discussion of the "Free-will Question," in reply to Dr. Ward's prolonged defence of "Indeterminism" in the *Dublin Review*. Mr. Hodgson holds, as might be expected, the only rational theory of free-will—the theory which views it as self-determination. "There is," he remarks, by way of introduction, "an inner necessity of a man's nature, as well as an external necessity acting upon him from his environments, and the action of that inner necessity is his liberty." It is not surprising that after this Mr. Hodgson should find that "the facts, as Dr. Ward describes them in all the cases of anti-impulsive effort which he gives, are perfectly compatible with determinism." No doubt Dr. Ward will say something in reply; meanwhile he contents

himself with re-affirming, in a "Note" in answer to Prof. Bain, his doctrine of an "anti-impulsive effort and effectual resolve" against a "strongest motive" and "predominant desire."

THE second number of the *Modern Review* is better than the first. Several of the articles are interesting; the most instructive are "The Doctrine of 'Uniformity' in Geology," by H. W. Crosskey, and "Synesius of Cyrene," by R. Crompton Jones.

THE *Church Quarterly Review* also has a good number. There is a clever article on "Debased Hellenism and the New Renaissance," not well written as a whole, but full of telling sentences: e.g.,

"This [the interest in morbid states of the emotions] is the sting of that variety of the serpent which haunts modern Hellenism; and all we have to say of him now is that he is not, in fact, handsome; that he does not create beauty, but spoils it; and that Pheidias and Sophocles would have been ashamed of him."

"The Past and Future of Parish Registers" calls attention (not for the first time) to a question of some interest and importance; and the review of Ashwell's *Life of Wilberforce* is not only more candid than might have been expected in its estimate both of the biographer and its subject, but gives, for the first time, the Bishop's own defence of his conduct in the Hampden case—which, in one or two points, is more complete than appears to readers of the *Life*.

SCANDINAVIAN NOTES.

Copenhagen: April 22, 1880.

Allow me to jot down a few remarks connected with certain archaeological and historical branches of literature in Scandinavia of late.

Commencing with Sweden, I would point out a new and enlarged and handsome edition of the classical *Swedish Ballads* ("Svenska Folkvisar") published more than sixty years ago by Geijer and Afzelius. The new editors are R. Bergström and L. Höljer, the latter of whom has arranged the airs, adding sixty fresh ones. Hr. Bergström has drawn up the interesting notes. It will be in about eight octavo parts, of which three have already appeared.

I have also received from Stockholm the first part of a work in large octavo, which is of standard value. It is on *The Middle Age of Sweden* ("Sveriges Medeltid"), treating of the life, manners, and condition of the nation from about 1050 to about 1530. It is the largest, as it is undoubtedly the best, work yet written by its productive author, Dr. Hans Hildebrand, who has just succeeded his well-known father as Swedish State-Antiquary ("Riks-Antiquarie"), and who has had such exceptionally favourable opportunities for worthily carrying out his great task. In his interesting pages, Dr. Hildebrand has done his acknowledged talents justice by allowing himself time to be careful and mature, and the result is, accordingly, most satisfactory. The subject is exceedingly wide and of vast importance, but he has gathered from all available quarters a mass of information, with many piquant and little-known details, and has worked up his materials into pleasant and popular reading. He has also scattered through his text a great number of elegantly engraved woodcuts of all sorts of subjects. In this way we become acquainted with a choice selection of the art treasures of Sweden, as preserved in its National Museum and elsewhere. This first section deals with the country and its physical changes, agriculture, the habits of the landed classes and the peasantry. The following parts will treat of Lapland, Estland, the towns, trade, the King and his officers, costumes, war, the Church, the

slaves, the poor, and many other subjects. The whole will contain upwards of five hundred illustrations. Much of what the author has thus brought together is also applicable to, or throws light on, the other Scandinavian lands and our own country, and I have no doubt that many Englishmen will hasten to consult its valuable pages. Paper and printing are excellent, and the price low. The whole will be in four volumes.

Another Swedish book, remarkable in a different way, is Adjunct K. F. Söderwall's *Some Swedish Middle-Age Words* ("Några Svenska Medeltidsord"; Lund), an octavo pamphlet of sixty-eight pages. It consists of specimen columns from his great *Dictionary of Middle-Swedish*, on which he has been toiling for so many years. It shows that we shall get a most welcome, solid, and scholarly gift when the whole volume is published. Everything is worked out with judgment and minuteness and linguistic ability; all the chief different forms of each word are given, the genders and grammatical forms are pointed out, and so much of the context added in every citation as to make it really clear and instructive. The absence of this is one of the many faults in Stratmann's *Dictionary of Middle-English*, which he mis-names "Old-English." And, also unlike Stratmann, where he does not know the meaning of a word, he does not omit it, but gives it special room with what quotations he has, and asks future help towards its elucidation. Söderwall has collected all the words in every bit of printed Middle-Swedish known to him, except the language of the old and provincial laws. But these, as you know, have been published in one common glossary by the veteran Schlyter in his invaluable quarto, and Söderwall refers to these law-words in their places, adding remarks where he has anything new to say. English lexicography will gain much from Söderwall's labours, and his finished work will be a boon indeed to students of all the Scando-Anglic dialects. Let us hope that no long time will elapse before the palace—of which this brick is a specimen—is raised up with shouting.

In Norway I would draw attention to a paper by Dr. G. Storm, in the *Transactions of the Christiania Society of Science*. It is on *Havelok the Dane*, our famous English romance. Dr. Storm ingeniously identifies this chief in Danish North England, and shows how, in fact, he was a North English king in contrast to South England. According to him, Havelok is Olaf Kuaran, the Norse king of Dublin, Anlaf, Olaf, becoming Abloc, Aveloc, Havelok, in Celtic mouths. This Olaf Sigtrygon eventually reigned—942-944—over all Danelag north of Watling Street. He also explains how it came to pass that our hero, in a popular poem produced in North England, could have a father assigned him named "Birkabeyn."

The learned Norwegian priest, Dr. A. O. Bang, has produced a book small in size but great in value—*The Church and the Roman State to Constantine the Great*. It is written with admirable grasp and with many new side-lights. After examining how the Church sprang from the synagogue, and the influence of the Jews on the ancient world and the early Church, following the gradual emancipation of the latter from Judaism, he treats of the Roman State-religion and the growth of Christianity to the times of Trajan's Rescript and the Christian Apologists. Afterward comes a masterly sketch of the actual position of the new faith, and how far it was, or was not, persecuted in the east and the west, till, under Constantine, we see the Emperor as heathen Pontifex, then as Neoplatonic Rationalist, then as the tolerant deist trying to create a new worship based on the sun and Christ as one and the same Omnipotent, till he gradually makes

Christianity the favoured national cult, not finally breaking with heathenism till his baptism and death in 337. Dr. Bang's last words are—"How, out of this state of things, grew up a State Church in the east and a Church State in the west is outside our purpose here to describe. For this brings us beyond antiquity and lands us in the Middle Age." I heartily recommend this sound and clear sketch. The latest modern research has been everywhere laid under contribution, and I know nothing so good of its kind elsewhere. It only occupies 274 pages in octavo.

In Denmark I will only speak of a couple of novelties. First we have a third volume of Johannes Steenstrup's historical researches. Its title is *The Danish and Norse Kingdoms in the British Islands during the times of Danish Lordship*. It is Part I. which is now before us. Like its predecessors, it re-writes important sections of our olden history, and must be carefully studied by all who hereafter handle the subject. In abundance of material painfully collected from all sources—Scandinavian, Celtic, Romance and Latin, &c.—Steenstrup far surpasses any former digger, and in breadth of view and happy combination he has no fellow. Faults of detail may occur, as in all other good work.

With one other Danish publication I conclude. It is an elegant pamphlet, in large octavo, on the famous oaken stall-carvings in Roskilde Cathedral here in Sealand ("Reliefferne over Korstolene i Roskilde Domkirke"). All these interesting bas-reliefs are now for the first time accurately drawn and published by the Danish architect, J. B. Löffler, a gentleman well known for his zeal in antiquarian pursuits. The plates are by the accomplished engraver, Prof. Magnus Petersen; while the copious descriptive text is drawn up by Prof. Julius Lange. Artists and archaeologists everywhere may, therefore, now with full confidence study these costly specimens of Middle-Age wood-carving in Denmark, so much the more noteworthy as their date is fixed as 1420. The engravings, forty-eight in number, offer valuable details as to the costume and weapons of the time, besides illustrating the local treatment of the incidents handled by the old "woodsmith," which are chosen from the Old and New Testament, almost the only legendary group being that of St. Christopher, which is very happily treated. I dare not dwell on particulars, but among the exceptional figures introduced is an elephant (No. 20), in a battle-piece concerning the Maccabees. Prof. Lange has executed his part, which offers several difficulties, very well indeed, as was to be expected from so distinguished an art-critic. Besides the full Danish text, a *résumé* of the whole is given in French; the admirable engravings all can understand. Would that similar cheap but first-class monographs could be produced on the carved remains adorning the stalls at Ringsted, Lund, and elsewhere in these lands!

CORRESPONDENCE.

MENHIRS IN THE DISTRICT OF OTRANTO.

Canons Aahby, Byfield: April 30, 1880.

In the *Rassegna Settimanale* of March 14 is a communication by Cosimo de Giorgi on the menhirs in the district of Otranto. This district is in the province of Lecce in the South-east of Italy. The author uses the term "menhir," which belongs to Brittany, Wales, and Cornwall, but he gives as the local name "pietra fitta."

He refers to a former communication in which he describes ancient buildings in the same district apparently allied to the *nuraghi* of Sardinia; but this communication I have not seen. The present one is on *pietre fitte* alone. These he defines as rectangular parallelepipeds fixed in an erect position in the rock or soil. They are in general of Leccese stone, which is calcareous magnesian clay—hardly ever of sandstone. They appear to be numerous, and spread all over the district. He states that all the writers are agreed as to their age, but disagree as to their designed use. All *Italian* writers may agree as to their age, but the writers of this country certainly do not; and the probability is that the erection of a large stone was a custom of all ages and for various purposes, as tombstones, boundaries, commemorations of battles, &c. However, the Otranto stones, according to the author, have certain characteristics in common which lead to the conclusion that they were not far different in date and were all for the same purpose, whatever that may have been. They have the faces

well defined and the angles regular, and all are parallelograms in plan. This form probably was favoured by the nature of the stone.

The author asserts that they show the use of iron tools; but it is evident that they required no more perfect tools than the dolmens of Brittany or the great circle of Stonehenge, which have not yet been asserted to testify to the use of iron.

The following dimensions are given in metres and decimals, which I have translated into English measure, omitting fractions of inches. He gives the height of one only, but states that some are more than thirteen feet in height from the surface:—

	Width.	Thick- ness.	Height.
	ft. in.	ft. in.	ft. in.
Largo Trice . . .	1 6	1 1	
Largo Cuti . . .	1 7	1 1	
Opposite Miggiano . .	1 4	1 2	
Giallini . . .	1 3	1 2	
Station Zollino . . .	1 9	10	
Martano . . .	1 7	11	
Merine . . .	1 6	1 0	
Ruffano . . .	1 7	11	
Giuggianello . . .	1 3	10	
Miggiano . . .	1 1	10	
Carpignano . . .	1 10	10	
Largo S. Antonio . .	1 7	1 1	13 8

All these stones are of much more slender proportions than any I have met with in Great Britain, France, or the Netherlands, and were, therefore, necessarily let into the rock or soil. The author does not state the depth of the socket. The stones of the *lines* in Brittany are all set on the surface. But the most interesting fact about the Otranto stones is that, without exception, the long sides are placed north and south (true), or within 7° of it, and the deflexion, if any, is almost always towards the east. The measures show that the sides are always unequal, but not so wide in proportion to thickness as most stones of the same thickness in other countries. Many of the "standing stones" and stones of circles in Orkney, Shetland, and Caithness do not greatly exceed in thickness those of Otranto, but their width is much greater. For instance,

	Width.	Thick- ness.	Height.
	ft. in.	ft. in.	ft. in.
At Harray, Orkney . .	3 5	1 0	7 6
W. Brough, Barrey . .	1 3	8	5 0
Washow Tresness . .	4 0½	5	13 4
Circle Stenness . .	4 4	10½	13 8
" " " " " " " " " " . .	4 8	1 4½	13 3
Bridge of Brogar . .	5 5	1 5	15 0

The flatness of the faces of stones in Orkney is caused by the stratification of the stones, and is not to be attributed to tooling. In Brittany and the Netherlands this form is rare. It is stated that at the base of Largo Trice and Largo S. Antonio were found sepulchres excavated in the rock containing large skeletons. Notwithstanding this, the author's conclusion is that these *pietre fitte* are gnomons or sundials, erected "to serve as guides to travellers forced to cross those vast tracts."

The traveller was supposed to know the position of *pietre fitte*, and so he could, if the sun were shining, be certain of twelve o'clock, and could approximately guess other stages of daylight. Midday was to be known, not by a shadow cast by the stone, but by the equal illumination, or want of it, of the two long sides.

It must be noted that for the purpose of a gnomon, a wide thin stone, more like the Orkney stones mentioned above, would be preferable to the stones of Otranto. Nevertheless, some may have been erected for such a purpose; in any case we have the curious fact that all are similarly disposed as to their long and short diameters. If we examine the menhirs of other districts, we shall seldom find such flat

and regular faces as the author describes these to have. This, as before mentioned, he attributes to tooling. Capt. Oliver has noticed that certain menhirs in Brittany, apparently not parts of lines or circles, show more careful formation than the stones of lines and circles.

Mr. Lukis observes, in his observations on "The Devil's Arrows" at Boroughbridge, that "writers on prehistoric monuments have been and are too apt to regard ruins as perfect and typical examples, and then to classify them." He shows the probability of the three "Devil's Arrows" being a part of a much more extended series; and possibly some of the Otranto stones may belong to a line or circle of which the remainder is destroyed.

I have seen but few "tall stones" still erect unconnected with others, which have flat faces and unequal sides, so that I cannot compare their position with those of Otranto. The stone at Harray has its long sides east and west. That the lines of Brittany and the dolmens of that country, of Scotland, and the Netherlands were placed in a certain position on a system is evident to anyone who will examine the monuments or the plans of them. A Brittany dolmen is generally a chamber nearly square, with a long passage in an east or south-east direction, the outer end being lower and narrower than the chamber end. Many Scotch dolmens are the same. The "lines" of Brittany are groups of stones in slightly convergent lines, of which the large ends (widest intervals and largest stones) are to the west or north-west.

The Netherlands hunne-beds are nearly parallelograms, lying generally about north-east and south-west, with short narrow entrance passages on their east or south-east sides. That the position of all these monuments has some reference to the sun appears highly probable, though it is not for the purpose of denoting midday. The Devil's arrows are in a line nearly north-north-east and south-south-west. The north stone of the three is eight feet by three feet ten inches, and has its long diameter at right angles to the line; which fact induces Mr. Lukis to suppose it the original north end of the line. The three great stones at Trellech, in Monmouthshire, are in a line north-east and south-west. Not having seen Mr. Lukis's plans of the Devon and Cornwall monuments, I cannot state whether they follow the same system as those before mentioned. Superstitions have attached to many of the menhirs in Brittany, and, in consequence no doubt, they have been Christianised by having crosses cut on them or erected on them. Similarly, Signor Giorgi states that crosses have been cut on many of the *pietre fitte*, and that the country people place on them branches of blessed olive. The author intends to continue his researches, and it will be interesting to know whether menhirs in other districts (if any remain) have the same peculiarities as those of Otranto.

H. DRYDEN.

"MIRACLE PLAYS AND SACRED DRAMAS."

Exeter College, Oxford: May 3, 1880.

As Mr. Saintsbury's interesting and suggestive notice of this book in your last number appears to attribute to the translator and editor a design which they had not entertained, will you kindly allow me space for a word of explanation? The notes added by the editor were not intended to supplement the work generally, or to bring it as a whole up to the level of the most recent information, but merely to give some account of the English religious plays to which Prof. Hase had made hardly any reference. The translation was not addressed to special students of the drama, but to those readers who might wish for a general sketch of the religious drama of Europe, such as no English book exactly supplies. To use Mr.

Saintsbury's words, "the translators merely wished to give English readers the opportunity of acquainting themselves with a pleasant and instructive work."

W. W. JACKSON.

SENSE-PERCEPTION IN DOGS.

University College: May 1, 1880.

A "suggestion" about sense-perception in dogs, ascribed to me by Mr. Grant Allen on p. 328 of to-day's ACADEMY should rather have been ascribed to Mr. A. R. Wallace. At least, it was Mr. Wallace who gave first expression to it in *Nature* some years ago.

G. CROOM ROBERTSON.

ON A PASSAGE IN "HAMLET," III. iv. 160.

Temple: May 3, 1880.

I presume that the etiquette which closes a writer's mouth when criticism takes the form of a review does not apply when it comes in the shape of a letter. I therefore ask permission to say a few words in answer to Mr. Aldis Wright's remarks upon a quotation from my *Elizabethan Demonology* made in your very kindly notice of it which appeared in your issue of April 24. I have carefully read Mr. Wright's letter upon the meaning of the word "assume," and it appears to me that the latter part flatly contradicts the former; and that the interpretation contained in the former does not differ in any respect from the one I have offered, unless it be in felicity and clearness of expression.

In the first paragraph Mr. Wright says that Hamlet

"appeals to his mother, whose conscience is now thoroughly awakened, to refrain from the further indulgence of her guilty passion:

"'Good-night; but go not to mine uncle's bed; and, to strengthen her weak will, he urges that this abstinence, though not the immediate offspring of a virtuous purpose, yet will grow into a virtuous habit, and the virtuous principle will follow.'"

I agree perfectly with all this; and I cannot see what is at issue between Mr. Wright and myself. I said, "The context plainly shows that Hamlet meant that his mother, by self-denial, would gradually acquire that virtue in which she is so conspicuously wanting." It really seems as if the process which Mr. Wright has taken several lines to describe might be explained shortly by the words "acquiring a virtue" without much likelihood of misconception.

But after this statement of the meaning of the line, it is rather startling to find Mr. Wright saying in the second paragraph of his letter that Shakspeare never uses the word "assume" in the sense of "acquire;" and still more startling to be informed that with him the word "to assume" always "signifies to put on something external to oneself, a form or shape, not to get or acquire anything as a possession or inward principle." How abstinence, growing into a virtuous habit, and a virtuous principle following, can be described otherwise than as a process of getting or acquiring an inward principle, I fail to see.

It was a far other interpretation of the line in question at which I was striking. There are many people who, dissociating the line from its context—probably being ignorant of its context—complacently defend all manner of minor immoralities and hypocrisies by saying: "Oh, doesn't Shakspeare say you're to assume a virtue if you haven't got it?"—that is, "If you don't happen to fast particularly frequently, at any rate let the public get the idea that you do." If Mr. Wright has never been nettled by the casuistry of such interpreters, he is more fortunate than myself.

THOS. ALFRED SPALDING.

3 St. George's Square, N.W.: May 3, 1880.

Our Latin dictionaries say that the primary meaning of *assumo* is "take to one's self." Shakspeare is noted for going back to the primary meanings of words. Mr. Spalding says he does so in Hamlet's *assume*; that he bids Hamlet's mother take to herself a virtue if she has it not. Mr. Wright says, "No; he tells her to put the virtue on without taking it to herself." Would not this process require the help of a lady's maid? To prove that Shakspeare's *assume* cannot mean anything that is really part of a man, Mr. Wright cites the instance of cowards' beards, which wearing or growing of beards Shakspeare calls "assuming valour's excrement;" and Schmidt rightly defines "excrement" here and elsewhere as "that which grows out of the body—hair, beard." I submit that when Shakspeare assumed his (own and not his theatrical) beard, when a coward assumed his Mars-beard, he *did* "get or acquire it as a possession," and that it was part of him. Shakspeare was capable of using the word *assume* in its primary as well as its tertiary sense. Mr. Wright agrees with Mr. Spalding that the modern connotation of hypocrisy or falsity did not belong to Shakspeare's use of *assume*; he cannot fairly deny that if a woman is to put on a virtue as a habit she must take it to herself; then why does he quarrel with Mr. Spalding for saying so? To me, Mr. Spalding has put a richer and truer meaning into Hamlet's *assume* than I formerly understood it to have, and has rescued it from its later degrading associations. F. J. FURNIVALL.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, May 10, 8 p.m. Society of Arts: "Decoration and Furniture of Town Houses," VI., by R. W. Edis.
8 p.m. Victoria Institute: "On the Data of Ethics," by Prof. Wace.
8.30 p.m. Geographical: "Journeys in the Interior of British Guiana," by E. F. Im Thurn.
TUESDAY, May 11, 1 p.m. Horticultural.
3 p.m. Royal Institution: "Wind and Weather," by R. H. Scott.
7.30 p.m. Education Society (Stockwell Branch): "Recent Discoveries about Shakspeare and his Surroundings," by the Rev. F. G. Fleay.
7.45 p.m. Statistical: "Ten Years' Statistics of British Agriculture, 1870-79," by Capt. P. G. Craigmiles.
8 p.m. Civil Engineers.
8 p.m. Anthropological Institute: "Notes on Prehistoric Discoveries in Central Russia," by O. H. E. Carmichael; "Notes on the Occurrence of Stone Implements of the Surface Period in South Russia," by W. D. Gooch; "Notes on the Western Regions," by A. Wylie.
8 p.m. Colonial Institute: "The Botanical Enterprise of the Empire," by W. T. Thelston Dyer.
8 p.m. Photographic.
WEDNESDAY, May 12, 8 p.m. Geological: "Structure and Affinities of the Genus *Protospongia*, Salter," by W. J. Sollas; "Note on *Pleurophorus Polygonus*, von Meyer," by Prof. H. G. Seeley; "Review of the Family *Diastoporidae*," by G. B. Vine; "On Annelid Jaws from the Wenlock and Ludlow Formations of the West of England," by G. J. Hinde; "On the Occurrence of the Glutton, *Gulo luscus*, Linn., in the 'Forest Bed' of Norfolk," by E. T. Newton.
8 p.m. Microscopical: "On the History of *Grantia compressa*," by O. Stewart; "The Elasmodia of Myxomycetes," by the Rev. H. H. Higgins.
8 p.m. Telegraph Engineers: "On the Use of the Dynamo-Electric Current in Horticulture and in Metallurgy," by Dr. C. W. Siemens.
THURSDAY, May 13, 3 p.m. Royal Institution: "Light as a Mode of Motion: Theories of Light and Colours," by Prof. Tyndall.
4.30 p.m. Royal.
8 p.m. Society of Arts: "Optical Properties of Crystal, and Some of their Practical Applications," by Prof. W. G. Adams.
8 p.m. Mathematical: "On Cremonian Congruences," by Dr. Hirst; "On Some Statical and Kinematical Theorems," by Prof. Minchin; a Paper by Prof. Cayley; "On Binomial Bioridinals," by Sir James Cockle.
8.30 p.m. Antiquaries.
FRIDAY, May 14, 8 p.m. Astronomical.
8 p.m. New Shakspeare Society: "On Shakspeare's Treatment of Fate and Free-will in his Characters," by F. D. Matthew.
9 p.m. Royal Institution: "Certain Aspects of Social Democracy in Germany," by Lord Reay.
SATURDAY, May 15, 3 p.m. Royal Institution: "The Dramatists before Shakspeare," by Prof. H. Morley.

SCIENCE.

A Physical, Historical, Political, and Descriptive Geography. By Keith Johnston, F.R.G.S. Maps and Illustrations. (Stanford.)

WHEN Mr. Keith Johnston succumbed to dysentery on the road from Zanzibar to the interior of Africa we had to lament the loss of an explorer whose qualifications and previous performances held out a promise of a thorough and substantial addition to our knowledge of African geography. Still greater, we believe, has been the loss which scientific geography sustained through the premature death of this earnest student and enthusiastic explorer. No country has in recent times more largely contributed to the extension of our knowledge of the earth's surface than England. There is no part of the world where British pluck and enterprise have not let in a flood of light upon what was previously unknown to us. But it is not sufficient to collect facts; it is also needful that the information gathered should be systematically arranged and sifted. And for such a task, which requires a special training and peculiar qualifications, no less than much discernment joined to the power of lucid exposition, our lamented friend was exceptionally fitted. His previous performances as an author justified us in looking forward to a time when he would have occupied a foremost place among writers on geographical subjects. The work now under review, a work only completed on the eve of his departure upon the journey which was to prove fatal to him, bears out our opinion. It is a text-book of geography revealing in its every page the author's thorough knowledge of the subject he deals with. It can be warmly recommended for the use of schools, and may be perused with profit and pleasure also by those whose school-days are past, and whose knowledge of geography has grown somewhat misty and antiquated, but who, for these very reasons, are desirous of refreshing their memories, and of obtaining, within the limited time at their command, a general idea of the extent to which we are at present acquainted with the earth's surface features.

In an introductory chapter the author deals in a thoroughly satisfactory manner with the principles of astronomical geography, and furnishes a lucid explanation of the manner in which surveys are made and maps produced. This chapter should be attentively studied, for it lays the foundations for a due understanding of maps, which play so large a part in geographical instruction. Equally satisfactory is the chapter on Physical Geography, and this is only what might have been expected from the author's previous achievements in that department of science.

The bulk of the volume is devoted to a general description of the continents and of the various States and countries into which they are divided. The physical features are very properly dwelt upon at somewhat greater length than is usual in text-books of this description, for they largely influence the social, industrial, and political development of each country and determine its capacities for future advancement. Very ample details are given of the natural and industrial productions, and a set of maps very much enhances

the interest of these descriptions and conveys at a glance what even pages of letterpress would fail to render equally clear. If there is a portion of the volume which does not quite meet our views it is the "Sketch of Historical Geography." The author there supplies more than is conveyed by the title, and in a future edition it might, perhaps, be advisable to eliminate purely historical matters which have no connexion with the progress of geography and geographical exploration.

E. G. RAVENSTEIN.

HEBREW GRAMMAR IN THE MIDDLE AGES.

Opusculs et Traités d'Abou-l-Walid Merwan ibn Djanah de Cordoue. Texte arabe, avec une Traduction française par Joseph Derenbourg et Hartwig Derenbourg. (Paris: Imprimerie Nationale.)

THIS book is more than a contribution to special grammatical history. It is not a mere edition of the controversial tracts of a famous scholar. Had it aimed only at this scope it would have been accepted by every Hebraist as a welcome addition to our too scanty and little accessible means of knowledge in a department of high interest and importance. But MM. Derenbourg have made their labours valuable to a larger society than that of historical philologists. Their Introduction, a performance of truly French clearness and precision, has given them the opportunity of opening to us a phase in the civilisation of the early eleventh century, little known out of the Israelite Church, a phase that reveals the power of the Jewish genius in availing itself of resources even remotely suggested to it, of rising at a hint to prominence and sway in the midst of a different and unfriendly religion. It speaks also of the laborious vigour of the independent and self-sustained nation, of their patient and persevering toil under the oppression of those who should have been their helpers instead of their envious rivals. The Jew stood under small suspicion among his fellow-subjects of the Mohammedan kingdom. But never were the little bitternesses of the Jewish brotherhood of scholars more intrusive and arrogant. MM. Derenbourg tell us how Menahém ben Saruq, the lexicographer of Tortosa, was goaded into an abject submission when a hostile critic displaced him in the favour of the all-powerful physician-courtier Hasdái, the chamberlain of Abd-er-rahmán III. (p. iii.). The republic of letters was becoming a despotism, and the free prosecution even of such impersonal enquiries as grammar and lexicography came to depend almost on the will of one whose dignity secured him the power of patronage and the licence of social excommunication.

Abu-l-Walid suffered perhaps as much as any from the fluctuations of literary opinion. But his temper was happily free from their depressing influence. He was as careless of the applause of the great as he was sensitive to the esteem of his fellow-scholars and to the respect due to the memory of his master, Yehuda Hayyúj. In a phrase that recalls Plutarch's story of Demosthenes, he boasts, "I give days and nights to my indagations and studies, in such measure that I expend twice as much for oil as others for wine" (p. lxxv.,

n. 2). And his energy was piously devoted to the continuation, in a liberal spirit, of the work of Hayyúj. Hayyúj is the true founder of the Jewish school of grammarians. Abu-l-Welid, following in his steps, is as earnest in his declamation against those who traverse the method he had taken up as against those dogged literalists who accept the blind tradition of a master as a fixed rule, and refuse either to divaricate or to enlarge. It is against both classes of scholars that the tracts contained in the present volume are directed. Their special scope is fully detailed in pp. xx. *et seqq.* of the Introduction. The wider issues merit a repeated summary. In effect, was Hebrew philology to be kept separate from the systematised science of the Arab grammarians?

Arabic was closely classified in a scheme of triliteral radicals. Weak letters, theoretically considered as strong, were held not to affect the uniformity of the system. Was Hebrew capable of so symmetrical an arrangement? Hayyúj sought partly to assimilate the grammar of the two languages; but the barrier of religion and race constantly tended to keep them apart. Abu-l-Welid set himself against this tide, and, while discriminating certain cases of real biliteral formation, he endeavoured to establish a prevailing triliteral rule. An example will distinguish him from his more compromising contemporaries. Samuel Hallévi, "the Nágid," held all hollow roots (as *qám*) for biliterals (*cf.* the *Opusc.* 311 *et seqq.*): this was the traditionary view. Abu-l-Welid, like the Arabs, treated them as triliterals. He restricted the biliteral name, under the modified title of "reduplicate biliterals," to such words as *tal* which may appear (before suffixes) with dagesh, but never have the second letter actually repeated (p. xxvi.). Except in this case, the Arabic parallel was everywhere accepted; and here conspicuously Abu-l-Welid is the precursor of modern grammarians (*cf.* pp. lxxvi. *et seqq.*). The Nágid was, in other respects, perhaps, in advance of him; and the manner in which he argues the original identity of verbs *lamed-he* with *lamed-yod* (p. xix., n. 1) shows a discriminating use of the comparative method which contrasts well with the reckless habit of heaping together heterogeneous examples too characteristic of the grammatical illustration of the time (*cf.* the *Opusc.* 250, 291, and *Intr.* lxxxv.).

In conformity with his principle Abu-l-Welid passes in review, in the tracts here edited, the different explanations of his own and of Hayyúj which had been discredited or misunderstood by the critics. The phenomena of the language are brought together and sifted with scholarly completeness, and not seldom with fine judgment. The wealth of material is valuable alike to the historian of grammar and of exegesis. The latter is made accessible by a full index of Biblical places; in the former department a single instance may be of interest, and it will serve as a specimen of the author's treatment. The seven vowels of the Hebrew scale he divides into three primitive, *shureq*, *hireq*, and *patah*; and four derived, *hólem* and *qámeç* from the first, *cére* from the second, *segól* from the third (pp. 275 *et seqq.*). For the pronunciation, it is noticed as a possible theory

that *séré* may come alternatively from *hireq* or *patah*. Of greater importance is the statement which traces *qámeç* to *shureq*. "*Shureq* is above *hólem*, and *hólem* above *qámeç*" (p. 276). *Qámeç hatuph* is non-existent; in fact, "little *qámeç*" is a name for *cére* (p. 284, *cf.* lxxxii., n. 1). It is needless to add that *gibbuç*, the fond invention of empirical grammarians, has not yet been elevated into its distinct though undistinguishable place among the vowels.

It remains to speak of the sources of this scholarly edition. The MS. is that of the Bodleian, which the courteous tradition of that library allowed the editors to study in their own country. In the first of the four treatises printed in this volume MM. Derenbourg have had the advantage of comparison with a Hebrew translation of the fourteenth century. They have also added the fragments of a fifth work recently discovered at St. Petersburg by Mr. Neubauer (*Intr.* pp. xxxv.-lxxiii.; *cf.* p. v.), whose experience as editor of the same author's *Book of Roots* has been valuable in the critical part of the present book, which completes as far as is at present possible the bibliography of the writer.

The text and translation are worthy of the reputation of the two Derenbours. If there be anything to regret, it is that their lavish learning has led them to fill the notes of the Introduction with a mixed store of illustration often detached from the subject of the page. The arrangement may distract and sometimes confuse the reader. But we can scarcely blame the scholar for communicating his unique knowledge; and the permanent gain is perhaps greater than the occasional perplexity. REGINALD LANE POOLE.

NOTES OF TRAVEL.

WE regret to learn that M. Soleillet, whose journey from the West Coast of Africa in connexion with the Trans-Sahara Railway project we have more than once alluded to, has already met with a serious reverse, and been compelled to return to St. Louis, having been completely pillaged by the Uled-Delim nomads. After refitting, however, he intends to start again for Timbuku.

AFTER a long silence news has at last been received of the Roman Catholic missionary expedition, which left Grahamstown about a year ago with the intention of penetrating to the Upper Zambesi. The last letters received were dated from Gubuluwayo, the capital of the Matabele country, where the party are stated to be on excellent terms with the redoubted Lobengula. Père Depelchin, we learn, intends to cross the Zambesi during the present month, and found a station to the north of the river. Four additional priests have lately left England for the purpose of joining this expedition, and are expected to reach Gubuluwayo in September.

THE Rev. J. Milum has lately sent home an account of a visit which he paid at the end of last year to Bida, the capital of Nupe, or Nyffe, an important region in the Niger basin. He ascended the Bakoo affluent of the Niger in a canoe to Wanagi, whence, after a pleasant two hours' ride through fine farm land, the horizon on either side being skirted with beautiful hills, he arrived at Bida. The town is surrounded by a square mud wall, with a trench, and it measures some six or eight miles across from gate to gate, containing a population of about 100,000. The people are industrious, smelting

and working their own iron; they also card and dye their own cotton, weaving it into cloth of a variety of patterns. Glass melting and other industries are also carried on.

DR. REGEL, Director of the St. Petersburg Botanical Gardens, has returned from his botanical exploration of Eastern Turki-tan. Owing to political complications with China, he appears to have been prevented from carrying out his proposed work in Kashgaria, and was compelled to confine his operations almost entirely to the Ili basin. He has succeeded, however, in accumulating much interesting information in regard to the flora of the country he examined.

THE French Geographical Society have given their great gold medal for the year to Prof. Nordenskiöld; and other gold medals have also been awarded to Dr. Jules Crevaux for his recent journeys of exploration in equatorial South America, and to the Abbé Desgodins for the excellent services he has rendered to science on the Thibetan frontier of China for more than twenty years past.

News has just been received of M. Miklukho-Maklai, dated December 10. He was then in the Solomon Islands, and intended afterwards to visit the Louisiade Archipelago, a group of small islands near the South Cape, New Guinea. After this excursion, which would occupy him about a month, he was to return to Sydney.

THE principal contents of the May number of the *Monthly Record of Geography* are Lieut. Temple's account of his voyage on the coasts of Norway and Lapland, and Mr. E. Hutchinson's paper on the ascent of the Binué branch of the Niger last year by the Church Missionary Society's steamer *Henry Venn*. Both of these are illustrated by good maps, containing much new information. The map of the Binué is from Flegel's original surveys made during the expedition, under Mr. Ashcroft, of which he was himself a member. Among the geographical notes will be found one dealing with Tsushima Island in the Japanese group, an account of an interesting journey made by Mr. Chalmers in New Guinea, and a sketch of Mr. Haybittel's expedition in search of the Trek-Boers, to which we briefly alluded some time back. Under the head of correspondence, there is a letter from Mr. Griffin W. Vyse correcting some erroneous statements respecting the Tal-Chotiali route from India to Pishin and Candahar. Among the notes on new maps are long lists of recent publications by the Ordnance and Indian Government Surveys.

SCIENCE NOTES.

AN exhibition of German prehistoric anthropology will be held at Berlin in August next. It will comprise objects selected from all the museums of Germany, and will be under the superintendence of a committee, with Prof. Virchow for president.

A LARGE and influential committee of ship-builders and marine engineers has been formed in Glasgow for the purpose of promoting an exhibition of naval and marine engineering models in Glasgow. It is proposed that the exhibition shall be opened in the Corporation Galleries in November, and remain open for six months. Mr. James Paton, the superintendent of the Glasgow Museum and Galleries, has been appointed secretary to the committee.

THE Council of the Society of Arts have decided to summon a public conference to consider the question of supplying London with pure water. The date for the conference has been fixed for Monday, May 24, and succeeding days. The arrangements for the conference are now being considered by a committee, and

full announcements will be made as early as possible.

The Geology of Scarborough.—A short description of the oolitic and cretaceous rocks which occur to the south of Scarborough has just been issued by the Geological Survey, in explanation of a portion of the National Map. The memoir is written by Mr. C. Fox-Strangways, to whom the survey of the district has been entrusted, while the lists of fossils have been revised by Mr. Etheridge, the president of the Geological Society. The area under description is one of considerable interest, since it includes the well-known watering-places of Scarborough and Filey, and the grand promontory of Flamborough Head. Within this area the geologist finds representatives of many of the oolitic and cretaceous strata, with glacial and post-glacial deposits. A more detailed account of the oolitic rocks is reserved for a special memoir, which the Survey intends to issue, on the Yorkshire Oolites as a whole. The high price of several publications of the Survey has been the subject of unfavourable criticism on more than one occasion in these columns, and it is therefore only fair to remark that the present memoir of forty-four pages is issued at the moderate price of one shilling.

MEETINGS OF SOCIETIES.

SOCIETY OF ANTIQUARIES.—(Thursday, April 29.)

A. W. FRANKS, Esq., V.-P., in the Chair.—Mr. F. Seebohm read a paper upon the connexion between serfdom and the open field system of cultivation, on which latter subject he had previously expressed his views before the society. The question to be considered was whether the usual holding of a villein, which was generally a virgate or yardland—i.e., two bovates or thirty acres, or a quarter of a hide—was originally the free share of the land held by the free Anglo-Saxon, afterwards degraded into serfdom, or whether this holding had been always by servile tenure. In the Domesday survey, the *socmanni* or free tenants were found almost exclusively in the counties on the eastern side of the island, which were partly inhabited by Danes. Of *servi*, the greatest proportion were in Wales and Cornwall, and they formed altogether about nine per cent. of the population. About three-quarters of the cultivated land was held by *villani*, who were about thirty-eight per cent. of the population, while the *bordarii*, or cotters, a still inferior class, were about thirty-two per cent. The total acreage under the plough at that period was approximately 5,000,000 acres, the present amount being 12,000,000. In the time of Edward I. the villeins paid their lord by compulsory personal service, and had no right to leave the land. These few circumstances Mr. Seebohm considered to be the notes of serfdom. When the Hundred Rolls were compiled, personal services were gradually being commuted for payments in money; and it was the attempt of the lords after the Black Death to reintroduce the old state of things that led to Wat Tyler's insurrection. Mr. Seebohm then proceeded to quote the *Rectitudines Singularum Personarum* and the laws of King Ine in Thorpe's *Ancient Laws and Institutes of England*, as well as charters of other kings, to show that the Anglo-Saxon *gebur* and *geneat* were supplied with house and oxen by their lord, and were in return bound to work for him two or three days a week. If, however, the lord did not supply a house this service could not be exacted of the *gebur*. That this arrangement was not confined to England is proved by cartularies of monastic houses from Picardy to Bavaria, the old home of the Belgae, and by the ancient laws of the Bavarians printed by Pertz. By these laws, the villein was bound to work three days for the lord and three for himself, but, if the lord supplied oxen, all the six days of the week for the lord. In Wales, on the other hand, rent was paid in produce, and no personal menial services were performed by the free landholders, except those of serving in the king's army and repairing his castles. The land was held by the whole family, and redivided at the expiry of each generation until the third, when the division was final.

There was, however, another class of landholders, composed of foreigners, bastards, and others not having all the rights of the free Welshmen, who were bound to maintain the lord's servants and render other slight services. The land held by each of these persons was divided equally among the whole community, not only among the relatives of the deceased. Among the Gauls no personal services were paid for land, but they were among the Franks. From these considerations Mr. Seebohm argued that the Saxon landowner settled in England, not as the leader of free men, but as the master of a body of serfs, and he showed that permanent equality of holdings and primogeniture are not marks of allodial freedom, in which state land would be divided among the family, but of serfdom; and he doubted whether free village communities existed at all under the Anglo-Saxon régime.

FINE ART.

THE GROSVENOR GALLERY.

[First Notice.]

THE Grosvenor Gallery has been open but a few years, but it has won, and is likely to sustain, a well-deserved and distinct place in the public estimation. It would be difficult to say in few words in what its character consists, but that it has a decided character which constitutes a fair *raison d'être*, and enables it to hold its own without rivalry or even comparison with the Royal Academy, it would be impossible to deny. It certainly is not that it is devoted to any special clique of artists or phase of art, for no exhibition of its size contains works more dissimilar in spirit or aim. Its main interest has perhaps hitherto consisted in the opportunity afforded of seeing pictures by artists too distinct in their individuality to be welcome in more popular galleries—men who, regardless of conventional taste and the picture-market, were trying to give their own artistic impulses free rein. One of the cleverest, and certainly the most wilful, of these, Mr. Whistler, is altogether absent; the greatest of all—Mr. Burne-Jones—is represented by a design which, however consummate in certain technical qualities, gives no opportunity for the display of his highest powers; and some others, like Mr. Walter Crane, Mr. Strudwick, Mr. Cecil Lawson, and Mr. Hallé, add rather to the variety than the beauty of the exhibition. Nevertheless, the collection is one of remarkable interest. If it is full of eccentricity, it is at least almost free from conventionality; if it contains a good deal of weak, unfinished, and sketchy work, it contains much that is strong and nearly perfect of its kind. It is, on the whole, a pleasant but puzzling exhibition, full of disappointments on the one hand and of pleasant surprises on the other.

The disappointments are of two kinds—one, the absence of certain artists such as Messrs. Whistler and Tissot, whose works, though not always pleasant to see, were too individual to be missed without regret; and the other the presence of works by distinguished men which do not yield the expected pleasure. As Mr. Burne-Jones's name has been already mentioned, and is more than any other associated with the Grosvenor Gallery, the reputation of which he may be said to have crowned, while it, on the other hand, has greatly enhanced his own, we will begin with his solitary contribution to the present exhibition, which he has called *The Golden Stairs* (120). This is a composition of damsels clad in white, and bearing musical instruments of various kinds, descending a winding stone staircase, without banisters, of a faint yellow metallic tinge. In general scale of colouring it reminds one rather of that remarkable decorative design of *Perseus and the Graiæ* which the artist sent to the gallery two years ago, than of his usual pictures. In this, it will be remembered, metals were introduced; and some cunning

Japanese metal-worker, with pale gold for the stairs and dull silver for the draperies, with soft greenish, brazen, and coppery amalgams for bush and hair and flesh, might reproduce the design of *The Golden Stairs*, with little alteration in colour and tone; and this is no small praise, for it is to say in other words that its few subdued tints are arranged with consummate mastery and perfect keeping, and that the whole effect is soft and lustrous. Neither is it cold in appearance, as might have been expected from a composition chiefly made up of white linen dresses and stone steps, especially as the figures, with the exception of feet and ankles, hands and faces, are almost completely draped, while the flesh is of no warm rosy tint, and the drapery is opaque. The whites are of course not pure whites; no two garments of quite the same shade come together, warm and cold grays alternating with occasionally a sleeve or instrument of stronger tint or purer silveriness. As an example of the harmonies to be produced from a few soft notes of colour, the picture is a marvel. Nor is this all; as a composition of form it has much beauty. Given the particular maidens, in their particular dresses, on their particular staircase, and it would be difficult to give greater variety of simple and graceful attitude, to make prettier combinations of feet and ankles, arms and heads. It would be useless to protest against Mr. Burne-Jones's ideal of beauty in woman; he has a right to it; and, if he cannot or will not vary the type, we must submit. Nor is it necessary to object to the stairs; they answer their purpose of a curved line and a warm background; nor even to the drapery, though its material is doubtful and its folds highly artificial. It may be objected that the damsels appear to increase in height in a sort of inverse perspective the farther they are removed from the eye, and that all have ceased playing but one, who, for reasons best known to herself, is feebly drawing an archaic bow across an archaic violin. All these things allowed to pass without comment, there is yet good reason for disappointment that the artist of *The Days of Creation*, of *Merlin and Vivien*, of *Pygmalion and Galatea*, and of many other pictures remarkable not only as feats of colour, but as masterpieces of subtlest human expression, should have nothing for us this year but a technical triumph—an example, it may be said, of the purest art, but nevertheless of an art which appeals to little beyond the eye, and is purified by the exclusion of nature among other things.

It may seem churlish to be disappointed with a picture which gives pleasure of a refined kind because it does not give as much or as high pleasure as has been derived from other works of the same artist, but there can be unfortunately no such scruple with regard to the only contribution of another artist of great fame. Not only no pleasure, but extreme pain, is produced by Mr. Holman Hunt's portrait of his son (89). Perhaps the less said about it the better, for it is not agreeable to laugh at the mistakes of so skilled and conscientious an artist as Mr. Holman Hunt, and to describe either this portrait or its frame with perfect gravity is simply impossible. It would seem that, while prodigal of other gifts, Nature has denied the artist a sense of humour, though even this will not account for the oppressive colour of this unintentional caricature.

We are sorry to have to include Sir Frederick Leighton and Mr. Albert Moore in the list of slighter disappointments. The President has seldom painted a face with so little distinction as *Rubiniella* (69); and though Mr. Moore's supreme talent for harmonious arrangement of colours has not deserted him, his figures in *Jasmine* (95) and *Rose Leaves* (105) fail to reach his accustomed level of simple grace. It is a matter of regret

that Miss Clara Montalba, hitherto noted as much for her careful execution and modesty of design as for her rare sense of colour, should indulge in such unsatisfactory work as her scene from Venice (155), which, though audacious and clever, is painty, sketchy, and unreal. To the list of those who do not come up to their usual standard might be added some few others, but it will be more pleasant to turn to those artists in whose achievements full compensation may be found for the shortcoming of others.

The Song of Miriam (136) shows that leap toward the front rank which we have been long expecting from Mr. W. D. Richmond. It is refreshing to turn from the passionless minstrels of the golden stairs to this vigorous and graceful incarnation of spiritual music. Miriam and her maidens singing their song of triumph on the barren sandhills of the Red Sea shore, with hands, and hearts, and feet, and voices lifted with lyrical exaltation and solemn joy, is a subject to tax the talents of a greater artist; but Mr. Richmond has proved that his imagination and skill are equal at least to rendering it with much beauty and dignity. The picture is large, and long, and decorative in treatment; the principal group, of Miriam and her fair company in various robes of primrose, citron, and rose, are advancing toward the spectator, dancing and singing on the bright sand; their faces are all lit with musical emotion, and are finely contrasted with the careful faces of the male musicians and the weary ones of the carriers. All of these are relieved against a background of deep blue, composed of mountain, sea, and sky. The artifice by which this colour is continued in the drapery of some figures in the background is too apparent, and the figures on the right seem weak in comparison to the rest; but it is scarcely fair to criticise details of an unfinished picture.

Of very different aim is M. Legros' large picture of *L'Incendie* (87), which fully sustains his power as a painter of the poetry that underlies the rough surface of ordinary hard-working existence. The present picture verges on tragedy; a cottage is burning furiously, and two women have escaped leaving behind a child whose empty cradle is by their side. The mother, with her back to the conflagration and her hands over her ears, as though she would shut out both sight and sound, is kneeling in front of the elder woman. From the house a man with the baby safe in his arms has just issued, holding an arm before his blinded face. The elder woman is proclaiming the joyful news to the younger, whose face, half raised, is truly tragical in its momentary pause between agony and joy. There is a noble simplicity and repose in this design, the work of an artist who not only conceals his art, but himself, dealing with an awful subject in a way that brings home the terror and pathos of it without melodramatic gesture or sensational colour.

COSMO MONKHOUSE.

THE ROYAL ACADEMY.

[First Notice.]

THE present exhibition of the Royal Academy has provoked a full measure of unfavourable comment. It has been widely and confidently assumed that in quality of workmanship the mass of paintings displayed upon the walls will not bear to be judged by the standard of preceding years, and it has been roundly asserted that this decline is due as much to the increased incapacity of the titled painters as to the diminished excellence of the works accepted from the general body of English artists. I think it may fairly be doubted whether either of these opinions is absolutely warranted by the facts. That the exhibition is, in regard to

certain specific classes of art work, but poorly furnished must, perhaps, be granted. It by no means follows, however, that the executive ability of our school is therefore in decay. On the contrary, there is, I believe, ample evidence to show that the advance in technical proficiency which has been remarked for several years past is still steadily maintained. This is an advance, be it observed, that is, to a large extent, independent of the worth of the intellectual aims in art that are now widely accepted by the race of the younger painters. Critics are free to question the principles of style which find favour in the eyes of contemporary artists, and to deplore the absence or abeyance of the kind of forming and creative faculty which is needed to transform clever studies into pictures truly so called. They may justly regret that, whereas the earlier manner of sentimental or anecdotal painting has lost something of its vitality, the more serious study of nature by which it has been driven out has not yet yielded an appropriate style of its own. The ideas and purposes of our younger school are manifestly unsettled, and their energies are for the moment largely absorbed in the direct rendering of outward facts; but the power that is displayed in this pursuit must be acknowledged, I think, to be steadily developing, and, if it is less strikingly expressed in the two present than in some previous exhibitions, the result is due to accidental circumstances which have no bearing upon the general condition of our art. Nor, on the other hand, is it at all fair to say of this year's show that the interest it awakens owes little to the titled painters. There is no doubt a certain proportion of Academic work which would be a scandal to any exhibition; but, on the other hand, it must be acknowledged that the most remarkable achievements alike in subject-painting and in portraiture are contributed by men who belong to the titled body.

It should be added, however, that the increasing weight of unfavourable criticism, although not always rightly directed, does truly point to a state of things to which the members of the Academy ought to give serious heed. Opinions concerning the quality of the exhibition are perhaps unconsciously coloured by a sentiment of disapproval towards the manner in which the affairs of the institution are conducted. Year by year the feeling that the Academy does not fully or fairly discharge its national functions must surely gather strength, and the feeling will acquire additional force from the fact that the area of artistic effort is rapidly widening. Even if the Academy can ever be said to have satisfied the public requirements of English art, there would still be need of some vigorous measure of re-organisation in order to bring it into sympathy with the greatly increased demands of the time. Such a powerful body cannot afford to sacrifice the position of authority which it has won. Whatever may be attempted or achieved by other institutions in the representation of special phases of contemporary art, the Academy still holds in its keeping the general interests of English painting. Whether it will maintain this dignified position in the future must depend altogether upon the willingness and the ability of its members to adapt themselves to the circumstances of their age; and with the *prestige* they enjoy, and the practically inexhaustible resources at their disposal, this, one would say, ought not to be a task of insuperable difficulty. I do not propose at this time to enter into any general discussion of the constitution of the Royal Academy or to consider exhaustively either its merits or its defects. The criticisms to which I have referred spring out of its management of the annual exhibition, and it is in the proper discharge of this particular duty

that the public, at any rate, is most nearly interested. It is to the interest of the public, for example, that the annual display of contemporary work should be as complete and as representative as it is possible to make it. With the grievances or the misfortunes of individual artists the public has little concern; but, if the injustice inflicted in particular cases affects the general character of the display, the result must be admitted to have something more than a personal significance. And, in regard to this matter, it would seem to be established beyond dispute that these annual exhibitions are, under existing circumstances, either too large or too small. If the design of the Academy were merely to collect a series of chosen examples of the highest interest and excellence, then they would notoriously be forced to put a restraint upon themselves as well as upon the members of the outside body of artists; and, with such an ideal to guide them, one room would more than suffice for their requirements. But if the exhibition is intended to embrace all artists who can show that they possess a required degree of proficiency, then the exclusions that yearly take place are in many instances altogether indefensible. The excuse of limited space which is sometimes offered by or on behalf of the Academy is in truth no excuse. A body with the power and the wealth of the Academy has no right to confess that it has not made adequate provision for the due discharge of its duties. It would only be necessary at any time to approach the Government of the day in a proper spirit in order to secure a sufficient grant of public land or of public money for such a truly national purpose. But, unfortunately, in its dealings with the central authority, the Academy has been fettered by a foolish jealousy of its independence, and an unworthy fear lest it should be forced to accept the real responsibilities attaching to its position. It has always avoided the frank acknowledgment of its public and national character; and it has consistently refused, so far as refusal was possible, to render any account of its stewardship to the rightful guardians of the public interests. That this attitude is the result rather of a traditional prejudice than of deliberate design may be freely granted, and it is at least certain that there are many individual members of the present Academy who would gladly welcome a more frank acceptance of the position to which the institution is justly entitled. The Royal Academy has only to place itself loyally at the head of English art in order to obtain from the nation all the facilities it may require; and there is no real reason, if such an attitude were boldly adopted, why English artists, within a very short space of time, should not secure, in one of our great public parks, a building that would not only suffice for the exhibition of all deserving pictures, but would also be suitable for the agreeable display of works in sculpture in a manner corresponding to that which prevails in the Salon at Paris. In the meantime, however, there are reforms of internal organisation that might be effected without any sort of delay. The disappointments dependent upon strained accommodation are for the moment incurable, but it is always within the power of the Academy so to re-arrange the machinery of selection as to put an end at once to a large number of complaints. There is a rumour that a serious effort in this direction is really under consideration. The Council, so it is said, is to have a resolution submitted to it whereby the number of works which any one artist may exhibit is to be strictly curtailed, and this resolution, if carried, will apply as much to Academicians as to outsiders. Here at least is a step in the right direction; but there remains yet a further reform to be effected, without

which no system of selection can possibly be satisfactory in its working. Some plan must sooner or later be devised whereby the general body of exhibiting artists shall be admitted to a share in the election of the jury. There are various methods by which this desirable result could be secured, and the plan in force in the Paris Salon at once suggests itself. But if a different mode were considered desirable, it would be easy to form a constituency out of the exhibitors of each preceding year. By adopting some such measure the Academy would be assured of the sympathy of the general body of artists. The existing method of electing Associates and Academicians might still be maintained, for the distribution of titles is of less importance than the just organisation of the annual exhibition. J. COMYNS CARR.

EXHIBITIONS.

SOCIETY OF BRITISH ARTISTS, SUFFOLK STREET.

THIS exhibition of the Society of British Artists, now held in the old place, the fifty-seventh from its commencement, is somewhat more select than usual. The number of works by new men is indeed very small, and here, as in every chartered body, the oldest members continue to claim their privilege, although their works do not show the freshness necessary to attract visitors. The collection consists of over eight hundred pictures, a third of these being water-colours. These last are nearly all of comparatively little importance, small in size and tentative for the most part, landscape being in the ascendant. Among them the first that attracted us was No. 540, *A Pool—on the Glaslyn at Beddgelert*, by Mr. J. Jackson Curnock, a beautiful minor work. *The Building Yard, Southwark*, by Jules Lesson (594), shows a sense of the picturesque, and Mr. Andrew B. Donaldson's two studies in *Dordrecht* (646 and 653) are full of this picturesque with impressive sentiment. Mr. W. L. Wyllie, of whom we shall have to speak farther on, has also some excellent works, though trifling in size, especially No. 659: *Mont St. Michel, Normandy*, and *The Valley of the Rhine*. Among the figure pictures, Miss Helen Thornycroft's *St. Sebastian* (No. 739) is distinguishable by good drawing. The flesh, however, is too hot in colour.

To enter the great room, and come to the more important oil pictures, No. 4, by Mr. W. Holyoake, immediately arrests the eye of the visitor. This is called *The First Night*, and shows us the front row of the dress circle. All the visitors on this happy theatrical occasion are young and beautiful, girls of course prevailing, but the men—only two, if we recollect aright—are of the same sweet age and equally handsome. This uncritical audience, who seem to carry daylight with them on this *First Night*, shows the besetting sin of our English art, from the works of the President of the Royal Academy downwards. *Couleur de rose* is the prevailing pigment, rose-water being the medium. This is certainly simplifying the office of art, but, alas! the art itself is eliminated along with truth to nature. Close to this attractive row of beauties is Mr. A. F. Grace's *First Load: Clouds clearing off for a Fine Day*, a picture which pleasantly recalls the haymaking season in a flat, rich country: the early doubtful morning giving way gradually to the kind of weather beloved by the farmer on such occasions. *He jests at Scars who never felt a Wound*, by Mr. H. G. Glindoni (No. 15), shows painting power which ought to produce excellent pictures of the costume order; and No. 20, *Good Folks are scarce*, is, in a quite different way both in motive and execution, worthy of praise. This last work is by Mr. James Hayllar, and represents a worthy, hale, old country gentleman muffled up for a winter journey, the snow falling fast, his atten-

tive housekeeper offering him a glass of ale; a simple subject enough, simply and unaffectedly told. A little farther on we find *Footsteps* (No. 24), by Mr. Yeend King. It represents a party of young ladies in a wood, strongly and ably painted, arrested by the sound of coming steps. The dog here is equally well rendered with the figures and still life; and this point suggests to us the name of Mr. J. S. Noble, the animal painter, who is one of the ablest members of this body, and who contributes two works: No. 35, *The Keeper's Assistants*, a rough pony and two admirably alert pointers, and No. 394, *The Gillie's Friend*, which, however, recalls, both in subject and arrangement, certain favourite compositions of Landseer. Other pictures to be mentioned here are No. 40, *The Mischief-maker, Zandvoort, Holland*, by Mr. J. R. Reid, and No. 42, *Going to the Fair*, by Mr. Charles Collins. At the end of the room is Mr. J. Morgan's *Assizes*, an elaborate composition of many figures, full of action, with considerable discrimination of character, but little humour. Our remarks on the picture by Mr. Glindoni are again suggested by No. 140, by Mr. Ludovici, jun., called *Cracking the Last Nut*, full of clever action and well-painted costume, but marred by the vulgar introduction of a badly expressed female listener. In No. 168, *The Last of a Ruined Home*, by Mr. Horace M. Cauty, we find an imitation of Walker, misunderstood altogether, but too obvious. Among the best genre pictures in this exhibition are a pair by Mr. A. H. Burr, Nos. 236 and 246, admirable studies of Scotch character. In one, the old countryman is puzzling over his mouse-trap, determined to catch the depredator whose marks were too visible on the "heel of the auld cheese;" and in the other (this task being accomplished) he finishes his evening, "Saturday Night," perhaps, with reading a chapter in *The Word of God*. Another Scottish study equally good is Mr. Weatherhead's *A Braw Fly for Salmon* (No. 213). Our limited space allows only two other pictures to be mentioned before we arrive at the landscapes. These are remarkable in executive ability; one is No. 470, ladies leaving a lighted railway station almost in the dark, by Mr. Lionel P. Smythe, curiously enough called *Summer Twilight*, and the other a crackly and perhaps impetuous connoisseur, *A China Hunter*, by Mr. Howard Helmick.

In landscape, which used to be the strong point with the Society, we ought to mention at once Mr. W. L. Wyllie's *Alps*, "The moon is up and yet it is not night" (No. 182), the most poetic rendering of nature we have seen for a long time, and his other picture *Coming Home* (No. 376). Mr. Aumonier's *Cornish Orchard* is also one of the most accomplished productions in the rooms, and one of the most charming. Near Mr. Wyllie's *Alps* we find (No. 176) *The Bass*, by John Finnie, and in the place of honour the large and elaborate work of Mr. Wyke Bayliss, the *Interior of the Basilica of St. Mark, Venice*. This, which must have occupied the talents of Mr. Bayliss during many months, is a work of great interest, full of elaboration, representing the wonderful richness of the mosaic-covered walls from the great altar looking west. Other distinguished pictures we can only mention rapidly. Mr. Stuart Lloyd's large *Deserted Mansion* (No. 235); *View near Alton, Hants* (No. 165), by Alfred Cole; *The Retreat* (No. 183), by Mr. F. Heydenthal, and *Eventide* (No. 237), by Mr. E. E. Ellis, both landscapes with figure interest and sunset effects; *Mouth of the Thames, Shrimpers running in* (No. 250), by Mr. J. Fraser, one of the few sea subjects; and two charming small pictures (No. 286), *The Squirrel's Haunt*, by Mr. W. C. Way, and (No. 298) *Evening Lights: Holland*, by Mr. Andrew B. Donaldson.

THE FOURTH NATIONAL EXHIBITION OF FINE ARTS AT TURIN.

THE usually sedate little capital of Piedmont has lately given itself up to an exuberant display of festivity and loyalty, the occasion being the inauguration of the exhibition by King Humbert. Flags and banners have decorated the streets by day and illuminations have made them brilliant by night; the promenades are thronged by visitors from all parts of Italy, and processions of students and operatives, headed by their banners, are constantly passing hither and thither. The exhibition building has been erected near the Piazza d'Armi. It consists of a long central gallery devoted to sculpture, the pictures being shown in a succession of rooms ranged along either side of the main gallery. Everywhere the lighting is all that can be desired; the pictures are not inconveniently crowded, neither are any hung too high to be easily seen; they are relieved against low-toned green drapery, and flowers and choice plants are mingled with the sculpture, so that the general aspect of the galleries is gay and cheerful.

Though the sculpture, both in the building and catalogue, occupies the most prominent position, it is perhaps hardly the department in which the visitors or our readers will be most interested. A more than cursory examination of it compels us to say that from no point of view is it satisfactory. There is absolutely nothing of high aim. No conception of ideal beauty, no noble thought, wrought out in quiet meditation and severe study, has been transformed into imperishable form. Everywhere the aim has been realism, but not the realism of the grave and serious art of past times, nor is there any trace of its grace and fancy. The motives are as feeble and frivolous as the execution is weak and without true refinement. So trivial are the subjects generally that it would be useless to waste time on their consideration. Sculpture whose chief aim is the representation of lace or the texture of satin, or which delights in squalor and grimace, has passed out of the region of criticism. When, some years since, Italian sculptors were weak enough to accept the applause of the unthinking for their statues of veiled figures, it was easy to foresee the descent of their art; possibly it has not yet reached its lowest depth. However, we would not bear too hardly on the sculptors. The present state of modern Italian sculpture, and, indeed, that of other countries, is entirely the result of the public neglect. To appreciate a really fine bronze or marble requires qualities to be found only in the smallest degree in the art-buying public.

Turning to the paintings in the exhibition we find more that is hopeful, and, in many points, signs of genuine progress. Perhaps the most striking impression suggested on first making the round of the rooms is the strongly imitative faculty displayed by the Italian painters. One naturally sees the larger canvases first, and these almost invariably remind us of pictures we have seen in the exhibitions of other countries, mostly in the French Salon. There are the same nudities either languishing in harems or leering in studios; theatrical Romans, here painted from their descendants—though not perhaps of unmixed lineage; Syrians that have been studied from Algerines; mediaeval warriors, Renaissance nobles, and republicans of '92; all our old Parisian friends go through their old familiar melodrama under nearly the same effects. The acting has, perhaps, lost some of its finer shades; there is an uncertainty and want of finish necessarily pertaining to the next remove from the original. Still, not on all occasions does the inspiration come from abroad. A picture of a *cocotte*, life-sized, stretched on a divan, dead

from the ball of a revolver which has just dropped from her hand, and, needless to say, the due amount of blood staining her transparent drapery, shows that pure and unaffected pathos and poetry are not confined to Paris. The smaller canvases, naturally dealing with more familiar subjects, follow the same general rule, and, as might be expected, the French Impressionists are the favourite models; though in some instances the influence has been derived from men of real genius, as Fortuny and Mr. Alma-Tadema. The former, indeed, may be said to have founded a school in Southern Italy, considerably modified, however, by the later Impressionists. The gentleman who astounded visitors to the Paris International Exhibition by the eccentricities of his frames is here in greater force than ever; the tints of his frames are more pronounced; the star fish, shells, and what not stuck about them are still more rampant than two years back; and his exuberant imagination runs riot in colours that would make the canvases of M. Manet appear quiet and unpretentious.

That it is possible to have strong, intense colour without overstepping the modesty of nature is plainly shown in the works of Signor Pasini. He sends seven pictures, all small in size, but all bearing evidence of his exquisite drawing and imaginative colour; beside two frames of studies which will be peculiarly interesting to artists. Signor Pasini has marked original genius; he is also a diligent student of nature. The consequence is that his work is always satisfying and delightful. A young Venetian painter, Signor Favretto, has earned warm recognition by six charming pictures of modern Venetian life. His style in sentiment and technical qualities resembles that of Herr van Haanen. It is rich in colour, careful and characteristic in drawing, full of light, and with fine appreciation of grays; there is also a genuine fund of humour in his observation of life. *Stampi e Libri* represents a couple of priests looking over a book and print stall. A few other figures make up the composition. The refinement of colour and genial character make this a picture which would be distinguished in any exhibition. We venture to augur a distinguished career for Signor Favretto, hoping that he will never allow his evident facility to degenerate into carelessness. Among the pictures with life-size figures we must not omit to mention Signor Jacovacci's *Michelangelo e Vittoria Colonna*. It represents Vittoria lying dead, and the great painter bending down to give her a last kiss. His aged, grief-worn face is noble and pathetic, the colour is sober and harmonious, strong in light and shade; perhaps the white of Vittoria's dress is somewhat forced. The picture is impressive and the sentiment genuine.

In the department of landscape art the exhibition is not remarkable; we failed to detect any sign of serious study of nature, which is the more to be wondered at considering the opportunities the peninsula presents in this direction.

The portraits, fortunately for the visitor who goes to an exhibition to see pictures, are few, and, remembering English and French work, not of great interest. Signor Spiridon sends a portrait of *M. Gambetta* and another of *Signor Monteverde meditating his Statue of Jenner*, which shows that both these gentlemen are distinguished for an easy good-nature; the former looks like a prosperous Hebrew capitalist, with his clothes of the lustrous black cloth dear to the *parvenu*, while the latter has his hair and beard streaming out in all directions and an expression of such intense though subdued agony that it is evident his ideas when he is meditating hardly flow freely. Signor Morelli has an easy, well-drawn portrait of a lady; the satin dress and accessories are well painted, but

the flesh is opaque and not pleasant in tint. The happiest portrait, in every direction, is Signor Bompiani's full length of the Queen of Italy, painted for the Chamber of Deputies. The expression and pose are charming, the colour fresh and silvery; it is rare to find an official picture of such excellence.

If there is no very marked advance, neither is there any decline, in this year's exhibition. We cannot agree with an enthusiastic journalist that there are "capolavori che mi richiamarono alla memoria le gloriose ed antiche tradizioni dell'arte italiana." From the context, this was evidently not intended to be ironical, the probability being that the critic was innocent of any knowledge of the antique traditions of Italian art. There would be more hope for the art of Italy if her artists would seek to penetrate the spirit and teachings of those traditions.

A SHAKSPEARE MONUMENT.

ONE of the pieces of sculpture which will probably attract no little attention at the present exhibition of the Royal Academy, but which for obvious reasons we forbear to criticise here, is a seated figure of Hamlet contemplating the skull of Yorick, which has been modelled by Lord Ronald Gower. Another figure by the same young nobleman has been accepted for the Paris Salon, and represents young Prince Hal lifting the crown above his head, and pausing, as it were, for a moment before he dares to place it on his brow. The Prince is very simply clad, and is standing on his left foot, the right drawn slightly back, and the right knee bent. Slim, graceful, and vigorous, with his tightly fitting jerkin and trunk hose, the figure has almost as purely sculptural an outline as though it were nude. But though so simple, it is not too severe; and though the figure is poised in complete rest and not without a dignified gravity, there is such spirit in the limbs and such latent audacity in the face that we feel the peace and solemnity is but momentary. Not only has the artist seized the happy moment of arrested action to give the repose necessary to a work of sculpture, but he has suggested the previous moment of thoughtless sport and the future of crown-shadowed care. Whatever future criticism may have to say of this work, there can be no difference of opinion as to the originality and spirit of the conception and the care with which it has been executed. There are signs of fresh vitality in the school of British sculpture, but few more favourable than this statue, which, while telling its story by line and contour alone, is yet thoroughly English and living, appealing in sculptural language direct to the knowledge and feelings of Englishmen.

That Lord Ronald Gower is no mere *dilettante* seeking the applause so easily awarded to one of his rank by dallying with the arts, but a painstaking artist whose heart is in his work, and who is determined to be master of it, will be still more evident when we say that this figure and that of Hamlet are only instalments of a greater work in commemoration of the greatest English poet. These are, then, two out of four figures representing famous characters of Shakspeare which are to decorate the base of a large monument to the poet on which Lord Ronald has been engaged for some years. The other characters chosen are Sir John Falstaff and Lady Macbeth, the former of which is finished. On the latter, which will complete the work, he is busily engaged. The monument will be surmounted by a group representing Tragedy and Comedy crowning the bust of Shakspeare. The bust follows in costume and general appearance that in the church of Stratford, but it is somewhat more youthful and spiritual in appearance than the rather stiff and

stolid effigy which is so familiar to us. Tragedy is standing erect on the left of the plinth on which the bust of Shakspeare is placed. Young, beautiful, and sad, she holds the wreath in her right hand over the poet's head, the arm being bare to near the shoulder, and extended almost to full length. She is half shrouded in a mantle, which covers her head like a hood, and is gathered round her waist by the left hand. On the other side is Comedy, a figure of exuberant joy, with loose locks and careless dress, scarcely able to perform her part of holding the wreath for the laughter which shakes her sides. She appears as if she had run with gay willingness to her task, and to be half embracing the effigy of her lord and master, her laughing head turned, as it were, to the audience in confident appeal for sympathy in her love for him. The action of this figure is, we think, a little excessive, and not altogether graceful in the lower limbs; but it is a vigorous embodiment, and the composition of the three heads and the arms of the two supporters is bold and successful.

The whole work, when completed, will be too large for any ordinary gallery, and it is to be hoped that arrangements may be made for its exhibition at the Crystal Palace or elsewhere, where it may be fully seen and fairly criticised.

NOTES ON ART AND ARCHAEOLOGY.

MR. H. S. MARKS, R.A., has lately been occupied in painting for the Duke of Westminster twelve decorative panels of Birds to be placed in the ante-drawing-room at Eaton, Cheshire, and has, considerably, before sending them home, given the public a chance of seeing them by tickets distributed by himself at Messrs. Agnew's Gallery in Bond Street. Mr. Marks' taste for the grotesque has made him select flamingoes, cranes, pelicans, and other long-legged and enormous-billed creatures; and these, with the scarlet ibis, macaws, parakeets, and others, afford the brightest and richest tints, so that the whole of these compositions are distinguished by splendour of colour, and the most amusing peculiarity of character. The world of birds Mr. Marks has made his own, in pictures painted year after year, and now in these twelve decorative panels he has completed his right to be considered the king of that division of animated nature.

PROF. RUSKIN will contribute an article on "The Formation of an Art Museum" to the June number of the *Art Journal*.

Now that the colours used by artists in painting important pictures and the media employed by them are attracting considerable public attention, consequent on Mr. W. H. Hunt's lecture at the Society of Arts, we are authorised to mention an important fact. The Royal Academy some years ago took a step which forestalls Mr. Hunt's proposal that a record of the experience and practice of artists should be preserved. The Council of that body, under the presidency of Sir Francis Grant, drew up and printed a form of enquiry into the materials and method of painting followed by the members in the production of the pictures contributed by them year by year to the Exhibition. This fact seems exactly to answer the object proposed in instituting any society or committee of enquiry into the matter. The replies, which it is proposed to preserve systematically in the library of the Academy, have not been in many cases returned; that is another matter, and only shows individual indifference.

THE first annual dinner of the Hogarth Club took place at the Criterion on Thursday last, Mr. Alma-Tadema in the chair. Including visitors there were some ninety persons present, among whom were the President already named,

Messrs. Colin Hunter, Hamilton Macallum, Seymour Lucas, A. C. Gow, T. Graham, C. E. Holloway, J. Charlton, and A. Crofts, A.R.A. After dinner there were a few speeches, Mr. Tadema presiding with great geniality, and Mr. Godfrey Turner returning thanks for the visitors in a happy manner. Some exceptionally good music prolonged the meeting to a late hour.

THE Chantrey Fund has been applied this year to the purchase of four of the most noteworthy and generally satisfactory pictures in the present exhibition of the Royal Academy, namely, Mr. Orchardson's *On Board H.M.S. Bellerophon*, Mr. H. W. B. Davis's *Returning to the Fold*, Mr. Poynter's *Visit to Aesculapius*, and Mr. John Brett's *Britannia's Realm*.

M. FRANCK, a member of the Belgian Academy, has just finished a line engraving of Quentin Matsys' famous triptych in the Antwerp Museum.

AN exhibition of objects relating to the history of the House of Orange will be held at the Hague in August next.

ON Saturday evening, April 24, during the course of the Tiber works, there came to light, near the Ponte Sisto, and just before the river meets the ancient wall of the city, a massive square-stone structure, which was quickly seen to be a *columbarium*, very rich in relics. The niches inside must be rather termed *aediculae* than *loculi*, being divided by small and elegant columns, faced with stucco. In the *aediculae* hitherto discovered cinerary urns of marble were found in excellent preservation and of beautiful workmanship. They are all ornamented in relief, with festoons of fruit and leaves, birds and flowers. All contained the remains of the funeral pile, and in one a finger ring of pure gold, the stone of which had been destroyed by the fire, was found among the calcined bones. An urn, in the shape of a simple vase, bears as an inscription the two words, *Minatia Tolla*. In the ground underneath was found intact the large marble inscription which speaks of members of the Sulpician family. There was also found an elegant marble bust of a young girl, and a life-size statue of a woman of mature years. Among the rubbish were broken pieces of a statue of Tiberius, as is plain from a fragment of the head, which clearly shows the lineaments peculiar to that Caesar. But this imperial statue can have had no relation to the monument, which belongs to the age of the Antonines, as the predominating style of the sculptures shows. It seems likely that there may be yet more urns in that part of the sepulchral chamber which remains to be dug out.

WE have received the completed fifth volume of that vast German work, *Kunst und Künstler des Mittelalters und der Neuzeit* (published by E. A. Seemann, of Leipzig). Few modern works of art-biography are more satisfactory than this, for each Life is written by some art critic who has devoted especial study to the artist of whom he treats. This of course precludes the unity of view and scientific aim that might be found in a work written throughout by one author; but, on the other hand, it ensures a far more detailed attention to each subject than would be possible to the art historian who sought to grasp the whole. In the present volume we find Dr. Robert Dohme, the editor of the whole work, responsible for the biographies of Palladio and Lorenzo Bernini; Dr. J. P. Richter for Correggio, Sebastian del Piombo, and Giulio Romano; H. Janitschek for Andrea del Sarto, Giovanni Bellini, Tintoretto, Paolo Veronese, and the Bolognese school; J. E. Wessely for Tiepolo, Canaletto, Bernardo Bellotto, and Pompeo Battoni; A. Rosenberg for Palma Vecchio and Andrea and

Jacopo Sansovino; Dr. Max Jordan for Titian; C. Brun for Lionardo da Vinci and Bernardino Luini; O. Eisenmann for Caravaggio and Spagnoletto; H. Lücke for Fra Bartolomeo and Giorgione; and C. A. Regnet for Salvator Rosa. As will be seen from these names, the Venetian school preponderates in the present volume; it is, indeed, the last volume of the series dealing with Italian art, for the sixth and last volume—which is now in progress—will contain only Spanish, French, and English artists. It is advertised to be completed this year, after which a supplementary work, containing biographies of the artists of the present century, will be begun and continued in numbers like *Kunst und Künstler*.

AT the last meeting of the Anthropological Institute a paper entitled "Further Notes on the Romano-British Cemetery at Seaford, Sussex," by Mr. F. G. Hilton Price and Mr. John E. Price, was read, being a continuation of a paper communicated by the same authors in November 1876. During the summer of 1879 these gentlemen revisited Seaford, and made further excavations in the Roman cemetery upon the Downs, in which they discovered several urns, a drinking cup of Durobrivian pottery, Samian *paterae*, flint celts of the neolithic type, and many flint flakes. In one interment a large urn, full of charred human bones, was discovered, having a Samian cup in its mouth, for the purpose of keeping out the earth; another elegant cup of Durobrivian ware was found on its left side, and a food vessel and *patera* of Upchurch pottery on the right side. In close proximity to this interment was a similar one; the urn was much crushed, but beneath a *patera* of Samian ware a coin of Faustina Junior, the daughter of Antoninus Pius and wife of Marcus Aurelius, was found. This was most important, as giving an approximate date for the interments; they could not be earlier than between A.D. 161 and 180. In another part of the Downs, in a place called the Little Burys, black patches were of frequent occurrence in the sand, which were composed of charcoal, fragments of burnt bone, a flint flake or two, and frequently iron nails. In one particular spot a batch of over ninety iron studs was found, mixed up with bone ashes and charcoal. The authors considered that the patches of charcoal without an urn indicated pauper burials, or the burials of soldiers, as this place was a military station.

EXHIBITIONS appear to be coming into fashion in Italy as well as elsewhere. The town of Milan is at present organising one, and a subscription has been opened which has, in the course of about a month, produced as much as 810,000 frs. The French journal *L'Italie* estimates that Milan will probably be able to raise two millions of francs for this purpose if required.

A FINE statue of a faun in bronze, of about the same size as the celebrated *Dancing Faun* of the Naples Museum, has lately been dug out at Pompeii. It was found in a house decorated with paintings near the temple of Fortune. The faun is represented in a drunken attitude and holding under his left arm a pitcher out of which the water of a fountain was probably intended to flow.

THE Cluny Museum has made two important purchases at the San Donato sale. One is a processional crucifix in silver-gilt of fourteenth-century workmanship. It is stated to be the most remarkable work of its kind in any of the public collections in France, for it is in perfect preservation and of the finest execution. Both faces are enriched with figures in high relief, on one side being seen Christ crucified, with the Virgin, St. John, St. Peter, and Mary Magdalene, and on the other the twelve apostles with their various emblems, the whole being executed in rich

repoussé and ornamented with pieces of rock crystal. The other work is of less choice material, but is almost equally fine in its own way of workmanship. It is a Venetian cabinet in the form of a palace, with five rows of columns rising one above another and a cupola crowning the whole. In the niches between the columns are placed very small figures in bronze gilt, while charming paintings of flowers, arabesques, and figures adorn every portion that is not inlaid with mother-of-pearl and ivory. This ornate cabinet was acquired by M. Sommerard, the director of the museum, for 5,100 *lire*, and the crucifix for 11,100—a very much smaller sum than Prince Demidoff had paid for it some years ago. Both purchases were indeed excellent bargains for the Cluny Museum.

THE magnificent mural paintings by Eugène Delacroix that decorate the Salon du Roi in the Palais Bourbon have been lithographed this year by M. Robaut at the special command of the French Government. The five lithographic plates which he has produced are exhibited in the present Salon.

AN etching by Ramus from a clever picture called *Ouvrières en Perles à Venise*, painted by O. C. van Haanen, is given in *L'Art* this week. It represents a number of Venetian girls engaged in stringing pearl beads. It attracted some notice at the Universal French Exhibition in 1878.

AN important international exhibition of photographic works and appliances is being organised at Ghent by the Syndical Chamber of Industrial Arts. It is to be held next September, and an appeal is made to all photographers, artists, and amateurs to contribute. It will include all branches of photography, for it is meant to show the extensions of which the art is capable. New applications and new processes will therefore find special favour.

UNDER the title of *Le Monde vu par les Artistes*, an artistic geography, illustrated with numerous views and maps, is being brought out in cheap form in weekly numbers by the firm of Ch. Delagrave in Paris. It is edited by René Menard.

A MONUMENT of high artistic pretension has lately been raised at Père-la-chaise over the grave of the Comtesse d'Agout, better known under her *nom de plume* of Daniel Stern. M. Chapu, the sculptor of the much admired monument to Henri Regnault, has again been the artist called upon to design a memorial to genius. Three symbolical figures of the size of life are grouped against a pyramid supporting the bust of the deceased Countess, the names of her principal works being inscribed on its sides.

THE *Magazine of Art* still continues to provide capital illustrations and pleasant instructive talk on matters artistic. The "Living Artist" dealt with in the May number is Hubert Herkomer, and a full-page engraving of his glorious picture of *Life, Light, and Melody* forms the frontispiece of the number. One of the attractions offered by this journal is the sketches it gives of the "Pictures of the Year." Some from the present exhibition of the Royal Academy have already been engraved.

IT is with regret that we see recorded in the French papers the death of M. Edmond Duranty, an art critic who has become known even in England by his outspoken and clever criticisms in the *Gazette des Beaux-Arts*, *La Vie Parisienne*, the *Temps*, and other journals. M. Duranty, who was born in 1833, began his literary career by founding a Review called *Le Réalisme*. It had only a short duration, but the principles in art that it advocated have been adhered to by M. Duranty through all his writings. He has, indeed, always been known as the enthusiastic exponent of naturalism in art in contradistinction to academic tradition; and it is greatly

owing to his fervour in spreading his convictions that the doctrine of naturalism has gained so powerful a hold over many of the best French artists of the present day. To the general public who care not for matters artistic, M. Duranty is best known as a novelist, one of his novels, *Le Malheur d'Henriette Gérard*, having had considerable popularity. He has written several others, some of which were published in the *Temps* and the *Revue de France*, but it is on his cultured criticism of art that his chief distinction as a writer is founded.

THE STAGE.

"THE DANITES."

The Danites has not been very sympathetically received by the critics, but it is worth seeing, and the public is showing that it thinks so. Dealing, as the daily papers have all told us before now, with the endeavours of two men, representative of an entire company and of a principle, to assassinate the remaining members of a doomed race, it is at some disadvantage in assuming that English audiences are more familiar than they really are with the peculiar conditions and incidents on which it is founded. That is immediately intelligible in Chicago and St. Louis which is a little obscure in the English Midlands or in the suburban neighbourhood of the New River. On the other hand, the piece, from beginning to end, has a freshness for English folk which it cannot have for American. In America the piece may be a melodrama founded on a remarkable and discreditable chapter of history—the existence of a *Vehmgericht* in the farthest West. In England it may be a melodrama lightened by the humours of the log cabin and the drinking saloon. Our own native melodrama has accustomed us to the exhibition of the various stages of boozing, and no English low comedian can be pronounced accomplished—hardly even can he be pronounced popular—if he is not skilled in the representation of a man in his cups. But it is a new thing to see a Yankee, with good-humoured eyes and cheery step, trip across to the bar of a drinking saloon and demand "some more poison;" and it is new, moreover, for an excellent opportunity for the exhibition of the effects of *delirium tremens* to be so sparingly used as it is in the case of the sailor from Boston who has been disappointed in his love. Mr. E. M. Holland, who represents the first of the two personages we have been naming, is a most genial and intelligent comedian, though why he should bear so close a resemblance both to Lorenzo de' Medici and to a modern publisher it is by no means for us to say. Mr. W. E. Sheridan is the actor whose discretion in the matter of *delirium tremens* is bravely calculated to disappoint the gallery. In the camp it seems that the personage he enacts was called "the Parson," "because he could out-swear any man in the camp." But again at the theatre he is a model of discretion; the oath in which he finds the greatest amount of relief—"Darn my boots!"—being, it must be admitted, one which would not seriously compromise a divine.

Considered critically, it is fair enough to say that *The Danites* is not a very complete success. There is but little show of such poetical power as Joaquin Miller—its author—

displayed in the *Songs of the Sierras*. The motives of the murderers are not sufficiently analysed to constitute "a psychological study" such as that by means of which Mr. Irving first seized the attention of the public of London. And, bringing our expectations down to the level of the melodrama—a form of dramatic composition and performance, let us say in passing, from which it is by no means so certain that art need be banished—it must be confessed that the literary purveyors for the Porte St.-Martin and the Ambigu would have known better how to arouse interest and to retain and deepen it. We speak, of course, of interest of the intense and serious kind. As it is, people's sympathies go well enough with the persecuted Nancy Williams, the last of her race, and with her deliverer and protector, Sandy Mc'Gee. And sympathetic laughter follows the performances of the wild brotherhood who assemble in the drinking saloon, and to whom good spirits and "the glorious climate of California" supply the place of everything that in the eyes of wholly artificial Londoners makes existence worth having. Quite excellently arranged, and of seeming spontaneity besides, is all this presentation of the distant life and its wild ways, its rough cheeriness, its leaven of chivalry. The stage grouping is of the most expressive kind. The comic interest—the local characterisation—is not closely welded to the serious. The construction of all this is rather loose indeed. But we forgive it for its freshness.

Of the acting of two of the performers something has been said already. But on Mr. McKee Rankin rests the burden of the piece, and it must, anyhow, be a burden to represent a character who is described to us as an ideal in the rough, "a painter, a sculptor, a mighty moralist, a man who could not write his own name." The perfections of this personage incline one at first to be a little sceptical with regard to him. His moralities, it is true, are beyond a doubt. But one is surprised that he should have been able to teach himself to paint while unable to teach himself to write, until one reflects that after all he may have only painted like a rejected of the Academy on his way to the Albert Hall, in which case it may turn out not to have been remarkable that he was not a writer to boot. However this may be, the character is played with a great deal of homely charm by Mr. Rankin, who does not at all insist upon the "Admirable Crichton" qualifications of the personage, but upon his healthy humanity, his cheerfulness of demeanour, and his excellence of heart. Mrs. McKee Rankin plays dramatically the part of the pursued woman. And Miss Cora Tanner, as a young schoolmistress, who becomes in good time the wife of the hero, and the secret protectress of Nancy Williams, fills her character thoroughly. She is not very noticeable in the earlier scenes—is wholly without pose or forced effect—but as the play proceeds one sees there must be some art behind so much simplicity. Objection has been taken in influential places, and in exceedingly well-written criticisms, to the sentiment of the play. It seems that the inhabitants of the neighbourhood of the New River may deem themselves wronged when a

dramatist exhorts them to virtue, or does other than scoff at good principles. It seems that the assumption that anyone can possibly be actuated in any action of life by any motive higher than that of self-interest is an offence to common-sense, which Islington is called upon to resent. But to think so is an affectation of the moment—nursed, it may be, by the fashionable paradox of Mr. Gilbert—and, like other affectations, it will pass away.

FREDERICK WEDMORE.

STAGE NOTES.

School has been revived at the Haymarket Theatre, no new comedy of much merit having apparently been forthcoming. It is now some years since *School* was played last. It is not the most original of its author's productions, for it owes much to a German source, but the charm of familiar style is Robertson's own, and something of the homely incident is also his. The revival of the little play at the Haymarket seems to have been unattended with any of the mischances that befel the management on the occasion of the revival of *Money*. Such of the public as chooses to pay for stalls has settled down to the absence of the pit, and *School* is performed to the satisfaction of the moneyed class, who are no doubt the best patrons of the drama. Mr. and Mrs. Bancroft appear as they did of old at the Prince of Wales's; Miss Marion Terry acts the ingenuous heroine first of all presented by Miss Carlotta Addison; and Mr. Arthur Cecil, always thoughtful, as well as careful and polished, enacts the aged nobleman whom Mr. Hare was wont to represent so funnily. *School* is elaborately furnished with set scenes, which, in the absence of that clever American device written of in a daily contemporary, must necessarily take some time to change, and therefore tend somewhat to weaken the interest which the audience takes in the play.

MDME. MODJESKA has appeared at the Court Theatre. It was, of course, impossible to suspend the evening performances of *The Old Love and the New* during what is understood to be one of the most successful runs in London; but the fame of the foreign actress and her positive success at a first representation reduce to a minimum the disadvantage of afternoon performances. Besides, these take place now daily at the Imperial, and are no longer strange to the public. At the same time, there must always remain some portion of the public debarred from attending them. Lawyers, for instance, who are always understood to be among the warmest patrons of the drama and of the drama's professors, are clearly unable to frequent afternoon representations; and doctors, if they see Modjeska in *Heartsease* or Miss Litton as Rosalind, must do so at the peril of their reputation for possessing a good practice. The Bob Sawyer of the day can no more venture to attend an afternoon theatre than to attend church, unless, indeed, it be with careful instructions that he shall be called out in the middle. The fashionable world, however, and a host of unoccupied people in the more remote suburbs, have both leisure and inclination to go to the play between lunch and tea time, and their enthusiasm about Mdme. Modjeska will at all events have been occasioned by a serious artist. An adroit adaptation of *La Dame aux Camélias*—such as we find Mr. James Mortimer's to be—is inevitably interesting; and the actress to whom the principal rôle falls has grace, power, tact, and what our ancestors used to call "sensitivity." Moreover, she is sufficiently well supported. But we trust we shall be allowed to see the lady in one of her great classical or accepted rôles before she

leaves London. Is it impossible to see her as Juliet if we cannot see her as Cleopatra? But it is undoubtedly the latter that is the most to be desired, and we trust its accomplishment may be feasible.

It seems that our knowledge of the "palmy days" is to close with a lesson in *The Castle Spectre*. The public has taken to *George Barnwell* more seriously than Mr. Hollingshead expected, and it now shares the honours with an admitted burlesque every evening at the Olympic. Did Mr. Hollingshead, when he expected it to prove so wholly ludicrous, forget that until within the last few years it was played habitually on Boxing Night at certain provincial theatres as a *lever de rideau* to the pantomime?

MUSIC.

RECENT CONCERTS.

THE first piece in the programme of the fifth concert of the Philharmonic Society (Wednesday, April 28) was a concert overture by Mr. Charles E. Stephens, entitled *A Recollection of the Past*. In addition to this title, we are informed that "the design of this work was prompted by a salient incident in the life of the author, in which happiness was unexpectedly tinged by a transient cause for regret." The "salient incident" is not revealed; hence, it is programme-music *minus* the programme. The themes are pleasing and well contrasted, the form is thoroughly orthodox, and the workmanship shows the hand of a skilled and accomplished musician. The work was well received, and Mr. Stephens appeared on the platform to acknowledge the welcome accorded to his overture. A very charming concerto in E flat for two pianofortes by Mozart was admirably played by Mdle. Anna Mehlig and Mr. Walter Bache. This double concerto was first publicly played on November 24, 1781, by Mdle. Anernhammer and the composer. M. E. Sauret gave a very good performance of Max Bruch's violin concerto in G minor. His quality of tone is not rich, his intonation is at times faulty, but he has great technical skill and plays with refinement and energy. The programme included Mendelssohn's Scotch symphony and Cherubini's overture *Les Abencerages*. Miss Lillian Bailey and Herr Henschel were the vocalists. Señor Sarasate had been announced to appear at this concert, but failed to keep his engagement. His secretary writes from Valencia: "We have met with such extraordinary enthusiasm that Sarasate has resolved not to come this year to London." Such conduct needs no comment.

Mr. Ganz gave his second orchestral concert at St. James's Hall on Saturday, May 1. M. Saint-Saëns was the pianist, and performed in a most brilliant manner his first concerto in D major (op. 17). It is one of the composer's early works, and is not a great composition, but it contains much that is pleasing, and the piano part is showy. The middle movement (*andante sostenuto*) is very graceful. One of the most interesting features of the concert was a performance of M. Saint-Saëns' very clever and effective variations on a theme of Beethoven for two pianos by Mdme. Montigny-Rémaury and the composer. The ensemble playing was perfect, and both pianists well deserved the applause bestowed on them. The programme included Beethoven's pastoral symphony, which was not given with the requisite polish and delicacy; Mendelssohn's *Midsummer Night's Dream*; and an overture (*Penthesilea*) by Goldmark, performed for the first time in England. Mrs. Osgood was the vocalist. Mr. Sims Reeves had been announced, but was unable to appear.

Messrs. Ludwig and Daubert gave their first concert of chamber music (fourth season) at the

Royal Academy on Saturday evening. The programme was an interesting one, including Schubert's quintet for strings in C (op. 163), Beethoven's quartet in E flat (op. 127), and Brahms' sonata in G major (op. 78). The quintet was played with precision and delicacy. The Beethoven and Brahms, far more difficult, were rendered in a careful and intelligent manner. Herr Bonavitz was the pianist, Miss Henrietta Nunn the vocalist, and Mr. Zerbini the conductor.

Mdme. Anna Mehlig gave a morning concert at St. James's Hall on Tuesday, May 4. She played with Herr Straus the Kreutzer sonata. Of her solos, the most satisfactory were Bach's organ prelude and fugue in A minor, arranged by Liszt; *La Campanella*, a brilliant but common piece by Liszt; and Rubinstein's well-known *Valse Caprice*. She gave two *Etudes* of Chopin, Nos. 1 and 3, from op. 25. The second was well played, but her reading of the first appeared to us very heavy and exaggerated. Nor were we altogether pleased with her interpretation of Chopin's *Fantaisie-impromptu* and Schubert-Liszt's *Soirées de Vienne* (No. 6). Schumann's *andante* and variations for two pianofortes was cleverly but somewhat coldly rendered by Mdle. Mehlig and Mdme. Haas. Mdme. Sophie Löwe was the vocalist, and gave some pleasing songs by Franz, Brahms, and Schubert, accompanied in a most able manner by Mdle. Mehlig.

J. S. SHEDLOCK.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Fleet Street, and Catherine Street, Strand.

Copies of the ACADEMY can also be obtained every Saturday Morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

PARIS.

Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.

Doors open at 1.45. Play at 2.15.
Box-office open daily from 11 to 5.

ROYALTY THEATRE.

Lessee, Mr. EDGAR BRUCE; Manager, Mr. W. A. HARWARD.
This Evening, at 8, THE MIMIS.
Followed, at 8.45, by THE CUPID.
Messrs. Charles Ashford, E. Strick, S. Wilkinson, David Fisher, Jun., Fred Irving, and Charles Grove; Mesdames Amalia, Kate Levier, Marie Williams, Katie Lee, Maria Harris, Lillian Lancaster, Alma Stanley, Phoebe Don, and Rose Cullen.
The Burlesque produced under the direction of Mr. CHARLES HARRIS.
Box-office open from 11 to 5. No booking fees.

THE SOLICITORS' JOURNAL.

Established 1837. Published every Friday. Price 6d.

Of the general contents of the JOURNAL the following statement will afford some idea :—

CURRENT TOPIOS.—Comments on the legal events of the week.

LEADING ARTICLES.—Essays upon branches of law and matters of professional interest.

RECENT DECISIONS.—Explanatory and critical disquisitions on recent cases, pointing out their relations to the previous law.

CASES OF THE WEEK.—Short reports of cases decided during the previous week; during the Long Vacation, reports are given of cases before the Vacation Judge.

REVIEWS.—New legal works are carefully noticed in this department.

GENERAL CORRESPONDENCE.—**NEW ORDERS.**—All new orders and rules are given, sometimes before they can be obtained by the public.

COURTS.—Special reports are furnished of cases decided by the Railway Commission, and of Solicitors' cases; selected cases in the County Courts are also reported.

PARLIAMENT AND LEGISLATION.—**LEGISLATION OF THE YEAR.**—Under this head careful criticisms are given during the Long Vacation of the legislative results of the session.

APPOINTMENTS AND OBITUARY.—**SOCIETIES AND INSTITUTIONS.**—Full Reports of the proceedings of the Law Societies.

A Careful Summary is given of all the Legal News of the week, and Special Attention is bestowed on Furnishing Early Copies of all Court Papers.

The First number of Volume XXIV., published October 31st, 1879.

ANNUAL SUBSCRIPTIONS.

SOLICITORS' JOURNAL, 28s. ; by post, 28s., when paid in advance :

WEEKLY REPORTER only, £2 12s., post-free, when paid in advance. Single Numbers, 1s.

OFFICE : 52, CAREY STREET, LINCOLN'S INN.

THE NEW LITERARY PAPER.

THE PEN :

A JOURNAL OF LITERATURE.

Without any disposition to underrate existing Literary Journals, the founders of *The Pen* believe that there is a distinct place for a new paper such as that which they now submit to the judgment of the public.

The Pen will give an almost exclusive attention to Letters, and there will, therefore, be space in its pages for such full quotation of the representative passages of important works as will make *The Pen* a permanently interesting reflex of our Literature.

Original Essays on Literary Subjects, which, it is hoped, may be light, yet not unlearned; Biographies of eminent Authors; and Poems will be given, week by week. And if an effort is made to please the most fugitive fancy by paragraphs of Literary Table-talk, entire care will be taken that the reader is not amused at the expense of any private or professional interest whatever.

Another distinct and attractive feature of *The Pen* will be the frequent reproduction of Drawings from some of the more memorable of the illustrated books under review.

So far the general plan of the new paper. The details involved in carrying it into effect must be the subject of performance, not promise. Suffice it to say, that we believe the best and most difficult function of the critic to be the discovery of merits rather than of defects; that, while we shall praise nothing that is not good for the sake of being pleasant, we shall never be tempted into injustice for the mere sake of being smart; and that, if a book be faulty, we shall say so in language which is used face to face among gentlemen—especially avoiding, in the case of young writers of talent, such pitiless verdicts as have destroyed some lives, and warped many.

The Pen will be published every Saturday, and will give as early a judgment on all books coming under its notice as is consistent with the candid consideration of them; and its criticism may be accepted by authors and readers as the conscientiously expressed opinion of cultivated men and women, uttered without favour and without fear. It is, moreover, with the earnest intention to be in all things straight, honest, and thorough, and with an avowed wish that our national Literature should express pure thoughts in pure English, that *The Pen* is now grasped by experienced editorial fingers.

The first number of "THE PEN" will appear on Saturday, the 22nd May.

"THE PEN," WEEKLY, PRICE TWOPENCE.

Office : 22, Tavistock street, Covent-garden, W.C.

NOTICE.

THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Maud's Library).

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Colour Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are :—

1st. The absolutely facsimile nature of the result.

2nd. Its cheapness for small Editions of 500, 500, &c.

3rd. The Prints being direct on the Paper there is an absence of all coloring and that disagreeable effect inherent to all Mounted Prints.

* * For Terms and Specimens apply to the Manager.

Now ready, price One Guinea.

"THE PIED PIPER OF HAMELIN." Illustrated by Jane E. Cook. Second Edition (1879). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."

Academy, January 3th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all the characters."

To adorn the Walls of Home at lit'e cost with Artistic Masterpieces, visit the AUTOTYPE FINE-ART GALLERY, 531, OXFORD STREET.

General Manager, W. B. BIRD. Director of Works, J. H. SAWYER.

CLASSES for the STUDY of the LIVING

MODEL daily, at 16, North Audley-street, W. For Ladies only.—Apply for terms to Miss DIBBY WILLIAMS.

ROUND EUROPE with the CROWD. By J. MAGGS.

London: WM. H. ALLEN & CO., 13, Waterloo-place, S.W.

13, Great Marlborough-street.
HURST & BLACKETT'S
NEW WORKS.

THE VILLAGE of PALACES; or, Chronicles of Chelsea. By the Rev. A. G. L'ESTRANGE. 2 vols., crown 8vo, 21s.

"This is a work of light antiquarian, biographical, and historical gossip. Mr. L'Estrange is inspired by interest in his subject. The names of Chelsea celebrities, dead and living, including poets, novelists, historians, statesmen, and painters, will be found thickly clustering in these volumes, to which we refer the reader."—*Daily News*.
"One of the best gossiping topographies since Leigh Hunt's 'Old Court Suburb.' So many persons of note have lived in Chelsea that a book far less carefully compiled than this has been from historical records and traditions could not fail to be amusing."—*Daily Telegraph*.
"Every inhabitant of Chelsea will welcome this remarkably interesting work of the Rev. A. G. L'Estrange. It sheds a flood of light upon the past; and, while avoiding the heaviness of most antiquarian works, gives, in the form of a popular and amusing sketch, a complete history of this 'Village of Palaces.'"—*Chelsea News*.

ROYAL WINDSOR. By W. HEP- WORTH DIXON. Vols. III. and IV., demy 8vo, 30s. Completing the Work. Second Edition.

"Readers of all classes will feel a genuine regret to think that these volumes contain the last of Mr. Dixon's vivid and lively sketches of English history. His hand retained its cunning to the last, and these volumes show an increase in force and dignity."—*Athenaeum*

CONVERSATIONS with DIS- TINGUISHED PERSONS during the SECOND EMPIRE, from 1861 to 1868. By the late NASSAU W. SEYMOUR. Edited by his Daughter, M. C. M. SEYMOUR. 2 vols., demy 8vo, 30s.

"It is impossible to do justice to these 'Conversations' in a brief notice, so we must be content to refer our readers to volumes which, wherever they are opened, will be found pregnant with interest."—*Times*.

THE MARCHIONESS of WEST- MINSTER'S DIARY of a Tour in SWEDEN, NORWAY, and RUSSIA in 1837. 1 vol., 8vo, 15s.

LODGE'S PEERAGE and BARON- ETAGE for 1880. Under the Especial Patronage of HER MAJESTY. Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the Arms beautifully engraved, 31s. 6d., bound gilt edges.

THE NEW NOVELS.

MISS BOUVERIE. By Mrs. Moles- WORTH, Author of "Hathercourt Rectory," "The Cuckoo Clock," &c. 3 vols.

POOR ZEPH. By F. W. Robinson, Author of "Grandmother's Money," &c. 3 vols.

POET and PEER. By Hamilton AIDR, Author of "Peurduckee," &c. 3 vols. Dedicated to LORD LYTTON.

"'Poet and Peer' is a novel of unusual merit, the work of a cultivated man of the world, who describes what he has himself seen. It is both in intention and execution the best of Mr. Aidr's novels, and will interest and amuse every reader who takes it up."—*Athenaeum*.
"A thoroughly readable and attractive novel."—*Morning Post*.
"If Mr. Aidr's aim in writing his 'Poet and Peer' was to produce a clever, readable novel, he has succeeded in it remarkably well. In this entertaining and interesting book there are numerous cleverly and carefully sketched figures of modern life, and the arrangement of the story is artistic and well composed."—*Daily News*.

THREE RECRUITS, and the GIRLS THEY LEFT BEHIND THEM. By JOSEPH HATTON. 3 vols.

"Three recruits' is likely to surprise even Mr. Hatton's admirers by reason of the powerfully dramatic character of its plot, the excellence of the language, and its remarkable picturesqueness. It is one of the best novels of the season, and is sure to become exceedingly popular."—*Morning Post*.

"A vigorous and spirited novel, which will well maintain Mr. Hatton's established reputation. The story is full of stirring incident, and very cleverly put together."—*John Bull*.

FOR HER DEAR SAKE. By Mary CECIL HAY, Author of "Old Myddleton's Money," &c. Second Edition. 3 vols.

"It is very seldom that a novel has appeared more deserving of popularity than this unusually interesting story."—*Post*.
"For Her Dear Sake" is a decided success."—*John Bull*.
"Miss Hay undoubtedly has advanced considerably in this her latest contribution to the novels of the day."—*Sunday Times*.

LILY of the VALLEY. By Mrs. RANDOLPH, Author of "Gentiana," &c. 3 vols.

"A very pretty and romantic tale."—*Examiner*.
"A very excellent novel. The plot is marvelously ingenious, and is worked out with singular skill."—*Sunday Times*.

A SYLVAN QUEEN. By the AUTHOR of "RACHEL'S SECRET," &c. 3 vols.
"A picturesque and very pleasing story."—*Athenaeum*.

MERVYN O'CONNOR. By the EARL OF DESART, Author of "Kalverdale," &c. 3 vols. [Just ready.]

Cheap Edition of SIR GIBBIE. By GEORGE MACDONALD, LL.D. Forming the new volume of "HURST & BLACKETT'S STANDARD LIBRARY." Price 5s., bound and illustrated.

"This book has power, pathos, and humour. There is not a character which is not life-like."—*Athenaeum*.

TRÜBNER & CO.'S LIST.

BY THE AUTHOR OF "UNCLE SILAS," &c.

THE PURCELL PAPERS.

By the late J. **SHERIDAN LE FANU**, Author of "Uncle Silas," "The House by the Churchyard," &c.
3 vols., crown 8vo.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE." NO RELATIONS.

By **HECTOR MALOT**. Translated by the Author of "The Hon. Miss Ferrard," &c. 3 vols., crown 8vo.

"An extremely fascinating story, written with unflagging force, and as full of genuine pathos as of graceful and delicate descriptions. . . . This novel fully deserves the honour that has been done it."—*Blackwood's Magazine*.

"Full of striking and effective incidents, and contains some exceedingly powerful situations. . . . All the details are vividly picturesque."—*Globe*.

"'No Relations' gained M. Malot the Monthyon Prize, and deserved to gain it. It is a story consistently excellent in all its characteristic features."—*Saturday Review*.

HONOR CARMICHAEL.

By **HENRIETTA A. DUFF**, Author of "Virginia: a Roman Sketch." In 2 vols., crown 8vo.

"It would be impossible to do anything but speak most highly of this book, which must have a wide circulation."—*Graphic*.

"This story is skilfully narrated, and well worth reading. The plot is ingenious, and the hero admirably drawn. Honor, the heroine, is a powerfully conceived character, who soon commands respect and interest."—*Morning Post*.

TWO WOMEN.

By **GEORGINA M. CRAIK**. 3 vols., crown 8vo.

LONDON:

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.

Strengthens the Nerves and muscular System.

Promotes Appetite and Improves Digestion.

Animates the Spirits and Mental Faculties.

Thoroughly restores the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A

valuable combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fullness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 34 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTS

THROUGHOUT on

MOEDER'S HIRE SYSTEM.

The original, best, and most liberal.

And all other goods in great variety.

F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862

MR. G. H. JONES,

Surgeon-Dentist, 57, Great Russell Street, London,

Will be glad to forward his Pamphlet on PAINLESS DENTISTRY, free, enclosed by Post, which explains the most unique system of the adjustment of ARTIFICIAL TEETH without pain, to which the following Testimonials refer. Consultation free 10 to 5.

"MY DEAR SIR,

"Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which renders my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services you are at liberty to use my name.

"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

PROFESSOR GARDNER, late of the Royal Polytechnic Institution, in a certificate to Mr. G. H. Jones, Surgeon Dentist, of 57, Great Russell Street, London, says:—"I have examined and tested your Painless System of adjusting Artificial Teeth; it is quite perfect, and is the most successful application of scientific laws for securing a natural wear and comfort yet introduced."

"January, 1877.

GOLD MEDAL PARIS EXHIBITION.

Aoidity of the Stomach, Heartburn, Headache, Gout, and Indigestion,

And as the safest Aperient for Delicate Constitutions, Ladies, Children, and Infants.

DINNEFORD'S MAGNESIA.

CLARENDON PRESS PUBLICATIONS.

ITALY and her INVADERS, 376—476. By Thomas HODGKIN, B.A., Fellow of University College, London. 2 vols., 8vo, with Maps and Illustrations, 32s. [Now ready.]

GEODESY. By Colonel A. R. Clarke, C.B., Royal Engineers, F.R.S. 8vo, 12s. 6d. [Now ready.]

PROF. STUBBS'S CONSTITUTIONAL HISTORY of ENGLAND. Library Edition. 3 vols., 8vo, £2 8s.

. The Book will still be kept in 3 vols., crown 8vo, each 12s.

"We regard this work as the most valuable contribution to the knowledge of English constitutional history and law of our generation. So exhaustively and accurately does Professor Stubbs treat his subject that it seems hardly possible that anyone can ever attempt to cover his ground again."—*Westminster Review*.

A COMPLETE CONCORDANCE to the ODYSSEY and HYMNS of HOMER. To which is added a CONCORDANCE to the Parallel Passages in the ILLIAD, ODYSSEY, and HYMNS. By H. DUNBAR, M.D. 4to, 21s. [Now ready.]

THESAURUS SYRIACUS: Collegerunt Quatremare, Bernstein, Lorschach, Arnoldi, Field. Edidit R. PAYNE SMITH. Fasc. V., completing Vol. I. 4to, 21s. Vol. I., 4to, cloth, £5 5s. [Now ready.]

ELEMENTS of JURISPRUDENCE. By T. E. HOLLAND, D.C.L., Chichele Professor of International Law and Diplomacy at Oxford. 8vo, 10s. 6d. [Now ready.]

THE ANTI-PELAGIAN TREATISES of ST. AUGUSTINE. With the Acts of the Second Council of Orange. With Introduction by the Rev. W. W. BRIGHT, D.D., Regius Professor of Ecclesiastical History, Oxford. Crown 8vo, 9s. [In a few days.]

EXTRACTS from HERODOTUS. Edited, with Introduction and Notes, by W. W. MERRY, M.A. Extra fcap. 8vo, price 2s. 6d.

SACRED BOOKS of the EAST. Translated by various Oriental Scholars, and Edited by Professor MAX MÜLLER. New Volumes to be published shortly:

Vol. IV.—THE ZEND-AVESTA. Part I. The Vendidad. Translated by JAMES DARMESTETER. 8vo, 10s. 6d.

Vol. V.—PAHLAVI TEXTS. Translated by E. W. West. Part I. The Bundahis, Bahman Yast, and Shâyast Lâ-Shâyast. 12s. 6d.

Vol. VII.—THE INSTITUTES of VISHNU. Translated by JULIUS JOLLY. 10s. 6d.

GOETHE'S IPHIGENIE auf TAURIS. Edited, with Introduction, &c., by Dr. BUCHHEIM. Extra fcap. 8vo, 3s.

SELECT ORATIONS of CICERO. Edited, with Introduction, Notes, &c., by J. B. KING, M.A. Extra fcap. 8vo, 2s. 6d.

A LATIN DICTIONARY, founded on Andrew's Edition of "Freund's Latin Dictionary." Revised, Enlarged, and in great part Rewritten, by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D., Professor of Latin, Columbia College, New York. 4to, price 31s. 6d.

"The improvements are such as to defy quotation, both from their length and their intrinsic character. New words are added, and new and most happy quotations are introduced; meanings are more carefully differentiated and arranged. The etymological notes certainly far surpass in accuracy and fulness anything as yet attempted in any dictionary."—*Athenæum*.

"The distinguished American scholars, under whose care it appears, have spared no time or labour to make the book . . . as representative of the present state of Latin scholarship as Liddell and Scott of Greek."—*Guardian*.

"Everything that the most advanced student can fairly require will be found in these pages. . . . The work is evidently one of first-rate merit, and it is sure to command, as it deserves, an extensive circulation."—*British Quarterly Review*.

Oxford: Printed at the CLARENDON PRESS; and Published by MACMILLAN & CO., London, Publishers to the University.

MESSRS. MACMILLAN & CO.'S PUBLICATIONS.

Burlington House.

BOOKS on ASTROLOGY, ALCHEMY,

WITCHCRAFT, on SALE Catalogues gratis. BOOKS BOUGHT, and the utmost value given in Cash or Exchange. MANUSCRIPT SERMONS and good LITHOGRAPHS on SALE: specimens by post.

Apply THOS. MILLARD, Bookseller, 79, St. Paul's-churchyard, London.

THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Mudie's Library).

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype Process, and the Society's apartments in Essex-street House, daily from 10 to 4 (Sundays 10 to 2). The prices to the public are for Vol. XLV. Part II., £1 16s., and for Vol. XLVI. Part I., £1 1s.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are:—

1st. The absolutely facsimile nature of the result. 2nd. Its cheapness for Small Editions of 250, 500, &c. 3rd. The Prints being direct on the Paper there is an absence of all coaling and that disagreeable effect inherent to all Mounted Prints.

* * For Terms and Specimens apply to the Manager.

Now ready, price One Guinea.

"THE PIED PIPER OF HAMELIN." Illustrated by Jace E. Cook. Second Edition (1879). Published with the kind permission of Mr. Browning.

Saturday Review, December 27th.—"Mrs. Jane E. Cook has richly and fancifully illustrated Mr. Browning's charming poem."

Academy, January 8th.—"The artist has not neglected the opportunity of portraying beauty and a character that is curiously comic. She has entered thoroughly into the spirit of the story told so brightly by Mr. Browning, and has brought invention to bear upon her work."

Standard, December 17th, 1879.—"There is life and vigour in all the characters."

To adorn the Walls of Home at little cost with Artistic Masterpieces, visit the AUTOTYPE FINE-ART GALLERY, 531, OXFORD STREET.

No. 419, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Francis Deák, Hungarian Statesman. A Memoir, with a Preface by Mountstuart E. Grant Duff, M.P. (Macmillan.)

THE anonymous author of this book has made a valuable contribution to the literature of the Eastern Question. As he observes, the brilliant talents of Kossuth long caused the more solid mental gifts of his great contemporary, Deák, to be overlooked; and only the extraordinary outburst of popular feeling in Hungary at the obsequies of the latter in 1875 made the world understand that a great man, in the truest acceptance of the term, had passed away. Since then Deák has been the subject of more than one Western biography. Most of these, however, have been published in Paris, and it is therefore a matter of congratulation that a writer has been found to put Deák's career before the public in an English dress; though it is evident that, although a thorough master of our language, it is not an Englishman who speaks to us. Deák's career falls into five parts, distinguished in the work before us under the names of the periods of "Reformation," "Revolution," "Reaction," "Revival," and "Restoration." In the first of these he is found as the trusted counsellor and finally as the colleague of the patriotic Ministers and statesmen who gave Hungary the reformed Constitution of 1848, accompanied with a great body of social and political reforms which struck down the feudal and aristocratic system whereby the Hungarian people had been made to exist for the benefit of the Hungarian magnates. In the second the lawyer-statesman disappears from the arena, unwilling to have recourse to arms, even under the grossest provocation, and trusting to the final triumph of the ideas of justice and right founded upon law and precedent. In consequence of the adoption of this attitude, when the storm of the revolutionary period was over, and, of the heroes of the War of Independence, some were dead and the others in exile, Deák was able to remain in his country, closely watched indeed by Austrian officials, anxious to have some excuse for sending him, if not after Count Bathanyi to the scaffold, at least after Count Andrássy over the frontier; and still more closely watched by his own countrymen, who regarded him as the sole remaining anchor of their political salvation. The present volume ably relates how Deák from 1850 to 1867 resisted the stress alike of the Bach system, which attempted to triumph over Hungary by a mixture of military intimidation and bureaucratic pressure, and of the Liberals of the Rechberg and Schmerling type, who

would have tempted him off the safe ground of the historical rights of Hungary into the quicksands of a brand-new Constitutionalism evolved by Viennese *doctrinaires* out of their own inner consciousness. The attitude of the Hungarian statesman brought upon him at this stage of his career the reproaches of many foreign Liberals; among others, oddly enough, of Englishmen, some of whom seemed unable to understand the position of a statesman who entrenched himself on the safe ground of legal right, and preferred it to the schemes of Constitution-mongers, of whose work it may but too often be truly said that it to-day is and to-morrow is cast into the oven. Lord Brougham, with characteristic violence and inaccuracy, made himself the mouthpiece of these criticisms. Mr. Grant Duff, in the Introduction to this volume, happily compares the attitude of Deák to that of Hampden; nor can the reader fail to be constantly reminded of the vindication of that famous man and of the American colonists, his imitators, by Burke.

"Would twenty shillings," he asked, "have ruined Mr. Hampden's fortune? No! But the payment of half twenty shillings, on the principle it was demanded, would have made him a slave. It is the weight of that preamble of which you are so fond, and not the weight of that duty, that the Americans are unable and unwilling to bear." (Speech on American taxation, April 19, 1774.)

The Bach system gave way after Solferino.

"As the victories of Radetzky in 1848 had once sealed the fate of constitutionalism in Austria, so in 1859 the news of his defeat came like the first dull crash of melting snow that heralds the break up of the long frost-bound winter and the advent of spring and freedom" (p. 134).

The final crash came after Sadowa. Deák, by knowing how to wait, had become master of the situation. The historical rights of Hungary, including the legislation of 1848 and the celebrated Fourth Act proclaiming the responsibility of Ministers and the appropriation of accounts, were recognised by the Emperor, and the dual system under which the Austro-Hungarian empire lives to-day sprang into existence. Of this system a sketch was recently given in these columns. Deák was recognised as the father of his country, while Kossuth remained in a self-imposed and impracticable exile.

Deák has been reproached with having, at this juncture, deserted the champions of the State rights of Bohemia and other countries, with whom he had waged a joint warfare alike against Bach and against Schmerling; but, as the author of this book observes,

"the agreement between Hungary and the great non-German provinces of Austria was of the negative kind, founded upon a common dislike of the existing system, rather than upon any positive harmony of opinion as to the State policy which should be adopted in its stead" (p. 222).

The acute and practical mind of Deák probably also recognised that the claims of Bohemia were not only not so clear as those of Hungary, but also, through the predominance of the German element in that kingdom, especially in the towns, not so easy to support in argument as those of Hungary,

where the German and the Magyar stood together. Nor can the so-called "Nationalist" party in the German half of the empire be said to have materially suffered. They may think they might have obtained more by wrecking the dual system. It is much more probable that they would have obtained a great deal less, as the dual system was the father, not merely of Hungarian, but also of Austrian liberty, including the grant of considerable powers to the provincial Landtags, and the fullest freedom of discussion. Dualism also has, perhaps, been safely paving the way for federalism. Hungary, it is well known, has in Croatia a little Bohemia of its own; and there is no subject upon which Hungarians have been more justly reproached than their intolerance with regard to this *pars adnexa* of the kingdom and the other non-Magyar nationalities of the country. It is one of the most creditable features of the consistent career of Deák that in him these bigoted proceedings found not only no supporter but an opponent. The laws of 1843, making the use of the Magyar language compulsory in the debates of the Diet and of the county assemblies, in some branches of the administration, and in public instruction, were passed during his temporary absence from the Diet, and in opposition to his well-known opinions and to those of the most distinguished Hungarian statesmen of the day, Szechenyi, Eotvos, Apponyi, and Mailath. One of the first acts of the restored Legislature was, at his instigation, to repeal these laws so far as they affected the county assemblies (p. 279); and "in view of the palpable fact" that Croatia wished to loosen the bond that attached her to Hungary, he made the famous offer to her representatives of the "blank sheet" on which to inscribe their own conditions for maintaining the connexion with Hungary. The result was the "Ausgleich," one of the most important provisions of which was the right of the Croatian deputies to address the House in their own language (p. 285). There is reason, however, to fear that the majority of the Hungarian Diet has not grown wiser in these matters, and that the unreasoning violence of the "ultra-National Magyar party" (p. 151)—which, at more than one critical moment, almost ruined the statesmanship of Deák during his life—may yet destroy his work after his death by want of foresight and a refusal to recognise existing circumstances.

The Hungarians have been called "a nation of hussars" and also the "Englishmen of the East." The future of their country depends in no small measure upon which element, the Englishman or the hussar, triumphs over the other. The occupation of Bosnia and the Herzegovina has, since Deák's death in 1875, added new and important factors to the already complicated problem of the future of the Austro-Hungarian empire. The South Slav element has been thereby largely increased, and attracts to itself the discontented Croat elements over the border. The Federal or Nationalist party is active and stirring. Never, indeed, were its hopes higher than at the present moment. If the House of Hapsburg is to win over its new subjects to a true allegiance, it must do so by encouraging their national aspirations; and with such a course

it may perhaps be doubted whether the dual system is altogether compatible. What the result of the administration of Bosnia has been hitherto it is difficult to ascertain. Mr. Laing (*Fortnightly Review*, 1879, p. 650) says that it is a success. Mr. Arthur Evans (*Fortnightly Review*, 1880, p. 491) says that it is an entire failure. Perhaps it is as yet premature to determine. The whole future, indeed, of Eastern Europe depends more upon circumstances most of which it is impossible to forecast than upon the views of individual statesmen. "To those," says the author of this book (with that impartiality which is a pleasing characteristic of his work),

"who have watched with sympathising interest the introduction and gradual development of the present constitution of Austria-Hungary the thought will inevitably suggest itself, May not there come a time when dualism will no longer fulfil the purposes for which it was designed in 1867? 'I am not a Deakist; only Deak,' Francis Deak once observed. It may possibly be that the statesman who at some future day, under the altered conditions of the Austrian empire, looks towards the establishment of a new order of things upon the basis of old principles will be following more closely in the footsteps of Francis Deak than the thorough-going defenders of the compromise of which the great Hungarian citizen was the author and champion. . . . Had Deak been spared to aid his country with his counsels during the critical phase through which Austria-Hungary has been passing during the past three years, would not the weight of his powerful influence have been still exerted on behalf of the much-abused policy of the Hungarian Chancellor? Judging by the internal evidence to be derived from an examination of the words and deeds of a lifetime, does it not seem probable that the same principles influencing the unpopular and so-called anti-Magyar policy adopted by Count Andrassy and M. Tisza in their attempt to steer the dual empire with safety and honour through the perilous shoals of the Eastern Question would, rightly or wrongly, have guided the actions of Deak himself?" (pp. 269, 302).

Such are the doubts of the author of this book. If they are well founded, the true creator of the Austrian empire may yet prove to have been, not Deak, but his Czech contemporary—the apostle of federalism, Palacký, the author of the phrase, "If Austria had not existed, it would have been necessary to invent her." Whatever in any case the future may have in store, every well-wisher of freedom must desire that Deak's work, so far as Hungarian liberty alone is concerned, may live and prosper, and that neither foreign intrigues nor the violence of ultra-Magyar patriots may destroy it. "The Hungarians are the only people of Eastern Europe," says Mr. Arthur Evans (no mean authority), "whose love of constitutional freedom is genuine, and whose press is really free" (*Fortnightly Review*, 1880, p. 500). Mr. Evans, be it recollected, is the sworn enemy of the German and the Magyar and the apostle of Illyrianism. His testimony is therefore important. Constitutional freedom is, after all, not so cheap and common an article that the disappearance of a nation like the Hungarians from among the free nations of the earth can be looked forward to "avec un cœur léger."

GEORGE WILTSHIRE.

Poems. By W. H. Mallock. (Chatto & Windus.)

Few things are more interesting than the study of the growth of a Soul. When the soul is Mr. Mallock's the psychologist is peculiarly grateful for the opportunity which Mr. Mallock has afforded by the publication of his early poems. Mr. Mallock is the Pascal of the nineteenth century. Substitute his private orthodoxy for Jansenism, and the morality and religion of advanced persons for the casuistry of Escobar, and the parallel is sufficiently close. Without sympathising with Mr. Mallock's disinterested devotion to the Church, and while occasionally regretting the vivacity of his method and the latitude of his humour, one must acknowledge that he has a very keen eye for solemn inconsistencies, and touches with a very sharp point the weak places in the scientific armour. But Pascal was not always arguing with his good Jesuit Fathers; in the nursery he was a mathematician, and in his early youth is thought to have been a little gay. There was also a time when Mr. Mallock dallied with the Muse, not of the cube and square, but of poetry. In an elegant little quarto he has produced the pledges of this dalliance. At the age of eight he composed (in a swing) this amatory song, in which the profanity and precocity are alike remarkable:—

"The breezes are sighing
About me, above me!
Oh, I should be happy,
If Celia would love me!
But without Celia's love
The breezes may blow;
And, for all that I care,
To the devil may go!"

Mr. Mallock is more fortunate than Mr. Swinburne. "Remembrance may recover," says the elder bard, "and Time bring back to Time, the name of your first lover, the ring of my first rhyme." But, in our author's case, Remembrance actually has recovered, not only the ring of his first rhyme, but the name (Celia) of his first love. At the age of thirteen he ceased to sigh, and composed "A Boy's Love-Song," in the spirit of Withers's famous renunciation. Probably no such remarkable verses, so full of *aplomb*, so dexterous in the mastery of language, were ever composed by so infantile a phenomenon.

Between the years of thirteen and seventeen, Mr. Mallock seems to have seldom broken into song. At seventeen he was master of an extremely fluent and melodious verse, in which he chiefly expressed a passionate interest in Nature. This verse from "A Boy's Dream" may remind one of the "Dream of Fair Women," but not by way of servile imitation:—

"And triremes with the measured plash of oars,
And foam-worn plumes, and breastplates luminous,
And calm-eyed pilots helming towards the shores
Of leaguered Pergamus."

This again, seems to me a truly original image, and a happy expression of a sentiment that often survives seventeen:—

"As a lone sinner on a sea-rock craves
Headlong to plunge into the clear green seas,
Catching the wavering lustre through the waves
Of ocean palaces,

"So have I longed, ye beautiful dead years,
For you and yours, seeing the things that be
Touch me with cold that nips, or heat that sears,
And have small part in me."

And the conclusion of this poem appears to me to be masterly in expression and admirable in sentiment. "Lux Maligna" is probably not derived from "Les Yeux de Berthe," but accidentally coincides with the ideas of that poem. "Alter et Idem," again, may have been written by one who had not read "Félice," but the cynical sentiment is much the same in both pieces. "On Lake Como" is well worth quoting for the sake of the first and third verses.

"The stars are o'er our heads in hollow skies,
In hollow skies the stars beneath our boat.
Betwixt the stars of two infinities,
Midway upon a gleaming film, we float.

"My lips are on the sounding horn;
The sounding horn with music fills.
Faint echoes backwards from the world are borne,
Tongued by yon dusky zone of slumbering hills.

"The world spreads wide on every side,
But dark and cold it seems to me.
What care I, on this charmed tide,
For aught save those far stars and thee?"

That seems good enough to live, and one might have expected much from the boy who wrote it at seventeen. But "the mount is mute, the channel dry," Mr. Mallock says; or at best the channel only murmurs a dirge over a lamented dog which of late made the joy of the Lady Dorothy Nevill.

The most powerful, and apparently the most sincere, poem in this collection is that named "Natura Verticordia." If Mr. Mallock had written "Aeneas and Dido" later, he would probably not have been so superfluous as to let the Trojans talk of Pallas's "owl-like eyes," a piece of wildly erroneous pedantry which, in modern verse, might make even Dr. Schliemann shudder. Another error in taste incident to youth is that which permitted Mr. Mallock to speak of "the long troubled amber" of Ariadne's hair when the rest of her frame had just been likened to marble. Ivory and gold would have been archaeologically the right thing. But Ariadne has suffered much of many poets from the days of Pendennis and his "Ariadne in Naxos" to those of Ouida. A poem called "A Marriage Prospect" has been criticised as cynical, but it is taken from "an unfinished drama," and surely there is room, even in an unfinished drama, for the character of a cynical flirt. The sonnets called the "Light of the World" are, perhaps, too intimately personal to be criticised here; and this notice must end with hearty praise of the poem entitled "Proteus," a recognition of the unity that lives and that masters us and defeats our pursuit in the manifold beauty of the world. This volume is worth reading, both for its intrinsic merit and for the light it throws on the development of a singular, a mundane, an enigmatic, but a real and remarkable talent.

A. LANG.

Conversations with Distinguished Persons during the Second Empire. From 1860 to 1863. By the late Nassau William Senior. Edited by his daughter, M. C. M. Simpson. (Hurst & Blackett.)

MR. SENIOR stands alone in one respect among writers of diaries. He may be said to have

introduced the spirit of natural history into this kind of literature. The simple egotism which flows on in a garrulous stream through the incidents of daily life, taking for granted that anything great or little which interests the writer must interest the reader, and careless whether it interests the reader or not, is conspicuous by its absence from Mr. Senior's journals. They tell us as little about the writer as if they were a collection of materials for a treatise on flowering plants or bees. Mr. Senior shows the scientific spirit also in the way in which he isolates a particular class of phenomena as the subject of his observations—the distinguished persons to be met in France at a specially interesting epoch of European history. His personal friends will no doubt be able to detect his own individuality. Mrs. Simpson, the editor of this and the preceding series of *Conversations*, assures us that there is more of her father's own mind brought into play than would appear from a cursory glance. This one can well believe; but Mr. Senior has been so successful in diverting attention from himself and concentrating it upon the persons whose opinions he drew out and put on record that one is almost as unconscious of him as of the stage manager in the course of a well-conducted play.

But it must not be supposed that, because Mr. Senior's method is scientific in a certain sense, his matter is dull. It is very much the contrary. There are few diaries that one can take up in a dull hour with a greater certainty of being amused as well as instructed. A writer who can raise the curtain upon so many eminent individuals at a time of anxiety and suspense—statesmen, diplomatists, some of them playing an actual part in public life, some of them biding their opportunity, all of them intimately conversant with affairs—and turn the conversation on their recollections, their hopes, fears, and prognostications, must be the master of an entertaining show. We can forgive him for not having the naïve charm of chroniclers who take us into their little confidences, and delight us by making fools of themselves. And the element of comedy is not wanting, though the conversations are more about matters of high policy than the private lives of exalted personages.

The two volumes contain, beside many interesting descriptions of important events by the chief actors in them, an immense store of political theories, predictions, calculations, and conjectures, and those who like to moralise on the limited nature of human wisdom will find much here to feed their peculiar humour. Thiers, Guizot, Odilon Barrot, Changarnier, Prince Napoleon, Prosper Mérimée, Montalembert, and the eminent personages veiled under the letters A. B. C. and D. E. F. were among Mr. Senior's interlocutors, but all their knowledge of affairs did not save them from absurd mistakes when they ventured into the regions of prophecy. A prophet who desires honour should take care not to have notes made of his predictions. France was filled with rumours of war from 1860 to 1863, and Count de Corcelle's forecast of the results that must follow from Garibaldi's entry into Naples in September 1860 may be taken as a type of the anticipations then entertained by well-informed

French politicians. M. de Corcelle was certain that the conquest of Naples must be followed immediately by an attack on Venice. "Do you suppose," he asked Mr. Senior, "that Italian mobs can calculate chances? Do you suppose that, even if Garibaldi were wise enough to wish to keep his hands off Venice, they would let him do so?" This was the first step in a series of inevitable events. "If Garibaldi attacks Venice, he is beaten. If he is beaten, Louis Napoleon must rescue him, and then we shall have a German war. We shall beat the Germans at first—we always do so." Then England must interfere, and so there would be a general European war. Mr. Senior ventured to doubt whether it was certain that Italy would attack Venice, but all the same M. de Corcelle foresaw imminent war. He shared the common opinion among French politicians, which was not the opinion of Lord Palmerston, that Italy could not remain united. If she did remain united, France, to preserve the balance of power, would require an extension of territory, Belgium and the Rhine, or Catalonia, or the Riviera and Genoa, and an attempt to realise any of these extensions would bring on a collision with England.

Another example of the vanity of trying to give precision to political prophecies is seen in M. de Circourt's sketch of the map of America as it would be in three or four years from 1863.

"It will consist [M. de Circourt said] of at least three empires. The Western Empire, formed of Washington, Oregon, Nevada, California, Utah, Colorado, New Mexico, Arizona, Kansas, Nebraska, and Dakota. The Southern Empire, divided from the Northern by the Missouri River from its source down to its confluence with the Mississippi, then by the Mississippi down to its confluence with the Ohio, then by the Ohio up to the mouth of the Kankawa River, then by a line crossing the Virginia mountains and running to the Potomac; and, lastly, by the Potomac itself and the bay of Chesapeake. This would give to each empire a well-defined frontier."

The mere fact that prophecies have been contradicted by events does not, of course, convict them of absolute vanity. It is only when the sequence of events has been dogmatically formulated, and a definite time fixed for their occurrence, that forecasts look absurd after an interval when compared with facts. A prophecy is a convenient form into which to cast one's estimate of forces so complex and incalculable that fulfilment is as little a proof of the prophet's wisdom as non-fulfilment is of his want of wisdom. The thing that has not happened may have been more probable six months before than the thing that has happened. It is but fair to some of Mr. Senior's prophets to admit that they were right in their main belief that the Second Empire could not be maintained without war, though entirely wrong as to when and how war would be brought about, and what the results of war would be for France and for Europe.

The unknown element which most troubled their calculations was the character and the intentions of the Emperor Napoleon. Mr. Senior laboured hard to solve this mystery, and often made it the topic of conversation

among his friends, getting various answers to his questions. M. de Kégorlay, a Legitimist, was almost alone in his belief that the Emperor personally in 1860 did not wish for war, and his reason for this was curious:—

"War would be fatal to his commercial policy, which is a child of his own, and his favourite child. He believes in its success, and is anxious that success should convince the world that he was right and all his advisers wrong."

In answer to Mr. Senior's question whether Napoleon understood the subject, M. de Kégorlay said:—

"Perfectly. Any man of strong sense, unwarping by private interests or prejudices, and once committed by previous expressions of opinion, must understand it. The proofs are all on the surface; and I have heard him discuss and explain them. The conversation at his dinners is free. During the session, I dined with him with a large party of members of the Corps Législatif. After dinner there was a little knot in the corner, to which somebody was talking Protectionism. The Emperor joined it, and explained as clearly as Michel Chevalier could have done that Protectionism is the sacrifice of the future to the present and of the many to the few, and urged, too, that free trade was the best preservative of peace."

Napoleon III. was not so sound upon all economical questions. When Barrot was his Minister, he found him bent upon a great scheme of his own for the abolition of pauperism, which consisted in taking all the common lands and dividing them among the poor families that wanted relief. Barrot told him that he would thereby create more paupers than he could relieve, and gave him the homely advice that the best way to prevent pauperism was to give the poor peace at home and abroad, and then they would provide for themselves. The Emperor may have remembered this advice when the negotiation of the Commercial Treaty of 1860 furnished him with an opportunity of preserving peace for a grand and impressive object. At any rate, M. de Kégorlay's judgment of his desire for peace was more countenanced by events than the general judgment that his great object—for which he was in 1860 watching an opportunity—was the acquisition of the Rhine frontier. He did make war ultimately for this object, but not so soon as to justify A. B. C. in feeling confident that his throne was tottering in 1863, and could only be saved by a successful war for the acquisition of the Rhine provinces.

Perhaps the most correct judgment of Napoleon III. which Mr. Senior has recorded was that given by M. Odilon Barrot. It was not in the form of a prophecy; it was in effect an admission that the Emperor defied prophecy, because he did not know his own mind. "I do not believe," Barrot said,

"that any of his schemes are deep-laid. I do not believe that he has any Italian policy. He hates the Austrians and the Pope. He is not sorry, perhaps, to see them upset. He hates the King of Sardinia, too; but is afraid to stop him. He hates Garibaldi, but he fears him still more. He would like to extend our frontiers to the Rhine. It would remove the stain on the Bonapartes, that they lost all that the Republic had gained. But I do not believe that he sees his way. In fact, he does not see, he feels. He is a man in the dark, *il tâtonne*."

This opinion entirely coincides with the con-

clusions formed by M^{de}. Cornu, who had known him from his childhood. We have something of the same truth expressed by A. B. C., with a spice of hatred, in the saying that if a great dancer came to Paris the Emperor's first idea would be to rival him; and if he thought he could do so he would like to collect all Paris in the Place Vendôme, and exhibit his activity and grace from the top of the column. In Napoleon III., in fact, we see his uncle's ruling passion in a degenerate form—the same passion, but ruling a weaker subject. No steady action, no persistence in deep-laid schemes, could be expected from such a character, always liable to be disturbed from its plans by some new madness of jealousy or ambition.

It is quite possible that the Emperor might have struck a blow for the Rhine much sooner if he had not been effectually convinced by his Italian campaign that he had no chance of rivalling his uncle in war. "I never knew before what a genius my uncle had," he is reported to have said on his return from that campaign. His experience in Italy had enlarged his ideas upon this point, and had conclusively proved his own want of military capacity, though he probably did as well as any man might be expected to do who had to learn the art of soldiering after fifty, and began with the chief command. The generals who served under him were of opinion that only the blunders of the Austrian generals saved him from disaster. He marched his soldiers in one long line, which, in Changarnier's opinion, any but the silliest imbeciles would have cut through in half-a-dozen places. He was always taken by surprise, at Montebello, at Magenta, and at Solferino. If he had found himself more at home on the battle-field, the war for the Rhine frontier would perhaps not have been put off till 1870. His inability to shine in the art of war must have helped any tendency that he had to aim at establishing his authority by making France prosperous under a peaceful régime. The empire had this additional reason for meaning peace, that the Emperor was more than doubtful of his own capacity to make it mean successful war.

Mr. Senior was at some pains to ascertain whether there was any ground for a prevalent suspicion of the Emperor's personal courage. It was said that he had never been under fire in the whole Italian campaign, and one of Mr. Senior's friends professed to have seen a letter from one of the Swiss Guard to his mother telling her not to fear for him, because he was in no danger, being with the Emperor. Lord Clyde, in a conversation with Mr. Senior on the subject, quoted good authority for believing that the Emperor was under fire both at Magenta and at Solferino, that he was even in considerable danger, and that he was more calm than those around him. Changarnier, on the other hand, was positive that the Emperor was never under fire, and affirmed that both at Magenta and at Solferino he kept a couple of miles in the rear, and never gave an order. "All that he did was to smoke;" and, according to Changarnier, at Solferino he smoked fifty-three cigars in the course of the day. The fact of not giving an order may perhaps be attributed as much to good sense as to

cowardice; but there seems to be every reason to believe, in spite of his exposure of himself to artillery fire at Sedan, when all was lost and there was no chance of living to fight another day, that he was apt to lose his head in the presence of actual danger. At Strasbourg he ran away and hid himself under a wagon, without even firing a pistol in his defence. His behaviour at Boulogne was even more ridiculous. He fired a pistol on that occasion at the officer who summoned him to surrender; but when the bullet missed its mark, and wounded a pastry-cook who had come to his door to stare at the strange procession with the tame eagle, the future Emperor fairly turned tail and ran, never stopping till he had run into the sea, where he was caught.

It is almost a pity that Mr. Senior should have exploded a good story about another member of the Bonaparte family, Prince Napoleon. This story ran that when his father, King Jerome, lay on his death-bed the Prince expressed a desire to see him. Dr. Rayer told him it was useless, as the King was too far gone to recognise him; but the Prince insisted, and forced his way into the room. As he entered, his father opened his eyes and murmured, "Te voilà, mon brave." "Je vous ai bien dit," said Dr. Rayer, "qu'il ne vous reconnaîtrait pas." This story M. de Kérogay declared to be an invention, and that what really happened was that the Prince, finding a priest in the room administering extreme unction to his dying father, turned about, kicked the door, and went out slamming it violently behind him—a less pleasing anecdote in every respect.

Much of the recorded conversations deals with the probabilities of the political situation then existing; but Mr. Senior lost no opportunity of learning "the true story" of many interesting episodes in recent history when he chanced to meet people who had taken part in them. Odilon Barrot accompanied Charles X. from Rambouillet to Cherbourg after the Revolution of July, and gave an interesting account of the difficulties he had in protecting the illustrious exile from his late subjects. Mr. Senior was also fortunate in obtaining from M. Barrot his account of what he saw and did on the memorable 24th of February, which sent the *branche cadette* of the Bourbon family into exile; and this account was supplemented by a narrative from the lips of M. Thiers of his share in the event. Mr. Senior's conversations with Changarnier make a substantial contribution to what is generally known of the history of the short-lived Republic under Louis Napoleon's Presidency. He had considerable difficulty in getting at the facts of the massacres of the 2nd of December, but his investigations throw not a little light upon the horrors of that enormity. Mr. Senior has accumulated in his journals a number of most entertaining conversations, and a large mass of materials which the future historian of the Second Empire will know how to appreciate.

WILLIAM MINTO.

The Roman System of Provincial Administration, to the Accession of Constantine the Great. Being the Arnold Prize Essay for 1879. By W. T. Arnold, B.A. (Macmillan & Co.)

UNIVERSITY prize essays have frequently been of real value as vehicles of the latest results of research. Indeed, they have done something to supply the place of those monographs in which our academic literature is still so poor as compared with that of France and Germany. Mr. Arnold's essay last year obtained the prize founded in honour of Dr. Arnold, his grandfather. It is an admirable specimen of careful and thorough work; and, in addition to its intrinsic merits, it stands quite alone as a brief and simple sketch of the Roman provincial administration. This is undoubtedly one of the best points of view for penetrating to the true significance of Roman history; and there is no department of that history where a minute study of details is more amply rewarded. Mr. Arnold's compendium is as complete as the limits of the essay allowed. He has collated a great mass of authorities, and every page bears witness to the wide range of his independent reading. He cites the original authors and documents throughout, and hazards no opinion without abundant references by way of evidence. At the same time he has made use of nearly all the elaborate works of foreign scholars which bear on the subject, especially those of Mommsen, Duruy, Preuss, and Marquardt. The subject is presented in a simple and appropriate style, which occasionally becomes epigrammatic but never in the least rhetorical; Mr. Arnold's writing is quite free from the besetting sin of prize compositions. In the short compass of about two hundred pages we have a terse and lucid exposition of a score of difficult subjects, such as the municipal constitution, the failure of the senatorial administration, the *Lex Provinciae* and the Governor's Edict, the growth and life of the provincial towns, the division of authority between the local and imperial magistrates, and the bureaucracy established by Diocletian. Mr. Arnold rightly singles out Spain and Gaul for detailed treatment, as best illustrating the true value of Roman conquest; and likewise Egypt and Roman Switzerland, the latter of which countries Mommsen has selected for special investigation. He also gives a minute analysis of the famous speech of Claudius, both in its original form as engraved on the Lyons tablets and in the improved version of Tacitus (*Ann.* xi. 14). Other subjects, hitherto perhaps underrated, he raises to new prominence—*e.g.*, the influence of the Roman traders in the spread of Roman civilisation. He traces their agency, first as following in the wake of the legions and opening up the outlying countries, then as bankers and money-lenders in the provinces, and finally as contributing to develop the Roman encampments into towns.

In discussing the merits of the Imperial system in relation to the provinces, Mr. Arnold rightly points out that, while the Senate had a vested interest in misgovernment, the main motives of the Imperial Government were to secure a large revenue and a regular corn-supply, and to protect the frontiers. Good government resulted from

this identity of interest between the rulers and their subjects. The immediate object of Caesar and his successors was not, of course, the comfort of the provincials, but their capacity to replenish the exchequer and to recruit the legions. It was equally necessary that the army should be no longer responsible to the various provincial governors, but to one Emperor. The Emperor's office was, therefore, from the nature of the case, essentially military—a fact which is too often forgotten in commenting upon the government of the Empire. Those who stigmatise that government as a military despotism generally found their criticism on the suppression of the Senate. They share the regret of Tacitus for that lost ideal, the partnership of the Emperor and the Senate; a compromise with the old aristocratic *régime* which the historian defines in the phrase so unfortunately parodied by Lord Beaconsfield, “*principatus et libertas*.” Mr. Arnold does not appear to take this view, though he says, with reference to the question of the succession:—“Some system which would enable the Senate and Emperor together to name the heir, as the Senate and Nerva together named Trajan, would, perhaps, have been the best.” In other words, the Emperor should have nominated his successor, but the Senate should have been allowed a veto. He rightly represents as the bad side of the Empire, not the suppression of the Senate, but the suppression of the municipal life under the later Emperors. This he fully explains in an exhaustive review of Diocletian's innovations.

Surveying the fall of the Empire from his limited standpoint, Mr. Arnold of course dwells almost exclusively on the breakdown of the administrative machinery, and the failure of the Imperial Government in the object which (as he began by showing) was always paramount—viz., the security of the frontiers and the revenues. It should be remembered, however, that these were rather symptoms than causes of the catastrophe. The oppressive centralisation, which he describes so well, was nothing but a desperate substitute for the broken bonds of moral union. Greater mechanical energy was needed to hold the Empire together when the State had succeeded only too well in superseding the rival domestic authority, and at the same time the Roman religion had lost all its controlling power. Nor could the growth of the new spiritual power really strengthen the Empire. Mr. Arnold is hardly right in saying that with Constantine Christianity became a bond of union. On the contrary, the rise of the Church hastened the fall of the Empire, not only because it undermined Roman loyalty and public spirit, and diverted men's thoughts for a time from public life and duty, but because it was impossible for the Church to deal with such a vast aggregate as the Empire, whether as its servant or as its master. Two such powers could not exist together, and the Church was the stronger.

GEORGE C. WARR.

The Eye-Witnesses' Account of the Disastrous Russian Campaign against the Akhal Teke Turcomans, &c. By Charles Marvin. (W. H. Allen & Co.)

In the month of September last year, the

rumour of a reverse to the Russian expedition then operating against the Turcomans reached Simla from Persia. It was asserted that the Russians had attacked the enemy in his position at Geok Tepè, and had been repulsed with a loss of seven hundred men *hors de combat*. At first this was considered to be a mere invention of the bazaars, and the Russian press stoutly denied that it possessed any foundation. In the course of a few weeks, however, the truth leaked out, and the accuracy of the original statement was placed beyond dispute. In the volume before us, Mr. Marvin has collected and translated the narratives of all the Russian correspondents who accompanied the expeditionary force, and were eye-witnesses of the disaster with which the campaign suddenly and unexpectedly terminated. Mr. Marvin has brought to the accomplishment of his task an intimate knowledge of the Russian language and considerable acquaintance with the political questions involved in his subject; and, notwithstanding that he has, to a great extent, been anticipated in the more interesting portion of his narrative by the translations which have appeared in the Central Asian Blue-Books, he may fairly claim consideration for the labour he has expended in compiling a complete account of the last Russian campaign against the Turcomans. It must be admitted that there are no striking novelties in his volume, and that it will not be necessary to change any of the ideas upon the subject formed before the publication of this “full description” of the war. In short, it is valuable for the details it furnishes rather than for its general information. Mr. Marvin has evidently spared no effort to make his book as complete as possible, and he has ransacked all the leading Russian papers in order to fill in the gaps in the picture. It is matter of regret that he did not combine with the information from Russian that to be obtained from Persian sources, which furnish considerable data as to the course of events on the frontier of Khorasan. A single proof of this is afforded by the fact that the disaster at Geok Tepè was known at Teheran on September 21, whereas the Tiflis paper did not admit it until the beginning of November, and then only to confirm the substantial accuracy of Mr. Ronald Thomson's information of six weeks before. On the other hand, the style is bald, and the story not only monotonous, but narrated, with the exception of a telling phrase here and there from the graphic pen of M. Arsky, with the want of life that might be expected from second-rate newspaper correspondents. Mr. Marvin is so conscientious a translator that he has left the Russian journalists to tell the story in their own bad way.

The first chapters describe the founding of Krasnovodsk and Chikishlar—the harbours, or rather landing places, on the eastern shores of the Caspian—and also the earlier expeditions against the Turcomans. This Introduction is very appropriate to the consideration of recent events, and should be read in conjunction with Gen. Markozoff's paper quoted in the Appendix. There then follows a description of Akhal, which, although adding little to the information contributed by Fraser and other English travellers and writers, is

beyond question the most interesting and best written chapter in the volume. This may probably be attributed to the fact that it is taken exclusively from one writer, the M. Arsky already mentioned. Interesting and full of information as this sketch is, it by no means follows that all M. Arsky's statements are to be accepted without reservation, for he had, unavoidably, to depend for much of his intelligence on doubtful authority. A great deal of the matter with which he filled the columns of the *Moscow Gazette* is based on the mere gossip of the camp, or on conversations held with those faint-hearted Turcomans who, trusting to the supposed invincibility of the Russians, had deserted their braver kinsmen. We say this with no intention of disparaging the value of M. Arsky's narrative, but simply in order that its exact worth may be gauged; and the present writer willingly bears testimony to the fact that, by comparing it with the works of Prof. Vambéry, Col. Macgregor, and other writers, and also with the reports of English officers who have explored the outlying districts of Khorasan, it greatly facilitates the task of arriving at a fairly accurate idea as to the present condition of the Akhal Turcomans. Of the main section of the Teke clan at Merv less is known; but the statement of the Russian correspondents that it is less numerous than the Akhal does not agree with other information received upon the subject. The priests, or Ishans, as M. Arsky correctly calls them, enjoy very great influence among them, and it is to their exhortations, as much as to any other cause, that the gallant resistance of the Akhals last autumn must be attributed. Of Noor Verdi Khan, the most famous of the Turcoman chiefs, M. Arsky says little that is fresh; and he is mistaken in calling him the “ruler of Merv,” for Baba Khan was elected to that post on the death of his father, Kousheed. Noor Verdi is, however, the recognised leader of the Turcomans in the field, and they say of him that “he is the only man of his kind in the world, and if any one tells you that he does not like Noor Verdi he is a liar.” Before passing on, we may quote the same writer's account of the Persian siege of Merv in 1859, and of the striking, but apocryphal, incident with which it closed.

“In 1859 the present ruler of Persia advanced into Khorasan at the head of an army, and despatched thence his relative, the Sultan Mourad Mirza, with forty thousand troops to occupy the oasis. The Tekes again collected at Merv, and after a while succeeded in exterminating nearly the whole of the Persians, capturing an immense quantity of booty, including thirty-two guns. In connexion with this victory a curious story is narrated by the Tekes. The siege was conducted until the Tekes, apparently in despair, entered into negotiations for surrender. Mourad Mirza sent intelligence of this happy event to the Shah, and, pending the arrival of the terms of peace, he continued to maintain the blockade, allowing, however, the women to pass through his lines. By degrees the Persians grew accustomed to the sight of Turcoman women moving about the camp with their faces covered, and did not notice that their number increased every day. At length, one afternoon, more than ten thousand gathered in and near the camp, while the soldiers were relaxing themselves and the officers sleeping inside their tents. Suddenly, with a wild shout, the women

tore off their yashmaks and disclosed the beards of men, and, drawing sabres from inside their robes, fell upon the astonished Persians with an energy that overcame all resistance. Mourad escaped, and with him two or three hundred horsemen, but the rest were either slaughtered or seized, after resistance was over, as slaves."

In the spring and summer of 1879 the Russians had collected in the Atrek region an army of about 20,000 combatants; and General Lazareff, who had greatly distinguished himself in Armenia, was appointed to the supreme command. The enterprise before it was to advance into the country of the Akhals, and to establish the Czar's authority in the midst of the nomad tribes of Kara Kum. The Russians were disposed to undervalue the courage and military capacity of their antagonists, but they were fully aware of the difficulties of moving a large force from the shores of the Caspian to the northern skirts of the Kopet Dag. The success of the expedition depended upon the care shown in attending to the minor arrangements, for "a march was made or marred in accordance as the start was effected punctually or an hour late;" and from the very commencement the Russian commanders proved singularly deficient in the capacity of enforcing upon their subordinates the imperative necessity of adhering to the plan drawn up for their guidance. The death of Gen. Lazareff on August 26, when the army had advanced almost to the crest of the mountain range that looks down upon the homes of the Akhals, threw the arrangements further out of gear; and, whatever definite plan of campaign may have been formed, the loss of the commander who had originated it destroyed all chance of its being properly put into execution. There is no valid reason for supposing that, had Lazareff lived, he would have been able to bring the campaign to a successful termination; but he might at least have averted the final catastrophe. On the death of Lazareff, Gen. Lomakine, the Governor of the trans-Caspian province, and an officer experienced in Turcoman warfare, assumed the chief command. A council of war was held at Khoja Kala on the southern side of the Kuren Dag, and it was then decided to enter the Teke oasis only a few miles distant, and "to subjugate the Tekes." The Russians accordingly continued their advance, and, traversing the Bendessen Pass, entered the Akhal oasis near the fort of Bami. By this time the strength of the army had been greatly reduced by sickness and the necessity for leaving garrisons in the more important strategical points in its rear. Gen. Lomakine gave the number of the troops with which he commenced the campaign at 3,790 men, with an artillery force of twelve guns and eight rockets. The main body entered Bami on September 4, and Beurma, the next fort, was occupied by the advanced guard the same day. The inhabitants had fled from their homes, and already there were rumours that the Akhals were concentrating at Geok Tepè. On the 8th the army had, by rapid marches, reached Yaradj, only eighteen miles from that place, and it was then decided that the attack on the Turcoman position should be made the next day.

It is impossible to describe within the space

at our command the course of the attack that was made with tired troops, improperly supported by their comrades, upon the encampment of the Akhals, who, badly armed as they were, fought with all the energy of despair, in sight of their wives and their children. Mr. Marvin supplies the amplest details that anyone could desire as to the incidents of the battle, and explains with considerable perspicuity the blunders committed by the Russian commanders. After reading the description of the repulse of the final assault it becomes difficult to explain how the whole Russian force was not destroyed. Gen. Borch said afterwards that he "thought all was lost, so fierce and numerous were the Tekes;" and probably such would have been the case but for the promptness of the artillery officer, Makhukhi, and the death of the Akhal chief, Berdy Mourad, son of Noor Verdi Khan. Gen. Lomakine retreated the next day; and, as the consequence of this great defeat, the Russians have since been compelled to abandon all their advanced positions in the Kuren Dag and to make extensive preparations for a new campaign. Mr. Marvin's narrative tends further to strengthen the opinion that it will require time and a systematic plan before the Russians can hope to reach Merv or Sarakhs by a march along the "Attock;" and it is extremely doubtful whether they will not perceive that the game in this direction is not worth the candle. Although Russia is a great military Power, the evidence of native writers convicts her generals of an incompetence that would not be tolerated in the most civilian of States; and it appears probable that the full significance of Gen. Krjhanoffsky's saying, that "the country of the Turcomans would prove a second Caucasus," is likely to be learnt before Russia has finished either with Merv or the nomad races of Kara Kum. Mr. Marvin's volume may be recommended for perusal on the ground that it gives a complete account of a war which is likely to take its place in history as one of the most memorable yet waged by Russia in Asia.

DEMETRIUS CHARLES BOULGER.

NEW ITALIAN BOOKS.

Sette Anni di Sodalizio con Giacomo Leopardi. Da Antonio Ranieri. (Naples: Giannini.) The sensitive poet, whose feeble life was embittered by perpetual warfare against petty prejudices, family fetters, and restricted means, would, we think, have almost shrunk from immortality had he divined the conditions with which it would be saddled. Of late years, as Leopardi's fame has increased, so Leopardian gossip has assumed overwhelming proportions. Every circumstance of his private life, of his loves, his hates, of his mental and physical sufferings, has been dissected and laid bare for the satisfaction of public curiosity. Numerous biographies of the poet, his own correspondence and that of his family, have been given to the world with the addition of a flood of immature compositions, philological, philosophical, and classical, including mere school exercises assuredly never intended by the author for publication. One phase alone of his career remained wrapped in comparative obscurity; his seven years' intimacy with Signor Antonio Ranieri, in whose house at Naples he died during the cholera season of 1836. A special interest, therefore, attaches to any word of Signor Ranieri respecting

Leopardi, and it has often been regretted that he should be so reticent of his knowledge. Something, it is true, he wrote soon after the poet's death, and the memorial prefixed to the Le Monnier edition of Leopardi's works is from his pen. But he had abstained from giving any details of his seven years' companionship, and, with the delicacy of true friendship, had completely effaced himself behind the great man whom he delighted to honour. But silence is more commonly interpreted in a hostile than a friendly spirit; and so it came to be written and whispered about Italy that Damon had been victimised by Pythias, that Ranieri had taken advantage of the poet's bodily weakness to keep him in Naples against his will. All this may be of small account to English readers, but in noticing the *Sette Anni di Sodalizio* it is necessary to explain its *raison d'être*, and how those who can read between the lines find a revelation of ideal self-sacrifice amid the swollen periods, high-flown utterances, and frequent bathos of Signor Ranieri's little volume. At last, after forty years, he breaks silence and gives the key-note of the chord. In 1830 Leopardi was in Florence almost penniless, too completely prostrated by disease to use his pen, and with no resource but going back to die in his "odiato sepolcro," the miserable home at Recanati. Ranieri came to see him, witnessed his sufferings, learnt his condition, and instantly placed himself and his purse at his friend's disposal. What was enough for one could be made enough for two. Yet Ranieri himself was by no means wealthy, was an exile from Naples, and dependent on an allowance from his family. After some hesitation on Leopardi's part the friendly bargain was struck; the one gave time and energy and gold, the other confidence and friendship. But human nature is weak, and, although the suffering poet was vanquished by his friend's generosity and filled with affectionate gratitude, he had moments of revolt against the obligations thus incurred. The world must never learn his dependent position, for that would have taught the world that he was indebted to a stranger for all that his own family ought to have given him. This seems the most obvious explanation of the dislike to Naples professed in certain of his letters to friends at home, and our theory is supported by all that other letters have taught us of his difficult relations with his stern, grudging father, and the more than diplomatic reserve which he found it necessary to maintain with him. During the four years preceding his decease the poet must have been a trying guest, and it is impossible to appreciate too highly the untiring devotion of Ranieri and his sister, Paolina. Almost blind and stricken with incurable sickness, Leopardi was a sadly rebellious patient, now disobeying, now exceeding, the prescriptions of his medical advisers, and persistently turning night into day. Signor Ranieri tells us little of Leopardi's intellectual life during these last years, although much certainly might be said, since many of his noblest poems, his *Pensieri* and his *Paralipomeni*, were composed during this period. One curious fact he gives us. "No man," he says, "ever hated country life more than this exquisite singer of Nature's sights and sounds; Leopardi abhorred the country." Probably it was the presentiment of approaching death that engendered this dread of solitude, for Giacomo Leopardi, who had never enjoyed one day of health, clung to life and tried to believe that he had many years before him.

Ricordanze della mia Vita. Da Luigi Settembrini. Vol. II. (Naples: Morano.) The second and concluding volume of these *Recollections* is very fragmentary, and, although it contains many interesting and touching pages and much material towards a future biography of the Neapolitan patriot, it is far

less important than vol. i., noticed in the ACADEMY of March 27. This volume gives a documentary account of Settembrini's trial; his spirited, if hopeless, defence; and the well-known farewell letter to his wife, written from the condemned cell, where, for three long days, he and his companions endured more than the agony of death. This letter should be read *in extenso*, for it is no exaggeration to say that the world's literature possesses few compositions of equal pathos and dignity. Three days later the sentence was commuted to imprisonment for life, and Mme. Settembrini's interpolated narrative records the sufferings of the wives and children of the doomed men during the dreadful interval: how they journeyed to Caserta to ask for mercy, were denied access to the King, were compelled to watch through the night on the highway because no man dared give shelter to relatives of the tyrant's victims, and how they hurried back to Naples uncertain whether their loved ones were alive or dead. The rest of the volume is filled with notes of prison horrors during Settembrini's nine years' martyrdom among the convicts of Santo Stefano, and his secret correspondence with his devoted wife; but no connecting links are given, and we are still left in the dark as to the particulars of the generous enterprise for the prisoners' release originated in England by Sir Antonio Panizzi and other friends, and which failed through the wreck of the steamer despatched from Newcastle. The book closes with Settembrini's arrival in England. Of the manner of his liberation and the daring manoeuvre by which the Neapolitans were saved from transportation to America we have already spoken in reviewing Prof. Torraca's work. Settembrini returned to Italy in 1860, and henceforward public life and pressing literary work left him no leisure to finish his autobiography.

Storia dell' Indipendenza italiana dal 1814 sino al 1870. Da Domenico Ghetti. (Turin, Rome: Loescher.) A complete history of Italian Independence is much needed. So far, only separate narratives of the various revolutions, chances, and campaigns through which Italy has won her freedom have been given to the world. Signor Ghetti has attempted to supply the want, but cannot be congratulated upon his success. His bulky volume is crowded with blunders of all kinds, errors of date and fact, omissions and contradictions. How, for instance, can we advise any student of Italian history to seek instruction from pages that confound Giuseppe Mazzini with the living Senator Giuseppe Mazzoni, asserting that the former, instead of the latter, was a member of the Tuscan triumvirate in 1849; that place Garibaldi's Sicilian expedition in 1861, instead of the preceding year; and that trace the bloody deeds of May 15, 1848, in Naples to so petty a cause as King Bomba's decision to pronounce his Constitutional oaths in church rather than in Parliament?

Macchiette. Da C. Collodi. (Milan: Brigola.) A lively volume of flippant realistic sketches by the clever writer whose *nom de plume* is Collodi. The author has much wit, and is a master of epigrammatic Tuscan phraseology; but he cannot resist his tendency to broaden fun into farce, and shows a decided preference for depicting the wrong side of life.

Gino Capponi: i suoi Tempi, i suoi Studi, i suoi Amici. Memorie raccolte da Marco Tabarrini. (Florence: Barbèra.) This is a very agreeable and well-written memoir of the venerable nobleman who for many years played so prominent a part in Italian literary life. A distinguished *littérateur* and member of the inner circle of Marquis Capponi's friends, Signor Tabarrini has every qualification for his biographical task. At the time of Capponi's death, and again in reviewing his *Recollections*, we gave details of

his career, so now it is only necessary to say that the closer knowledge gained from the present volume confirms us in the opinion that Gino Capponi just missed greatness from want of confidence in his own powers and from the generous width of sympathy that caused him to feel keener interest in the literary enterprises of his friends than in his own. Capponi had the warmest affection for the Milanese patriot, Count Confalonieri, and this volume gives to the world a document of deep historical interest in the report of Confalonieri's interview with Prince Metternich, in Vienna, when on his way to the dungeons of Spielberg. At that moment—1824—Austria was anxious to extort revelations proving the complicity of the Prince of Carignano (Charles Albert) in the attempt of 1821 for the overthrow of Austrian rule in Lombardy, so Metternich went in person to interrogate Confalonieri, who was too ill to be brought to him. The visit lasted more than two hours, and the celebrated statesman used all his astuteness to entrap his prisoner into the desired admissions. But Confalonieri was proof even against offers of immediate release. He parried every thrust with *finesse* as keen as that of his powerful adversary; and the long duel of words, carried on with all outward forms of courtesy, resulted in nothing but disappointment to Metternich and increase of suffering for his unflinching victim. This document is extracted from Confalonieri's *Memorie Autografe*, which, when published, will be a useful contribution towards the yet unwritten history of the rise of Italian liberty. Capponi's loss of sight—a misfortune that checked his activities in the prime of life—was not, it seems, the sole cause of his comparative failure as a statesman. His scrupulous intellect, the keen sense of justice that always made him perceive both sides of a question and carefully weigh its every issue, deprived him of the rapidity of judgment indispensable in a political leader. Thus, notwithstanding his enormous mental energy, he was a very undecided man.

Lettere di Carlo Goldoni. Con Proemio e Note di Ernesto Masi. (Bologna: Zanichelli.) Signor Masi deserves no little gratitude for the diligence with which he has ransacked libraries, record offices, and private collections to glean this delightful little harvest of Goldonian letters; and more gratitude still for the brilliant Preface in which, with firm and sympathetic touch, he rapidly sketches the career of the genial playwright who, with a perpetual smile upon his lips and perpetual kindness in his heart, rejected the artificialities of the age, and painted human nature as he saw it. All the letters are charmingly spontaneous, many brilliant; and it is a pity that the collection is not larger, and does not embrace the whole of Goldoni's long career. What is especially noticeable in them is the genuine light-heartedness that floated the Venetian through a life which was not always a comedy. Voltaire was right in dubbing him a child of nature. He was in truth an amiable child, who persistently looked at the sunny side of things, and had no bitterness at his command even for virulent enemies like foul-tongued Baretti. He tells us: "The chief wealth God has given me consists in a placidity of temper that is proof against every trial. Woe betide me if I were of a different temperament! Have I not had to do with actors?" And one of his most amusing letters is that giving the *genesis* of his bustling comedy, *Il Ventaglio*, and his troubles with the lazy, inefficient company of the Italian theatre in Paris. These actors took three months to learn a written play, and compelled poor Goldoni to return to the skeleton comedies (*commedie a soggetto*) so abhorrent to his artistic instinct. His relations with great people show that he never tampered with his self-respect, and that his tact was born of frank kindness, not self-interest. His friend and patron, the

magnificent Marquis Alberghati of Bologna, begged for Goldoni's honest opinion of his comedy, *L'Amor finto e l'Amor vero*. Goldoni honestly gave it. After praising its elegance of style, its *brio*, &c., &c., he plainly says that, although it may have pleased in Alberghati's own theatre, acted by his own company of noble amateurs, it would be a dead failure on any public stage before a paying audience. He enumerates the faults of the play in the most outspoken terms, and yet in so kind a manner that Alberghati's literary vanity took no offence at the unfavourable criticism. Why does not Signor Masi write a Life of Goldoni? The Venetian's autobiography is little read nowadays, and, delightful as it is, is by no means exhaustive. Signor Masi's accurate knowledge of the eighteenth century, and the sparkling ease of his style, specially fit him for the task; and in his work on Alberghati and his times there were abundant hints that he knew where to find plenty of new information regarding Goldoni's battles with Gozzi and his followers in Venice and his life at the French Court.

La Critica moderna. Di G. Trezza. New Edition. (Bologna: Zanichelli.) In announcing the appearance of a second edition of Prof. Trezza's important work, we must not omit to mention that it is enriched by two additional chapters—on Morals and on Education.

LINDA VILLARI.

NOTES AND NEWS.

We understand that Messrs. C. Kegan Paul and Co. have in the press an anonymous work, by a new scientific writer, on a subject of much popular and clerical interest at present—namely, the relations of religion and science. It is called *The New Truth and the Old Faith*; and the author, advancing beyond the usual ground of controversy—i.e., whether evolution is true or not—assumes its truth and seeks to determine whether or not it is compatible with Christianity.

We are informed that Mr. G. O. Trevelyan's new work, *The Early History of Charles James Fox*, is now in the printer's hands.

THE Tenth Part of the Facsimiles of the Palaeographical Society, which is now ready for distribution to the members, contains specimens from the fragments of the works of Philodamus and Metrodorus, recovered from the ruins of Herculaneum; the papyrus fragment of the Eighteenth Book of the Iliad, known as the Bankes Homer; and other Greek MSS. from the tenth to the fifteenth century. The Latin series includes specimens from the waxen tablets recently discovered at Pompeii, of A.D. 55 and 56; the Vatican palimpsest of Cicero's *Republic*, of the fourth century; interesting MSS. written in England in the eighth and ninth centuries; a deed relating to the primacy of the see of Canterbury, A.D. 1072; and the Book of Hours of John Duke of Bedford, better known as the Bedford Missal, and Queen Isabella's Breviary, of the fifteenth century.

By way of illustrating the cheapness of English bookbinding, it may be mentioned that a thousand volumes belonging to the Astor Library, New York, were sent over to this country last year, and returned handsomely bound at a cost, including commission and transmission, considerably less than similar work would have cost in New York.

ON Tuesday next (May 18) Mr. J. Fiske will give the first of a course of three lectures at the Royal Institution on "American Political Ideas viewed from the Standpoint of Universal History;" and on Thursday, May 20, Mr. T. W. Rhys Davids will give the first of a course of three lectures on "The Sacred Books of the Early Buddhists." The following are the arrange-

ments for the remaining Friday evenings:—May 21, Mr. W. Spottiswoode on "Electricity in *Transitu*;" May 28, Mr. Francis Hueffer on "Musical Criticism;" and June 4, Mr. H. H. Statham, "An Analysis of Ornament."

M. GALLESLOET has just published at Bruges his *Life of Margaret of York*, the wife of Charles le Téméraire.

MISS ELEANOR MARX's interesting paper on "How Shakspeare became Popular in Germany," which was read at the last meeting of the New Shakspeare Society, is in type for the *Gentleman's Magazine*, and will probably appear in its next number. Mr. Spedding's criticism of the view taken by Mr. Furnivall of Shakspeare's "hell of time" in Sonnet cxx., l. 6, will appear in an early number of the *Cornhill Magazine*.

MR. EBSWORTH has finished his Introductions to the two quartos of *Midsummer Night's Dream*, 1600, in Mr. Griggs's series of facsimiles, and will now take up *Love's Labours Lost*.

MESSRS. RIVINGTON have in preparation and in the press the following new educational publications:—Mr. A. Sidgwick's *First Greek Writer* (of which an edition is being specially prepared, by arrangement with the English publishers, for the United States), to be published in July; a *Primer of Greek Syntax*, edited by Dr. Percival, to be published next month; the *Bucolics of Virgil*, by C. G. Gepp, M.A.; *Selections from Caesar's Gallic War*, by G. L. Bennett, M.A.; the twenty-first book of Homer's *Iliad*, by A. Sidgwick, M.A.; cheap Latin Texts of the separate books of Virgil and Caesar, to be published at twopence each and upwards; *A First History of England for Children*, by Mrs. M. Creighton; and Mr. York-Powell's *History of England*, which is now going through the press and will be ready for the autumn term at schools.

A NEW *Revista de Ciencias Históricas*, with especial reference to the archaeology of Catalonia, has appeared at Barcelona. The principal article in the first number (April) is a "Contribution to the Study of the Religion of the Iberi," by the editor, Sanpere y Miquel, in which he endeavours to establish an Egyptian-Phoenician origin for the remains found at Ebro and at other localities in Eastern Spain. The article is illustrated, and conjectural readings of inscriptions are given. Extracts from inedited MSS. and reviews follow; there is also a most useful list of the principal articles on Spanish history and archaeology which have appeared in Spanish and in foreign periodicals during the present year.

Two new periodicals devoted to history and archaeology have already appeared in Spain during the present year—the *Boletín Histórico* at Madrid, and the *Revista de Ciencias Históricas* at Barcelona. A third, *Revista de Arqueología*, is promised also from Madrid.

A COMMITTEE, composed of SS. Zaragoza, Gimenez de la Espada, and Abella y Ferreiro, has been appointed to direct the publication of the *Relaciones topográficas de América*, written in the time of Philip II., for the Congreso de Americanistas to be held in Madrid.

It is stated that Lord Ashburnham, yielding to the representations of M. L. Delisle, has generously presented to the Library of Lyons the leaves of the famous Pentateuch which, under painful circumstances, had been taken from that library and carried off to England. This is a generous and liberal act, which has caused general congratulations, and for which French scholars owe a debt of gratitude to the noble donor.

THE annual exhibition of the London Prize Needlework Association will be held in the gallery usually devoted to the Navy models at

South Kensington on the 21st and 22nd inst. The prizes will be given at 4.45 on the Saturday.

M. PAUL LEROY-BEAULIEU, member of the Academy of Moral and Political Sciences, has been selected by the Minister of Public Instruction to occupy the chair of political economy at the Collège de France, vacant by the death of Michel Chevalier.

M. GASTON PARIS has just reprinted two of his recent essays. One of them, taken from the *Encyclopédie des Sciences Religieuses* (a work now in course of publication at Paris under the superintendence of M. F. Lichtenberger), discusses the legend of the Wandering Jew. The other is extracted (for private circulation only) from the ninth volume of *Romania*, and is devoted to *La Chanson du Pèlerinage de Charlemagne*, the old French romance which tells how that monarch went on a pilgrimage to Jerusalem, and what singular feats he and his twelve paladins performed at Constantinople. After giving a summary of the story, and mentioning the various conclusions with regard to its date and origin arrived at by the editors and commentators of the single MS. (belonging to the British Museum) by which it has been preserved, "written in England in the thirteenth century by a transcriber who scarcely knew any French and who has cruelly maltreated the text," and having referred briefly to its Norse and Welsh translations made in the same century, M. Gaston Paris gives his reasons for attributing its composition "to the epoch preceding the Crusades, to about the third quarter of the eleventh century." Among its other points of interest, he alludes to the fact that it offers the oldest example we possess of the verse afterwards called Alexandrine, and that it may be fairly regarded as "the most ancient product of the *esprit parisien* which has come down to our times." In dealing with the *Juif Errant*, M. Gaston Paris makes use of the materials collected by Grässe, but calls attention to the fact that the bibliography of the oldest editions of the *Relation d'un Juif appelé Ahasuerus* has been compiled by him "avec un désordre qui fait naître de grands soupçons d'inexactitude." And he gives due credit to the researches of various other commentators, including the "vues fort ingénieuses, bien que très aventurées" of one of the most recent of their number, M. Charles Schoebel, who holds that "the allegory of the legend . . . is the evolution of war, the original state of humanity, ending in peace, which is its typical state." Without aspiring to such exaltations, M. Gaston Paris, in about twenty pages, points out, with his usual combination of good sense and sound scholarship, the track and the moral of the mysterious Jewish wanderer, whose popularity is confined to certain countries of North-west Europe—Germany, Scandinavia, the Netherlands, and France—but whose legend is unknown to Spain, Italy, and the East of Europe, having taken its form "dans un milieu allemand et protestant." He holds that there is no reason for doubting that the author of the legend founded it upon the story of Cartaphilus, which he borrowed from Matthew Paris, for in many respects the Ahasuerus of the Protestant story-writer is almost identical with the Joseph, formerly, under the name of Cartaphilus, doorkeeper of Pontius Pilate's court, with whom an archbishop of Armenia, who visited England in 1228 and narrated the strange story to the monk of St. Albans, was personally acquainted. The name Ahasuerus, as M. Gaston Paris remarks, is to be found only in Protestant Bibles, the Vulgate and the Roman Catholic versions giving the form Assuerus. As regards the date of the legend, there seems no reason, we are told, for supposing that it was made public before the beginning of the seventeenth century. Paul von Eitzen, the ardent Re-

former who owes his celebrity to the letter in which he is quoted as a witness to the existence of the Wandering Jew, died in 1598, and could scarcely have appeared until after his death. The success of the story, which has since become a real popular tale in many lands and has even been made a pretext for annoying the Jews in Germany on more than one occasion, is indeed remarkable. But M. Gaston Paris thinks the original aim of its author, whom he describes as "un audacieux novelliste," was "to mystify his contemporaries, and also, no doubt, to make money." For the *Neue Zeitung von einem Juden von Jerusalem* "was really nothing more than one of those canards, so common at the end of the sixteenth and the beginning of the seventeenth centuries, which, generally thrown into the shape of letters, exploited public curiosity while circulating reports of extraordinary adventures, prodigies, strange crimes, apparitions, imaginary travels, and the like."

WE have received *Monday Lectures*, by the Rev. Joseph Cook, part xvi. (Dickinson); *Help for Ireland*, by an Anglo-Irishman (Kerby and Edean); *Ward and Lock's Guide to the House of Commons*, 1880 (Ward, Lock and Co.); *Collins' Guide to London and Neighbourhood*, new edition (Collins); *What do we owe him? Robert Raikes*, by the Rev. C. Bullock (Home Works Publishing Office); *Epidemiology*, by John Parkin, M.D., part ii., second edition (Bogue); *Practical Boatbuilding for Amateurs*, by A. Neison, new edition by Dixon Kemp (Bazaar Office); *The Religious Mission of the Irish People and Catholic Colonisation*, by J. L. Spalding, D.D. (New York); *Rodman the Keeper: Southern Sketches*, by C. F. Woolson (New York: Appleton); *The Spellbound Fiddler: a Norse Romance*, by K. Janson, trans. A. Forestier (Chicago: Griggs; London: Tribner); *The Jews: their Customs and Ceremonies*, by the Rev. E. M. Myers (New York: Worthington; London: Tribner); *Science Lectures delivered in Manchester, 1879-80*, eleventh series (Manchester: Heywood); *Deductions from Euclid and how to work them*, by E. H. Matthews, third edition (Moffatt and Paige); *The Voice of the Nation, 1880*, by Frederick Bigg (Moxon, Saunders and Co.); &c.

ST.-SIMON'S UNPUBLISHED WORKS.

THE important discovery recently made at the French Ministry of Foreign Affairs of the unpublished papers of St.-Simon is causing great interest in the intellectual world of Paris. While M. F. Faugère, formerly director of the archives, was reserving for himself the right of giving a first edition of them, other publicists were acquainting themselves with these valuable documents. The public is now beginning to be instructed with regard to the curious vicissitudes of the volumes which formerly composed St.-Simon's cabinet. In 1760, in consequence of the difficulties arising out of a lawsuit, these papers were, "by order of the King," handed over to Sieur le Dran, head clerk at the Foreign Office. Since that time they have remained carefully locked up and jealously guarded from prying eyes. It was only by almost surreptitious means that the first publishers of the *Memoirs of St.-Simon* were enabled to gain access to the incomplete fragments which they gave to the press. Happily, under the Restoration, the Marquis de St.-Simon, a descendant of the great writer, having rendered personal services to Louis XVIII., obtained from the royal favour the restitution of the entire MS. of the *Memoirs*. He speedily published a complete edition. The judgment of the critics was henceforward based on the text of this edition. They did not shrink from comparing the literary *grand-seigneur* to Tacitus, and it may be said that the latter has no reason to complain of the comparison. Since then several editions of the *Memoirs*, each more

correct than its predecessor, have been published, notably by M. Chérel. The firm of Hachette has become the proprietor of the original MS.; it has entrusted the task of a final standard edition to M. de Boillie, who, by the care he takes to supplement his author's text with notes and commentaries, is making this work a perfect encyclopædia of the history of France at the end of the seventeenth and the beginning of the eighteenth century.

But hitherto various editors have asked in vain for leave to examine the other MSS. left by the Duke and peer. The archives in which these MSS. were deposited have remained closed to all; and it is only since the appointment of M. de Freycinet as head of the Foreign Office that this state of things has been changed.

The best proof of the liberality of the new Government consists in the promptitude with which the chief papers of St.-Simon have been made public. A few days ago M. G. Picot, a member of the Academy of Moral and Political Sciences, read before that Academy certain fragments selected from an unpublished work, the subject of which is a *Parallèle de Henri IV., de Louis XIII. et de Louis XIV.* These fragments, which are now appearing in the *Revue des Deux-Mondes*, convey a fresh and more exalted idea of the bold and fantastic genius of the author of the Memoirs.

Almost simultaneously, M. Drumont is winning renown by publishing (through Quantin) a hasty work on St.-Simon's embassy to Spain. If, in the Preface placed at the beginning of this work, he has complained of the illiberality of the new administration of the archives of the Foreign Office, this is a grievance which may be left to the judgment of English readers, and which does not seem particularly well founded if we remember that the author of the book in question has had in his hands, within less than six weeks, above a hundred volumes of the St.-Simon MSS.

In fact, the charm is broken. We are entitled to hope that very shortly all that has hitherto remained concealed will be brought to light, and that the inedited works will be published, not hastily and as a trade speculation, but with that deliberation, that self-possession, that love of things well done which should characterise every work that concerns the name of one of the glories of French literature.

MAGAZINES AND REVIEWS.

THE *Nineteenth Century* is deprived for the moment of the co-operation of Mr. Gladstone, and is able to devote a greater amount of space to the affairs of literature and art. Accordingly, Mr. Minto comes to the front with an article on Donne; Mr. A. W. Hunt with an article on English Landscape; and Mr. James Payn with a most cheerful discussion on that apparently not very exhilarating theme, Genteel Poverty—the poverty of the cultivated. Mr. Minto on Donne is interesting and satisfactory, the matter of his article being comprehensive and its manner excellent. The essay is indeed, in a sense, exhaustive of its subject. Mr. Hunt writes with authority on the difficulties that beset the contemporary landscape painter, who is forced, he conceives, into the attempt to accomplish feats both of which are desirable yet difficult of combination. Mr. James Payn contributes the humour of which the Review sometimes stands in need. The "Pinch of Poverty" is an entertaining and withal instructive assemblage of social observation. Sir William Gull argues the subject of hospital nursing, but the theme is hardly one to be more than mentioned in our literary columns. It was extremely wise of Mr. Knowles to present to us, in French, M. Renan's Royal Institution lecture—*Marc Aurèle*. The London dailies had the disadvantage of giving M. Renan

in English, by which, though the substance was retained, the form was wholly lost or disfigured. And M. Renan knows too well the value of form ever to be less than careful of it. *Marc Aurèle*, like all that he writes, is the work not only of a philosopher and historian, but of an expert in pure literature.

PROF. BAYNES' papers on "What Shakspeare learnt at School" in the November and in the January and May numbers of *Fraser's Magazine* are valuable helps to the consideration of a subject that is always interesting—Shakspeare's school-learning. Indeed, they may truly be described as the best papers yet written on that subject. Never before has it been discussed with so much information, intelligence, and breadth of view—with such thorough culture. The method pursued is excellent. By means of two well-chosen authorities—Brinsley's *Ludus Literarius* and Hoole's *New Discovery of the Old Art of teaching School*—is drawn up a list of the schoolbooks commonly in use in the Elizabethan age, and the order and gradation of study observed. Thus furnished, Prof. Baynes proceeds to point out signs of Shakspeare's acquaintance with these different stages. These signs may be ranged under two heads, (1) direct mentions and allusions, and (2) traces of influence on style and thought. To both these departments of enquiry Prof. Baynes makes noteworthy contributions; exhaustive, of course, he does not pretend to be. Both especially demand sound scholarship, and that sound judgment which is vividly conspicuous by its absence in so many persons who take upon themselves to write about Shakspeare. Prof. Baynes is both scholarly and judicious. Also, he aims at considering the question before him, not at demolishing his predecessors or establishing some new paradox. The most important section of his essay is that dealing with the relation of Shakspeare to Ovid. This is marked by a fine critical insight and power. Such papers would well bear expansion, and form a really valuable volume illustrating the education given in Elizabethan grammar schools as well as Shakspeare's book-learning. Then the list of Ovidian and other reminiscences might be increased. Here is one, noted by Malone and others, that is surely unmistakable, is indeed somewhat crude and gross. "Be of good comfort, Prince," says Salisbury to Prince Henry (*King John*, v. 7),

"for you are born

To set a form upon that indigest

Which he hath left so shapeless and so rude."

Probably Golding's translation was also in Shakspeare's mind, for Golding has "a huge rude heap," and speaks in the next line of "the shapeless world." But "indigest" is a direct importation of "indigesta." And the subject might be usefully illustrated from other authors. Here is a relevant quotation from Drayton—from his "Elegy" to his "dearly loved friend, Henry Reynolds, Esq., of Poets and Poetry." Having spoken of his friend's delight in poetry and in hearing him cite writers old and new, he adds:—

"For from my cradle you must know that I
Was still inclined to noble poesy;
And when that once *Pueriles* I had read,
And newly had my *Cato* construed,
In my small self I greatly marvel'd then
Amongst all other what strange kind of men
Those poets were; and, pleased with the name,
To my mild tutor merrily I came
(For I was then a proper, goodly page,
Much like a pigmy, scarce ten years of age),
Clasping my slender arms about his thigh.
'O, my dear master! cannot you,' quoth I,
'Make me a poet? Do it if you can,
And, you shall see, I'll quickly be a man.'
Who he thus answered smiling, 'Boy,' quoth he,
'If you'll not play the wag, but I may see
You ply your learning, I will shortly read
Some poets to you.' Phœbus be my speed!

To't hard went I, when shortly he began,
And first read to me honest *Mantuan*,
Then *Virgil's Eclogues*. Being enter'd thus,
Methought I straight had mounted Pegasus,
And in his full career could make him stop
And bound upon Parnassus' by-clift top.
I scorned your ballad then, though it were done,
And had for Finis, William Elderton."

OBITUARY.

THE absorbing duties of journalism have claimed another victim. After two years spent in withdrawal from all work, caused by illness brought on through the excessive strain of his literary labours, Mr. James Hamilton Fyfe died at 35 Cathcart Road, South Kensington, on the 5th inst., aged forty-two. He was the son of a journalist well known in the newspaper world of Edinburgh, and was born in the Modern Athens. When the boy was only a few years old his father removed to London, having received an appointment on the *Times*. His son's education was completed at the City of London School. In early manhood Mr. Hamilton Fyfe returned to his native city and adopted the profession of journalism for his own. It was at this period of his life that he published some compilations on British enterprise in foreign climes and on the triumphs of invention in science. On the starting of the *Pall Mall Gazette* Mr. Fyfe was entrusted with the supervision, under the editorial care of Mr. Greenwood, of the literary portion of that paper. He quitted these duties for the more onerous labour of assisting in the management of the *Saturday Review*, and remained in that position until he was forced by illness into sacrificing all such engagements. Many of his contributions have appeared in the best literary periodicals of this country. It was for many years a dream of his, to the fulfilment of which he looked forward with eagerness, to publish a comprehensive account of the France of to-day, and a few months before his withdrawal from labour he paid a visit to Paris for the purpose of acquiring knowledge of the subject by personal information. Like Mr. Macdonell, another distinguished journalist who was deeply interested in the history and progress of our neighbours, Mr. Fyfe died before his task was completed. He was called to the bar by the Middle Temple in 1863, but all his energies were devoted to duties elsewhere, and he never obtained any practice in the law.

In M. Gustave Flaubert, who died of apoplexy at Rouen, his native place, on Sunday last, in the fifty-ninth year of his age, France has lost one of the most distinguished of contemporary men of letters, and probably the most remarkable of her contemporary novelists. M. Flaubert's career is an example of the advantage which a competent but not overabundant fortune gives to the *littérateur*. He has never been a hasty or a prolific writer, and everything he has done, except, perhaps, the rather insignificant *Candidat*, is marked to last. The son of a distinguished medical man, he himself studied medicine as well as arts; and it was not till he was long past thirty that he settled down to the work of novel-writing. Since the appearance of *Madame Bovary* in 1856, which resulted in a futile and absurd prosecution, he has produced something every few years, *Salammô* having appeared in 1862; *L'Education Sentimentale*, in 1869; *La Tentation de Saint-Antoine* (of which instalments had been given long before in the *Artiste*), in 1874; and *Trois Contes*, in 1877. He is known to have been, at the time of his death, engaged upon another work which was supposed to be in a tolerably forward state of preparation. No detailed criticism of this great and singular novelist's work can be here attempted. He has sometimes of late been bracketed as a "realist" with such writers as

MM. de Goncourt and M. Zola, a proceeding which simply testifies to an entire absence of literary perception in those who have been guilty of it. Despite the Dutch painting in which no one has ever excelled him, M. Flaubert was one of the most purely literary and, so to speak, idealist of writers. His work, so far from being a mere photograph or *procès-verbal*, is purely arbitrary and artistic in what it selects as well as in what it rejects, in its conception of total effect as in its rendering of the parts of the composition. Perhaps his genius is seen to the best advantage in the wonderful fantasy-piece of the *Tentation*, to which, as a smaller pendant, the legend of Saint Julian in the *Trois Contes* may be joined. In his novels properly so called the gloom and occasional repulsiveness of the subjects have interfered with the general popularity of the work; but neither the fantastic horror of *Salammô* nor the tragedy of *Madame Bovary* nor the gray and monotonous failure represented in *L'Education Sentimentale* will ever blind careful critics to the extraordinary power and idiosyncrasy of the workmanship. It has been said of M. Flaubert that

"he draws the hopeful undertakings that come to nothing, the dreams that never in the least become deeds, the good intentions that find their usual end, the evil intentions which also are balked and defeated, the parties of pleasure that end in pain and weariness, the enterprises of great pith and moment that somehow fall through."

In this task he has employed by turns the most elaborately faithful and the most gorgeously coloured language; and has won, even from those critics who dislike his work, the reputation of being able to do almost anything with French. In the school which pretends to have drawn some of its inspiration from him there is not one man who has even the smallest fraction of his power, or who has inherited any of the true secrets of his art. He has stood, and is likely to continue to stand, alone.

THE death is likewise announced of M. Edouard Fournier, the antiquary and dramatist.

VICTOR HUGO'S NEW VOLUME.*

M. VICTOR HUGO's literary position in public opinion in France is now absolutely unassailable. Even the papers most strongly opposed to his political ideas bow before the extraordinary might of that great genius which is still producing works of the first rank at an age when most men are resting in the position they have already won. What Goethe was in Germany M. Victor Hugo now is in Paris, visited by every writer, and considered as, beyond all dispute, the ancestor of the whole generation of poets and novelists. M. Emile Zola and his disciples alone protest against this unanimous admiration, and consider the aged poet the representative of a dead system—Romanticism. But whatever element of justice there may be in some of their criticisms is spoilt by their excessive party bias, and sometimes even savours of ingratitude. For, without the literary movement called into being by Romanticism and its chief, most assuredly French prose would never have become what it is to-day, even in the hands of M. Zola and his friends—an instrument of extraordinary flexibility and of colouring unknown before the nineteenth century.

M. Victor Hugo's new book has therefore been received, like all his works, with a feeling akin to veneration by the whole press and also by the public. It contains, of course, some most magnificent fragments, and from one end to the other it is pervaded by a breath of true

grandeur; though, on the other hand, there are some reserves to be made—as we shall frankly point out—with regard to the inadequacy of certain ideas and the commonplace character of certain lines of argument.

As is indicated by the title, *Religions et Religion*, the author's aim has been to review the positive religions, the dogmas of all times and places, but more especially the Catholic dogma, and to show that these dogmas are in contradiction with true religion—that is, with that religion which is content to affirm an indeterminate belief in a principle of things, a *logos*, ineffable and indefinable. The first part, entitled *Querelles*, contains pretty much a criticism of what M. Victor Hugo regards as the chief errors of the positive religions; the observance of Sunday, the human form or human passions ascribed to God by different theologies, the existence of the devil, of hell, original sin, and the theory of the redemption are in turn the objects of the poet's criticism. To tell the truth, this is the weakest side of the book. M. Victor Hugo does not shrink from reproducing jests to be found in Voltaire, which, in his hands, become very dull and by no means amusing. Never in the very acme of his genius did the illustrious poet possess the gift, granted to far smaller men, of light and playful jest. He possesses it less now than ever, so the whole of this exordium is painful to read, and possesses as little poetical attractiveness as philosophical purport. Yet this part ends with a passage aimed, strange to say, against the mockery of scepticism which deserves quotation:—

"Avoir ri
Cela ne construit pas un toit sur notre tête
Contre l'Être, sinistre et splendide tempête.
Cela n'empêche pas les monts d'être debout,
Cela ne fait pas taire un Vésuve qui bout,
Ni les clairons de l'ombre aux bouches des Borées;
Cela n'empêche pas les mers démesurées
D'offrir on ne sait quels hommages écumeants
A la pâle planète au fond des firmaments . . ."

Need we call attention to the beauty of the last three lines, which remind us of the profoundly mystical inspiration of Shelley's *Ode to the West Wind*?

The second part is called *Philosophie*, and likewise contains a criticism of the various positive religions, but this time seriously undertaken. The poet first attempts to show the element of contradiction in the notion of a positive God; then he brings out, as it were in an historical fresco, every series of crimes or follies for which the name of the religions has served as a pretext. Here the gift of eloquence and of imagery which makes *Les Châtiments* M. Victor Hugo's most original book is allowed free scope, and the finest lines occur. I must quote especially the declamatory passage at p. 83:—

"Fanatismes! Terreurs! la fable est sur les hommes!
Sur tous ces yeux fermés faisant de sombres sommes!
Quel rêve! Quel monceau d'Olympes insensés!
Que d'effroi! Que d'enfer! Assez, prêtres, assez!
La Bacchante aux flancs nus rit dans le bois infâme.
L'Indou qui saigne et pend aux crocs de fer, se pâme;
La mère, avec la chair de son enfant, nourrit
Le dieu-fournaise aux dents de feu, Baal-Bérith;
Ici, temple à la nuit; là, temple à la Famille.
Le cheval de l'Iman de la Mecque chemine
Sur des hommes couchés à terre qui lui font
Un fumier de leur âme, un pavé de leur front.

Que d'hommes ont vécu sans être jamais nés!"

The third part, entitled *Rien*, gives the materialistic or empirical solution of the universe. There are, perhaps, a few crudities in this state-

ment which might make metaphysicians smile; but it is not the metaphysical side with which M. Victor Hugo is dealing. It is on their moral side that he attacks the negative doctrines. He takes up with great warmth the argument from good and evil, and from the necessity of a future life to repair the injustices of this world, and ends with the cry—

"Rien! oh! Reprends ce rien, gouffre, et rends-sou Satan,"

thus testifying that he prefers to the despairing nihilism of the materialists even the conception which he has just assailed with the utmost vehemence. The last two parts, which are called *Des Voix* and *Conclusion*, contain the poet's profession of faith after this twofold negation of the positive religions on the one hand and of atheism on the other. This faith of M. Victor Hugo is wholly mystical. He confines himself to affirming a higher existence, beyond human ken, and a single line will suffice to render his theory comprehensible;

"Il est, il est, il est, il est éperdument!"

he says of God, thus confessing both his faith and his weakness. Those philosophers who are struck with the vague and summary character of this conclusion, so like the cry of Parmenides, "One, all; all, one!" will be comforted by reading a very beautiful page on the Hindu ascetics which recalls the most marvellous passages in *Les Orientales* or *La Légende du Siècle*:—

"Contemplant ce qui n'a ni bord, ni temps, ni lieu,
Absorbés dans la vue effrayante de Dieu,
Farouches, ils sont là, chacun seul dans l'espèce
D'horreur qu'il a choisie au fond de l'ombre épaisse,
Faisant vers l'Inconnu toujours le même effort,
L'un, dans un vieux tombeau dont il semble le mort,
L'autre, sinistre, assis dans un trou de tonnerre
Au tronc prodigieux d'un cèdre centenaire,
L'autre, livide et nu, dans le creux d'un rocher,
Muets, affreux, laissant les bêtes s'approcher,
Pas plus importunés sous leur fauve aurole
D'un tigre qui rugit que d'un oiseau qui vole.
Le désert les a vus à jamais s'accroupir! . . ."

This summary will enable the reader to understand at once the qualities and the defects of this new work by the author of *Hernani*. A style wholly incomparable in its power, an intense spirituality, much warmth of soul in presence of great ideas—such are its merits. Its defects result more especially from its philosophical poverty, and from M. Victor Hugo's apparent ignorance of the theories of contemporary exegesis. On this subject he has unfortunately remained stationary at the point reached by thinking men in 1825. He has not followed, with the philologists of our time, the history of religions through the history of words. While modern science shows us all religious conceptions as legitimate in a certain sense, and all agreeing to manifest under ever-renewed symbols either the forces of nature or the energies of the human soul, M. Victor Hugo seems to believe, with Voltaire—and, it must be added, with many of his fellow-countrymen—that religious development is a purely factitious work, as it were a great political plot, intended to perpetuate the oppression of the great of this world by basing it upon the terrors of the small. Then passion blinds him, and prevents him from seizing the element of acquired morality that enters into the positive dogmas, which may, indeed, furnish occasion for abuses, but which nevertheless remain the only school of virtue open to the people. But perhaps we ought to ask nothing from a poet but fine images and eloquence. It has been seen that M. Victor Hugo shows no falling off in this respect at the age of seventy-eight from the standard which he reached in 1818 when he wrote his first Odes. If his new book does not

* *Religions et Religion*. Par M. Victor Hugo. (Paris: Calmann Lévy.)

add to his glory, which is impossible, yet it does not detract from it—and that is a great thing if we remember the feebleness of Voltaire's later tragedies or the obscurity of the second part of *Faust*. PAUL BOURGET.

CORRESPONDENCE.

A MISQUOTATION.

9 Bel Lion Square, W.C.: May 10, 1880.

Can any of your readers help me to the first origin of a persistent misquotation which forms the title and subject of a picture of Mr. Calderon's in the Royal Academy?

It is this: "Captives of his bow and spear." Most persons, I assume, suppose it to be a Biblical phrase. But the Biblical collocation is usually "sword and bow," as may be seen in Gen. xlviii. 22; Josh. xxiv. 12; 1 Sam. xviii. 4; 2 Kings vi. 22; Psa. xlv. 6; Hos. i. 7, ii. 18; the first of which passages seems the suggestive one. "Bow and spear" or "bow and lance" are found in Psa. xlii. 9; Jer. vi. 23, l. 42; Neh. iv. 16; but not with the context implied. R. F. LITTLEDALE.

ON A PASSAGE IN "HAMLET," III. iv. 160, ETC.

Cambridge: May 8, 1880.

There is probably no great difference of opinion between Mr. Spalding and myself with

regard to the general meaning of the passage in Hamlet's address to his mother. No doubt he counsels her to "acquire that virtue in which she is so conspicuously wanting." All I contend for is that he does not do so in the words,

"Assume a virtue if you have it not,"

which is only to be a step in the process of acquisition. Mr. Spalding, if I understand him aright, regards "assume" as describing the process from beginning to end. To me it appears to denote the beginning only. This is the real issue between us. "To assume a virtue," he says, is "to acquire a virtue." If so, then to assume a title is the same thing as to acquire a title. It may be that his interpretation gives a richer and truer meaning to the word, but I submit it is not Shakespeare's meaning nor in accordance with his usage. I therefore adhere to my previous explanation, which is consistent with the context and not self-contradictory.

W. ALDIS WRIGHT.

King's College, London: May 8, 1880.

May I just say that the idea that Shakespeare teaches false morality in the well-known line

"Assume a virtue if you have it not"

arises entirely, not from any misunderstanding of the word *assume* (Mr. Aldis Wright has surely made its meaning plain enough if there could be any doubt about it), but *through cutting off the line from its context*? Mr. Spalding mentions those who dissociate the line from its context; but he does not seem to see that, if it is not so dissociated, the word "assume" needs no new gloss, but has, and it must have, its ordinary sense. Shakespeare certainly does say, "Wear the guise of a virtue, even if you do not possess that virtue;" but the context explains the seemingly immoral mandate. The guise or habit is to be worn in the hope that it may assist the growth—the acquisition—of the virtue. Now such quoters of the line as so justly offend Mr. Spalding forget the context altogether—forget the worthy purpose for which the virtuous guise is to be worn; and, in fact, suggest that it is to be worn to deceive others—to make others believe that the wearer of it really possesses the virtue.

Once sever a line from its context, and strange things may be made of it. It was Archbishop Whately, I think, who pointed out that, if we allowed ourselves the liberty of ignoring the surroundings of a phrase, we could discover in the New Testament such a sentiment as "Hang all the law and the prophets!"

JOHN W. HALES.

Clifton: May 10, 1880.

In the ACADEMY of May 8 Mr. Spalding says:—"Many people" (because they adopt the popular meaning of *assume* in *Hamlet*, III. iv. 160) thereby "defend all manner of minor immoralities and hypocrisies," and cite Shakespeare as one who justifies them in so doing.

Whatever meaning *Hamlet* may have had in this passage, there can be no doubt that in *Comedy of Errors*, III. ii. 1-28, Luciana is giving advice which involves, in its usual and popular signification, the counsel to "assume a virtue if you have it not." She says to him whom she believes to be her brother-in-law, with reference to the neglect which she supposes her sister to have suffered at his hands—

"Or if you like elsewhere, do it by stealth.

Muffle your false love with some show of blindness.

* * * * *

Apparel vice like virtue's harbinger;

Bear a fair pretence, though your heart be tainted;

Teach sin the carriage of a holy saint.

Be secret false; what need she be acquainted?"

Did anyone ever seriously think that by giving these words to one of his characters Shakespeare

stands "committed to the appalling doctrine that hypocrisy in morals is to be commended and cultivated"? This is the conclusion which Mr. Spalding seems to think follows on what Mr. Furnivall calls the "Victorian" meaning of *assume* in the passage from *Hamlet* (ACADEMY, April 24, 1880). Even granting that the "Victorian" meaning is correct, I must enter my protest against such a depreciatory estimate of Shakespeare's morality, which credits him with the vices of which his characters are the warning examples. L. M. GRIFFITHS.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, May 17, 4 p.m. Asiatic: Anniversary.
- TUESDAY, May 18, 3 p.m. Royal Institution: "American Political Ideas," by J. Fiske.
- 8 p.m. Society of Arts: "Arts, Commerce, Recent Advances, and Future Prospects of Madagascar," by the Rev. Jas. Sibree.
- WEDNESDAY, May 19, 7 p.m. Meteorological.
- 7.30 p.m. Education Society: President's Address; "A Review of the Discussions on Education as a Science," by Prof. A. Bain.
- 8 p.m. Society of Arts: "Trade Routes between England, Norway, and Siberia," by Lieut. G. T. Temple.
- 8 p.m. Archaeological Association: "Ptolemy's Measurements of the South Coast," by H. Bradley; "British Earthworks near Weston-super-Mare," by C. W. Dymond.
- THURSDAY, May 20, 3 p.m. Royal Institution: "Buddhist Sacred Books," by T. W. Rhys Davids.
- 7 p.m. Numismatic.
- 8 p.m. Chemical.
- 8 p.m. Society of Arts: "Some Recent Advances in the Science of Photography," by Capt. Abney.
- FRIDAY, May 21, 8 p.m. Philological: President's Address; "English Place-Names," by Mr. Walter Browne.
- 9 p.m. Royal Institution: "Electricity in Transit," by W. Spottiswoode.
- SATURDAY, May 22, 3 p.m. Royal Institution: "The Dramatists before Shakespeare," by Prof. H. Morley.
- 3 p.m. Physical.
- 3.45 p.m. Botanic.

SCIENCE.

Early Man in Britain, and his Place in the Tertiary Period. By W. Boyd Dawkins, M.A., F.R.S., &c. (Macmillan & Co.)

LIGHT from two opposite quarters has of late years broken in upon the study of early man. Just as two sets of engineers driving a tunnel from opposite ends will eventually meet, so the antiquary, as he recedes beyond the verge of history, meets the geologist advancing towards the human period; and the two enquirers, thus finding themselves on common ground, join hands over the study of prehistoric man. It is true that valuable contributions to this subject have sometimes been made by the pure geologist, and sometimes by the pure archaeologist; but these have been individual discoveries, and nothing more. A general and unprejudiced view of the entire subject can be taken by neither of these specialists without the aid of the other—the one sees too much of this side, the other too much of that; and it needs a man of rare attainments to combine these opposite views into a faithful picture. The needful combination of geological and archaeological knowledge is fortunately possessed in a conspicuous degree by the distinguished Professor of Geology at Owens College. Yet it is no secret that Prof. Boyd Dawkins is a geologist first and an archaeologist afterwards. It may therefore be fairly expected that in any discussion of this two-sided subject he will naturally take care to keep the geological side turned well to the front. The reader will feel, in short, that he is in the hands of an antiquarian geologist rather than of a geological antiquary.

Such is the impression left upon the student who takes up the noble volume which Prof. Dawkins has just given to the world. The

geologist, at least in the early part of the book, peeps out at every page. Early man is, to our author, a mammalian fossil whose range in time is to be determined with precision. The records of the rocks are accordingly searched for the first appearance of human remains, and where search fails to discover them arguments are adduced to account for their absence. The rashest radical in anthropology will hardly expect to find primitive man in any rocks older than the Tertiary epoch. It is only, therefore, with the Cainozoic or Tertiary strata that anthropologists need concern themselves, and the great problem which our author seeks to solve, as suggested by his title, is the determination of man's place in the Tertiary period. It should be mentioned, in passing, that Prof. Dawkins uses the term "Tertiary" with considerable elasticity, stretching it far beyond its original Lyellian meaning, and causing it to cover the Pleistocene, the Prehistoric, and the Historic periods.

In the oldest of the Tertiary strata, forming the Eocene group, the palaeontologist has never met with the faintest trace of human remains. Nor does Prof. Dawkins believe that they ever will be found there. So far as we at present know, only a single living genus of the mammalia is represented in the Eocene fauna of Europe, and that one genus is of marsupial type. "To seek for highly specialised man in a fauna where no living genus of placental mammal was present would be," says Prof. Dawkins, "an idle and hopeless quest." It may obviously be objected that, although no representatives of recent genera of the higher mammalia have as yet been found in the Eocene rocks, their non-discovery does not necessarily imply their non-existence. Negative evidence is always a dangerous basis on which to found any generalisation, as the history of geology abundantly proves. Nevertheless, we feel that Prof. Dawkins is perfectly justified in dismissing the question of Eocene man as outside the range of practical science.

Advancing to the Miocene strata, the palaeontologist finds a large number of living genera, but no living *species*, of land mammal. Hence, says our author, "it will be seen how improbable, nay, how impossible, it is that man, as we know him now, the highest and most specialised of all created forms, should have had a place in the Miocene world." And yet many anthropologists of eminence have felt justified in believing that man dwelt in France as far back as mid-Miocene times. Witness, say they, the chipped and fire-marked flints of Thenay; not to mention the notched bones of Pouancé. But even if it be admitted that these stones and bones do exhibit traces of artificial treatment, Prof. Dawkins is disposed to regard them as the work of an ape, and not of a man. No anthropoid ape at the present day, so far as we know, is a stone-chipper or a bone-cutter; but Prof. Dawkins suggests that our Pithecoïd contemporaries may, after all, be but the degenerate descendants of a noble ancestry, stretching back to the Miocene period.

Pliocene man, in spite of all that has been said about him in France and in Italy, is much too shadowy a personage to be recognised by Prof. Dawkins. The reputed discoveries of

human remains in Pliocene deposits are dismissed as utterly unsatisfactory; and the author holds that, "as the evidence stands at present, the geological record is silent as to man's appearance in Europe in the Pliocene age." His appearance is admitted, however, to be improbable, rather than impossible; for one living species of mammal has already been found in Pliocene deposits; and if one such species is known, who can say how many others may exist and yet be unknown?

It is not until the geologist rises to the study of the Pleistocene period that he finds indisputable proof of man's existence. The earliest men have left their simple flint flakes in the lower brick-earth of the Thames Valley, where they have been unearthed by the Rev. Osmund Fisher and by Messrs. Cheadle and Woodward. These deposits are referred by Prof. Dawkins to the mid-Pleistocene series. As to Mr. Skertchly's discovery of implements in the Brandon beds, Prof. Dawkins is disposed to admit the validity of part of the evidence, and he therefore does not deny that man dwelt in East Anglia before the upper boulder-clay had ceased to be deposited.

We have been tempted to dwell upon the early portion of Prof. Dawkins's book because it is here that its novelty seems chiefly to rest. Yet it must not be supposed that the interest ceases, though it centres, there. In fact, there is scarcely a single page in the book, out of its full five hundred pages, which may not be read with interest by the student of early man. And by the non-geological reader the latter part will perhaps be read with greater relish than the earlier. For, in penetrating to the very oldest vestiges of man's existence, the enquirer feels that much is necessarily uncertain, and all is more or less hazy. Our view of the earliest occupants of this country is exceedingly dim. We see men but as trees walking; and it is not until we have made considerable advance that our vision clears up, and the outline of prehistoric man shapes itself with distinctness. Our acquaintance with the rude palaeolithic hunter of the river-drifts, notwithstanding all that has been written, is still but meagre. We know more, however, of the cave men, with their neat carvings and quaint engravings; still more of the agricultural folk of neolithic times; and, most of all, of the cultured people of the bronze age. On every one of these stages of man's development, Prof. Dawkins discourses in a way which is well worth listening to—clearly, pleasantly, and learnedly. His book, moreover, is well arranged, freely illustrated, and handsomely got up. And, in short, since Sir John Lubbock wrote his masterly work on prehistoric times, we have met with no English book which takes so clear and comprehensive a view, both geological and archaeological, of the fascinating study of early man.

F. W. RUDLER.

Miscellaneous Essays relating to Indian Subjects. By Brian Houghton Hodgson. (Trübner.)

THIS is a remarkable volume of the collective Essays of a remarkable man, who in green old age is still among us, though some of his

writings date back to a period when men of sixty were still boys at school, and these Essays register the high-water mark of a particular branch of linguistic knowledge which up to this date has never been exceeded. At a time when one portion of the influential classes in India were laying undue stress upon the study of Sanskrit, a language which has been dead for centuries, and a second went to the other extreme of making English the vehicle of instruction of the people of India, Mr. Hodgson saw that it was by means of the vernacular alone that any general enlightenment of a nation could be attained, and the principles which he preached in vain have become the rule of practice now.

More than this, Mr. Hodgson, availing himself of the rare opportunities which a residence of twenty years at the capital of the kingdom of Nepal in the sub-Himalayan ranges afforded, deliberately studied the manners and languages of the numerous tribes which occupied what is now known as the field of the Tibeto-Burman family. With pen in hand he interviewed deputations of Hill-men, and jotted down vocabularies and colloquial phrases which fell from the mouths of different specimens of humanity at different stages of civilisation, and threw a light into recesses never previously, or since, explored. Some portion of these results, hitherto scattered in the volumes of serials, are collected in these volumes, and are a mine of wealth to the student of the languages of India. All the vocabularies brought together in the course of his laborious researches are designed to show the validity of his opinion that all the non-Aryans of India are essentially of one stock, and came from that *officina gentium*, the trans-Himalayan regions of Central Asia. This *dictum* (with the exclusion of the great Dravidian family of South India, who assuredly hailed from Western Asia), has been provisionally accepted by subsequent labourers in the same field, but much remains still to be done to place the theory on the solid ground of demonstrated fact.

Nor was this the only virgin field which was worked by the indefatigable Resident of Nepal. In the field of natural science he led the way also, and found time to enrich our zoological annals with seventy-one papers on the mammals and fifty-two on the birds of the sub-Himalaya. It was also his good fortune to discover the existence in Nepal of an independent Buddhistic literature of undoubted authenticity and the highest importance. Where he could not secure originals, he had copies prepared under his immediate supervision, and transmitted them to Calcutta, Paris, London, and Oxford. How highly they were valued by scholars is evidenced by the fact that Eugène Burnouf, one of the greatest of scholars, dedicated his last great work to Mr. Hodgson, as founder of the true study of Buddhism. St.-Hilaire, Regnier, Max Müller, and all other scholars who have made Indian Buddhism or the non-Aryan vernaculars of India their study have acknowledged the debt that they owed to the author of these volumes. In addition to this, with a rare munificence Mr. Hodgson presented a unique specimen of Tibetan literature in 334 large volumes to the India Office Library.

and hundreds of zoological specimens to the British Museum. It is characteristic of this country that, though he was decorated with the order of the Legion of Honour by Louis-Philippe, and had a gold medal struck in his honour by the Asiatic Society of Paris, here he has been undecorated and unrecognised; but the volumes now before us, in addition to the volume published in 1874, will serve to maintain his reputation as one of the greatest and most original workmen in the great Indian field.

The book before us is by no means light reading. The casual reader will turn over its pages in despair; the man of science whose tastes are attracted in another direction will place it respectfully on his bookshelves; but to those who take an interest in the manners and customs of the people of India and their languages it will ever be instructive and suggestive. They will learn that the majority of the people of India, though some of them speak Aryan languages, and all are more or less imbued with Aryan civilisation, are not in race or origin Aryan, as is generally supposed. Affinities, undreamt of before, betwixt races with most distant habitats are here clearly indicated. New worlds seem to be opening out of languages and dialects; new conceptions of the mode in which tribes are broken up by defeat or disease; the existence of a language such as the Kiranti, with seventeen dialects, conveys an idea of the process by which forms of speech have been differentiated. The language field of Nepal still remains the peculiar preserve of Hodgson as he left it twenty-five years ago; and if, in the fields of Assam and Burma and Central and Southern India, our knowledge, owing to the labours of men like Caldwell and Dalton and Phayre, has been extended, and new terminologies and classifications have been worked out, still this progress has been made on the lines and along the spoor marked out by the great pioneer through the previously unexplored forest. The use of Hodgson's vocabularies has given reputation to more than one compiler; and the perusal of such treatises as the one with which this book commences, on the Kooch, Bodo, and Dhimal tribes, has been, and will long remain, the best model for any young scholar who wishes to try his 'prentice hand on a faithful and intelligible delineation of the characteristics of an unknown race.

The letters on "The Pre-eminence of the Vernaculars," though written as far back as 1848, have a peculiar and continuous value, as one of the epidemics to which statesmanship in India is periodically liable exhibits itself in an insane and useless desire to supplant the great vernaculars of British India by the English language. That whole nationalities have changed their vernacular language is evidenced by the notorious examples of Syria and Egypt; but the process must be a slow one, and far exceeds the power of an Emperor of Russia or Empress of India. These letters produced permanent practical good at the time, before the educational system of British India had settled down on a healthy vernacular basis, and as recently as 1871 they were quoted in Returns made to the House of Commons.

The learned public are indebted to Dr. Reinhold Rost, of the India Office Library, for

the care with which this book has been edited, and to Mr. Trübner for his enterprise in undertaking the publication of a work which the Government of India had declined. We trust that scores of copies will be purchased and distributed to such officials in India as are likely to profit by it in the prosecution of similar researches.

ROBERT CUST.

NOTES OF TRAVEL.

LIEUT. G. BOVE's plan of an Antarctic expedition appears in the last number of the *Bollettino* of the Italian Geographical Society. Provision is to be made for spending two winters within the Antarctic circle—viz., under long. 110° W. and long. 90° E. of Greenwich. The cost of the expedition is estimated at 600,000 frs., and it is hoped to raise this large sum by a public subscription.

COUNT SZECHENYI, Lieut. Kreitner, and Dr. Loczy are reported to have arrived at Rangoon on March 12. They traversed a portion of Eastern Tibet, access to Lhasa being denied them, and their observations are stated to throw much light upon the hydrographical features of Central Asia. The Irawadi is said to rise much farther to the north than was hitherto supposed, and for a considerable portion of its course it runs parallel with the Brahmaputra.

WE have received four volumes of the *Journal* of the American Geographical and Statistical Society. In variety of contents they cannot vie with some of our European publications of the same class, but they nevertheless contain some valuable papers on American explorations which deserve to be widely read. Chief Justice Daly's annual address is a standing feature. It furnishes an able summary of geographical work done throughout the world, dwelling more especially upon the labours of surveyors and explorers within the limits of the United States.

WE are glad to learn that the opinion which we were able to express on April 24 regarding Col. Prejevalsky and his expedition has been confirmed even sooner than might have been expected, news having reached St. Petersburg, via Peking, at the end of last week, announcing that on March 20 he was at Sining-fu. He appears to have entered Tibet last year, but was compelled by the Lamas to retreat when within one hundred miles of Lhasa. He is reported to have wintered in the mountains in Northern Tibet at an elevation of sixteen thousand feet, and intended to spend the spring and the early part of the summer in exploring the sources of the Yellow River. After that he proposed to cross Mongolia to Kiaocha, which he expected to reach in August.

WE hear that the Abbé Guyot, who early last summer organised the second Algerian missionary expedition to East Central Africa, and accompanied it as far as Tabora, is about to return to Europe in order to prepare another expedition, also destined for the same region. The new party will consist of over twenty members, who have already been chosen; and, profiting by the Church Missionary Society's experience of the greater economy of that route, they will make their way to the Lake region by way of the Nile.

Estudios geográficos históricos de España, by A. Fernandez Guerra, with maps under the supervision of the Instituto Geográfico, is in preparation at Madrid at the Government expense.

A GEOLOGICAL map of the whole of the United States is being prepared by Prof. Hitchcock, of Dartmouth University.

By the last mail from Zanzibar news has been received that M. Popelin, after the end of

the heavy rains, will leave the Belgian station at Karema, on the east shore of Lake Tanganyika, for Nyangwé, in Manyema, on the Upper Congo. He will there make preparations for the arrival of Mr. H. M. Stanley and the Belgian trading expedition from the West Coast, though it seems very doubtful when they will succeed in reaching Nyangwé. M. Popelin has availed himself of his stay at Karema to take a series of meteorological observations.

M. BURDO, with the third Belgian expedition, arrived at Mpwapwa from Saadani on February 18, having accomplished the march in only twenty-three days without any mishap, and he has sent home a detailed report of his journey. He speaks highly of Mpwapwa, which he describes as very salubrious on account of its position in the midst of mountains. M. Burdo started the next day with a small party to visit the Matamombo lakes to the south-east, and appears to have found some little difficulty in reaching them owing to the mountainous nature of the country and the dense forests, through which he had literally to cut his way. He intended to leave Mpwapwa for Lake Tanganyika on February 23, and hoped to be able to cross the dreaded Ugogo region by forced marches in from ten to fifteen days.

AMONG the results of their observations during their recent expedition in Western Africa, we learn that MM. Capello and Ivens found that the climate of the regions explored improved according to the elevation reached, and that the Bihé and Bailundo tribes were the most advanced in every respect. The River Quanza was found to have its origin in a lagoon on the Bihé plateau some three or four miles long and about a mile broad. The Casai takes its rise on the Quiso plateau at an altitude of 5,200 feet. This region stretches from west to east, and is considered to form the water-parting of the great basins of the Congo and Zambesi Rivers. With a view to studying the course of the Quango more effectually, the two explorers separated, one following each bank. This investigation appears to have been no easy task, for, in addition to the numerous windings of the river caused by the undulating nature of the country, the explorers experienced great difficulties from the many affluents of the river and the cataracts, some of which are nearly two hundred feet in height.

MR. R. GORDON, an executive engineer in British Burmah, has for some time been engaged on an important work, of which he has recently published the first two volumes at Rangoon, under the title of *A Report on the Irrawaddy River*. These volumes deal with the hydrography, hydrology, and hydraulics of the river, and contain besides Appendices and Supplement. The first volume is illustrated with hydrographical, hypsometrical, and orographical maps of Thibet and the neighbouring countries, together with a hydrographical map of India. The third and concluding volume of this elaborate Report, with the Atlas of plates, is in course of preparation.

IT is said that the Government of Western Australia intend shortly to make an attempt to open out the country in the neighbourhood of Beagle Bay, where good land is believed to exist, and that a party will be sent there under Mr. Alex. Forrest, who has lately returned to Perth from his exploration of the interior.

DR. SCHOFIELD and Mr. R. J. Landale have lately left for China to join the China Inland Mission in the interior of the country. As they have both gone through a course of scientific instruction before starting, it may be hoped that their journeys will be productive of useful results to geography.

MR. GREVILLE CHESTER has recently re-

turned from a journey, undertaken at the request of the committee of the Palestine Exploration Fund, to the principal Biblical sites in Lower Egypt, and in particular from the tract of country between San, the ancient Zoan, and the Serbonian Lake, through which, according to the theory taken up and advocated by Brugsch-Bey and since accepted by Prof. Sayce, the Israelites passed at the time of the Exodus. The result of Mr. Chester's explorations will be published in the next *Quarterly Statement* of the Palestine Fund. We hear that he has been compelled to abandon this theory, as he has discovered that the geographical and physical features of Serbonis are in actual conflict with it, and utterly incompatible with any tract of water bearing the name Jam Sûf.

SCIENCE NOTES.

Practical Geology.—The current number of the *Proceedings of the Geologists' Association* contains the inaugural address which was delivered at the commencement of this session by Prof. T. Rupert Jones, the president of the association. The subject of this address is "The Practical Advantages of Geological Knowledge." Prof. Jones takes a masterly view of the objects of geology and of its place in the family of the natural sciences; he then deals in detail with the economic aspect of the subject, showing the relation of geology to mining, agriculture, engineering, geography, and landscape-painting, but especially enlarging upon its value to the military officer. The army has the credit of having trained several eminent geologists, such as De la Beche, Murchison, and Portlock; and the close relation between the science of war and the study of geology is ably pointed out by Prof. Jones, whose connexion with the military and staff colleges at Sandhurst gives peculiar value to his remarks on this subject.

Introductory Science Primer. By T. H. Huxley, F.R.S. (Macmillan.) This work, which was originally advertised to appear with the well-known Primers of Profs. Roscoe, Geikie, and Balfour Stewart, has been delayed for many years, partly by the ill-health of the author, and partly by the many demands upon his time. It is divided into three main sections, which treat respectively of Nature and Science, of Material Objects, and of Immaterial Objects. The facts which are accumulated in each separate section are both philosophical and experimental; yet we confess we do not consider that the study of the more special Science Primers will be much, if at all, promoted by the perusal of the present one. Some of the aphorisms are very forcible and condensed, such as "Chance and accident are only aliases of ignorance;" "Natural laws are not commands, but assertions respecting the invariable order of nature;" "Scientific experiment is scientific observation performed under accurately known artificial conditions." Such sayings should, indeed, be constantly used by the teacher while he is making use of the other Primers. But, beyond this, we do not think the book will be very useful for teaching purposes, and we must own to a considerable feeling of disappointment as the result of the careful perusal of a long-expected book from the pen of one of our foremost men of science.

PHILOLOGY NOTES.

THE present number of the *Anglia* (vol. iii., No. 2) opens with a careful examination by H. Wood (New Bedford, U.S.A.) into the influence of Chaucer upon James I. of Scotland in *The King's Quair*, in which, by a comparison of numerous passages, the writer reverses Pinkerton's assertion that "not one Scottish poet has imitated him

(Chaucer) or is in the least indebted to him;" and maintains, on the contrary, both that James acknowledged "my maisteris dere, Gower and Chaucere," and that he studied and imitated many of Chaucer's poems, particularly *Troilus and Creseida* and the *Knights Tale*. It is a pity, however, that, with plenty of sound material, the writer, who is evidently a student of recent Chaucer criticism, has not had the courage to let the spurious and doubtful poems alone; it can only introduce confusion and weaken his argument to adduce comparisons with *The Cuckoo* and *Nightingale* or *The Flower and Leaf* as instances of Chaucer's influence. Justly comparing the beautiful little poem *Divine Trust*, attributed to James, with Chaucer's *Good Counsell*, the complete four-stanza version of the latter printed by Mr. Furnivall in 1867 (though contained in Dr. Morris's revised Aldine edition) has escaped Mr. Wood's notice. In an interesting essay upon the debts of Spenser's *Shepherd's Calendar* to the eclogues of the Carmelite monk, John Baptist Mantuanus, F. Kluge (Strassburg) comes to the conclusion that, while Mantuanus was the model for his moral and satirical, as Virgil was for his elegiac and erotic eclogues, Spenser, with all these obligations, did not lose his originality. H. Varnhagen gives the *Complaint of Maximian* and the *Sayings of St. Bernard* in continuation of Middle-English poems from MSS.; and the indefatigable and scholarly student of saint-lore, C. Horstmann, contributes four *Prose Legends*—*St. Winifred* from Caxton's and John Mirk's versions; fifteen short *Mary-Legends*, *St. Dorothea*, and the life and miracles of *St. Jerome*, in nineteen chapters, all from Lambeth MS. 432. G. Schleich devotes some pages to Nehab's dissertation on the Old-English *Cato*; other notices deal with Arber's *English Garner*, Schleich's *Prolegomena ad Carmen de Rolando Anglicum*, Hermann's *Shakespeare der Kämpfer*, and Leo's *Four Chapters of North's Plutarch*. M. Trautmann has some brief remarks on the spread of the Northumbrian *r*, and H. Varnhagen on the etymology of *catch*.

Allindisches Leben. Von Heinrich Zimmer (Berlin: Weidmannsche Buchhandlung.) At the fourth meeting of the Oriental Congress, held at Florence in the autumn of 1878, a prize was offered for the best essay on "Le vicende della civiltà ariana nell' India," and it was awarded to the work of Heinrich Zimmer. The essay is now swollen by additions and corrections into a substantial octavo volume of some 470 pages, but it is stated in the Preface that the alterations have reached only to the details, and that the book is substantially the same as the prize essay. In that case the essay must have afforded a remarkable contrast to the ordinary prize essay. Herr Zimmer's book—if he has earned his doctor's degree he modestly suppresses the title—is a clear statement in orderly arrangement of carefully selected and verified facts illustrative of the manners and life of ancient India in the times of the Vedas. There is no theorising and no eloquence, but there is evidence of much careful and conscientious labour, and the result is a most accurate and complete account of the subject discussed. The work will be especially useful to those interested in the history of primitive culture, as it collects and supplements the information hitherto scattered in Prof. Roth's contributions to the Petersburg Dictionary and in the works of Dr. Muir and other writers on the civilisation of the early Indian Aryans. The reader will here find all the information which the author has been able to collect from the Vedas concerning the geographical and tribal divisions, the customs, laws, agriculture, food, clothing, and amusements, and the marriage, burial, and family customs of the Vedic times.

THE *American Journal of Philology*, edited by Prof. Gildersleeve and published by Messrs. Macmillan and Co., is the name of a new periodical to which we cordially wish success. Half the number is occupied by abstracts of articles in various French, English, German, and Greek philological journals, a most useful and valuable feature which we would recommend for imitation to the editors of our own *Journal of Philology*. There are also short reviews of some books, including Prof. Whitney's admirable *Sanskrit Grammar* and Vincent's *Handbook to Modern Greek*. The first article, by W. W. Goodwin, is on the phrases *δικαι ἀπὸ συμβόλου* and *δικαι συμβόλου* in Thucydides, the latter of which he determines to mean "business suite;" the second is by F. Carter, on "Two German Scholars on One of Goethe's 'Masquerades,'" but contributes nothing original to the subject; the third, which is also somewhat disappointing, is by L. R. Packard on Geddes' *Problem of the Homeric Poems*; and the fourth is a learned paper by the editor on "The Encroachments of $\mu\eta$ on ν in Later Greek." Then follow some interesting notes by T. Davidson on the Dionysia at Marathon, which he shows to have existed there by the side of at least one tomb; on a fragment of Korinna (Bergk No. 2); on a passage in Aristotle's *Metaphysics* (A. 7), which he reads very neatly; and on the corrupt passage in Pausanias I. xxvi. 5, where he proves from Hdt. viii. 55 that the word *ἄλα* must be supplied, the olive having really been within the precincts of the *naos* of the Erekhtheion. A. C. Marriam supports the signification of "invisible" given to *ἀίηλον* in *Il.* ii. 318 by a reference to *Od.* xiii. 168-78; and A. S. Cook endeavours to show that "aphaeresis of initial *h*, standing for Indo-European *k*, is not unknown in the Anglo-Saxon period." The *Journal* will contain articles on Oriental philology as well as on classical philology.

MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, May 4.)

DR. S. BIRCH, President, in the Chair.—A communication was read from M. Paul Pierret on "The Libation Vase of Osor-ur, preserved in the Museum of the Louvre (No. 908)." This vase, of the Saitic epoch, is of bronze, and of an oblong form, covered with an inscription finely traced with a pointed instrument. The text has been published by M. Pierret in the second volume of his "Recueil d'Inscriptions du Louvre," in the eighth number of the *Études Égyptologiques*.—Dr. Birch read a paper on "The Monuments of the Reign of Tirhaka." It contained an account of the historical monuments of Taharqa found in Egypt, and especially of an inscription, published by Le Vte. Jacques de Rougé, recording the fact of Taharqa having mounted the throne of Egypt in his twentieth year; and it also gave an account of the inscriptions of Mentuemha, the petty king of Thebes and supporter of Taharqa, mentioned in the inscriptions of Thebes published by Mariette-Pasha. The paper also contained a mention of some minor monuments of the same monarch, in different collections, illustrating his reign. Unfortunately they are few in number, but they show that his sway in Egypt was sufficiently protracted to have left very permanent traces of his power. The paper likewise included a *résumé* of the history of Taharqa, as known from the Assyrian monuments, especially in connexion with the annals of Assurbanipal, which contain the narrative of the advance of the Assyrian forces as far as Meroe, after driving Taharqa out of Egypt. This kingdom was governed at the time by chiefs of Nomes as Assyrian viceroys, and they were temporarily subdued by Taharqa, with whom they made an alliance. The epoch of Taharqa is one of transition, foreign influences having by that time completely penetrated the country. The oldest demotic writing is of his reign; and that he was master of the whole of Egypt is proved by the

leath of an Apis having occurred in it, and the age of Taharqa representing for the first time positive chronology. The history of this king has really been recently obtained from the monuments of Egypt and Assyria. Although the period is not, from the point of view of Egyptian monuments, one of high importance, all evidence afforded from Egyptian sources is precious, as adding to the knowledge already possessed of an obscure period in Egyptian history.—The following paper was read by the Secretary: "An Examination of the Assyrian Ideograph *mi*," by Robert Brown, Jun. After stating that the phonetic Akkadian values of the sign were *mi*, *vi*, *gig*, and *ku*, and their Assyrian equivalents *tsalmu*, *erilu*, shade, (black) sunset, with a further meaning, Akkadian *ge*, Assyrian *nusu*, night, the writer considered the *rationale* of the combination in its pictorial aspect, and, in so doing, illustrated what he thought existed in the cuneiform writing, viz., pictorial representation is either (1) direct, i.e., when an object is portrayed according to the sum of its physical characteristics, however roughly this may be done; or (2) indirect or symbolic, i.e., when an object is portrayed according to a protagonist idea or principle connected with it, e.g., when the unit stands for "man." A great number of ideographs are necessarily based upon the latter principle. The ideograph was then divided, and the two divisions separately considered. Mr. Brown was of opinion that the second portion represented the transit of light across the heaven from east to west, and that the first sign in connexion with it indicated that the further passage westward of the solar rays is barred, and pointed to the underworld "below," whither they must now descend. It was pointed out that the sign appears to be used in many ideographs with a similar or derivative force. Some examples were given, and mythological points deduced from them.—A communication from Mr. Richard Cull, on "The Expression of Assyrian of the Soft Sound of the Hebrew *y*," was likewise read.

LIBRARY ASSOCIATION.—(Friday, May 7.)

V. H. OVERALL, Esq., in the Chair.—Mr. Henry Vilson, Assistant Librarian at the British Museum, read a paper on "Reproducing and Multiplying Processes." These, the paper pointed out, had now reached great excellence, and, by diffusing copies of fine works of art, might do much to cultivate public taste. It was well for librarians and their custodians of such treasures to be qualified, not only to select subjects for reproduction, but also to judge of the merits of different copying processes. A brief account of the more important photographic and photo-mechanical processes was given, and illustrated by blocks, plates, and numerous specimens. An interesting experiment was also exhibited in which some faint yellow tints, which had previously been exposed under negatives, were drawn over a hot solution of otassic oxalate, upon which they instantaneously tarted into vigorous black-and-white pictures. This was the new platinotype, which is quite permanent, and is a suitable and inexpensive way of copying engravings.

ROYAL ASIATIC SOCIETY.—(Monday, May 10.)

SIR T. EDWARD COLEBROOKE, Bart., M.P., in the Chair.—M. Terrian de la Couperie read a paper—"Sur l'Histoire de la Langue Chinoise et de quelques noms géographiques de l'Empire du Milieu"—in which he pointed out the great value for the history of a large portion of the world of a Chinese work called the "Yh Sing," which had hitherto been altogether misunderstood. A great part—more than half—of this work consists of lists resembling the syllabaries which have been recently made known to us from the cuneiform inscriptions. To show his the writer gave a complete translation of one chapter, and showed the identity of the lists in it with cuneiform syllabaries, his conclusion being that the most ancient Chinese was a member of the Hamardian branch of the Uralo-Altaic agglutinative languages, thus forming a connexion between the dialects of Susiana and the Ugro-Finnish. He then gave a history of the writing itself, and of the hieroglyphic revival of the ninth century B.C., which followed a form exhibiting the characteristics of cuneiform writing. His general conclusion was

that about twenty-five centuries B.C. certain families or tribes left Northern Susiana and entered China after an element of feudal agglomeration had commenced in the kingdom of Susa, and thus carried with them the elements of Akkado-Chaldaean culture.

FINE ART.

Church Restoration. From the Second Edition of "A Book on Building." By Sir Edmund Beckett, Bart., LL.D., Q.C., F.R.A.S., Chancellor and Vicar-General of York. (Crosby Lockwood & Co.)

THIS pamphlet is marked strongly by the urbanity and modesty which generally characterise the writings of Sir Edmund Beckett. On p. 11, his opponents are "only fit to rank with anti-vaccinators and objectors to interference with other filth;" on p. 14 they are "a few persons who had their own several reasons for wanting to make themselves important." After a patronising approval of Sir Gilbert Scott's work, he adds, "and yet I had several times to convince him," &c., &c. It is pure waste of labour to argue with a disputant of this sort; but his book is amusing and worth reading, and, indeed, he sometimes has the better of his adversaries, although it is rather by the weakness of their arguments than by the strength of his own. Except in the fury of his attack, Sir Edmund Beckett is not a formidable foe on the ground he has now chosen. His knowledge of the history of English architecture must be but superficial, if we may judge from a statement on his very first page, where he tells us that

"the only people who did condescend to adopt any work of their predecessors were the Normans, who sometimes used the old Saxon columns and shafts, which were much handsomer than their own. All subsequent ornamental work when pulled down was simply thrown into the new walls like rubble. The idea of copying or adding to it in the same style never entered the heads of the later Gothic builders."

Now, a man who writes himself "Chancellor and Vicar-General of York," and who, two years ago, had the confidence to take upon himself the office of "Diocesan Architect" as well, might at least have remembered the large crypt at York Minster, built in the fifteenth century out of Norman materials, and closely resembling real Norman work. The fact is that the adaptation of old details, and the copying of them in new work, although never very common practices, did exist all through the Middle Ages. There are examples of both at Westminster Abbey. Some Saxon pillars were thus used in Norman work at St. Albans Abbey, which building Sir Edmund Beckett happens to know more about than he does of most others. Whether they are "handsome" or not we will not dispute; but we believe they are the only known examples of the kind and date. Out of this one instance he makes a practice for Norman times, which he positively denies ever existed later.

Sir Edmund's position with respect to the immediate subject of his pamphlet can only be described in the language of theological controversialists as one of "invincible ignorance." This, unfortunately, he shares with the great majority of those who have to deal with old churches, both architects and others.

There is much wrangling about special cases, but, for the most part, the public appear to be utterly incapable of understanding the historical value of architecture. The number who do understand and appreciate it is increasing, but as yet they are scarcely strong enough to do more than to now and then raise a protest against some particular act of vandalism. They generally get little but scoffs and jeers for their pains, and the good cause has often to suffer for the conduct of friends whose zeal is greater than their knowledge. But some real progress is being made. The older generation of Gothic architects and their sympathisers are, however, for the most part, absolutely unteachable. They do not understand the buildings they are dealing with. They have studied them diligently, it is true, and think they know all about them; but they only know their details. And they will ignorantly obliterate an alteration which the old men have wisely made, because they do not know why it was made, and cannot see that it was an improvement. Nothing is *architecture* with these men except what they can measure and put into a note-book. A window inserted in the fifteenth century into a thirteenth-century wall, for the sake of throwing light exactly into the place where it is wanted, is to them a mutilation of the original design; and out it must go. And when it is gone, perhaps somebody innocently wonders why, in spite of the "improvements," the church does not look so dignified as it used to do. Nor is mere destruction the worst. For our architects pride themselves on making their modern additions as close imitations of old work as can be, and some of them do succeed in producing work which it is almost impossible to distinguish from the real. Such work destroys all the historical value of the old with which it is mixed, and a church in which it exists in any quantity has lost the associations and interest which belong to an ancient building, and has become one of the date of the alterations. This is what is called "conservative restoration."

It is quite possible to execute such alterations, improvements, and repairs as an old church, being a building still in use, must from time to time require without destroying its historical life. We cannot follow the old men in making our work in the style of our own time, for our own time has no style. If what we do is to have a proper harmony with the old, it must be based on a study of ancient work. But, so far from directly imitating it, we should be careful to make our work differ from the old enough to show itself to be what it is, not vulgarly and obtrusively, but clearly to anyone who examines it. Thus, instead of destroying the history, we continue it. The interest of our work may be inferior to that of the earlier, but it is of the same kind; and posterity will thank us for what we have done.

The architect who would work on an old church must first learn to understand and sympathise with it. A man who can only sympathise with the work of one century is unfit to be trusted with an ancient building of any date. This lesson, we fear, both Sir Edmund Beckett and most of his adversaries have yet to learn. He rails fiercely against

"conservative restoration," but it is difficult to distinguish the doctrine he himself holds from it, unless by way of difference we call his "destructive restoration." He advocates "the *bona fide* restoration of churches to the form and condition of their best days" (p. 10), and tells us that parts which have been cut away for "innovations"—a very wide term with him—

"must be rebuilt as much in the style of the originals as we can, and the parts which have perished can only be restored by building copies of them, or at any rate something of the same style and kind" (p. 12).

We wonder what would be said of a man who found a MS. of one of the lost books of Livy, defective in places and in others scribbled over by some former possessor, and who, before making known his discovery, was to attempt to "put it into the form and condition of its best days," and to cut out the "modern defilements," as Sir Edmund Beckett calls them, and to supply their places with new matter "as much like the original as he could, or at any rate with something of the same style or kind"—say extracts from Dr. Smith done into the best Patavinity. We think he would find cause for repentance before long. But people cannot see the harm of treating a building in the same way, although an old parish church is as much an historical document as a MS., the only difference being that its record is not yet completed. J. T. MICKLETHWAITE.

Die Terracotten von Pompeii. Bearbeitet von Hermann von Rhoden nach Zeichnungen von Ludwig Otto, u. a. (Stuttgart: Spemann.)

IN a work which is to embrace the wide series of ancient terra-cottas it is necessary to take the good with the bad. Of the latter class Pompeii furnishes a large share, which neither the learning and just perception of von Rhoden nor the unrivalled skill of L. Otto can succeed in making attractive. Yet it was obviously right of the Archaeological Society of Berlin to follow the geographical distribution of terra-cottas, and to assign to Pompeii one of the volumes of the collection which they have undertaken with the editorship of Prof. R. Kekulé, of Bonn. It does not, however, look like putting their best foot foremost. On the other hand, there is this to be gained by such a step—that we have in Pompeii a series of terra-cottas as to the date of which there is no question; and, considering how often disputes arise elsewhere in these matters on the subject of dates, we may be glad to have a base of ascertained fact to start from such as the present volume provides. Nor is this by any means the only advantage. Among others, it is to be remembered that the terra-cotta statuettes found in large numbers in Greek tombs tell us little or nothing of the purposes for which they were made—whether expressly to be consigned under ground with the dead, or in the first instance to serve as household ornaments. But the excavations at Pompeii have shown that such figures were placed in niches in dwelling-houses, and in some cases were regarded as *laræ*. A man who had fallen a victim to the general destruction of the city

had tried to save a terra-cotta image as well as his money.

Apparently figures of bronze had superseded those of clay among the rich, since it is in the houses of the poor or middle class that they are mostly found. The cheapness of the material would soon bring about that result, and with it the degradation of the art would increase; that is to say, degradation of the art as it had been handed down from Greece. At the same time there was imported into it an essentially Roman element which is not without interest, though it may be more forcible than refined, with a preference for figures of gladiators, soldiers, and men and women in Roman dress.

Perhaps the most interesting terra-cotta in this volume is the group of Pero holding her breast to her aged and famished father, Kimon, to save him, if she can, from dying of hunger—a subject which was previously known from the Pompeian paintings, though there treated rather differently. Here the execution is evidently rough, yet with great force, as of a man deeply impressed with the conception; and in the reproduction of it in pl. 47, M. Otto has given a good example of his skill in drawing and colour, as, indeed, he does throughout the entire series of fifty plates. As regards the literary part of the work by von Rhoden, it is unnecessary to say that it has been done with all the ability and thoroughness that could be desired; and, if we part from him and from M. Otto now with less pleasure in their labours than we could have wished, it is at the same time with the hope of meeting them both again, under more favourable circumstances, in the succeeding volumes of the collection of terra-cottas.

A. S. MURRAY.

THE SALON OF 1880.

[First Notice.]

THE Salon of 1880 is arranged on a new principle, which departs entirely from the alphabetical order to which we have of late been accustomed, and in obedience to which we walked from Room A to Room B, taking the painters' works in an order which corresponded closely to the order of their names in the catalogue. This year, all artists not French by birth are grouped apart, receiving, as *étrangers*, the hospitality of five separate rooms and one wall of the *Salon Carré*. This arrangement is not, perhaps, altogether desirable in the interests of the "strangers" themselves, who may be supposed to wish to take their chance without invidious discrimination; but in many cases the title is a pure misnomer. Men like Pasini, for instance, who have received the whole of their artistic education and all the influences which have gone to the shaping of their talent in Paris, cannot be regarded as foreigners, and their work, inconsiderately thrust among a mass of pictures wholly different in aspect and aim, sometimes loses much of its best quality, and sometimes detracts from the merit of its neighbours.

The works of French artists themselves are divided into three classes. First, we have the *hors concours*—men who can no longer compete for any recompense; then the *exempts*—that is, those whose works are received without examination; and, finally, the large class of non-exempts, who occupy over ten rooms and overflow into the neighbouring galleries. Very nearly four thousand pictures in all have been hung, and the total number of works entered

in the bulky catalogue goes beyond seven thousand; so that it is absolutely impossible within present limits, to do more than note briefly a few of the leading names.

The most striking feature of the year is perhaps, the enormous proportion of subjects contributed by modern life and treated in what we call the "modern spirit." The one or two innovators of a few years back have been followed by a host of imitators who challenge notoriety and success by the same means without having the same powers. Gervex, this year, by no means realises the promise of his former works, his *Souvenir de la Nuit de la L'Enfant avait reçu deux Balles dans la Tête*—an episode which Victor Hugo has rendered famous—lacks that air of vivid reality which has distinguished several of his more recent works, and without which subjects from modern life, treated by men lacking any perception of their poetic aspect, look like cuttings from an illustrated newspaper; yet Gervex not at his best is infinitely better than the general run of his followers, such as Emmanuel Dieudonné, who has plagiarised Gervex's picture *La dernière Nuit de Rolla* with open audacity. There is the bedstead, only the brass is replaced by white painted wood fresh from the Bon Marché, and the occupant, out of respect for the jury, he dragged the counterpane into decency; the lamp, it is true, is shaded with yellow instead of rose, and Rolla is absent, but stays and petticoat are well to the front on the armchair, and form a principal object in the picture; all this is intelligible material, but what puzzles the spectator is a full-blown white rose, very solid and tangible, which appears in the air all by itself, and which is contemplated apparently without the smallest surprise by the well-conditioned young lady who lies in bed with nothing on but the counterpane and an elaborate chignon fresh from the *coiffeur à la mode*. The *livret* in explanation gives us Théophile Gautier's pretty verses:—

" 'Soulève ta paupière close,
Qu'effleure un songe virginal !
Je suis le spectre d'une rose
Que tu portais hier au bal . . . "

Verses which embody a subject charmingly suggestive in poetry but absolutely unsuceptible of treatment in the hands of the modern realist, unless indeed he have some share of the spiritual insight and imaginative fire of which M. Bastien-Lepage gives proof in his *Jeanne d'Arc*, which is one of the most remarkable works of the Salon.

It seems to me that M. Lepage's execution is hardly so agreeable in a work of great scale—such as *Jeanne d'Arc*—as it is in his smaller paintings—such as his marvellous portrait of M. Andrieux, his second contribution of this year. In his big canvases there are always spaces which, either because they are too monotonous in value or because the execution is lacking in solidity, look flat, weak, or empty; and at the first, therefore, his *Jeanne d'Arc*, like his *Saison d'Octobre* of last year, does not attract or impose; it is only gradually that one becomes aware of the infinite beauties and delicacies which give the work its charm and its strong hold on our attention. And first, there is a certain strangeness in conception which is yet free from affectation, coupled with an intimate sympathy for the daily aspect of life which takes all brutality from the touch with which even that which is unlovely or repulsive is handled. M. Lepage's previous studies of peasant labour had, perhaps, brought him to realise how great a store of secret enthusiasm may lurk beneath the dumb exterior of those dwellers in the field who live in close communion with the earth and sky, for in the figure of *Jeanne d'Arc* he has found the character of an exaltation which is elevated without ceasing to be rustic. *Jeanne*

fronts us a little to the left, beneath the thinly branching foliage of a tree against which she stands with outstretched searching hands, and flushed face uplifted in dazed awe and wonder, while strange visions flit on the right behind her, through the daylight clearness, in the homely neighbourhood of the cottage and the blossoming cottage garden. But although this is a work in which the sentiment is very important, it is by no means, nor in good work is it ever, the only or even the chief source of interest and admiration. It is as the work of an artist and a painter that the *Jeanne d'Arc* of M. Lepage must be judged, and from this point of view he gives ample proofs of a talent which, whether it does or does not command our sympathies, is incontestable. In spite of the apparent fluidity, thinness, and delicacy of the touch, which, as I have said—but I am by no means positive on the point—seems insufficient at present to give full effect to work on a great scale, there are parts of this *Jeanne d'Arc*, and notably the figure of Jeanne herself, which could not be more largely and strongly rendered. The jointing of the arms and hands is of exquisite workmanship; and the same love of suppleness and strength seems to have directed the skill which traces the delicate outlines of the little trees on the extreme right, through whose slender columns we see descending the armed angel of battle, followed by the spirits of prayer and pain. In the little portrait of M. Andrieux, the *Préfet de la Police*, one has the pleasure of testing M. Lepage's remarkable powers of acute observation and delicate manipulation employed on a type of great interest and character. M. Andrieux is seen at half length, standing at the side of a bureau covered with suspicious documents, which he must have been examining, for we seem to read something of their mysteries in the very movement of the body and turn of the head, half bent to one side in that attitude of penetrating enquiry which seems to have become habitual to him. The unity of the man with his surroundings, and the discrimination with which M. Lepage has avoided the vulgar aspect of spying and inquisition while intimating all the peculiar characteristics which fit M. Andrieux for his special post, are points deserving of notice in this portrait; and, if we should wish to see how immensely difficult it is to be at once so simple, so consistent, and so full in expression, we have but to compare M. Bastien-Lepage's work with portraits showing similar aims by other able but less gifted painters. In Mr. Kenyon Cox's clever portrait of a lady in black we feel a certain effort and barrenness, evidences of a less comprehensive faculty of sight, and less readily responsive touch; something of the same difference which separates work such as M. Gervex's great *pièce de circonstance*, *Le Nuit du 4*, from such as M. Dagnan-Bouveret's little canvas, *Un Accident*. The subject in either case is substantially the same—a child terribly hurt or wounded; but, whereas M. Gervex—about whose talent there can be no manner of doubt—has intended to give us an imposing modern historical picture, and has given us only a middling portrait or two, and (I should say) an insufficiently studied study of the dead body of a little lad, M. Dagnan-Bouveret, working on an infinitely less pretentious scale, has produced, in its way, a masterpiece. The head of the principal figure—the fair boy, whose wounded hand is delicately bound by the young surgeon sitting in the centre—for beauty of execution and intelligence in the conception deserves the epithet of *petit Clouet*, which has been frequently bestowed upon it. But all the rest of the family who have come in to assist at the operation are individualised with equal thoroughness: observe the group to the right, the anxious mother leaning on the table behind the elder brother, who sits close by

where she stands and looks across with a somewhat stolid air; the scarcely concerned but interested uncles still farther to the right; and then, on the left, the pitiful father, at whose side the little sister hides her face in an agony of sympathy and distress, while a brother, too young to be aware of anxiety or sorrow, gazes, full of childish inquisitiveness, at the scene. But the central point, finely observed as are all the rest, is the child himself, whose silent pain and white-lipped exhaustion, brave still to bear up, with still pressure of the lips against the necessary suffering, inspire us with pitying interest and admiration; and the whole treatment of this figure shows that M. Dagnan has the gift of beautiful choice and a fine instinct in selecting a type which would charm and not disgust; yet one regrets the introduction of the blood which the child has lost, though it seems necessary and beautiful colour in the midst of the dull brown and tawny hues of his picture, which are only relieved here and there by faint shades of blue which spread the spaces of white afforded by the shirts of the lad and his elder brother. Turning from this picture, I happened to meet one of the most celebrated of French painters, and found that he, also, was full of admiration for M. Dagnan's work. M. Dagnan was, he told me, just twenty-six, "et vous concevez, madame, avec un tel outil dans la main on doit aller loin."

There is another young painter, a Mr. Sargent, whose works hang among the *étrangers* though he is a pupil of Carolus Duran, who shows more than ordinary gifts. He has a study, dated *Tanger*, of a woman in yellow white standing against a cold white background; she is firmly set on a line of carpet full of varied colour, finding a touch of repetition in the orange bindings of her undersleeves, which are exposed as she lifts her arms and thrusts out and forwards the drapery above her head, casting a shadow as from a pent house, and checking the vapour which steams upwards from the silver vessel, full of burning ambergris, at her feet. Mr. Sargent's touch is very delicate and fresh, but the general aspect of his work is superior at present to its completeness; he has a life-size portrait of a lady in a garden which is admirable as regards the effect of light and air; his conception of the whole person is good and delicate, and the head and hands only want more strength and a little more putting into them; in short, age and prolonged study seem to be all that Mr. Sargent needs. The name of M. Daux is another which needs mention among the "moderns." His *Femme jouant avec des Colombes* is noteworthy for brilliance and firmness of execution, and for a certain hardy vigour and simplicity, which characterise equally his smaller study of a lady in black, holding a Japanese fan, and boldly relieved on a white background. White, too, is treated very successfully by M. Birger—who comes to us, like M. Salmson, from Stockholm—and exhibits a remarkably well painted and arranged little subject, *La Toilette*: a fair young woman sitting under her hairdresser's hands while her friends amuse her with *La Vie Parisienne*. M. Birger has skilfully employed yellow-white on white, rather soberly relieved against a mass of blue-gray, and sharply detached by touches of black from a pale blue background.

M. Salmson himself sends *Les Batteurs d'Épilletes en Picardie*, a subject which, though it lacks the elements of pathetic interest which rendered popular *Une Arrestation*—his contribution of last year, which is now, I believe, exhibiting in London—shows itself, in his hands, susceptible of very graceful, natural, and attractive treatment. MM. Butin, Dupré, Deyrolle, are also to be noted among the painters of peasant subjects; and

there are, indeed, some hundred works in this order of no mean merit; yet, in spite of the rivalry of younger men, Jules Breton, the long-familiar master, more than holds his own. His grave and noble *Le Soir*, of which he has contributed a sketch to M. Dumas' excellent *Catalogue Illustré*, is, I think, the finest example which I have ever seen of his work. The little sketch, slight as it is, is an admirable record of the picture, indicating not only the general scheme of arrangement and scale of colour, but even the masterly skill with which the lines and movement of the body are felt in each separate figure.

All the most marking pictures of the year have, indeed, found a place in M. Dumas' work; the sketches, which have been executed by the artists themselves, are often excellent, and always interesting and useful in recalling the qualities of the originals. The catalogue, which is published under official sanction, is sold for the small price of 3 frs. 50 cents., and will be found to be not only an indispensable *aide mémoire* to those who have seen the works reproduced, but to afford no inadequate image of the character of the various works exhibited to those who are unable to visit the Salon for themselves.

E. F. S. PATTON.

THE GROSVENOR GALLERY.

[Second Notice.]

THERE are some people to whom the tendency to say the most disagreeable things that occur to them appears like the prompting of conscience. A picture, or a person, or a book may deserve much praise and a little blame, but to such persons it appears a small merit to give the praise, but a pressing obligation to mention the slightest spot that offends them. Something of the same spirit which actuates these worthy critics would seem to infect a strong body of our rising realistic painters—these mistake rudeness for sincerity, those ugliness for truth. M. Bastien-Lepage is a typical representative of this perversion of the artistic conscience; he seems to shun beauty as though it were a sin, and grace as the invention of the devil. Of his portraits of his father and mother (141) and of his grandfather (86) we would speak with the reverence with which he has painted them, "just as they were;" nothing could be more forcible, nor, as far as their faces and attitudes are concerned, pleasing in a homely way, than these strongly and tenderly drawn portraits; but they would, at least for us, have lost nothing of their charm or their force of character if sundry unlovely details of costume had been omitted or softened. To M. Lepage they perhaps appear essential; but it is difficult to imagine that a particular hat or pocket-handkerchief can be so important an item of that sum of things which constitute a loved individuality that they need be insisted on in a manner which distracts the attention of an ordinary observer. In his portrait of *Mlle. Sarah Bernhardt* (9) he has pushed his determination not to err on the side of flattery to an extreme limit. Whatever her faults or eccentricities, she is a lady of great talent and singular powers of attraction, vivacious and graceful; on the other hand, she has a bad profile, and is not free from caprice in manner or costume. The latter class of facts is that which has seemed to M. Lepage the most necessary to paint. The *tragédienne*, the brilliant woman of society, are omitted; she is simply a bundle of affectation, with a high nose. In the *Annunciation to the Shepherds* (21) there is neither beauty in the angel nor nobleness in the shepherds; the fact that the latter were shepherds, and therefore likely to express their astonishment with uncouth gestures and stupefied expression, has employed the whole power of the artist. In some of his pictures,

such as *La Communiant*, mere exhibition of technical skill seems to be the only motive. While repulsed by the heavy plain face and awkward figure, one cannot withhold admiration from the wonderful painting of white on white, and the equally extraordinary rendering of texture in the kid gloves. M. Lepage's largest picture, *Les Foins* (7), is painted with extraordinary power; for realistic skill there is nothing in the gallery finer than the head of the woman, but except as an exhibition of force we can discover no reason why she and her mate should have been painted; they are not even pathetic or suggestive in their ugliness, while the landscape in which they are placed is not only uninteresting but without atmosphere. Scenes from as humble lives, without any softening of the hardness of circumstance or indulgence in the picturesque or sentimental, have been painted by M. Legros, but he has never failed to make them interesting by a noble spirit of human sympathy akin to that of Mr. Carlyle. One other point of difference may be noted between these two artists, so alike in many ways. Even in M. Legros' *tours de force*, as those hastily painted heads of distinguished men, of which there are several excellent examples in this gallery, the characteristic is reserve; that of M. Lepage is display.

But this school of realism pushed almost to brutality, in which M. Lepage is a master, is vigorous and earnest, manly and natural, and in virtue of these qualities will thrive and become a power, and its works will not fail in interest to succeeding generations. It will probably soon purge itself from its over-violence, and be content with such unaffected work as Mr. J. Gregory's masterly portrait of *Mr. W. H. Wills*, M.P. (39).

A different and swifter fate is, we fear, in store for the opposite extreme of art as represented in the Grosvenor by the clever pictures of Mr. Stanhope and Mr. Strudwick. It is distinguished by its desire for beauty and its hatred of facts, but its search for the former is not so successful as its avoidance of the latter. In order to escape with certainty any too near approach to realism Mr. Stanhope does not trust to his own powers of conventionalising nature, but frankly adopts the manner of certain early Italian artists whose earnest desire to paint what they saw was thwarted by want of knowledge and skill. The design of Mr. Stanhope of *The Waters of Lethe* is distinguished by much that is pretty in form and colour, and that of Mr. Strudwick of *Apollo and Marsyas* is refined though weak in expression; but both represent to us Art in love with its own beauty, and doomed, like Narcissus, to end in interesting suicide.

Standing not so much between as above these extremes is the exquisite art of Mr. Watts, B.A., unusually well represented here; in portrait by his very lifelike, but most thoughtful, heads of *Mr. William Morris* and the *Rev. C. Beanlands*, and in imaginative art by his lovely *Daphne*, still as beautiful as when she first made her appearance at the Royal Academy in 1870, and a new (at least, to us) *Psyche*, who, in spite of the length of her waist and the thickness of her knees, is almost worthy to stand as she does here side by side with her more fully developed sister. His portrait of a girl (38) is a simple, quiet masterpiece of colour, and his other pictures—*Laura* (47) and *Watchman, what of the Night?* (45)—are refined and spiritual in expression.

The art of Mr. Alma-Tadema, R.A., no less than that of Mr. Watts, is remarkable for its highly artistic qualities, combined with a regard for nature as the source of art. Though dealing with scenes of a time long past and remote almost as far from modern sympathies as *The Waters of Lethe*, he has as great regard for truth and even fact as M. Bastien-Lepage. He restores

for us the ancient life with its ancient surroundings, but he paints men and women who seem to live and love as we do, shone upon by the same sun that we see to-day; he paints the stains in the marble and the dust upon the garment, but uses them to help and not to obstruct the general beauty of his work. The three pictures which he has sent to the Grosvenor this year are all very small, but nowhere else on the walls is so much beauty contained in so small a compass, or the appearance of bright sunlight so simply and vividly given. This quality is perhaps the most remarkable in *A Pastoral* (53), a very simple composition representing a peasant returning with his ox-wagon from some festival. They are set in a lovely landscape, equally wonderful for minuteness and breadth. A temple decorated with colour is very happily introduced, and the distance is exquisite.

Mr. Millais, R.A., is only represented by portraits, but these are in his best style. That of *Mrs. Jopling* (49) is remarkable for its spirit and character, and a masterpiece of execution. Mr. Poynter has a *Vestal* (41), which is not very interesting, despite its careful and accomplished painting, and a small view in Venice, called *A Door on to a Silent Highway* (33), very fresh and bright. He also sends a finished study for his picture of *Nausicaa and her Maidens* (63). Beside these works by Academicians, the Royal Academy is represented by several strong and beautiful works by some of its Associates. Mr. Herkomer contributes a finely expressive portrait of *Lord Stratford de Redcliffe* (140), and Mr. Hall one of *H. T. Bushby, Esq.* (134), perhaps the most solid and finished piece of painting in the gallery; the execution of the hands is especially fine. Mr. Prinsep sends an *Unprofessional Beauty* (34), a lady with a charming, unaffected face, and a spaniel on her knee. The effect of the head is a little spoilt by the wall-paper against which it is relieved, and it is somewhat hardly and drily painted, as is usual with Mr. Prinsep, though this defect is more visible in his portrait of *Dr. Chepmell* (8). Mr. P. R. Morris contributes three of his sunny pictures with pretty figures, and Mr. Boughton a clever sketch of a *Meet of Cub Hounds* (80), and a quaint rendering of *Omnia Vincit Amor* (125), full of his favourite green light. A cavalier, whose horse is being held in the distance by his squire, is wooing a very rustic maiden indeed, "under the greenwood tree." It is difficult to understand the attraction of this unkempt and slatternly girl for her lover; and his method of wooing, with his guitar and love-song, seems scarcely suited to the occasion; but the figures are well placed, and there is great charm in the simple, secluded, and thoroughly English landscape.

Of the other portraits and figure subjects which demand more than a passing glance, there are more than we can mention, but among these certainly are Mr. Richmond's fine intellectual study of *Mr. W. Holman Hunt* (2) and his splendid (in all senses) portrait of *Mr. Darwin* (40); Mrs. Alma-Tadema's *Hunt the Slipper* (36); Mr. Lehmann's portrait of *Miss Emily Davies*, all the pictures of Mr. Macbeth, especially *Landing Sardines at Low Tide* (78) and *Expectation* (84)—his large picture, *A Flood in the Fens* (131), has many fine qualities and some beautiful and expressive faces, but the composition is too scattered; Mr. John Collier's charming and unaffected portrait of his wife (81); *Waiting*, by Mr. Ernest Lintz, a very tenderly painted and drawn figure, which, with its slight execution and delicate artificial colour, it was hardly fair to hang next to Mr. Macbeth's more realistic study.

Mr. Hennessy's *Spring Fantasy* (92) is a work more easy to enjoy than to criticise. The figure of the lady introduced is of exceeding grace, and the picture is full of quaint poetry and beautiful colour. Mr. E. B. Hughes' *Hubert*,

Christopher, and *Oliver Howard* is a portrait group of a pony and three little round-headed boys with very professional riding trouses, like little grooms, very well painted and clever in colour. Mr. J. H. Walker's *Baby Charles* (113) has a true "baby" look; and Mrs. Anderson's *Bathers* (132) is well drawn and graceful. Lastly, Mr. Edgar Barclay's *A Kabyle Woodcutter* (163) is a picture by no means to be missed, on account of the beautiful painting of its misty mountain landscape, and the clever effect of reflected light by which the figure is illumined. His other pictures have much merit, but they belong rather to the landscapes, about which, and the water-colours and the sculptors, we hope to say something next week.

COSMO MONKHOUSE.

EXHIBITIONS.

SOCIETY OF PAINTERS IN WATER-COLOURS.

I.

THERE are some things we always expect to see in this exhibition, and it may be as well, first of all, to notice them. Mr. T. M. Richardson's admirers will not be disappointed either as regards the number or the importance of his works. His large picture of *Glencoe, from the Hills looking towards Ballachulish*, exhibits all his well-known characteristics. There are some huge rocks in the foreground, and some very small Scotch firs in the middle distance, and some very blue distance, all worked in the chromo-lithographic style of water-colour. The President, Sir John Gilbert, has two pictures, both spirited and streaky, as usual—one, called *Prisoners*, in an appropriately sombre hue of colour, with a rather rough piece of landscape; the other—*The Battle of the Standard*—is a favourable specimen of this painter's works in a more "spectacular" vein, if we may borrow an appropriate term from Astley's. Mr. Birket Foster has transported his little boys and baskets of fruit and vegetables to Venice, and in his view of *Venice from the Giudecca* has represented gondolas of preternatural neatness launched on water of the colour and consistency of turtle soup, surrounded with neatly cleaned-up and whitened buildings. In another picture of the *West Portal of Rheims Cathedral* we recognise the well-known old white horse, and there are more children and picturesque figures. The picture contains an excellent study of the great doorway, but the perspective of the rose window over the doorway appears to be wrong. Mr. Edward Duncan has seven pictures, some of them hardly up to the average excellence of his work; see, for instance, *The North Berwick Lifeboat going out to a Vessel in Distress*, in which the waves are apparently of cotton wool. On the other hand, there is a delightful piece of foreground and of distance (to the right) in *The Shore near Exmouth*. Mr. Carl Haag is in considerable force, and we remember few better studies of its kind from his brush than *Uskai, a Friendly Zulu*. He seems to revel in the rich browns of the Zulu complexion, and, as an example of finished workmanship, it would be difficult to surpass this head, though it may be doubted whether there is not too much smoothness in the flesh. Miss Clara Montalba has eight pictures, some of them even less finished than usual, and one—*The Gondola*—only redeemed from being an Indian-ink sketch by a band of colour on the posts in the water. *A Wintry Day* and *Santa Chiara on the Grand Canal* are also little more than sketches. Miss Montalba has so much force and originality that we greatly regret to observe symptoms of carelessness. Leaving now for a time the best-known exhibitors, we should like to call attention to a picture by Mr. T. B. Lamont, called *The Bell Ringers*, which strikes us as in some respects the most remarkable figure composition

in the exhibition. The scene is very simple—a few hand-bell ringers performing outside a tavern to a rustic audience; but the drawing of the figures is very clever, and the attitudes are singularly lifelike. The colour is peculiar, and is often characterised by an unpleasant opaqueness, apparently due to the mixture of white paint with the colour—see especially the dress of the little girl in the doorway and of the girl in blue in the road. Mr. Thomas J. Watson, one of the newly elected Associate exhibitors, has some careful and very promising works, but we hope he will discover that body colour is not a satisfactory medium, and that blotches of white paint can never properly represent the sky as seen through trees. His elaborate and, in many respects, excellent study *In a Wood* is disfigured by the adoption of this device. *Autumn and Autumn Leaves* are both clever, though the latter is in parts rather feeble, and the trees and church tower are a failure. In *The Miller's Home*, Mr. Watson has apparently set before himself as a model some painter of the Dutch school, and has produced an elaborate drawing in very cold and blackish colour of an old house. The road is badly drawn, and the whole picture, while careful and elaborate, is unpleasant. Mr. B. Thorne Waite exhibits some very satisfactory studies. In *A Hot Day* the distance strikes us as very good, and scarcely less truthful is the distance in *The Quiet Old Town of Rye*, but the foreground is feeble, and there is something wrong in the perspective of the rising knoll to the left. Beyond all question the most striking picture in the exhibition is Mr. Powell's *Ailsa Crag*. The scene is very impressive; the huge mass of rock is illuminated with a gleam of sunshine piercing the heavy clouds which are drifting across the sky. The masses of rock are drawn with great accuracy but without the least approach to "finikin" treatment, and the half-misty, colour-destroying indefiniteness of the atmosphere on a rainy day is skilfully given—see especially the effect of mist to the left of the rock. The rocks near the summit of the Crag are not less firmly painted, and the sky is superb, the only doubt we feel as to this part of the picture being as to the greenish-gray colour in the break between the clouds. The waves are admirably drawn, but strike us as a little hard, and the patches of mist floating across the rock are hardly sufficiently softened at the edges. Still this is an admirable picture, and would by itself repay a visit to this gallery.

ART SALES.

SOME interesting and valuable modern pictures were lately sold by Messrs. Christie and Manson from the collection of the late Mrs. Benyon. Prominent among these were Sir Frederick Leighton's *Golden Hours* (a picture of some sixteen years ago), which was admired at the International Exhibition, and which sold for £1,155; and Mr. Millais's *Flowing to the River*—one of his earliest large landscapes first exhibited eight years ago—which fetched £1,165 10s. Certain pictures by Old Masters of some value and authenticity were also sold under the hammer on the same occasion, but these do not require to be mentioned in detail.

LAST Saturday were sold the remaining works of the late Paul Falconer Poole, R.A. They included a few considerable pictures painted at various dates by this poetical artist but incomplete draughtsman; but they consisted in the main of unimportant sketches, remarkable only by their number and by the connexion of some of them with his more celebrated works. These naturally did not realise high prices.

NOTES ON ART AND ARCHAEOLOGY.

WE are glad to know that a volume on the subject of "Book Plates" is forthcoming from the hand of Mr. J. Leicester Warren. We do not know whether it is to be confined to English book plates, and so to do for England what *Les Ex-Libris Français* not long ago did for France, or whether it is to be of yet wider scope. Anyhow, the subject is one which merits careful treatment here, and there can be little doubt but that Mr. Leicester Warren's work will take excellent rank.

WE hear that the publication of a series of critical notes of importance on the *Liber Studiorum* of Turner is in contemplation by a collector of long standing who has not yet written upon the subject of his research. Should their public issue be resolved upon, some fresh light will doubtless be thrown upon a work which has already engaged a great deal of attention from writers upon art.

THE valuable cabinet of coins formed by a well-known collector, Mr. Lake Price, will shortly be sold by auction. The collection includes, among others, important pieces of Harthacnut, Stephen, Richard II., Henry VII., Henry VIII., Edward VI., Elizabeth, James I., Cromwell, Charles II., and Anne, and of foreign examples, Mithridates VI., Antiochus VI., Simon Maccabaeus, Magnesia, Smyrna, and Tarentum.

THOSE who did not see them when exhibited at the Burlington Club have now the opportunity of seeing some of Mr. F. Dillon's wonderful studies of animals by Japanese artists at Mr. Hogarth's, in Mount Street, Grosvenor Square. These are remarkable, not only for their absolute truth and skill, but as examples of the extraordinary care and study bestowed on such subjects by the best painters of Japan. Drawn with the brush at once with marvellous precision and without any tentative sketching, they exhibit a sure dexterity which may well arouse the wonder and envy of European artists. Yet they are but studies, mostly unfinished, of different birds (peacocks, cranes, and wild fowl), flowers, frogs, and grasshoppers—memoranda, in fact, for future use, with notes on the margin as to the colour, &c., and occasionally a real feather plucked from the bird attached to the sheet by little bands of paper. The drawings, fifteen in number, have been reproduced with great success by the autotype process, and coloured by hand under Mr. Dillon's careful supervision. It is intended to publish them shortly in a portfolio, with descriptive letterpress by Mr. Dillon. The reproductions are so exact that they will be as useful as the originals, both to artists and naturalists, and will be desirable possessions for all lovers of art or nature.

THE article on "Queen Victoria and Art," illustrated by her Majesty's express permission with copies of sketches by the Queen and the late Prince Consort, will appear in the June number of the *Magazine of Art*. This, we understand, will form the first of a series of articles to appear in this magazine illustrating the interest taken in art by various members of the royal family.

GEORGE MANSON'S name is not familiar to the London public or even to the London artistic world, but the artistic public of Edinburgh has for some time known it favourably, so that the literary and pictorial tribute to the young artist who died so prematurely is a welcome remembrance. The volume of which we speak consists of two portions: the pictorial portion, devoted to the reproduction of some of Manson's works, is issued under the very capable direction of the artist's friends, Mr. W. D. McKay, an Associate of the Royal Scottish Academy, and Mr. Patrick Adam;

the literary portion, which consists of brief biography and criticism, is by Mr. John Gray, of whose art criticism readers of the ACADEMY cannot be altogether ignorant. The book is not regularly published, but it is issued by subscription, and we understand that all the copies have been absorbed. Nor can we wonder at this, looking at our own: at the thick, hand-made paper, which is the delight of the bibliophile; at the best printing of Messrs. Constable; at the dainty and varied photographic illustrations, and at the excellence of the literary matter. Manson's life deserved a chronicle, and his work merited to be reproduced as far as it was possible. Good taste has undeniably presided over the production of this book. There is only one fault we find with it, and that is a trivial one, though its presence occasions fussiness as we turn over the leaves; ready access to the illustrations is debarred us by the sheets of limp paper, doing the unnecessary office of tissue paper, in front of each picture. The possessor of the book will never, we should think, be able to prevent these tiresome and superfluous guards (which really are no guard at all) from getting untidy, and the best thing is to cut them right out. Everything else about the book is absolutely as it should be. Great care must have been taken of the illustrations, which reproduce, we do not doubt, with fair fidelity every quality of Manson's art but that of colour. He was, it seems, a refined colourist; the illustrations themselves prove that he was careful of tone and sensitive to delicate gradation as he was likewise to delicate form. Some of the pictures are copies of water-colours sweet and gentle in subject and treatment, and others are reproductions of pen-and-ink sketches which seize quite without idealisation the prettiest or more piquant aspects of actual things. Thus there are some studies of character in Northern France—old women, thoughtful but not exactly pretty looking girls—which recall by their precision and directness very great masters indeed. There is no room for doubt that, whatever George Manson actually succeeded in attaining, his early death was a severe loss to contemporary Scottish art. The portrait of the youth—for he was then a youth—prefixed to the volume shows a head of close and shrewd observation; a face, in the form of it, less refined than his own character and his art, but conspicuous for its exhibition of the Scottish qualities of resolution and inveterate perseverance. The later boyhood of Manson was passed in the offices or workshops of Messrs. Chambers; he was apprenticed to this firm as a wood engraver so lately as in 1866. Of his life Mr. Gray writes simply and sympathetically—of his work, distinctly critically, though with here and there some colour of enthusiasm which we shall only condemn on the day when the critical Dryasdust shall successfully prove to us that enthusiasm and sensitiveness are quite without utility in the appreciation of art. Mr. Gray's criticism contains many passages of which Dryasdust would be clearly incapable. He gives us, for example, such happy sentences as the following, the capacity to write which he certainly did not acquire from any study of merely technical criticism, but rather from a familiarity with that which is literature.

"Manson," he writes, "is above all things a colourist, colour being quite the sweetest and tenderest quality of natural objects. And the human face being of all coloured things the subtlest and most lovely, he paints this oftenest, in all its aspects of pink rounded babyhood, and rose-flushed girlhood, and bronzed prime, and wrinkled age."

Further, in an admirable passage of descriptive criticism, he speaks of a child-mother "beautiful with the grace of service and wistful responsibility;" and *à propos* of a picture of Duddingston Loch he says that it is full of "the calm and stillness which the artist shed alike

over his scenes of nature and his scenes of life, the sights of the outward world seeming to come to him with such gathered sweetness." From all which it is sufficiently clear that the critical Dryasdust, who cannot write, has not persuaded Mr. Gray, who *can*, that on the whole good writing is misplaced in criticism. Manson's pictorial art was delicate and refined, and so is the literary art of Mr. Gray. In respect of his critical judgment as distinguished from his art we should probably reproach him with a tendency to give something more than its proper place to gracefulness and something less than its proper place to strength, both in literature and painting. The book before us is one which its possessors must frequently enjoy.

We are glad to learn that the late Dr. A. Woltmann's *History of Painting*, which the firm of E. A. Seemann, of Leipzig, were bringing out in parts at the time of the lamented author's death, will not be left unfinished, but will be continued by Dr. Karl Woermann, who has already contributed to this work the section on "Painting in Ancient Times." The section of the Italian schools of the fifteenth century was nearly finished by Dr. Woltmann himself, and at his wish will be completed by Prof. Janitschek in the eighth number.

THE second part of *The South Kensington Museum* (Sampson Low and Co.) scarcely fulfils the promise of the first. The objects selected are in one or two instances too unimportant, and the etchings are very poor. The letterpress still shows a laudable desire to instruct; but only careless editing could have allowed such a sentence as this to pass:—"Diptychs, or folding tablets for devotional purposes, of this character are extremely rare;" or this, in a description a little farther on:—"Anything doubled, or doubly folded, is a diptych." The uninformed, for whom such instruction is prepared, may well be puzzled at two such irreconcilable definitions, especially as neither of them is true. The first is too restricted; the second would include napkins and pancakes.

It is the Marquis de Chennevières who has undertaken to write the Salon review in the *Gazette des Beaux-Arts* this year. He begins by relating how thirty years ago he wrote a notice of the Salon of 1850 for a small provincial journal, writing then with the absolute independence of a critic who had no friend in the world of art and could dare to be frank without wounding personal friendship. Now all is very different, and he ought perhaps to shun such an imprudent adventure; but the interest he feels in the progress of French art makes him undertake it, and he must try to acquit himself as best he can. After this he sets forth with a long criticism of the government of the Salon and the position of French art, and does not even arrive at the pictures in the present number. Two other exhibitions are noticed—namely, that of "Les Artistes Indépendants," by M. Ephrussi; and the decorative designs at the Musée des Arts Décoratifs. M. O. Rayet has a second article on the excavations at Olympia, and M. L. Goussier continues his study of Fromentin as a painter and writer. The only other article of the number is by M. Jules Claretie, and gives an interesting account of a unique book—viz., a copy of *L'Affaire Clémenceau*, by Dumas, illustrated on the margins and in all sorts of ways by various artists of his acquaintance. This book has long had a certain celebrity among M. Dumas' friends, and some of its illustrations are now reproduced in the *Gazette*. Many of them are by eminent artists, and are very charming works.

A DIFFERENCE of opinion that took place between some members of the Salon jury and M. E. Turquet, Under-Secretary of State for Fine Arts, has led to a pretty little quarrel which has given rise to much discussion in the

French papers. M. Turquet, by virtue of a right that he asserts the State has always retained, though seldom used, gave this year a further term of delay to certain artists for sending in their pictures. When this delay expired and their pictures were sent in, M. Bouguereau absolutely refused to allow them to be hung, insisting that no one had authority in the matter but the jury. The question was discussed with much warmth of temper on both sides, and in the end M. Bouguereau resigned his position as president of the jury rather than submit to the interference, as he considered it, of the Government. He was only followed in his resignation by two other members, MM. Vollon and van Marcke, and most unprejudiced critics consider that he was in the wrong. But, unfortunately, politics have got mixed up with the affair, so that much bitter feeling has been evoked, which the French journals of various shades entering into the quarrel have done their best to foster. The two pictures which caused the whole disagreement are the portrait of M. Andrieux by M. Bastien-Lepage and M. Aviat's picture of Charlotte Corday.

THE attention of the Italian Minister of Public Instruction having been drawn to the article lately published in the ACADEMY on the ancient walls and cemetery on Monte Leone, and to the theory of Mr. Stillman regarding their possible origin and great antiquity, his excellency has given instructions to the learned archaeologist, Signor Cavaliere Gammurini, to make an examination of the site, and to take such steps as he may think necessary towards throwing light upon the date and origin of these remains. No doubt these enquiries will be followed by a satisfactory examination of the cemetery. The geological enquiry may be of great interest, but it may be found that the period when the flats of the Maremma were covered with sea is not really very distant. For instance, the Port of Pisa has been filled up and has disappeared within quite a recent period. What in the Middle Ages was an extensive harbour, with wharves, docks, and numerous public and private buildings, is now dry land, covered with pines and other trees; and the sea retires, it is said, at the rate of about a metre *per annum*. In Etruscan times the plain between Pisa and the present littoral was, in a great measure, covered with sea, and when such was the case the flats round Grosseto must have been equally covered; hence, no doubt, the unhealthiness of Etruscan towns, the sites of which are now for the most part too insalubrious to be occupied. The climate of Italy must have been very different when the succession of plains along its coasts, including the Pontine marshes, were buried beneath the sea.

THE "Contemporary Artist" illustrated in the *Portfolio* this month is Mr. W. W. Oulless, A.R.A., whose portrait of Mr. Stacey Marks, R.A., is vigorously etched by B. A. L. Damman, an artist whom we do not remember to have come across before. He is stated to be a pupil of M. Waltner. Mr. Clark is still occupied with the history of Trinity College, but the illustration given is of the interior of King's College Chapel. It makes an effective scene, and M. Toussaint, the etcher, has not in the least exaggerated its gorgeous beauty.

MR. P. G. HAMERTON, in the *Portfolio* for this month, replies with deserved severity to the writer of the articles in the *Pall Mall Gazette* on Etching and Modern Art Criticism, quoting letters from M. Georges Duplessis, *Conservateur-adjoint* at the Bibliothèque Nationale in Paris, and from Prof. Colvin to show that in their opinion, as well as his own, Rembrandt, who is admitted by the writer of the articles to be the greatest etcher in the world, practised surface printing occasionally much in the same way as it is practised by modern etchers. But even if

this were not the case, it is difficult to understand why the etchers of the present day should be forced to keep within the limits of traditional practice, or be called "dishonest" for trying to produce the effects they seek by all means in their power. The best answer to such cavils is to be found in the plates themselves that the *Pall Mall Gazette* criticises. While modern etchers continue to produce such splendid works as are continually published in the *Portfolio*, *L'Art*, and elsewhere, no one, we think, will care much for their "infringement of artistic propriety."

Archaeological Notes on Ancient Sculpturing: Rocks in Kumaon, India, by J. H. Rivett-Carnac (Calcutta: Rouse), is a brochure on cup marks, flint instruments, and ancient barrows, and other prehistoric remains of Central India by a member of the Bengal Civil Service whose name is already well known in connexion with these researches. The little work, which consists mostly of reprints from the *Journal of the Royal Asiatic Society of Bengal*, is enriched with numerous plates, and is especially interesting as it establishes a curious uniformity between the Indian cup marks on exposed rocks, and on stones ranged round circular barrows, with marks found in similar situations in Europe. Mr. Rivett-Carnac adduces considerable evidence to prove that they are now, in India, considered by natives as connected with *linga*-worship; whether they originally were so is quite another and a more difficult problem.

Prehistoric Remains in Central India, by J. H. Rivett-Carnac (Calcutta: Rouse), is a continuation of the same line of enquiry by the same author. The discoveries he here deals with were excavated from barrows in the Nagpur district, and include bronze hatchets, with tie-bands of bronze, bronze bridles and stirrups, and a small model in bronze of a bow and arrow, all of which are now deposited in the British Museum. The cup marks, or small carved heads, referred to in the last note, were also found on the boulders surrounding these cairns.

Rough Notes on the Snake Symbol in India in Connexion with the Worship of Siva, by the same author, is an attempt to show that snake worship is always connected with, and even identical with, *linga*-worship. This contention is probably too sweeping; but a number of curious and interesting facts are alleged in support of it, and the figures given in the plates are sufficient to show that there is often now a close connexion between the two ideas. The snake is found twined round the *lingam*, with its hood extended above it and with its tail running down the *yoni*; and there is a kind of snake valentine in which rough representations of snakes and women are sketched or carved for the purpose of presentation on the fifth day of the native month of Sawan. But the author does not seem to pay sufficient attention to the more numerous instances in which undoubted snake worship has nothing to do with the modern worship of Mahadeva.

THE most important article in the nineteenth volume of the *Numismatic Chronicle*, which has lately been completed, is one on the coins of Elis, by Mr. P. Gardner. It is the first of a series of monographs on the coinages of the principal Greek cities which are to appear from time to time in the *Chronicle*, and each of which is to form, as it were, a chapter of a new Eckhel. Nothing more useful to the archaeological student can be conceived. There is really no satisfactory account of Greek numismatics to be had at present. Most of the immense additions which have been made to our knowledge of the subject since Eckhel's time are hidden away in remote *Proceedings* of royal and imperial academies of obscure localities,

and few students have the energy or the knowledge to extract these buried treasures. It is the design of the contributors to the *Numismatic Chronicle* to remedy this defect by collecting together all the materials that have been accumulated by archaeologists, special numismatists, and historians bearing on the coinage of each particular city, and to throw this mass of information into a clear and intelligible form, which the mere beginner can understand, and yet from which the most experienced antiquary may learn something new and suggestive. It is especially intended to treat the coins in relation to history. It has now become possible to ascertain within very narrow limits the dates of most of the coins, and to arrange the series of each city in a tolerably exact chronological order. This being done, the advantage of placing the records of the ancient historians side by side with the testimony of the coins is patent; and the aid which each may render the other, obvious. The opening monograph of the series is a very successful example of this mode of treatment. The coins of Elis are of paramount interest from an artistic point of view, and present some of the noblest works of the finest period of Greek coin-art; but historically they are also exceedingly important. If the portraits of Zeus are valuable to the art student, inasmuch as he can trace in them the influence of the master-hands of Greek sculpture, and can even, perhaps, reproduce from the coins the true appearance of the lost Olympian Zeus of Phidias; scarcely less important from an historical point of view is the sudden introduction of the head of Hera on the Elean coinage just at the time when Elis had broken off the Spartan alliance for one with Argos, upon whose coins the head of her tutelary goddess simultaneously appears. Another coin of Elis belongs both to the historian and the student of art, if the letters ΔΑ occurring on it may, as Mr. Gardner reasonably argues, be taken to stand for Daedalus, who is recorded by Pausanias to have been employed by the Eleans, just at the time this coin was issued, in executing a trophy which was set up at Olympia to celebrate the victory of the presidents of the Olympic festival over King Agis of Sparta. It is impossible here to do justice to the methodical ordering of Mr. Gardner's history of the coinage of Elis, to his clear and yet often poetical exposition of the meaning of the various symbols and types employed, and to the thoroughness of his bibliographical and archaeological preparation. It is enough to say that every student of archaeology, and a great many who are not archaeologists but who care for the beautiful wherever it is to be found, will prize this essay on Elis as it deserves to be prized, and will rejoice that the noble examples of the great age of art which are so finely represented in the seven photographic plates accompanying the monograph have found so able and so systematic a commentator. The first chapter of "The New Eekhel" is a good beginning. The second will, we understand, be on the coins of Ephesus, which will offer considerable historical, if no great artistic, interest, and it will be written by Mr. B. V. Head, the assistant keeper of coins in the British Museum and the author of the *History of the Coinage of Syracuse* and other numismatic works of the highest value.

In the same volume Mr. Gardner contributes two other papers—one on coins from Kashgar, describing some pieces brought back by Sir Douglas Forsyth, from which the conclusion is drawn "that Greek influence did penetrate into Kashgar, but only in the times when the Sakas and Yu-chi had established themselves in the North of India, and become imbued with the Hellenistic civilisation which there prevailed;" the other on coins from Bactria, including some of Andragoras, a satrap of Parthia men-

tioned by Justin, and others with Aramaic inscriptions, which may be assigned to an unknown Phahaspes. Beside these, there are ten articles on English, Scotch, and Irish coins, interesting to those who busy themselves with such matters; one on Jewish coins, by Mr. Madden; and one on Arabic coins (including a curious piece issued by a prince of the dreaded Carmathians), by Mr. Stanley Lane Poole. Mr. Roach Smith writes about a discovery of nearly fourteen thousand coins and four-and-twenty altars, mostly dedicated to the goddess Coventina, in a well near the site of the Roman station Procolitia, on the line of the Roman wall. The coins probably formed part of the military chest of the Roman garrison, and were hidden, along with the altars, during some barbarian inroad. Mr. Keary, beside finishing his study of the *Coinages of Western Europe*, which has now appeared as a separate book, contributes a paper on the Renaissance Medals of Italy, in which he calls attention to "the wonderful revival of the medallic art under the auspices of Vittore Pisano, a painter and artist of Verona, whose fellow-citizen, Matteo de Pasti, may also claim some share in the honour."

THE STAGE.

WE hear that Mdlle. Sarah Bernhardt is going into "the provinces." Accompanied by M. Coquelin, she will appear in Manchester towards the end of June.

OUR readers perhaps know that the Princess's Theatre is to be pulled down, and that so early a day as Wednesday next is fixed for the last performance within its walls. The Princess's will, however, rise again, and no doubt in better form than at present. It is not a very old house, as anyone can see who looks carefully at the style of it. The stage is deep, which fits it for the production of spectacle, but both proscenium and auditorium are too high, and there is hardly a seat in the theatre, except in the third row of stalls, in which one feels that one is exactly where one would wish to be. There is plenty of space absorbed by the building, but it is chiefly devoted to a palatial lobby and giant refreshment rooms. The sense of roominess vanishes when one gets properly inside. Indeed—to be brief about it—the Princess's Theatre is one of the least skilfully planned in London. It is about forty years old, and that was a bad period in theatre building. The Princess's has neither the virtues of more aged playhouses nor those of the playhouses of Mr. Phipps.

MISS ELLEN TERRY's benefit, which is appointed for Thursday next, the 20th inst., will be noteworthy by reason of the performance of *King René's Daughter*, Mr. W. G. Wills's rendering in one act of Henrik Herz's poem. Mr. Irving plays "Count Tristan," and Miss Ellen Terry "Iolanthe." There is every reason to suppose that the part of the heroine will be particularly suited to Miss Terry.

DUTCH plays begin in London on the evening of June 7. We trust the performances of the company will be chiefly confined to Dutch domestic drama and to such historical drama as is really Dutch. It can be no privilege, and is not likely to be any attraction, to the London playgoer to see Dutch actors perform in historical drama that is not their own, for it is not likely that they have among them an artist like Bistori, who can put new interest into what English performers have already made familiar. The success of the Dutch enterprise at the Imperial Theatre will much depend upon the strictness with which the individuality of the company—which will be the one attractive novelty to the English public—is adhered to. By all means let us see the Dutch at home, as

it were, and not the Dutch in foreign classical or historical drama.

Cupid, the last after-piece of much importance produced in London, and played nightly at the Royalty Theatre, is important chiefly as a pretty spectacle and a piece abounding in tuneful airs. It will probably have a very long run, for it has little literary merit, and is supported by an excellent orchestra and by a company in which the principle of natural selection is especially apparent. Aldershot and *la haute finance*—the best patrons of the drama—are perfectly of accord that talent is not the only thing that is desirable at the theatre; and certain of the *tableaux* now represented in Dean Street are possibly scarcely inferior in attractiveness to the *tableaux* at Cromwell House.

THE emotions of M. Victor Hugo on finding that Mdlle. Bartet was equal to the part of the young Queen in *Ruy Blas* have been carefully *exploité* in the commercial interests of the Théâtre Français. Had the veteran poet been a more frequent playgoer, his discovery of Mdlle. Bartet's capacity would have been less sudden and less effective. Mdlle. Bartet is, up to the present time, one of those privileged persons who have never conspicuously failed. She has sensibility as well as vivacity, extreme intelligence as well as good looks; and from her first appearance at the Vaudeville to this, her latest, at the Français, it has been evident that she was no ordinary comedian, and that it would be difficult to fix precisely the limit of her achievements. At the same time, she has never actually displayed the electrical quality of genius in which certainly her predecessor, Sarah Bernhardt, has not been wanting. Mdlle. Bartet's best performances in high comedy and quiet pathos have suggested not so much the genius of the stage as the presence of a personality exceedingly mobile and attractive in daily life. To make the characters she assumed not so much wonderful as interesting and sympathetic has been thus far what she has mainly done. But, after all, her Désirée Delobelle was so perfect of its kind—so peculiar by its faultlessness—that it is hardly a matter of surprise that her talent should suffice her as the heroine of *Ruy Blas*. The raptures of M. Hugo on finding himself satisfactorily interpreted were therefore unnecessary, though excusable.

MUSIC.

MR. F. H. COWEN'S CANTATA, FIRST RICHTER CONCERT, ETC.

MR. F. H. COWEN, an English musician of great promise, wrote, in 1876, a cantata, *The Corsair*, founded on Byron's poem. The work was produced with success at the last Birmingham Festival, but was only heard in London for the first time on Wednesday, May 5. The romantic and tragic tale of the pirate Conrad and his bride Medora, and the dramatic libretto by Mr. R. E. Francillon, have inspired the composer to write some very charming and original music. The orchestration is specially clever and effective; the orchestra, in fact, plays a prominent part throughout the work. We may particularly note the pleasing choruses for female voices, the music assigned to Medora, and the characteristic "Dance of Almas." We do not enter into any special details, as the work has already been reviewed in these columns. The solo parts were excellently rendered by Mrs. Osgood, Mdme. Marie Roze, Mr. Barton McGuckin, and Mr. Frederick King. The work was well performed, and conducted by the composer.

A large audience, including many musical celebrities, assembled at St. James's Hall on Monday evening, May 10, for the first Richter Concert of the second series. The appearance of the famous conductor, Herr Richter, was the

signal for long and loud applause. Wagner's overture, *Die Meistersinger*, was given with wonderful strength, brilliancy, and clearness of detail, and served well to display the excellent qualities of both orchestra and conductor. This was followed by Beethoven's first symphony. (All the nine are promised at these concerts, and, as at the Crystal Palace, in chronological order.) The performance was a very fine one, but the second movement (*andante*) was slightly heavy, especially at the commencement. It would seem difficult to assign a good reason for the omission of the short repeat in this movement. Mr. E. Dannreuther played in an unusually clear and brilliant manner Mr. C. H. H. Parry's difficult concerto in F sharp major. He particularly distinguished himself in the long and difficult cadenza at the close. We have already spoken of this work when produced a short time ago at the Crystal Palace. On a second hearing, the first movement gains in interest, but our general opinion of the work remains the same. Herr Henschel was the vocalist, and sang in his very best manner a scene (*Wo berg ich mich*) from Weber's *Euryanthe*, accompanied to perfection by the band. He also gave two songs of Brahms, with piano-forte accompaniment by Herr Frantzen. The concert concluded with an impressive rendering of Schumann's fourth symphony in D minor. We must, however, recal the last performance of this work at the Crystal Palace, when the first and last movements were, in our opinion, given with more energy and enthusiasm. Herr Richter is a marvellous conductor. His manner is singularly simple and unobtrusive; and his success is due not so much to what he does at the performance as to what he does beforehand. He knows by heart the works to be rendered; he conducts the performances and, still more wonderful, the rehearsals without book; and he has also the gift of imparting his knowledge to the band, and in doing so spares neither time nor trouble. He obtains the most wonderful gradations of tone, delicate *pianos* and powerful *fortes*, while the phrasing, general expression, and ensemble playing are all that can be desired. The second concert will take place on Thursday, May 20.

Dr. Hans von Bülow was the pianist at the third concert of the Musical Union last Tuesday, and took part in Beethoven's trio in D (op. 70). We cannot remember to have ever heard a more delicate and in every sense finished performance of this beautiful work. Dr. Bülow gave in addition some piano-forte solos by Brahms, Chopin, and Liszt. His very fine playing was much appreciated by a large and enthusiastic audience. He is to appear again at the next *matinée*, on May 25. The concerted pieces were Haydn's quartett in F (No. 82) and Mendelssohn's quintett in B flat (op. 87). The executants were, as usual, Signor Papini and Messrs. Wiener, Holländer, Hann, and Lasserre.

The fourth and last subscription concert of the Borough of Hackney Choral Association took place on Tuesday evening last, and commenced with an excellent performance of Dr. Stainer's sacred cantata, *The Daughter of Jairus*. The music is very pleasing, and written with skill and taste. We would particularly notice the opening choral recitative, "The Wailing;" a chorus for female voices, which is both quaint and original; a song for tenor, "My Hope is in the Everlasting;" and a recitative, "Maid, I say to thee, Arise." The solos were well rendered by Miss Marian Williams, Mr. Frank Boyle, and Mr. E. Hilton. Mendelssohn's 114th Psalm was well sung by the choir. The second part of the programme included Beethoven's symphony in D, Schumann's *Gipsy Life*, Rossini's *Charity* for female voices, a song from Haydn's *Seasons*, and Adam's overture *Giraldia*. The choral singing

was not quite up to the mark of previous concerts, but, as Mr. Prout's choir as a rule sing marvellously well, a "little short of the mark" by no means implies a bad performance. Four concerts are promised for the next season, the dates of which will be duly announced.

J. S. SHEDLOCK.

SIR JOHN GOSS.

We regret to announce the decease of Sir John Goss in his eightieth year. He studied under Attwood, organist of St. Paul's and a favourite pupil of Mozart. He succeeded his master at St. Paul's in the year 1838; and eighteen years later became one of the composers to the Chapel Royal. He was knighted in 1872, and made Doctor of Music at Cambridge in 1876. His works are widely known in this country, and highly esteemed. We may mention one of his best-known anthems, *If we believe that Jesus died* (composed for the funeral of the Duke of Wellington), the celebrated glee *There is Beauty on the Mountain*, and his work on Harmony and Thorough-bass. One of his anthems, *Lift up thine Eyes*, for eight-part chorus, tenor, solo, and organ, was performed on March 16 at the first concert of the Bach Choir this season.

Saturday Review.

LONDON: GEORGE BELL & SONS,
YORK STREET, COVENT GARDEN.

Messrs. RICHARD BENTLEY & SON beg to announce that they will publish on Thursday, the 27th of May, a New Novel by

RHODA BROUGHTON,

ENTITLED

SECOND THOUGHTS.

LADY JACKSON'S
THE OLD RÉGIME:
COURT, SALONS, and THEATRES.

Now ready at all Booksellers', 24s., with Six Fine Portraits.

"Full of entertaining anecdote."—*Boston Literary World*.

"So fascinating is the narrative that, as we read 'The Old Régime,' it soon proves better than a novel. . . . It is so skilfully put together and so gracefully written that it is sure to find many eager and admiring readers."—*Morning Post*.

Just ready, in 3 vols., crown 8vo.

THE HON. LEWIS WINGFIELD'S
NEW NOVEL,

ENTITLED

IN HER MAJESTY'S KEEPING.

TWO NEW NOVELS
AT ALL LIBRARIES.

BY THE AUTHOR OF "UNCLE SILAS."

THE PURCELL PAPERS.

By the late J. SHERIDAN LE FANU, Author of "Uncle Silas," "The House by the Churchyard," &c. In 3 vols., crown 8vo.

THE MONTHYON PRIZE NOVEL,
"SANS FAMILLE."

NO RELATIONS.

By HECTOR MALOT. Translated by the Author of "The Hon. Miss Ferrard," &c. In 3 vols., crown 8vo.

"Full of striking and effective incidents, and contains some exceedingly powerful situations. . . . All the details are vividly picturesque."—*Globe*.

"'No Relations' gained M. Malot the Monthyon Prize, and deserved to gain it. It is a story consistently excellent in all its characteristic features."—*Saturday Review*.

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.
Strengthens the Nerves and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A

fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTS

THROUGHOUT on
MOEDER'S IRON SYSTEM.
The original, best, and most liberal.

No extra charge for time given.

F. MOEDER begs to announce that the whole

of the above premises have recently been rebuilt, specially adapted for the Furniture Trade, and now form one of the most commodious warehouses in the metropolis.

Bed-room Suites, from £8 6s. to 50 guineas.

Drawing-room Suites, from £9 3s. to 45 guineas.

Dining-room Suites, from £7 7s. to 30 guineas.

And all other goods in great variety.

F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862.

MORE CURES OF RHEUMATISM (this week) BY

DR. LOCOCK'S PULMONIC WAFERS.

Mr. Horsman, 1, Spring-street, Sussex-gardens, London, writes:—
"May 8, 1880.—I have found your Pulmonic Wafers most effectual in Rheumatism, relieving the most acute sufferings."

They taste pleasantly. Price 1s. 1½d. and 2s. 9d. per Box, of all Druggists

MR. G. H. JONES,

Surgeon-Dentist, 57, Great Russell Street, London,

Will be glad to forward his Pamphlet on PAINLESS DENTISTRY, free, enclosed by Post, which explains the most unique system of the adjustment of ARTIFICIAL TEETH without pain, to which the following Testimonials refer. Consultation free 10 to 5.

"MY DEAR SIR,

"Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which renders my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services you are at liberty to use my name.

"G. H. JONES, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

PROFESSOR GARDNER, late of the Royal Polytechnic Institution, in a certificate to Mr. G. H. Jones, Surgeon Dentist of 57, Great Russell Street, London, says:—"I have examined and tested your Painless System of adjusting Artificial Teeth; it is quite perfect, and is the most successful application of scientific laws for securing a natural wear and comfort yet introduced."

"January, 1877.

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.O.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

Food, Water, and Air, Edited by Dr. HASSELL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT.

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

WILLS'

JELLIES, with their Gelatine and Essence of Lemon.

NELSON'S ESSENCE of LEMON.—For

JELLIES, with their Gelatine and Citric Acid.

NELSON'S PURE BEEF TEA.—In ½-

plut packets.

The *Lancet* says—"An excellent preparation. Is very portable. Its flavour is all that could be desired."

The *Medical Press* says—"One of the best articles of the class we have ever examined."

NELSON'S SOUPS.—BEEF with various

kinds of VEGETABLES, CARROTS, CELERY, &c.

In pint and quart packets.

Miss MARY HOOPER says—"I have found your Beef Tea and Soup excellent—indeed, in my opinion, they are by far the best things of the kind ever before the public."

"The Soup is, besides, so cheap that it cannot fail to be appreciated by all classes of the community."

ASK YOUR CHEMIST or GROCER

for the above.

"HOME COMFORTS."

This book, neatly bound in cloth, and illustrated with numerous woodcuts, will be found very useful to Ladies, or anyone interested in home comforts.

A copy will be sent, post-free, for seven stamps, on application to the Publishers.

THE AUTOTYPE COMPANY
has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Madie's Library).
The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.
Note.—The special advantages of the Autotype Process for Book Illustrations are:—
1st. The absolutely facsimile nature of the result.
2nd. Its Cheapness for Small Editions of 250, 500, &c.
3rd. The Prints being direct on the Paper, there is an absence of all cockling and that disagreeable effect inherent to all Mounted Prints.
* * * For Terms and Specimens apply to the Manager.

NOW OPEN. EXHIBITION of the PAINTINGS by F. W. LAWSON, illustrating "CHILDREN of the GREAT CITY," "DAWN." This important painting by F. W. Lawson is on view by the courtesy of the BARONESS BURDETT GOUTTS.

W. H. SMITH & SON'S SUBSCRIPTION LIBRARY,

186, STRAND, LONDON.

1.—This Library is established in connexion with Messrs. W. H. SMITH & SON'S numerous Railway Bookstalls; it embraces all the most important Works of History, Biography, Travel, Fiction, Poetry, Science, and Theology, as well as the leading Magazines and Reviews.

2.—Subscribers can only change their Books at the Depot where their names are registered, but they may transfer the place of exchange *by giving notice to the Clerk in charge of the Depot at which they obtain their books*. There are 500 Bookstalls available for this purpose. Of the current periodicals, one only at a time is allowed to a Subscription under Five Guineas, and Subscriptions will not be accepted for the supply of Magazines and Reviews only.

3.—The Books are delivered at the Bookstalls, carriage free. A Subscriber may exchange once a day; the Clerk in charge will obtain from London any Work in the Library which a Subscriber may desire to have. **NOVELS exchanged only in unbroken and complete Sets.**

4.—London Subscribers transferring their Subscriptions to a Country Depot will be entitled only to the number of volumes which the Country terms assign to the amount they subscribe; similarly, Country Subscriptions transferred to Town become subject to the London regulations.

5.—Subscriptions may commence at any date, and are payable in advance at any of the Railway Bookstalls, or 186, Strand, London.

6.—Messrs. W. H. SMITH & SON beg to impress upon their Library Subscribers the fact that much disappointment and inconvenience would be avoided if they would, in all cases, give to the Clerk in charge a list comprising at least *twice* as many titles of works as they wish to exchange.

I.—FOR SUBSCRIBERS OBTAINING THEIR BOOKS FROM A LONDON TERMINUS, OR 186, STRAND—

TERMS FOR SPECIAL TRAVELLING SUBSCRIPTIONS, Lists of Books in circulation, or any other information can be obtained at any of the Railway Bookstalls, or at 186, Strand, London.

A Catalogue of Surplus and New Books, offered at greatly reduced prices, is published Monthly, and can be had upon application at the Bookstalls. Also a Catalogue of Books in elegant bindings for Gentlemen's Libraries.

Now ready, in crown 8vo, cloth, price 12s.

THE COUNTRY OF THE PASSION-PLAY:

The Highlands and Highlanders of Babaria.

By L. G. SEGUIN, Author of "The Black Forest," "Walks in Algiers," &c.

With a Route Map and Forty Illustrations.

EXTRACT FROM THE PREFACE.

"It is hoped that this work will induce some few holiday-makers out of the great 'many' who are turning their thoughts and footsteps in the direction of Ober-Ammergau not to make that now famous village the sole goal of their pilgrimage, but persuade them rather to continue their explorations into the very attractive district of which the Ammergau is but the gate or the outpost.

"By far the greater number of those who attended former

representations of the Passion-Play made a mere excursion of a day or more from Munich for the purpose, and returned artistically satisfied, it may be, and full of praise of the simple manners and earnest faces of the dwellers in the Highland vale, but probably without the smallest idea that some of the most beautiful scenery to be found in Europe had been within a few hours' reach of them."

London: STRAHAN & Co. (LIMITED), 34, Paternoster-row.

DR. GORDON HAKE'S NEW POEMS.

Small 4to, cloth extra, price 8s.

MAIDEN ECSTASY.

By THOMAS GORDON HAKE, the Author of "Parables and Tales," "New Symbols," "Legends of the Morrow," &c.

"Dr. Hake holds a separate position in modern poetic literature, of which, indeed, he is an interesting phenomenon. The 'Betrothed,' the 'Heartbroken,' the 'Self-conscious'—self-conscious of new-awakened passion—these are subjects with which Dr. Hake deals sympathetically and in the manner of a 'subtle-souled psychologist.'"—*Full Mall Gazette*.

London: CHATTO & WINDUS, Piccadilly, W.

A MEDLEY OF NOTABLES: What

they said and What others said of them. By G. F. S. "This little book contains on one side of each page a quotation from some well-known author, and on the other side a brief notice of this author by other authors."—*Saturday Review*.

Published at 21, Castle-street, Holborn.

18, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

THE VILLAGE of PALACES; or,

Chronicles of Chelsea. By the Rev. A. G. L'ESTRANGE. 2 vols., crown 8vo, 71s.

"Mr. L'Estrange's volumes are a fair specimen of the popular books on antiquarian matters which are constantly coming out. They are pleasantly written, and fairly interesting."—*Athenæum*.

"This work has considerable value as a record of a most interesting portion of London. It may be read with much pleasure and some profit."—*Morning Post*.

"One of the best gossiping topographies since Leigh Hunt's 'Old Court Suburb.'"—*Daily Telegraph*.

CONVERSATIONS with DIS-

TINGUISHED PERSONS during the SECOND EMPIRE, from 1861 to 1863. By the late NASSAU W. SENIOR. Edited by his Daughter, M. C. M. SIMPSON. 2 vols., demy 8vo, 30s.

"It is impossible to do justice to these 'Conversations' in a brief notice, so we must be content to refer our readers to volumes which, wherever they are opened, will be found pregnant with interest."—*Times*.

ROYAL WINDSOR. By W. Hep-

WORTH DIXON. Vols. III. and IV., demy 8vo, 30s. Completing the Work. Second Edition.

LODGE'S PEERAGE and BARON-

ETAGE for 1880. Under the Special Patronage of HER MAJESTY. Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the Arms beautifully engraved, 31s. 6d., bound gilt edges.

THE NEW NOVELS.

MISS BOUVERIE. By Mrs. Moles-

WORTH. Author of "Hathor Court Rectory," &c. 3 vols.

POOR ZEPH. By F. W. Robinson,

Author of "Grandmother's Money," &c. 3 vols.

"The author has written many good stories, and has long since established his reputation as a romancer of every-day life to whom the bulk of the reading public willingly listens. He has done well to reproduce these charming studies and sketches."—*Athenæum*.

POET and PEER. By Hamilton

ALDE. Author of "Penruddocke," &c. 3 vols. Dedicated to LORD LYTTON.

"'Poet and Peer' is a novel of unusual merit, the work of a cultivated man of the world, who describes what he has himself seen. It is both in intention and execution the best of Mr. Ald's novels, and will interest and amuse every reader who takes it up."—*Athenæum*.

"A thoroughly readable and attractive novel."—*Morning Post*.

"The story is sufficiently relieved with brightness and humour to make it not only interesting, but agreeable reading."—*Saturday Review*.

THREE RECRUITS, and the

GIRLS THEY LEFT BEHIND THEM. By JOSEPH HATTON. 3 vols.

"Mr. Hatton's novel hurries us along in unflagging excitement. The scenes of the good old times when Farmer George was king are excellent."—*Times*.

Three Recruits is one of the best novels of the season. It is sure to become extremely popular."—*Morning Post*.

"A vigorous and spirited novel, which will well maintain Mr. Hatton's established reputation. The story is full of stirring incident."—*John Bull*.

FOR HER DEAR SAKE. By Mary

CECIL HAY. Author of "Old Myddleton's Money." Second Edition.

"It is very seldom that a novel has appeared more deserving of popularity than this unusually interesting story."—*Post*.

LILY of the VALLEY. By Mrs.

RANDOLPH. Author of "Gentianella," &c. 3 vols.

MERVYN O'CONNOR. By the

EARL OF DESART. Author of "Kilverdale," &c. 3 vols.

[Next week.]

CHEAP EDITIONS.

BY THE AUTHOR OF "LADY GRIZEL."

IN HER MAJESTY'S KEEPING.

By the Hon. LEWIS WINGFIELD, Author of "My Lords
of Strogue," "Lady Grizel," &c. 3 vols., crown 8vo.

BY THE AUTHOR OF "UNCLE SILAS."

THE PURCELL PAPERS. By the

late J. SHERRIDAN LE FANU, Author of "The House
by the Churchyard," "Uncle Silas," &c. 3 vols.,
crown 8vo.

THE MONTHYON PRIZE NOVEL, "SANS FAMILLE,"

NO RELATIONS. By Hector

MALOT. Translated by the Author of "The Hon. Miss
Ferrard." 3 vols., crown 8vo."An excellent novel, showing all the vivacity which we
are accustomed to associate with French fiction, and wholly
free from any of its characteristic defects."—*Spectator*."Full of striking and effective incidents, and contains
some exceedingly powerful situations. . . . All the
details are vividly picturesque."—*Globe*.

LADY JACKSON'S THE OLD

REGIME: Court, Salons, and Theatres. Now ready,
at all Booksellers', 24s., with Six fine Portraits.

On May 27th, price One Shilling.

THE TEMPLE BAR MAGAZINE.

CONTENTS FOR JUNE, 1880.

ADAM and EVE. (Continued.)

A PRINCESS of the 17th CENTURY.

WILLIAM COWPER.

"BIF-STECK" à l'ANGLAISE.

DRYDEN as a DRAMATIST.

MRS. PIERREPOINT.

VICTOR HUGO.

THE PORTRAIT of a PAINTER by HIMSELF.

THE REBEL of the FAMILY. By Mrs. LYNN LINTON.

(Continued.)

LONDON:

RICHARD BENTLEY & SON,

NEW BURLINGTON STREET,

Publishers in Ordinary to Her Majesty the Queen.

The New Illustrated Literary Paper.

THE PEN.

WITHOUT any disposition to underrate existing Literary journals, the founders of *The Pen* believe that there is a distinct place for a new paper such as that which they now submit to the judgment of the public.

The Reviewers in *The Pen* include some of the best writers of the day; they will never praise what is not good for the sake of being pleasant, nor blame what is meritorious for the sake of being smart; and they will interweave with their conscientious criticism such full quotation of the representative passages of important works as will make the paper a permanently interesting reflex of English Literature. *The Pen* will also contain light Essays on Literary subjects, Biographies of Living Authors, Verses, Literary Table Talk, and Drawings reproduced from illustrated books.

THE PEN,

The New Illustrated Literary Paper,

Appears TO-DAY, MAY 22ND,

And will be published

WEEKLY, PRICE TWOPENCE.

LONDON:

22, TAVISTOCK STREET, COVENT
GARDEN, W.C.SAMPSON LOW, MARSTON, & CO.'S
LIST.

Now ready, at every Library, the New 3 Vol. Novel.

MARY ANERLEY.

By the Author of "Lorna Doone."

MARY ANERLEY: a Yorkshire Story.

By R. D. BLACKMORE, Author of "Lorna Doone," "Alice Lorraine,"
"Cradock Nowell," &c. 3 vols., crown 8vo, 31s. 6d."Mr. Blackmore's wealth of material has made his story rich and full to
overflowing. . . . There is a masculine vigour in his writing."—*Daily
News*.

THE FLORAL ASPECT OF SPRING.

In large post 8vo, handsomely bound in cloth, gilt edges, 12s. 6d.

SYLVAN SPRING. By Francis George

HEATH, Author of "Our Woodland Trees," "The Fern World,"
"The Fern Paradise," "Burnham Beeches," "Trees and Ferns," &c.
Mr. Heath's new work on the Floral Aspect of Spring is illustrated by
Twelve Coloured Plates (comprising Thirty-six Grouped Subjects),
printed by Leighton Brothers from Drawings specially made for the
Work, after Designs of the Author, by F. Edward Hulme, F.L.S., Artist
and Author of "Familiar Wild Flowers;" and by over 100 Wood En-
gravings of the Flowers and Ferns of Spring. [Ready.]

Now ready, crown 8vo, cloth extra, 10s. 6d.

POETS in the PULPIT. By the Rev. H. R.

HAWES, M.A., Author of "Music and Morals," &c. Containing Perma-
nent Photographic Portraits of Wordsworth, Keble, Tennyson, Shak-
spere, Herbert, Browning, and Longfellow.

SCIENCE a STRONGHOLD of BELIEF;

or, Scientific and Common Sense Proofs of the Reasonableness of
Religious Belief, as Based on a Plain and Candid Study of Nature and
the Scriptures. The whole forming a general practical View of Belief
and an opposition to modern Doubt and Infidelity. By H. B. PAINTER,
M.D., F.R.C.S. Crown 8vo, 10s. 6d.

NOW READY, AN ENTIRELY NEW WORK BY JULES VERNE.

JULES VERNE'S GREAT NAVIGATORS

of the EIGHTEENTH CENTURY. With numerous Illustrations and
Facsimile Copies of Old Engravings, Charts, Maps, &c. Demy 8vo,
cloth extra, 12s. 6d.; gilt edges, 14s.

Now ready, crown 8vo, 8s. 6d.

THE WATERING-PLACES of GER-

MANY, SWITZERLAND, &c. By EDWARD GUTMAN, M.D. illus-
trated."Is likely to attract attention."—*Full Mail Gazette*.

LITERATURE.

The Hibbert Lectures, 1879. The Origin and Growth of Religion, as Illustrated by the Religion of Ancient Egypt. By P. Le Page Renouf. (Williams & Norgate.)

THE Hibbert Lectures are intended to illustrate the origin and growth of religion. Prof. Max Müller's lectures treat of the religions of India, Mr. Renouf's of the religion of ancient Egypt. The earliest known forms of these religions present themselves in different degrees of development. The oldest Vedic hymns are the product of a very simple faith, and we can trace the progress of the Hindu mind, in its search after the Infinite, through successive stages, until it reaches its highest expression in the philosophy of the Upanishads. The sublimest conceptions of the Egyptian mind, on the contrary, are among the most ancient, while its subsequent history is one of slow deterioration and decay. Like Athené from the brain of Zeus, the Egyptian religion emerges from the thought of prehistoric times in full maturity of beauty; but the process by which its moral code and its noble conception of the Deity were developed is as unknown as is the process by which the massive stones of the Pyramids, which belong to the same remote ages, were built into their place.

This unique character of the religion of ancient Egypt naturally attracts Mr. Renouf to the earlier and purer forms, which he treats with interesting detail, and with his usual severe and accurate scholarship. We could, however, have wished that he had generalised his facts, and shown what light he considers them to throw upon the many problems connected with the Origin and Growth of Religion, which is the title of his lectures.

In the Egyptian religion the polytheistic and monotheistic doctrines constantly appear together in the same context, without any thought of inconsistency in the mind of the worshipper. Nevertheless,

"a highly cultured and intelligent people like the Egyptians did not simply acquiesce in the polytheistic view of things, and efforts are visible from the very first to cling to the notion of the unity of God. The 'Self-existent or Self-becoming One,' the 'One of One,' the 'One without a second,' . . . are applied to this or that god; each in his turn being considered as the Supreme God of gods."

In opposition to "many very eminent scholars who maintain that the Egyptian religion is essentially monotheistic," Mr. Renouf contends that "the magnificent predicates of the one and only God, however recognised by Egyptian orthodoxy, never, in fact, led to actual Monotheism; but stopped short in Pantheism." He thinks "no words can more distinctly express the notion of 'self-existent Being' than

chepera cheper t'esef . . . but the word *chepera* signifies *scarabaeus* as well as *being*, and the *scarabaeus* was in fact an object of worship, as a symbol of divinity." He rejects also, as a definition of the Deity, the literal translation of *nuk pu nuk*—"I am that I am"—because the "passages of the Book of the Dead where they occur do not contain any mysterious doctrine about the Divine nature."

The word *Nutar*, God, is closely allied to *nutra*, in which he considers the "palm-shoot" as a determinative not of signification but of sound. He finds the notion expressed by these words in the Coptic *nomti*, "power, strength, fortify." He quotes texts in which this meaning occurs, and refers to the demotic in the Tablet of Canopus, where *nutra* is translated *χν*, to strengthen, to fortify. He concludes, therefore, that the Egyptian *nutar* as a name of God means power, and corresponds to the Hebrew *El*; and that the common expression *nutar nutra* exactly corresponds to *El Shaddai*, the name by which God was known to the Patriarchs. This identity of meaning is "the most remarkable point of contact between Hebrew and Egyptian religion." In this view, we may remark, he differs from M. de Rougé, who regards the "palm-shoot" as a determinative of "l'éternelle jeunesse renouvelée périodiquement" (*Rev. Arch.*, Juin 1860), rendering *nutar nutra* "dieu devenant dieu" (*Chrestom.* iii. 25). However this may be, the Egyptians in all periods of their history spoke of *Nutar* in the singular number; and it is remarkable that the translators of the Bible into Coptic, while generally avoiding the use of Old Egyptian dogmatic words, adopted *nutar* as expressive of their notion of God. He quotes Cardinal Newman's idea of what Christians mean by God, and then frankly confesses:—

"Now, as I carefully examine each paragraph of this beautiful passage, I am obliged to acknowledge that single parallel passages to match can be quoted from Egyptian far more easily than from either Greek or Roman religious literature."

Mr. Renouf has done good service in proposing to translate *maat* by Right or Law, as including the ideas of Truth and Justice. He therefore gives as the title of the 125th chapter of the Ritual, "The Hall of Twofold Right" and "The Hall of Law;" and even translates *maä-xeru* ("one whose word is law") by "triumphant" instead of "justified" or *véridique*. The primitive notion of *maat* is the geometrical "right" as opposed to *xab* "bent," but when it is translated "law" its opposite is *asfet*, "lawlessness." *Maat* is therefore Law as the governing force of the universe in its moral as well as in its physical aspect. When *maat* is so regarded we find that "the triumph of Right over Wrong is the burden of nine-tenths of the Egyptian texts which have come down to us." The gods are said to live by it: "Thou art the Lord of Righteousness (*maat*) hating iniquity;" "Hail to Thee, Ra-Tmu-Horus, One God, living by Right," *anx em maat*. This meaning seems to us identical with the Zend *asha*, and with the Sanskrit *rita* as in the Vedic hymns:—

"O Indra, lead us on the path of *Rita*, the right path over all evils" (*Rig-Veda*, x. 133, 6.)

"The god *Savitri* toils on the right way, the horn of the *Rita* is exalted far and wide; the *Rita* resists even those who fight well" (*Rig-Veda*, viii. 86, 5).

It must, however, be borne in mind that there are passages in which the Egyptian scribe seems to give an intentional ambiguity to *maat*, meaning either Truth, which is right speech, or Justice, which is right action (*Notice des Monuments au Musée du Louvre*, p. 58, note).

The earliest translation of the *Shai an Sinsin* was made by Dr. Brugsch under the title *Liber Metempsychosis veterum Aegyptiorum*. It was Mr. Renouf who proposed the ingenious interpretation, which has since been generally adopted, *Book of the Breaths of Life*. He now happily suggests that it is a sort of Breviary of the Book of the Dead, from which it borrows the main ideas, while it avoids the obscurities of both matter and form.

The nature of Egyptian metempsychosis he considers to have been misunderstood through a confusion with either Pythagorean or Hindu notions:—

"There is really no connexion, either doctrinally or historically, between the two systems. Nothing in the Pythagorean system is foreign to previously existing Hellenic modes of thought, or requires in any way to be accounted for by foreign influence; and its metempsychosis is essentially based upon the notions of expiation and purification. Men were supposed to be punished in various forms of a renewed life upon earth for sins committed in a previous state of existence. There is not a trace of any such conception to be found in any Egyptian text which has yet been brought to light. The only transformations after death depend, we are expressly told, simply on the pleasure of the deceased or of his 'genius.' Nor is there any trace to be found of the notion of an intermediate state of purification between death and final bliss. Certain operations have to be performed, certain regions have to be traversed, certain prayers to be recited, but there is no indication of anything of an expiatory nature."

Mr. Renouf thinks it impossible to resist the conviction that the Egyptian mythology is very similar to that of the Indo-European races; and that, while the same drama is being acted under different names and disguises, the comparative mythologist will hardly hesitate in assigning the real name to each. For instance, Osiris is the son of Seb, the earth-father, and Nut, the heaven-mother (this relationship between heaven and earth is peculiar to the Egyptian myth). He weds his sister Isis, the Dawn, while they are in the womb of their mother; their offspring is Horus, the Sun in his noonday strength. His brother Set, the Darkness, has for wife Nephthys, the Sunset. After Osiris is slain by Set he reigns in the nether-world, like the Indian Yama, and there judges the dead in the Hall of the Twofold *Maat*. Again, the god Thoth represents the Moon, which he wears upon his head. As our word moon is derived from the Sanskrit root *md*, to measure, so one of the names used for Thoth was *Texu*, which was also the "name of the instrument which corresponds to the needle of the balance for measuring weights, the ancient Egyptian cubit of Techu." Hence Thoth is called "the measurer of this earth," and is said to have "calculated the heaven and counted the stars."

Mr. Renouf transcribes a passage from his *Grammar* on the essential differences between the Egyptian and Semitic languages, showing that he continues to differ from M. Maspero and other scholars, who think that the two languages are allied in *la forme grammaticale*. He also argues that neither Hebrews nor Greeks borrowed any of their ideas from Egypt; and that the interest which the Egyptian religion inspires is derived solely from itself:

"A sense of the Eternal and Infinite, holy and good, governing the world, and upon which we are dependent; of right and wrong, of holiness and virtue, of immortality and retribution—such are the elements of Egyptian religion."

These pure elements of religion, although mixed with much alloy of baser metal, were not, as is frequently asserted, an esoteric doctrine known to the scribes and priests alone, but were the common popular belief.

JOHN NEWENHAM HOARE.

Songs of the Springtides. By A. C. Swinburne. (Chatto & Windus.)

MR. SWINBURNE'S new volume of poems is not a large one, but the four pieces which it contains are all of some length, and are moreover united by a community of subject. There is a double meaning in the word "spring-tide," and either of the two possible interpretations would suit the book. But its contents are emphatically studies of the sea, even the last, which is a birthday ode to Victor Hugo, falling not unnaturally under this heading. No poet, not even Victor Hugo himself, has saturated his verse with the savour and sound of the waves as has Mr. Swinburne, and it is fitting that he should thus give up a separate volume to his favourite subject.

The three pieces which precede the birthday poem are all, like it, couched in ode-form, the irregular iambic *tirades* being not unfrequently interspersed with regular strophic arrangements in other metres. "Thalassius," the first, might be described in several ways, but perhaps as good an argument as any other for it would be "how a child was found on the sea-shore by an ancient poet and warrior, and of his fostering, and how he was thrall awhile to love and thereafter became free." The next, "On the Cliffs," is a long address to Sappho; the last, "The Garden of Cymodoce," a description of the Island of Sark. This latter poem includes not a little reference to the great poet whose home for many a year looked out on the long range of cliff, jagged with its central scoop, which Sark presents to the westward, and thus leads up not inappropriately to the concluding piece. In this "Garden of Cymodoce" the strophic portions are of especial beauty and interest, all the more so since Mr. Swinburne has here and there taken up metres which his earlier practice has associated indissolubly with his poetical style. There is something, for instance, extraordinarily attractive in this striking of an old chord after fourteen years of imitation, parody, and burlesque by hundreds of writers who thought they had the seed, but who unquestionably could not raise the flower.

"Or haply, my sea flower, he found thee
Made fast as with anchors to land,

And broke, that his waves might be round thee,
Thy fetters like rivets of sand;
And afar, by the blast of him drifted,
Thy blossom of beauty was borne
As a lark by the heart in her lifted
To mix with the morn?

"By what rapture of rage, by what vision
Of a heavenlier heaven than above
Was he moved to devise thy division
From the land as a rest for his love?
As a nest when his wings would remeasure
The ways where of old they would be
As a bridebed upbuilt for his pleasure
By sea-rock and sea?"

In this case, at any rate, there is not much difficulty in distinguishing the original from the counterfeit, nor has the hand that wrought *Dolores* lost its cunning. It would be impossible to indicate all the separate passages that deserve indication both in this poem and in "On the Cliffs." As wholes, however, we are inclined to prefer "Thalassius" and the "Birthday Ode." The former is singularly well proportioned, free alike from obscurity and from undue diffuseness, and abounds in passages of the greatest beauty. The opening lines, as far as mere description is concerned, could not well be better:—

"Upon the flowery forefront of the year
One, wandering by the greygreen April sea,
Found on a reach of shingle and shallower sand,
Inlaid with starrier glimmering jewellery,
Left for the sun's love and the light wind's cheer
Along the foam flowered strand,
Breeze-brightened, something nearer sea than land
Though the last shoreward blossom fringe was near,
A babe asleep, with flower-soft face that gleamed."

This *mise-en-scène* is happily maintained, and the whole poem abounds with passages of the same kind which we should like to quote. It will, however, be better to give one of a somewhat different and less purely pictorial kind:—

"And Hope the high song taught him; Hope whose eyes
Can sound the seas unsoundable, the skies
Inaccessible of eyesight; that can see
What earth beholds not, hear what wind and sea
Hear not; and speak what all these crying in one
Can speak not to the sun.
For in her sovereign eyelight all things are
Clear as the closest seen and kindest star
That marries morn and even and winter and spring
With one love's golden ring.
For she can see the days of man, the birth
Of good and death of evil things on earth
Inevitable and infinite, and sure
As present pain is or herself is pure.
Yea, she can hear and see, beyond all things
That lighten from before Time's thunderous wings
Through the awful circle of wheelwinged periods,
The tempest of the twilight of all gods;
And higher than all the circling course they ran
The sundawn of the spirit that was man."

Good, however, as "Thalassius" is the "Birthday Ode" is even better, and that not merely because it is bigger. Like "The Garden of Cymodoce," it has a regular metrical plan and structure, and is probably the most ambitious piece of the kind—not excepting its author's ode on the French Republic—that has recently been attempted in English. Extending as it does to over five hundred lines, the major part of it is occupied by a running survey of the life work of the poet whom it celebrates, and we doubt whether anything of the kind has been better done. It is almost unfair to quote continually from a book whose pages do not much exceed a single century, but

the strophe devoted to *Les Rayons et les Ombres* and its incomparable "Gastibelza" must be cited:—

"But ah! the glory of shadow and mingling ray,
The story of morn and even
Whose tale was writ in heaven,
And had for scroll the night, for scribe the day!
For scribe the prophet of the morning, far
Exalted over twilight and her star;
For scroll beneath his Apollonian hand
The dim twin wastes of sea and glimmering land.
Hark, on the hillwind, clear
For all men's hearts to hear,
Sound like a stream at nightfall from the steep
That all time's depths might answer, deep to deep,
With trumpet-measures of triumphal wail
From woody vale to vale,
The crying of one for love that strayed and sinned,
Whose brain took madness of the mountain wind."

After all, mere extracts can do little justice to a regularly planned poem on such a scale as that adopted in this volume, and especially in the "Birthday Ode." Only in Dryden, the greatest English master of the larger ode, can anything be found to match it for substance and proportion—both absolute requisites, be it remembered, of this class of composition which admits of nothing so little as of indefinite splashing about till the writer is tired—and at the same time for detached passages of individual beauty.

It is hardly necessary to say that those persons who are careful and troubled over "the subject" may find, as usual, some stumbling-blocks ready for their feet even in a volume so limited in bulk as is this present one. This is generally the case with Mr. Swinburne's muse, and the stumblers need not be reasoned with—indeed, the fact of their stumbling is sufficient proof of that. There are doubtless a great many people who do not agree with Mr. Swinburne as to the merits of Victor Hugo or the demerits of Dean Stanley—the Dean has a fiery little sonnet hurled at him in an Appendix—or on a good many other disputed points. For ourselves we have never found our enjoyment of Mr. Swinburne's work affected one jot by the accident of agreement or disagreement—the latter being at least as common as the former, perhaps rather commoner, with us—with his views on any conceivable subject. Those who judge of their wine by the character of the bottles into which it is put will of course differ from us. But what we have found about this work is that it has the unmistakeable power of resisting time and change which nothing but the highest poetry has. There is much verse written at this day, and doubtless there has been much written in all days, to which it is difficult to refuse a certain approval, but which at the same time wins, even with the best-disposed critic, little more, or nothing more, than a *succès d'estime*. There is also some which, especially in early youth, catches the attention for a time, but fails singularly to maintain its grasp. There is yet a third class which palls through mere repetition of the dose. Mr. Swinburne's poems rise far out of all these classes. Since the earliest of them appeared, a space of time has passed which is no small one even in the full lifetime of man. Their author has not been of those careful merchants who restrict the production of their wares lest they should become cheap and common. He has had the ill-fortune to be widely imitated and carica-

tured. His views on all sorts of irritating subjects are certainly not of the least irritating to those who differ from him. But, to some persons at any rate, the charm of his work, not merely at its best, but in all but its least good samples, is absolutely what it was. It still has the "lift" which takes the reader off the ground, and the rushing music which obliges him to recite rather than read. Neither the changes of fashion, nor of thought, nor of belief affect its attraction; and no amount of comparative study of poetry dulls the palate to its savour, or substitutes the merely scientific satisfaction in knowing how the thing is done for the pleasure, integral and never to be wholly analysed, which a work of art should give. We find in 1880 the attraction of these *Songs of the Springtides* as great as we found, in 1864, the attraction of *Atalanta in Calydon*, and we doubt whether higher praise could possibly be given to any poet by any reader who has seriously devoted himself to the critical reading of poetry.

GEORGE SAINTSBURY.

A Contemporary History of Affairs in Ireland from 1641 to 1652. Edited by J. T. Gilbert, F.S.A., M.R.I.A. Vol. II. (Dublin: Printed for the Irish Archaeological and Celtic Society.)

THE second volume of this valuable history, which Mr. Gilbert has made still more valuable by the publication of accompanying documents in the Appendix, opens in 1649 and extends to the latter part of 1651—a period which has left a stronger impression upon the popular mind than almost any other in Irish history. Everybody who knows anything at all about history has heard of Cromwell's proceedings at Drogheda; and there can be little doubt that the pages in this volume which will be first turned to by its readers will be those in which Aston, the commander of the garrison, reports on the state of affairs within the assailed town before its capture. The place, it seems, was ill provided with provisions and supplies of war. Aston, too, was particularly troubled by the presence of certain ladies—some of them his own relatives—who carried on communications with the enemy. He was particularly annoyed by the conduct of old Lady Wilmot, and wrote to Ormond for leave to expel her from the garrison—"for, though she be my grandmother, I shall make powder of her if she play me such foul play." Some suspicions, too, he seems to have had of one who was nearer to him than his grandmother. "Just now," he writes, "my wife is arrived, and just now I wish she were at Athlone."

Here, again, is Ormond's account of the storm. Cromwell, he says:—

"having made a breach which he judged assaultable, he assaulted it, and being twice beaten off, the third time he carried it; all his officers and the souldiers promising quarter to such as would lay downe their armes, and performing it, as long as any place held out, which encouraged others to yeeld. But when they had once all in their power, and feared noe hurt that could be done them, then the word 'noe quarter' went round, and the souldiers wear many of them forced against their wills to kill their prisoners."

Among those thus slain in cold blood was

Sir Edmund Verney, to most readers a mere name among many others, except so far as it may call up a recollection of the tragic figure of his father, who died as Charles's standard-bearer at Edgehill. To the few who have learned from his letters, still preserved in the great storehouse at Claydon, to know the tender-hearted and honourable Cavalier officer, whom no political differences could estrange from those to whom he was bound by family ties, the name will stand out almost as that of some dear friend who may have perished on some well-stricken field in their own day.

After all, however, books like this with which Mr. Gilbert has presented us are not made to be reviewed. It is not by some days or weeks of study that their worth can be measured. Every statement is valuable by itself, but it is far more valuable when it is compared with other statements in other books; and this comparison can only be made after long and deliberate special study. The statement, for instance, made in part i., p. 12, that Ormond was in 1641 one of "seventy-eight persons, all sworne to secrecie, to each his town or forte appointed to secure the same for his majesties intrest," Lord Inniskillin and Sir Phelim O'Neill being among the others; and the further statement (p. 21) of Ormond's treason to the Irish rebels as one "already sworn to their covenant," must seem to most readers to be a mere hallucination of the writer. To those who are more fully acquainted with the authorities bearing on the subject it appears as one more link in the chain of evidence which brings home to Charles the responsibility, not indeed of the agrarian rebellion in Ulster, but of a combination with the Irish Catholics in the summer and autumn of 1641 with a view to obtaining armed assistance from them against the English Parliament in exchange for the grant of toleration for their religion. How important this evidence is in clearing up difficulties in English as well as in Irish history it is needless to say, and if Mr. Gilbert had done no more than publish these two paragraphs he would have done much to secure the gratitude of scholars on this side of the sea.

SAMUEL R. GARDINER.

THE ALPS.

The Ascent of the Matterhorn. By Edward Whymper.

A Handbook for Travellers in Switzerland: The Alps of Savoy and Piedmont, &c. Sixteenth Edition, Revised. (Murray.)

THERE is a little deception about Mr. Whymper's title. It cannot be said that the book does not correspond to its title, for no book could do so more completely; but the book is not a new one, as the title would lead us to suppose, but is simply a virtual reprint—with some few additions, particularly in the Preface and the Appendix, and some few omissions—of the well-known *Scrambles amongst the Alps* which the author published in 1871, which was rendered into German by Herr Steger in 1872, and into French by M. A. Joanne in 1873. The story of the first successful assault of the Matterhorn is as unique in the annals of mountain-climbing as that magnificent isolated obelisk on the frontiers of Switzerland and Italy is itself

unique among the great European mountains. We need hardly add, nine years after the first appearance of this record of the achievement, that Mr. Whymper, the Caesar of the ascent and the Xenophon of the descent, has the art of so relating the history of the battle, with all its preliminary campaigns and its awful loss at the instant of victory, as to make the tale fascinating alike to the expert, the tyro, and the quiet stay-at-home. But it is a little strange to find no word on the title-page warning the intending reader that he is about to open an old book and to look at a fine series of woodcuts which are already well known all over Europe. The deception of novelty is kept up by the substitution of a new sensational frontispiece, by M. Gustave Doré, for the famous old frontispiece of Mr. Whymper and the Taugwalders contemplating the mysterious crosses in the fog-bow, which is now introduced in its relevant place in the text. In his Preface, Mr. Whymper has certainly added some really useful hints on the self-equipment of an Alpinist, with explanatory woodcuts; at the same time he has omitted from this place his former acknowledgments to the artists and others who aided him in giving such finish and exactitude to the *Scrambles*. It appears to me that the illustrations, which have also done duty in M. Joanne's *Escalades dans les Alpes*, have lost considerably in sharpness; the full-page group of portraits in "the club-room of Zermatt in 1864" looks blurred and indistinct when compared with the earlier impress in the carefully printed *Scrambles*. Some of the old woodcuts are omitted, and notably the sketch of the English miss on the mule (apparently to make room for a new foot-note), Mr. Mahoney's capital picture of the roguish little postilion, the illustrations of the Mont Cenis Railway, and the sensational full-page illustration of the episode, "We saw a toe; it seemed to belong to Moore; we saw a flying body." The Appendix, as I have said, contains some useful new matter, as it brings down the chronicle of Matterhorn climbing to the present date, and completes the tabular conspectus which was commenced in what we must call the first edition of this book. Mr. Whymper repeats his admonitory note about the Taugwalders, though Tschudi in the present year has singled out Peter Taugwalder, presumably the younger, as "besonders empfehlenswerth." Old or new, the book is a very charming one.

After comparing the sixteenth edition of "Murray" with its foregoers, we are struck with the number of noteworthy improvements which it contains. It still preserves its old characteristic, that of being by far the most pleasant and chatty of all extant handbooks, and one can read it continuously, page after page, by an English fireside in the middle of winter. The mountaineer will find it exceedingly thin in comparison with "Ball" or "Tschudi," but the holiday climber will find that his wants have been cared for more scrupulously than in the earlier editions; while the "short time" tourists, and those who travel in family, cannot obtain a more agreeable guide-book. The editor's "selected list of books" is fairly good, although it is not brought down to the latest date. He has done well to recommend Stricker's *Lehrbuch*

as "the Swiss history for travellers;" but much has been written since W. Vischer's book on the legend of the liberation of the Forest Cantons, and the one work which is the most complete and exhaustive *multum in parvo* for the tourist who wishes to acquire a general but exact knowledge of Switzerland—Berlepsch's admirable *Schweizerkunde*—does not find a place in the catalogue. We could point out a large number of passages in which the information given is either defective or incorrect. This results in some cases from too slavish a reproduction of the matter of the earlier editions. Thus, "Murray" is unwilling to allow the Swiss villages to increase in population; they contain in 1879 exactly the same number of inhabitants as they did in 1867. In that year Wasen, in Uri, on the busy St. Gothard route, was put down as "a village of 550 inhab." The words are transferred bodily into the present edition, although the village now numbers 1,310 inhabitants. Writing of Altorf or Altdorf, the capital of Uri, "Murray" increases its inhabitants by 3,000, but he still repeats that it is a "dull village;" the *d* has been inserted in the name since the twelfth edition. Such a chronicler of pictures and of good points of view ought surely to have mentioned that the church possesses a *Nativity* attributed to Vandyke and a *Burial of Christ* attributed to one of the Caracci, and that the Capuchin convent on the heights above the town has a magnificently wide and varied prospect, and is locally supposed to be the spot on which Gesler built his terrible "Zwinguri." While speaking of this neighbourhood, we may observe that it is not merely "difficult" to ascend the Bristenstock without a guide, but foolhardy to attempt it. It is at least seven or eight hours' climb to the summit, but a sleeping-place may be got in the chalets of the Bristenalp, more than half-way up. The treeless condition of the green Urserenthal is not due to its great height above the sea, but to the reckless improvidence of the citizens of the republic of Uri. The splendid Bannwald, a little way out of Andermatt, over the road to Hospenthal, shows that trees can flourish there; while in the valley of Davos, which is nearly one thousand feet higher, and in the Upper Engadin, which is nearly two thousand feet higher, the trees are magnificent in quality and quantity. The "Beadles" (the "Landweibel") and the "Beiden Tellen" at the Uri Landsgemeinde procession are not clothed "in the ancient Swiss garb" of black and yellow; these colours were more extensive in their official use than the boundaries of Uri and her confederates. Black and yellow were the oldest German imperial colours, and the use of them by the officers of the little State of Uri was a sign that the S. P. Q. U. (as the village republicans proudly called themselves) regarded the Caesar as their temporal head. We find not a few instances of peculiar spelling; for instance, "Reinsoolbad," which does not stand for a Soolbad that is pure (*rein*), but for a Soolbad in the fields of the Rhine (at *Rheinfelden*). "Murray" is unwilling to part with the old notion that an English tourist can be expected only to know one modern tongue beside his own. The tourist is forewarned against the risk of

visiting a particular convent because the nuns speak nothing but German. The *h* which is struck out of the "Rhein" in the Canton of Basel is struck out of "Rhaetia" in the Canton of Graubünden. The Blauersee is turned into "Blau See," though this is an improvement on the earlier habit, when a lake in the midst of a German-speaking people would probably have been entitled Lac de Bleu. "Justisthal" should either be Justusthal or Justithal, as Berlepsch calls it. It is locally known as the Uestesthal; it owes its name, by a combination of the Latin genitive with the German nominative, to St. Justus, a local apostle. We cannot acquit "Murray" of a certain favouritism, as well as of some glaring mistakes, in a department where it ought to be scrupulously exact, considering the professed aim of the book. We refer to the hints provided for tourists in the important matter of hotels. "Murray" is notably the guide-book for the rich, and rarely commends any but the dearest hotels. Some of the very best are ignored; though the volume is dated 1879, no mention is made of the principal large new hotels which have sprung up in Graubünden—for instance, in the popular Klosters in the Prättigau. The fine old "Adelshaus," at Davos Dörfli, happens to have two names—"Kurhaus" and "Seehof." These are recorded as the names of two rival hotels, while one of the two is diligently characterised as "good." The tourist, who is cautioned to avoid the dubious "Kurhaus" and choose the good "Seehof" must rub his eyes when he finds that they are one and the same. "Murray's" snatches of Swiss biography are very faulty. Heinrich Zschokke, for instance, is actually dismissed as a popular historian and novel-writer. It is true that he was both; and, when Murray tells the tourist that "no good English history of Switzerland has yet appeared," he is probably unaware that a very fair English translation of Zschokke's best work, his popular Swiss history, appeared in Frankfurt as long ago as 1833, and that copies may be often found in England. Of no man is it more true than of the statesman and diplomatist Zschokke that he made history before he sat down to write it. But his greatest renown, throughout the whole German-speaking population of the world, is due to his famous religious work, the *Stunden der Andacht*. Our copy, published by the Sauerländers of Aarau and Frankfurt in 1840, is the twenty-first edition.

The new and plentiful maps in the Savoy and Piedmont section are an improvement on the older editions. They are not over-crowded, and the roads, waters, and configuration of the surface are made singularly clear. The chart of the Mont Cenis Railway and Vaudois Valley is an excellent help to the text, which is here very readable, though the authorities cited, both in the districts sacred to Protestants and in those sacred to Catholics, are not always the latest. We are still sent to Bakewell's *Tour in the Tarentaise* for light upon the country of Francis de Sales. The division of the old fat volume (which was growing fatter with each new edition) into two thin ones is a sensible amendment. T. HANCOCK.

THE BUILINAS.

Untersuchungen über die Volksepik der Grossrussen. Von Wilhelm Wollner. (Leipzig: Engelmann.)

THE *Builinas*, or semi-historical metrical romances of Russia, have hitherto been made known to Western Europe chiefly by means of M. Alfred Rambaud's attractive account and analysis of them, published about three years ago under the title of *La Russie Epique*. With its brilliance and other literary merits, the book now before us makes no pretence to compete, but Herr Wollner has compiled a very solid and trustworthy work on the subject which may be safely recommended to all who wish seriously to study the questions to which "The Folk-Epic of the Great Russians" has given rise. Its pages, 147 in number, convey a great deal of sound, condensed information. The author is evidently thoroughly familiar with the literature and language of Russia, and is well acquainted with what has been written in other countries upon the popular fiction of Europe; and he seems to have succeeded in keeping clear of the mythological pitfalls which beset the path, and so often bring to naught the explorations, of the enthusiastic student of ancient romance.

The book begins with an account of the various collectors of the poems which so long remained known to few but unlettered peasants in remote parts of Russia, from Richard James, who carried home with him to Oxford from Russia half-a-dozen specimens of poems written down for him in 1619, to Alexander Hilferding, the compiler of the excellent collection of Onega *Builinas*, whose zealous exploration of the wild *builina* district of North-east Russia led to his untimely death. The author then proceeds to give an account of the various books and the chief articles which have been written about the contents of the different collections, especially those in which the origin of the poems is discussed. Thus we have a useful summary of the arguments used by Stasof, who wishes to derive them from Central Asia, as well as those employed by Buslaef, Bezsonof, Orest Miller, and other scholars who, more or less, uphold their originality and their Slavonic character. He then passes on to an examination of the themes of the poems, giving in an Appendix an analysis of the stories relating to each of the heroes of Russian romance. Following the usually accepted nomenclature, he designates as "elder heroes" the dimly seen personages who figure in the apparently mythological poems about the metamorphoses of Volga, who, as a bird, overhears the hostile Turkish Sultan discussing his plans with his spouse, and, as a wolf and a weazel, destroys the girths of that monarch's saddles and the strings of his bows; the wondrous ploughing of Mikula, the representative of agriculture; the matrimonial adventures of Samson and Svyatogor, who vainly attempted to avoid their destined wives; and the suicide of Suchman, arising from his rage at not being properly rewarded, after he had annihilated an infidel host by means of an uprooted oak. After these obscure forms follow the more clearly defined figures of "The Heroes of Kief," the Paladins who feasted

with Vladimir, the ruler of that city, and fought for him and Holy Russia against the infidel. First comes Ilya of Murom, "the Old Cossack," for thirty years a peasant's crippled son, then the chief warrior of his time, the overthrower of the demoniacal brigand, Solovei or "Nightingale." By his side go Dobryna, the slayer of the mystic riversnake, and Alyosha Popovich or priest's son, who takes advantage of Dobryna's long absence from home to force that hero's wife to marry him. And after these leading actors come a number of players of inferior parts—Dunai, who first kills his heroic wife, and then repents and kills himself; Ivan Godinovich, who woos and wins a princely bride, but, finding himself betrayed by her, cuts her to pieces; Churilo, the wealthy and well dressed, whose seductive appearance leads to his untimely death; Stavr, whose wife, disguised as an ambassador, rescues her husband from the dungeon into which the capricious Prince of Kiev had flung him; Duk, "the Boyar's Son," too ready to brag about the riches of his father's home; and various other beings of less repute. For their legends it is better for the general reader to consult M. Rambaud's very readable pages. But what is of special value in the present work is the discussion of the various suggestions which have been made as to the sources whence the composers of these quaint romances derived their inspiration. It is a singular fact that poems relating to Kiev and South-west Russia should have been preserved in the memories of peasants of the outlying North-east provinces, while they have died out in the district to which they refer. On this point Herr Wollner's opinion is in accordance with that expressed by M. Rambaud. From, and even before, the time when, in the thirteenth century, the Mongols devastated South Russia, a great migration of its inhabitants towards the North-east took place. The emigrants carried with them, among other treasures, their poetic traditions, and along the shores of Lake Onega, and in the barren wastes towards Archangel, continued to sing the glories of Vladimir and of the Paladins of Kiev. The few who remained behind, and the new-comers who took possession of the lands long left vacant, naturally fixed their attention on the constant wars they were called upon to wage against Turks, Tartars, and similar foes; and there arose among them a new form of poetry, the Douma or Cossack song. As regards the themes of the *Builinas*, Herr Wollner remarks that they are derived partly

"from the great store of folk-tales, the home of which is the East, and which have spread gradually over the West, passed on by word of mouth, until they have become the property of all nations of Europe, partly from literary sources, from Biblical and apocryphal tales, from the romances of Byzantium, and from the various Oriental works with which Europe became acquainted by means of translations at an early period."

Of these sources he gives a useful list, rich in references to periodical and other works which might well escape the notice of even a well-informed student. As an instance of this, we may take his remarks about one of the forms of the name of Dobryna's mother,

Amelfa Timofëevna. The name Amelfa remained inscrutable until it was pointed out by N. Lavrovsky in the *Dukhovny Vestnik*, or "Ecclesiastical Messenger," that it was derived from that attributed in the apocryphal Testament of the Prophet Joseph to Potiphar's wife. She is called in it *Μεμφίς*, or, according to the Russian translation of the work, Amemfia, whence appears to have sprung the name Amelfa given to the mother of the hero, Dobryna. This derivation appears to be trustworthy. But it is not possible for everyone regularly to peruse the *Dukhovny Vestnik*.
W. R. S. RALSTON.

CURRENT LITERATURE.

Legenda Sanctorum. By H. E. Reynolds. (Elliot Stock.) The traditional fourth-form boy, we all know, is credited with the belief that the ancient Romans indulged in a proud disregard of grammar, and took the nominative or accusative before the verb indifferently. Mr. Reynolds seems to fix the same elastic standard for the monks and other writers of the Middle Ages, and to imagine that the "choice ecclesiastical Latin," as we think, Dr. Cumming once called it, was a cunning device whereby to conceal the thoughts and to evolve gibberish. The work before us professes to be a specimen of the Lectionary which Bishop Grandison, of Exeter, compiled for the use of his church. Mr. Reynolds, priest-vicar and librarian of Exeter Cathedral, announces his intention of publishing, by instalments, this MS., and also Grandison's Ordinale. Now, if the work is to be carried on in the same style as the present *fasciculus*, we shall be giving Mr. Reynolds good advice in suggesting an immediate suspension of his labours. This *fasciculus* is printed with contractions—a useless toil in the case of a MS. of so recent a period as the fourteenth century—which are supposed to represent those of the original. A cursory glance through the pages will detect misreadings enough and to spare; but we need only confine our attention to the first page of the MS. of which Mr. Reynolds gives a *fac-simile*. By comparing this with the letterpress, we are aware of, at least, four downright blunders, and twice that number of smaller inaccuracies—and all this in the space of thirty-four lines. Why, also, we may ask, does Mr. Reynolds, in his Preface, prefer to print *nimis sectae*, which is nonsense, for the correct reading *unius sectae*, in his extracts from Grandison's will? Dr. Oliver printed the passage correctly, and Mr. Reynolds absolutely quotes from his book. It is really to be regretted that Mr. Reynolds should have been in such haste to rush into print. There are not too many workers in the particular field on which he has essayed an entrance; and the little that is done should be done accurately.

Peter der Eremita: ein kritischer Beitrag zur Geschichte des ersten Kreuzzuges. Von H. Hagenmeyer. (Leipzig: Harrassowitz.) Peter the Hermit did not succeed in getting so far on his pilgrimage as to reach Jerusalem, and therefore saw no vision there, and was not charged by the Patriarch to call on Europe for aid against the infidels, and did not instigate the Pope to preach the first Crusade. Such is Hagenmeyer's somewhat startling result, but he shows how the legend grew up. The real credit was due to the Pope. It has been said that the Crusades were the foreign policy of the Papacy, and they certainly tended largely to increase the papal power. What is true about Peter is that, after the councils of Placentia and Clermont, the Pope commissioned him to preach the Crusade, and that he led the first horde of Crusaders to the East, whose passage

down the Danube was marked by such atrocities that the natives turned on and cut most of them to pieces. Von Sybel's book about the Crusade had already shown how soon myths about it grew up, and Hagenmeyer has done service in further clearing up the real character of the events.

Fifteen Maps illustrating Caesar's Gallic War. By Albert Kampen. Edited by James S. Stallybrass. (Sonnenschein and Allen.) We have already noticed the German edition of these excellent maps. The letterpress was there given on the paper wrappers, which might easily be lost. The English edition has it in the text, and the maps are given spread out at full length instead of being folded, and the whole is strongly bound in cloth. The German edition was, of course, cheaper, and single maps might be had at twopence each, as we presume, they may be still; but the English, as a rule, prefer having a series of maps together. The atlas is very useful to students of the Commentaries on the Gaulish War.

Die Gemeindeverfassung der Juden in Rom in der Kaiserzeit. Von Emil Schurer, nebst 45 Jüdischen Inschriften. (Leipzig: Hinrichs.) Our histories of the Roman empire have been almost entirely drawn from authors such as Tacitus and Suetonius, but the mass of inscriptions now collected and critically sifted in the Berlin *Corpus Inscriptionum Latinarum* has enabled us to give a much fuller picture of the state of the provinces as well as of Rome itself than was possible even when Merivale wrote. It results from Schurer's account that the Jews in Rome formed a number of separately organised communities, each with its own synagogue, officials, and Gerusia, but without a trace of common organisation under a single Gerusia; whereas at Alexandria they formed a great and united community. At Rome there were merely separate *collegia* under the Roman law as to such corporations. They may, however, have had a common burial-place. The names of the officials offer some illustrations of the New Testament.

Early Chronicles of Europe. England, by James Gairdner. France, by Gustave Masson. *The Home Library. Military Religious Orders of the Middle Ages*. By F. C. Woodhouse. These are three publications by the Society for Promoting Christian Knowledge, which has of late put out so many useful manuals of a more comprehensive character than of old, while not deserting its old ground, as is shown by the three interesting books on "The Heathen World and St. Paul"—in Damascus, Asia Minor, and Greece—by G. Rawlinson, E. H. Plumptre, and G. S. Davies respectively. Mr. Gairdner's book on the sources of our mediaeval history is the most interesting of the three above mentioned, as he has judiciously quoted characteristic passages from our chief chroniclers, putting them of course into an English form. On the other hand, Mr. Masson has given a more complete account of the lesser French authors, and more help in the way of indexes. It would be very convenient if Mr. Gairdner would, in his next edition, add a list of the less-known writers, with dates—two or three lines to each would suffice. A student often wants to refer to such a list, and is disappointed at not finding the name he wants mentioned. Mr. Woodhouse's book mainly repeats the old accounts of the great sieges of Rhodes and Malta by the Turks, but they are always interesting, especially to the young. In giving a history of the destruction of the Templars, the author does not mention how unpopular they early became, as is shown by the saying of Richard I., and by the notices in Joinville. The sketches of the Teutonic Knights and of the lesser Orders are useful, but there is no index.

Die deutsche Augustiner-Congregation und

Johann von Staupitz. Ein Beitrag zur Ordens- und Reformationsgeschichte nach meistens ungedruckten Quellen. Von Th. Kolde. (Gotha: Perthes.) In this very careful work, the author of which has consulted not less than twenty-eight archives, the history of the Augustinian Order in Germany has met with a far more thorough investigation than it has ever received before. It was to this order that Luther belonged; but it is evident that the doctrines prevalent among the German Augustine friars contained nothing that could encourage him in his struggle against ecclesiastical authority. Herr Kolde has especially occupied himself with the biography of Johann von Staupitz, and the investigation of the relations of that remarkable man to Luther. He has also been enabled to throw fresh light upon the last years of the life of Johann Staupitz, having obtained important legal documents from the archives of the Church of St. Peter at Salzburg, some of which, together with other documents, are printed in the Appendix. There remains no doubt that, towards the end of his life, Johann Staupitz was ever approaching more and more nearly to Luther's manner of thought and teaching, although he was unable to draw from Luther's doctrines their practical consequences. At the conclusion of his Preface, Herr Kolde expresses his intention of publishing the correspondence of Spalatin. We wish every success to this undertaking, and are convinced that Herr Kolde will show himself perfectly competent to perform his new task.

Maximilian's I. Beziehungen zu Sigmund von Tirol in den Jahren 1490-96. Studie zur Charakteristik beider Fürsten. Von Victor v. Kraus. (Wien: Hölder.) The author of this little publication, already favourably known by previous works upon Austrian history, narrates the circumstances under which the transference of the Tyrol from the Archduke Sigmund to the Roman King Maximilian, in the year 1490, was accomplished, and takes this opportunity of correcting the views of other historians. The principal materials for this work have been gathered from the letters of a certain Florian Waldauf von Waldenstein, whom Maximilian appointed as Sigmund's agent at his Court. As Waldauf accompanied the King on his expedition to Austria and Hungary in 1490, his letters, in which he is very communicative, form an important contribution, at least for a short period, to the history of Maximilian.

Der Vertrag von Alt-Ranstadt. Oesterreich und Schweden, 1706-1707. Ein Beitrag zur Geschichte der österreichischen Politik während des Nordischen Krieges. Von Jaroslav Goll. (Prag.) This carefully written work may be regarded as a valuable supplement to Noorden's *History of the Eighteenth Century*. Prof. Goll has made use of a number of official documents, almost entirely belonging to the archives of Vienna, and, relying upon these papers, relates the history of the important agreement in which the Emperor was compelled to make such large concessions to the Protestants of Silesia. For English readers, the most interesting part of the work is that in which Marlborough's visit to the Swedish camp is mentioned.

Gentz und Cobenzl. Geschichte der österreichischen Diplomatie in den Jahren 1801-5. Nach neuen Quellen von Dr. August Fournier. (Wien: Braumüller.) The biography of the most gifted and famous of the political writers of Germany is enriched by an important contribution in this work. From it we learn what trouble it cost to establish him—the Protestant and Prussian—in Austria, that very Austria in which he subsequently became the literary shield-bearer of Metternich and the harbinger of reaction. We find that he carried on a formal war with the Minister Cobenzl, because, in his foreign policy, the latter had hesitated for a

long time to accomplish the rupture with France. We obtain information respecting the remarkable memorial addressed by Friedrich Gentz to the Archduke Johann in September 1804, of which only a fragment was hitherto known. In this memorial Gentz pleads for a close alliance between Austria and Prussia, in which he sees a permanent obstacle to a union between France and Russia. He also fully expresses his sentiments regarding England and the English Constitution, with that enthusiasm which distinguishes him as a scholar of Burke. A series of documents from the archives of Vienna is added to this book by way of Appendix. The author, however, has also been enabled to make use of the memoirs of the Archduke Johann and of Metternich.

Studienreisen eines jungen Staatswirthes in Deutschland am Schlusse des vorigen Jahrhunderts. Von einem Ostpreussen. (Leipzig: Duncker.) This work is derived from the posthumous papers of the celebrated Prussian statesman Théodore von Schön, whose memoirs have recently aroused a great literary dispute. In his youth, when endeavouring to add to his sources of information by travelling, Théodore von Schön kept a careful diary. Selections from this, of a very instructive kind, are given, and are used by the editor in his own occasionally somewhat discursive narration. This volume merely treats of the journey of the young Schön through Germany. We hope to hear at a future time, from his own description, what impression was made upon him by England, the country to which he owes the greatest stimulus to his subsequent activity as the associate of Freiherr vom Stein.

Rheinsberg: Memorials of Frederick the Great and Prince Henry of Prussia. By Andrew Hamilton. In 2 vols. (Murray.) "Any one who has thought it his business to read them through," says Mr. Hamilton of the great Frederick's poems, "will have felt, on getting to the end, pretty much as if he had been set to munch the thick paper on which they are printed." The munched paper sensation is easily obtainable from the exciting narrative of personal adventure in that delectable country, the Mark of Brandenburg, which Mr. Hamilton's readers have to undergo before they arrive at Frederick the Great, and after they have buried Prince Henry. In emulation, perhaps, of M. Gachard's account of his expedition to Simancas, Mr. Hamilton describes, in endless detail, the "good fun" of his coach-journey from Berlin, the Rheinsberg omnibus, the smelly rooms, "quite loathsome with stains and filth," occupied by him at the *Rathskeller*, the menu of his nasty dinner there, the manners and morals of the "very dirtiest servant girl I ever saw," and so forth. In order to get well soaked in the genius of the place, which is a vile one, Mr. Hamilton actually settled in the town. Not only does he give an accurate topographical sketch of the lodgings which he finally selected, but he carefully states his reasons for rejecting some rooms offered him by a Jew grocer, whose stock-in-trade is particularised. Of the sayings and doings of his eventual landlady we hear much more than of essential personages of his book, like Queen Elisabeth Christina or Princess Henry. It is a very interesting and unparalleled circumstance that, while in Frau Lemm's house, Mr. Hamilton often took his tea at dusk, near an open window, when he used to make out the meal with cold chicken and eggs, which alternated with jam. That the memorials of Rheinsberg may be brought well down to date the author mentions that the Schloss porter's wife had lately been in the straw, and he analyses Frau Lemm's ideas about her house property in the town, expatiating, by way of supplement, on his own advice to his landlady to pay her masons by the job, and not

to boil her sister's tea. That readers to admire this sort of thing will not be "awanting," as Mr. Hamilton expresses it, we are well aware. But the hypercritical student will perhaps remember Frederick's remark when the Kriegskammer sent him in a bill of £30 for repairs to the Rheinsberg road—"they must think me a great ass to try to get me by the nose with such nonsensical stuff." When Mr. Hamilton gets out of the Cook's tourist vein he appears to greater advantage. The obscure and ugly *château* of the Platens and Bredows is not quite Versailles, or Windsor, or "the House in the Wood." The Prince of Prussia's round-table included neither a Condé, nor a Bossuet, nor a Molière; the "Tourbillon" was not quite Mdle. de la Vallière, and very few of us have heard of Caesarion and Diphane, or of the Swans of Padua and Mittau. To recal to life these comparatively obscure personalities, when we have no St.-Simon, but only German Dryasdusts like Nicolsi and Bielefeld, is no easy matter, and Mr. Hamilton's attempt to do so is a creditable performance. His pictures of character and incident are not of a particularly high order; the style is light and gossiping, and the first personal pronoun is obtruded with unpleasant frequency. But the work is readable, the subject has been fairly mastered, and the proper authorities, as a rule, have been laid under contribution. And Mr. Hamilton's bright *guidesque* manner, though not in his hands pushed to great perfection, is, in itself, more appropriate to the men and things of this particular epoch than the lurid lights and colour employed by the great Rembrandt of the historic art—Carlyle. Mr. Hamilton's treatment is, however, too passive; he seldom does more than compile and filter existing materials, without attempting to solve the psychological or other problems which his story presents. Very unsatisfactory, though not from taking too little room, is his chapter on old Fritz as a musician. He knows of no trustworthy estimate of the kind and degree of the royal flute player's skill as an executant, and yet there is a minute account, detailed enough to satisfy a Richardson or a Pratten, of one of the Potsdam concerts by Dr. Burney, to whom, for other points, reference is made by Mr. Hamilton. Our author is evidently unaware that Prince Henry met Gibbon in Switzerland. A reference to the characteristic passage in the historian's Autobiography on the "wit and malice of a demon," and to Gray's remarks on Frederick's poems, would have elucidated Mr. Hamilton's subject far more than his expostulations with Frau Lemm for paying masons by the job and boiling her sister's tea.

Notes of Travel. Extracts from the Journals of Count Moltke. (O. Kegan Paul and Co.) Although these sketches of Italian, Roman, and Spanish travel have a less concentrated interest than the Russian diary reviewed some time since in the ACADEMY, they are full of those fine qualities of thought, style, and observation which characterise all the illustrious author's writings. Whether the subject be the geology of the valley of the Tiber, or the influence of botanical development and decay in the Roman landscape, or the destruction of the Fabii, or Constantine's victory over Maxentius, or the gowns, necklaces, skin, and shoulders of the Empress of the French, or the dinner menus at the Tuileries, the victor of Sadowa and Sedan is always indefatigably accurate and minute. The style, in this case, is by no means quite the man. There are no symptoms of Count Moltke's stern and starchy personality in his genial remarks on *Dindon truffé*, *pâté de foie gras*, and lobsters, on ballet-girls, and all the other amenities and trivialities of life. It would have been interesting to discover his opinions on the French

army; but his professional criticisms are very scanty. However, he ridicules the way the troops knock their muskets about, and observes that such "a fierce clatter is rather bad for the weapon." *A propos* of the Minié rifle, which was then under consideration, Count Moltke makes a remark which shows how thoroughly he took the measure of the firing capacity of his future enemies. He says:—

"Not much attention is paid here to accurate aim, nor is it expected in the field. . . . Such a delicate instrument as our percussion rifle could not be put into the hands of the French infantry, since they require the excessive care and consideration which we bestow on our arms and on the men who carry them."

This is prophetic of the late war. Nothing was more remarkable in 1870 than the miserable use made by the French of their *chassepots*. As the General passed the Vosges on leaving France with the Royal Prussian visitors, he made this reflection:—"It was melancholy to find ourselves among a German-speaking people, who are, notwithstanding, good Frenchmen. We left them in the lurch"—but only for sixteen years!

Geography for Little Children. By Antonia Zimmern. Maps and illustrations. (Stanford.) The language employed in this little text-book is studiously simple, but the matter conveyed in it, we fancy, is somewhat beyond the reach of Dolly, Fantie, and Too-Too, to whom the little book is dedicated. We hardly see in what respect this primer differs from other books of the same kind. The author is of opinion that the "sole objects of the earliest instruction in geography should be to show children how to use a map, and to teach them a little of that elementary physical geography which forms the basis of all knowledge about the earth." She supplies her children with a globe and a few clear maps, and sets questions very much like those set by geographical teachers since the days of Aristophanes. We venture to differ from her. A child ought first of all to be taught to observe the topographical features of its own neighbourhood, and only after some definite ideas of topographical features have been acquired from actual observation ought we to lead it into districts which lie beyond its field of vision. What will it profit a "little child" to be told that "the Highlands [of Scotland] are divided from the Lowlands by a chain of mountains called the Grampians," even supposing the information sought to be conveyed in this sentence were correct?

The Funny Picture Book. (Griffith and Farran.) Some of the pictures are funny, some are not. They are very badly drawn and very coarsely coloured. The verses are translated from the German, and are somewhat in the style of Struwwelpeter, but very inferior to that old favourite. The morals appended to each tale are unexceptionable.

NOTES AND NEWS.

MR. G. F. WARNER is preparing for the Governors of Dulwich College a detailed catalogue of the Alleyn Papers and other MSS. preserved in the college library and muniment room. The value of the collection for the early history of the English stage is well known, and all the more important documents have already been printed. The printed copies, however, have never before been systematically compared with the originals, and some further forgeries have now been found in addition to those exposed twenty years ago by Mr. N. E. Hamilton and Dr. Ingleby. The single genuine mention of "Shaksper" appears to have been hitherto overlooked. This is a note of the purchase of his Sonnets by Edw. Alleyn in 1609, the year of publication, for the sum of fivepence.

In 1858 Mr. Huth gave for his copy of the same edition £154 7s. Unfortunately, Alleyn's copy is no longer to be found in the college library.

THE Hibbert Lectures for 1881 will be delivered by Mr. T. W. Rhys Davids, who will take as his subject Buddhism, with special reference to the development of its doctrine and the history of its canon and of its internal organisation, as compared with the corresponding events in the history of Christianity.

THE Rev. W. J. Loftie has privately printed a short monograph of *The Table of Abood* (i.e., the New Tablet of Abydos), with woodcuts of the seventy-six cartouches, a transliterated list of royal names, and a few explanatory notes. Were it purchaseable, students of Egyptian history would find this little pamphlet both useful and trustworthy.

WE are glad to be able to state that the Rev. Alexander Napier, the editor of Barrow's works, is preparing a new edition of Boswell's Life of Johnson with the Tour in the Hebrides. While preserving all that is of value in Croker's edition, it will also comprise the results of researches by more recent students and admirers of the subject of these works. Moreover, the text, which has been much tampered with, will be scrupulously restored to its original integrity. The volumes will be published by Messrs. Bell.

PROF. MAX MÜLLER's paper "On the Discovery of Sanskrit Texts in Japan," which is to appear in the forthcoming number of the *Journal of the Royal Asiatic Society*, has been translated into Japanese. A French translation of it by M. de Milloué will appear in the *Annales du Musée Guimet*.

MANY of our readers will be glad to learn that Mr. J. G. Fitch has undertaken to edit for the Syndics of the Cambridge University Press the course of lectures on educational principles and methods which was delivered by him in the last Lent term in the university, under the auspices of the Teachers' Training Syndicate. The volume may be expected to appear early in the autumn.

THE death is announced of the widow of Mr. Shirley Brooks, author of *The Silver Cord*, &c., and late editor of *Punch*. Mrs. Brooks leaves two sons, one of whom pursues the literary profession.

AFTER the publication of the concluding volume of his *Origines du Christianisme*, M. Renan will bring out a translation of Ecclesiastes, with a critical introduction, which, it is said, has long been ready for the press.

THE comprehensive work by Mr. William Saunders on *The New Parliament* is, we understand, nearly completed, and its publication may be looked for in the course of the next few days.

MR. T. W. RHYSDAVIDS' work on the Buddhist Jataka tales, with an Introduction on the connexion between the fable and story literature of East and West, has passed through the press, and will be published shortly. Mr. Trenckner's edition of the Pali text of the Milinda Panha, a series of discussions between the Greek King Menander and the Buddhist priest Nagasena, which ended in Menander's conversion, will be ready for publication almost immediately; and Mr. Trenckner has expressed his intention of then devoting himself to the preparation of an edition of the Majjhima Nikāya.

MESSRS. GRIFFITH AND FARRAN have in the press, and will publish on the anniversary of his death, a Life of the late Prince Louis Napoleon, compiled by Miss Ellen Barlee. Many who knew the young Prince have aided Miss Barlee in writing the Life, and she has had the opportunity of procuring information

from many special sources both in Paris and in England. The volume will consist of about four hundred pages octavo, and will contain a photograph of the Prince and other illustrations.

THAT unresting, yet unshaking editor of Shakspeare's plays, Mr. W. J. Rolfe, of Cambridgeport, Massachusetts, has just brought out two more volumes of his handsome and excellent school series, the two parts of *Henry the Fourth*. The Notes are posted up to the latest comment of Mr. Crosby, and the latest illustrative extracts in the New Shakspeare Society's *Transactions*. That on *drum*, p. 185, the last word of 1 *Henry IV.*, III. iii., is the first of its kind; and others call attention to the metrical peculiarities, like the final two-syllable *-i-on* (pp. 197, 199), which Shakspeare used even in his very latest plays. The extracts on the characters in *Henry IV.* are from Hazlitt, Johnson, Verplanck—an editor whose work is far too little known in England, and whose edition is not in the British Museum—Cowden Clarke, Dowden, Furnivall; and on the last but one of these critics Mr. Rolfe says, "In the way of general aesthetic criticism, Dowden's *Shakspeare* is, to my thinking, by far the best of recent books." Full extracts from Holinshed's (or "Reine Wolf's") *Chronicle* are given by Mr. Rolfe, and woodcuts of the chief places from Knight's *Shakspeare*. The books are very handy to use, and admirably got up.

MESSRS. NIMMO AND BAIN are about to publish, under the name of "The Modern Foreign Library" and the auspices of the International Literary Association, a selection of the best novels of all foreign countries, edited by Henri von Laun. The first volume will be a translation of Lapointe's *The Rival Doctors* by the editor of the series.

THE English edition of Louis Kossuth's new work, which will be published by Messrs. Cassell, Petter, Galpin and Co. under the title of *Memories of my Exile*, will, it is expected, be ready for publication during the coming week.

MESSRS. REMINGTON AND Co. have in the press *A Son of Mars*: a Novel, by Major Arthur Griffiths; *Lord of Himself*: a Novel, by Lord William Lennox; and *My only Love*: a Novel, by E. Aylmer Blake.

MR. KARL BLIND will have an article in the *Gentleman's Magazine* on "Wodan, the Wild Huntsman, and the Wandering Jew," in which he seeks to show the gradual evolution of the Ahasuerus legend from the Saga-circle of Germanic mythology. From the same author there appear essays in the *International Review* on "The Revolutionary Movement in Russia," and in *Minerva* on "The Earliest Vestiges of a German Drama" in connexion with the Passion Play of Oberammergau.

A COMMISSION has been appointed by the Turkish Government to prepare a catalogue of the MSS. in the principal libraries of Constantinople.

LETRONNE's papers are to be published in a collected form, under the editorship of M. Fagnan. The Græco-Egyptian series will appear at the close of the summer.

TWO bound MSS. of Lamartine have just been sold in Paris. The MS. of *Jocelyn*, dated 1836, fetched 2,805 frs.; and that of *Les Harmonies Sacrées*, dated 1826, 655 frs.

THE *Times* records the death of M. Paul de Musset, the poet's elder brother, at the age of seventy-six. He began to write historical novels in 1832, brought out two plays in 1856 and 1857 with but little success, and four years ago published a Life of his brother, whom he had defended in *Lui et Elle* against George Sand's allusion to her rupture with Alfred de Musset in her *Elle et Lui*.

M. O. TERRIEN DE LA COUPERIE writes:—

"Owing probably to the special nature of the subject which formed the matter of discussion at the last meeting of the Royal Asiatic Society, a slight mistake occurs in your notice of the paper which I read on that occasion.

"It was the *Yh-king* and not the *Yh-Sing* of which I then spoke, and from which I translated *verbatim* one of the four chapters I have prepared. At the same time I pointed out the similarity of shapes and sounds of the Akkadian with the Chinese hieroglyphs, thus indicating a common origin. The title of my paper was 'On the *Yh-King* and the Origins of Chinese Culture.'

AUERBACH's new and very successful novel *Brigitte* is being translated into English, and will be the next work in the Tauchnitz German Series. Being copyright in England, it will be obtainable at the usual low price in England as well as on the Continent.

WITH the assistance of the Saxon Government, a new historical magazine has just been started at Dresden. The *Neue Archiv für Sächsische Geschichte und Alterthumskunde* is edited by Dr. Hubert Ermisch, Secretary to the Royal State Archives of Saxony, at Dresden, whose last publication, the sixth volume of the *Codex Diplomaticus Saxoniae Regiae*, was favourably noticed in our issue of March 8, 1879. The new *Archiv*, which is printed and published by the firm of W. Baensch, of Dresden, is a continuation of Dr. von Weber's *Sächsisches Archiv*, and is, like the latter, patronised by the Government. By all persons interested in the history of Saxony, the necessity of a similar undertaking had been felt; and thus the new magazine is intended as a sort of central organ for all the historical societies of the kingdom of Saxony. As its title implies, it will also open its pages to the study of antiquities; in fact the former *Mittheilungen des Sächsischen Alterthumsvereins* has been discontinued, and is now united with the new magazine. For his first number Dr. Ermisch has succeeded in securing the assistance of historians and antiquaries of note. Prof. G. Droysen, of Halle, gives a long essay on "Holck's Invasion of Saxony in 1633;" Prof. Grünhagen treats of the "Corps of the Prince of Anhalt in the First Silesian War;" Dr. Lenz contributes from unpublished MSS. in the Marburg Archives an "Autograph Letter of Christopher of Carlowitz on the Death of Maurice, Elector of Saxony;" Dr. Schnorr von Carolsfeld, Royal Librarian, gives a short "Biography of the late Dr. F. K. Seidemann," the greatest Luther scholar of our time, which is followed by an accurate bibliography of Seidemann's various works; the Minister of State, Dr. P. von Falkenstein, opens the number with an essay on the Dresden Society for Antiquities and its connexion with the new *Archiv*. Critical reviews of new books and a bibliography of works of a local historical character are given at the end of the first number. The *Neue Archiv* is to appear quarterly, and costs six marks per annum.

THE Roxburghe Club has been asked to print the MS. of Samuel Sheppard's poem, "The Faerie King, Fashioning Love and Honour," which contains

"a list of all the Lords of Sense,
Ancient, and modern Bards."

Sixty-five of them there are. After Hebrew, Greek, Latin, Italian, Dutch, and Spanish poets, come the French, headed by

"MAROT, the first, wearing a verdant crown:
take him in such an Age that little knew,
hee's exquisitely rare, and well may own
the title of the Gallick Ennius,
Such as the ancient CHAWCER is with us."

Then follows the Scotch Buchanan, and then the English poets, first

"a Swaine, of yore
the bonniest and the blythest one yfere,

CHAWCER, a Knight readen in vertues lore,
who knew full wellen how to Jape and Jeere:
by Mercury, compare those barbarous times
with his conceits, and you'll applaud his Rimes."

The others follow in this order:—

Sir Thomas More	Johnson
Sydney	Fletcher
Spencer	Sands
Harrington	Donne
Chapman	Goffe
Wootton	Quarles
Daniell	Webster
King James	Randolph
Bacon	Sucklin
Shakespeare	Cartwright
Rawleigh	Charles [I.]
Drayton	

and, in accordance with the snobbishness of the age,

"the last in order, but the first in worth
for Eloquence and boundlesse Oratorie,
(whom I could wish, FATE had denyde a birth,
or being borne, the heavenly Consistory
had voted him a longer date on Earth)
is that great CHARLES, who to's eternall glory,
to the rude seas and the relentless stones
Sung his admired MEDITATIONS."

THE death is announced of Prof. Bohtz, Professor of Philosophy at Göttingen, and author of *Ueber die Idee des Tragischen* and *Ueber die Komödie*; of Mr. Seth B. Hunt, co-founder and original proprietor of the New York *Independent*; of the Rev. Francis Johnstone, of Edinburgh, author of *The Work of God and Man in Conversion*; and of Dr. Nils Johann Andersson, the celebrated Swedish botanist and traveller.

THE *Theologisch Tijdschrift* for May contains:—Kuenen, "Contributions to the Criticism of the Pentateuch and Joshua: VI. Dinah and Shechem, VII. manna and quails;" Straatman, "Sketches from the Church History of the Second Century: IV. The Importance of the Paschal Controversy for Christian Theology;" Koekebakker, "Ethical Studies in England: II. Bradley's *Ethical Studies*" (simply an abstract is given). Notices of books:—The *Hebrew Migration from Egypt* (not sufficiently critical); Scholz on the Alexandrine version of Isaiah; Conder's *Palestine* (translated).

A CORRESPONDENT in Moscow writes:—

"We are all rejoicing at the fall of Count Tolstoi, the Minister of Public Instruction. We are also on the point of erecting a monument to Poushchine, our greatest poet, and a great admirer of Shakspeare and Byron. The best Russian authors—among others, Turgenev—are to give discourses on Poushchine's literary career at a solemn assembly on June 8, at which 'The Society of the Friends of Russian Literature' intends to celebrate his memory. Invitations are to be sent to different Slavonic and foreign writers, and also to literary and scientific societies.

"Prof. Kovalefsky has nearly finished his work on the social condition of England in early times."

EXPLORATION IN CENTRAL ASIA.

IN a volume of correspondence relating to Central Asia, recently issued by the Foreign Office, we find an account of an important journey to the upper course of the Oxus, of which, we believe, nothing has hitherto been heard in this country, and the immediate result of which was a detailed chart of the course of the Oxus from the River Vaksha (called the Surkhab in Gen. Walker's great map) to its mouth, a distance of more than one thousand miles. M. Bykof started from Samarkand in company with an embassy sent to the Amir of Bokhara, who gave him special facilities for exploring his territory. After encountering some difficulties, he reached Kobadian on the Oxus, where he was instructed to obtain a boat for the journey on the river. This, however, appears to have been no easy matter, as there were no boats on the

River Vaksha and only two in the whole *bekdom*. The boat, when purchased, had to undergo some alterations, and M. Bykof availed himself of the delay to make excursions in the Kobadian *bekdom*, or more properly along the valley of the Lower Kafirngan. The time thus employed was well spent, for he was able to make himself acquainted with an almost unknown corner of Central Asia. Joining his boat at the ruined Kurgan fortress of Alvdj, near the *embouchure* of the Kafirngan, M. Bykof commenced his journey on the Oxus. As far as the ferry of Patta-Kissar (or Ohushka) the banks are almost desolate, after which settlements occur at intervals, and beyond the town of Kalif both banks are inhabited up to the town of Ildjick. Then military posts are found at intervals, with large intervening wastes, and this continues up to the town of Pitviak, where the Khivan oasis commences. Up to the town of Kalif, mentioned above, the scenery on the banks of the Oxus is described as fine; wild precipitous declivities extend to the water's edge on one side, while the opposite bank is covered with thick vegetation and dense groves of *tugal*, the hot-beds of fever. Beyond Kalif the banks are covered with cultivated fields, gardens, and rows of native habitations; the islands and the river margins are overgrown with reeds, and marshy. M. Bykof was detained by strong winds, but eventually reached Karki, where it had been arranged that he should meet the small steamer *Samarkand*, which had previously never been higher up the Oxus than Charjui. On his joining the steamer his journey was practically brought to a close, for he was immediately attacked by fever, and confined to his cabin nearly the whole way down to Petro-Alexandrovsk. Though, for obvious reasons, M. Bykof is reticent as to the details of his operations, he evidently made very minute observations as to the depth, width, and current of the river during the whole of his boat journey, and he believes that the steamer could have ascended that part of the river which he had surveyed above the ferry of Khoja Saleh. Owing to his unfortunate illness, M. Bykof was prevented from obtaining ethnographical information respecting the inhabitants of the central portion of the Oxus, and data as to their *économie*; but during the three years he has spent in this region he has collected ample materials on which to base what will no doubt prove to be a highly important sketch of the whole valley of the Oxus.

THE CULTUS OF ST. THOMAS OF CANTERBURY IN ICELAND.

AT the last meeting of the Cambridge Antiquarian Society, Mr. Magnússon called attention to the great interest which the Icelanders of the thirteenth century took in collecting and bringing together into connected narratives the widespread accounts of the life of Archbishop Thomas of Canterbury. His fame reached Iceland very soon after his death. About 1190 an Icelandic chief made a vow to the Saint, and brought as a gift to his tomb a walrus skull with both the teeth fixed in it, walrus teeth being at that time a high-priced article of commerce—the ivory of the North, in fact. Two principal recensions of a Saga of Archbishop Thomas exist, both written by men who flourished in the thirteenth century. From the latter, which is preserved almost entire, evidence may be gathered to show that Icelanders had brought verbal accounts to Iceland from England of the Saint; and it would seem that certain personal peculiarities, such as the stuttering in his speech, which no Latin life of the Saint mentions, must have been observed by eye-witnesses. The Icelandic recensions prove beyond a doubt that their principal source of

information was a Life of the Saint written by Robert of Cricklade, Prior of St. Frideswide's, although by no writer on English history and literature is the Prior known as the author of any such work. Miracles which are expressly stated in the Icelandic Saga to be set forth in the Prior's words have no place in the authorised miracle-collections of the Saint. The life of Archbishop Thomas had a peculiar charm for the Icelanders, and the great devotion shown him is evident, among other things, from the fact that no other single saint had so many churches dedicated to him as Thomas had after his canonisation was known in Iceland. And the *Litera fraternitatis concessa Wytfrido Juarri filio de Insula de Island*, taken together with the information which contemporary annals supply, is a further proof that so late as the fifteenth century the Saint was considered worthy of the laborious pilgrimage which the distance of Iceland involved, and of rich gifts and special adoration. The name of the Icelandic pilgrim was doubtless *Vigfús Ivarsson Hölmur*—de *Insula* being a translation of his surname, Engl. *holme*. The misspelling of it was due, Mr. Magnússon maintained, to a document, which must have formed an item of his credentials to the chapter—viz., a letter of indulgence which this same Vigfús had procured in 1402 at Roskild in Denmark from the Papal Nuncio at the Court of Queen Margaret, Frater Augustinus de Undinis, where he was called Wichfridus, *c* and *t* having the same form in the writing of the time. The Cantuarian document was undoubtedly genuine, for the names of Vigfús' mother Margret, his wife Gudfridr, and the children known from Icelandic records, Margret, Ellendr, Ivar, all agree perfectly, and even the name of Vigfús' father-in-law, Ingimundr, reappears in the very similar form of Edmundus. This letter shows that a certain Icelandic document, still extant, dated 1407, by which historians had fixed the death of Vigfús to a time anterior to that date, must be re-examined as to its genuineness, which Mr. Magnússon himself did not see his way to support. As to the blood-relationship with Archbishop Thomas, to which Vigfús evidently laid claim at Canterbury, Mr. Magnússon held that nothing from any northern source could be adduced in its support; but was willing to grant that Vigfús, a man of upright character, of great integrity and fervid belief in the Saint, must have been possessed of some evidence in support of it which was satisfactory to him and acceptable to the Chapter of Canterbury.

CORRESPONDENCE.

CHAUCER'S PRIORESS'S NUN-CHAPLAIN.

3 St. George's Square, N.W.: May 18, 1880.

This old puzzle is at last cleared up. My paper on it in our Chaucer Society's *Essays on Chaucer*, arguing that the Chaplain was a secretary and helper of the Prioress, and, of course, a nun, was sent by a Roman-Catholic friend to a Benedictine nun in an abbey in the southwest of England, and called forth the following answer, which its writer kindly allows me to make public:—

"Forgive me for saying that I cannot help being much amused at the idea of your . . . friend Mr. Furnivall and other learned savants puzzling over the poor 'Nonne-Chapeleynne.' It is an office still held in most Benedictine convents, I fancy, and is called by either term, *Chaplain* or *Secretary*—and its duties (which I performed for six years, as Chaplain to our dear deceased Abbess) consist in not only writing or sealing letters for her, when she may so wish, but *mainly* in attendance on her in choir on those great festivals, Easter, Christmas, &c., &c., when her crosier is used. On those great days, the abbess intones the Hymns, reads the Capitulum, the concluding lesson, &c., and the prayer, and as she, holding her book for these, could not well hold the crosier herself, it is held, at her side, by the Nun whom she has appointed Chaplain. The choir of course always forms part of the church or chapel—hence, I presume, the name of Chaplain. With regard to the Abbess's crosier, although, properly speaking, she has no claim or right to it, yet it has of old been allowed, and still continues to be given her, *by courtesy*, as a badge of her having the care and command of the monastery, and I have heard (but do not know if it is so) that in the cathedral of Ely, the old tomb of the Abbess St. Ethelred has, among its sculptures, one representing her with her crosier, either lying by her or held by her—I do not know which, having no friend in those parts whom I could ask to ascertain the fact; but I think I was told that she was represented as dead, with her crosier by her side.—Mr. Furnivall is to be complimented on his excellent guess, that the word, or rather office, meant secretary. It is, in fact, the Nun who has special charge of attending on the Abbess and giving assistance when she needs it, either in writing, when she (the Abbess) is busy, or in attending when sick, &c., but that which comes most often to claim her services is, on the twelve or fourteen great festivals, as stated above. In our abbey we call the Nun whose office is to hold the crosier for Lady Abbess, her *Chaplain*,

although in our Ceremonial she bears indifferently the name of Chaplain or Secretary. But in an old French Ceremonial of the Abbey of Montmartre, dated 1669, there is mention not only of the 'Chapeline' but also of the 'Porte-Crosse.' 'Vne des Soeurs sera choisie par la Mère Abbess pour estre sa Chapeline. Sa place au Chœur sera du costé droit, proche du siège de la Mère Abbess, qui lors qu'elle sera obligée de chanter quelque chose, la Chapeline viendra à son costé droit afin de luy tenir le livre; ce qu'elle fera encore aux Processions and autres Cérémonies.' Further on, in the same chapter, is the office of 'Porte-Crosse—une Sœur qui viendra au costé gauche de la Mère Abbess lorsqu'il faudra se servir de la Crosse,' &c. 'La Mère Abbess en toutes les Festes de la 1ère Classe, servira de sa Crosse, qui doit aussi être portée devant elle aux Processions solennelles.' With us the Abbess holds her own book, and therefore her chaplain has the holding of the crosier."

The second puzzle about the Prioress was, that besides her Nun-Chaplain, she had three Priests with her. This, in my paper, I showed was not unlikely, as the Abbey of St. Mary's, Winchester, when broken up at the Reformation, had no less than five Priests. My kind Benedictine-nun informant thus explains why several priests would be wanted in a convent:—

"Here is the idea that struck me, when reading of the five Priests, and I believe I have it from some notes on the former great Benedictine Abbey (of nuns) at Rheims. They too had several Priests, because, first, they had *chaplains* in their church, each of course with an Altar, and some of these chaplains were *each* to have *daily Mass*. Now, a Priest can say but one Mass daily, therefore, where more than one daily Mass was required, more chaplains must necessarily be kept. And it must be remembered that in Catholic times, when our forefathers all were so happy as to hold the Old Faith, it was a frequent custom for Founders, or great Benefactors, to require in return that, at their decease, a daily, or weekly, or monthly Mass should be offered for their souls in perpetuity. Again, there is mention made at St. Mary's of the *High Altar*, which leads to the supposition that there were other Altars in their church, as was, and is, common in our churches. We have three, and every day our own Chaplain and my Sister's Chaplain say Mass, the one at the High Altar, the other at one of the Side Altars (which are at a distance from the High Altar, so that they may, if desired, be used at the same time—but are not so usually); thus there is always 1st and 2nd Mass."

Next comes the third puzzle. Chaucer says of his Prioress:—"Hire grette's ooth ne was [or ooth the nas] but by Seynt Loy." Now, no one has been able to make out who St. Loy was. St. Louis, St. Eligius, &c., have been suggested; but it never occurred to any of us Chaucer folk that the saint in question might have been an imaginary quantity. Yet this is what my kind informant suggests:—

"But next comes a question which is indeed puzzling—'Her greatest oath'!!! Surely this must be a poet's licence! To swear without necessity is strictly forbidden, and, though the times were rude, things could scarcely have come to such a pass! I can only then believe that 'Seynt Loy' was an expression, no real name, and thus, no real oath. I am afraid you will think this nonsense!—but 'Hire grette's oath nas but'—seems to imply something below all ordinary forms—yet, swearing by St. Eloi or St. Louis would not have been anything out of the common, would not have required this 'nas but.'"

Moral: to folk about to emend Chaucer because they, in their ignorance, can't explain him: Don't. Leave his text alone, when the MSS. are firm, and wait for someone else with a better head than yours. Let us also hope for some more Roman-Catholic and learned mediaevalist commentators on Chaucer; and meantime thank the good Sister who has given us the explanations above.

F. J. FURNIVALL,

APPOINTMENTS FOR NEXT WEEK.

MONDAY, May 24, 3 p.m. Linnean: Anniversary.
8 p.m. British Architects.
TUESDAY, May 25, 1 p.m. Horticultural.
3 p.m. Royal Institution: "American Political Ideas," by J. Fiske.
8 p.m. Anthropological Institute: "The Stone Age in Japan," by J. Milne; "The Japanese People," by C. Ffoulkes.
8 p.m. Civil Engineers: Discussion on "Portland Cement."
WEDNESDAY, May 26, 7.30 p.m. Education Society: "The Educational Value of the History of the Fine Arts," by Frau Karoline Göpel.
8 p.m. Society of Arts.
8 p.m. Geological.
8 p.m. Telegraph Engineers: "A Decade in the History of English Telegraphy," by E. Graves.
8 p.m. Literature: "On the Diversity of National Thought as Reflected by Language," by Prof. C. Abel.
THURSDAY, May 27, 3 p.m. Royal Institution: "Buddhist Sacred Books," by T. W. Rhys Davids.
4.30 p.m. Royal.
8.30 p.m. Antiquaries.
FRIDAY, May 28, 8 p.m. Qu-kett: "On Two New Species of Aearina, not hitherto recorded as British," by A. D. Michael.
9 p.m. Royal Institution: "Musical Criticism," by F. Hueffer.
SATURDAY, May 29, 3 p.m. Royal Institution: "The Dramatists before Shakspeare," by Prof. H. Morley.

SCIENCE.

CURRENT SCIENTIFIC LITERATURE.

Pharmacology and Therapeutics; or, Medicine Past and Present. By T. Lauder Brunton, M.D., F.R.S. (Macmillan.) This volume contains the Goulstonian lectures delivered in the spring of 1877. An historical sketch of the progress of medicine from the earliest times to our own is followed by a general account of the methods employed in pharmacological research, and the results already attained in this department. Three illustrative examples are given in considerable detail: Magendie's enquiry into the action of opium poison; Claude Bernard's famous analysis of the paralyzing effects of woorari; and Dr. Brunton's own investigations on *casca bark* (*Erythrophloeum Guinense*). This is the best part of the book, the simplicity and precision of the author's language being admirably suited to the corresponding qualities of his subject. The ensuing chapters take us into a more thorny region. The application of the deductive method to pathology and therapeutics, the attempt to substitute physiological laws for empirical traditions—these are attractive to every scientific mind. It is only by following this road that the art of medicine can ever hope to justify its claim, prematurely conceded on more than one occasion, to be regarded as a science. Dr. Brunton may fairly be described as an enthusiastic apostle of what is sometimes rather incorrectly termed "rational" medicine; and he does his best to show how great are the services conferred by the experimental method in throwing light on the pathology and treatment of various diseased conditions of the circulatory, respiratory, and digestive organs. It may be questioned whether he has always realised the complexity of the problems for which he offers plausible, if not invariably adequate, solutions. But if he sometimes errs in treating hypothetical explanations as though they were fully demonstrated, he redeems his error by the outspoken candour with which his opinions are expressed. Frank optimism is never misleading.

A History of the Trade in Tin. By P. W. Flower. (George Bell and Sons.) This work treats of the metallurgy of tin, and afterwards of the history of the tin-plate manufacture and the technical processes employed in it. It is necessarily a subject of somewhat limited interest, and will become more so as the trade passes from our shores, as it appears to be doing. The weakest part of the book is, perhaps, the first chapter, which gives the early history of the metal, and which is full of errors both chronological, philological, and historical. Some quaint extracts from old books—notably,

"A dialogue betwixt a tynn minor of Cornwall, an iron mynor of the Forest of Dean, and a traveller in 1677"—serve to enliven a dull book.

Sun, Moon, and Stars: a Book for Beginners. By Agnes Giberne; with a Preface by the Rev. C. Pritchard, Savilian Professor of Astronomy in the University of Oxford. (Seeley, Jackson and Halliday.) Of this book the learned Savilian Professor, after remarking that people often ask him, "Can you tell me of any little book on astronomy suited to beginners?" says, "I think that just such a book is here presented to the reader." The author shows her acquaintance with the most recent developments of the science; the facts are simply stated, and the subject is not overloaded with technicalities. Some rough but effective coloured illustrations considerably aid the explanations.

Practical Chemistry: the Principles of Qualitative Analysis. By William A. Tilden, D.Sc., Professor of Chemistry in Mason's College, Birmingham. (Longmans.) Dr. Tilden's large experience at Clifton College has enabled him to produce a very concise text-book of simple qualitative analysis, perfectly suited to the wants of a school laboratory. The first part of the work consists of a description of the principal properties of the most important re-agents, and the preparation of test solutions. The second part treats of the means of detection of the chief metallic radicles, ending with a review of the analytical grouping of the metals, and a table showing the simplest method of separating all the commoner elements. This is followed by the characters of the acids arranged in three divisions, and general directions for the analysis of an unknown substance. The tables of memoranda at the end of the second part are very valuable, and we can only wish that they could be extended. Such general statements as the fact that all chromates are red or yellow, and that strong sulphuric acid aided by heat converts all the metals except gold and platinum into sulphates, are of infinite service to the student. Indeed, it is only by generalised statements of this nature that it is possible to obtain any grasp of the multitudinous facts of which the sciences treating of the history of matter are built up. If used side by side with some elementary text-book of general chemistry this work will be found of the greatest utility, especially by science masters in our larger schools.

Journal and Proceedings of the Royal Society of New South Wales, 1878. (Sydney.) This volume of more than three hundred pages, containing many charts, tables, and woodcuts, is the twelfth record of the proceedings of a very young, but very active, scientific society. The subjects discussed range over the course of the principal sciences, astronomy, perhaps, having the precedence. The memoirs are for the most part carefully written, and the society is doing much, and will do yet more, to foster a taste for research among the inhabitants of our South Australian colonies.

Ambulance Lectures; or, What to Do in Cases of Accident or Sudden Illness. By Lionel A. Weatherby, M.D. (Griffith and Farran.) This extremely useful little book gives a clear résumé of a series of lectures given to the Ambulance Department of the Order of St. John of Jerusalem in England. A general outline is first sketched of the structure and functions of the human body; this is followed by directions for arresting bleeding, and for treating wounds, fractures, burns, frostbites, and sprains. The immediate treatment of insensibility and of poisoning is then discussed, and of drowning, suffocation by various causes, and choking. The last lecture treats of bandaging, and of the removal of sick or injured persons by bearers, carts, or by train. The book is small and handy; it con-

tains very clear directions, and should be the companion of every traveller in a distant country, while a general knowledge of its contents would be useful to everyone.

Handbook of Competitive Examinations for Admission to Every Department of Her Majesty's Service. By W. G. Chetwode Crawley, LL.B. (Longmans.) This work has been carefully and accurately compiled; it contains all the information necessary for competitors in any of the Government examinations—the subjects, marks, rules of competition, salaries, and so on—and those who cannot decide what branch of the service they are most disposed to compete for cannot do better than study the book minutely.

The International Dictionary for Naturalists and Sportsmen in English, French, and German, containing the Terms used in Hunting, Shooting, Fishing, &c., Natural History, and the Sciences. By Edwin Simpson-Baikie. (Trübner.) The title of this book explains its nature; it is not quite easy, however, to understand its object. It is a large octavo book of nearly three hundred pages, and hence by no means a pocket volume, and we should have imagined that it would have been far easier to consult a good French or German dictionary, in which one might be certain to find the desired word, than to take the chance of its being introduced into a special dictionary like the present. Indeed, the Vocabulary does not appear to be so extensive as that furnished by an ordinary good dictionary. For instance, in the range A—AC not a single mineral appears; *actinism*, *actinic rays*, &c., are altogether omitted; also *abdomen*, *ace*, *acrid*, and *acetic*; while under the term *acid* only three (*carbonic*, *nitric*, and *sulphuric*) are mentioned.

PHILOLOGICAL BOOKS, ETC.

Dictionnaire samoan-français-anglais et français-samoan-anglais, précédé d'une Grammaire de la Langue samoan. By L. Violette. (Paris: Maisonneuve; London: Nutt.) This is a valuable contribution to Polynesian philology. Samoa forms one of the principal groups of Polynesian islands, and, as Mr. Whitmee has shown, the dialect spoken upon it is of prime importance from a philological point of view. The author of the well-written and well-printed grammar and dictionary that lies before us is a French missionary, Father Violette, whose long residence in Samoa is the best guarantee of the correctness of the work. It is preceded by a short Introduction, which deals with the products and other characteristics of the Samoan Islands.

Parlers grecs et romans: leur Point de Contact préhistorique. Vol. I. By Sp. Zambélios. (Paris: Maisonneuve; London: Nutt.) M. Zambélios has expended a good deal of labour upon a book which had better have never been written at all. He wishes to prove that the Neo-Latin dialects, and more especially French, have been largely indebted to the Greek dialects carried to the West by the colonists of Massilia and other towns. But the way in which he sets about his task takes us back to the days of a pre-scientific philology, when a resemblance in sound between words in different languages was supposed to be enough to demonstrate a common origin. For M. Zambélios, Diez and others have laboured in vain. He has yet to learn the first principles of Neo-Latin phonology. The truest part of his whole book is a passage at the end of the Preface, where he confesses that he cannot well "give an exact account" of the method he has followed in getting at his "facts," or of the "code of phonology" he has substituted for that founded by the great masters of Romanic philology.

Introduction to the Science of Chinese Religion: a Critique of Max Müller and other Authors. By Ernst Faber. (Hongkong: Lane, Crawford and Co.; Shanghai: Kelly and Walsh.) This volume shows a considerable amount of thought and study; indeed, we cannot help feeling surprised and gratified that Mr. Faber should have found an opportunity of reading so many standard works on the science of religion at such a distance from good European libraries. With all its merits, however, the book is disfigured by two serious blemishes. Mr. Faber starts confessedly with a bias which must vitiate all real scientific enquiry; and he speaks in too confident a tone of scholars who may be presumed to know at least as much about their subject as Mr. Faber himself. What Mr. Faber has to tell us about Chinese religion is very acceptable; here he is dealing with a matter with which he has had special opportunities of becoming acquainted, and which European students have to take more or less at second-hand. But it is different when he comes to the theories which the constructors of a science of religion have put forth; to say, for instance, of a scholar like Prof. Max Müller, that "the confusion about religion and theology will be settled in chapter iii. Any attempt to solve religious problems 'on purely grammatical grounds' shows a want of proper method"—argues, to say the least, a considerable lack of modesty, as well as of appreciation of the magnitude of the question under discussion. Certainly we have risen from a perusal of the brief and perfunctory chap. iii. without discovering that "the confusion about religion and theology" is at all "settled" in it. In the tenth chapter, on "Religion and Language," Mr. Faber seems to have misunderstood Max Müller's exact point of view; at all events he has forgotten that a language embodies the thought of a people, and that the only way of discovering what were the religious ideas held by a nation at a particular period of its history is, not by assuming that the words which expressed them had the same meaning that they still bear to us, but by ascertaining through the help of philology what was the signification they then conveyed.

Monograph on the Relations of the Indo-Chinese and Inter-Oceanic Races and Languages. By A. H. Keane. (Trübner and Co.) Mr. Keane may be warmly congratulated on having established a new fact for the science of language. In a monograph of only thirty-six pages he has satisfactorily shown that the Khmers of Cambodia form a link, on the linguistic side, between the Malays and the Polynesians; and that the so-called Mon-Annam family of speech must be banished from our linguistic charts, Khmer, Annamese, and Mon having no connexion with one another. Whether Mr. Keane has been equally successful in showing that the brown Polynesian and Khmer tribes belong to what he terms the Caucasian race, and the Siamese, Annamese, Burmese, and Khasia to the Mongol, the Malays, Dyaks, Micronesians, &c., being a mixed race (partly Caucasian, partly Mongol), is another question. Certainly few anthropologists nowadays will be disposed to admit, as Mr. Keane seems inclined to do, that the brown Polynesians are racially allied to the Aryans, or that the Aryans ought to be called a Caucasian race at all. It is strange to find so experienced a scholar as Mr. Keane encouraging the popular fallacy that Aryan and white man are synonymous terms. The Aryan race is a linguistic expression, and has nothing to do with race in the ethnological sense of the word. We should recommend Mr. Keane to look up Prof. Flower's researches in the craniology of the Pacific, to some of which he has alluded in his paper; we doubt whether after doing so he would still be inclined to class the Micronesians with the Dyaks or the Malays.

Introduction to the Study of Sign Language

among the North American Indians, as illustrating the Gesture-Speech of Mankind. By Garrick Mallery. (Washington: Government Printing Office.) This is another of the important contributions to science which we owe to the Smithsonian Institution, and makes us once more regret that no similar institution exists in our own country. The Introduction does not profess to do more than put forward enquiries and suggestions, but it will be found to contain much that is new and highly interesting. Nothing can be more curious or more valuable to the student of the science of language than the speech in signs made by a medicine man of the Wichitas to a missionary, or the story in signs obtained by Dr. W. J. Hoffman from a Pah-Ute chief. Col. Mallery comes to the conclusion "that the alleged existence of one universal and absolute sign-language is, in its terms of general assertion, one of the many popular errors prevailing about our aborigines," and certainly the signs used in other parts of the world differ very considerably from those used by the natives of America to express the same ideas. At the same time, how easily understood these signs are is shown by the way in which a European at once catches the meaning of signs made to him by Indians for the first time. One remark thrown out by Col. Mallery is very true and striking; it is that "the words of an Indian tongue, being sympathetic or undifferentiated parts of speech, are, in this respect, strictly analogous to the gesture-elements which enter into a sign-language." Naturally, therefore, a sign-language has maintained itself in full vigour among the Indians. Aid in carrying on the investigation is requested from all who have interested themselves in the subject or are in contact with savage and barbarous tribes, and a list of words is given for which the signs used by different races and tribes are wanted.

OBITUARY.

PROF. ANSTED, M.A., F.R.S.

FORTY years ago a young Cambridge graduate was appointed to the chair of geology in King's College, London. David Thomas Ansted, to whose lot this honour fell, was then but six-and-twenty years of age, and for the next ten years at least he was a prominent figure in the scientific world. He taught geology not only at King's College, but at the Putney College and at the Military Academy at Addiscombe; while as assistant-secretary of the Geological Society of London he rendered signal service to his favourite science, especially by editing the early volumes of the *Quarterly Journal*. At the Great Exhibition of 1851 Prof. Ansted was active as a juror and reporter. There, indeed, his energies found congenial occupation; for, surrounded by the products of the mine, the pit, and the quarry, he realised to the full the value of practical geology. Ultimately the attractions of applied science allured him from the paths of pure science, and of late years he was known chiefly as a consulting mining engineer. Many of the younger geologists, therefore, scarcely appreciate his early services to their science. Moreover, the numerous manuals and text-books of geology which he wrote when young, though excellent in many respects, are now but rarely read. But his *Physical Geography*, the product of riper years, still enjoys a wide circulation; and until a very recent date Prof. Ansted acted as examiner in this subject for the Department of Science and Art. Outside scientific circles he was known by several popular works, such as *The Channel Islands* and *The Ionian Islands*. His vocation as a mining engineer gave him frequent occasion to travel, and on his return home his facile pen was generally busy in describing the scenes which he had visited. Reference to such a book

as his *Scenery, Science, and Art* is sufficient to show his strong artistic feeling and his power of effective word-painting. We regret to announce that Prof. Ansted succumbed to disease on the 13th inst. at the age of sixty-six.

PROF. C. A. F. PETERS, Director of the Observatory at Kiel, and for more than a quarter of a century the editor of the *Astronomische Nachrichten*, died on the 8th inst., in his seventy-fourth year. His investigations secure for his name a lasting place in the annals of astronomical science.

NOTES OF TRAVEL.

WE hear that the International African Association are determined to persevere with their attempt to utilise elephants for the service of their expeditions in East Central Africa, and that four more of these animals have been purchased in India and are on their way to Zanzibar, *en route* for M. Cambier's station at Karema on the east shore of Lake Tanganyika. We may here mention that the association have just published at Brussels a third instalment of reports from the members of their expeditions, comprising letters from MM. Cambier, Popelin, Burdo, Roger, &c., and a special report by Dr. Dutrieux on the maladies and acclimatisation of Europeans in Eastern Africa.

M. OLIVIER PASTRÉ has lately started from Marseilles for the West Coast of Africa, his object being to organise an expedition in Senegal for the exploration of a route across the Sahara.

THE expedition of the German Branch of the African Association under Dr. Buchner is expected to have reached Musumba by now, as they left Kimbundu about the middle of September last with the full intention of pushing on to Lake Sankorra and, if possible, to the East Coast of Africa. It may be doubted, however, from past experience, whether the Mwata Yanvoo will allow Dr. Buchner to pass through his territory to Nyangwé and Lake Tanganyika. It is stated that Dr. Pogge is about to revisit that country under the auspices of the German African Association, and that he will take with him a naturalist and a topographer to assist him in his explorations.

WE hear that the newly founded Spanish Society for the exploration and civilisation of Central Africa (to which allusion was recently made in the ACADEMY) propose shortly to despatch an expedition from the West Coast into the interior of Africa, which will endeavour to penetrate into the region almost immediately to the north of the country which Dr. Buchner has been exploring.

THE German African Association, as we have before recorded, propose shortly to establish a station near the southern end of Lake Tanganyika, and we believe that their expedition, which will soon start for Zanzibar, will be under the charge of Capt. von Schöler, who will be accompanied by Drs. Boehm and Kayser and Herr Reichard as scientific assistants. The King of the Belgians is stated to have contributed £1,600 towards the expenses of this expedition, which we trust may have more fortunate experiences than its Belgian predecessors in the same region.

AN attempt is about to be made to open commercial relations with the interior of Somaliland by two merchants from Brescia, who have recently gone to Africa for that especial purpose.

BEFORE making his late unsuccessful attempt to penetrate into Thibet Proper from Bathang, Count Szechenyi forwarded to Shanghai a number of cases containing the collections which he has made of minerals, plants, coleoptera, &c., all of which he intends to present to the Buda-Pesth Museum.

DR. MACGOWAN, of Shanghai, has recently made a journey up the gorges of the Yangtze-kiang into the Chinese province of Szechuen, and has given an interesting account of his experiences to the North China Branch of the Royal Asiatic Society.

At the request of M. de Lesseps, the Académie des Sciences at Paris have appointed a special committee to consider certain scientific questions connected with the canalisation of the American isthmus.

ENERGETIC attempts are being made to settle the rich country in the far west of Queensland in the neighbourhood of the Herbert, Diamantina, and Mulligan Rivers.

DR. J. CHAVANNE has published a useful map of Central Asia on a tolerably large scale, and including the latest information derived from the explorations of Russian and other travellers. In spite of a few inaccuracies, the appearance of the map is opportune in view of the Russo-Chinese difficulty, as it takes in the Caspian on the west and Kulja on the east.

SCIENCE NOTES.

Ethnography at Liverpool.—Ethnological studies ought to be specially cultivated at every large seaport. Scarcely a ship comes home without bringing with it a few "curios;" and it is evident that if these, instead of being dispersed, were accumulated in one centre they would rapidly grow to an instructive collection which must serve as a valuable incentive to ethnographical study. Such appears to be the opinion of a few scientific authorities in Liverpool. A committee has therefore been formed to bring together a large loan collection of objects of ethnological interest, with the view of stimulating and instructing the merchants and sea-faring men in this great shipping centre. Ethnology, however, is so closely connected with prehistoric archaeology that the two subjects are best illustrated side by side. Accordingly, a large portion of the Liverpool exhibition is devoted to specimens illustrating the industrial progress of our race and the development of human culture. It is, in short, a kind of Christy Museum transferred to the Walker Art Gallery. Here then the visitor may compare the relics of prehistoric man with the implements and weapons used by uncivilised peoples in various parts of the world at the present day. The exhibition will be opened next Wednesday, when an address will be delivered by Prof. Mivart. We are glad to hear that Mr. O. T. Gatty is busy with the preparation of a catalogue of this instructive collection.

The Photographic Spectra of Stars.—In a lecture lately published in the *Proceedings* of the Royal Institution, Dr. Huggins gives an account of the work to which he has chiefly devoted himself for some years past—the photographing of the ultra-violet portion of the spectra of stars. Earlier attempts did not produce photographs of sufficient purity to give them a scientific value; but the instrumental difficulties which previously prevented success have been gradually overcome. The two principal difficulties are the feebleness of the star's light after dispersion by a prism, and the circumstance that the stars are in apparent motion in consequence of the earth's rotation. In order to obtain a sufficiently pure and detailed spectrum, with the least possible loss of light, the spectral apparatus used consists of a prism of Iceland spar, and of lenses of quartz, for rendering the light from the slit parallel before entering the prism, and for making it converge and form an image on the photographic plate, which is inclined so as to bring a considerable part of the spectrum to focus. This apparatus was so adjusted at the end of an

equatorially mounted reflecting telescope that the slit was precisely in the principal focus of the metallic mirror, of eighteen inches aperture; but though the clock motion was of exceptional excellence, a secondary control being contrived by means of a pendulum in electrical contact with a standard clock, it was found necessary to supplement these instrumental arrangements with a suitably devised method of continuous supervision by hand during the whole time of exposure, which might last half-an-hour, one hour, or it may be two hours. The slit was provided with two small shutters, only one of which remained open while the photograph of the star was taken; while the other was opened for obtaining a comparison spectrum upon the same plate. Various photographic methods were tried, but the great sensitiveness which may be given to gelatine plates, as well as the great advantage of employing plates in a dry state, led to the exclusive use of this method of photography. Huggins' recent researches begin about G in the blue, and carry our knowledge of stellar spectra beyond O, and in some cases beyond S in the ultra violet. In the case of white stars, the most marked circumstance is the distinctly symmetrical character of a strong group of a dozen lines, ending between M and N. As the refrangibility increases, these lines diminish in breadth, and it becomes highly probable that all the lines of this remarkable group are members of a common physical system, and that they are due to hydrogen. The variations of the spectra of different white stars from the typical spectrum of Vega furnish materials for detailed investigations and afford means for closer classification. In the last spectrum represented in Huggins' paper, that of Arcturus, we come to that of a star of another order, to which that of our sun is approaching. The spectrum is crowded with fine lines, and in the visible part resembles the solar spectrum, but beyond H the lines are more intense and differently grouped. The importance of the work upon which Dr. Huggins has been so successfully engaged will be appreciated by all who are interested in spectroscopic researches.

PHILOLOGY NOTES.

In the *Zeitschrift für Deutsche Philologie*, vol. ii., part 2, the most important paper is that by Pilger on the dramatisation of the story of Susanna in the sixteenth century. The question is considered mainly with reference to the form which the story assumed when adapted as a drama. Pilger's essay is followed by a report on a Düsseldorf MS. of "Bruder Hansens Marienlied" recently discovered by Gerss. In the following number Piper publishes a number of notes from the glossaries and vocabularies and treatise *de Musica* contained in MSS. at St. Gallen, and previously collated by Graff and others. Some notes are added on St. Gallen MSS. of the creeds and of Notker's psalter. Schmitz publishes a fragment of a Latin-German vocabulary from a fourteenth-century MS. now in the library of the Catholic schools at Cologne. An interesting continuation to this paper is the following one, by Zacher, in which a collection is made of mediæval Latin-German glossaries, containing (1) the names of birds, (2) technical terms of law. Gottschick has an essay on the sources of Ulrich Boner's fables, and notes on the same writer are added by Zacher. Frischbier ("Die Thierwelt in Volksräteln") publishes a number of old popular Prussian riddles on animals. The next number opens with two essays on Lamprecht's *Alexander*: the first by Kinzel on the MSS. of this piece, the second by Zacher on some points in the Strassburg version. These papers are followed by fragments of MSS. in the Hardenberg collection, including fragments

of sermons, commentaries, and glossaries of the eleventh, thirteenth, and fourteenth centuries, a piece of a French prose romance of the thirteenth or fourteenth century, and part of Wittig von Jordan. Wegener publishes the instructive paper on the methods to be pursued in the investigation of German dialects which he read before the congress of scholars at Gera in 1879.

MEETINGS OF SOCIETIES.

CAMBRIDGE PHILOLOGICAL SOCIETY. — (Thursday, April 29.)

PROF. MAYOR, President, in the Chair.—Mr. Burn read the following remarks:—"In Propert. iv. (v.) 4, 14, 'Bellicus ex illo fonte bibebat equus,' the reference is supposed by Mommsen and others to be to the lacus Servilius near the Basilica Julia in the south-western angle of the Forum Romanum. This does not seem probable, as Propertius is speaking of the encounter between the Sabines on the Quirinal hill and the Latins on the Capitoline, and the Quirinal hill is at the north-western angle of the Forum. The poet had in his mind the legend of Tarpeia coming down from the Capitol toward the Sabine army posted between the Quirinal and the Capitoline hills, and of her drawing water from a well-head, whence it ran down to the Sabine army at a lower point. Now the so-called Carcer Mamertinus was originally a well-head, as its shape and its name Tullianum indicate, and this is the well-head to which Propertius probably refers. Propert. iv. (v.) 8, 1, 'Disce quid Esquilias hac nocte fugarit aquosas,' Propertius himself lived upon the Esquiline hill, and must have intended by the epithet *aquosas* to indicate some feature of the hill which would be at once recognised by every Roman. The explanations usually given are not satisfactory. It is clear from the accounts we have of the greater aqueducts of Rome—the Marcian, Tepulan, and Julian—that they all entered Rome at the higher part of the Esquiline hill, and were carried across it in pipes and on archways to the other parts of the city. Where these pipes and arches passed there was necessarily some leakage. This we find referred to in the Roman poets Horace, Ovid, Martial, and Juvenal, who all speak of the dripping of water from pipes and arches of aqueducts. The Esquiline would therefore be peculiarly liable to such leakage water, and hence the epithet *aquosae*. Agrippa and Augustus renewed the supplies of water which passed over the Esquiline during the life of Propertius, and his attention would thus be called to the quantity of water on the hill, and its leakage from the conduits and pipes."—Mr. Verrall put before the Society some points from a paper shortly to be published upon the literary history of the forms in *-druvos*, *-druvm*, as illustrated by the use of these forms in Attic tragedy. His object was to show that this termination was apparently not employed, or at least not extensively employed, in the common Attic language of the fifth century, but was derived from the Ionic dialects of Asia through the influence of the Epos and other literature of Asiatic origin, and that the tragedians admitted it as a general rule only where the associations thus fixed upon it were appropriate, and would be perceived by the audience.

SOCIETY OF ANTIQUARIES.—(Thursday, May 13.)

E. FRESHFIELD, Esq., V.-P., in the Chair.—Capt. Telfer, R.N., exhibited a porphyry block carved with a lion's head which he had brought from Erivan in Russian Armenia. It formed part of a building, probably a temple, erected, according to Moses Chorenensis, by Tiridates, King of Armenia, and destroyed by an earthquake. Many huge blocks of porphyry are still to be seen on the site.—Dr. Baron exhibited a photograph of the monument at Boyton Church, Wiltshire, of Sir Alex. Giffard, who escaped from the battle of Mansourah. His shield bears three lions passant with a label of five points, which has been wrongly described in various works as having *fleurs-de-lis* on the points, from the fact that the coat of Thomas Earl of Lancaster, which has such a label, is to be found in one of the windows of the church. The feet of the effigy rest upon an otter, perhaps in allusion to his escape

from Mansourah by swimming.—Mr. E. M. Thompson gave an account of a MS. written by James Montgomery in 1562, containing suggestions for the defence of the country. The author was a seafaring man, and mentions having made a voyage to Scio. He enlarges upon the evils resulting from the ignorance of drill among English soldiers at the beginning of a campaign; the necessity of having hospitals for maimed soldiers, and of providing for soldiers at the close of a war, who often take to crime for want of means of gaining a livelihood. He also advocates the institution of shooting matches to teach the people the use of the gun. The treatise is dedicated to Francis Duke of Bedford.

FINE ART.

ART BOOKS.

The Great Historic Galleries of England. Edited by Lord Ronald Gower, F.S.A. Part I. (Sampson Low and Co.) This work, of which the first handsome part now lies before us, promises to fulfil a real want by bringing within the reach of moderate purses accurate copies of many of the great treasures of art which now lie scattered over England in what the editor has chosen to call the great historic galleries. We have before given a list of nine collections for selections from which arrangements have been completed. If no addition is made to these there will be plenty of material for several splendid volumes of masterpieces; but if the success of the work is equal to its value, both historical and artistic, we do not doubt that other owners will be willing to assist it, and that it will ultimately embrace most of the finest works in the finest galleries in England which have any claim to the title of "historic." This is "a consummation devoutly to be wished," not only in the interests of the publisher, but the public. The photographs issued with this part are excellent. Although in two cases at least reproducing pictures which have been terribly damaged, they are clear and rich in tone, giving the spirit and handling of the originals with a perfection impossible to attain by either engraving or etching. The most perfect manual skill could not reproduce the delicate contours of the infant Saviour in the famous Bridgewater Raphael, or all the thought and dignity of expression in van Dyck's noble portrait of the great Earl of Arundel; and the sun, while giving with unabated beauty all the grace that is left in the lovely wreck of Sir Joshua Reynolds' portrait of Caroline Countess of Carlisle (from Castle Howard), softens rather than exaggerates the damage it has received. The part is prefaced by an interesting sketch by the editor of the history of celebrated collections of works of art in England, and each plate is accompanied by a short description of the picture and its pedigree.

THE SALON OF 1880.

[Second Notice.]

M. LAURENS this year sends only a single figure—*Honorius: Le Bas Empire*. The child emperor is draped in folds of scarlet, beneath which shows embroidered underclothing of gold and black on fawn; his left hand rests on the globe surmounted by a Victory, and his right feebly retains the glaive; the scarlet of his mantle is spread by the dull red of the pillow on which he sits, and over the throne of ebony, inlaid with gold, and crimson, and silver ornament, is thrown a sheet of cloth of silver. The lad himself is a singular and thoroughly realised conception; coarse insensate sensuality moulds the mouth, and Eastern fatalism looks out of the eyes and forebodes the falling fates of Byzantium. There is something very striking, too, in the way in which M. Laurens has contrived to make a real live boy of Honorius, and yet retain the quaint aspect of archaic art;

there is no suspicion of masquerading—the child emperor, as well as the cut of his garments, is of the past, but—of a living past. It is a pity that the subjects which interest M. Laurens should so rarely be likely to interest the public, or even a very large class of the public; with the exception of the *Death of Marceau*, I cannot remember a single work by him which could be readily "understood of the people," and this is the more unfortunate as the masterly qualities of his painting would enable him to stir an audience powerfully could he but contrive to place himself directly in sympathy with them.

M. Henner's work is also a pleasure to me for mere paint's sake; the quality which he obtains is certainly always the same; his effect of tone is generally obtained, as in *La Fontaine*—his principal contribution this year—by a trick of forced contrast between the hue of fair flesh and a dusky background of olive green lit by a spot of turquoise sky; his composition is of the most simple and innocent description; his contours are undefined, or rather seem to be so; for, in truth, the longer one looks at M. Henner's work—which invariably seduces the eye by its poetic aspect—the more one is inclined to accept all his sins against sound rules, and his shortcomings, when judged by accepted standards of thoroughness, for the sake of his marvellous powers of suggestion. If we take the work of his imitators; if we look, for instance, at M. Lesrel's *Le Christ mort*, and then turn to the brilliant study of the head of a young girl asleep, which M. Henner has called *Le Sommeil*, we shall see that we wrong him by supposing that his method of work is superficial, or that anything is left to result from happy accident. Everything is suggested, because everything has been foreseen, and every touch has been laid in accordance with calculations the exactness of which could only be ensured by admirable intelligence, a fortunate temperament, and habits of serious application. Thus it comes to pass that at the right distance from Henner's work we believe in fine forms and full modelling and even noble line; although, if we approach too closely, the signs upon the canvas seem empty and meaningless, so that, for the moment, we suffer the disappointment of something like a cheat. We find what appears to be a sketch where we expected to see all thoroughly made out.

It is rare, indeed, for a work of art to possess the triple beauties of suggestiveness, of finish, and of solidity of aspect. M. Blanchard's *Francesca di Rimini* is unfinished, and a pathetic interest attaches to the picture, for M. Blanchard died while at work upon it. In its present state, perhaps, it produces a more profound impression than it would have done had it been fully wrought out; the very mists in which the figures are enveloped seem to refuse to be definitely fixed on the canvas with a firm hand; but the tone of the flesh is very beautiful; the torso of the female figure is admirably solid and real, and the movement of the two together is well conceived—she curved backwards against him, as he supports her with his left arm, and turning in a sense contrary to the direction in which they are floating. In M. Becker's contribution, *Martyre Chrétienne*, we have work which is not interesting or suggestive, but strong and thorough, and—like his *Rizpah defending the Bodies of her Sons*—imbued with a decided—perhaps somewhat exaggerated—sentiment of pictorial drama. The Christian martyr, draped in white over under-ropes of pink, has fallen headlong backwards down a flight of gray steps, at the top of which we see the three archers whose shafts have struck her dead; in front of these, with hands outstretched in an attitude of malediction, an elder man, clad in garments of olive black, descends towards the body. The steps, and the prostrate body of the woman, make a broad line of light, passing diagonally

across the picture from lower left to upper right, and ending in a little break of sky in the corner; a great mass of dark trees, against which the three archers and the elder man are based, fills the upper centre, and farther down their hue is repeated in a group of cypresses seen above the edge of the steps, overshadowing the curving road which winds into a distance of rose purple fading into the clear pale and intensely luminous air of upper ether. The qualities of M. Georges Becker's work are precisely those in which, from of old, the French school has been strong; and in spite of the rising tide of individualism there is plenty of evidence that the ancient traditions of training and learning are still in vigour. Constant, with a marvellously certain hand, marks out, with all the effectiveness, and something of the crudeness, of scene painting, the execution of the *Derniers Rebelles*—above, a broad band of blue sky, then a broad band of red brick wall, at base of which a thin third line of white spectators; on the right, advancing to the centre—balanced on the left by a group of camels—comes the troop of mounted chiefs and their attendants, before whom stretches from right to left, slanting across the court, the long line of the slain. M. Constant seems curiously insensible to the human horror of slaughter and death; and this very want of intimacy with his subject makes his rendering of it, perhaps, the more true a reflection of the spirit of Oriental despotism—all is gay and bright in the sunlight, and nothing matters, nay, not even savage torture and cruel death. But, effective as it is at a given distance, M. Constant's work is never suggestive; there is no mystery about it, nor is it ever quite thorough enough and full enough to bear close inspection; it does not show the complete training which is evidenced by such execution as that of M. Becker, or to take another of the younger men, of M. Morot.

M. Morot—a *prix de Rome* of, I think, no older date than 1873—paints *Le Bon Samaritain* on as vast a scale as M. Becker's *Martyre Chrétienne*, and with as strong a hand. The group of the Samaritan hoisting the stranger, on whom he has taken pity, on to his own ass fronts us, and it is extremely well composed. As painting also of "Academy" studies, the two figures are noteworthy; but M. Morot has introduced little prettinesses of reflections and changing carnations in the bust of his wounded man which seem out of place, and, skilful as they are, detract from the appropriateness of the type chosen. The veteran M. Bonnat falls into no such error in dealing with the lean, common, unlovely old man whom he has painted, crouched on his black rags, against a conventional brown background, and christened *Job*; but Job himself is painted with a force and dexterity that makes the figure a model of how such work should be done. Other well-known names also keep their place. M. Bertrand is even unusually good this year with his graceful *Charmeuse d'Oiseaux*. The little figure seated on a stone in the thick of the leafy woods, against a background of full blue sky, has something of the exquisite, original charm which distinguished the younger Grace piping to the birds in Gleyre's well-known picture of the contest between the Graces and Minerva. M. Langée, too, makes a mark with his *Serviteur des Pauvres*. Bouguereau is, of course, what Bouguereau always is, and shows, in his *Flagellation de N. S. J.-C.*, his habitual and astonishing facility; but the flesh is, as usual, distressingly transparent. Pictorial feeling is totally absent. Not a line, or look, or action is frank; the colour is suffused and suppressed, and the atmosphere seems close and unreal. Even more strangely transparent and unreal than the flesh-painting of Bouguereau is the flesh-painting of Cabanel. His *Phèdre* contains some

lovely things. The *silhouette* of the old nurse who peers in on the right, anxiously spying on the hateful passion of the queen, is drawn with equal felicity in choice of forms; the low-toned harmony of the draperies of the tried attendant, who slumbers propped against the couch whereon her mistress lies, is very pretty and delicate; but Phèdre herself is a powerless, characterless, boneless creature, posed with studied affectation in the midst of gossamer and spangles, and is the weakest point of the whole work, which looks at once theatrical and weak, and affords at one and the same time evidence of taste, both refined and false.

In the desire for delicacy and for elegance M. Cabanel loses hold on Nature, just as M. Gustave Moreau quits her sound teaching in order to follow the promptings of a fantastic imagination, which every year seems to lead him farther and farther from the interest and pleasures of other men. His unfinished *Galatea*, in the present Salon, seen sitting beneath the sea surrounded by myriad strange shapes of star-fish and shells and fringed anemones, is extravagant to the degree of folly; in his *Helen*, although it is below the manner of work which M. Moreau has now and then given us, we find much that only a man of his great gifts could do: the statuesque solemnity of Helen's figure is very striking, seen with the time-worn walls of the great city behind her, and the sky, clear above, but settling down in crimson anger on a troubled sea, while the whole foreground beneath the battlements, on which she stands as on a pedestal, is filled by the sinking, falling bodies of her victims, the youthful princes and strong men of Greece. The grandeur of the impression is, however, disturbed by M. Moreau's increasing habit of employing vast quantities of small and many-coloured ornaments, until the whole surface is broken up by the profusion of a paltry splendour, which recalls in the *Galatea* a stall of Palais Royal jewellery. And yet, in spite of this, the solitary figure of Helen, flower in hand, is one of those which remain most distinctly fixed in the mind when one quits the great picture fair of the Palais de l'Industrie.

The *Salomé* of M. Moreau, too, persists in presenting herself whenever one comes across another treatment of that well-worn subject; and this year, as in all others, *Salomé* is handled by more than one painter. M. Humbert, although he does not come near the triumphs of some of his predecessors, has made a pleasant picture of the princess, draped in lilac, enthroned on marble adorned with gold and enframed in roses, while above, against the sky, spread branches of laurel. There is a certain amount of personality in M. Humbert's work which prevents it, even in its weakness, from becoming uninteresting; but it lacks, as in the present instance, that sense of style which can give to work, in other respects full of shortcomings, a sure and enduring charm. It is on account of his possession of this quality that M. Puvis de Chavannes never fails to attract us. His modelling may be empty, or his drawing disputable, but his strong sense of the inherent necessities of monumental design invariably imparts an accent of grandeur and simplicity to all he does. He sends this year the complement of his work for Amiens—a cartoon more than fifteen mètres long by over three mètres high. The subject is the national game of Picardy—*Les Joueurs de Pique*. The composition is divided into three main groups; in the centre are the youths and men about to throw their weapons; to the extreme left are the houses whence they have issued, and their families gathered about the doors of their homes; on the right are a group of onlookers; minor groups and incidents connect the three main divisions of the subject, and the whole is set in

one of those beautifully arranged and spaced landscape backgrounds of which M. Puvis de Chavannes seems to have the supreme instinct. This perfect fitness and marriage of landscape and figures is very rarely to be seen even in the work of the most distinguished men; it is as rare as the gift of style, and yet something of both may, I think, be traced in the work of a man about whom no talk is made. Last year I noticed a decorative landscape painted by M. Jean Cazin, not a forcible piece of work, but delicate and well arranged, and, as it seemed to me, showing real artistic temperament; this year M. Cazin has two pictures, *Ismael* and *Tobie*, both of which bear the stamp of a distinct individuality, and one of which—*Ismael*—shows remarkably fine feeling for decorative composition. The figures of Hagar and Ismael do not challenge our admiration in and for themselves—they are even rather inadequate, but they are in harmony with the landscape; they form, in their close and despairing embrace, a dark column of sorrow rising against the waste sand drifts thrown up behind them, sand drifts just touched along the distant ridge with struggling patches of blossomless heath, above which a dark pine stands gloomily—the solitary outpost of a darker and more distant forest; the desert space about the figures in front yields only the sparse blooms of a yellow broom, and the blasted branches of a fallen fir stretch out their withered arms as if to ensnare the feet of the mother abandoned with her child.

E. F. S. PATTISON.

THE ROYAL ACADEMY.

[Second Notice.]

THE works of style in the present exhibition are uncommonly rare. Among the members of the Academy, Sir Frederick Leighton and Mr. Poynter are almost alone in their persistent devotion to the study of design, and Mr. Poynter's picture indisputably ranks as the most remarkable specimen of the class to which it belongs. In many ways it is, indeed, the most considerable work of the year. Putting aside for the moment the force of individual invention which it displays, there is evidence here of a deeper knowledge of the essential conditions of art, and a more finely trained skill in the selection and rendering of the truths of nature than have gone to the making of half the pictures upon the walls. To those for whom originality implies an absolute breach with all tradition, such a work will not be very acceptable. They will detect in Mr. Poynter's research of beauty in form, and his almost entire neglect of sentimental interest, the signs of an imperfect sympathy with the modern spirit. But a painter who works in such close alliance with nature need not be greatly disturbed by any fear lest his art should miss the impress of his time. He may be content to learn all that earlier schools have to teach, so long as he preserves the resolution to test the beauty that he borrows by a renewed reference to reality. We have seen it somewhere stated that the attitudes of these nude figures are only slightly varied from many well-worn arrangements of the same theme, and the statement is thought to carry a kind of reflection upon the painter's originality. But a variation, however slight, in a design of this class has all the force of newly chosen notes in music. Changes of motive that would be perhaps insignificant in a picture of drama assisted by costume become altogether vital in a composition of nude form which aims at abstract beauty; and not the minutest deviation can be made from the original scheme without importing a necessity to refer the entire design to the authority of nature. Unless, therefore, it could be shown that the attitudes of Mr. Poynter's figures were taken *en bloc* from some earlier master the charge of imitation

would count for very little. The aspect of nature that has served as the basis of his work does not lend itself to the vulgar assertion of originality. We should be shocked rather than charmed to discover that Venus held her wounded foot in some new and unaccustomed manner, and it would add nothing to our admiration of her beauty to know that she could stand on one leg without the support of her attendant maidens. The enduring fascination of such works as this and its true and substantial claims to originality rest rather upon the successful realisation of what is familiar and settled in the ways of nature. Those gestures and movements are therefore the most acceptable which appeal to us as being, in some sense, inevitable and unconscious. They are the gestures and movements that repeat themselves incessantly in common life, passing unnoticed, or almost unnoticed, until they are caught and imprisoned in the unchanging lines of art; and the task which the painter who rightly understands his office has to accomplish is to liberate the beauty which nature offers from the imperfection or uncertainty of expression with which it is associated in individual form. To effect this enfranchisement without doing violence to reality is the true function of what is known as style in art. The movements of the body, even in the most perfect individual, need to be simplified for the purposes of ideal design, and the painter, having first won from nature a direct and certain impression, is left to select the particular truths which can best assist its utterance, and to sacrifice or subdue what is of inferior significance. The consideration of these complex problems of design will help us to appreciate the distinguishing excellence of Mr. Poynter's work. It would not perhaps be difficult to take exception to certain parts of his picture, to object to the particular type of form which he affects, or even to deny to the design, as a whole, the highest stamp of imaginative invention. But when criticism so directed has been allowed its full weight it remains impossible not to recognise at their worth the highly trained taste which has governed the choice and arrangement of the composition, and the rare knowledge and resource brought to bear upon its execution. Mr. Poynter's art has here, as always, an accent of masculine strength. The beauty he is able to grant to his design is genuinely derived from nature; he takes nothing on trust, though he cheerfully follows the guidance of the highest tradition; what others would be disposed to borrow without enquiry he resolutely tests by the light of his own study and experience; and the result, even where it is incomplete, is therefore found to rest upon a sure and solid foundation. He has, moreover, escaped altogether a fault only too common in the class of work that seeks to revive the beauty of antique form. Those who look only to Greece and shut their eyes to the Italian Renaissance are very apt to exaggerate the value of repose, and to be unduly fearful of the signs of movement and vitality. There has been a superstition since the days of Lessing that fleeting gesture and action are not fit material for art. The superstition is by no means warranted by the example of the best Greek sculpture, but it received a kind of authority from the teaching of Winckelmann and the practice of Canova, and its prevalence helped for a long time to blind the world to the greatness of Michelangelo, who found in the rendering of momentary action the noblest triumphs of design. Mr. Poynter has shown in his own work, what was, indeed, already sufficiently expressed in his writings, that he understands this secret of Michelangelo's power. The forms he presents to us have a fullness of life and an alertness of mien that take them clearly out of the category of the sham antique, and their attitudes are conceived in such a way

as to suggest immediate change and continuance of movement.

The very important place assigned to the principal group of figures makes it, we think, a matter for regret that the background and all that forms the setting of the scene should have been allowed so large a space in the picture. The prominence of what may be called the landscape element in the composition inevitably suggests the need of a freer and more idyllic treatment of form. Landscape, even where it is handled with the sense of style which Mr. Poynter employs, always tends to illusion; and to awaken the sense of illusion is to give emphasis to the conventional qualities which properly belong to Mr. Poynter's scheme of design. By force of contrast between one part of the picture and the other, the result takes an air of artificiality for which there is no real warrant, and the spectator is embarrassed by the presence of two distinct ideals whose separate claims are scarcely capable of reconciliation. With the conception of form here adopted by the painter, and in view of the settled principles of design that govern his work, the background and accessories of such a scene ought, we think, to be clearly subordinate; indeed, it is scarcely too much to say that the figures should occupy as large a proportion of the canvas as is consistent with the representation of the main idea. The advantages of such an arrangement in the present case acquire added force from the fact that Mr. Poynter's gifts as a colourist are by no means equal to his resources in draughtsmanship, and it would only be by great purity, variety, and magic of colour that sufficient interest could be given to the expanse of garden and masses of foliage that fill so much of the picture.

Sir Frederick Leighton's several contributions cannot be said to rank either with the *Visit to Aesculapius* or with earlier examples of the President's style. They nevertheless express in a very satisfactory manner the high conception of artistic practice which the painter has steadily maintained throughout his career. Lord Ronald Gower, who is evidently deficient in the sense of humour, has discovered and announced that all of these pictures are open to the charge of indecency; but the public, even in defiance of his lordship's statement, will feel the impropriety of applying these notions of suburban decorum to the judgment of a serious work of art.

J. COMYNS CARR.

THE GROSVENOR GALLERY.

[Third Notice.]

THE domain of ideal landscape is left so deserted nowadays that we should be glad to welcome even the clumsy landscapes of Mr. Cecil Lawson if we were quite sure that they were meant to be imaginative. Their want of selection in form and their carelessness in composition seem to negative a notion which their strange appearance would at first glance appear to support, and we are compelled at last to leave the problem unsolved as to which department of landscape art they are intended to belong. The only obvious facts about them are that they are very large, that their perspective is false, and their colour dirty. The moonlight scene is by far the better of the two, and has some grandeur, if little interest; but the scrubby boughs of the pine-trees in the foreground have no such soft translucency or grace of light-hanging plume as that which moonlight lends, even to the most obstinate trees. The middle distance, with its watery meadows, is effective, but it misses both the purity and the glamour of moonlight. The other huge canvas is still more unsatisfactory, and looks, with its faded foreground and brilliant sky (the best part of the picture), like some old painting badly restored, an idea

which is helped by the gigantic and amorphous figures of two children dressed in ill-fitting frocks, made apparently of oilskin, and a cuckoo and a gadfly, which seem to have been plastered on at the same time by the same alien and unsympathetic hand. The cleverness and care shown in painting the tangle of grass and flowers, the birch trunk, and many other parts of both pictures make us the more wonder at and regret the total failure of their general effect.

A little picture on the right restores health to the eyes and spirits. Mr. Mark Fisher is one of those landscape painters who love green and paint it in a refreshing manner. His *Normandy Orchard* (27) is simple and fresh, but his largest picture, *Coast Pastures* (114), is also the most beautiful of the three charming scenes he has sent to the Grosvenor. This also would appear to be a scene on the Continent, for the sheep are thin and foreign in appearance, but the lovely mottled sky, with its casual spaces of true blue, and its hedge and trees of cool bright green are such as often delight the eyes on this side of the Channel. The picture is full of light that comes from the sky, which is more than can be said for the light in most landscapes. Usually, as in Mr. P. B. Morris' *Cradled in his Calling* (142), the sky is the least luminous part of the picture; sometimes, but very rarely, as in Mr. Cecil Lawson's *The Voice of the Cuckoo*, the sky is too bright for the picture. Mr. Mark Fisher's third picture, *The Last of Autumn* (130), is beautifully painted and true, but a little cold and uninteresting in comparison with the others.

Not less true, we think, in colour, but more striking in effect and poetical in conception, are the two contributions of Mr. Alfred Parsons—*Last Gleanings* (70) and *Gathering Swallows* (152). The first is an evening scene, with golden spaces in the bright cloudy sky brought out strongly against the purple distance, and reflected in the puddles of the road in the foreground. These bright tints are harmonised and subdued by a band of willows, whose cool, gray green has been perfectly caught. The other is a scene of tall trees beside a stream, with a bold sky and a leafless pollard in the foreground, whose bare boughs are the benches for this Parliament of little birds. The scene is very rich in sombre colour, and is full of the pathos of the fading year. Nearer in spirit to Mr. Mark Fisher than to Mr. Parsons is Mr. H. R. Bloomer's capital little orchard scene in Normandy, called *Her Devoted Lover* (122); and wavering uncertainly between the unsentimental school and the poetical rendering of nature with which the late Mr. Mason used to charm our eyes, stands Mr. W. J. Hennessy's *Evening—Calvados* (68).

With a skill and a view of nature all his own, not sentimental in a human sense, but with a subtle feeling for the essential beauty of natural phenomena, more akin in spirit to Turner than any of the artists we have mentioned, with a delicate eye for colour and a power of painting atmospheric effects unequalled on these walls, Mr. Albert Goodwin deserves no mere passing notice. His little picture, *A Low Tide in the Harbour* (124), unobtrusive as it is among its neighbours, is not unlikely to be missed altogether, but will repay careful and prolonged attention from all those who can appreciate rare and masterly work. The harbour looks like that of Ilfracombe, though we cannot quite make out the point of view. We have seldom of late years seen such a delicate opalescent sky, or such exquisite painting of misty hills and horizon.

Beautiful in a small way with their delicate grays and greens are several little studies by Mr. Walter Crane, but their artificial colour and want of sun make their juxtaposition with more realistically painted pictures somewhat trying to them. The two little upright

views of Torcross, for instance, by Mrs. Gosse (147 and 161), with their bright blue skies full of bright white clouds, and their sunny sketches of land and water, make Mr. Crane's views appear more artificial than they are.

Not excelled by any in dexterity, though deficient in composition and sentiment, *The Grass of the Field* (100), by Mr. J. W. North, is a fine specimen of that school of landscape art which aims at nothing more than reproducing as faithfully as possible a particular scene. What has occupied the whole of this artist's attention is the minute rendering of a tangle of flowers and bushes in some Eastern land in which "flowers of all hues, and lovelier than their names," are engaged in a beautiful struggle for existence. Only a botanist could tell the titles of most of these gay forms of vegetation, but there are enough familiar flowers—such as poppies and convulvuluses mixed with the scarlet creepers and other lovely *anonyma*—to make it not altogether strange. As a whole, however, the picture is shapeless and spotty, and the central mass of blue lake which appears in the distance between the two clumps is so much brighter and deeper in colour than the other portion of the lake scene to the right that it has the effect of a patch, and looks, what we dare say it is not, unnatural.

In paintings of the sea the gallery is deficient. No word need be said in reference to Mr. H. Moore, whose gray studies of sea are always welcome. He gives us a little sun in one of them for a treat (72), but for all that we rather prefer the colder of the two (76). From what we can see of Mr. Keeley Halswelle's *Tug and Timber Barge* (108) we are inclined to think it very successful. Certainly the effect is very bold, and the upper part of the sky a beautiful and true piece of moonlight; but the reflections in its plate glass make it quite impossible to see the picture except in a fragmentary way. This is the case with many pictures in the gallery, especially Mr. Pellegrini's capital likeness of Mr. Bancroft (30), and Mr. J. C. Farrer's *Evening Mists* (164), which appears to be worth seeing. We hope that Sir Coutts Lindsay, who does not think that his own clever pictures require such protection, will prohibit plate glass next year. Mr. O. Napier Hemy's *Saved* (171) contains a great deal of skilful painting. The fishing vessel running into harbour, with its brown sails, the transparency of the rich green water, and the stones on the jetty are painted with great force and truth, but the composition is divided into two parts, which are at enmity with each other—on the left the fishing boat and jetty, on the right a tug towing a large sailing vessel.

With the exception of Mr. A. F. Grace's beautiful snow scene, called *Our Village* (184), there are but few other landscapes which require special notice, though the following will repay more than a glance: Mr. Edgar Barclay's *In the Grounds of a Moorish Villa* (74) and *Spring Time, Algiers* (90); Mr. D. Murray's *A Sultry Day* (118), a remarkable effect of fruit blossom reflected in a stream under a hot sun; Mr. J. O'Connor's truthful study of *A Corner of Waterloo Bridge* (59); Mrs. Arthur Murch's *At Castle Gondolfo* (109); Mr. R. C. Minor's *Sundown* (126); Mr. A. W. Henley's *Evening Mists* (164); and Mr. Clem. Lambert's clever study of sand (179). Mr. James Orrock's *On the Lincolnshire Coast* (194) is very clever, pleasant, and true, and if it had a little more colour and light might pass for a David Cox.

In the water-colour room the most noteworthy drawings are two beautiful portraits by Edward Clifford of *The Countess Cowper* (237) and *Constance, Daughter of the Late Hon. St. Leger Glyn* (245); and two drawings by Richard Doyle, one, an elaborate composition of *The Battle of the Elves and Frogs* (240), full of his peculiar quaint humour and fertile fancy, and a *Design*

for a *Frieze—Birds and Fairies playing Leap-frog* (238), which is not only a very delicate and refined piece of fun, but is exquisite in design and colour. The Hon. Mrs. B. Boyle (E. V. B.) never painted a prettier group of children and angels in a garden than *In a Golden Age* (221); but her designs for *Beauty and the Beast* (268), though bright and simple in colour and original in design, are disappointing. The Beast should have some trace of humanity, and Beauty should be free from affectation. Carl Haag sends a splendidly painted, but rather dandified *Zulu* (218), and a portrait of *Sir Isaac Newton* (284). Mrs. Stillman's design suggested by a passage in Dante's *Vita Nuova* (287) is very rich in colour and graceful in design, and there is great tenderness in the conception of the principal group. Miss R. M. Watson's *Far Away* (227) is a study which in spite of the author's sex we must call masterly. The drawings of Louisa Marchioness of Waterford are all clever, if somewhat careless and hasty, and with the contributions in this and other rooms of Lady Lindsay, Mrs. Perugini, whose charming *Civettina* (55) we should have mentioned before, Miss E. Pickering, Miss O. J. Atkins, Miss C. Charlton, Miss Henrietta Montalba, Miss Rosa Koberwein, and others already noticed, show with what earnestness and success art is being practised by the ladies of to-day.

This is perhaps most noticeable in sculpture, where Miss H. Montalba leads the way with her finely conceived heads of *Romola* and *Tito* (307, 317) and her spirited bust of *The Marquis of Lorne* (298). Miss E. Pickering's head of *Medea* (311), Miss Alice M. Chaplin's *The Spirit of Inquiry* (a clever group of dogs) (312), and Miss Emma E. Phinney's bronze bust of a negro (319) hold their own among the works of the sterner sex. With the exception of a bust of *Lady Ashburton* (301) by Mr. Boehm and a pretty figure of a *Naiad* (322) by Mr. McLean, there is little to attract in the larger contributions of the latter. A new and charming field of art is, however, revealed in the humorous groups of Mr. Caldecott and the portrait statuettes of Signor Amendola; and the medallions of Mr. A. St. Gaudens, of New York, if not classical, are at least living, a quality which it is worth some sacrifice to obtain. There is at all events plenty of room for a branch of familiar sculpture in which the attitudes and even costume of the century may be reflected without invading the province of painting; and we do not think that anyone can see such portraits as those of *Mrs. Alma-Tadema* (314) by Signor Amendola and *M. Bastien-Lepage* (304) by Mr. St. Gaudens without desiring to possess some such images of his friends—a feeling which is not generally aroused by the sight of a row of orthodox busts. COSMO MONKHOUSE.

NOTES ON ART AND ARCHAEOLOGY.

A SERIES of twelve etchings in Rome, by William Scott, will shortly be published, including, among others, the temple of Vesta, the old Pescaria, the cloisters of S. John Lateran, the Porta S. Paolo and the Theatre of Marcellus. Every proof will be printed and signed by the artist, and a limited number only will be taken. The price of the etchings will be, in a portfolio, 100 frs.; and subscribers' names will be received by Messrs. Spithöver and Co., 85 Piazza di Spagna, Rome.

THE series of "Text-books on Art Education" which Mr. Poynter has promised to edit will shortly appear in instalments. Two volumes are now ready. The first—on *Classic and Italian Painting*, by Mr. P. Head—will contain an essay on Art Education by the editor, chapters on Italian and Greek Painting, and short accounts of the celebrated schools of Italy, with criticisms, founded on personal knowledge,

of the best works of the Great Masters. The second, on *Gothic and Renaissance Architecture*, is by Mr. T. Roger Smith, one of the Lecturers on Architecture at Chatham and at University College, London. Each volume is very fully illustrated.

WE are requested to state that one free studentship in the day classes and four in the evening classes of the School of Art Wood-Carving at the Royal Albert Hall, Kensington, are at present vacant. These studentships are maintained out of funds provided by the City and Guilds of London Institute for the Advancement of Technical Education. Forms of application and prospectuses of the school may be obtained by letter addressed to the Secretary, School of Art Wood-Carving, Royal Albert Hall, Kensington, S.W.

M. EUGÈNE GUILLAUME has been commissioned to execute a bust of Flaubert.

THE inauguration of the statue to Adolphe Quetelet, on the terrace of the Palais des Académies at Brussels, took place on the 11th inst.

THE landscape and historical painter, Michael Wittmer, died at Munich on the 11th inst. at the age of seventy-eight.

AN exhibition of the works of the French painter, Théodule Ribot, is now open in the new galleries of *L'Art*, and a very interesting account of this boldly realistic artist is contributed to the pages of *L'Art* by M. Eugène Véron. M. Ribot has been incapacitated from sending any work to the present Salon by a painful disease in the neck, which necessitated a dangerous operation. Happily this succeeded, and he is now recovering, though not sufficiently well to finish a large *Descent from the Cross* which was intended to figure this year at the Champs-Élysées. As a slight compensation his friends have organised this exhibition, and *L'Art* reproduces several of his powerful drawings, and in the current number gives a striking etching from one of his pictures, entitled *L'Aveugle et Guzman d'Alfarache*. It is a work showing much coarse strength, resembling in its bold lights and shades and almost repulsive realism the style of Caravaggio or Spagnoletto. M. Ribot's life, according to his biographer in *L'Art*, has been one of bitter struggle. His youth was passed in dire poverty, so that often it happened that he had to endure the pangs of bodily hunger as well as of that artistic craving which would not be satisfied without suitable food. To a man thus brought face to face with the realities of existence it may well be that the ideal in art would have no meaning; at all events it is life, human life in some of its least attractive aspects, that is depicted with thorough understanding and uncompromising truth in Ribot's pictures.

A COLLECTION of pictures is to be sold this month in Hanover which, if its attributions are correct, will be likely to possess great interest for lovers of the Old-Flemish and Dutch schools. It belongs to Dr. Ludwig Jelinik, of Politz, near Prague, who has been for about twenty years an instructed collector, and who affirms that he has "scientific proof" of the authenticity of most of the works to be sold. The catalogue includes the names of Hubert van Eyck, Albrecht Dürer, Rubens, Vandyck, Rembrandt, Pieter de Hoogh, Paul Potter, and others of the Dutch school, beside those of Correggio and Murillo. No fewer than ten works are ascribed to Rembrandt.

THE second competition for the great statue of the French Republic that is to be erected by the Municipal Council of Paris has resulted in the model by M. Morice being chosen.

TO the latest number of the *Etcher* Mr. Birket Foster contributes an etching which reproduces

with remarkable success the more popular characteristics of his water-colour work—the representation of a dainty little Nature, a landscape prettily dressed, like a good child on a Sunday. Mr. Lumsden Propert's *Twickenham* is solemn and tasteful, without much power; and Mr. Storms van s'Gravesande, an excellent Dutch amateur, contributes a somewhat feeble etching of a French port—*Honfleur*—which contrasts strangely with the similar subjects of a very masculine artist, Jongkind, whose art is given wholly to selection, and whose only fault it generally is that he selects too little instead of too much. Mr. Storms van s'Gravesande can etch very pleasantly, but he does not here give us of his best, and he must allow us with all courtesy to tell him so.

THE works at Cologne Cathedral have been renewed since the winter with great activity. The massive stone roof of the northern tower has now been placed, and appears above the surrounding scaffolding. The south tower also is progressing apace, so that it really seems, in spite of adverse prediction, that Cologne Cathedral will actually be finished at last. While one part is being completed, however, another falls into decay, and needs to be restored. Works of restoration, indeed, are being carried on at the same time as the works of completion, especially beneath the south tower, whose foundations have to be renewed while its summit is being finished.

THE competition that was opened some time ago in America for an equestrian monument to George Washington to be erected in Philadelphia, has been lately decided in favour of Prof. Siemerling, of Berlin, and he has now received the commission for the execution of the work. This is a great triumph for the German sculptor, for among the competitors were artists of many nations—American, English, French, and Italian—and he has carried off the prize from them all.

THE death is announced of Gustave Charpentier, a pupil of Ingres, whose portraits of the elder Dumas, George Sand, &c., attracted much notice in the Paris Salon years ago.

WE have received Mr. Blackburn's two latest "Art Handbooks"—*Academy Notes* and *Grosvenor Notes*. The works have now become much more illustrative than critical, and might fairly be called *Academy Sketches* and *Grosvenor Sketches*. Mr. Blackburn's modification of plan is, we think, a wise one. Criticism is done everywhere in the public prints, the most influential filling many columns with disquisitions on the art of the day; and Mr. Blackburn best renders service to the public, and probably best consults his own interests, by taking now almost exclusively the newer and unoccupied ground of illustration rather than that of description and criticism. Most of his designs are now furnished in slight pen-and-ink sketches by the artists themselves, and these are for the most part well reproduced. Of course a process that not only discards colour, but also inevitably abandons any serious attempt at gradations of light and shade, will be unequal in its results. Thus a *genre* or historical picture dependent broadly on the disposition of the figures has a chance which cannot be shared by such decorative works as concern themselves with problems of hue and subtlest harmonies of line. It is easier to reproduce Mr. Wells or van Haanen than to reproduce Mr. Albert Moore. Mr. Blackburn's Handbooks may be of modest aim, but they are always worth the money that is asked for them.

THE latest exhibition organised by Director Max Jordan in the upper storey of the Berlin National Gallery consists of a collection of the works of the late Anselm Feuerbach, an artist whose loss leaves a decided gap in the ranks

of modern German art. Feuerbach is represented in this exhibition in his entire artistic strength. Very few of his pictures are missing, and a large number of studies, water-colour drawings, sketches, &c., are included. These are chiefly contributed by his stepmother, Hofrathin Feuerbach, from the works left in his studio. Two important pictures—namely, a *Pietà* and *Francesca and Paolo*—are contributed from the Schack Gallery, which contains no fewer than eleven works by Feuerbach, Graf von Schack having always been one of his greatest admirers. Altogether ten rooms are filled by this Feuerbach exhibition, and the catalogue contains 206 numbers. Only such large works as *The Fall of the Titans*, *Medea*, and others preserved in public galleries are absent.

THE authorities of the South Kensington Museum have lost no time in preparing for exhibition the collection of Indian art products which have been transferred to them from the India Office. To this they have added their own, and the result is an assemblage of beautiful and interesting specimens of Indian art which, though incomplete, is no unworthy nucleus of such a great national illustration of our greatest "possession abroad" as we ought to have. It is useless here to regret the partition of the treasures of the India Museum or to insist upon the national importance of storing together all that is useful for the study of that vast Eastern empire of ours; we may more wisely rejoice that the Indian art collection has at last found a spacious, well-lighted home, where all its varied objects can be studied with ease and leisure. Well arranged and well lighted, what is now the Indian section of the South Kensington Museum might serve as a model even to the Museum itself. The eastern galleries of the Exhibition buildings, enclosing the Horticultural Gardens, have been chosen for the display of the "Indian Section," and were opened to the public on Monday last, and at the same time were published a complete catalogue of the magnificent collection of arms, with a Preface by the Hon. W. Egerton, and a handbook on Indian arts, in two volumes, by Dr. Birdwood. Both of these important works we hope to notice shortly. The arms have been hung very artistically, and, with some ivory palanquins and other valuable articles lent by the Queen, occupy the principal room. Here may be seen many objects of historical interest, such as the Orissa sword and Tippoo Sahib's armour; and in the next room is arranged the very beautiful and valuable collection of jewellery, ranging from rude archaic goldwork to the exquisite specimens of jade inlaid with gold and precious stones in which the Great Mogul delighted. Farther on are the pottery, metal-work, textures, &c., &c. In the rooms below is a miscellaneous collection from various sources, including a very beautiful assemblage of carpets, ancient and modern, which are exhibited by Messrs. Vincent Robinson and Co. With the exception of the abominable green-spotted tiles, which will assert themselves in every sheet of plate glass, and will, we fear, lead to a specific South Kensington disease of the eyes, there is little fault to be found with these beautifully stored rooms. Everything is not only clean, but in good order; even the famous group of the English officer and tiger which Tippoo Sahib made for his own savage diversion, and which, mute and dusty, many will remember in the gloomy hall of the United Service Museum, is cleansed, varnished, and repaired. By turning a handle you can hear our unfortunate countryman shriek and the bloodthirsty beast growl, and, if you can get someone to turn the handle for you, you can play "God Save the Queen" at the same time on a set of ivory keys seated in the monster's interior.

THE historical painter, Karl Heinrich Her-

mann, died at Berlin on the 29th ult. in his seventy-ninth year.

THE last number (part i., vol. iv.) of the *Transactions of the Cumberland and Westmoreland Antiquarian and Archaeological Society* contains much matter of very great local interest. Mr. Isaac Fletcher, M.P., has contributed an exhaustive account of the little church at Brighton, which is almost the only parish church in Cumberland that exhibits a good specimen of decorated architecture. The south aisle, which replaced a Norman building, is a very fine example of curvilinear work, the eastern window possessing much beauty and grace, and being extremely like in style to the portions of Carlisle Cathedral which were built about the same period. The paper is illustrated with drawings of details, as well as with photographs of the church before and after its restoration by Mr. Butterfield in 1864. The gabled termination of the tower with which the architect has replaced the old battlement and pinnacles has very much altered the appearance of the building and perhaps, for the better. Kirkby Stephen Church has also been restored, and the contrast between the two drawings of it in a paper by the Rev. J. F. Hodgson is almost ludicrous. One shows a picturesque state of disrepair, venerable and almost ruinous, while the other looks like a brand-new church in some town suburb. Mr. R. S. Ferguson discusses the tradition that the well-known old glass in Bowness Church came from Furness Abbey, which is in itself unlikely, for Cistercian houses rarely admitted painted glass, though the windows of the Lady Chapel at Lichfield once ornamented a convent of that order near Liège. He shows from various indications that it must have come from Cartmel Priory, and that it could not have been there for much more than sixty years before its dissolution. More than one of the contributors to this volume speak of the difficulties of gaining access to the library of the Dean and Chapter of Carlisle, to which the Rev. Thomas Machell left his collections for a history of the two counties, expressly for the use of the public.

The Antiquary. No. 5. (Elliot Stock.) Mr. T. F. Thiselton Dyer contributes a useful notice of Jade, a material of which little is known beyond the small circle of specialists who devote their attention to precious stones and those other mineral productions which, although not precious in the jeweller's sense, may, from their rarity or beauty, be put in the same class. Mr. E. P. Loftus Brook continues his paper on church restoration. We cannot profess to be in entire agreement with him, but much that he says is certainly true, and all deserving of attention. There is a valuable article on the Russell monuments at Chenies; and Mr. Greenstreet prints a hitherto unedited roll of arms, and Mr. Walcott continues his notes on some of the Northern ministers. There is a favourable review of Mr. Waterton's *Pietas Mariana Britannica*, from which three woodcuts are reproduced.

THE STAGE.

THE French performances, which will be the chief theatrical events of the next few weeks, begin at the Gaiety on Monday, when Mdlle. Sarah Bernhardt will appear, not as Frou-Frou, but as Adrienne Lecouvreur. *Frou-Frou* will be performed on the following Monday. The cast by which Mdlle. Sarah Bernhardt will in the first instance be accompanied does not appear to be a particularly strong one. It includes, at all events, no attractive names, though several of the performers are known by the initiated to be at least fairly creditable actors. M. Coquelin appears on the 7th of June, when the play given

will be *Ruy Blas*—Mdlle. Sarah Bernhardt still venturing to endeavour to interpret the part of the Queen in spite of the depressing influence of M. Victor Hugo's emotions and of the encomiums he has lavished on the newer actress at the Français.

MME. MODJESKA has proved a quite decided success—we mean a popular success in London; that she was an artistic success was certain from the beginning. The unusual step has therefore been taken of withdrawing from representation every evening a play that was drawing money, and of putting up *Heartsease*—with the great Polish actress—in the place of *The Old Love and the New*.

THE Globe Theatre has changed its programme somewhat suddenly, *The Naval Cadets*, which had a great success in America, not having proved really popular in England, despite the excellent fooling of Mr. Harry Paulton (who has never shown himself a better low comedian than in this piece), the infectious vivacity of Miss Violet Cameron, and the musical and dramatic art of Mdlle. Dolaro. Mdlle. Dolaro, however, was—to say the truth—rather thrown away upon her part; Miss Cameron would be as agreeable to the audience in any part; and Mr. Paulton, in being plaintive and aggrieved, always manages to be funny. We have heard then the last of *The Naval Cadets*, for a comic opera, once removed from the stage by reason of its inability to please, is never, or hardly ever, revived. Unlike a drama of serious interest, which has always a chance with some new actor to do for it what it may have failed to get at first, a comic opera once shelved as unsuccessful is as dead as yesterday's *Echo*. The management of the Globe Theatre has had recourse to the *Cloches de Corneville*, which was still filling the treasury at the moment of its withdrawal, after several hundred nights' performance. The cast is not now exactly what it used to be; but Mr. Shiel Barry remains a mainstay, attracting by a curiously melodramatic interlude; and the company includes Mr. Paulton, Miss Violet Cameron, Miss Emily Duncan, and Miss Clara Graham.

AT the Lyceum Theatre something has occurred to vex the soul of those who would have Shakspeare played without modern addition or curtailment. *The Merchant of Venice* has been advertised to end with the Trial Scene—no doubt the proper climax of the drama if Shyllock is to be considered entirely its hero, but cutting too short the agreeable fortunes of Bassanio and Gratiano, Portia and Nerissa. Certain literary and theatrical critics—among them Messrs. Furnivall, Thomas, Harrison, and Rose—have addressed a protest to the manager on this matter; and, as Mr. Irving is genuinely devoted to Shaksperian interests, it is quite conceivable that we may be able to announce next Saturday that the Belmont scene has been again restored. It was Mr. Irving who restored it at the beginning of the present revival, and has maintained it until now. It is fair to add that the immediate cause of the disappearance from the Lyceum stage of the rightful end of the play is due to the exigencies of a benefit, Mr. Irving and Miss Ellen Terry having desired to appear in a single evening in two parts. Miss Terry's benefit was on Thursday night. We shall next week be able to speak of it, and of her performance of a part hitherto associated with Miss Helen Faucit.

THE performance of Mr. Albery's new comedy, *Jacks and Jills*, is imminent at the Vaudeville. Mr. Buckstone's *Married Life* is meanwhile performed every evening.

The Queen's Shilling, which was played at the St. James's Theatre before the revival of *Still Waters Run Deep*, is again to be performed there.

The spectacle of two important theatres—the Haymarket and the St. James's—trusting almost entirely to the revival of modern dramas, as distinguished from that of old ones, is certainly a curious one, and affords occasion for a comment on the sterility of contemporary dramatic literature.

MUSIC.

RECENT CONCERTS.

Emmanuel, a new oratorio by Dr. Joseph Parry, was performed for the first time in London at St. James's Hall on Wednesday, May 12. The libretto, written in Welsh by Dr. William Bees, has been translated into English by Prof. Rowlands. Dr. Parry is Professor of Music at the University College of Wales. We learn, from a short Preface to the book of words, that the composer considers this work his chief musical enterprise, and hopes it may "foster, elevate, and refine the taste of the rising generation." The first part of the libretto deals with the revolt of Satan and his "rebellious hordes;" the second with Eden, while the third is entitled "Bethlehem to Calvary." The composer is a musician of considerable ability; he can write double choruses, fugued chorales, and fugues with mastery and ease; but the choral writing is altogether too much in the style and spirit of Handel, while the recitatives remind one of Mendelssohn and even sometimes of Wagner. The rambling libretto and immoderate length of the music militate likewise against the success of the work. It was creditably performed by the London Welsh Choir and Mr. W. Hill's orchestra, the soloists being Miss Marian Williams, Miss Mary Davies, Miss Lizzie Evans, Mr. Shakespeare, and Mr. Lucas Williams. Dr. Parry was the conductor.

The first concert of Mr. Charles Hallé's twentieth series of pianoforte recitals took place on Friday, May 14. The programme included Beethoven's trio in D (op. 70, No. 1), Schubert's fantasia in C for pianoforte, Brahms' sonata for piano and violin, and a trio in E flat by Franz Berwald. The composer was born at Stockholm in 1796 and died there in 1868, and the above trio is the first of a set of three, published nearly twenty-five years ago. It is an interesting and pleasing work, and somewhat remarkable for its peculiarities of form. It was very well played, and the showy piano part was given with great finish and brilliancy by Mr. Hallé. A quintet by Berwald was introduced at these concerts last season, and the favourable reception accorded to both works will doubtless induce Mr. Hallé to give us more from the same pen. As usual, Mme. Norman-Néruda was violinist, and Herr Franz Néruda violoncellist.

At a concert given by Lady Folkestone for the benefit of the Hospital for Sick Children, Romberg's Toy symphony was performed. The work itself is a clever musical joke, but the list of executants constituted the principal joke and, we may add, attraction, for the hall was quite filled, and consequently the hospital greatly benefited by the concert. The strings were played by Messrs. Manns, Cusins, Carl Rosa, Santley, Ganz, and Daubert; the pianoforte by Messrs. Cowen and Barnett. The toy instruments were distributed as follows:—cuckoo, Mr. A. Sullivan; quail, Mr. Charles Hallé; nightingale, Mr. J. Barnby; woodpecker, Mr. A. Chappell; bells, Sir J. Benedict; drum, Mr. Randegger; rattle, Mr. Blumenthal; trumpets, Dr. Stainer and Mr. Kuhe; and triangle, Mr. Louis Engel.

Miss Jessie Morison, a pupil of Mr. Fritz Hartvigson, gave a piano recital last week at St. James's Hall. She played Liszt's sonata in B minor and Schumann's *Carnaval*, and smaller pieces by Grieg, Raff, Chopin, and Liszt. She

is at present young, but has excellent mechanism: plays with feeling and taste, and promises to become a very good pianist. She was most successful in the sonata and Raff's *Fileuse*.

Miss Agnes Zimmerman gave her annual concert on Thursday, the 13th inst., assisted by Messrs. Straus, Zerbini, and Lasserre. Mdlle. Keller and Mr. Santley were the vocalists. The programme included no novelties.

J. S. SHEDLOCK.

We are informed that Herr Richter has undertaken to direct the opera *Lohengrin* (only) four times at Her Majesty's Opera, as guest by special arrangement during his stay in London. Mr. Herm. Francke will on these occasions be the leader in the orchestra.

Two concerts are announced by the Cambridge University Musical Society at the Guildhall, Cambridge, on Friday, May 21, and Tuesday, May 25. The first is a chamber and the second a full choral and orchestral concert. The orchestra will be led by Herr Straus.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON,
186 Strand, and Messrs. CURTICE & Co.,
Fleet Street, and Catherine Street, Strand.

Copies of the ACADEMY can also be obtained
every Saturday Morning in EDINBURGH of
Mr. MENZIES; in DUBLIN of Messrs. W. H.
SMITH AND SONS; in MANCHESTER of Mr.
J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P.
PUTNAM'S SONS.

PARIS.

Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue
Neuve des Capucines.

STUDIES in PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds; Glaciers; the Telephone. By W. J. MILLER, C.E., Secretary to the Institution of Engineers and Shipbuilders in Scotland; Author of "Principles of Mechanics," &c.

"We can confidently recommend Mr. Miller's volume to the attention both of teachers in search of an elementary text-book, and to private students, as well as to the general reader. It unites the utmost lucidity with strict scientific accuracy, and deals with ascertained facts rather than with vague theories."—*Greenwich Daily Telegraph*.

"This work consists of chapters from several sciences—astronomy, electricity, heat, light, &c. They cover a good deal of ground, and include objects as wide apart as whirlwinds and spectrum analysis, glaciers and the telephone."—*Liverpool Advertiser*.

Published at 21, Castle-street, Melbourne.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.
Madame MODJESKA will appear every evening, at 8, commencing THIS DAY (SATURDAY, MAY 22), in Mr. JAMES MORTIMER's successful version of Dumas' Play, entitled

HEARTSEASE.

Early application for seats will be necessary, and holders of tickets for Matinee on Saturday, May 22, can either have their money returned to them, or their vouchers transferred to any of Madame Modjeska's Evening Performances, by applying at the Box-office, or (by letter) to H. HERMAN, Royal Court Theatre, S.W.

DRURY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.
At 8, LA FILLE DE MADAME ANGOT.
Mdlles. Cornille d'Alaska, Grancy, Kate Sullivan; Mr. Wilford Morgan. Chorus of 120. Opera Band. Conductor, Mr. Wallerstein.

At 10, Danse Française, encored nightly.
LES SIKENES.
Grand Ballet, at 10.30. Music by WALLERSTEIN. Mdlles. Palladino, Perical, Fisher, Hudson; Messrs. Walte, Storey, and Bradbury. Ballet Master, Mr. John D'Auban. No booking fees.

MORNING PERFORMANCE, THIS DAY, SATURDAY, at 2.

DUKE'S THEATRE, Holborn.

Mr. C. WILMOT, Lessee and Manager.
To-night, grand revival of PAUL MERITT's enormously successful Drama, NEW BAHY LON.
Miss CAROLINE HILL as BEL LORIMER, and powerful company.
All the original effects.
The Collision at Sea—Tattersall's with the Horse Sales—Cremorne on a Bal Masque Night—Dancing on the Crystal Platform—Goodwood on the Grand Cup Day—The Race—The Thames Embankment by Night—The Theatre's Kitchen—Lionel, Darrell, Ashford, and Shiel Barry. Full chorus.
The greatest spectacle ever seen.

FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.
To-night, 49th time, at 8.30, a new original Comedy, in three acts, called THE UPPER CRUST.

By HENRY J. BYRON.
Messrs. J. L. Toole, John Billington, W. W. Garden, T. Sidney, and E. D. Ward; Misses Lilian Cavaller, Holmed Phillips, and Emily Thorne.
Preceded, at 7.30, by DEAF AS A POST.
Concluding with A MARRIED BACHELOR.
Doors open at 7. Prices 1s. to £3 3s. Box-office open 10 till 5. No fees for booking. No free list.

GLOBE THEATRE.

Manager, Mr. ALEX. HENDERSON.
This evening, at 8.15, revival of the celebrated LES CLOCHES DE CORNEVILLE.
Supported by Mesdames Violet Cameron, Emma Chambers; Messrs. Harry Hamilton, Le Fan, Darrell, Ashford, and Shiel Barry. Full chorus.
Preceded, at 7.30, by THE AREA BELLE.
Mesdames Hilton, Graham; Messrs. Osborn, Ashford, &c.
Doors open at 7.

IMPERIAL THEATRE.

AS YOU LIKE IT.
With the special cast, every afternoon, at 2.50, and every Wednesday and Saturday nights.
Messrs. Norman Vesin, Lionel Brough, W. Farren, Kyrie Bellow; Miss Crosswell, Miss Branton, and Miss Litton, &c.
Secured by Mr. Perkins. Dresses by Mr. Forbes-Robertson. Glee and incidental music, the new "Wedding Chorus," by Mrs. TOM TAYLOR.
Seats may be secured one month in advance at the Box-office (personally or by letter), or at the principal Libraries.

LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.
Every evening (excepting Saturday, May 23, and the Saturdays in June), at 7.45, THE MERCHANT OF VENICE.
Terminating with the Trial Scene.
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Concluding with an Idyll by W. G. WILLS, entitled IOLANTHE.
IOLANTHE—Miss ELLEN TERRY. COUNT TRISTAN—Mr. IRVING.
Every Saturday evening, commencing with SATURDAY, MAY 23, will be performed THE BELLS (MATTHIAS—Mr. IRVING) and IOLANTHE (Mr. IRVING and Miss ELLEN TERRY).

LYCEUM THEATRE.

MORNING PERFORMANCES MAY 23, and every SATURDAY during JUNE, at 2.
THE MERCHANT OF VENICE.
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.

NEW SADLER'S WELLS.

Proprietor and Manager, Mrs. S. F. BATEMAN.
THE DANITES.
JOAQUIN MILLER's famous American play descriptive of life in the Far West, as depicted by Bret Harte.
SARIE, MCGEE (a Miner)—Mr. RANKIN.
Messrs. W. E. Sheridan, G. Waldron, M. Lingham, E. Holland, L. Harris, J. Peakes, H. Lee, J. Richardson, and Harry Hawk; Mrs. McKee Rankin, Misses Cora Tanner, J. Waldron, and E. Marble.
New scenery, depicting the mountain passes, rude log huts, and giant trees of California, painted by Thos. W. Hall and assistants.

PRINCE OF WALES'S THEATRE.

Lessee and Manager, Mr. EDGAR BRUCE.
This evening, at 7.50, an original Comedietta, A HAPPY PAIR.
By S. TREYER SMITH.
At 8.40, HERMAN MERYALK and F. C. GOROV'S original Play, FORGET-ME-NOT.
(By arrangement with Miss Genevieve Ward).
Characters by Miss Genevieve Ward, Mrs. Bernard Beers, Miss Kate Pattison, Mrs. Leigh Murray, Miss Annie Layton; Mr. Edgar Bruce, Mr. Picketon, Mr. Herberton Tree, Mr. Edwin Bailey, Mr. Ian Robertson, and Mr. John Clayton.
Doors open at 7.30. No Fees of any description.

ROYALTY THEATRE.

Lessee, Mr. EDGAR BRUCE; Manager, Mr. W. A. HARWARD.
This Evening, at 8, THE MITS.
Followed, at 9.45, by CUPID.
Messrs. Charles Ashford, E. Strick, David Fisher, Jan., Fred Irving, and Charles Groves; Mesdames Anania, Kate Lawler, Miss Williams, Katie Lee, Maria Harris, Lilian Lancaster, Alma Stanley, L'Abbe Dun, and Rose Cullen.
The Burlesque produced under the direction of Mr. CHARLES HARRIS.
Box-office open from 11 to 5. No booking fees.

PHOENIX FIRE OFFICE, LOMBARD STREET
and CHANCERY CROSS, LONDON.—Established 1782.
Prompt and Liberal Loss Settlements.
Insurances effected in all parts of the world.
JOHN J. BROOMFIELD, Secretary.

BIRKBECK BANK. Established 1851.
29 and 30, Southampton-buildings, Chancery-lane. — DEPOSITS received at INTEREST for stated periods or repayable on demand. Current Accounts opened with persons properly introduced, and interest allowed on the minimum monthly balances. No charge made for keeping accounts. Letters of Credit and Circular Notes issued.
The Bank undertakes the custody of Securities of Customers, and the Collection of Bills of Exchange, Dividends, and Coupons. Stocks and Shares purchased and sold, and Advances made thereon.
Office hours from 10 till 4, excepting Saturdays; then from 10 to 2. On Mondays the Bank is open until 3 P.M.
A Pamphlet, with full particulars, on application.
FRANCIS RAVENSCROFT, Manager.

LOCKYER'S SULPHUR HAIR RESTORER.
Large Bottles, 1s. 6d. Restores the Colour to Gray Hair in a few days. The best, safest, and cheapest. Quite equal to expensive ones. Sold by Chemists and Hairdressers.

BRAND & CO.'S OWN SAUCE,
SOUPS, PRESERVED PROVISIONS, and
POTTED MEATS & YORK & GAME PIES.
Also
ESSENCE of BEEF, BEEF TEA.
TURTLE SOUP, and JELLY, and other
SPECIALITIES for INVALIDS.

CAUTION—BEWARE of IMITATIONS.
SOLE ADDRESS—
11, LITTLE STANHOPE STREET,
MAYFAIR, W.

PEPPER'S QUININE and IRON TONIC
Purifies and Enriches the Blood.
Strengthens the Nerves and the Solar System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A
fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fullness, headache, pain beneath the shoulders, and other indications of dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.
In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTS

MR. G. H. JONES,

Surgeon-Dentist, 57, Great Russell Street, London.

Will be glad to forward his Pamphlet on PAINLESS DENTISTRY, free, enclosed by Post, which explains the most unique system of the adjustment of ARTIFICIAL TEETH without pain, to which the following Testimonials refer. Consultation free 10 to 5.

"MY DEAR SIR,

"Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which renders my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name.

"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

PROFESSOR GARDENER, late of the Royal Polytechnic Institution, in a certificate to Mr. G. H. Jones, Surgeon Dentist of 57, Great Russell Street, London, says:—"I have examined and tested your Painless System of adjusting Artificial Teeth; it is quite perfect, and is the most successful application of scientific laws for securing a natural wear and comfort yet introduced."

"January, 1877.

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

Food, Water, and Air, Edited by Dr. HASSALL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT.

A slight addition of the Extract gives great strength and flavour to Soups, Made Dishes, and Sauces; and effects great economy.

** In use in most households throughout the Kingdom.

CAUTION.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for Liebig COMPANY'S Extract, and see that no other is substituted for it.

"WESTWARD HO!"

WILLS' "WESTWARD HO!" NEW SMOKING MIXTURE.

"When all things were made, none were made better than Tobacco; to be a lone man's Companion, a bachelor's Friend, a hungry man's Food, a sad man's Cordial, a wakeful man's Sleep, and a chilly man's Fire. There's no Herb like it under the canopy of heaven."—*Kingsley's "Westward Ho!"*

In 1 oz., 2 oz., and 4 oz. packets, lined with tinfoil.

W. D. & H. O. WILLS.

NELSON'S GELATINE.—For JELLIES.

An Economical Recipe in each packet.

NELSON'S CITRIC ACID.—For

JELLIES, with their Gelatine and Essence of Lemon.

NELSON'S ESSENCE of LEMON.—For

JELLIES, with their Gelatine and Citric Acid.

NELSON'S PURE BEEF TEA.—In ½

plait packets.

The *Lancet* says—"An excellent preparation. Is very portable. Its flavour is all that could be desired."
The *Medical Press* says—"One of the best articles of the class we have ever examined."

NELSON'S SOUPS.—BEEF with various

kinds of VEGETABLES, CARROTS, CELERY, &c.

In pint and quart packets.

Miss MARY HOOPER says—"I have found your Beef Tea and soup excellent.—Indeed, in my opinion, they are by far the best things of the kind ever before the public."

"The Soup is, besides, so cheap that it cannot fail to be appreciated by all classes of the community."

ASK YOUR CHEMIST or GROCER

for the above.

"HOME COMFORTS."

This book, neatly bound in cloth, and illustrated with numerous woodcuts, will be found very useful to Ladies, or anyone interested in home comforts. A copy will be sent, post-free, for seven stamps, on application to the Publishers.

NELSON, DALE, & CO.,
14, DOWGATE HILL, LONDON, E.C.

NEW NOVEL.—VIDA: Study of
a Girl. By AMY DUNSMUIR. 2 vols., crown 8vo, 21s.

"'Vida' is a curiously pleasing book. . . . It is to the
writer's credit that her sentiment is never maudlin, and that
touches, which may be trivial or even puerile in themselves,
have their value in relation to the development of a character
which is singularly attractive."—*Saturday Review.*

OLD GLASGOW:

THE PLACE and THE PEOPLE.

From the Roman Occupation to the Eighteenth Century.

By ANDREW MACGEOURGE.

Illustrated by numerous Engravings, several of which are
from drawings that have not before been engraved.

"No one, probably, is more competent for the work than
Mr. Macgeorge, and by the present handsome quarto in
which he has embodied the result of his labours he has
placed under a deep debt of gratitude, not only his fellow-
citizens, but all who are interested in the antiquarian history
of the district."—*Academy.*

"The author has omitted no subject which comes within
the scope of his scheme, and has spared no pains in getting
the fullest and most accurate information attainable. . . .
Full justice is done to the worth of the contents by the ex-
cellence of the type, the paper, and the illustrations."—
Saturday Review.

"As a systematic outline of the early history of the city,
it is a decided success. The work, beautifully printed and
well illustrated, extends over three hundred and twenty-
eight large quarto pages, and is written by one competent to
make independent investigation."—*Athenaeum.*

New Edition, with numerous Engravings and Coloured
Plates, large 8vo, cloth, 35s.

THE GARDENER'S ASSISTANT:

Practical and Scientific.

By ROBERT THOMPSON,

Of the Royal Horticultural Society's Gardens, Chiswick.

Revised and largely Extended by THOMAS MOORE, F.L.S.,
Curator of the Chelsea Botanic Gardens.

Assisted by Eminent Practical Gardeners.

"The best book on general practical horticulture in the
English language."—*Gardener's Chronicle.*

"It ought to be in the library of every English gentleman
who takes pleasure or pride in his garden."—*Guardian.*

CHEAPER EDITION.

Just published, square 16mo, 472 pp., cloth, red edges, 2s. 6d.

DR. OGILVIE'S SMALLER ENGLISH DICTIONARY.

ETYMOLOGICAL, PRONOUNCING, AND EXPLANA-
TORY.

Abridged from the "Student's Dictionary" by the Author.

"The etymological part of the work is well done, the pro-
nunciation is clearly and correctly indicated, and the explana-
tions, though necessarily brief, are clear and precise."—
Athenaeum.

Imp. 16mo, cloth, red edges, 7s. 6d.; or half-calf, 10s. 6d.

THE STUDENT'S ENGLISH DICTIONARY.

ETYMOLOGICAL, PRONOUNCING, AND EXPLANA-
TORY.

By JOHN OGILVIE, LL.D.

With about 300 Engravings on Wood.

"This is the best etymological dictionary we have yet
seen at all within moderate compass."—*Spectator.*

Fourth Edition, Revised, medium 8vo, cloth, 18s.

DESCHANEL'S NATURAL PHI- LOSOPHY.

An Elementary Treatise.

Translated and Extended by J. D. EVERETT, D.C.L.,
F.R.S.E., Professor of Natural Philosophy in Queen's
College, Belfast.

Illustrated by 760 Wood Engravings and Three Coloured
Plates, and accompanied by a Series of Problems.

Also separately, in 4 Parts, limp cloth, 4s. 6d. each.
Part I. MECHANICS, HYDROSTATICS, and PNEUMA-
TICS.

II. HEAT.

III. ELECTRICITY and MAGNETISM.

IV. SOUND and LIGHT.

"Systematically arranged, clearly written, and admirably
illustrated, it forms a model work for a class in experimental
physics."—*Saturday Review.*

The Friends of Fellows are admissible to the Dinner.

GROVE TESTIMONIAL FUND.

A FUND has been raised by the Friends of Mr. GEORGE GROVE with the object of offering him a Public Recognition of his valuable Services in behalf of Biblical History and Geography in connexion with the Dictionary of the Bible, the Palestine Exploration Fund. Mr. Grove's services to Music and Musical Literature during the many years that he has been associated with the Crystal Palace and the Saturday Concerts give him another claim upon the gratitude of all those interested in the diffusion of art, and the occasion of his retirement from the Board of the Crystal Palace offers the desired opportunity.

About £1,000 has been already subscribed, and further subscriptions will be received by the Hon. Sec., or may be paid in to the credit of the Grove Testimonial Fund at the Hanover-square Branch of the London and County Bank (Limited), where a list of the subscribers may be seen on application. The Subscription List will be closed on the 15th June, and a Meeting of Subscribers will take place on Monday, June 14th, in the St. James's Hall Restaurant (Regent-street Entrance), at 5.30 P.M., when it is hoped all will attend to consider the manner of presentation of the Testimonial.

"The author has high gifts. . . . These are mainly a directness, brilliance, and vigour such as we see in Ebenezer Elliott, without his ill-temper, and with a native melody and a sense of beauty such as the Cotta-Law Rhayner never showed."—*Athenaeum*.

London: REEVE & TURNER, Strand.

VOLUME XI. (GOU—HIP) OF THE ENCYCLOPAEDIA BRITANNICA, WILL BE PUBLISHED NEXT MONTH.

EDINBURGH: ADAM & CHARLES BLACK.

MUDIE'S SELECT LIBRARY

(LIMITED).

MUDIE'S SELECT LIBRARY was established in 1842 in order to meet the growing demand of the age for a Higher Class of Books than could then be readily obtained on moderate terms from the ordinary Circulating Libraries.

From its commencement the original purpose of the Library has been kept steadily in view. The best Books of every shade of opinion, on all subjects of general interest, have been taken in large numbers—Hundreds, and in some instances Thousands, of Copies of the Leading Works of every Season having been placed in circulation.

Great care has always been taken in the selection of Books to study the wishes of Subscribers, and to make the Library, not only "Select," but comprehensive.

THE WHOLE COLLECTION NOW EXCEEDS ONE MILLION VOLUMES.

Additional Copies of all the Best New Works in History, Biography, Religion, Philosophy, Travel and Adventure, and the Higher Class of Fiction continue to be added as the demand increases; and arrangements are made with the leading Publishers for an ample supply of all Forthcoming Books of general interest as they appear.

FIRST-CLASS SUBSCRIPTION, ONE GUINEA PER ANNUM.

This Subscription allows of a Constant Succession of the Newest Books.

LONDON BOOK SOCIETY SUBSCRIPTION, TWO GUINEAS PER ANNUM.

For the Free Delivery of Books in every part of London.

COUNTRY SUBSCRIPTION, TWO GUINEAS PER ANNUM AND UPWARDS.

According to the Number of Volumes required.

Book Societies and Literary Institutions supplied on Liberal Terms.

THE NAMES OF NEW SUBSCRIBERS ARE ENTERED DAILY.

Prospectuses, postage free, on application.

MUDIE'S SELECT LIBRARY (LIMITED), New Oxford Street, London.

CITY OFFICE: 2, KING STREET, CHEAPSIDE.

LITERATURE.

A History of England, from the Conclusion of the Great War in 1815. By Spencer Walpole. Vol. III. (Longmans.)

THE third volume of Mr. Spencer Walpole's impartial and instructive narrative of the political history of England from the close of the Continental war in 1815 deals with the very important period which lies between the passage of the Reform Bill and the accession of Sir Robert Peel to power in 1841. The facts of the period are stated fully and precisely; the financial expedients of the Whigs during this their first period of recovered power are expounded with sufficient clearness; and the vicissitudes of political feeling during the same epoch are commented on with great judgment and prudence. Mr. Walpole's work is a solid contribution to the political literature of modern England; and, though it is by no means exhaustive, it is exceedingly sensible and is practically useful in the highest degree.

The period is one of great, immediate, and of no less permanent significance to the student of English politics. To understand it rightly, one must look back for nearly a century and a-half. The Revolution of 1688 was the act of the whole people; and, although the adherents of the Stuarts were strong enough to create great difficulties, the new settlement of the Crown and Constitution was never seriously threatened. The power of the Whigs, and, later on, of the Whigs and the Hanoverian Tories, lay with the Lords and with the moneyed classes. The power of the Jacobites resided in the country gentlemen and the country clergy. The Whigs were united, familiar with government, and resolute. The Tories were incapable of common action, and could never make head against their rivals. Hence, from the Revolution till the accession of George the Third, the Whigs were always in power, and nearly always in office. George the Third attempted, it is true, to create a new party, and, even when he seemed to be baffled, strove with characteristic energy and perseverance to carry out the principal object of his theory of government—that of emancipating himself from the control of those families to whom his family owed their throne at the crisis of Queen Anne's death. He so far succeeded as to create the later Toryism of North and of the younger Pitt, and to arrest the progress of the Constitution for seventy years and more. It may be said that his diligence and perseverance were mischievous, but George the Third contrived to impress his personal character and will more fully on the public life of the English people than many monarchs

of far higher capacity and of far greater powers.

All the benefits of the Revolution, beyond those of relief from the arbitrary practices and irritating arrogance of the Stuart kings, and of the limited but very effectual toleration which the settlement necessitated, enured to the benefit of the Lords. Individually, the Lords might have been in some degree what Walpole told Pulteney they were, "the most insignificant fellows in the kingdom;" collectively, they wielded all the political power in the three kingdoms, appropriated all its patronage, and carved fortunes for themselves out of public money. It was in vain that the country party carried over and over again, in the Commons, the Bill for "free and impartial proceedings in Parliament," *i.e.*, a vigorous resolution against the mechanism by which the Lords wielded the solid power and secured the solid profits of government. Whig Ministers—Walpole notably—connived at, or even assisted, the barren protest which the passage of this Bill, almost as annual as the Mutiny Act, made; for it was certain that the Lords would reject the Bill when it came before them, as they regularly did. The jealousy with which the English Lords viewed the Scotch contingent, the extraordinary resolution by which they succeeded for nearly eighty years in excluding every Scotch peer created before the Union (they took care to allow none to be created after the Union) from an hereditary seat in the Upper House, is part and parcel of the dread which they felt that an independent section in the Lords would wreck the family compact. They had some reason for their fears, for, with few exceptions, the sixteen peers of Scotland were regularly paid for their attendance and their votes. But the payment was a fee for the brief which the Minister of the day offered for their advocacy. They never entered into the sheepfold or the pasture of the English peerage. At the present day it is instructive to an historian to watch the contrast between the England and Scotland of our time and that of a century and more ago. At the time of the Scottish Union the Scotch Lords were nearly as numerous as the English. The titles and estates which they possessed were derived from about one-third the area of the Scottish kingdom. A Scotch lord was nearly as frequent a being in Southern and Eastern Scotland as a Scotch minister, and, to the minds of the English aristocracy, a rather less respectable personage.

The English counties were nearly all anti-Ministerial; but they were utterly outnumbered by the English boroughs. Old Sarum, with three inhabitants, or Gatton, whose political entity was said to have been a tree in a park, had as much weight in old St. Stephen's as Yorkshire or Lancashire or Kent. It is said, and with some probability, that these decayed places were once thriving towns, and it is certain that, especially in Western England, where these boroughs were most numerous, there had been during the Middle Ages many busy seats of the woollen trade. But they had become mere villages in the time of the Long Parliament, and, as the Protector had disfranchised them, it was argued in the eighteenth century that Royalist England could not, and should not, take a lesson from

the policy of the Commonwealth. But it was through these boroughs that the House of Lords dominated in Parliament, constructed or destroyed Ministries, and made vast fortunes at the public expense.

The Reform Bill of 1832 did not entirely destroy the system under which the Upper House ruled in the Lower. It permitted a number of small villages to retain a pretence of representation, but to be really nomination boroughs. Some of these still exist, most absurdly, under the Ballot Act, since the fact that they were nomination boroughs was the only justification for their existence, and the principle of the ballot is the neutralisation of all local influence. How the Lords were brought to consent to the surrender of their power over the Commons is matter of very familiar history; one has to study the details of those nine years which Mr. Walpole writes about to see how implacable was their anger against the party which forced the surrender.

There is no doubt that the Whigs, who ruled after the Reform Bill became law, made very serious blunders. The great families, who had been faithful to the general principles of the Revolution, and who saw at last that they had no chance of recovering any place in the administration of affairs unless they destroyed the oligarchy of the borough-mongers, deemed themselves the natural objects of popular gratitude. They forgot that there is no gratitude in politics, because the public thinks that what the Legislature concedes is not a favour, but a right, and they were not aware that their rivals would accept the *status* of the change, and would at no very remote period find means to supplant them. They ought to have known that there was such a party, and a singularly competent leader to that party; for in shrewdness, patience, tact, and political capacity England has never possessed a greater public man than Peel. Peel never mistook his opportunity but once. By so doing he postponed his accession to power. This was in 1835, when he was induced to back the foolish error of the King and take office with a minority. Pitt had done so, but Pitt had certain qualities which Peel had not, to say nothing of the very different materials which Pitt had to manipulate.

But if the wisdom of the Whigs had been consummate, if they had never erred in a single measure, if the details of their policy had been as faultless as the principles of their policy were sound, they could not have made head against the stubborn and implacable wrath of the Lords. It was fresh in the memory of public men that the Lords had made and unmade Ministries, and freshest in the memory of the Lords themselves. It was certainly true that henceforth the new party—it soon became known as the Liberal party—would be permanently in a minority in the Upper Chamber, as the new Conservative party seemed likely to be in a permanent minority in the Lower. But nothing could deprive the Lords of their veto, and they used their veto freely and blindly. There are numerous incongruities in the machinery of the English Constitution. They are mainly due to the resistance of the Lords during the nine years of their angry activity. Mr. Walpole has not dealt with

this part of English political history as fully as he has treated other particulars. It is sufficient here to state that such a person as the Duke of Cumberland was actually a power, and even a danger, in the Upper House.

The Nemesis of this unreasoning animosity was not long delayed. At last the Conservative party obtained a decisive majority in the Commons, and Peel became Prime Minister. The Lords at once became docile, and in a very few years Peel inflicted on them what they believed to be far more solid, substantial, and enduring injuries than those which they had suffered when they were constrained to emancipate the Roman Catholics and to surrender the rotten boroughs. When Melbourne said that a man must be mad who could dream of repealing the Corn Laws, he was thinking of a Whig who would have to encounter the landowners, ennobled or untitled. That which Melbourne declared impossible Peel effected with far greater ease than he did any other great matter which he had previously taken in hand. For a time he lost his popularity with his old allies; but he was surely reconstructing a party, and when the accident which resulted in his death occurred he was on the eve of being again Prime Minister. In the meantime the temper of the Lords was thoroughly changed, and the spirit which possessed them from 1832 to 1841 was exorcised.

JAMES E. THOROLD ROGERS.

The Englishman and the Scandinavian. By F. Metcalfe, M.A. (Trübner.)

THE object of this work is to compare the Old-English and Old-Norse national characters as shown in their literatures, institutions, and way of life generally. We have chapters on the history of the study of Old English, on Bede and his Ecclesiastical History, on the laws, charters, the poetry, and various other subjects, together with a general survey of the national situation in Britain during the Old-English period. The second part deals in a similar way with the revival of Icelandic philology, the two Eddas, the sagas, the scalds, the Norse laws and charters, runes, &c., and winds up with a general summary of the results of the comparison.

In ordinary cases we assume that, when a man writes a book, he has previously acquired an (at the least) sound elementary knowledge of its subject. We make this assumption when a German, Dutchman, or Scandinavian writes on Old-English antiquities or philology. But when an Englishman deals with these subjects the case is exactly reversed; we assume, until the contrary is proved, that this preliminary requisite is wanting; if we find any gleams of knowledge or originality we are thankful, but do not complain if our author shows no other gifts than those of inaccurate compilation and superficial popularisation. It would be unfair to judge Mr. Metcalfe by the severer standard. A writer who still bows down to the authority of Conybeare, and who quotes Old English poetry from Thorpe's versions, can hardly be expected to be abreast of modern research, or even to have acquired a sound elementary knowledge of the language. We find such errors as *krafte* (for *cræfte*), *lig* (*lic*), *clepan*

(*clipian*), *geswiltan* (*sweltan*), *fusan* (*fysan*), *clænum antimber* (*antimbre*), and many such. The Icelandic words are better, but here, too, we find *skörungur*, *orrust*, *skib*, for *skörungur*, *orrosta*, *skip*. Sometimes the two languages are confounded, as when *fetill* (p. 204) is given as an Old-English, *galdor* (p. 104) as an Icelandic word. We are told (p. 452) that *ale* is a purely Scandinavian word, although *calu* is quite common in Old English. Inferences are drawn from Thorpe's absurd mistranslation of a passage in the Gnostic poem, "a lover requires a leech," where *lefmon* has nothing to do with *lemman*, simply meaning a "sick man." Mr. Metcalfe connects Icelandic *eykr* (p. 454) with Latin *equus* and Sanskrit *açva* in defiance of that time-honoured generalisation, Grimm's Law, which finds the Norse equivalent of *equus* in *jör*. He enriches philological literature with such astounding etymologies as *gun* from Icelandic *gunnr* (war) and *jolly* from *jól*, Christmas being the season of *jollity*!

But we must turn from such details to the main subject of the book, whose tendency is, we may say at once, to run down the Low-German element in our national pedigree as much as possible, and to extol the Scandinavian one in the same proportion. According to Mr. Metcalfe the "Anglo-Saxons" were as uncouth as their name in every respect; they were the most sluggish, sensual, dull, unimaginative, plodding, priest-ridden race that ever crawled between heaven and earth, while their adversaries were all "go," pluck, energy, buoyancy, and vivid poetical imagination. It will be seen that Mr. Metcalfe reflects the current prejudices of the ordinary "well-informed" reader, based mainly on Scott's *Ivanhoe* and various oracular utterances of clever writers like Macaulay and Kingsley. It is, of course, useless to protest against these prejudices, which will last as long as the present ignorance of Old-English history, institutions, and literature lasts; useless even to point to such names as Bede, the great missionary Wilfrid, Alfred, Athelstan, and Edmund Ironside; but it is worth while to call attention to one or two general facts which are too often ignored. The most important of these is that the great bulk of Icelandic literature—we may say the whole of its really valuable portion—is not older than the thirteenth century; that is to say, not more than a century older than the birth of Chaucer. Now, although the Northmen were notoriously one of the most imitative and assimilative races that the world has seen, exceeding in this respect even the Japanese of our day, there has been, till within the last few years, a tacit agreement to ignore this fact, and to assume that the late Middle-Age literature of Iceland is an absolutely true reflection of the life, manners, and beliefs of the Norsemen of five centuries earlier. We believed it, because it was pleasant and convenient to do so; we even waded patiently through the dreary baldness of most of the so-called "Sæmund's Edda" because we believed it to be really the gospel of Germanic heathenism. Now that it has been proved that the beautiful myths of Balder, of the world-ash, &c., are merely distortions of Christian and Greek legends, and that the heroic poems are of purely German origin,

we must cease to adduce them as proofs of an impossible idealism and loftiness of thought among the half-savages who made an easy prey of the crumbling or half-consolidated civilisations of the South.

Again, Mr. Metcalfe, like many others, takes a too egotistically modern view of national history. In his boundless enthusiasm for the picturesque heathenism of the Norsemen he abuses the Old English for being Christians, and King Alfred for translating Orosius and Boethius, and entirely fails to appreciate the unique features of Old-English civilisation—the wonderful way in which our ancestors assimilated Roman and Celtic culture and the spirit of Christianity while at the same time vigorously maintaining their national characteristics. Nothing is more striking than the contrast of the broad geniality of the Old-English character with the hard narrowness of the Northmen.

As might be expected, Mr. Metcalfe's estimate of the literatures of the two races is parallel with his estimate of their national characters. We can only explain his extravagant admiration for the scaldic poetry as the reverse of the sentiment "familiarity breeds contempt." He himself naively remarks, speaking of Egil's *Sonar torrek*, that, "owing either to the perturbation of his mind or the faults of transcribers, it is very obscure." "Obscure" is a very mild word to apply to such Chinese puzzle word-patterns as these compositions of Egil and his brother scalds. The plain fact is that, with all the stimulus of English and Celtic literature, the Northmen did not produce more than a few hundred lines of actual poetry. Contrast this with the variety and excellence of the Old-English poetry with its *Beowulf*, *Judith*, and *Seafarer*! Of the splendid fragment of *Judith*, which no student of Old English has ever read without enthusiasm, Mr. Metcalfe says—apparently forgetting himself for the moment—"nothing can exceed the descriptive power in this poem." He also patronises the incident of the stag in *Beowulf*, which he calls a "beautiful touch," and even goes so far as to hint that it is "worthy of the author of *As You Like It*." His remarks on the *Seafarer* show a most extraordinary misapprehension of its meaning. He adduces it as "a capital instance of the chapfallen tone of some of the Anglo-Saxon poems, as contrasting with the buoyant, exulting strain of the Icelandic scalds," whereas no poem, either of ancient or modern times, expresses more vividly and ideally the fascination of adventure and peril on the sea. So startlingly modern is the spirit of this poem that it is difficult to realise that it is the work of a Northumbrian scop of the eighth century, and not of some nineteenth-century Shelley.

Mr. Metcalfe's style is light and easy, occasionally degenerating into flippancy, as when he talks of "Tancred and Co." telling the king, &c., or says of the Assyrians in *Judith* that "literally they 'get the sack,'" which is a mere pun on the *æt sæcce* of the original; and his book will no doubt obtain the popularity it deserves.

HENRY SWEET.

Œuvres complètes de Victor Hugo. Edition définitive d'après les Manuscrits originaux. Tomes I., II. (Paris: Hetzel, and Quantin.)

THE world has waited long for this uniform and final edition of the works of Victor Hugo, and now it has begun to see the light it is probable that public curiosity will hasten it to a speedy completion. We are promised forty of these great quarto volumes, and this estimate does not take into account the written and unwritten productions of the author which have not yet been printed. Already, when the first volume had scarcely appeared, the illustrious and prolific poet added a new work to the library of his writings, the noble rhetoric of *Religions et Religion*; and we hear vague and wonderful things of epics, novels, histories, dramas, completely finished, and waiting only to be issued in such a way as not to trip up one another by the heels. These future productions, however, the poet pledges himself to present to us in the same form as that now before us; and the reader has but to consider what room in his house he can spare as the exclusive habitation of Victor Hugo, past and future, to be very happy in subscribing for an indefinite series of these handsome, finely printed books.

The task of bibliographical annotation has been entrusted to M. Paul Meurice, who is to hold this position of absolute textual authority as long as he may survive Victor Hugo. "Paul Meurice," says the author, gracefully excusing himself for his indolence, "est un poète qui veut bien accepter cette fonction: surveiller la publication d'un autre poète; je lui remets tous mes droits," and the MSS. upon which to found the text. Tome I. contains *Hernani*, *Marion de Lorme*, and *Le Roi s'amuse*. It is interesting to learn that these tragedies were composed with extreme rapidity, regularity, and promptitude, as we discover from the dates of commencement and completion of each act. *Hernani* occupied the poet twenty-six days, *Marion de Lorme* twenty-four, and *Le Roi s'amuse* exactly three weeks. The original name of the second drama was *Un Duel sous Richelieu*, and under that title it was accepted at the Odéon.

Some interesting passages excluded from *Hernani* are here printed for the first time. In the original draft the mystery of Hernani's birth was explained as early as the opening scene of the second act. The following touch of fine poetic insight was omitted, partly, perhaps, because the scene was already long, and partly to avoid giving offence. The King is watching beneath the windows of Doña Sol:—

"DON CARLOS. Dans la place
Qui brille ainsi là-bas ?
DON RICARDO. C'est le crieur qui passe.
DON CARLOS. Il dit l'heure. Écoutez. Paix !
LE CRIEUR (*au fond*). Minuit. Priez tous
Pour les âmes des morts !
DON CARLOS (*achevant tout haut sa prière*).
... Ils espèrent en vous,
Mon Dieu ! pardonnez-leur leur péchés et
leur fautes !
De votre paradis les murailles sont hautes,
Laissez-les leur franchir, Seigneur, ainsi qu'à
nous !
DON RICARDO (*montrant les murailles de l'hôtel*).
Faut-il aussi franchir celles-là ?
DON CARLOS. Taisez-vous !
Vous êtes un impie !"

In the final scene Doña Sol was permitted at first to yield to the physical agonies of her death, and it is agreeable to turn from the painful cancelled scenes to the more dignified, if less realistic, close of the drama as it now stands. The alterations made in *Marion de Lorme* turn out to be considerable, but it may safely be said that in every case they were improvements. The MS. of *Le Roi s'amuse* is much cleaner than those of the other two dramas, and scarcely contains any corrections.

But if the resuscitated passages in the first volume are not very important, bibliographical restoration gives us still less in the second, which comprises *Les Orientales* and *Les Feuilles d'Automne*. The latter collection originally opened in this brusque fashion:—

"Sans doute il vous souvient de ce guerrier suprême
Qui, comme un ancien dieu, se transforme lui-même
D'Annibal en Cromwell, de Cromwell en César.
—C'était quand il couvrait son troisième avatar.
Ce siècle avait deux ans. Rome remplaçait Sparte,
Déjà Napoléon perçait sous Bonaparte,
Et du premier consul, trop gêné par le droit,
Le front de l'empereur brisait le masque étroit."

It is very rarely that Victor Hugo seems to have been dissatisfied with so long a passage as this, and the corrections are singularly few and unimportant. On the whole, the curious and elaborate notes appended to these volumes tend to prove that the poet composes with unusual rapidity and sureness of hand, as indeed the extent of his writings would prepare us to suppose. As a rule, the corrections made on his first MS. are slight touches, each removing a superficial blemish of form or taste.

The publishers of the series have spared no pains to make it handsome and serviceable, and there is no fault to be found with the result except that the individual volumes are rather fatiguing from their size and weight.

EDMUND W. GOSSE.

Nile-Gleanings. By Villiers Stuart (of Dro-mana), M.P. (Murray.)

To be an observant traveller, as Dogberry might say, is "the gift of Fortune;" but wealth and leisure, like reading and writing, "come by nature." Mr. Villiers Stuart is favoured alike by fortune and by nature. He is rich enough to go to Egypt as often as he pleases, and intelligent enough to make use of his opportunities. In the course of three winters spent on the Nile, he has thought for himself, dug for himself, collected antiquities, dipped into hieroglyphs, copied inscriptions, facsimiled portraits of dead-and-gone Egyptian beauties, and written an exceedingly readable book.

To have seen and done all that Mr. Villiers Stuart saw and did in the course of his "Gleanings" asked no small amount of industry, endurance, and good temper. Some of his adventures—as, for instance, his visit to the Maabdeh crocodile pits, where he was basely deserted by a dragoman only too well known to the present writer—are told with genuine humour. Mr. V. Stuart, indeed, loves a joke almost as well as he loves a mummy; which is saying a good deal. He is also an excellent draughtsman. Some of his sketches of Egyptian bas-reliefs (such as the procession of emblematic figures of townships, oddly

described as "female slaves," from the tomb of Ti) are rendered with a freedom and purity of line not often met with in amateur work of the kind. As reproductions of subjects either figured for the first time or so little known as to be practically new, the recently excavated tombs of Atot and Nofre-Ma-t at Meydoom (pl. 56 F, 57 G), the wall-paintings from tombs of the Sixth Dynasty at Kasr-el Syad (pl. 36, 37, 38) the "Levée of Amenhotep II." from a grotto at Ibream (pl. 42), and the Minstrel Group from El Kab (pl. 19) may be especially indicated; and I can testify to the accuracy with which Mr. V. Stuart has copied the elegant Bari (pl. 41) from the south wall of a *speos* which I myself helped to excavate at Abou-Simbel in 1874. Others of the designs reproduced in this costly volume have been so often engraved in the works of Lepsius, Rossellini, Champollion, Champollion-Figeac, Dümichen, Sharpe, C. Blanc, &c., that it was scarcely worth while to devote to them the space and labour which might have been better bestowed upon less hackneyed subjects. Neither are the Bayt-el-Welly scenes (pl. 46, 47) so "rare" as Mr. V. Stuart believes; since, besides being facsimiled in certain of the foregoing works, they are familiar to all comers in Bonomi's magnificent coloured casts in the British Museum.

From these and other indications it may be gathered that Mr. V. Stuart has turned his attention to independent sketching and sight-seeing rather than to the published literature of his subject. But then the literature of Egyptology involves such a formidable amount of study, that only professed archaeologists can be expected to go into it very deeply; and the travels of archaeologists are apt to be somewhat dry reading. Mr. V. Stuart is never dry; and his impressions have lost none of their *naïveté* by over-friction with the views and opinions of others. Certain it is that no amount of mere "book-learning" will teach that quickness of observation which led the author of *Nile-Gleanings* to discover at Thebes a very curious tomb dating apparently from that obscure period of Egyptian history when Amenhotep IV. is believed to have instituted the worship of the solar disc, and to have founded the city of Tel-el-Amarna. This tomb (the site not indicated) was found "buried beneath an avalanche of quarry rubbish," one half of which Mr. Villiers Stuart caused to be removed, so uncovering the right side of the *façade* and part of the left. The external bas-reliefs, of which various illustrations are given, are distinctly in the style of the Tel-el-Amarna sculptures, and represent the Pharaoh hitherto known as Amenhotep IV. (Khou-en-Aten) and his Queen, Nefer-ti-tai, attended by guards and courtiers, and seated, as it would seem, in their palace gateway. From the solar disc above, the usual rays, terminating in hands, stream down upon the heads of the royal heretics, whose faces, figures, and cartouches have been elaborately mutilated. The other figures, the architectural details, and the hieroglyphed inscriptions are untouched and in perfect preservation; the presumption being that the figures of Khou-en-Aten and Queen Nefer-ti-tai were defaced during a subsequent reign by the

orthodox priests of Thebes. A tomb thus decorated is a curiosity anywhere out of Tel-el-Amarna; but still more curious is it that while Khou-en-Aten and Nefer-ti-tai occupy one side of the *façade*, another and a very different Amenhotep IV. and his Queen, seated under a canopied pavilion, occupy the other. Though shipped over, the features of Khou-en-Aten plainly reveal the Asiatic type of the Tel-el-Amarna sculptures; but the new Amenhotep IV., of whom Mr. V. Stuart gives no portrait, is described as "unusually stout," and very like the Amenhotep family in general. Hence it would seem that Amenhotep IV. and Khou-en-Aten, whom historians have hitherto believed to be one and the same, were in reality two distinct personages; the one thoroughly Egyptian in appearance, the other thoroughly Semitic. It is also to be observed that while the Queen of Amenhotep IV. is represented standing at the back of her husband's throne, as is usual in subjects of this class, the Queen of Khou-en-Aten is seated on a separate throne, and entitled "Lady of the Two Lands." From these and other details, Mr. Villiers Stuart concludes that Khou-en-Aten, who may have been of Phœnician birth, married a daughter of Amenhotep IV., and reigned in her right. The rise and origin of the disc heresy, and the singular physical characteristics of Khou-en-Aten and his Court, have given rise to much learned speculation; and Mr. Villiers Stuart is to be congratulated if his discovery should lead to a clearer understanding of this interesting phase of the religious history of the Middle Empire. It is, however, very desirable that the tomb in question should be cleared of all remaining *débris* and systematically examined. Mr. V. Stuart mentions a long hieroglyphed inscription which he copied; but of this copy he unfortunately gives no facsimile.

AMELIA B. EDWARDS.

NEW NOVELS.

Poet and Peer. By Hamilton Aidé. (Hurst & Blackett.)

Odd or Even. By Mrs. Whitney. (Ward & Lock.)

Vida. By Amy Dunsmuir. (Macmillan.)

Sussex Stories. By Mrs. O'Reilly. (Strahan.)

Lord Maskelyne's Daughter. By Rosa Mackenzie Kettle. (Weir.)

Roughing it in Van Diemen's Land. By Edward Howe. (Strahan.)

The Mistress of Coon Hall. By Margaret Cartmell. (Walter Smith.)

Louisiana, and That Lass of Lowrie's. By F. H. Burnett. (Macmillan.)

As the Crow Flies. By E. Owens Blackburne. (Moxon, Saunders & Co.)

MR. HAMILTON AIDÉ may perhaps not quite deserve the rank which an intelligent French critic lately gave him, at the head of all English novelists except Miss Braddon. But his work is always welcome, because in the first place his literary and story-telling faculties are very considerable, and because in the second it is never mere hackwork. The author gives himself time to form a

proper conception, and time also to work it out. *Poet and Peer* tells its story pretty plainly in its title. The hero is a democratic young nobleman of amiable, but intensely thoughtless, fickle, and impulsive character, who is, as a matter of fact, spoilt thoroughly by everybody who has anything to do with him, including Mr. Hamilton Aidé. Nothing can be more delightfully remote from poetical justice than the way in which he flits from flower to flower, and is permitted to sip the sweets of each, the last being the sweetest. If the heroine is less fortunate, the impolicy of village maidens forming attachments out of their degree is a fact admitted, and requiring no comment. Mr. Hamilton Aidé is an adept in verse as well as in prose, and he is therefore able to give specimens of his hero's poetical powers which are decidedly superior to the run of such things. The chief attraction of the book, however, as of most of its author's novels, lies in the easy sketches of character and society which are strewn about it. Mr. Hamilton Aidé is able to make even his sketches of English society at Rome, the most hackneyed of all such subjects, fresh and agreeable; and the light hand with which he attempts satirical description makes the fare he provides very pleasant after the heavy compound of maudlin sentiment and awkward cynicism to which certain of his fellows of the other sex have accustomed us in treating similar scenes. To all which it must be added that the pathos of *Poet and Peer* is considerable, and very well managed, so that it would be odd if the book were not, as it is, an unusually good one.

"I am told," said the fairest, not only of queens, but of women, "that they speak their very language with a grace which the haughty islanders who oppressed them never attain." We are inclined, as we have been before inclined, to think that there is much truth in this speech of Marie-Antoinette's as reported by the author of *The Stars and Stripes*, which, by-the-way, they do not reprint in the American editions of Thackeray's works. We must confess that to persons nourished on the scanty fare of English literature, with an occasional treat of the classics and the effete tongues of continental Europe, such phrases as the following are something too wonderful and excellent:—"And of being so lovely to the accidentals when you didn't mean anything continuing," or, "Was it not even already in essential respects a thing of yesterday which the hard, uncertain, shifting to-day was fast changing from all established centre and solid confident advance?" Such a dialect as this never fails to remind us of that immortal speech of Hoffmann to Werner which Mr. Carlyle has somewhere reported; and we cannot help saying to Mrs. Whitney, "Respected madam, if the whole of thy dear novel is going to be written in this language thou wilt please translate it, as otherwise we shall not understand." From the present instalment of *Odd or Even*, which is apparently being issued, not in books or parts, but in volumes, it seems, where we catch its meaning, to be a pleasant story of a not unusual American kind, in which the town-bred young lady of immense cultivation and beauty goes

to the wilds and is captivated by the philosophic ploughman and the engaging minister. But we wish we did not think so often of Hoffmann and Werner as we read it.

Miss Dunsmuir's novel is a very charming story of the Isle of Arran and of a girl's childhood there. Arran must be in some way subtly novel-inspiring (the influence of Mrs. Whitney is still upon us as we write), for we have only read two novels of which it was the scene, and both of them were unusually good. The first volume of *Vida* is better than the second, which gets into theological difficulties and anatomises the hearts of ministers of the Established Church of Scotland. The first, dealing with the childhood of Vida Callander and Arthur Kennedy, is as pleasant a study of its kind as we have read for a very long time. Miss Dunsmuir rarely strikes a false note, except when she is talking of the wicked world and its inhabitants. We do not think that the Honourable Mrs. Stanley, who is represented as a lady by birth as well as by marriage, would have said of a boy of fourteen, "I always did think him so gentlemanly when he put on that bored look." A very silly boarding-school girl of a doubtfully middle class, fresh from the study of Ouida, might possibly have said such a thing. But this is a slip of no very vital importance, while the faculty of draughtsmanship shown in the character of Vida is of a very excellent kind.

Readers of that very pleasant book, *Phæbe's Fortunes*, will know what to expect from Mrs. O'Reilly's *Sussex Stories*, and they will be in no way disappointed. The three volumes contain a dozen or so of admirable tales, distinguished alike by the presence of goodness and the absence of goodness, by a familiarity with the ways and thoughts of the poor in town and country and by an unusual power of rendering both character and scenery. We should say that we have never seen better stories for presentation to children and servants if such a saying did not, very unjustly and unreasonably, seem to carry with it an inference that they are good for nothing else. On the contrary, they are good for anybody who knows how to recognise and enjoy good work, and who is no more afraid of the moral biting him in such work than he is to be persuaded by the presence of a moral to call bad work good. It is difficult to single out any stories for special praise, but perhaps "Miss Olive's Boys" and "A Golden Wedding" deserve the palm.

Lord Maskelyne's Daughter displays most of the characteristics which that prolific novelist, Miss Kettle, has taught readers to expect in her work. It is not very easy to decide what the attraction of that work is, for Miss Kettle's characters are for the most part rather conventional, and her plots rarely have any particular merit. Probably the secret is to be found in the hearty and genuine love of nature which pervades her work, and which she manages to express in a very fresh and pleasing manner. She tells us that this is the thirteenth volume of her "author's edition" of her books, and that she hopes to add another dozen volumes, most of them new. We have not the slightest objection to offer to this proceeding, and that is more

than we could say in the case of a great many novelists.

Mr. Howe's volume contains two stories of rather unequal merit and attractions. The first, from which the book derives its title, is decidedly readable. It has not much story in it, but gives a lively and obviously faithful account of the experiences of an English family settling in Tasmania a generation or so ago. It very well deserves a place among the numerous conscious or unconscious imitations of *Robinson Crusoe*, of which boys who are good for anything are never tired. Of the other we cannot speak so favourably. "The Adventures of Harry Delane" reverses the picture, and shows the school life of a young Australian in England. Now school stories are uncommonly difficult things to do well, and Mr. Howe is not of the company who have mastered that secret.

Miss Cartmell is, it seems, the author of *The Viking*, a rather eccentric novel, in which we had the pleasure of discovering some merit a year or so ago. We are glad to be able to recognise some more in her present venture, though she has still a good deal to learn in order to put her powers to the best use. *The Mistress of Coon Hall* contains a heroine who is related, but not too closely related, to the Scandinavian young woman who burnt the Bishop in *The Viking*; and a benevolent but queer old lady, who believes in family legends and destiny, but has extremely little respect for modern police regulations and the conventions of society generally. Among the minor personages there is a black kitten which is irrelevant but pleasing. Miss Cartmell has not quite found her way yet, but she seems to be making some progress towards it, if that progress be occasionally "through bush, through briar." *The Mistress of Coon Hall* is, especially in its earlier chapters, by no means devoid of interest.

Messrs. Macmillan have consulted not unwisely Mrs. Burnett's international reputation by bringing out in one volume *That Lass of Lowrie's*, and the Transatlantic study of *Louisiana*. Though the one story is as strongly English in character as well as dialect as the other is American, both display the author's characteristics well. For ourselves we should be glad if there were a less distinct trace of the imitation of Dickens—a model never yet imitated but to the imitator's hurt—in Mrs. Burnett's work, but no one can fail to recognise the real ability to draw character she has shown, and the true vein of pathos she has worked.

Mrs. Blackburne is a tower of strength to Messrs. Moxon's venture of sixpenny novelettes. Not many novelists of the present day have an equal faculty of knocking off lively stories with just enough substance in them to last for a hundred pages or so. The story of *As the Crow Flies* turns upon the evil practices of a base and cold-blooded Saxon who habitually corrects the letters of his beautiful Irish love in red ink, and obliges her to go in for examinations. His fate is worthy of his brutal conduct.

GEORGE SAINTSBURY.

CURRENT LITERATURE.

Sanctorale Catholicum; or, Book of Saints. By the Rev. Robert Owen, B.D. (C. Kegan Paul and Co.) A distinguished scholar and theologian, who, a few weeks ago, was attracting large London audiences by his reputation and his eloquence, has said that a true philosopher in a prison cell with the fifty-five volumes of the *Acta Sanctorum* of the Bollandists would find himself in an earthly paradise. In his Preface Mr. Owen quotes the enthusiastic dictum of M. Renan, and he offers us the following pages as a kind of epitome of this voluminous literature—"a quiet hermitage," whence the reader "may catch heart-feeding glimpses of the vast outlying prospect of the City of God." He had once, he informs us, cherished a more comprehensive design, but was forestalled by the activity of Mr. Baring Gould. The present volume is characterised by one special feature which, as Mr. Owen observes, "differentiates" it from other similar collections in that it includes "just men" who have adorned the Anglican Communion since its severance from the See of Rome. To object to the inclusion of such characters, he not unreasonably observes, on the ground that they were not adorned by *charismata* or supernatural gifts is unfair; and he declares that, "if blamed for honouring the ambiguous merits of Charles Stuart, he objects to the East the cultus of Constantine 'equal to an apostle,' to the West its veneration of the ambitious Charlemagne." Nor is it easy to call in question the justice of the declaration that "the solid, unpretending virtues of a Berkeley or a Johnson are more admirable than the fantastic merits of a host of ascetics about whom the most impudent fictions have been circulated;" but, were it not that the religious enthusiast and the rationalist are often to be found meeting at points arrived at by very different routes, we might be almost startled by the similarity between Mr. Owen's theory and the Comtian veneration of Ideal Humanity. As regards the historical value of such a collection, it may be noted that writers of a very different school from M. Renan—Guizot, for example, and Prof. Stubbs—have insisted strongly on the importance of the later hagiologies as a help to the study of mediæval times, although from this point of view we cannot but admit the correctness of M. Renan's canon—that the right method of classification is not the artificial and fortuitous succession of the Calendar, but that according to epochs and nationalities. Of the literary execution of Mr. Owen's volume it is impossible to speak very highly. His renderings of the original narratives are wanting in chasteness and carefulness of expression, and phrases which recal the modern newspaper paragraph writer are often oddly interspersed in a naked translation of the Latin text. The successful performance of such a task calls, however, it must be admitted, for acquirements and gifts of no common order—the erudition and judgment of a John Henry Newman with the *curiosa felicitas* in diction of a Charles Lamb or a Charles Kingsley. The general appearance of the volume is most appropriate, and the typographical execution excellent.

Shropshire Word-Book: a Glossary of Archaic and Provincial Words used in the County. By Georgina F. Jackson. Part II. (Tribner.) Unlike many works issued in parts, Miss Jackson's Glossary improves as it goes on. We spoke highly of the first number, and are bound to say that the present one is still more worthy of praise. If she finishes it in the careful fashion in which she has begun, it will be one among the three most important local Glossaries we possess. The amount of reading indicated by the quotations from all kinds of recondite sources has been very great, for there is full evidence, which a student cannot miss, that the examples

are not mere scissors-and-paste work such as we come upon in many books of reference of high pretensions, but have really been studied with their contexts. A few examples, it is true (see *jour, ligger, nest*), have been taken at second-hand, but in these cases the immediate source is always unmistakably indicated. Miss Jackson almost always avoids the snare of derivations. This is undoubtedly wise. The duty of a compiler of a local Glossary is clearly to put on record what is heard, and to give such examples, gathered from far and near, as may illustrate the same, not to make guesses as to how such and such words have come into being. A wide knowledge of language and very many other things beside is required before anyone can do more than make a haphazard guess at the parentage of a word. This is proved by some of the very silliest books in human literature which have been written by persons possessing plenty of scholarship of a certain kind, but no knowledge whatever of the laws of language. Miss Jackson explains *kelter* to mean "wealth, accumulated money." She is, we doubt not, right as far as she has gone; but is she quite sure that she has told us the whole truth? In many parts of Northern and Eastern England "*kelter*" signifies "rubbish." We believe this to be its primary meaning, and that "*wealth*" is a secondary and figurative one. Such changes are not uncommon. We have heard and read sermons in which money was called "*dross*" and moral conduct "*filthy rags*." This secondary meaning has, we think, been mistaken for the primary one, mainly on account of Jamieson's guess, for it could be no more, that *kelter* came from the German *geld*. *Graff* is given as "a spade's depth in digging." Does it not also mean a ditch or drain? Symonds, the Civil War diarist, speaks of "a deepe graffe and wide, full of water." The habit of pronouncing "*gold*" as if it were spelt *gould* is certainly older than the time of George IV.; how much older we cannot say, but we believe it to be a genuine dialectic variety of the word, not one of those "good-society" malformations under which all cultivated languages have suffered.

Les Polynésiens: leur Origine, leur Migrations, leur Langage. Par le Dr. A. Lesson. Tome I. (Paris: Leroux.) Dr. Lesson's work claims our attention from the author's long and, so to speak, hereditary acquaintance with the Oceanic races. We may regret, however, that its scope is in a great measure limited to the establishment of his theory as to the origin and subsequent movements of the Polynesian race. Opinion has hitherto, as he points out, been divided between three rival views—first, the advent of the race from the Asiatic continent and adjacent islands; second, an emigration from America; and, third, its origin on a now submerged continent. Dr. Lesson proposes to show that each of these views is untenable, and that the Polynesian race originated in New Zealand, and has spread thence, not only to the various groups it now occupies, but into the Malay Archipelago (where it is represented by the Dyaks and other non-Malay races) and even to the continent of Asia. Many of the author's conclusions run counter to the views now generally held by ethnologists, to whom his terminology will also be unacceptable. Thus, writing of New Guinea, he speaks of "les Papous" as a mixed race produced by the union of "Papua" and "Alfourons," and he attributes a similar origin to the Australians. His assumption that the "Alfourons" are an ethnological entity, and his consequent attempt to define them as such, lead him necessarily, as we venture to think, into some confusion. It would be unfair to discuss his arguments until we have the whole work before us. As yet he has not succeeded in proving the assertion which he persistently and rather tediously reiterates;

some of the facts he adduces, for instance, to prove a migration northward and westward from the southern extremity of the Polynesian area would equally prove a movement in the opposite direction; but the whole subject is beset with difficulty, and is, perhaps, incapable of demonstration.

An East End Chronicle. By the Rev. R. H. Hadden. (Hatchards.) In this little book Mr. Hadden has sketched with sufficient brevity the parochial fortunes of St. George's-in-the-East during its hundred and fifty years of separate existence as a parish. The thing is necessarily done rather in the fashion of a newspaper article than of a regular parish history. But it is far from unamusing reading, and any profits which it earns for the organ fund of the parish church will be honestly got.

The Political Comedy of Europe. By Dan Johnson. (Sampson Low and Co.) Mr. Dan Johnson, of Denver City, has had a sufficiently happy inspiration, and might have carried it out in a worse manner. The "Political Comedy of Europe" is a sketch thrown into dramatic form of the history of Germany during the last twenty years. Prince Bismarck plays the part of first fiend; and, after a rapid survey of the Danish, Austrian, and French wars, a *finale* in which Germany attacks Austria and England, and is grievously discomfited abroad at the same time that civil war breaks out at home, accomplishes the *peripeteia* necessary to poetical justice. The chorus of the play is furnished by a German-American named Flitz, who finally appears in a mysterious re-union of the delegates of universal democracy in the Bernese Jura, arranged on the model of the Grütli meeting. Mr. Johnson writes with some force, though with an evident *parti pris*, and he makes his numerous characters work together for the dramatic purpose of his book in a manner which more celebrated dramatists have often failed to attain. But is "billion" American for "million"? It certainly is not the English for that now familiar word.

Within a Circle. By Emily Marion Harris. (Marcus Ward and Co.) This little collection of essays by the author of *Estelle* is devoted to advocating the moral and material interests of the poorer Jews resident in this country. Our author has evidently an intimate practical acquaintance with the woes and wants of her less fortunate brethren, and this suggestive little book will doubtless furnish many valuable hints to the wealthy and benevolent among her coreligionists.

Magic Morsels! Scraps from an Epicure's Table. By Harry Blyth. (J. N. Roberts.) This is a chatty and amusing little collection of anecdotes about the table, rather than a formal treatise on the culinary art, though the *gourmet* will be able to pick out here and there some "straight tips." Our author strongly objects to "meat teas," or, indeed, to the use of tea at any time as a beverage when solid nutriment in the shape of animal food is partaken of. He says, and from our own gastronomic experience we are strongly inclined to agree with him,

"All physiologists are agreed that the tannin in tea very seriously impedes the assimilation of muscular fibre. . . . Tea has a distinct value in the science of practical dietetics. Taken after a heavy meal, say at the end of a couple of hours, it gently stimulates the later processes of digestion; drunk with the food, it only obstructs."

Considering the heavy breakfasts it is so much the fashion at present to indulge in, washed down by liberal potations of the cheering cup, one cannot wonder at the prevalence of that hydra-like monster—dyspepsia. Mr. Blyth has got together in this little volume a most quaint and curious array of anecdotes concerning the gastronomic affinities and antipathies of actors,

eminent and obscure, which will no doubt prove amusing reading for all who have any taste for sock and buskin.

NOTES AND NEWS.

MESSRS. RIVINGTON have nearly ready for publication a volume of Translations of Hymns of the Latin Church by Mr. D. T. Morgan, several of whose translations have appeared in *Hymns Ancient and Modern*.

We understand that Mr. Marvin's translation of Col. Grodekoff's *Ride to Herat* will be in the hands of the public in the first or second week in June.

MESSRS. HURST AND BLACKETT have in the press *Monsieur Guizot in Private Life (1787-1874)*, by his daughter, M^{me}. de Witt, translated from the French by Mrs. Simpson, in one volume; and a second series of *Tales of Our Great Families*, by Mr. Edward Walford, in two volumes.

THE secretary of the Smithsonian Institution, Washington, U.S., is desirous of obtaining any information which might be of use for the contemplated Memoir of its founder, James Smithson, F.R.S. Communications should be addressed to Prof. Spencer F. Baird, care of Mr. William Wesley, 28 Essex Street, Strand.

SIR ROWLAND HILL spent some of his later years in writing a *History of Penny Postage*. In this work is naturally included a history of his own life, from the year when he first turned his thoughts towards postal reform to the date of his retirement from the public service. It was Sir R. Hill's wish that his nephew, Dr. G. B. Hill (the author of *Dr. Johnson: his Friends and his Critics*), should edit this work, and should, at the same time, render it a complete record of his whole career by writing his Life in those years which were not included in the *History of Penny Postage*. He desired, moreover, that the book should be published with as little delay as possible after his death. Messrs. Thomas De La Rue and Co. have the work in preparation, and it will be ready for publication early in the autumn of this year. It will be brought out in two volumes octavo, and will contain a portrait of Sir R. Hill etched by M. P. Rajon, beside other illustrations.

MESSRS. W. SWAN SONNENSCHNEIN AND ALLEN will publish shortly a magnificent royal folio volume, containing twenty chromo-lithographic plates, printed in from fifteen to eighteen colours in the highest style of Parisian art, entitled *Glimpses of Bird-Life*, the descriptive text being from the pen of Mr. J. E. Harting, the eminent ornithologist. The artist, Mr. Robert, is himself a well-known naturalist. The colour-printing has been entrusted to the firm of Lemer cier et Cie., of Paris.

THE fourth volume of the German edition of Sir Theodore Martin's Life of the Prince Consort has just been published by the well-known firm of Perthes, of Gotha. Herr E. Lehmann is the translator.

MESSRS. MARCUS WARD AND Co. will shortly publish a novel, in two volumes, by M. E. Fraser-Tytler, entitled *Grisel Romney*.

A Modern Greek Heroine is the title of a new novel to be shortly issued by Messrs. Hurst and Blackett.

Fulgentius: with Poems Old and New, is the title of a new volume, to be shortly published, by Mr. Montgomerie Ranking, author of *Fair Rosamond*, *Bjorn and Bera*, &c.

MESSRS. RIVINGTON will publish the *Lectures on Everlasting Punishment*—now in course of delivery on Sunday afternoons at St. James's,

Piccadilly, by Dr. Goulburn, the Dean of Norwich—immediately after the delivery of the last lecture; also a new and revised edition of *England the Remnant of Judah and the Israel of Ephraim*; or, a *Hebrew Episode in British History*, by the Rev. F. R. A. Glover, M.A.

A PAMPHLET interesting to Cambridge men has just been published by E. Johnson, of Cambridge, on *The Origin and History of the Mathematical Tripos*. The writer, W. W. R. B., of Trinity, puts the origin of the Senate House examination about the year 1730, and shows how it gradually superseded the old "acts" or disputations that students had to keep for their degrees, so that after 1779 it became the sole test by which candidates were judged. A very clear and concise account is given of all the later changes up to the present time, and we are told that the tripos takes its name from the *tripos*, or three-legged stool, on which the bachelor who represented the university sat to dispute with the first questionist to be admitted to his B.A. on the chief degree days. The senior and junior "optimes" get their name from the phrase in which the examiner or moderator complimented a good opponent after the eighth argument in his act: "*Domine opponens, optime disputasti*." The mathematicians' Latin may be judged of by the order of Farish, one of the moderators in 1783, when he saw a stray dog in the Senate House: "*Verte canem ex!*"

THE phoneticians of the Philological Society have at last come round to the common-sense view that the only way to bring about a reform of our spelling is to do it gradually, and not keep on all the present absurdities till a perfect system can suddenly be substituted for them. The society, at its anniversary meeting last Friday, resolved that it would begin, as its president recommended, by asking Mr. Henry Sweet—who suggested the plan—to draw up a list of all the words whose spelling has been spoilt by false etymology or false analogy—like *island* for *iland*, *aggrive* for *agrove*, and *could* for *coud*, &c.; and of those words which contain unnecessary letters—like *foreign* for *foren*, *lead* for *led*, &c.—with the revised spellings that he would propose for them. The society would then meet and discuss these forms, and, after settling them, would recommend their adoption by the society's members in its *Transactions*, &c., and by the public. Mr. Sweet undertook to prepare the list, and he hopes that it may be settled and issued in July next, as so much of the preliminary work has been done by the American and other spelling reformers.

MESSRS. KERBY AND ENDEAN are about to publish a lecture recently delivered by Sir Joseph Fayrer at the Royal Indian Engineering College, "On the Preservation of Health in India."

THE French Government has allotted the necessary sums for the following missions:—M. Homolle, for the continuation of the excavations which he has undertaken at Delos, with M. Nénot, in his capacity of architect; and M. Kellien, to collect the traces of the ancient Breton poems the text of which has been published by M^m. de la Villemarqué and Luzel.

M. CALMANN LÉVY is preparing for publication the correspondence of George Sand.

PROF. JOH. STORM, of Christiania, has been appointed representative of Norway at the International Literary Congress to be held at Lisbon in June. It is to be hoped that the learned Romancist and phonetician will take the opportunity of adding to our scanty knowledge of Portuguese pronunciation and the colloquialisms of the language.

PROF. JOH. STORM has completed the MS. of his German recast of his *English Philology*, which will be double the bulk of the Norwegian original.

THE *Revue Critique* of May 17 contains a review of part i. of Mr. Furnivall's edition of Stubbes' *Anatomy of Abuses* from the competent pen of Dr. J. J. Jusserand.

THE firm of Weigel, in Leipzig, will publish in the course of this and the following year a series of *Germanic Grammars* by the following writers:—Old and Middle English (separately), by Prof. ten Brink, of Strassburg; Old Norse, by Dr. Oscar Brenner, of Munich; Old High German, by Dr. R. Kögel, of Leipzig; Middle Low German, by Dr. A. Lübben, of Oldenburg; and Old Frisian, by Dr. H. Müller, of Kiel.

THE Accademia di Conferenze Storico-giuridiche of Rome has begun to publish its periodical journal, and has given to the world the first two parts of the *Studi e Documenti di Storia e Diritto*. The collection is very carefully executed, and contains some important contributions by well-known scholars. It opens with the first part of an essay by Prof. G. B. de Rossi on the funeral eulogy of Turia pronounced by her husband, Q. Lucretius Vespillo, who was Consul in the year 735 A.U.C. (cf. *C. I. L.*, vi. 332). This is followed by a monograph by Prof. Alibrandi on some fragments of the writings of the ancient Roman jurists. Then come an essay by Prof. C. L. Visconti on the *quinquiduum* and *tressis* in the Vatican collection of medals; some remarks by Prof. C. del Re on a new MS. of the commentaries of Bulgaro on the *de regulis juris* of the Pandects; a letter from Clement XI. to the Duke of Parma and Piacenza, edited by Prof. G. Tomassetti; and an essay by E. Stevenson on the basilica of S. Sinforosa on the Via Tiburtina during the Middle Ages. The publication of the following collections of documents has also been taken in hand:—The statutes of the corporation of the merchants of Rome, edited by Prof. G. Gatti; and the Register of the church of Tivoli, edited by F. D. Luigi Bruzza.

THE Queen of Greece has written an article advocating the maintenance of the Greek nunneries.

MR. ALBERT CRANE, of New York, has offered to build at Quincy, Massachusetts, on behalf of his family, a library building as a memorial of his father, Thomas Crane. The town of Quincy has accepted the offer, and has voted upwards of £2,000 for a site. The building will be called the Crane Memorial Hall.

OUR Hungarian contemporary, the *Journal of Comparative Literature* ("Összehasonlító Irodalomtörténelmi Lapok"), beside its usual allowance of interesting polyglot contributions, in the bi-monthly number for April 15 has an extra title-page in honour of the centenary of the Buda-Pesth University—founded by Maria Theresa—and these appropriate elegiacs:—

"SINGIDVNVN ET VYDAPESTVN ET MOENIA CLARA
VIENNAE

TRES VRBES ORNANT LITORA DANVBIL.
OMNES DOCTRINAE MATRES: HAEC SARMAICORVM,
HAEC GERMANORVM, HAEC HVNGARIENSE DECVS.
OMNES DOCTRINAE MATRES—AT TV VYDAPESTVM,
PRINCEPS SIS NOBIS DVX ET AMICA SALVS."

M. E. BEAUVOIS has just completed in *Polybiblion* a series of learned bibliographical articles on "The French and German Languages and Literatures in the Grand Duchy of Luxemburg."

WE are requested to state that Mr. W. J. Loftie's pamphlet on *The Table of Abood* was not "privately printed," but is a *tirage à part* from the new quarterly number of the *Archaeological Journal*.

WE have received the *Report of the Seventh Annual Conference of the Association for the Reform and Codification of the Law of Nations* (Clowes); *A Practical Method for the Constitu-*

tional Union of the United Kingdom and the Nine Parliamentary Colonies (Stanford); *Pilgrim Memories*, by J. S. Stuart-Glennie, third edition (Moxon, Saunders and Co.); *Hand's Aesthetics of Musical Art*, trans. W. E. Lawson, Book I., second edition (W. Reeves); *The Gifts of Civilisation*, by Dean Church, new edition (Macmillan); *Madonna: Verses on Our Lady and the Saints*, by the Rev. Matthew Russell, S.J. (Dublin: Gill); *The Forgotten Truth*, by the Rev. C. Bullock (*Hand and Heart Office*); *Principles and Portraits*, by C. A. Bartol (Boston: Roberts); *British Dogs*, Part X. (*Bazaar Office*); *Practical Trapping*, by W. Carnegie (*Bazaar Office*); *Bicycles and Tricycles of the Year*, by H. H. Griffin (*Bazaar Office*); *A Catechism on Geology and Sacred History*, by E. A. Peakome (Belfe Bros.); *A Critical Outline of the Literature of Germany*, by A. M. Seles, second edition, revised and enlarged (Longmans); *The Protagoras of Plato*, ed., &c., W. Wayte, third edition (Bell); *Second Report of the Executive Committee of the Duchess of Marlborough's Fund* (Dublin); *Jordan's Nibelunge*, 1. Lied, zehnte Auflage (Frankfurt-a-M.: Jordan); &c.

MAGAZINES AND REVIEWS.

THE *Deutsche Rundschau* for May is an exceptionally good number. It has the beginning of a story by Herr Rudolph Lindau, "Die Kleine Welt," in which the scene is laid in Japan, though the characters are English. Herr Preger contributes an exceedingly interesting article on "Psychogenesis;" he strives to investigate the steps in the process of the development of the will and the understanding in children. His conclusions are founded upon a careful observation of the movements of children, and his connexion between these and the expression of emotions is highly ingenious. Herr von Sarburg writes an appreciative notice from the Liberal Catholic point of view of "Felix Dupanloup," the late Bishop of Orleans. Herr Hirschfeld gives a brief sketch of the history and capacities of the "Island of Cyprus," and points out that history for 3,500 years, from Thutmes III. to Queen Victoria, has connected the occupation of Cyprus with the lordship of the East. Herr Ebers contributes a valuable résumé of the "Modern Results of Egyptology," and Berthold Auerbach writes a little idyllic picture of a day's wandering last summer under the title of "Ein Tag in der Heimath."

In the *Archivio Storico Italiano*, Signor Morosi begins a paper on "The Motives of Diocletian's Abdication." The first instalment, which is in the current number, consists of an examination of previous theories, and points out the difficulties which each of them raises. Signor Rolando writes on a difficult but very important subject, "The Political Geography of Imperial Italy in the Ninth and Tenth Centuries;" by "Imperial Italy" he means that portion of Italy which was under the Empire, and he endeavours to fix the geographical limits of the several provinces and to note their variations.

THE *Revue Historique* has an excellent article by M. Vast on "The Siege and Capture of Constantinople by the Turks;" it is grounded on authorities which have come to light since the time of Gibbon and Hammer, especially the writings of George Scholarius and Oritobulus, who wrote in Constantinople in the reign of Mahomet II. M. Maury, in a slight article, "Une Réhabilitation de César Borgia," discusses the recent works of Gregorovius and Alvisi, and concludes that Caesar Borgia is not so black as he has generally been painted, and that his misdeeds were those commonly recognised in the politics of his age. The other papers in the *Revue* are continuations.

THE April and May numbers of the *Monats-*

schrift für Geschichte und Wissenschaft des Judenthums contain a learned and well-written essay on the life and works of Ibn Djanakh (Abu'l-walid), the celebrated Jewish grammarian and lexicographer, born at Cordova towards the end of the tenth century. The author, M. Joseph Derenbourg, has lately brought out an edition of the Arabic text, with a translation of Ibn Djanakh's smaller works and treatises. His son, M. Hartwig Derenbourg, has also shared in this labour of love, which contributes so much to our knowledge of the best school of early Jewish scholarship.

THE May number of *Le Livre* contains the usual and extremely useful articles of contemporary bibliography. But the section intended to possess more permanent value has no article which can be said to be of the first interest. Such articles as it does contain, however, are all fairly attractive. A series of "Lettres Pédantes," written by a provincial bibliophile, under the scarcely probable name of Dr. Chrysostom Mathanasius, begins well, with a description of a book of horoscopes, &c. The Paris archives and municipal libraries form the subject of another paper; there is a *chronique* of recent book sales, which perhaps should have fallen by rights into the modern portion; and a paper describing two newly discovered Groliers which it is said will come to the hammer shortly. The illustrations of the month are perhaps more attractive than the letterpress. One is a full-size *facsimile* of Victor Hugo's autograph MS., giving a page from *Religions et Religion*, from which it appears very clearly that the great poet is not of those who never blot a line. The other is an etching of a silver-gilt binding of the early part of the last century, an exquisite piece of work both as concerns the original and the reproduction.

OBITUARY.

THE news of the death of Mr. Henry Ashworth at Florence on the 17th inst. reached this country a few days ago. He was the son of Mr. John Ashworth, of Turton, near Bolton, and was born there in 1795. From early manhood he was connected with cotton spinning, and deeply interested in the progress of Lancashire. One of his first ventures in the literary world consisted of a series of *Statistical Illustrations* (1842) of the Duchy of Lancaster, with especial reference to the Hundred of Salford. He threw himself with vigour into the agitation against the Corn Laws, founding, and throughout its existence actively supporting, the celebrated Anti-Corn Law League. He published several pamphlets on subjects dear to the hearts of Manchester men, but his most ambitious publication contained his recollections of Mr. Cobden and the history of the League. It was published in 1877, and passed into a second edition in the following year.

As we have already mentioned, M. Paul de Musset, elder brother of the great poet, Alfred de Musset, has just died in Paris at the age of seventy-six. A writer of real talent and keen wit, M. Paul de Musset was eclipsed by the brilliancy of his brother's glory. Still, educated readers highly appreciate the powers of narration which he displayed in the field of historical romance. We have from his pen *Mignard et Rigaud* (1839), *Guise et Riom* (1840), *Les Femmes de la Régence* (1841), *Les Originaux du XVII^e Siècle* (1847). His chief success was due to the novel of *Lui et Elle*, which appeared in 1859, in answer to George Sand's novel, *Elle et Lui*. The *Elle* and the *Lui* concealed the names of the famous novelist and the famous poet. Everybody knew that they had loved, and that their love had ended unhappily. George Sand told the story of Alfred de Musset's misdeeds. Paul de Musset undertook to tell the story of George

Sand's misdeeds. It was, it must be confessed, a rather dreary spectacle, this battle over a coffin. Paul de Musset was more happily inspired when he published, four years ago, a biography of his brother. We could have wished it more complete; but was it possible for a brother's pen to set down the whole truth concerning the author of *Rolla*? M. Paul de Musset was likewise the author of *La Revanche de Lauzun*, played at the Odéon in 1856.

THE OBERAMMERGAU PASSION-PLAY.

THE unique representation of the Passion, crucifixion, and ascension of Christ in an open-air theatre, built after the old Greek model, took place, for the first time since 1871, on Whit Monday, May 17, and was repeated on the following day on account of the large number of persons who could not obtain admittance on the Monday.

The text and music as now performed are substantially the same as in 1850, 1860, and 1870-71. The text is that of Alois Daisenberger, formerly parish priest of Oberammergau, who improved on the version of Ohmar Weiss; the music was written by the village school-master, Rochus Dedler, in the year 1810.

The two most remarkable features of the *Passionspiel* are the introduction of a chorus, which, as in the Greek drama, acts a mediating part between actors and audience, and the employment of *tableaux vivants* to illustrate each event in the life of Christ by a typical event from Old Testament history. The chorus consists of eighteen persons and a choragus, who ascend the front or open stage at the beginning of each act; the choragus addresses a short speech to the audience, setting forth the subject of the act; the chorus introduces the *tableau* or *tableaux* with appropriate music, and then leaves the stage to make way for the actors. The drama proper is, therefore, relieved by intervals of music and pictorial illustration, both related to the main action. The value of this arrangement is great; the modern stage substitutes for it irrelevant music and incongruous conversation.

The text of the *Passionspiel* on the whole follows the gospel narrative very closely; and seems specially modelled on the Gospel according to St. John. The play is Christian, not specially Catholic, in tone; thus all merely traditional or legendary episodes are avoided, except that of Veronica, in the fifteenth act; and here no miraculous impression is left upon the handkerchief with which Christ wipes his brow. The debate in the Sanhedrim in act II. no doubt contains much that is not recorded in the Gospel of St. John; but this was unavoidable if the debate, of which we have only a meagre account, was to be represented on the stage at all. The play here rather assists the imagination of the reader of the gospels than presents him with any new incidents. The same may be said of the scenes in which the despair of Judas is developed. On the other hand, there are points in which the version of the Passion-play differs, perhaps unnecessarily, from the gospels. Thus Judas, instead of coming forward of his own accord with the offer of betrayal, is solicited by emissaries from the Sanhedrim; and after the Resurrection, the priests enter, led by Caiaphas, and attempt to bribe the soldiers who have watched by the sepulchre to spread the story of the stealing of the body of Christ by his disciples. Some of the speeches, introduced in various parts of the play to meet the demands of dramatic necessity or propriety, are exceedingly beautiful and poetical. Such is that of Mary Magdalene, where she parts from her master at Bethany, "O, Du einziger Freund meiner Seele," and again, as she kneels at the foot of the cross, embracing it and covering it with

her long black hair, "Mein Herz hängt mit Dir am Kreuze."

The conception of the whole play is dramatic, and well worked out. The first scene shows us Jesus, in the hour of his greatest popularity, brought into violent collision with Judaism, as represented by the priests and Pharisees on the one hand and the offended money-changers and traders of the Temple on the other; we have here the elements of the coalition which ultimately brought about his death. The last act represents the final triumph of the Redeemer. Side by side, through successive scenes, we follow the life of Christ, and the steps by which his enemies compass his destruction; and the dramatic interest is well sustained throughout.

The characters of Judas and Pilate are excellently drawn; one understands the men better after witnessing the play. Judas is represented as having attached himself to Christ from motives of gain, and in expectation of the speedy coming of a temporal kingdom. Being disappointed at the delay of his hopes, and filled with resentment at the reproach which he receives in the house at Bethany, he is ready to lend an ear to the proposals of one of the money-changers sent by authority of the Sanhedrim. His despair and suicide are vivid and effective scenes.

Pilate is presented with a success which leaves nothing to be desired. His refusal to condemn an innocent man, his sincere admiration of the character and noble bearing of Christ, his melancholy and pitying speech, "Was ist Wahrheit?" give us one side of his character; but he is not courageous enough to be the only friend of the friendless, and when he is disappointed in his expectation that the people will support Christ—his speech when he asks them whether they will prefer one of the vilest of men to the pattern of all excellence is very fine—he yields to the combined fury of priest and mob. The part is admirably played by Thomas Rendl; his enunciation is clear and free from dialect, and his presence commanding.

The Christ of Joseph Maier is a successful performance of an extremely difficult part. His personal appearance is eminently well adapted for the character, though the dark brown hair is at variance with our traditional picture of Christ. Some who witnessed the performance of 1850 regard the impersonation of Tobias Flunger as superior in mildness and sweetness, though they admit that Joseph Maier has a grander presence. The latter is always dignified, and sometimes rises to the sublime. Nothing could be better than his acting in the scene of the "Last Supper," where the washing of the disciples' feet presents such great difficulties; and his long silence in the scenes before Caiaphas and Herod is most impressive. The only fault that one has to find is with his voice, which is high pitched and somewhat monotonous, occasionally almost giving one the impression of apathy. But his rendering of the last words in the Crucifixion scene, "Es ist vollbracht: Vater, in deine Hände empfehle ich meinen Geist," is magnificent. Throughout this scene the expression of pain is finely moderated, like that upon the face of Laocoon; there is not much blood on the hands or feet, and the spectacle of this living crucifix is terribly beautiful. A good deal has been said and written about the intense effort which it must require on the part of Joseph Maier to sustain himself for nearly twenty minutes on the cross. This seems to be a mistake. His feet rest upon a small board, and there are hooks, not perceived by the audience, by which the body is prevented from falling forward and the arms supported.

On the whole, then, we may endorse the verdict of Edward Devrient, that the Ammergau play proves that the Passion of Christ can be represented dramatically on the stage, in

spite of the fact that he only suffers and does not act. Through his voluntary election of suffering the indignities and wrongs which he endures appear as so many great actions.

The least well-sustained parts are those of the Virgin and Mary Magdalene; the latter especially seems qualified neither by the gift of acting nor by adequate physical endowments. Caiaphas and the priest Nathanael are excellently played by Johann Lang and Sebastian Lang, though the former seemed to be suffering from a severe cold, and the speech of the latter is not always free from a slight touch of Bavarian *patois*.

A word of praise must also be given to the hand which has directed the whole performance. Here again we observe the studied moderation which takes care so to present the terrible as not to make it horrible. In this respect the scene where Christ is scourged by the soldiers, that in which he is struck and thrown down, and that of the suicide of Judas are eminently free from any offence against good taste. The blows fall lightly or do not strike at all, and the curtain falls as Judas ascends the tree. Again, the bloody sweat of the garden of Gethsemane—the literal presentation of which is demanded by the realism of the whole play—is so managed as not to be hideous. A few things are disappointing—the appearance of the angels throughout the play, and the incongruous effect of the *tableau* representing Jonah cast up from the whale's belly—the supposed type of the Resurrection. It would be well, too, if the descent from the cross could be managed more speedily; and some of the *tableaux* are not seen to full advantage owing to the depth of the stage, which is lighted only from the front. For the *tableaux* the stage should slope upwards, and be lighted from behind.

The music of Dedler is generally pleasing and sometimes very effective. Specially beautiful are the passages—

"Ach Sie kommt, die Scheidestunde" (act III.).

"Doch dies Gewächse der Natur" (act V.).

"Ihr Felsen Gabaon" (act VII.).

"Seht, welch ein Mensch" (act IX.).

The solos were not powerfully rendered, and the performance of the band is decidedly capable of great improvement.

Perhaps the most successful part of the whole Passion-play is the *tableaux vivants*, which take place within the smaller or central stage. Great artistic skill is shown in the attitudes and grouping. Some of the best are the expulsion of Adam and Eve from Paradise, the parting of the young Tobias from his parents, the feeding of the Israelites by manna, and the return of the spies bringing the grapes of Eshcol from Canaan. The last two are types of the Host and Chalice of the Eucharist respectively, and in each of them several hundred persons appear. Other excellent ones are Samson derided by the Philistines and Adam tilling the soil in the sweat of his brow—the latter the type of the agony of Gethsemane; and, last, but not least, the treacherous kiss given by Joab to Amasa—the type of the betrayal of Judas. The lovely music, with its refrain of "Ihr Felsen Gabaon," the echo-answer which comes from behind the rocks, and the fine group on the stage convey together an impression never to be forgotten. In these *tableaux* the Ammergauers have an opportunity of showing their sense of form, a sense developed by the art of designing and carving beautiful figures in wood and ivory to which the people have been for generations devoted. And this skill in design is seen to be the special excellence of the Ammergauers, not merely in the *tableaux*, but in the play itself, many of the most effective scenes of which depend more upon grouping than acting.

The theatre of Ammergau has been often compared to a Greek theatre; and the comparison is no doubt justified by its stage for

the chorus—like the orchestra in every respect except in not being rounded or on a level with the stage proper—its roof of sky opening up a view of the surrounding hills and its immovable house of Pilate and house of Annas, reminding one so forcibly of the fixed house of Cleon or of Hegio on the Roman stage. But it would be more exact to describe it as a Greek theatre without the advantages which a Greek theatre possessed for seeing and hearing. The distance from which the voice has to reach the occupants of the far seats is as great; but no arrangements are made for increasing or confining the sound; and in a Greek theatre the tiers of seats ascended at such an angle as to enable every spectator to see with comfort over the heads of those in front of him, as the ruins at Syracuse bear witness. This cannot be said of the Ammergau theatre—at least not of the most expensive places. The stalls (*Logen*) are so placed and built as to make seeing difficult and hearing almost impossible, except in the case of a few actors; and the only chance for the spectator is to get into one of the uncovered and backless seats in front, which are priced at two shillings. The authorities publish a "Textbuch" containing the words of the choral songs, but they take every precaution to prevent the publication of the words of the dialogue—evidently fearing that the play might be reproduced elsewhere. One is therefore entirely dependent upon one's ears for the due appreciation of this highly elaborated drama.

CORRESPONDENCE.

"SAINT LOY" IN CHAUCER.

Cambridge: May 24, 1880.

In a letter upon Chaucer's Prioress's Nun-Chaplain (ACADEMY, May 22, p. 385), Mr. Furnivall takes occasion to say that "no one has been able to make out who St. Loy was. St. Louis, St. Eligius, &c., have been suggested," and so on.

Mr. Furnivall ought to know perfectly well that his "&c." means nothing. No solutions beyond the two of "St. Louis" and "St. Eligius" have ever been made. Of these two, the former suggestion is a mere reckless guess, and simply false. The latter is well known, at least to some students of Chaucer, to be the right solution; and it was pointed out forty years ago at least. I need hardly insist that the suggestions of a modern "Sister" about the oaths of the Middle Ages are worthless, because it is to her credit that I say so.

In Warton's *History of English Poetry*, vol. ii., p. 200, ed. 1840, the solution is given; with a statement that the name occurs in another passage in Chaucer and in Sir David Lyndesay's *Monarchie*. I quote these passages, and another from Sir T. More:—

"I pray god saue thee and seint Loy."

Chaucer, Six-text edition, ed. Furnivall, group D, 1564.

"Saunt Eloy he doith straitly stand,
Ane new hors schoo in tyll his hand."

Sir D. Lyndesay, *Monarchie*, 2299.

"Seint Loy we make an horsleche, and must let our horse rather renne vnshod and marre his hoofs, than to shooe him on his daye, which we must for that point more religiously kepe high and holy then Ester day."

Sir T. More, *A Dialogue*, &c., b. ii., c. 10, ed. 1577, pp. 194 f.

This affords positive proof that *Loy* is short *Eloy*; and *Eloy* is the French *Eloi*, the usual name for St. Eligius, who is well known to be the patron saint of goldsmiths (and afterwards of farriers), as is shown at length in one of the volumes lately issued by P. Lacroix—I think it is in the one that treats of Science and Art in the Middle Ages.

The life of St. Eligius is duly given in Butler's *Lives of the Saints*, Dec. 1. I transcribe one rather curious passage:—

"St. Owen relates many miracles which followed his death, and informs us that the holy abbess, St. Aurea, who was swept off by a pestilence, . . . was advertised of her last hour some time before it, by a comfortable vision of St. Eligius."

Chaucer's meaning is plain enough. The Prioress, in "shotting her discourse" in the usual mediaeval manner, abstained from using sacred and Scriptural names. But the carter did not; he prayed to God and St. Loy both.

It is interesting to compare the "Freres Tale," where the old woman, visited by the summoner, swears by "Christ Jesu, king of kings," and then "by lady saint Mary," both strong expressions for an old lady, and even more so than the summoner's exclamation "by the sweet saint Ann," in return for which the old woman at once commits him to "the devil rough and black of hue."

I think this is enough to show that, according to Mr. Furnivall's own advice, which I heartily endorse, it is best to "leave the text alone, and wait for someone else with a better head."

WALTER W. SKEAT.

7 Coombe Terrace, Teignmouth: May 22, 1880.

I take the opportunity afforded by Mr. Furnivall's having brought forward this subject

in to-day's ACADEMY to supplement the comments made by the Benedictine nun by an explanation which occurred to me some time ago (and which, as far as I know, has not—though obvious enough—been proposed before), but which seemed hardly worth publishing until the question again came under discussion.

I quite agree with the remark of the Sister who has given the valuable information communicated by Mr. Furnivall, that "Seint Loy" was no real name. Besides the fatal objection that swearing by St. Eloi or St. Louis would be nothing out of the common, it would be very odd that the initial *e* of *Eloi* (whose omission, besides, would spoil the metre) should be lost in so many MSS.; while *Louis* is at once excluded by the facts that in Chaucer's time, as now (*Lewis*), this name was dissyllabic, and had final *s*, whereas *loy* rhymes on *coy*. I believe *seint loy* to be nothing but the French *sainte loi* (Latin *sanctam legem*), a very common expression for the Scriptures, or rather for Christian doctrine; unfortunately I have no books here, or I should be able to give several instances of the phrase *par la loi sainte*, and of similar expressions referring to heathen creeds. The word *loi*, in its earlier and Norman form *lei*, was borrowed, with the meaning it has above, long before Chaucer's time; Middle-English *lay* and *loy* (with their compounds *allay* and *alloy*) are French doublets, like *peise* and *poise*, *convey* and *convoy*.

Chaucer, as is well known, preserves in various half-French phrases the dissyllabic feminine form *sainte* of the Old-French adjective *saint*, which accordingly is written *seinte* in these cases in the best MSS. of the *Canterbury Tales*; that few or none of them (if I recollect right) have the final *e* in this case is probably due to the fact that, as *loi* has nothing in its meaning to show an Englishman its gender, there was only the metre (a frail protection) to prevent the scribes replacing the uncommon *seinte* by the common *seint*. In any case (as mentioned above) an unaccented *e* is here wanted for the metre; the attempt to make the line scan by resolving *nas* into *ne was* is, I believe, creating a philological monstrosity, and I can speak no more favourably of tacking a final *e* on to *ooth*, and explaining it as genitive plural instead of nominative singular. Moreover, Chaucer's metre, a compromise between the Romanic and Teutonic systems, is of that primitive character which is closely associated with the simplest musical rhythm. In his heroic verse the five even syllables (allowing for the cases of truncated first foot and of trisyllabic feet) would almost all be primarily or secondarily accented if the line were read as prose, while the odd syllables would, in most cases, be quite unaccented (such dissyllables as *April*, *wynnyng*, constituting nearly all the exceptions), so that we generally get a monotonous five-bar line, each bar consisting of an unaccented and an accented note. I need hardly point out that the emendations *ne was* and *oothe* spoil this rhythm by putting the naturally unaccented *was* (or *nas*) and *by* into stressed places, and the accented *seint* into an unstressed one; whereas the reading *seinte*, by putting *but* and *seint* into stressed places, maintains the agreement between the ordinary prose rhythm of the line and the five-measure rhythm in which Chaucer wrote. As to meaning, grammar, and metre, therefore, the explanation of the Prioress's oath as the French *sainte loi*, and the consequent reading *seinte loy* ("Hir' gretteste ooth nas but: 'By seinte loy!'", appear to me to deserve the favourable consideration of Chaucer students.

HENRY NICOL.

London: May 24, 1880.

I venture to think that we can hardly dispose of the word "oath" in such an arbitrary manner as that which supposes S. Eloy to be a

fable or a nonentity, so that to swear by it would be irreprehensible. An oath is an oath, but I do not suspect "Eglantine" of swearing. It seems to be an ejaculation, or rather invocation, of S. Elói by a nervous rider, in the sense of "marry come up," S. Elói being invoked or horses (Becon, i. 139, ii. 536, where a new Saint "Sweetlad" is mockingly introduced); and people "commended themselves and horses to God and S. Loye" (Hooper, i. 310), S. Loye having constructed a saddle of peculiar excellence for King Dagobert. Is not this a simpler explanation of the expression?

The Homilist says, "S. Loy is the horse leech. If we remember God sometimes yet we join to Him another helper using these sayings, such as learn 'God and S. Nicholas be my speed,' such as neese 'God help and S. John,' to the horse 'God and S. Loy save thee.'" What Chaucer means is that the Prioress did not abuse God's holy name, but simply called on S. Loy. The carter cries in the "Friar's Tale" to his horse Lyerd (like Ursewick and Grisell, the name of one of the king's trotting horses, Acc., 44, Edw. III.), "I pray God save thy body and Saint Loy."

S. Loy is depicted on the rood-screens of Potter Heigham and Hempton; an hospital at Cambridge and the church of Darrington are dedicated in his honour, as in some particulars he corresponded to our own St. Dunstan.

Acting on Mr. Furnivall's hint that light could be thrown by those who have studied the conventual system in England upon those portions of Chaucer which relate to the subject, I may point out that

1. The prioress was a conventual not a claustral prioress—that is, a prioress not having an abbess as superior. The Constitutions of the Legate Othobon say:—"Abbatissa, seu priorissa, et caeterae quae monasterio praesunt, monasteria non exeant nisi pro evidenti monasterii utilitate vel necessitate urgente et cum societate honesta" (tit. 53); hence she was accompanied by her nun-chaplain, who was "testis innocentiae suae," as in the case of the chaplain of the abbot or prior (Lyndw., 205). Lyndwood observes:—"Etiam abbatissa monasterium exire non debet nisi cum honesta et decenti societate, et tamen non nisi ex certa causa," and adds that in England greater liberty was allowed to nuns than was permitted by the Roman canon law, which restricted the indulgence to two cases—serious illness and the duty of doing homage or taking an oath of allegiance (Prov., lib. iii., tit. 20).

2. As she had been trained in the school of Stratford atté Bow she was a Benedictine. At Minster, Sheppey, I found at the Dissolution mention (independently of the curate or parish priest) of two chaplain-priests who served the conventual altars and the confessor's chamber over the gatehouse. Usually the title of prioress was given to the superior of the nunnery which was under the supervision of a monastery and not of the bishop.

3. Of two brasses of abbesses remaining, one at Elstow, c. 1530, represents her with a pastoral staff on the right arm; the other, at Denham, c. 1640, shows her in a cloak or mantle, wimple, and veil. There is a third at Nether Wallop, c. 1436. Sculptures at Ely and a portraiture in glass engraved by Bentham show the abbess S. Etheldreda holding a staff; there is a similar figure of the fourteenth century in Royal MS. 2, B, vii. Possibly the conventual prioress may have adopted the staff when some of the cathedral priors were permitted its use.

MACKENZIE E. C. WALCOTT.

London: May 25, 1880.

On "Seynt Loy," I ought to have said last week that *loy* is, no doubt, the Old-French *loy* (law), and that by "Hire gretteste ooth ne was but by Seynt Loy," Chaucer probably meant that

the prioress never said anything stronger than "in faith," "by my faith." Roquesfort gives "*Par sa loy*; *Par sa foi*, en bonne-foi, en honnête homme." There would be no conscious reference in the words to the Christian Law or Faith so as to turn them into an oath. Even "by St. Law" would not be an oath, any more than "by St. Grace, St. Gentleness," &c.

Dame Mary asks for two corrections in my last week's letter: "Etheldred" for "Ethelred," "*se servira*" for "*servira*."

F. J. FURNIVALL.

THE LITERATURE OF FOLK-LORE.

Oastman, Barnes, S.W.: May 24, 1880.

I hope I am not too late to say a word upon this important matter. But with reference to Mr. Axon's remark that it would be interesting to know whether any English library has yet made a special collection of folk-lore books (see *ante*, March 6, 1880), I would observe that, upon the formation of the Folk-Lore Society in 1878, I spoke of the importance of collecting a folk-lore library to the librarian of the London Library, who, with his usual attention to the needs of the members of that institution, set about gathering in folk-lore books. Although the London Library cannot boast so magnificent a collection as Harvard College, it has a very fair assortment, and is daily growing richer. It is also, perhaps, interesting to observe that, beside Harvard College and the London Library, the following libraries subscribe to the Folk-Lore Society's publications:—The Society of Antiquaries; Library of Congress, Washington; Göttingen University Library; Johns Hopkins University, Baltimore; London Institution; Mercantile Library, Philadelphia; Mitchell Library, Glasgow; Manchester Free Library; Middlesbrough Free Library; Stockholm Royal Library—all of which should contain collections of more or less extent and value. As I am now writing on a subject connected with the bibliography of folk-lore, perhaps I may add that the Folk-Lore Society hope very shortly to be prepared with their tentative list of book-titles to be sent round to members and others for additions.

G. L. GOMME.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, May 31, 2 p.m. Geographical (Anniversary): President's Address.
TUESDAY, June 1, 8 p.m. Royal Institution: "American Political Ideas," by J. Fiske.
8 30 p.m. Zoological.
8 30 p.m. Biblical Archaeology: "The Site of the Temples of the Jews," by Lieut.-Col. Warren, R.E.; "The Papyrus of Bek-en-Amen in the Municipal Museum at Bologna," by Prof. G. Kinnier-Smeale.
WEDNESDAY, June 2, 7 p.m. Entomological.
7 30 p.m. Education Society: Discussion on Ascham and his Principles.
8 p.m. Archaeological Association: "Supposed Birthplace of St. Outhbert," by A. C. Frier; "Cup Markings on Burley Moor," by O. W. Dymond.
THURSDAY, June 3, 8 p.m. Royal Institution: "Buddhist Sacred Books," by T. W. Rhyds Davids.
4 p.m. Archaeological Institute.
8 p.m. Linnean: "The Genus *Solanocrinus*, Goldfuss, and its Relations to recent Comatulæ," by P. H. Carpenter; "On the Anal Respiration in the Zoæe Larvæ of the Decapoda," by M. M. Hartog; "On the Specific Identity of *Scomber punctatus*, Couch, with *S. scomber*, Linn.," by Dr. F. Day.
8 p.m. Chemical.
8 p.m. Telegraph Engineers: "The Dynamo-Electric Current in its Application to Metallurgy, to Horticulture, and to the Transmission of Power," by Dr. C. W. Siemens.
8 30 p.m. Antiquaries.
FRIDAY, June 4, 8 p.m. Geologists' Association.
8 p.m. Philological: "On Some Differences between the Speech of Edinburgh and London," by T. B. Sprague; "On the Yao and Makó Languages," by the Rev. Chauncy Maples.
9 p.m. Royal Institution: "An Analysis of Ornament," by H. H. Statham.
SATURDAY, June 5, 8 p.m. Royal Institution: "The Dramatists before Shakspeare," by Prof. H. Morley.
8 p.m. Actuaries' Anniversary.

SCIENCE.

CURRENT SCIENTIFIC LITERATURE.

The Science of Voice Production and Voice Preservation. By Gordon Holmes. (Chatto and Windus.) This is an abridgment, for the use of speakers and singers, of a larger work by the same author. It gives a lucid account of the structure and function of the organs concerned in vocalisation, illustrated by a sufficient number of woodcuts. This is followed by two excellent chapters on the cultivation of the voice and on the proper means of preserving it. Just as the curious medley of traditions by which the training of candidates for athletic honours used to be governed has given place to a system of rules based on ascertained physiological data, so the variety of discordant methods adopted by famous speakers and singers for the management and preservation of the voice have, in recent years, been sifted and simplified in accordance with general hygienic laws. The existing state of our knowledge on the subject is well reflected in the present work, whose size is moderate, and which is admirably printed and got up.

The Watering Places and Mineral Springs of Germany, Austria, and Switzerland. By Edward Guttmann, M.D. (Sampson Low and Co.) This is, substantially, a guide book for the use of that large section of the public which likes to combine the search after health with the amusement of foreign travel. After some preliminary chapters of a general nature, the author proceeds to give a short but adequate account of nearly all the watering places of Germany, Austria, and Switzerland. In connexion with this part of the work he gives us a useful map on which the names of the various baths are marked in such a way as to show their special character (whether alkaline or chalybeate, &c.) at a glance. A third part of the treatise is devoted to the chemical composition and remedial uses of the divers waters. The information given is clear and to the point; the author, with much good sense, avoiding disputed topics and the tendency to exaggeration which is a besetting sin of most writers on the subject of balneology. The concluding chapters of the book deal with climatic health-resorts, especially in reference to pulmonary consumption, and with a variety of miscellaneous "cures," such as the grape-cure, whey-cure, &c., which are in great favour among our Continental neighbours. Comparative tables of the chief mineral constituents of the different waters are added, and the value of the whole for reference is much enhanced by a double Index. Altogether, the book deserves the praise of being well adapted for its purpose. A similar treatise on the baths and waters of our own country and of France would be of real service both to the rank and file of the medical profession and to the general public.

Health. By W. H. Corfield, M.A., M.D. (Oxon.). (C. Kegan Paul and Co.) This volume contains nineteen lectures delivered under the auspices of the Trades' Guild of Learning and of the National Health Society. The first seven give a popular summary of general anatomy and physiology. Two more are devoted to the health of the individual. The remainder deal with hygiene, strictly so called—air, food and drink, water, climate, houses and towns, small-pox and other communicable diseases. The information is excellent, and it is given in clear and intelligible language. The style is occasionally rather diffuse, but this is explained by the fact that the speaker's words were taken down in short-hand. Taken altogether, the book deserves much praise and is likely to prove very useful.

Long Life Series.—1. *Long Life and How to Reach It.* 2. *The Throat and the Voice.* 3. *The*

Mouth and the Teeth. (Ward, Lock and Co.) The need for this series of little works is not very apparent, as substantially the same ground is covered by a publication which we reviewed some time ago—the “Health Primers” published by Hardwicke and Bogue. The resemblance between the two sets of books is increased by their being got up in boards of the same colour and general appearance. A comparison of their contents tells most decidedly in favour of the older series. The three little volumes now before us are unobjectionable in matter and style; that is all that need be said about them.

NOTES OF TRAVEL.

ON May 31 the Royal Geographical Society will celebrate its fiftieth anniversary without any of the parade incidental to jubilees, centenaries, and the like. The royal medals and the public schools prize medals will be distributed, and the outgoing president, the Earl of Northbrook, will deliver an address on the geographical work of the past year. It is probable that Lord Aberdare will be elected president for the ensuing year. The society was formed on May 24, 1830, and the number of its ordinary fellows has increased from about 600 in 1850 to 3,400 at the present time. The French Geographical Society was established nine years earlier, and on December 31, 1879, had 1,833 ordinary members.

AN African Committee has recently been formed at Naples to promote the exploration of East Central Africa by Italians, and to protect national interests in that region.

THE French branch of the International African Association have voted £2,000 for the establishment of their East African station for scientific observations in Usagara. M. Bloyet, who will be placed in charge of it, has been studying for some months at the Montsouris Observatory, at the Natural History Museum, and latterly at the Marseilles Observatory, and he is said to be fully qualified to take astronomical, meteorological, and other necessary observations. M. Sergère, of Marseilles, who was to leave for Zanzibar at the same time as M. Bloyet, has entered into a contract to erect the necessary buildings for his station, so that M. Bloyet will be spared all the preliminary difficulties which the Belgian expeditions have had to encounter, and he will thus enter upon his duties under peculiarly favourable circumstances. M. Sergère, as we have before stated, is going to East Africa to carry out a commercial scheme on a somewhat gigantic scale in connexion, to a great extent, with the numerous expeditions now working in that region. He intends to form an immense dépôt at Tabora, in Unyanyembe, with buildings that will accommodate 1,200 men, where expeditions will be able to refit and obtain means of transport; he will also organise a chain of communications with Zanzibar, Uganda, and the lake region generally. He has already had several years' experience on the East Coast, so that he is, no doubt, fully aware of the difficulties which at the outset must inevitably surround such an enterprise in a region which but a few years ago was almost entirely unknown to Europeans.

THE Congrès International des Sciences Géographiques, which met for the first time at Antwerp, and afterwards in 1875 at Paris, is to hold its third session at Venice in the latter part of October 1881.

News has, it is stated, been received in St. Petersburg that Mr. E. Delmar Morgan had reached Semipalatinsk, and had started on his southward journey to Kuldja. There is, however, no foundation for the statement that he is engaged on an expedition for the Royal Geographical Society. His undertaking is a purely

private one, though we believe the Council of the society granted him a loan of scientific instruments, as they have done in the case of several other travellers.

SEVERAL Russian expeditions are about to be despatched from Eastern Siberia for scientific and commercial explorations in Mongolia and Manchuria. M. Potanine, who has been for some time at Irkutsk, will accompany one of them, and, after visiting Uliassutai, will explore a new route across Mongolia to Kalgan, in the Great Wall, about 150 miles north-west of Peking. Two expeditions are to examine the Sungari River, and ascertain the wheat-growing capabilities of Manchuria, and how far it will be possible to send tea by way of the Sungari to the Amoor region.

THE last connecting link in the route across Australia from east to west has lately been completed by a traveller from the side of Queensland. He started from the Mulligan River, which, as we stated last week, is now attracting much attention, and, after travelling for some distance to the north, struck into the South Australian territory, and crossed Mr. H. Vere Barclay's route in 1878 from Alice Springs, on the overland telegraph line, towards the Queensland border. During the journey some very good country was discovered, which, no doubt, will be more fully explored before long. It is also interesting to record that the exploration of the extreme north of Queensland is proceeding rapidly, and quite lately a promising auriferous tract of country is reported to have been discovered on the western side of Cape York Peninsula.

In addition to matters of national interest, the Congress of French Geographical Societies, which is to meet at Nancy early in August, is to discuss several questions of commercial and scientific geography, among which will be the adoption of a prime meridian common to all countries. It will also consider the best means for advancing the interests of French Colonies, the promotion of exploration, &c.

J. RIVOLI's “Die Serra Estrella” (Ergänzungsheft No. 61 zu *Petermann's Mittheilungen*) is deserving the attention of all who are interested in the plantation of arid mountain tracts. The author describes the Serra as an unproductive, well-nigh waterless waste, producing scant herbage for the herds of goats and sheep which constitute almost the sole source of wealth of the inhabitants. Heavy rains, very unequally distributed, wash away the soil, and a time may be foreseen when the bare granite will cease to yield even herbs and grasses. The author, a practical “forester,” describes the physical features of the Serra, dwelling more especially upon those circumstances which have a bearing upon its being afforested. His practical suggestions apply, of course, only to Portugal; but his method of enquiry may advantageously be followed in the case of other barren mountain tracts.

DR. JUNKER's account of an expedition into the north-eastern part of the Libyan Desert in November and December 1875, in the course of which he explored the Wadi of the Natron lakes and determined numerous altitudes, is the most important paper in the forthcoming number of *Petermann's Mittheilungen*. In addition we meet there with an account of the gold fields of Wassaw, accompanied by a map based upon recent surveys by Bonnat and Dahse, with a description of Southern Chili, by Dr. C. Martin; and an extended notice of Ayán and the carriage road which it was intended to construct from that excellent harbour to the Lena in 1851. The Russians have since then annexed the regions of the Amur, and Nordenskjöld has discovered a passage by sea to the mouth of the Lena; but Herr von Struve, the author of the

article referred to, is, nevertheless, of opinion that a carriage road may even now prove of great advantage, and we fully agree with him.

OBITUARY.

PROF. MILLER, M.A., F.R.S.

BRITISH mineralogy has lost, by the death of Prof. Miller, its most distinguished representative. When the late Dr. Whewell, in 1832, vacated the chair of mineralogy in the University of Cambridge, William Hallowes Miller was appointed his successor. This post Prof. Miller continued to occupy until his death on the 20th inst.—a period of not less than forty-eight years. Of late, however, he had felt the burden of his age, and had deputed the duty of lecturing first to the Rev. H. P. Gurney and then to Mr. W. J. Lewis. It was as a mathematician rather than as a naturalist that Prof. Miller studied mineralogy, and his lectures were attended chiefly by those who desired to study crystallography. He has the great merit of having devised an elegant system of crystallographic notation, which he unfolded in his *Treatise on Crystallography*, in his *Tract* on the same subject, and in his valuable work which is modestly called an *Elementary Introduction to Mineralogy*, based on that of W. Phillips. This last-named work is the standard text-book familiarly known as “Brooke and Miller,” though Mr. Brooke's part in its production was but slight. Prof. Miller did not confine his attention to mineralogy, but was the author of a valuable work on Hydrostatics, and another on the Differential Calculus. Much of his reputation, however, rests on the delicate work which he accomplished in connexion with our national standards of weight and length, and with the standard meter of France. Prof. Miller was one of the most enthusiastic workers in the field of science, but from the nature of his work much of it was known only to specialists. To mineralogists, not only in this country, but on the Continent and in America, his name is indissolubly connected with the famous *hkl* system—a system which is year by year gaining ground as the only rational expression of crystallographic facts. Curiously enough, while this system had been introduced into Germany by such men as Grailich and von Lang, it was but little used in this country until Prof. Maskelyne insisted upon its value and advocated its adoption.

SCIENCE NOTES.

The Geological Survey of the Territories.—We have received a copy of Dr. Hayden's eleventh *Annual Report of the United States Geological and Geographical Survey of the Territories*, embracing Idaho and Wyoming. The published Report forms a volume of more than seven hundred pages, descriptive of the work accomplished by the staff of surveyors during the year 1877. As much of this work has already been briefly noticed in these columns when referring to the *Bulletin* in which preliminary announcements have been issued by the Survey, it is needless to refer at length to the present Report. The greater part of the volume necessarily deals with details of the physical geography and stratigraphical geology of the several districts under examination; but, at the same time, their mineralogy and palaeontology are not neglected, and we can speak with especial praise of the figures of fossils with which the volume is illustrated.

PHILOLOGY NOTES.

THE *Indian Antiquary* for April 1880 commences with the first instalment of a series of papers by Mr. Henry H. Howorth on “Chinghis Khān and his Ancestors,” the present article

dealing chiefly with uncertain and legendary details of no great interest outside the circle of Mongolian scholars. Mr. Fleet continues his valuable papers on "Sanskrit and Old-Canarese Inscriptions," dealing here with three very early Pallava grants of probably the sixth century A.D. The Rev. W. Ayer contributes an article on the anthropology of a primitive and savage clan called "the Garos;" and Dr. Rost a full account of the literary labours of Prof. Anton von Schiefner, whose death was announced towards the close of last year. The number concludes with the first part of a long and unfavourable notice of Babu Rajendralala Mitra's recently published volume on the antiquities of the ancient Buddhist Temple of Buddha Gaya, the supposed scene of the temptation and triumph of the Buddha.

THE new Old-Scandinavian Text Society ("Samfund til udgivelse af gammel nordisk litteratur"), already mentioned in the ACADEMY, will open its series with the following texts:—*Peder smed*, by Grundtvig; *Kreetsaga*, by Cederschöld; and *Agrip af Noregs konungasögum*, by Dahlerup.

DR. J. H. GALLÉE, of Haarlem, is preparing a volume of Netherlandish (Flemish and Dutch) selections from the earliest period to the present time, together with a glossary.

THE editor of the periodical *Englische Studien*, Dr. E. Kölbing, has started an *Old-English Library* ("Altenglische Bibliothek"), intended to bring the chief works of Middle-English literature within the reach of students in a cheap and convenient form. There are many important works which urgently require to be re-edited, and are not likely to be taken in hand by the Early-English Text Society for an indefinite period, and meanwhile are only to be obtained with difficulty, and at high prices, such as Layamon and the publications of the Percy and other Societies. Others, such as the highly important *Ancren Riwe* and the editions of Thomas Wright generally, fall far behind the present standard of accuracy and criticism. Many of the publications of the Early-English Text Society give only the materials for critical editions, and it will be the task of the editors of the new *Bibliothek* to work up these materials in such a way as to make them more generally available for literary and linguistic purposes. There are, besides, many unedited texts lying hidden in the English libraries which will afford an ample field of work for many years to come, so that there is no question of rivalry with the Early-English Text Society. We hear that Dr. Kölbing is at present in England completing his collection of the materials for an edition of the *Ancren Riwe*, with which the series will probably be opened. It is proposed to publish a volume every year, consisting of from eight to sixteen sheets. The publishers will be Gebr. Henninger, of Heidelberg.

PROF. H. PAUL, of Freiburg-i.-Br., co-editor of *Beiträge zur Geschichte der deutschen Sprache*, is preparing an important work on general linguistics *Principles of the History of Language* ("Die Principien der Sprachgeschichte"), in which his views on morphology, the influence of association on sound-changes, the invariability of the purely phonetic laws of change, &c., will be fully set forth.

MEETINGS OF SOCIETIES.

NUMISMATIC SOCIETY.—(Thursday, May 20.)

W. S. W. VAUX, Esq., V.-P., in the Chair.—The chairman exhibited for Sir Arthur Phayre a silver coin lately found in Pegu, about twenty miles from the town of Sittang, said to be of the tenth or eleventh century. This coin has for obverse type a conch shell, within which is a hermit crab.—Mr. Hoblyn exhibited an original warrant, dated February 14, 1627, under the sign manual of Charles

I., to Sir William Parkhurst, Warden of the Mint, altering the value of certain gold and silver coins. Also a selection of rare and curious milled shillings from Elizabeth to George III.—Mr. Krumholz exhibited a proof in gold of a keeping piece, 1783, of the East India Company, struck at Bencoolen. Also two rare Oxford pound pieces, 1642 and 1644, and an unpublished variety of a twenty-shilling piece, Scotch, of Charles I.—Mr. Copp exhibited a portion of a large hoard of late Roman *denarii*, found at Rhewarthen Isa, Cardiganshire.—Mr. H. S. Gill communicated a paper on unpublished seventeenth-century tokens of Yorkshire, with contemporary notes on some of the issuers of Hull and other towns. In his paper Mr. Gill described over fifty new types.—Mr. L. Bergsøe communicated a paper, in which he discussed the place of mintage of certain coins of the Cuerdale Find. These were the coins inscribed EBRAICE CIVITAS; CVNETI and QVENTOVICI, which he attributed to the towns of Evreux, Condé, and Quentovic, situated in the North of France on the Scheldt. In the inscription CIRTENA ACRTEN, Mr. Bergsøe traced the name of Cnut Rex, and in SIEFREDVS the name of a Danish chief. Mr. Bergsøe from these premises proceeded to argue that none of these were struck in England as hitherto considered by numismatists, but that they were issued by foreigners, who imitated the type of English coins on account of the estimation in which they were held on the Continent. This adoption by one State of the type of the coins of another was very common in the Middle Ages, in the East as well as in the West, since, for the convenience of trade, the Turks imitated the type of the coins of Naples, even placing upon them Latin inscriptions, Naples at an earlier date having copied the type of the Turkish coins.—Gen. A. H. Schindler communicated a paper on some unpublished coins of the Mongols in Persia, acquired by him during a recent tour in Kerman (Caramania). These coins were for the most part struck by Abū Saïd Bahadur Khan, the last Mongol Emperor of Persia, and by Shah Rukh.

PHILOLOGICAL SOCIETY.—(Anniversary Meeting, Friday, May 21.)

DR. J. A. H. MURRAY, President, in the Chair.—The President read his annual address, in which he reviewed the work of the society during the past year, and gave an account of the progress made in the editing of the society's dictionary, and the collection of materials for it. He had finished to A; he wanted a dozen more sub-editors to prepare parts of the work for him; so many thousand slips for ordinary words had been sent in that he needed now only extracts for special words and senses; a dead sub-editor's Pa-work and slips had not been returned with his P materials, so that Pa-words were specially wanted from the earliest period. The United States volunteers had worked admirably under their chief, Prof. March, of Lafayette College, whom the society had that evening elected as one of its honorary members; and all promised well for the completion of the truly national undertaking that the society and its helpers had been engaged on for the last two-and-twenty years. Dr. Murray then urged the society to join in the spelling reform movement, and took his leave of the members on retiring from his two years' presidency.—Mr. Henry Sweet read his report on the late investigations by Continental scholars into vowel-phonology, which showed that Greek had preserved the oldest forms of the Indo-European family; the Teutonic languages the next oldest; while Sanskrit came only third.—Dr. Richard Morris then read his report on the progress of Pali studies during the last five years; and another report on the Feejee languages was taken as read.—Votes of thanks were passed to Dr. Murray, Mr. Sweet, Dr. Morris, and the Council of University College.—Mr. A. J. Ellis, F.R.S., was elected president for the next period of two years.

FINE ART.

THE ROYAL ACADEMY.

[Third Notice.]

AMONG painters the character of whose work is determined less by studied observance of any

settled principle of style than by the direct assertion of a powerful individuality, Mr. Millais holds in every exhibition of the Academy a prominent place. There is no artist of our school whose genius so frankly allies itself with all forms of popular sentiment, and yet there is no other painter who so constantly wins the respect and admiration of his fellows for qualities in his art that are wholly independent of popularity. These qualities, however, do not always furnish the happiest exercise. Mr. Millais, in common with all artists of his particular temperament, is often left at the mercy of his material. He does not seek to impose upon nature any preconceived idea of beauty, and he is therefore sometimes led by choice or fortune to an aspect of reality that proves suggestive. He cannot always command the kind of judgment in selection needed for the full exhibition of his remarkable technical gifts; and where nature has little to offer his heart finds but little to bestow. These considerations scarcely apply to his works in the present exhibition, and there are at least four out of the number which deserve to rank among the best the painter has produced. *Cuckoo* (315) is a picture that combines in the happiest fashion his power of sentiment and his strength as a painter of portrait. This is the style of portraiture Sir Joshua loved to follow, giving to the interest of individual face and form an added suggestion of dramatic and emotional truth. Mr. Millais' invention is at its best when it is restrained within these limits. Where he is required to create a type of character to consort with an independent poetical idea he is not altogether at his ease, for the presence of the model offers in his case an irresistible temptation to seize and record all the little individualities of colour and drawing which nature places before his eyes. But, on the other hand, he can enforce with admirable power the sentiment which belongs to particular phases of character, and, in the example before us, the choice of subject helps in a wonderful degree to mark the beauty of these two childish faces by finding fit employment for their wondering eyes and earnest glances. The scheme of the picture is altogether very completely expressed. The attitude and gesture of the figures yield a very graceful composition, while the warmth of colouring in the painting of the heads is skilfully supported by the rich tones of the woodland background, broken here and there by the brighter hues of the primrose. A full-length figure of a little flaxen-haired child, robed in black velvet, and carrying in her hand a yellow daffodil, is scarcely less successful as a picture, though it affects to be nothing more than a portrait. Here, however, as well as in the larger work already noticed, we seem to detect the signs of a decided change of manner in Mr. Millais' treatment of flesh. There is greater fullness of colour and less distinction of light and shade than he has formerly displayed in his work. He has altogether abandoned the harsher white tones which used to give a certain air of crudity to his execution, but, at the same time, he has sacrificed to some extent the realisation of particular conditions of atmospheric effect. This increased attention to the truth of local colour is noticeable again in the painter's portrait of himself (218), destined for the Uffizzi Gallery at Florence, a work that stands in striking and interesting contrast with the head of Mr. Watts which hangs close beside it. Mr. Watts' feeling for style finds expression in portraiture as well as in ideal design, and in offering to the gallery at Florence a likeness of himself he has also contributed a very dignified example of the essential qualities of his art. Both of these heads may indeed be said to illustrate in the happiest fashion the special excellences in painting which have won for their authors a place in the his-

toric collection of which they are to form a part.

Three of the most noticeable subject pictures of the year are contributed by Mr. Alma-Tadema, Mr. Morris, and Mr. Orchardson. In a certain marked originality of treatment, Mr. Orchardson's composition of *Napoleon on Board the Bellerophon* perhaps deserves to rank as the most noticeable performance of the year. It does not seem to us to exhibit at their best the particular excellences of Mr. Orchardson's style, for with so large a canvas to furnish, and with the need of enforcing the historical and dramatic realities of his subject, he has been unable to exercise in perfect freedom or with entire completeness of effect the taste and skill which serve to give distinction to his work. The talent he possesses can be better displayed when the subject to be illustrated is clearly subordinate to a chosen scheme of elegant design and dainty colour; and the aspects of character which he can most successfully express are those which are discoverable in the ordinary circumstances of life as they pass under the scrutiny of a keen and delicate observation. But, although Mr. Orchardson has at other times done fuller justice to his own resources, the work he has here accomplished proves that he can preserve the essential principles of his art even in the treatment of unaccustomed material. The picture, though it may be subject to criticism in other respects, is complete as a piece of colour, and is distinguished by a fine simplicity in design. The relation of the principal figure to the group formed of the members of his staff indicates a powerful grasp of the dramatic situation; and the manner in which the emotional realities of the subject are enforced by the sombre surroundings of sea and sky is undeniably effective. And this effect, it may be remarked, is combined with an impression of sobriety and restraint especially rare in the class of work to which the picture belongs. The only objection of a general kind which can be urged against the success of Mr. Orchardson's experiment has reference to the character of the execution. In all that concerns the rendering of the atmospheric conditions of the scene, in the relief of the sail against the sky and of the boat against the sea, the treatment seems to us to fall short of absolute realism, and yet not to admit any clear convention of style. It is quite fair to contend that in an historical picture we are not to look for the kind of illusion that belongs to the domain of landscape; but it is equally fair to reply that the painter of history has only himself to blame if he suggests in his method a degree of realism which is foreign to the scheme of his work. Passing to matters of detail, it may be questioned whether Mr. Orchardson has been altogether successful in the figure of Napoleon. The half-sullen, half-meditative expression of the face has been admirably rendered, but the head itself is surely out of scale with everything else in the picture. When we glance at the feet, and compare them with the feet of the foremost figures in the background, the difference of size is scarcely appreciable, and this fact serves to enforce the impression that there is something almost monstrous in the colossal head surmounting so small a frame. These criticisms, however, even assuming that they are well founded, do not destroy the impressive character of the work as a whole; and there will, we think, be few persons disposed to dispute the wisdom shown by the Academy in securing such a remarkable performance as a permanent possession for the public.

Mr. Tadema's *Fredegonda* (328) is another instance of a design that passes the ordinary limits of the author's style; the characteristic merits of the painter's work—his mastery over the subtleties of light and colour, his power of penetrating with a familiar step into the silent

chambers of the past, and of combining without the reproach of pedantry the surviving records of its daily life—these are displayed with perhaps finer effect in the *Spring Festival* (176), where the incidence of bright sunlight upon the flowery meadow and the gay costumes of the revellers calls forth all Mr. Tadema's *finesse* of execution. The delicacy of his method is scarcely so well adapted to the treatment of a composition of the scale of life, nor are the purely pictorial qualities of his art assisted in their expression by the requirements of a subject involving a strong dramatic idea. The *Fredegonda* is, nevertheless, a very forcible and striking picture, and the figure of the neglected Queen seated alone in her chamber is very effectively contrasted with the distant group engaged in celebrating the marriage of her rival. It is, no doubt, with a deliberate purpose that Mr. Tadema has so arranged the perspective of the design as to carry the eye at once through the opening in the columns to the altar in the background; but the immediate result of this device is to distract attention from the principal figure. It is needless to say that the accessories of the picture—the heap of jewels which the injured Queen has cast aside, the tiger skin upon which she is seated, and the details of the architecture—are all realised with consummate ability.

The Sons of the Brave (20), by Mr. P. R. Morris, is essentially modern in treatment and in theme. In a certain sense, it may even be described as a popular picture, for it gives expression to a kind of pathos that makes a sure appeal to the popular imagination. And yet it is not at this point that Mr. Morris shows any exceptional strength. There are many painters of our school who better understand how to touch the hearts of the public, and whose art lends itself more readily to the task of depicting familiar forms of emotion. Indeed, it may be said of this particular work from his hand that the result would have gained rather than lost in effect if the painter had not attempted to make so much of the dramatic elements of his subject, if he had laid less stress upon the tears of the widowed mothers, and had not sought to interest our sympathies by the spectacle of their mourning. For whatever Mr. Morris may strive to accomplish in this direction must always be of inferior attraction to the simpler and stronger qualities of pictorial effect, over which he possesses a more complete command. The value of his work rests always in the conviction that it leaves of a true and direct realisation of the facts upon which it is employed, and of a keen insight into their artistic capabilities. Where painters of an inferior talent see only a pathetic situation, he has the gift to recognise a picture; and this is a gift which, so far as regards the treatment of contemporary life, is especially rare in the English school. There are artists in plenty who are ready enough to complain of the lack of picturesque elements in the habits of the modern world, and who are glad to make the shortcomings of their material an excuse for any lack of beauty in the result. We have heard more than once of the impossibility of finding a satisfactory presentment of the scarlet coat of the British soldier, and it must, indeed, be allowed that the subject has been the occasion of much disastrous failure. In the work under notice, however, Mr. Morris has shown that the task of painting a mass of red coats is by no means inconsistent with beauty. He has fearlessly mingled the bright tints of scarlet and brass, taking nothing from their positive force, and yet successfully discovering for them a satisfactory formula of artistic expression. By the skilful introduction of the massive white stone columns, combined with the sober relief afforded by the dark dresses of the bystanders, and by the refining influences

of delicate hues of iridescent colour scattered over the composition in the flying forms of pigeons that flutter above the doorway, he has contrived to produce a result at once brilliant and harmonious. If we pass from the colouring of the picture, where the difficulty was greatest and the triumph, therefore, most remarkable, we shall find that in the suggestion of movement and in the choice of attitude the painter has been equally careful to preserve the impression of reality. The scene as a whole has a certain dramatic force, but there is no appearance of artifice in the mode of representation; and if we fix our attention upon the central group we shall acknowledge that it would have been difficult to render more completely the essential features of the chosen subject.

There are a number of pictures in the exhibition which, although very admirable and delightful in themselves, scarcely call for special remark. They only serve to renew our acquaintance with qualities of invention or workmanship with which their authors have long made us familiar. Such, for example, are the several charming coast scenes by Mr. Hook, the large sea-piece by Mr. Brett, the portraits of Mr. Oulless, and the delicately coloured garden scenes of Mr. Leslie. Mr. Leslie's portraits are not to be included in this category, nor do they deserve to rank as worthy examples of the artist's powers. Mr. Boughton slightly deviates from his usual manner in *Our Village* (338); but his most considerable achievement is the full-length figure of *Evangeline* (139), intended as a companion to the *Priscilla* of last year, and recalling the earlier work by its skilful management of tone and by a genuine sentiment for a certain type of rustic beauty. Foremost among painters who have either enlarged the scope of their work or have tried some new adventure are Mr. Henry Moore and Mr. Herkomer. Mr. Moore has always known how to paint the sea, but he has not, to our thinking, ever exhibited a picture of such noble sentiment and so much purity in colour as the *Beached Margent of the Sea* (973) hung in the Lecture Room. Nor has Mr. Herkomer on any previous occasion devoted himself exclusively to the study of landscape. The large water-colour drawing of two figures resembles much else that he has done in the same kind, but the *God's Shrine* (468), hung in the fifth room, is an original and striking contribution to modern landscape art. A scene so barren of incident, and rendered in the manner here adopted, perhaps scarcely deserved so large a canvas, and the excellence of the painting, dependent upon a fine choice of colour and a very skilful adjustment of tone, could have been equally displayed within narrower limits; but the picture is none the less a very remarkable performance, and its exhibition serves to enlarge our impression of the painter's talent.

J. COMYNS CARR.

PICTURES LATELY ADDED TO THE FLORENCE GALLERY.

VERY important and interesting additions have been lately made to the collection in the Florence Gallery, under the judicious arrangements of the new Director, Signor Chiavacci. In looking at these pictures the first satisfactory impression arises from the fact that, in opposition to the usages of former times, they have not been repainted out of all recognition and "made as good as new," but are hung in their places, some of them not even being revarnished. They all, however, bear more or less distinct traces of the operations to which all pictures in less conscientious or more ignorant times were exposed. A description of all and of their condition would occupy too much space, and only a few of them are of sufficient importance to make it desirable; but a list of the names will show that they are valuable supplements to the series of

examples of ancient masters, while a few may be more accurately referred to. One is given to the excellent Simone Memmi, but is much injured; another to Jacopo di Casentino; and a third, still more rubbed, to Spinello Aretino, his pupil. There is also a specimen of the art of Zanobi Strozzi, whose work Lanzi had never seen, but of whom he says that he advanced beyond the usual attainments of the mere *dilettante*; and there are some other pictures of moderate merit to which no names are as yet attached.

The *Coronation of the Virgin*, painted (1600.) by Lorenzo Monaco, is a magnificent adjunct to the collection. It has been carefully cleaned by the able and conscientious cleaner to the Florence Gallery, Signor Franchi; and, with the exception of one portion of the figure of an angel, all else is intact. The richly carved and gilt framework is divided into three canopies resting upon a predella, in which the artist has introduced five subjects, most of them admirably executed. In the summits of the pinnacles the Annunciation is represented in the usual way. Lorenzo may be spoken of as a contemporary of Fra Giovanni da Fiesole and of Masaccio, as he died in 1425; but, painting within the precincts of his cloister, he was unconscious of the advance which art was making by different routes in the hands of these two great masters. He carried on the traditions of the school of Giotto—for him it was in vain that Masaccio drew the human form from nature with correctness and lifelike movement, in vain that he represented the true *chiaroscuro* of Italian sunshine, in vain that he anticipated nearly all that was done in art for a century after him by a succession of men of genius. Lorenzo painted "di maniera" as he had been taught, but could not originate; he acquired infinite technical skill, of which this picture is a perfect specimen, but true art in such hands as his remained lifeless and could make no advance.

Next on the list, a portrait by Antonio da Pollaiuolo is especially worthy of observation and study for its truth to nature and life.

Three Saints—namely, *St. Stephen* in the centre, with *St. James* and *St. Peter* to the left and right, placed under tabernacles in the richest *quattro-cento* manner, with Corinthian pilasters and entablature, adorned with gilt arabesques—form the subject of a large picture by Sebastian Mainardi, of S. Gemignano, pupil, assistant, and brother-in-law of Domenico Ghirlandajo. This noble work is probably without its parallel in the Tuscan school for brilliant colour. It looks as if a painted window by Sandro di Giovanni Agolanti had descended from between its mullions, and taken up its present position with all its gem-like splendour. It is impossible to escape comparing, entirely to the disadvantage of modern skill and knowledge, the resplendent and durable colours with which this picture is painted with such as are at the disposal of modern artists, which are as imperfect and evanescent as those used by the old masters are radiant and eternal, unless injured by modern ignorance and bad taste. This picture, painted nearly four centuries ago, is—but for some wanton injury removed by Signor Franchi with infinite care and skill—without crack or stain, and has all the brightness which I have endeavoured to describe. Lanzi expresses himself somewhat contemptuously of Mainardi, Vasari with more regard. As a draughtsman he had less power than Domenico, but he excelled him in sentiment—never Ghirlandajo's forte. The *St. Stephen* is in every way finer than any of his master's works.

Finally, there is an *Annunciation* by Sandro Boticelli. The gallery is rich in pictures of this master, and among them this one takes a foremost place. The angel has just touched the ground from his flight earthward, the sound of

his wings and that of the flutter of his garments are still heard, their motion still is that of passage through the atmosphere. The startled Virgin shrinks from him with a wonderfully lifelike action of surprise mixed with some fear; while the angel's expression of countenance, and the movement of his hands marked by the most profound deference, seek to reassure her. This is a deeply impressive picture, full of reverential thought, but it is cold in colour, and indifferently drawn. It is quite obvious that Boticelli did not draw the figures in the nude before he draped them, and in this, apparently, the painters of his time were less careful than the sculptors. The drapery of most of the painters is very conventional, with a strong tradition of mediæval treatment; it is metallic, especially where the folds are bent upon the ground, when a hard, formal method is followed by all alike, and is adhered to even by Michelangelo, especially in his picture in the Tribune, reappearing in his sculpture. A glance at the works of the great Masaccio will show how free he was from these conventions, and how much more truthful. The colour of this beautiful Boticelli has faded; some of it has perhaps been removed. The Virgin's blue robe is, I think, painted with the "azzurro della magna" described by Cennini; the shadows were, no doubt, finished with indigo—these are now quite gone. There is generally an absence of harmony and union of tones, but the eye loves warmth of colour, and there can be no greater injury to a fine picture than its absence, whatever the cause.

Such are the precious and instructive additions made to the gallery, and placed by the Director, Signor Chiavacci, who looks forward to dispose of others at present hidden in the store. We may perhaps be permitted to express an opinion that, although a certain chronological order prevails in the arrangement, it might very profitably be carried farther.

CHARLES HEATH WILSON.

NOTES FROM ROME.

Rome: May 7, 1880.

In the course of the excavations near the old wall of Aurelian, and on the confines of the Farnesina Garden, as you look toward the Ponte Sisto, the sepulchre already mentioned in the ACADEMY (No. 418, p. 351) has been completely cleared, and found to be not an ordinary *columbarium*, but a magnificent tomb of the Sulpicia Platorina gens. The shape of the letters in the inscriptions, and, above all, the contents of the inscriptions themselves, show that, contrary to what was imagined when the discovery was first made, this monument does not belong to the age of the Antonines, but to the best period of art; that is to say, to an age a little later than that of Augustus, when the best traditions of skill and design had not yet died out.

A very well-preserved inscription reads: *C. Sulpicius M. f. vot. Platorinus || Sevir || x. vir. || stitibus. indic. || Sulpicia C. f. Platorina || Corneli Prieci. Among the Triumviri Monetales of the age of Augustus mention is made of a certain C. Sulpicius Platorinus, who seems to have been the grandfather of our Platorinus (Cohen, p. 307). But in the tomb were laid, not only Sulpicius and his wife Sulpicia, whose features we can recognise in the well-preserved statue of a woman which was dug out, and whose remains were enclosed in an alabaster urn, broken to fragments, yet still preserving some of the letters of her name; there were also preserved, enshrined in most elegant marble urns, the semi-calcined bones of other members of this family. One of these was *Minatia Polla*, and another was *A. Crispinus Caepio*, a name well known from the mention made of it by classical writers.*

His urn is in the shape of a tiny temple, supported by two beautifully shaped little columns. In the centre is a square slab bearing the name of the departed, underneath which are carved two griffins flanking a tripod. Another urn is in the form of a simple but elegantly shaped house, the style of which recalls the purest lines of the fifteenth century. Some are simple vases; others, again, are round, and decorated all over with festoons of flowers, fruits, and birds.

Beside the gold ring which was obtained on the first day, we must mention others found inside the urns discovered on the days immediately following. They all belong to a good style of art, and the gems in all have been destroyed by the fire. The presence of these rings would seem to point to the conclusion that the tomb had never been desecrated, and that the only injury received by it had been from the falling in of the vaulted roof, which only overturned a few urns among the stones and rubbish. But how could it possibly have happened that members of an illustrious family should have been interred without any of those necklets or jewels which are generally to be found in sepulchres of this kind? It is more probable that the few rings which have remained till now were despised by those who, in the early sackings of the city, opened the urns, and who carried away only those objects which appeared to them to be valuable.

All the fragments of the statue of Tiberius—the head of which was found at the beginning of the excavations—have come to light. It is still, however, unknown why the statue of this emperor was placed in the tomb. Perhaps some light may be thrown on this point from the study of the fragment of a large slab bearing an inscription, engraved in beautifully cut characters, in which inscription the name of Tiberius is legible and follows that of Augustus. Three large squares are, however, wanting to complete this lengthy epigraph. We must hope that they will be found during the course of the excavations. Under the first *aedicula* of the wall to your right as you enter the chamber is an inscription which bears in the top line the name *Marcia divi Titi*. The urns and statues were taken to the rooms near the Lungara Garden, where are preserved the mural paintings and other relics found during the Tiber excavations.

Under the auspices of the General Committee of Museums and Excavations has just been published the third volume of the *Documenti inediti per servire alla Storia dei Musei d' Italia*. It contains the catalogue of the marbles and bronzes of Cardinal Innocenzo de Monte, drawn up in 1577; a list made by Claudio Ariosto for the Duke of Ferrara, enumerating some sculptures sold at Venice in 1582; an inventory of the statues and vases of Duke Alfonso II. of Este; a second, of the statues taken from the Diamanti Palace at Ferrara, and sent to Modena in 1629; an enumeration of the marble and bronze statues, miniatures, and other objects that were in the ducal palace outside Portacassello in 1684; the catalogue of the Obiziano Museum drawn up in 1806; that of the engraved gems in the Museo Borbonico; the catalogues of the antiquities in the Palazzi and Ville Pamfili-Alto Brandini in 1709; an inventory of the statues and antiquies in the Palazzo Farnese in 1767 and 1775, as well as of those found in the Farnese Garden on the Palatine in 1778; a catalogue of the Drovetti collection made in 1822; one of the Odescalchi medals made in 1794, and of the Carelli medals in 1827; a catalogue of the Museo Borgiano recovered from an autograph MS. of Zoega's of 1796-1804; and lastly, a list of the antiquities of Herculaneum presented by the King of Naples to the First Consul in 1802.

F. BARNABEI.

EXHIBITIONS.

THE SOCIETY OF PAINTERS IN WATER-COLOURS.

M.

Mr. F. POWELL, whose noble drawing of *Ailsa Crag* (70) we noticed in our previous article, has another sea-piece, *Scudding* (110), characterised by a similar mastery of the forms of waves and arrangement of foam; but how is it that this artist manages to convey the impression of a sea perfect as to form and colour, but as hard as cast steel? In *Armathwaite Bridge* (215) he represents water under very different conditions. The picture is not well hung, and requires to be seen from the side of the secretary's table nearest the door; but, viewed from that point, we think it will be admitted that few finer representations of still river-water have ever appeared in this gallery than the pool below the bridge. It may, perhaps, be doubted whether the trees look sufficiently distant, but in their form and colour there is little room for improvement. *A Study* (52) is a pleasantly coloured and carefully finished portrait. Mr. A. D. Fripp sends only one picture, called *Every Little Helps* (263), which looks like a sketch in a Dorset sea-coast village. The colouring and drawing alike strike us as feeble, and unworthy of this painter's reputation. One of the arms of the girl with the clothes-basket seems to have considerable injustice done to it; and we do not remember to have seen anything in nature closely resembling some of the vegetables with which the fisherman's garden is planted. Mrs. Allingham has seven pictures. *White Horse Inn, Shere, Surrey* (210), is a pleasant study of a village hostelry. The buildings are carefully painted, but the trees are less satisfactory. *Gomshall Marsh, Surrey* (224), can hardly be considered a success, in spite of a good deal of cleverness in the foreground. The stream in the middle distance comes too prominently forward, and the flock of sheep is very imperfectly drawn. *The Primrose Wood, Kent* (277), is remarkable for a graceful figure of a girl and some gigantic primroses. Passing over two figure-pieces, we come to Mrs. Allingham's most elaborate work, called *The Lady of the Manor* (283), which contains a careful and admirable study of beech-trees. The breaks of sky are, however, represented, or misrepresented, by dabs of body colour; and we cannot say much for the attitude of the lady of the manor, who does not seem to know what to do with her hands. To our thinking, by far the greatest success of this clever painter this year is the exquisite little sketch of *Wallflowers* (290). Mr. Albert Goodwin, whose pictures are always interesting as experiments in colour, has a painting of one of his favourite river-side scenes—*Wells* (108). The creeper-clad wall and the cedar behind it are painted with great skill, and the bare branches of the trees are admirably drawn. We doubt whether the neutral tint of the distant cathedral tower is not too strong. *The Ponte Vecchio, Florence* (145), is an attempt to render that midday glare of the sun to which, according to the Florentines, none but Englishmen and dogs expose themselves. The drawing is uncertain, and it is difficult to recognise the colours of the old bridge in this picture. In *The Emigrants* (155) Mr. Goodwin has given with great care the effect on a landscape of cloud-shadows. The sky is noteworthy, but the colour of the picture is not agreeable. *Rome* (285) is a clever sketch. Mr. Walter Field's picture, *Outside the Mountains, Cumberland* (40), shows with what truth this artist is capable of representing a difficult scene—a long level stretch of high pasture. The sky, distance, and middle distance are excellent, but the foreground is not satisfactory. *Hurleston Head* (244) is exceedingly careful, but hard and cold in colour. Mr. Field also

exhibits a charming sketch, entitled *Hafod Lwyddog* (248).

THE exhibition of drawings, by the late M. Viollet-le-Duc, at the Cluny Museum, in Paris, astonished even those who were best prepared for the clear evidence of the architect's enormous industry and fecundity. M. Charles Blanc declared that if a laborious and constantly occupied architect could have lived and worked for three hundred years,

"he would not have produced more drawings, directed more works, drawn up more plans, made more reports, written more books, kept up more controversies, raised more questions than Viollet-le-Duc did, who only lived to be sixty-five."

The amount of work which he went through is not merely astonishing, it is inexplicable. The doings of other busy and industrious men appear insignificant in comparison. M. Charles Blanc says he does not believe it an exaggeration to estimate the number of Viollet-le-Duc's drawings at more than a hundred thousand, and many of them are highly elaborate, rich in detail, and carried far in finish—carried especially and peculiarly far in the explanatory representation of substances. The exhibition of the collected drawings, instead of diminishing the previous opinion about their author, has greatly increased the critical estimate of his capacity, by enabling the world to perceive better the wonderful lucidity of his intelligence. This lucidity, and the sureness which came of it, are the only possible explanation of his fecundity. Knowing exactly what he had to do, Viollet-le-Duc could always go straight to his purpose, and was spared those tedious tentative attempts which scatter the efforts of less clear-sighted and decided men. At the same time it is only fair to others to bear in mind that Viollet-le-Duc worked rather as an exceedingly well-informed man of business than as a poetic artist, and that poetic artists spend great time and labour in aiming at qualities much beyond that simple explanatory clearness which was the one purpose of the French architect. The best example of what we mean is his treatment of landscapes. He dealt with it simply as he would have dealt with an accumulation of architectural masses in a drawing made to explain them to pupils, so that we know well enough what he meant, but feel no charm. Such landscape design as his may easily be made swift and decided. It had its scientific utility, but it had little or no connexion with the art of the landscape painter. It was a reduction of infinite nature to finite formulæ.

PAINTINGS ON CHINA.

THE annual exhibition of paintings on china by lady amateurs and artists, held at the galleries of Messrs. Howell and James, has become an institution. Boasting no less than fourteen royal patrons, and a large number of prizes, ten of which are presented by those patrons, and others by the Countess of Warwick, Lady Ardilaun, the proprietors of the *Queen* newspaper and the *Magazine of Art*, Messrs. Hancock of "Worcester," and Messrs. Howell and James, it may be considered as well patronised and well endowed. The fifth exhibition, which has just been opened, shows a decided progress among the amateurs, and is the best that has yet been held, containing several works of remarkable merit, and very few out of the 1,641 which are not worth looking at.

Though, at first sight, the design of hawthorn blossom and dragon-flies on a green ground, called *A Study in Green*, with which Miss Everett Green has won the first prize for amateurs may appear slight to some, the exquisite painting of the objects, their admirable arrangement, and the beauty of the colour justify the

judges, Messrs. Frederick Goodall, B.A., and B. Norman Shaw, B.A., in their award. It is a little masterpiece of decorative art. The Countess of Warwick's prize for the best head painted by a lady has been given to Mdme. Marie M-rkel H-sine for a beautifully painted portrait of H. R. H. the Prince of Thurn and Taxis, which is simply a portrait painted on china without any decorative motive. The *Head with White Azuleas* (1473) by Miss Marion Gemmell and *Zuleika* (1477) by the same artist are, on the contrary, thoroughly decorative in design, and seem to us, on account of their fine feeling, distinction, and colour, to be worthy of a higher place than seventh in the rank of lady-amateur work. There can, however, be no doubt that *Azuleas* (1483 and 1491) by Mrs. George Duncan, the *Flower-pieces* of Miss E. E. Crombie (1472 and 1480), *The Set of Ornamental Tiles* (1477) by Miss Farnall, *The Autumn Anemones* (1479), by Miss Alice Argles and the *Portrait of the Hon. Mabel Hood* (1494) by the Viscountess Hood, to which the second, third, fourth, fifth, and sixth prizes for lady amateurs have been respectively awarded, are worthy rivals. It must also have been difficult for the judges to decide between the respective merits of Miss Ada Hanbury's *White Peonies* (1502) and Miss Charlotte H. Spiers' *Placida* (1486), a fine female head, and *Poppies and Tiger Lilies* (1488), as to which was the best work by a lady professional. Miss Hanbury may console herself by her victories of two previous years, and the undoubted fact that for strength, truth, and delicacy of painting there is no work superior to hers. Miss Linnie Watt takes the "Princess Alice" prize (third best work by a lady professional) for her charming *Primroses* (1487) and *The Little Fisherman* (608), though we are not sure that we do not prefer her *Happy Days* (594) to either of her larger and prize works; and, without denying the charm of her children, we miss those graceful figures of rustic maidens which she knows so well how to place in her soft sylvan scenes. Before passing to the less fortunate exhibitors we must mention the very fine head of *Atalanta, after the Race*, by Percy Anderson, whose first appearance last year we greeted with praise and prophecy, which appear to be justified.

Among the exhibitors to whom no prizes have been awarded, twenty-five have been very highly commended, fifty-four highly commended, and sixty-one commended; and as most of these have several works it may be imagined that the average merit of the exhibition is high. Among such a number it is impossible to do more than mention some which struck the writer as being peculiarly interesting. The *Carmen* of Mrs. Bythesa (307) is a good head; and Mrs. T. L. Bristowe's *Pair of Panels* are clever (313 and 342). Mrs. Leith-Hay's *Child's Head* (339), Miss Ellen Williams' *My Model* and its companion (352 and 380), Miss J. H. Robinson's *Orchids* (246), and Mrs. Garwood's clever conventional design of *Purple Iris* (232) are all delightful in their way. There is no better head in the centre gallery than Miss Gemmell's *Rosa* (180); and Mr. Sydney Morse's *The Lancers* (178) is one of the best groups of children. Simple and pretty is Miss B. Griffiths' arrangement of *Buttercups* (156). Mrs. Wistar's *Morning Glories* (122 and 142) are beautiful in drawing and colour, but a little too much like quarter yards of ribbon. Miss Rachel Lee has caught the colour of *Cinerarias* (132) very well; and Mrs. Choppin's *Lent Lilies* (187) are delicately painted. Mr. Hamilton-Dicker's *Genista* (99) is a very simple and pretty study of a child's head; and *The Reapers*, by Miss F. Nathan, a finished piece of work. There is much tenderness in the sky and sense of distance in Mr. Matthew Hardy's *Cowslip Ball* (63), and Mrs. Swain's *Sunflowers* (56) are superb. We must also find space to mention

Miss L. Doering's very delicate *In a Shady Dell* (37) and Miss Catherine Folkard's *Apple Blossom* (19). We must here end our notice of the amateurs, though conscious of having passed by many as well deserving mention as some of those alluded to, but there are so many at about the same level that it is impossible to do justice to all.

Of the professional work the landscapes of M. Grenet (painted under the glaze) are remarkable for their refinement of form and beautiful distances, excelling all others in atmospheric effect and grace of composition; but M. Mallet is as charming as ever with his bits of English scenery, and M. Léonce with his splendid paintings of flowers. In dead game he has rivals in MM. Quest, Ginot, and Egoroff. If no English work is quite up to these of their kind, there is no more beautiful face more sweetly painted than Mr. Rylands' *Ellen Terry* (624); and his *Japanese Fish* are well drawn and good in colour, but they have no such motion as a Japanese artist would have given them, nor do they seem "waterborne." Mr. Rylands has (we think unwisely) dispensed with those conventional curves to indicate the agitation of the water and the energy of the fish which the Japanese use in such subjects; without some such artifice it is impossible, in a decorative design, to give the sense of buoyancy in the water and life in the fish. All these professional works were "not in competition."

Of those that were, Miss E. Lewis with her *By the Sad Sea Waves* (582) and *Old Bridge, Mull* (592), Miss Isabel Lewis with her *Peonies* (607), and Miss F. Judd with her *Heads with Floral Backgrounds* (604 and 615) sustain their reputations; but, on the whole, the advance of the amateurs is more remarkable than the supremacy of the professional artists.

The visitor to this gallery should not omit to see some heads from the Royal Worcester Factory, relieved against the gold underglaze background, the secret of which is among the discoveries of M. Diet, of Paris. We think that the tones used for the flesh are too pale and morbid, as the background could well support the deepest and richest of colours, but they are interesting as experiments.

COSMO MONKHOUSE.

NOTES ON ART AND ARCHAEOLOGY.

THERE seems good reason to hope that the agitation to secure for the public greater facilities of access to the National Gallery, an agitation which never ought to have been necessary, is likely soon to prove successful. Members of Parliament on both sides of the House will support Mr. Coope's motion, with the necessary additions which will also be moved, and the Government will then hardly endeavour to uphold restrictions which have long been abolished in the principal Continental galleries.

A PIANO decorated inside and out from designs by Mr. Burne Jones has lately been completed by Messrs. Broadwood. Not only the decoration, but the shape, is due to the taste of the artist, who has induced Messrs. Broadwood to modify the usual grand-piano curve to one more subtle and beautiful. Seldom has so great an improvement been caused by so slight an alteration, and it is to be hoped that these instruments in future will no longer present a shape which spoils the appearance of the most carefully arranged room. In the decorations themselves Mr. Burne Jones has achieved a remarkable success, not only decoratively, but in the spiritual beauty of the designs which adorn it. The case is made of oak painted with various shades of olive-green and brown. On the sides are eleven circular discs, each enclosing a design

from the story of Orpheus and Eurydice, in which the genius of Mr. Burne Jones is seen at its highest. Although only *en grisaille* we doubt whether even his Pygmalion series equal in subtle expression and beauty of line these exquisite designs. The first shows Orpheus and Eurydice happy on earth, a simple, sweet, and graceful picture of pure love, which is only excelled in beauty by the next, where Eurydice is sinking to the earth from her lover's arms. For beauty of line and for intensity of sentiment, neither morbid, nor affected, nor strained, we know nothing which excels this masterly design. In the third scene Orpheus is entering the gloomy portal of the infernal regions. The air of the upper world still causes his robe to flutter, but his foot is on the threshold of an awful, barren, and rapidly descending defile, narrowing to a sunless cave. In the next disc is Cerberus, simply but finely imagined, with hog-like back, and long necks ending in canine heads. The next two discs are the simplest, but not the least wonderful. One represents Orpheus pressing forward and awaking the dreadful shadows with the first notes of his lyre; the other, Eurydice, borne a bloodless shade upon pallid mists, just smitten with the sense of something heard. In the next design, which is formed of three circles, the central one of which slightly infringes on the others, is depicted the scene before Pluto and Proserpine, who, with their heads crowned with flame and bent in solemn interest, are listening to Orpheus, who is playing on his lyre to the right, while Eurydice, pale and anxious, scarcely yet hopeful, listens in the left. The next three circles represent the ascent. In the first, Orpheus, with his hands before his eyes, and Eurydice clutching his garments, hurry up the dread arcade. In the second, he turns, and Eurydice falls back, losing life and colour. In the third, he gazes at her again, a pallid, death-like shade, hopeless and passionless. The last scene, which has been painted entirely by the artist's own hand, represents the death of Orpheus. Opening the lid, like opening a shell, discloses a very different scene and combination of colour. Here all is bright and gay, from the gilded sounding-board sprinkled with rose-leaves to the inside of the lid, which is painted with a bright and elaborate design of *Terra omniparens*. She is seated on a vine, whose branches and tendrils are painted a bright light blue, and whose boughs are populated with a number of naked babies—bad babies and good babies. The bad babies have an elfish expression and tails, and some are engaged in sucking eggs. Terra herself is a beautiful shadowy creature, with mysterious gray eyes. The most serious obstacle to the enjoyment of the painting of the lid, both in and out, is the supreme excellence of the designs on the sides. It is difficult to appreciate the most ingenious conceit after yielding to the magic of pathetic imagination.

MR. ELI JOHNSON is engaged on a portrait-bust of the late Rev. Alexander Raleigh, D.D.

WE understand that Messrs. Cassell, Petter, Galpin and Co. have arranged to offer at Messrs. Christie, Manson and Woods' sale on the 25th inst. all the original paintings specially prepared for the steel-plate frontispieces of *Picturesque Europe* by Messrs. Birket Foster, Louis Haghe, Carl Werner, Kilburne, Mogford, Wimperis, and other eminent artists. The publishers will also include in the sale a large oil painting by P. H. Calderon, R.A., and many other oil and water-colour paintings, made expressly for their publications, by Messrs. Frank Dicksee, J. D. Watson, F. Barnard, C. Green, A. Hopkins, the late Val. W. Bromley, Cox, H. Helmick, Mrs. Jopling, &c.

MISS ALICE CHAPLIN's group, *The Spirit of Enquiry*, which was mentioned in our last notice of the Grosvenor, is not, as there stated, a group

of dogs, but of a dog and kitten curiously investigating each other with deep interest, but grave doubts as to the advisability of close contact. The group has been purchased by Mrs. Mark Pattison. Miss Chaplin has also recently executed various small groups for the President of the Royal Academy, among others a clever portrait of Sir Frederick's handsome cat.

WITH reference to the lecture recently delivered by Mr. Holman Hunt on the quality and manufacture of artists' colours, it has been decided to convene a meeting at the Grosvenor Gallery for the discussion of this important subject. The date fixed for the meeting is Tuesday, June 8, at 7.30 p.m. Artists and scientific men desirous of attending the meeting can receive tickets of admission on application to the Secretary of the Grosvenor Gallery.

MESSRS. DOWDESWELL AND DOWDESWELLS have opened a new fine-art gallery at 133, New Bond Street, close to the Grosvenor Gallery.

UNDER the guidance of Mr. J. S. Domlevy and with the assistance of Mr. Henry Rylands, Messrs. Howell and James' classes for learning the revived art of what is called tapestry painting appear to be likely to become popular and useful. The name is not satisfactory, as it suggests the imitation of one art by another, whereas it is a quite different art, though suggested by another and applicable to much the same purposes. It is really the art of applying dyes with a paint-brush to textiles, so that the canvas or other textile is saturated with the colour as with marking-ink. The colours employed do not run either on application or by washing, or even by boiling, and their range is very considerable, the blues, yellows, and reds being particularly satisfying. The application of the art to objects of ordinary use is being daily enlarged, and for fronts of pianos, screens, and panels it is admirably adapted. It has one more and a great recommendation, and that is that, while it requires little apparatus or means, and the process is very simple, and great effects can be produced with comparatively little labour and time, it needs a sure and skilful hand. Faults, if committed, are not easily repaired, and it is therefore not likely to make our houses hideous by laborious efforts of persons with "a taste for art."

M. CHARLES LEMONNIER, in one of his pleasant Belgian letters to the *Chronique des Arts*, gives an amusing account of a kind of epidemic of panoramas which seems just now to have seized upon Belgium. Panoramas have of late years gone completely out of fashion in London. Since the time (about 1829) when David Roberts and Clarkson Staufield were both employed together upon two of these scenic works, very few painters of any note have undertaken them. It is therefore strange to read of several painters, of high renown, who have lately rushed into panorama in Belgium. Not a day passes, according to M. Lemonnier, but some new panorama is advertised in the Belgian papers. There are panoramas of Castellani and of Paillipoteaux; Verlat is engaged upon a panorama of Antwerp, and Artan upon one of Ostend; while Wauters has actually departed for Egypt to study there for a panorama to be exhibited in Germany. Added to all this, a new society has just been started, called "La Société Générale des Panoramas," which announces proudly that it intends to overturn the whole order of things by a totally new conception of panoramic effects. This society will exhibit at Paris a panorama of Jerusalem and the Holy Sepulchre, with the perspective painted, it is said, by Benjamin Constant; at Barcelona a panorama of "The Catalans, Conquerors of Greece;" and in Brussels an "Episode of the Revolution of

1830," by Slingeneyer, an artist of high reputation as a painter of large historical pictures. It does not seem to be in contemplation as yet to bring any of these numerous panoramas to London. At present the Belgian public are too delighted with them.

A COMPETITION has been opened by the Catholics of Lille for a painting commemorative of the late Pope Pius IX. The picture is to represent some important event in his life or Pontificate, or else to treat the subject as a whole in a symbolical manner. We commend the Catholics of Lille for having had the good sense to choose a pictorial rather than a sculptural monument. Paintings are, by their nature, less obtrusive than plastic works, and can be more easily avoided if desired. We should fear that the statues and huge monuments raised every year in France will in the end become a public nuisance. The paintings sent in for this competition will probably form part of an exhibition of religious art that is to be held at Lille next July.

THE electric light has broken down at the Musée des Arts Décoratifs, so that the exhibition can no longer be opened in the evening. It is still in use at the Salon, but the effect is very trying.

THE Belgian painter, Louis Dubois, has lately died. He was highly considered among the Belgian artists of the present day as a painter of original ideas and a powerful colourist. He painted both landscape and portrait, and occasionally *genre* and still-life. In his style he was naturalistic in the extreme, his portraits having much of the vigorous life and colour of Frans Hals. In his drawing, however, he was very defective, so that his works were often marred by great defects in design.

THE death is also announced of a French painter named Emile Betsellère, who has two works in the present Salon, and who obtained a third-class medal two years ago.

THE STAGE.

"ADRIENNE LECOUVREUR" AND "IOLANTHE."

THE witch of the French stage is with us again, though whether English society and English criticism are feeling her spell quite as potently as last year it is as yet too early to say. For Sarah Bernhardt has, at the present writing, appeared in one part only—that of Adrienne Lecouvreur in the play of the same name; and there is little in that play to induce even poetasters, not to speak of poets, to lay lilies daily on her doorstep. But possibly lilies are scarce this year; poetasters never are. It was a bold thing of Mdlle. Bernhardt to appear as Adrienne Lecouvreur with her present company. For though there are two or three good people in the cast, she is not strongly supported, and Adrienne is a part in which she particularly requires strong support, for she does not appear until the second act is well advanced, and by that time an audience—especially an audience which is called brilliant and is probably *blasé*—has had leisure to discover that there is much which is dull—much which requires a better interpretation than it receives. This performance of *Adrienne Lecouvreur*, now at the Gaïety, is, in its general effect, totally different from that to which not a few, even of those who are neither brilliant nor *blasés*, have been accustomed at the Théâtre Français, and the like of which could have been given us—and, indeed, was given us—last year at the Gaïety. Not many years since, in the Rue Richelieu, Got was playing the *régisseur*, while Mdlle. Arnould Plessis was playing the Princess, and while Favart—always intellectual if occasionally affected—was playing the part of Adrienne.

The gain, of course, was in the first two parts, not in the last; for Mdlle. Sarah Bernhardt is at least as competent for the part of Adrienne as anyone has been in our generation—nay, is probably more competent than any. Though, judged by the actors' test of the number of "lengths" the part contains, or by the more common test of the number of acts in which the character appears, Adrienne Lecouvreur is not exactly one of the great rôles of the theatre, it is in truth very important, and, what is more, very comprehensive. The range is wide, and some of the depths profound, between the cheerful and tender appearance of the young woman who makes at the first her enquiries for the soldier as if anxious for his glory, yet assured of it, and the raptures and agony of the famous actress whom rivalry—not in art, but in love—has succeeded in poisoning. Nor is there anything in these different situations which Mdlle. Bernhardt is unable to do justice to. It is, indeed, considered by some that she exaggerates the agony with which the fact of imminent death is realised. Neither the resignation of a Christian, a stoic, nor a heroine of tragedy is found in the intensity of her cry for "life;" but even in this it may fairly be said, on the other hand, that conventionality is avoided—"la vie qui s'ouvrait pour moi si belle" may well only be surrendered in a passion of regret, we suppose.

Iolanthe is successful, and the Lyceum play-bill is again strengthened. We are not indeed of opinion that the piece is quite so noble and beautiful an idyll as some of our contemporaries think it. There was not that in the original which could allow in the adaptation all the qualities that have been claimed for it. Pure and graceful and tender it certainly is, but withal, and of necessity, a little thin and unreal. There is in it no opportunity for profound mental analysis; a romantic view of life, which puts the play of individual character a good deal out of the question, is accepted at the beginning and is maintained to the end. We do not blame Mr. Wills in the slightest degree for this. We are thankful to him for the determination, which rarely deserts him, to be an artist in words. He conducts the story with his wonted power of graceful form; and he is not here occupied with things so profound as possessed him in the *Man o' Airlie*. The irony and tenderness, the inward dramatic action, of that play gave it a claim to be considered poetry. It was a distinct creation, and came near to life; and *Iolanthe* does not do this, and gains little by the author's occasional lapses into that tawdry imagery which nothing but the general poverty of our stage-writing could permit to be extolled, and which, though it may befit the romantic drama, has no part in that analysis, that "criticism," of life which "poetry is, at bottom." So much, then, for the piece—a light and fragile *entremet* after a substantial feast. We are grateful for it for what it is, but not for what its author never meant it to be. And we are grateful to it, in the second place, because it gives to Miss Ellen Terry the opportunity for a continuous triumph. There is here no height of passion which the actress cannot quite scale, and nothing of the vivid and every-day reality which sometimes she cannot quite grasp. Nor are there here any conventional standards of which she—whose fashions are quite individual and her own—intentionally falls short. This one performance would be enough to prove her indisputably first as an actress of romance—if proof of that sort were now needed. From the first word to the last she is rhythmic, graceful, impulsive, and suitably *naïve*. We like Mr. Irving as Count Tristan, the blind girl's lover. It is objected to him that he lacks the graces of early youth; but very young lovers are wont to be a good deal occupied with their graces, and Mr. Irving, as a lover, is occupied with his love. He is

chivalrous and he is warm, and it is not generally recognised—because he has been seen so little in lovers' parts—that he is chivalrous and warm in a peculiar measure. He suppresses himself in presence of his love, while generally stage chivalry asserts itself too much, and betokens a nature boisterous rather than quelled. Mr. Mead performs in a very direct and appropriate manner the part of the Eastern leech in whose art there lies the secret that will work Iolanthe's cure. Furthermore, he brings to the performance that careful, measured elocution which we associate with the Ghost of Hamlet's father, and with those persons of dignity in the Shakesperian drama whose words are generally few, but of particular discretion. The assumption of an extremely exalted position—especially if it is an official one—seems incompatible with the expression of sentiments of originality. Shakspeare knew this, though it is true that his opportunities for the study of "extra-Parliamentary utterances" were not so rich as ours.

FREDERICK WEDMORE.

MUSIC.

"FAUST" BY BERLIOZ, ETC.

HECTOR BERLIOZ was born in 1803 and died in 1869. He was undervalued and all but ignored during his lifetime by his countrymen, and it is only since his death that his works are being received in Paris and elsewhere with the attention and admiration which they so thoroughly deserve. *La Damnation de Faust*, a dramatic legend in four parts, was written in 1845, and performed the following year in Paris; but the composer was much irritated at the cold reception given to a work which he justly considered his best. It has, however, been recently revived with the greatest success in Paris, at the Châtelet Concerts, by M. E. Colonne. Portions of it have been heard at Drury Lane Theatre and Exeter Hall during the lifetime and under the direction of the composer, and at Her Majesty's Theatre in 1878 by M. Paëdeloup; but the first performance in London of the entire work was given on Friday, May 21, at St. James's Hall by Mr. C. Hallé, with the assistance of his celebrated Manchester band and chorus. The work was repeated on Saturday evening. The enthusiasm created by these two performances will lead, we hope, to the production of Berlioz' other great compositions. Like Wagner he was an original thinker and writer; a great worshipper of Gluck, Weber, and Beethoven; and yet seeking after a new and possibly higher form of art. It would be difficult—nay, at the present moment, impossible—to point out the exact niche which Berlioz should occupy in the temple of fame; but it is certain that a great name and at least one great work have been hitherto unaccountably neglected; and that his position as a composer, especially with regard to Wagner and Liszt, his contemporaries (or we might even say successors), has still to be carefully scrutinised and fixed. The music of *Faust* is strikingly original and full of dramatic power, and truly wonderful is the clear and lucid manner in which Berlioz expresses and develops his thoughts. He exhibits a wonderful versatility of style; the pathetic, the solemn, and the terrible, the gay and the humorous, are blended together with skill and discrimination; and clear form without formality, and tuneful music without triteness, combine to render the work pleasing and acceptable, not only to trained musicians, but to the general musical public. It is well known that the composer was a master in the art of instrumentation, and the orchestration throughout this work is a perfect marvel of learning, cleverness, and ingenuity. Berlioz, in selecting from Goethe's poem certain scenes suitable for the purpose he had in view, has

been accused of having "mutilated a monument." Again, Goethe ends with Faust regenerated and saved, but Berlioz presents to us Faust and Mephistopheles on black horses riding into the infernal regions, where Faust is delivered to the flames, while the heavens open and celestial spirits receive Margaret into the heavenly choir. The fine music is Berlioz' best apology for any liberties taken with the German poem, and to the alteration at the close we owe that wonderful and graphic tone-picture of "The Ride to Hell." Mr. Hallé's admirable orchestra has been heard quite recently in London, but this was the first appearance of the Manchester choir. The tone is excellent both in quality and quantity; they sing with great precision, and with such energy and enthusiasm that the very soft passages were at times lacking in delicacy. This was noticeable in the "Easter Hymn" and Margaret's "Apotheosis." The vocalists were Miss Mary Davies (Margaret), Mr. Edward Lloyd (Faust), Mr. Hilton (Brander), and Herr Henschel (Mephistopheles). Mr. Lloyd gave the Faust music to perfection, and Miss Davies and Herr Henschel sang with great taste and intelligence, though the latter did not quite realise the part of Mephistopheles. The performance by the band was very good. The spirited Hungarian march and delicate "Ballet of Sylphs" were encored and repeated each evening. We must mention Mr. E. Hecht, the chorus-master, for the marked success due to his training of the choir; and Mr. C. Hallé deserves the thanks of all lovers of music for his bold enterprise. He conducted the work with extraordinary ability and enthusiasm, and well deserved the cordial reception given to him.

The second Richter concert took place on Thursday, May 20. Cherubini's overture, *Anacreon*, was performed in magnificent style. Mdme. Norman-Néruda gave a fine rendering of Spohr's dramatic concerto; the orchestral accompaniments were played with wonderful delicacy and finish. The novelty of the evening was a serenade in C major, No. 2, for string-orchestra (op. 14), by R. Fuchs. The composer was born in 1847, and now holds a professorship of harmony at the Conservatoire in Vienna. The serenade consists of four movements—an *allegretto* in song form; a *larghetto*, consisting of a theme and three variations; a short *allegro*; and a finale *alla tarentella*. The music is pretty, lively, but sometimes rather commonplace. It is by no means an important composition, and we think Herr Richter could easily have selected some other German or even English work of greater value and interest. The programme included Wagner's charming *Siegfried* idyll, composed in 1871; and songs by Weber and Brahms. Miss L. Bailey was the vocalist. The concert concluded with a very fine performance of Beethoven's symphony in D.

The programme of the third concert (May 24) included no novelties. Herr Xaver Scharwenka played his clever concerto in B flat minor. He has a fine touch and splendid mechanism, and his brilliant performance was much applauded. (The work was first played in England by Mr. Dannreuther at the Crystal Palace in 1877.) Herr Henschel was the vocalist, and gave selections from *Der fliegende Holländer* and *Die Meistersinger*. The concert opened with Mendelssohn's Italian symphony and closed with Beethoven's *Eroica*. By the perfect rendering of these two well-known works Herr Richter has again given us the most brilliant proofs of his ability as conductor.

The Cambridge University Musical Society, founded in 1843, gave their 167th concert at the Guildhall, Cambridge, on Tuesday, May 25. There was a very large attendance. Goetz' *Nenia*, for chorus and orchestra, was admirably performed. The difficult music was sung with great firmness and energy. Herr Straus played Prof. Macfarren's ably written concerto in G

minor for violin. It was written for him in 1873, and first given at one of the Philharmonic Society's concerts in the same year. Herr Straus' performance of the work was much applauded. Bach's double chorus, "Now shall the Grace," was given with great spirit, but did not produce its full effect owing to an unequal distribution of voices and to the unfortunate but unavoidable omission of the organ. The concert concluded with a very fine rendering of Beethoven's *Eroica*; and Mr. C. Villiers Stanford, the conductor, deserves very great praise for the care, energy, and intelligence which he displayed. Good conductors are not too plentiful, and the Cambridge Society have good reason to be proud of their talented *chef-d'orchestre*. J. S. SHEDLOCK.

LIBER STUDIUM.

MR. A. W. THIBAUDEAU has for Sale Impressions of TWO HITHERTO UNPUBLISHED PLATES of TURNER'S "LIBER STUDIUM," and also a NEARLY COMPLETE SET of the WORK, containing some very fine proofs selected by Charles Turner; also a few Etchings. THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Muddie's Library).

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are—

- 1st. The absolutely facsimile nature of the result.
- 2nd. Its Cheapness for Small Editions of 250, 500, &c.
- 3rd. The Prints being direct on the Paper, there is an absence of all cooking and that disagreeable effect inherent to all Mounted Prints.

* * * For Terms and Specimens apply to the Manager.

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood.
Strengthens the Nerves and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly reconstitutes the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A

fluid combination for Derangement of the Liver, particularly when arising from slight congestion. It gently stimulates the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than colic or blue pill, and quite as effective for removing bile.—Prepared by J. FERRER, 247, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. FERRER is signed in red ink on the label.

MR. G. H. JONES,

Surgeon-Dentist, 57, Great Russell Street, London,

Will be glad to forward his Pamphlet on PAINLESS DENTISTRY, free, enclosed by Post, which explains the most unique system of the adjustment of ARTIFICIAL TEETH without pain, to which the following Testimonials refer. Consultation free 10 to 5.

"MY DEAR SIR,

"Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which renders my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name.

"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

PROFESSOR GARDENER, late of the Royal Polytechnic Institution, in a certificate to Mr. G. H. Jones, Surgeon Dentist of 57, Great Russell Street, London, says:—"I have examined and tested your Painless System of adjusting Artificial Teeth; it is quite perfect, and is the most successful application of scientific laws for securing actual wear and comfort yet introduced."

"January, 1877.

GROSVENOR GALLERY LIBRARY

NEW BOND STREET,

NOW OPEN.

AVAILABLE FOR BOTH LADIES AND GENTLEMEN.

COMPRISES AN

English and Foreign Circulating Library,

Provided with all the Best and Newest Literature ; a

LIBRARY OF VOCAL AND INSTRUMENTAL MUSIC ;

A Reference Library ;

READING, WRITING, AND NEWS ROOMS,

Supplied with the Daily and Weekly Journals ;

LADIES' DRAWING ROOM,

DINING AND LUNCHEON ROOMS, SMOKING ROOM,

And all the appliances and comforts of a FIRST-CLASS CLUB.

Subscription for Club Membership, as described in the foregoing, together with Six Volumes delivered free from the Circulating Library	- - - - -	THREE GUINEAS per Annum.
Subscription for Club Membership, excluding only the right to the Six Volumes	- - - - -	TWO GUINEAS per Annum.
Subscription to the Circulating Library only	- - - - -	From ONE GUINEA per Annum.

The Directors beg to inform the Subscribers to the Circulating Library that a constant endeavour will be made to provide a punctual and ample supply of all new works of interest and authority ; and in order to carry out this intention efficiently, they must rely in some measure upon the co-operation and assistance of the Subscribers themselves. It is notorious that a large number of new books of a wholly trivial character are now put into circulation, for which there is no real demand, and the publication of such works is in many instances only rendered possible by the system upon which Circulating Libraries have hitherto been conducted. The expenditure upon works of this class will be strictly curtailed, and the funds will be applied as far as possible to the purchase and circulation of books of a higher order and a really popular character, such as the majority of readers are anxious to obtain upon the date of their publication. The Directors trust by this means to render the Circulating Library, in the truest sense of the word, select, while they will seek at the same time to avoid the kind of interested and arbitrary censorship that has been found alike vexatious to authors and the public.

All the Books in the Library are available for Subscribers, without distinction as to amounts of Subscription.

Full details of Subscriptions, both for Town and Country Members, on application to the SECRETARY, the GROSVENOR GALLERY LIBRARY (Limited), 135, New Bond Street, W.

Particulars on application.—18, Green-street, Leicester-square, W.C.

THE AUTOTYPE COMPANY

has REMOVED from Bathbone-place to suitable Premises, 51, OXFORD STREET, W.C. (twenty doors west of Muddie's Library). The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Paleographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are:—

- 1st. The absolutely facsimile nature of the result.
- 2nd. Its cheapness for small Editions of 250, 500, &c.
- 3rd. The Prints being direct on the Paper, there is an absence of all coating and that disagreeable effect inherent in all Mounted Prints.

* For Terms and Specimens apply to the Manager.

NOW OPEN. EXHIBITION OF THE PAINTINGS by F. W. LAWSON, illustrating "CHILDREN OF THE GREAT CITY," "DAWN." This important painting by F. W. Lawson is on view by the courtesy of the HARBORERS BUILDING SOCIETY.

AN INTRODUCTION TO THE PHILOSOPHY OF RELIGION.

By JOHN CAIRD, D.D.,

Principal and Vice-Chancellor of the University of Glasgow, and one of her Majesty's Chaplains for Scotland.

"It is a remarkable book in many ways—remarkable in the fact that it proceeds from the pen of a Scottish clergyman bred in the Presbyterianism of Scotland, nurtured on the metaphysic of the Scottish school, and on the theology of the Westminster Confession. It is remarkable also for its marvellous power of exposition and graceful subtlety of thought. Hegel's solution of the problem of religion is at length adequately represented in English literature. Hegelianism has never appeared so attractive as it appears in the clear and fluent pages of Principal Caird."—*Spectator*, May 29.

"The Hegelian system of religion has never before, in this country, found an expounder as masterly and eloquent as Principal Caird."—*Dundee Advertiser*.

"Principal Caird's 'Introduction to the Philosophy of Religion' is a singular phenomenon. No book of the kind has ever, we believe, proceeded from the Scottish press; able and eloquent it undoubtedly is."—*Aberdeen Free Press*.

"This volume is no light reading, and is the result of very tough thinking; it deals with the most subtle points of scientific and metaphysical thought, discusses complex and perplexing philosophical questions, and enunciates a new ontological theory in turn. Let us say, at once, that the work is able, that it contains much acute criticism and ingenious thinking, and throughout there is an absence of narrowness of thought and dogmatism in tone, and there are no traces of the peculiar accent of any church or creed."—*Scotsman*.

Glasgow: JAMES MACLEHOSE, Publisher to the University. London: MACMILLAN & Co.

MUDIE'S SELECT LIBRARY.

MUDIE'S SELECT LIBRARY was established in 1842 in order to meet the growing demand of the age for a Higher Class of Books than could then be readily obtained on moderate terms from the ordinary Circulating Libraries.

From its commencement the original purpose of the Library has been kept steadily in view. The best Books of every shade of opinion, on all subjects of general interest, have been taken in large numbers—Hundreds, and in some instances Thousands, of Copies of the Leading Works of every Season having been placed in circulation.

Great care has always been taken in the selection of Books to study the wishes of subscribers, and to make the Library, not only "Select," but comprehensive.

THE WHOLE COLLECTION NOW EXCEEDS ONE MILLION VOLUMES.

Additional Copies of all the Best New Books in History, Biography, Religion, Philosophy, Travel and Adventure, and the Higher Class of Fiction continue to be added as the demand increases; and arrangements are made with the leading Publishers for an ample supply of all forthcoming Books of general interest as they appear.

FIRST CLASS SUBSCRIPTION, ONE GUINEA PER ANNUM.
COUNTRY SUBSCRIPTION, TWO GUINEAS PER ANNUM.

Prospectuses, postage free, on application.

MUDIE'S SELECT LIBRARY (LIMITED), NEW OXFORD STREET.
City Office—2, KING STREET, CHEAPSIDE.

FAMILIES. Second Series. By EDWARD WALFORD, M.A. 2 vols. 3s. [Just ready.]

ROYAL WINDSOR. By W. Hep-

WORTH DIXON. Vols. III. and IV., demy 8vo, 30s. Completing the Work. Second Edition.

LODGE'S PEERAGE and BARON-

ETAGE for 1881. Under the Special Patronage of HER MAJESTY. Corrected by the Nobility. Forty-ninth Edition. Royal 8vo, with the Arms beautifully engraved, 31s. 6d., bound gilt edges.

THE NEW NOVELS.

MERVYN O'CONNOR. By the

EARL OF DESART, Author of "Kilverdale," &c. 3 vols.

MISS BOUVERIE. By Mrs. Moles-

WORTH. Author of "Hathorcroft Rectory," &c. 3 vols. "Miss Bouverie" is a pure and pretty story."—*Athenaeum*.

POOR ZEPH. By F. W. Robinson,

Author of "Grandmother's Money," &c. 3 vols.

"The author has written many good stories, and has long since established his reputation as a romancer of every-day life to whom the bulk of the reading public willingly listens. He has done well to reproduce these charming studies and sketches."—*Athenaeum*.

POET and PEER. By Hamilton

ALDE, Author of "Penruddock," &c. 3 vols. Dedicated to LORD LYTTON.

"Poet and Peer" is a novel of unusual merit, the work of a cultivated man of the world, who describes what he has himself seen. It is both in intention and execution the best of Mr. Aldrich's novels, and will interest and amuse every reader who takes it up. [Then comes.]

"An unusually good story. Its chief attraction lies in the easy sketches of character and society which are strewn about it."—*Academy*.

"The story is sufficiently relieved with brightness and humour to make it not only interesting, but agreeable reading."—*Saturday Review*.

THREE RECRUITS, and the

GIRLS THEY LEFT BEHIND THEM. By JOSEPH HATTON. 3 vols.

"Mr. Hatton's novel hurries us along in unflagging excitement. The scenes of the good old times when Farmer George was king are excellent."—*Times*.

"Three Recruits" is one of the best novels of the season. It is sure to become exceedingly popular."—*Morning Post*.

FOR HER DEAR SAKE. By Mary

CHOIT HAY, Author of "Old Myddleton's Money." Second Edition. 3 vols. "For her Dear Sake" is a decided success."—*John Bull*.

A MODERN GREEK HEROINE.

3 vols. [Next week.]

CHEAP EDITIONS.

Each Work complete in 1 vol., price 5s. (any of which can be had separately, elegantly printed and bound, and illustrated by Mr. J. GILBERT, MILLAIS, HUNT, LEITCH, FORTNETH, FOSTER, TENNIEL, SANLIPS, E. HUGHES, SAMBOURNE, &c.)

FIGHTING and FARMING in

SOUTH AFRICA: a Narrative of Personal Experiences
in the Colony during the years 1877-8-9. By FRED. G.
BROWNING, late of the Frontier Light Horse and 3rd
Cape Yeomanry. 1 vol., large post 8vo, handsomely
bound, 10s. 6d.

LONDON:

REMINGTON & CO., 133, NEW BOND STREET, W.

SAMPSON LOW, MARSTON, & CO.'S NEW PUBLICATIONS.

A NEW SERIES OF

ILLUSTRATED TEXT-BOOKS OF ART EDUCATION.

Edited by EDWARD J. POYNTER, R.A.

Each Volume contains numerous illustrations, and is strongly bound for
the use of Students. Price 5s.

N.B.—These volumes were first announced last year as a 3s. 6d. Series.
Mr. POYNTER, the Editor, has, however, found it desirable to enlarge the
scope of each volume, and to add at least 100 pages of Text and many
additional illustrations. The price, therefore, has necessarily been increased
to 5s.

The Volumes ready on the 3rd June will be

PAINTING.

CLASSIC and ITALIAN. By Percy R.

HEAD, Lincoln College, Oxford; and EDWARD J. POYNTER, R.A.
Upwards of Eighty Full-page and other illustrations. Bound in extra
cloth limp.

* This Volume contains an Introductory Preface on Art Education by
Mr. POYNTER, who also contributes a chapter on Egyptian Art, and
succinct notices of the various Italian schools, &c.

ARCHITECTURE.

GOTHIC and RENAISSANCE. By T.

ROMER SMITH, F.R.S.B.A. 150 Illustrations.

* This Volume treats of the history of Architecture from the rise of the
Gothic style to the general depression which overtook the Renaissance
style at the close of the Eighteenth Century.

THE NEW WORK, by the AUTHOR OF "LORNA DOONE," entitled
"MARY ANERLEY," is Now Ready at every Library.

MARY ANERLEY: a Yorkshire Story.

By R. D. BLACKMORE, Author of "Lorna Doone," "Alice Lorraine,"
"Cradock Nowell," &c. 3 vols., crown 8vo, 31s. 6d.

"One of his happiest productions. It is full of the fine touches of observa-
tion and description, whether of people or of places, that have belonged to
most of his novels, and there is a strong dramatic interest to be found in it.
In this respect indeed, as in others, there is as much matter in 'Mary
Anerley' as would make a dozen ordinary novels. . . . We have found
it impossible to dwell upon more than a few of the many sides belonging to
this remarkable book, the pathetic passages of which are not less striking
than the humorous or dramatic touches and descriptions which abound in
it."—*Saturday Review*.

"Mr. Blackmore's wealth of material has made his story rich and full to
overflowing."—*Daily News*.

Now ready, in 2 vols., demy 8vo, cloth extra, 36s.

A PHYSICAL TREATISE ON ELEC- TRICITY and MAGNETISM. By J. E. H. GORDON, B.A. Camb., Assistant Secretary of the British Association.

Now ready, in 1 vol., crown 8vo, cloth, 12s.

A RIDE in PETTICOATS and SLIPPERS

from FEZ to the ALGERIAN FRONTIER. With Map and Illustra-
tions. By Captain H. E. COLVILLE, of the Grenadier Guards.

Now ready, crown 8vo, cloth extra, 10s. 6d.

SCIENCE a STRONGHOLD of BELIEF;

or, Scientific and Common Sense Proofs of the Reasonableness of
Religious Belief, as Based on a Plain and Candid Study of Nature and
the Scriptures. The whole forming a general practical View of Belief
and an opposition to modern Doubt and Infidelity. By R. B. PAINTER,
M.D., F.R.C.S.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Curiosities of Puritan Nomenclature. By Charles W. Bardsley. (Chatto & Windus.)

MR. BARDSLEY has produced a useful and amusing book, superior in almost every respect to his *English Surnames* (see ACADEMY, May 30, 1874), a book which, notwithstanding certain grave errors and the very mild endeavours after humour with which it was disfigured, threw a flood of light on a most interesting subject. The volume before us is not merely an account of a certain class of Christian names; it is over and beyond this an endeavour to demonstrate that the historian Hume, and the playwrights who preceded and the novelists who followed him, have been correct in asserting that the use of Hebrew names culled from the Old Testament, and English words and sentences of a theological nature used as names, was a distinguishing mark of Puritanism, and that, moreover, it was at one time very common. As to his first contention, he is no doubt substantially correct. A very few such names occur in the records of the Middle Ages, but they are so thinly scattered that they must be held to indicate individual eccentricity only, not a widespread fashion. After the Reformation became an accomplished fact it was otherwise. The Bible—Old Testament as well as New—became a household book. All who could read read it with avidity, and those who could not had the opportunity of hearing the greater part read aloud in the churches. It is well known, moreover, that the more extreme of the Reforming party, in their zeal to uproot all memory of the faith they had abandoned, were anxious that the rising generation should not bear names which could remind anyone of the old saints and the old worship. This was only part of a scheme that never came to maturity. Had such wild people been permitted to have their way, the men of the French Revolution and Auguste Comte would have been anticipated, and we should have had a purified Calendar, from which heathendom, Popery, and history would alike have been excluded (Pilkington's Works, Parker Society, 16). Such nonsense, however, had very little effect on the English people. But as the administration of baptism was in ordinary cases confined to the clergy, the Puritan faction had more power over the names of babies than they had over those of days and months; and Mr. Bardsley has gathered together from parish registers and other trustworthy sources sufficient evidence to prove that they used it in a manner so foolish as to excuse the most savage jests which their enemies have heaped upon them. The error he has fallen into is that he believes

this silly practice to have been once very common; whereas all trustworthy evidence goes to show that it was a folly confined to a few persons who were under the influence of the wilder of the Puritan clergy, that it never extended over the greater part of the kingdom, and that, except in the rarest cases, it did not affect any but the lower class. Evidence of this is furnished by the pedigree of almost every Puritan family in England. Oliver Cromwell was surely a typical Puritan, yet every one of his children bore names which would have caused no remark had they been given in the fifteenth or the nineteenth century. The pedigrees of Fairfax, Strickland, Wray, Hotham, Cholmeley, and a hundred others which we have examined for this special purpose bear similar testimony. Our knowledge of the Christian names of the common folk of those days is not confined entirely to the evidence furnished by parish registers. Manor court-rolls tell us a good deal, and, so far as we have examined them, their testimony goes to show that distinctively Puritan names are of great rarity. There are many army lists of the Civil War period which give the names of common soldiers. Most of these are unprinted, but some appeared as tracts at the time. The lists of Whaley's regiment, taken in May 1649, and of Goffe's regiment, taken in 1659, are now before us. The former contains 569 names, out of which there are but twelve that can be looked upon as remarkable. The latter contains 390 names, but only furnishes four distinctively Puritan examples. Probably, however, the most important list in existence for our purpose, as it cannot contain the names of any but the most advanced Puritans, is the Kentish petition published by Hearne (*Lib. Nig. Scac.*, ii. 694) of those who were anxious that the trial of the King might be "vigorously prosecuted." It was presented to the House of Commons on December 23, 1648. Here we have 1,113 names, out of which but thirty can be selected in support of Mr. Bardsley's conclusions.

Mr. Bardsley reprints from Hume the list of a Sussex jury which Hume had taken from James Brome's Travels and inserted as a note in his History. He also adds a similar but longer list from the British Museum (reference not given), and is at some pains to show that these catalogues have some sort of truth in them. "The conclusion," he says, "is irresistible; the names are authentic, the panel may have been." Now that the panel is authentic in either case is simply impossible; for, granting that every Christian name in the two lists was once borne by some unfortunate, it is absolutely impossible that there can have been so many persons in Sussex or elsewhere ticketed in this unhappy manner that the summoning officers should have made juries of them alone without including a single John, Thomas, Richard, or William. On the most liberal calculation the names called Puritan can never have formed more than one thirty-fifth of the whole in any one neighbourhood; and such names as these, which are not mere Bible names but many of them whole sentences—such as Stand-fast-on-high Stringer of Crowhurst and Search-the-Scriptures Moreton of Salehurst

—must at any time have formed a part of the population almost too small for estimation. Hume, when he gave currency to this Sussex list, must have been ignorant of the way in which English juries are summoned. It is just possible, though in a high degree improbable, that, had the summoning officer been permitted to pick a jury entirely at his own discretion, he might have got together some such "ragged regiment;" but it is utterly impossible that such an accident could have happened through the ordinary processes by which juries have been summoned for ages before the Puritan Revolution. Exclusive of the manorial jury lists of those times, of which hundreds yet exist, it so happens that a few others have been preserved. We have before us the one which tried the notorious Lieut.-Col. John Lilburne in 1649. It might, so far as the names are concerned, have been empaneled to-day. They are Miles, Stephen, John, Nicholas, Thomas, Edmund, Edward, Ralph, William, Simon, Henry, and Abraham.

Though we have no doubt that Mr. Bardsley is wrong in his conclusion as to the great and permanent effect of Puritanism on our Christian names, we welcome most gladly the large collection of facts which his industry has brought together, and are thoroughly at one with him in many of the inferences which he draws. A really good book on English names—surnames and Christian names together, for the two cannot rationally be separated—is much wanted. Mr. Lower and Miss Yonge have both of them done good work, but their books are incomplete, and neither of them is up to the present state of knowledge. Every future writer on this subject will find Mr. Bardsley's book a great help to him, but he must use it with caution. It is by no means certain, as any French antiquary will tell him, that the religious body called Huguenots took their name from Hugo. Epham or Effam, a contracted form of Epiphania, did not die out in the seventeenth century. There were two or three women of this name in North Lincolnshire in the reign of George III., and we have some reason to think that it exists at the present time. "Original" was once a commoner name than Mr. Bardsley supposes. Originul Peart was a Burgess of Lincoln in the reign of Charles I.; Orignalnd Smyth was fined for an assault at a court of the manor of Kirton-in-Lindsey in the twentieth of Elizabeth; and Originall Byron of Steakham was one of the appraisers of the goods of Gervase Markham of Dunham, Nottinghamshire, in 1636. Philadelphia, Pleasant, and Eden are by no means extinct as yet. We ourselves know persons bearing these names, and believe that they have been given in baptism within the last five or six years. We do not think it is correct to speak of Trinity Langley fighting in the army of Cromwell. He was surgeon in Col. William Vavasour's regiment in the army raised against Scotland in 1640, with which expedition the future Protector had nothing whatever to do. There is some doubt, moreover, whether this man's name really was Trinity. It is at least probable that it was a misprint for Timothy, for we find in the Commons' Journals, November 1, 1644, that Timothy Langley, surgeon, and

others, who had "received four pounds apiece advance monies . . . with injunction to repair with all diligence to their charges in the army," had failed to fulfil their contracts. Mr. Bardsley quotes a Douglas Sheffield of the year 1656 as an instance of a surname used as a Christian name. He may be correct, but the case is doubtful. The name of Douglas was a common female name among the Sheffields, their kinsfolk and allies. It came into the family by the marriage of John Lord Sheffield of Butterwick with Douglas, daughter of William first Lord Howard of Effingham. If Douglas be not a surname it is not easy to explain what it means; but there are grave difficulties in the way of believing that an English noble, and one, too, intimately connected with the Court, would give his daughter the name of one of the great Scotch houses. EDWARD PEACOCK.

A Dictionary of Christian Antiquities.
 Edited by William Smith, D.C.L., LL.D.,
 and Samuel Cheetham, M.A. In 2 vols.
 Vol. II. (Murray.)

THE completion of this important work is a great boon to scholars, serving as it does not only, in accordance with the promise of its title-page, as a continuation of the *Dictionary of the Bible*, but in scarcely less a degree to supplement the earlier *Dictionary of Greek and Roman Antiquities*, which too often fails the reader who has occasion to search for matter later than the early Imperial era of Rome. Nevertheless, the rule laid down by the editors of treating the death of Karl the Great as the beginning of the modern period excludes so very much that is of interest and value to the student, and scarcely accessible for reference, that we foresee a demand for a further supplement on mediæval antiquities, which shall carry the record down to the beginning of the Renaissance, if not even to the Counter-Reformation. Take, for example, the *Notitia of Monasteries*, compiled by Mr. Wensley at an expenditure of toil which only those who have had some experience in making like catalogues can justly estimate, but which even the most casual reader must needs guess at. It contains 1,481 entries, in no case including any name of a House founded after 814. And yet it is certain that the man who wants to know about Monte Cassino and Fulda, about Canterbury and Monasterboice, will also desire information about the Grande Chartreuse and Cluny, about Cîteaux, and Rievaulx, and Strata Florida, which, of course, are not to be found here, as being later foundations.

Necessarily, there is much inequality in the work before us, a defect not to be avoided even in a dictionary by a single scholar (since the most encyclopædic learning cannot be equal at all points), but accentuated when so large a body of contributors is concerned, several of whom have been assigned articles on subjects which are in no sense their speciality; unlike the rule which it is possible to follow in distributing the work in a compilation like the *Encyclopædia Britannica*. The best is of high excellence; the worst (say Dr. Swainson's) is at least passable, and is of much less bulk.

It is obviously impracticable to give in this necessarily brief notice any adequate survey of a volume of 1,162 double-columned pages in small type, dealing with a great variety of obscure and difficult topics, and a few critical notes are all that is possible.

Under the entry "Power of the Keys" Archdeacon Cheetham, while rightly enough describing the meaning of the term as most usually understood in the early Church, supplies neither the Rabbinical sense, which is presumably the original one (or at least that which an ancient Jewish convert to Christianity would put on St. Matt. xvi. 19), but is not given in the *Dictionary of the Bible*, nor yet the remarkable gloss of Tertullian, agreeing therewith, that the grant to St. Peter was fulfilled, so far as "opening" and "loosing" are concerned, in his being the first to preach the Gospel to Jews and Gentiles, and to admit them into the Church; and, so far as "shutting" and "binding," by his share at the Apostolic Council of Jerusalem in deciding what portions of the Mosaic law were to be relaxed, and what left obligatory on Christian converts (*De Pudicit.*, xxi.). Mr. Churchill Babington's articles have the advantage of being those of an expert in his own favourite subject, are strictly archaeological, and very helpful. We may note among them those on Lamps, Money (a most erudite paper), and Rings, as good examples of his method. Another expert whose contributions are valuable is Mr. J. R. Lunn, perhaps the most learned student of musical antiquities in this country, to whom the papers on that branch of the present Dictionary have wisely been committed. Under "St. Kevin" we miss Sir James Ware's ascription to him of a work on the origin of the Britons; and the short notice of "St. Kilian" omits some important points given by Mabillon, such as his ordination at Rome by Pope Conon, which fixes his date accurately, instead of the indeterminate "latter part of the seventh century," since that Pope sat in 686-7, nor yet Kilian's assassination at Würzburg in 689, which gives him his title of Martyr. Mr. Scudamore's liturgical articles are packed with erudition, as all who know his indispensable *Notitia Eucharistica* would naturally expect. The entries "Prayers for Kings," "Kiss," "Ceremonial Use of Lights," "Lord's Supper," "Missa," "Obolations," "Processions," and "Sacramentary" are instances in point. Like praise is deserved by Canon Barry's useful paper on the "Lord's Day" and by Mr. Birks's "Martyr." Mr. Edwin Hatch has also accumulated much learning in his contributions on the orders and ordinations of the clergy, but the peculiar views, not to say crotchets, on the subject, which he has since been ventilating in his Bampton Lectures, are traceable throughout. And as they belong to the domain of private and doubtful speculation, not to that of certified knowledge, they ought not to have found a place in a book of general reference for which he is not himself directly responsible. Anyone who will compare the late A. W. Haddan's article "Bishop," in the first volume, with Mr. Hatch's papers in the second, will note the difference between knowing and guessing, and will regret the substitution. Mr. Meyrick's article on "Prohibited Degrees" is of practical interest at the present moment,

and conveniently summarises the facts for reference. Another very careful paper, deserving of praise for its painstaking array of facts, is Mr. J. Bass Mullinger's on "Schools;" but the episode of Julian's attack on the Christian seminaries is too briefly recorded, nor is enough told concerning the law he enacted on the subject, the first model of the modern "Conscience Clause," and with very much the same object. "Slavery" is also well treated by the same writer. Another contributor whose articles will be consulted with pleasure and profit is Canon Venables, a sharer with Prof. Babington in the more strictly archaeological portions of the work. "Mosaics" and "Christian Sculpture" may be instanced as good examples, though in the woodcuts of the former we desiderate some of the examples from the chapel of St. Peter Chrysologus at Ravenna, and the Sacrifice of Melchizedek in San Vitale, which is of greater ecclesiological importance than that of the Empress Theodora, which is given. In Mr. Warren's article on the "Sign of the Cross," there is a curious omission from the list of early authorities. Although quoting St. Justin Martyr, *Var. Quaest.*, for one illustration, he does not cite him in evidence of the fanciful symbolism anciently prevalent on the subject; and yet chap. lv. of the *First Apology* is entirely devoted to it, and so are chaps. lxxxvi. and xcvii. of the *Dialogue with Trypho*, in the latter of which occurs the first reference to the uplifted arms of Moses during the battle with Amalek, which Mr. Warren gives as an example of the symbolical interpretation he discusses. Mr. Ffoulkes has had the Councils assigned him, and his great familiarity with ecclesiastical history enables him to discharge the task adequately on the whole; but the weighty evidence against the oecumenical character of the Second Council of Nicaea ought not to have been merely alluded to in less than two lines, even though a reference is given to Sir William Palmer's careful investigation of it in his *Treatise on the Church of Christ*, iv., 10, 4.

Mr. Mullinger's learned and careful article "Pope" is scarcely successful in one important particular—that of showing the ordinary student the amount and kind of discrepancy which exists in the accounts of the earliest settlement of the Roman See and in the catalogues of the first five or six Popes. A scholar already versed in the question will, of course, follow the thread of discussion easily; but an enquirer should have had put before him the fact, duly tabulated, that there are twelve irreconcilable accounts of the succession, the latest of which is the Liberian Catalogue. And it would have been also worth while to set out in full all the ante-Nicene evidence, of no great aggregate bulk, whose marked indeterminateness with regard to St. Peter's relations to the Roman Church forcibly contrasts with the "cock-sureness" of Optatus of Milevi in the subsequent period.

Mr. Gregory Smith's article "Nun" is one of those which will need revision at some future time. The question of the relation of the Church virgins and widows to the bishops is not adequately treated; and there is some confusion between the special veil of honour, conferred as an exceptional distinction by bishops alone, and the ordinary veil of

profession, which could be self-assumed, or bestowed by a priest.

Altogether, this second volume is more evenly executed than the former one, and is less open to hostile criticism; while the mere accident of the initial letters has assigned to it a larger number of the more important entries, which, as it accounts for its considerably greater size, will also make it the more frequent source of reference. But one question which its bulk and cost—when added to those of its companion *Dictionary of the Bible* and of *Christian Biography*, not forgetting Mr. Blunt's two lexicons of Theology and of Sects, also indispensable to the more advanced ecclesiastical student—prompt is, When shall we have one moderately cheap and compendious work, within the means of the ordinary learner, akin to the Abbé Glaire's excellent *Dictionnaire Universel des Sciences Ecclésiastiques*? This work, in two volumes of 2,500 pages, costing about thirty shillings, gives not only Scripture articles, canon law, Christian antiquities, and biographical notices, which, even for English names in theology, are quite the most convenient known to the present writer, but also *notitia* of all eminent Jewish theological authors, especially in Rabbinical literature, and their works—a kind of information not easily to be found by non-experts.

RICHARD F. LITTLEDALE.

POLITICAL ECONOMY IN EUROPE AND AMERICA.

AN American journal published at Chicago lately gave a conspicuous place to "a local economist's new theory of industrial depressions," of which the gist is that "the sole cause of the late general depression of trade throughout the world has been parsimony, or a too great desire to accumulate and reluctance to consume." The author, Mr. Edward Sweet, of Chicago, cites a host of writers in both his own country and this, and, observing that nearly all agree that the world had been consuming faster than it had reproduced wherewithal to make good the waste, replies that a lack of products is the very opposite to the real state of things.

"The countries in which the depression was and is most felt have, year by year, been accumulating property of all descriptions—raw material, tools, factories, canals, railways, ships, warehouses, stores, public buildings, residences, live stock, food, clothing, fuel, books, works of art, and other luxuries."

It is certainly possible that the desire to accumulate might prevail over the desire to consume, and that a lack of markets for consumable goods might result from general saving. Wealth, as Adam Smith emphatically urged in opposition to the Mercantile theory, consists of consumable goods. It consists, too, in great part of goods which will not keep long if not disposed of at once. And a miserly disposition might prevail. People might abandon luxuries of every kind, buy only one suit of clothes in two years, cram into the smallest and cheapest houses, give up carriages, horses, servants, wine, tobacco, sugar, butter, fruit, &c., in order to be richer hereafter. The immediate result would certainly be wide distress among producers of the things given up. But the facts are quite contrary

to the supposition. The English and the American are prodigal, not penurious, nations, and never were more so than just before the depression. In France, Germany, and other parts of the continent of Europe, again, habits of superfluous expenditure, in comparison with former times, have certainly been developed, and parsimony has diminished. Nor is Mr. Sweet's enumeration of articles that have been everywhere increasing quite accurate. The supply of "live stock and food" in this country has fallen off under adverse seasons and diseases among cattle and sheep; the produce of the vineyards of France has seriously declined; a smaller number of works of art have been produced both at home and abroad than during more prosperous years; and in England, at least, publishers, of late years, have brought out fewer books, and are not entitled to say to the public, "We have piped unto you and ye have not danced."

Among the few economic publications of the present year in England one is an Oxford Cobden Prize Essay, by Mr. W. E. Smith (Trübner & Co.), on *The Depression of Trade*, the doctrine of which is diametrically opposite to that of the Chicago economist. According to Mr. Smith, the whole world has been impoverished by consuming too much and producing too little; consuming too much in military expenditure, extravagance, intemperance, and imprudent loans and speculation, and producing too little by reason both of adverse seasons and the waste and misapplication of capital. Mr. Smith's exposition is clear, and it is his misfortune, not his fault, if the subject had been beaten very thin before his essay could appear. But we must not pass over without protest his treatment of the apocryphal decennial cycle in commerce as a well-established phenomenon. He does not seem to be aware that the decennial theory is, or was until the other day, that a commercial crisis occurs every ten years. In fact, there has been no crisis since 1866; and accordingly the advocates of the theory, who have always played fast and loose both with it and with facts, are beginning to leave out the crisis, and to speak only of decennial periods of inflation and depression. As Mr. Smith himself says,

"there is an abuse of language which we sometimes meet with; we hear of a 'crisis' which has been going on for the last six years. This seems to betray some confusion of ideas between depression of trade and an entirely different phenomenon, a 'crisis' or a 'panic' in the City, when merchants are in agony for the loan of money, and cannot get it. It does not require any profound analysis to see the utter unlikelihood of this to a period of commercial depression such as we have passed through, in which the greatest difficulty is experienced in lending money at all."

But the decennial theory would never have been heard of but for the crises of 1847 and 1857; and it is a departure from it, on Mr. Smith's part, to begin his essay by remarking that "periods of depression and inflation of trade have for a long time alternated in a decennial cycle with a regularity which seems more appropriate to the phenomena of astronomy than to the vast complicated affairs of social life."

A curious work, entitled *Progress and*

Poverty, lately published at San Francisco—the author of which, Mr. Henry George, has since been appointed Professor of Political Economy in the University of California—traces commercial depression and every other economic evil to a single cause which had best be stated in the words of the book.

"We have traced the unequal distribution of wealth, which is the curse and menace of modern civilisation, to the institution of private property in land. So long as this institution exists no increase in productive power can permanently benefit the masses, but, on the contrary, must tend to still further depress their condition. Poverty deepens as wealth increases, and wages are forced down while productive power grows, because land, which is the source of all wealth and the field of all labour, is monopolised. To extirpate poverty, to make wages what justice commands they should be, we must substitute for the individual ownership of land a common ownership."

The peasant proprietors of France, Germany, Belgium, and Switzerland will, we venture to say, object strongly to this mode of extirpating poverty. But we can only here recommend to English readers another American work entitled *Communism and Socialism: their History and Theory*, by Mr. Theodore D. Woolsey (Sampson Low & Co.), as a useful companion in a study of Mr. George's reasoning. At the same time we must not refrain from a remonstrance against the unscientific practice of obtruding theology into economic discussion, common with American writers.

"When," says Mr. Woolsey in his last page, "we think of the materialistic and even atheistic dogmas which hide the face of God from so many of the poor, we are consoled by the faith that the religion of Christ can never die, that it can revive a nation at its lowest ebb of prosperity."

A passage of this kind may be in place in a sermon; in a philosophical treatise it is as much out of place as in one on dynamics or hydrostatics. Mr. Albert Bollas has lately set an example to the economists of his country, both of historical investigation and of keeping clear of theology, in two important works, *The Industrial History of the United States* and *The Financial History of the United States*.

The depression of trade has nowhere been heavier than in Germany, but does not seem to have slackened the production of economic works. The number of publications of this class was probably never greater in any equal period than from 1876 to the present time. Controversies respecting socialism, protection, trade guilds, usury laws, &c., have called forth a multitude of essays, in addition to the historical treatises of which there is a never-failing supply. Among the works of chief mark that have lately appeared may be named (1) *Lehrbuch der Finanzwissenschaft*, 2. Theil, by Prof. Adolf Wagner; (2) *Deutsche Wirtschaftsgeschichte*, 1. Theil, by Inama Sternegg; (3) *Gewerksvereine und Unternehmerverbände in Frankreich*, by W. Lexis; (4) *Der Wucher und sein Recht*, by L. von Stein; (5) *Volkswirtschaftliche und sozial-philosophische Essays*, by Dr. Wilhelm Neurath; (6) *Das Venetianische Bankwesen im 14., 15. und 16. Jahrhundert*, by Dr. Erwin Nasse, of Bonn. The last-mentioned writer's name is well known in England in connexion

with the history of land tenure and agriculture; in Germany it is well known in connexion with the field of economics in general, and banking and currency in particular, of the European history of which he possesses an extraordinary knowledge. One of Dr. Neurath's essays (Vienna: Verlag von Faesy & Frick) discusses the question of Free Trade or Protection, as to which the writer arrives at the conclusion that no universal proposition can be laid down respecting the economic policy of either, all depending on local conditions and the stage of industrial development. Under Free Trade, he argues, there is a struggle for existence which may end in the premature extinction of the weakest at the moment, but the strongest in potential capacity. A young eagle just hatched, he says, would have no chance in the competition of life against a common sparrow, yet is by far the nobler bird; and a nation, with the highest undeveloped resources and powers, may, in like manner, need Protection in the infancy of its industrial career. We should like to ask Dr. Neurath whether he would apply the same principle to improvements in the means of locomotion and transport. Obstacles to communication answer the same purpose as protective duties, and facilities of transit, on the other hand, produce *pro tanto* an approach to Free Trade. Will Dr. Neurath contend that a nation should not make railways or harbours, or allow steam communication with foreign countries, until its industrial powers are fully developed?

In France the most important publication of the present year is M. Henri Baudrillart's *Histoire du Luxe privé et public depuis l'Antiquité jusqu'à nos Jours*, vols. iii. and iv., of which an account will be found in the *Economiste Français* of April 17 and April 24.

Among economic publications in Italy during the present year we may mention as deserving attention (1) *La Rendita fondiaria e la sua Elisione naturale*, di Achille Loria (Milano: Hoepli); (2) *Saggi di Economia, Statistica, e Scienza dell'Amministrazione*, di Carlo F. Ferraris (Torino, Roma: Loescher); (3) *Alcuni Questi sulla Domanda di Lavoro*, Saggio di Emilio Mazzani (Forlì: Tip. e Lit. Democratica). Italian economists are usually well acquainted with the economic literature of England and Germany, as well as of France. The European countries in which "orthodox" political economy flourishes best are those in which economists seldom read a book that is not in their own tongue.

T. E. C. LESLIE.

RECENT DRAMAS.

Ginevra, and The Duke of Guise: Two Tragedies. (C. Kegan Paul & Co.)

Richard Cœur de Lion: a Legendary Drama. By Catherine Swanwick. (Griffith & Farran.)

THE anonymous author of *Ginevra, and The Duke of Guise* has made choice of a momentous period of French history for the historical basis of his tragedies, and has given us ample security for their justifying their name. Casting the first in the reign of Charles IX., he lays his scene in the virtual Regency of the unscrupulous Catherine de Medici, and introduces the Massacre of St.

Bartholomew as its leading and most thrilling incident. When the curtain rises anew on the fortunes of another Duke of Guise, the action is still disturbed by the baleful plots and pre-eminence of Catherine with Henry III., the favourite son, for whose ascendancy she had schemed; and its plots, wars, massacres, and murders are consummated by the crowning assassination of the Duke of Guise at Blois hard by the King's chamber. As in an historical play of Shakspeare, here is no lack of incident; and though we might doubt whether the material is entirely adapted for an acting drama, or rife enough with fine passages such as in an old play bespeak the calibre of the prominent *dramatis personae*, it may be honestly said that each play is readable on its own merits, and not to be laid aside until its plot has been sounded and fathomed. Ginevra, the heroine of the first, is the supposed daughter of Cosmo Ruggieri, the Queen-mother's physician, astrologer, charlatan, and herself attached to Catherine's suite; yet, despite her suspicious antecedents, a maiden of fame as faultless as her beauty amid the gayest and lightest of Courts. The marriage of the Huguenot Henry of Navarre to Catherine's daughter, Queen Marguerite, has raised Ginevra to friendship with the latter, and aided to cement a tender passion between a nephew of Admiral Coligny, Aymar de Chatillon, a Huguenot, and the Florentine Ginevra, herself a Catholic. At first the difficulties of creed promise to cause trouble, but the favour of Henry of Navarre and his bride for Aymar and Ginevra, as well as the Queen-mother's interest in her young protégée and the King's special interference, obviates all difficulties, and the wedding is to be solemnised at the Louvre, when a certain Count Davila, the *bête noir* of the piece, who has cast his evil eye on the heroine, possesses himself of a secret of Ruggieri and Catherine de Medici, involving, in a certain horoscope, a plot to poison Charles IX. and pave the way for Henry III., and makes the surrender of his damning evidence the price of Ginevra's pledged and plighted hand. Here is Catherine's picture of her to the King:—

"She is as fair, and yet no angel, Sire;
A forehead of pure marble, yet not low,
As of Greek sculpture; eyes as bright as stars,
Yet are not stars, varying in their light
Ever, the light of an Italian sky.
Her brows so delicately shaped and pencilled
As if Love's hand had traced each perfect arch;
A voice like music heard in dreams; a step
That would not bend the waving grass, nor
cause

A flower to tremble as she passed along;
Rosebuds for lips; cheek where the rose has left
Its faintest blush; a hand—

KING. Enough; you paint
In no coy colours. I would fain commend
In prudence that your highness keep the
picture
From your new son-in-law: he hath an eye
For beauty may cause Margot jealous qualms!"
(P. 9.)

But the picture Catherine paints so warmly is that of one whom, having become possessed by chance of her secret, she uses for her own ends, and scruples not, when occasion demands, to sacrifice like Iphigenia of old, as it were with a father's hand. The exchange of vows between the Huguenot noble and the Italian maid affords a charming picture in the scene where the King rescues the latter from Davila's

pertinacity; but the constant interference of this meddling courtier bodes no good; and when, in the sequence of the drama, all seems to tend smoothly, and the wedding to promise happiest auspices, the course of true love suddenly veers round, Ginevra's father claims of her such a strain of duty as shall make her abjure Chatillon at the altar or tax his ingenuity to plead her excuse for her non-fulfilment, and, at the very hour of the tocsin being rung for St. Bartholomew as the signal for the massacre, Ginevra has been wedded to Davila, and, while her heart is sullenly steeling itself against its would-be master, is bent on saving Chatillon from the fate she divines the bell to be ringing out for every Huguenot. To this end, too, the King, himself intent on massacre, is strangely alive, and he does his utmost to deprive Chatillon of his sword in order to save him from the issue of his courage. All tends, however, to a *rencontre* at the Louvre, whither Ginevra repairs to persuade her lost lover to bide in quiet in the King of Navarre's quarters, and is found in conversation with him by Davila. She rushes on Davila's sword when he and Chatillon close in combat, and has scarcely expired when the nominal husband succumbs to his fate at the hand of his rival, who hurries forth to court death in the massacre. Upon this scene comes the arch-plotter Ruggieri, whom Charles, gloating over the slaughter, invites to see the justice of a king.

"Behold!

RUGGIERI. Ginevra—
Count Davila—it could but come to this!
(Aside to QUEEN.) So ends all danger to the
Queen!

KING. Hast thou
No tears, old man? 'Sdeath, were we not a
king,
Ourselves would weep o'er the night's tragedy."
(Act V., ad fin.)

In one of the last scenes of *Ginevra* we are strongly reminded of the death of Cardinal Beaufort in *Henry VI.* by the guilty ravings of the Cardinal of Lorraine, when his frequent comrade in guilt *abjures* (adjures?) him to speak. We are conscious of one or two mannerisms and tricks of speech which might be a clue to the author. Twice over he uses the Americanised form "forever" in one word; in p. 86 he coins the word "devanced" ("My wish *devanced* the hour"); and in p. 136, when Ginevra would bind a scarf round Chatillon's breast, he says, "Fear not: 'tis but a false alert." But as a rule the author's expressions are as choice as his collings of history.

While the second drama dwells on the vaulting ambitions of Henry Duke of Guise and the eccentricities of his half-mad namesake, Henry of Valois, its byplot interweaves a sad tale of a rifled home, of lawless love, and betrayed affections, a natural outcome of the violated sanctities which the Court of the Medicis was sure to reckon cheap. The air teems with rebellion, violence, falsehood, deceit, murder; and the would-be dramatist has wrought out of his materials various scenes of touching or startling interest. This turns mainly on the wrong done by the arch-conspirator, the Duke of Guise, to the home of one of his father's comrades [in arms—Raoul de Val—by the abduction of his daughter, Isaure, whose affections he has won under false pretences, and whom he has stolen from

her nest to live with him as his light-o'-love at Castel Joyeux, unwitting that he has a duchess in Paris worthy, for her talents, truth, and staunchness, of better treatment. The action of the play develops the outraged father's efforts to trace his truant daughter, in which he is aided by his assumed Capuchin's cowl; the Duke is traced to his paramour's presence, while his fellow-conspirators, the cardinal and others, are impatiently awaiting him in Paris, and gradually becoming alive to the suspicion of an intrigue destined to work doom and destruction to its infatuated perpetrator. The character of Isaure is drawn as a foil to that of the Duchess of Guise, a meet consort of a prince and statesman, for she accepts the consolations of ambition and family interest, while Isaure is content with her hiding-place at Castel Joyeux if blessed now and then with visits from one whom she knows but as the *Sieur de Tracy*, and whose wife she hopes soon to be. The scene in which *Lois*, the Duke's duenna of this prison house with a gay name, enlightens Isaure as to her real position; that in which the Duke strives in vain to parry her questions as to the portrait in the picture-gallery, which is proved by her father (the Capuchin) to be that of Henry of Guise's wedded wife; and the after-scene, in which the friar's righteous ban is hurled at the licentious spoiler of domestic hearths, are forcibly depicted, and lead up naturally to the crowning and ghastly tragedy at Blois, where the Duke goes, amid omens and warnings, to the royal cabinet at the King's summons, and, as he enters the presence, realises the terrible conviction of doom which the Capuchin's vengeance and the King's spite have plotted for their victim. We give a snatch of a scene between father and daughter:—

ISAURE. Whither wouldst thou drag me, father?
CAP. Peace, girl,
I am no more thy father but thy judge.
ISAURE. Thou wilt not slay me?
CAP. Thou shalt live,
if live
Thou canst after the hour is passed. Behold
A crevice in the arras; my own hand
Arranged it, that thou mightst not lose one
jot
Of the rare spectacle shall pass within.
Fix thine eyes there, and tell me what thou
seest.
ISAURE. A chamber richly dight. Against the
walls,
Mute, motionless, as if they were fixed
statues,
Stand men-at-arms. Each one leans on his
sword.
I' the midst, one with regal garb and mien,
On whom all fix a fascinated gaze.
CAP. Henry de Valois, King of France, thou
lookest on.
ISAURE. Ah! What lugubrious sounds are those
which rise
As from a sepulchre?
CAP. The brotherhood
Now celebrate their office in the chapel.
'Tis one of the grave functions of the order
To tend the dying and the dead. Listen!
Dost thou not know the chaunt?
ISAURE. Ah! me,
I know it well: it is the 'Dies Iræ.'
For whom the funeral dirge?
CAP. Thou'lt know
anon.
Regard within, note well what passes
there."

In like stirring dialogue, the hapless girl is

led step by step to note each particular of the butchery of her betrayer; and realises, at the final blow, that "the haughty Duke of Guise lies fallen there," but loses her stricken senses or ever she witnesses the indignities wreaked on the corpse by the fanatic sovereign who can now boast that he is indeed King of France. Some touches in the treatment of the "Castel Joyeux" *amour* bear a trace of resemblance to a scene between Leicester and Amy Robsart in *Kenilworth*.

A few words must suffice to summarise our impressions of Miss Catherine Swanwick's legendary drama of *Cœur de Lion*. Most novices in dramatic poetry have known what it is to light on a grand subject, historic, majestic, vast of conception. Anon, it is crushed by its unmanageable dimensions. "Mole ruit sua!" It is just thus with Miss C. Swanwick's Richard, who figures in his traditional *rencontres* with Saladin, Berengaria, Blondel, and the Cyprian Princess; plays a losing game at hide-and-seek with Henry of Austria, Philip of France, and Prince John one after another; and is finally rescued from foreign captivity through means set on foot by the Queen-mother (whom the author persists in calling Ellinor instead of Eleanor) and the instrumentality of Blondel, who sings beneath the Castle of Tenebreuse a song nearly as dark and hazy as the climate where the lion-hearted monarch is languishing when it reaches his ear. By those who take the pains to peruse it, this legendary tragedy will be found to savour strongly of *The Talisman*, patched and garnished with a selection of anecdotes like that of Saladin's Arab Steed, a royal gift to Richard, which carried one of his friends "nilly willy" into the Saracens' camp.

JAMES DAVIES.

NEW NOVELS.

Two Women. By Georgiana M. Craik. In 3 vols. (R. Bentley & Son.)
Folly. By Mrs. Newton Sears. In 3 vols. (Remington.)
Ill Weeds. By Mdme. Foli. In 1 vol. (Remington.)
A Tangled Web. By Mdme. Nelly-Lieutier. Translated by May Dick. In 1 vol. (Remington.)

THERE is very little intrigue in *Two Women*. Like the knife-grinder in the song, Mrs. Craik has no story to tell you. Her hero, Hugh Ludlow, being still in his salad days, woos and wins a certain Dorothy Wilmot. Baulked of marriage by his father, he yet remains engaged to Dorothy for several years. Meanwhile he falls madly in love with Cicely Verner, the second of the "Two Women," and by her is finally rejected for someone else. Then, in his turn, he throws over Dorothy. Long afterwards they meet again; they fall in love again; they are again engaged; and this time they are married. *Ce n'est pas plus malin que ça!* And this poor pennyworth of sack is laced with such an intolerable deal of water as to seem an even poorer pennyworth than it is. Mrs. Craik's women, albeit a little pale and feeble, are cleverly and sympathetically sketched. Her men are not so good by a long way. The

novel may be read without much difficulty, its flimsiness and its longsomeness notwithstanding. Positively good it is not; but it is not positively bad. And that, as novels go, is a great deal.

In *Folly*, Mrs. Newton Sears has told the story of a Gladys Vaughan, who elopes at seventeen with the man of her choice, and is widowed of him ten days afterwards. These ten days are fraught with tremendous consequences. Gladys returns to her people, and to the world is still Miss Vaughan. Presently she meets with a second hero, and the two plight their troth. Just, however, at this auspicious moment, Gladys is recognised by someone who had seen her during her wifehood. As this individual has been under the impression that Gladys' husband was somebody else's husband also, he at once leaps to the conclusion that Gladys is an improper person. Gladys is at once repudiated, with great sternness, by her affianced spouse. As she has but a hundred a year or so, she is obliged to take a situation of some sort, and—*et cetera, et cetera*. Matters come round in the end, but Mrs. Newton Sears has written her three volumesful ere they do, and so fulfilled as much of the modern novelist's destiny as she may. Whether or no it was worth her while is a question that need not be debated. What is certain is that *Folly* is often vulgar, and not very often amusing.

The English classic most in favour with Mdme. Foli would seem to be the gifted Edward Fitzball. *Ill Weeds* is the story of the young and lovely Olga Clentworth, daughter of a bold banker and a lady of title. Olga has many virtues, and her conversation is often polysyllabic; but she is terribly proud. She is madly in love with the young and talented Frederick Alleyne, "stamped" (at three-and-twenty) as "one of our best novelists," and author of "that remarkable poem, 'Sea-Depths.'" Finding that this person is the son of a kind of policeman, she bestows her hand and fortune on the wicked Earl of Glencliffe. Then her life becomes a life of terror. Hardly has the coronet circled her snowy brow (as Mdme. Foli might say) ere she discovers that she has married a nobody, the real Glencliffe being the poet-novelist, who, in spite of his connexion with the force, is somehow the grandson of a Spanish duke and an English earl. Things are largely complicated by the arrival of a baby, which the wicked peer puts into a box and casts into the sea. The box is rescued by the poet; the baby is put into spirits by the village doctor; and Olga, recognising her offspring in this predicament, is so incensed that she borrows a suit of clothes of her husband and runs away in them. Presently she hears that the Earl is about to wed another; whereupon she lays a most artful plot, provides herself with a mask and masquer's weed, beards him in his den as he is about to cut the wedding cake, and proves to the astonished guests that he's no more an earl than you or I. Naturally a little hurt with this conduct, the dis-coroneted peer "rushes" on his spouse "with the bound of a tiger," and tries to throw her out of window. Foiled by the doughty poet, he stumbles over Olga's "prostrate form" and is precipitated into "the

boiling sea." "His mangled remains were cast ashore a few days after, about a mile below where he met his death." When people learn how he actually tried to hide a "fell secret" by casting the "frail body" of his own baby into the "devouring sea" they "execrate his memory," and Olga is permitted to marry her poet in peace. If I add that *Mdme. Foli's* English is a thing of beauty and a joy—so that, for instance, a wet dog becomes a "damp canine pedestrian"—I shall have said enough of this very remarkable novel.

A Tangled Web is a slight, harmless, well-meaning little story, pleasant in tone and inoffensive in style. It was not worth translation, though there are many who will read it with a certain amount of interest, and few who will have the heart to speak ill of either the book or the author.

W. E. HENLEY.

CURRENT LITERATURE.

Extracts from the Koran: in the Original, with English Rendering. By Sir William Muir, K.C.S.I., LL.D., author of the "Life of Mahomet." (Trübner.) Sir William Muir thinks, very rightly, that

"the Koran abounds with arguments, drawn from Providence and Nature, with a view to prove the existence of God as a supreme ruler, and enforce his sovereign claim on the obedience and gratitude of mankind. The retribution of good and evil in the world to come, the obligation to follow virtue and eschew vice, the duty and happiness of the creature in worshipping and serving the Creator, and such-like topics, are set forth in language of beauty and vigour, abounding often with real poetry."

And he considers that "passages like these can hardly be obnoxious to the professors of any faith; and there is much in them that should be welcome to all." We are delighted that Sir W. Muir has come to so liberal an opinion. Every attempt to make the religion of Mohammed better known and more truly understood is a gain to the cause of toleration. These particular extracts are, however, chiefly destined for the use of Arabic students, to whom alone the Arabic text will be useful, and to whom the absence of all explanation or commentary will not greatly signify; but general readers will probably prefer the more complete and better ordered and explained selections from the Koran given in Mr. Lane's work, of which a new edition has recently been published. Sir W. Muir's extracts consist of a series of sections taken chiefly from the middle and later periods of Mohammed's revelation, very few of the early *sūras* being given; and they are selected simply on the ground of their general inoffensiveness, to the exclusion of all those in which the peculiar doctrines of Islam are contained. The result is a collection of some of the finest utterances of the Prophet on the highest subjects of universal religion, arranged, however, in no particular order. The Arabic text is carefully edited, but the verses do not, unfortunately, correspond to those of Flügel's standard text; while the translation is literal to a fault, and will prove very serviceable to beginners in the language. Such a version is of course based on the previous renderings of Sale, Rodwell, and Lane, and it is therefore a little surprising to see no reference whatever made to any of these authorities; but perhaps the indebtedness of the author was too obvious in every page to need the usual acknowledgments. The whole body of extracts correspond to about eighteen pages of Flügel, or a twentieth part of the whole Koran; and those who wish

to begin Arabic cannot do better than read the text and translation side by side. Readers who wish to understand the Koran will be disappointed, and must go elsewhere to gratify their curiosity.

Der Kampf um Plevna. Taktische Studien, von Thilo von Trotha, Hauptmann à la Suite des Grenadier-Regiments König Friedrich Wilhelm IV., &c., &c. (Berlin: Mittler.) Not one of the newest or largest, but not the least valuable, of the many German professional works on the late war. Like most similar publications, it shows that in Germany the Russian army has lost rather than won prestige by its victories over the Turks. Capt. Trotha is hard enough on the strategy of Osman and Suleiman, but thinks that, on the whole, more is to be learnt from the Turks than from the Russians. He observes that the Turks habitually poured into the enemy at all distances such a prodigious fire as had never yet been experienced in war—thanks to their ingenuity in pushing unlimited supplies of ammunition to the front. The Russians appear to have secured five hundred millions of cartridges in the various Turkish positions, which stock was actually with the troops in line. Now the campaign supply of a German Army Corps, including the reserve supply with the munition columns, is only four millions and a quarter, at which rate the quantity of cartridges just named would have been enough for nearly a hundred and twenty corps! The Turks are also our masters in the admirable way in which their infantry dig themselves into the ground, burrowing for covers "in the cellarage," throwing up traverses with flanking artillery, and keeping casks of water and provisions in the entrenchments so as to enable the troops to hold their positions indefinitely. The Russians, says Trotha, do not understand the proper principles of attack. They have no proper reserves, and they use up all their troops at once. They begin with artillery instead of with the skirmishers, who, when they finally do appear, get muddled up with the advance, which falls into confusion, so that if it is unsuccessful the tactical order and leading of the troops are almost entirely dissolved. The attack is always direct, and delivered prematurely before the enemy is shaken by the fire; when the enemy retreats the Russians take to the bayonet, although then is the time for firing. The cavalry is badly employed, reconnaissances are not understood, and the Cossacks are very poor eyes and ears to the army. The artillery begins to play at absurd distances; the batteries are scattered, the fire is merely frontal, never massed on special points, nor so directed as to rake the enemy's positions. Thus the guns have to stop firing when the infantry attacks, whereupon the more intelligent Turks open fire with their artillery, while the Russians cannot reply. Trotha's criticisms would inspire more confidence if we learned that they rested on personal knowledge of the campaign. And we may be sure that in the next war the Muscovites will be found to have unlearned some of their worst faults: *à barbe de fol on apprend à raisonner*. Skobelev, according to Trotha, can shave already, for he is the solitary instance of a Russian general who hardly ever made a mistake.

A Year's Work in Garden and Greenhouse. By George Glenny. (Chatto and Windus.) This is a practical compendium of all the knowledge which an amateur need possess for the management of an ordinary garden and greenhouse. The arrangement is simple and the directions conveyed in the clearest untechnical language, so that it is next to impossible for those who follow this guide to go wrong. The principal divisions of the book treat, in order, of the cultivation of the flower garden, the fruit garden, and the frame garden, and to the last of these Mr. Glenny gives more attention than usual,

because few persons are aware of the great amount of pleasure and profit that can be derived from it. All sorts of hints, receipts, directions, and suggestions are given for dealing with garden and greenhouse difficulties, and we feel sure that a year's work done according to the plan laid down in this little book must produce most satisfactory results.

Memoirs of Dr. Robert Blakey, Professor of Logic and Metaphysics, Queen's College, Belfast. Edited by the Rev. Henry Miller. (Trübner.) The biography of a self-made man cannot fail to possess much that must interest the reader, and this must be especially the case when the subject of the memoir tells his own story. Robert Blakey was the son of a mechanic, and was born in Morpeth in 1795. He went to work as early in life as possible, and when removed to Alnwick at the age of thirteen knew how to dig and drive, but had a very slender stock of book-learning. He possessed, however, a genuine thirst for knowledge, and soon found opportunities for gratifying it. How well he succeeded, in spite of adverse circumstances, in amassing and assimilating the dry mental food which repels most students is best seen in his *History of the Philosophy of the Mind* and his *History of Moral Science*. Both are able and learned books, and, although they have not placed their author among the great thinkers of the age, they are enduring evidences of what industry and perseverance can effect. The editor might, with advantage, have corrected many of the blunders in spelling, &c., which occur in Dr. Blakey's autobiography, for occasionally they render the sense obscure.

A CHARMING little collection of novelettes and light essays from the pen of Carlo Dossi, some pieces of which have been before printed—but for private circulation among the author's friends only—at various periods between the years 1866 and 1878, has been recently published by Signor Perelli, of Rome, under the title of *Goccie d'Inchiostro*.

HERR KARL EMIL FRANZOS, the well-known author of *Vom Don zur Donau*, has just given to the world an interesting study of Little-Russian Jewish and peasant life and character in the shape of a novel entitled *Moschko von Parma: Geschichte eines Jüdischen Soldaten*. The work is published by Messrs. Duncker and Humblot, of Leipzig.

WE have received from the same firm the first part of the first volume of a new geographical work entitled *Europäische Staatenkunde. Mit einem Anhang: Die vereinigten Staaten von Amerika*. The work, which seems to be most carefully executed, was planned and in great part worked out by the late Oscar Peschel, and is being edited by Herr Otto Krümmel, the author's friend and pupil, from the MSS. he has left behind him. The plan on which this comprehensive manual is constructed appears to us to be excellent. The authors have been careful to give a succinct and lucid appreciation of the historical, political, and ethnographic importance of the several States which pass under review, as well as a careful description of their physiography. The volume before us is occupied with Russia, the Scandinavian States, and the British Empire, including within its scope all colonial dependencies. The second part will comprehend the remaining European States (with an Appendix devoted to the United States), the German Empire excepted, to which the entire second volume will be given up. This section of the work will not go to press before the present year is out. An exhaustive series of comparative statistical tables at the end of each volume will greatly add to the practical utility of this promising work.

THE same indefatigable publishers have just given us a most remarkable and interesting

political essay on the historical relations between Prussia and Russia during the present century, and on the influence these relations have exercised upon European politics. The author of the work (which is entitled *Berlin and St. Petersburg: Preussische Beiträge zur Geschichte der Russisch-Deutschen Beziehungen*) has not thought fit to make his name public, but he is someone evidently *au fait* of European diplomatic relations during the past ten years or so, and, from the tone of the book, we should imagine that he is a Berlin diplomatist. The general conclusion at which he arrives is the now fashionable one—that the relations of Berlin and St. Petersburg, from having possessed a certain community of interest while Prussia was still striving to oust Austria from the hegemony of Germany, have, now that that long-cherished design is a fact, and since Prussia has grown to be the most powerful factor in a unified and well-organised German empire, become necessarily and permanently antagonistic. For those who take any interest in European politics, this essay will be very interesting reading, for though the general drift of the book is not new, yet the reasoning by which these conclusions are arrived at is always forcible and sometimes strikingly original. Some new information will also be found in the volume, especially on the ill-fated Polish rising of 1863 and 1864. A highly interesting memorandum said to have been penned by the Emperor Nicholas on the revolutionary movement in Berlin in 1848 is given in the Appendix.

The Oberammergau Passion Play. By J. P. Jackson. (W. H. Smith and Son.) This is a very useful handbook for visitors to the famous mystery, containing an abstract of the entire play, translations of many of the speeches, with the choruses in German and English, portraits of the actors, a description and history of Oberammergau, its people and its most famous institution, &c., &c. The competence of the author, whose album of the last representation may be remembered, is undoubted, and the book is a very good guide of its kind. The format is inconveniently large for a book which will be carried much in the pocket; but a reduction of size would perhaps have to be compensated by an equally inconvenient increase in thickness, while the actual arrangement is not improbably due to the illustrations reproduced from the larger work.

NOTES AND NEWS.

MESSRS. O. KEGAN PAUL AND Co. will publish next week a volume entitled *English Letters*, edited by Mr. W. Baptiste Scoones. The object of the editor is to give a representative collection of English epistolary literature, with brief notes for the purpose of explaining obscurities or indicating the occasions on which the several letters were written. The first of the series is dated 1450, while the latest were written within the last decade, so that examples of various styles of writing during the last four centuries and many familiar descriptions of national events by contemporaries will be found among the three hundred letters comprised in the volume.

M. DIGARD, pupil of the Ecole des Chartes, is preparing for publication an edition of the *Ἀποδημία* of Nicander of Corfu. Nicander travelled through the West of Europe in the suite of Gerard Veltwick von Ravenstein, Charles V.'s ambassador, and thus made a collection of notes of interest, especially from the artistic point of view, on Germany, Flanders, England, France, and Italy. These notes it is now proposed to publish in their entirety, from the only three MSS. known—in the Escorial, at Oxford, and at Milan.

M. GASTON LE HARDY has just published (Caen: Le Blanc-Hardel) a work entitled *Le Dernier des Ducs de Normandie: Etude de Critique historique sur Robert-Courte-Heuse*. The author's object is "to reconstitute the true figure of the last of the sovereign dukes of Normandy, outrageously disfigured by the officious pens in the pay of his headsmen" (Ordericus Vitalis).

A NEW serial story by Miss Florence Montgomery, entitled *Herbert Manners; or, a Lesson of Self-Control*, will be commenced in the July part of *Little Folks* magazine.

A COMPREHENSIVE selection of "Ballads and Lyrics" from English and American authors, edited by Mr. Henry Cabot Lodge, editor of the *International Review*, will shortly be published.

THE Sunday Shakspeare Society met on Box Hill last Sunday afternoon and read *The Tempest*, and then had tea at the gamekeeper's cottage.

MR. FURNIVALL has finished his print of the fine Cambridge MS. of Chaucer's *Boece*, Ti. 3, 21, in the Cambridge University Library. He wants to hear of another good MS. of the treatise for a parallel text of it to be worked with Dr. Morris's edition of the British Museum additional MS. 10340, for the Early-English Text Society. The Salisbury Cathedral is the only other fair MS. of the *Boece* that he has seen, and he will be much obliged for information as to any more MSS. of it.

M. ELIE BERGER, late pupil of the School of Rome, has just been appointed an auxiliary member of the Commission of the Institute entrusted with the publication of the *Historians of Gaul*.

MR. WM. BRAMSEN has lately printed at Tokio (Yedo) Japanese chronological tables showing the date according to the Julian or Gregorian calendar of the first day of each Japanese month from the year 615 to 1873, with an introductory essay on Japanese chronology and calendars.

AT the meeting of the Clifton Shakspeare Society held on May 22, *Richard III.* was the play for critical consideration. Papers on "Lady Anne" were read by Mrs. J. W. Mills, Miss Constance O'Brien, Miss Florence O'Brien, Mrs. E. Thelwall, and Mrs. J. H. Tucker. A report on the sources and history of the play was brought by Mr. John Williams. Mr. P. A. Daniel's time-analysis of *Richard III.* (read with the time-analyses of the other *Histories* before the New Shakspeare Society on June 13, 1879) was brought before the society. This meeting finished the work of the society's fifth session.

THE five sections of the Institute are about to be called upon for the first time to adjudicate the prize of ten thousand francs which is to be given, according to the directions of M. Ime. Jean Reynaud, to the man who in any branch whatsoever has rendered the greatest services to his country. The Commission, which consists of five members selected by the various sections of the Institute, intends, it is said, to make its first award in favour of M. Jules Quicherat, the eminent Director of the Ecole des Chartes, author of *Etudes sur Jeanne d'Arc* and an *Histoire du Costume*. The Academy wishes hereby to testify its esteem for the scholar and writer who, for some unknown reason, refuses to become a candidate for the section of Inscriptions and Belles-Lettres.

THERE were 20,172 students at the twenty universities of Germany during the winter semester 1879-80, an average of more than 1,000 apiece. The numbers, however, were distributed as follows:—Berlin, 3,608; Leipzig, 3,227; Munich, 1,806; Breslau, 1,309; Halle, 1,093; Tübingen, 994; Göttingen, 965; Bonn, 881; Würzburg, 848; Strassburg, 752; Königsberg,

737; Marburg, 552; Greifswald, 531; Heidelberg, 502; Erlangen, 481; Jena, 451; Freiburg (im Breisgau), 391; Giessen, 353; Kiel, 242; and Rostock, 198. Among the 20,172 students, 8,624 belonged to the philosophical faculty, 5,132 to the juristic, 3,761 to the medical, and 2,655 to the theological.

IN connexion with the unveiling of the statue of Alexander Pushkin, which is to take place at Moscow on May 28 (Old Style), a question has arisen as to the actual date of the poet's birth. The church register has May 27, but the date on the tombstone is the 28th. A writer who paid a visit to the poet's grave in 1870 describes it as being in the burying-ground of the Pushkin family, near the Uspenski Cathedral, about forty versts from the town of Opatchka, in the government of Pskov. The tombstone was of black marble, with a lyre engraved on it, and was surrounded by a plain iron railing, thickly overgrown with trees. The inscription bears that underneath are interred the remains of Alexander Sergievitch Pushkin, "born May 28, 1799; died January 28, 1837." It is desirable that the present condition of this interesting burying-place should now be ascertained, and measures taken for preserving this simple memorial of the poet from decay.

MAX WOLFF has published, at J. Hörning's, Heidelberg, his inaugural dissertation for his doctor's degree on "John Ford an Imitator of Shakspeare." Gifford long ago noted some of these imitations, and that act III., scene iii., of Ford's *Lionel Lincoln* quoted words from *Othello*, III., iii., and was evidently founded on it, as every reader must acknowledge. Dr. Wolf has now gone through all Ford's plays for traces of Shakspeare, and, though he often insists on parallelisms of common words and phrases which no English critic would allow to be borrowings by Ford from Shakspeare, yet, in other cases, the imitation can hardly be doubted, and the collection of all the like passages must be useful to students of our great poet.

M. EMILE BEAUSSIRE has been elected a member of the Academy of Moral and Political Sciences in place of M. Bersot.

PROF. BESTUZHNEV-RUMIN has more than once proposed the introduction of the Finnish language into the programme of the faculty of historical philology at the University of St. Petersburg. Notwithstanding its importance—in connexion especially with the dialects of Northern Russia—this proposal has not hitherto been entertained. The recent change in the Ministry of Education has, it is reported, induced Prof. Rumin once more to renew his application, and it is to be hoped that he will this time meet with a more favourable response.

M. STANISLAS GUYARD has another article in the *Revue Critique* on his explanation of the Babylonian word *em-ga*. In this he reiterates the arguments of his note to the ACADEMY, and we can only reiterate what we have said on the contrary side. As, however, he goes on to declare himself a convert to what Dr. Oppert has called M. Halévy's "insanities," he cannot expect to convince those Assyrian scholars whose study of the inscriptions is measured by years and not by months.

WE have received the *London Guide*, sixth edition (Stanford); *A Treatise on the Conflict of Laws*, by F. C. von Savigny, trans. W. Guthrie, second edition, revised (Edinburgh: T. and T. Clark); *Life: its True Genesis*, by R. W. Wright (New York: Putnam's); *Practical Photography*, Part II., by O. E. Wheeler (Bazaar Office); *Bees-keeping for Amateurs*, by T. Addey (Bazaar Office); *The Origin of the World according to Revelation and Science*, by the Bishop of Carlisle (S. P. O. K.); *Extension of Empire, Weakness, Defiance, Ruin: With a Practicable Scheme for the Reconstitution of Asiatic Turkey*,

by Francis Lloyd and Charles Tebbitt (C. Kegan Paul and Co.); *Egypt for the Egyptians: a Retrospect and a Prospect* (Cecil Brooks and Co.); &c.

THE REFORMS IN THE FRENCH ARCHIVES.

THE new administration of the archives of the French Foreign Office, on the recommendation of the Commission the formation of which we recently announced, has just taken a step of the happiest augury for historical studies. Not only has it thrown open the doors of its secret chambers, which had remained closed hitherto; but it is now meeting the requirements of scholars by two enterprises of vital importance: the preparation of a catalogue, which will be published, and the foundation of an historical library, the elements of which will be derived from the archives themselves.

To thoroughly understand the bearing of both these measures we must give a summary of the various classes of documents preserved in the Foreign Office. These are of three kinds. First come the *Treaties*, i.e., a collection of all the diplomatic documents which form a bond between France and foreign nations. The originals are carefully preserved in boxes, which are contained in iron or oak chests. This valuable series comprises all the international conventions of modern times, as well as a few mediæval treaties; one of the most ancient and curious is the Treaty of Troyes, so important in its bearing on the destinies of France and England in the fifteenth century.

The second portion of the archives is comprised under the head of *Correspondence*, and consists of a series of all the despatches and memoirs exchanged between the French Government and its ambassadors. The originals and minutes have been regularly preserved since the middle of the seventeenth century. Copies from the originals preserved in other offices or in private hands complete the series, which goes back almost uninterruptedly to about the year 1600.

The third series contains papers of various kinds arranged under the general title of *Memoirs and Documents*.

A catalogue of classes i. and ii. is almost useless. In fact, the student can always, with the indication of the date and country, find what the archives may contain. The *Correspondence* especially is classified in a geographical and chronological order which renders researches easy.

This is not the case with the *Memoirs and Documents*, which include papers of the most widely varying origin arranged under a vague title because dealing with such different subjects. We pass from Guillaume de Tyr's *History of the Crusades* to St.-Simon's papers and Dangeau's journal. It may be said generally that all that cannot be included under *Correspondence* and *Treaties* is to be found here, and it may be added that care has been taken to remove from the former a large number of peculiarly valuable and secret papers for the purpose of adding them to *Memoirs and Documents*.

Under the present system this collection is simply a chaos, and the administration has therefore taken pains to ascertain its wealth and to provide the public with a catalogue.

The catalogue will contain not less than 3,000 numbers. It is to be in the form of a very brief inventory, and is being carried on with the greatest activity. Each volume will be mentioned in a note of a few lines which will indicate as far as possible the origin of the MS., its nature, its object, and its historical importance. It is hoped that the first *fasciculus* may be given to the public before the end of the present year. This will be the happiest fashion of preparing a list of the information that the student may hope to meet with in these archives; and, above all, light will be introduced into a world

hitherto unknown where great discoveries may be hoped for.

With regard to the second part of the undertaking—the publication of a portion of the documents themselves—the business is no less advanced. The Commission considered it of the highest importance to extract from the archives the materials for certain publications which private individuals could not think of undertaking or of conducting to a successful issue. These publications will be issued not absolutely at the expense of the Government, but only under its auspices. Some publishing firms have very cordially offered their co-operation for a trifling subvention.

The first subject chosen for publication will render as important services to the history of foreign countries as to that of France herself. We refer to the publication of the *Recueil des Instructions données aux Ambassadeurs et Ministres de France dans les principaux Etats de l'Europe*. It is proposed hereby to give the elements of the traditional policy of France with regard to the peoples which have been intermingled with her history. These important instructions will be published in their entirety. The first will go back to the period of the Treaty of Westphalia. They will be interconnected by means of summaries explaining the chief intervening events.

It is thought that the total of the publications may amount to twelve or fifteen volumes in all. Their preparation is already fixed and undertaken for next year. England will naturally hold the first rank in the order of this publication; and it is said that the historian to whom this portion of the work has been allotted is M. Armand Baschet, whose name is well known on both sides of the Channel.

Application has been made to the Chamber for a grant of 25,000 frs. to put these plans in operation. It is expected that no difficulty will be raised, and the learned world will have a speedy opportunity of congratulating itself on seeing the development in this direction of an activity and zeal which replaces simple silence and obscurity.

OBITUARY.

AFTER a long life honourably spent in adding to the stock of innocent gaiety and historical knowledge, Mr. James Robinson Planché has departed from our midst. He was, as the name would suggest, one of the descendants of the sufferers of theological bigotry banished from the shores of France by the Revocation of the Edict of Nantes. Mr. Planché was a Londoner born and bred, having been brought into this world at Old Burlington Street on February 27, 1796. His literary tastes were derived from his mother, who was herself the author of a small work; but she unfortunately died while he was still in his early school-days. His name first became known in May 1818, when, through the recommendation of that courteous and respected actor, old Harley, his first burlesque (*Anorosa, King of Little Britain*) was played on the boards of Drury Lane Theatre. For many years from that time his pen was in constant employment for the stage. Operas, extravaganzas for Mde. Vestris, and adaptations of dramatic pieces familiar to our ancestors, all appeared in quick succession. On Peacock's novel he based his opera of *Maid Marian*; for Weber's music he composed the opera of *Oberon*. During these years he produced more than two hundred pieces, his drama of *Charles XII.*—a great favourite with the London public—being his fifty-fifth piece. Mr. Planché was deeply interested in the study of the various forms of costume which prevailed in bygone ages, and published many works on that branch of archaeological research. He was the author of the *History of British Costume* which was

included in the *Library of Entertaining Knowledge*, and the contributor of many articles on costume and furniture to the volumes of Mr. Charles Knight's *Pictorial Shakspeare*. For the same gentleman's *Penny Cyclopaedia* he compiled many memoirs of dramatic authors and actors. A few years ago Mr. Planché gratified the world with two entertaining volumes of autobiography, entitled his *Recollections and Reflections*. Many of those now in the middle of life will remember with pleasure his delightful translation of the *Fairy Tales of the Countess d'Aulnoy* (1855). One of his latest works was on the *Conqueror and his Companions* (1874), full of facts agreeably imparted. In 1854 Mr. Planché was appointed to the office of Rouge Croix, and since 1866 he has held the higher dignity of Somerset Herald. His death will be regretted by every member of the literary world.

MR. SAMUEL RALPH TOWNSHEND MAYER, a *littérateur* well known in the newspaper world of London, died at his house at Richmond on May 28 in his fortieth year. For some time he filled the offices of secretary to the Free and Open Church Association and of editor of the *St. James's Magazine*. Many contributions from his pen have appeared during recent years in the columns of the lighter periodical literature of the day; and to the gossiping pages of *Notes and Queries* he supplied many curious and instructive notes. *Amy Fairfax*, a juvenile novel by Mr. Mayer, was published in 1859, before he had reached his twentieth year. Mr. Mayer's widow was frequently associated with him in his literary labours.

THE death is likewise announced of Dr. Alfred Swayne Taylor, F.R.S., author of standard works on medical jurisprudence, on poisons, and on chemistry, at the age of seventy-three; of Mr. Seymour Kirkup, of Florence; and of the Rev. John Pulling, author of *Travels in Southern Europe and the Crimea*.

OXFORD LETTER.

Queen's College: June 1, 1880.

Convocation assembled to-day in unusual numbers to accept or reject the proposal of the Council that a site in the parks should be granted for the erection of the Indian Institute. By the unremitting labours of Prof. Monier Williams, a large sum of money has been collected for the building and endowment of an institute in which all that has to do with our Indian empire shall be brought together, and where all who have an interest in the inhabitants and languages of Hindustan may find a common meeting-place. The resources of the university have been exhausted by the requirements of the new examination schools and a cricketers' pavilion in the parks; all, therefore, that it could offer to Oriental learning and research was a site. The site chosen by the Council is unfortunately open to many objections—like most sites probably that could have been selected; but Convocation, like the Spartan *agora* of old, was not allowed to suggest a better one; in fact, could only say yes or no. Hence the opponents of the proposal mustered thick and strong, and much tender solicitude was expressed for the nursery-maids and their perambulators, who would have to deflect from their straight course in order to turn the angle of the institute, and would hardly be able to escape from the sight of it to whatever part of the parks they might happen to go. The proposal was, however, carried after an eloquent speech from Prof. Max Müller, and Prof. Monier Williams has good reason to congratulate himself on the successful termination of his long and indefatigable exertions.

The Bodleian Library has been attracting a

very unusual share of attention in the university during the past term. Mr. Bywater, whose appointment as sub-librarian was a matter of congratulation a year ago, has resigned, and there has been some talk of appointing not only a successor to him, but a third sub-librarian as well. The Bodleian is no longer the comfortable and easy-going place of leisure it once was. Under the present administration a new spirit of life has been breathed into it, and with increased facilities for study and reading has come a large increase of readers. It is true that Oxford itself supplies but few of these, our time being occupied during the terms with more important matters than study and research, while the vacations naturally find the colleges empty; but strangers and foreigners come in considerable numbers. There is no library in the world where the student is made to feel so thoroughly at home, or where he can obtain his books so readily and expeditiously. Indeed, to one accustomed to the Reading Room of the British Museum, the quickness with which he is provided at the Bodleian with the books he needs must be a constant surprise.

The readers, however, are not the only persons after whose interests the librarians are supposed to look. The Bodleian Library is one of the chief sights of Oxford, and distinguished visitors are therefore perpetually to be found there demanding the attention and courtesies of its staff. The hours of attendance required from the librarians have also been lengthened of late years, and this is necessarily a somewhat severe strain on a small staff. Then, again, the wisdom of the university has determined that "a class catalogue" shall be compiled, involving an encyclopaedic knowledge and a great expenditure of time and labour on the part of the three librarians. Meanwhile, the various departments of literature contained in the library have to be kept up to a level of fair completeness and the requirements of the readers; lists of foreign and Oriental books and MSS. must be examined and ransacked, and the latter, if purchased, must be sorted and catalogued.

Unfortunately, like most of our other institutions, the library has to struggle against "that eternal want of pence which vexes public men." It is to be hoped that the Commissioners will be more generous towards it than rumour prophesies they will be. The ordinary Englishman, whose library consists of a few volumes of controversial sermons mingled with stray railway novels and half-a-dozen "standard works" purchased for the sake of their covers, has little idea of the funds required for the maintenance of a really good library. The field of knowledge has become so vast, and the departments into which it is divided so many and minute, that of making of modern books there is practically no end. For the student in each single department many of these are absolutely indispensable; and unluckily it generally happens that most of the indispensable books have been published abroad. They have, therefore, to be bought by the Bodleian, since only books printed in this kingdom can be claimed as free gifts. But the income of the Bodleian is ridiculously small for an efficient library, and the institution is seriously crippled by want of money. And so it happens that the reader not unfrequently applies for a book, and applies in vain, or turns over the pages of the Catalogue for book after book—as has been my own ill-luck on many mornings during the past six months—only to find that the library is destitute of them all. It says little for our vaunted Oxford education that we have allowed the Bodleian to continue so long in this starving condition. We can fling away thousands on a new examination hall, and yet grudge a few hundreds to our public library. It is, however, only the natural symptom of an age and

place which puts its faith in examination papers and sneers at research. Public libraries are of small use to those who believe learning and knowledge to be that spurious sort of omniscience which pays in the schools.

Ah! well, this examination mania is, after all, but the necessary companion of the spirit of modern democracy, and we must bow to the inevitable. The examiner's definition of science is, no doubt, preferable to that of the Little Bethelite or the mob-orator.

With straitened means, and the whole spirit of the time and place against it, it is not wonderful if the acquisitions of the Bodleian during the last six months appear insignificant. It is only wonderful that there should be any acquisitions at all. The most important among them are a number of MSS. from Yemen, purchased from Mr. Shapira, of Jerusalem, a name probably already known to readers of the ACADEMY. One of them is a unique Commentary in Arabic on the prophets, containing quotations from Saadyah Gaon and other early commentators whose works are now lost. The value of a commentary on the Old Testament seems to depend to a wonderful extent on its age and obscurity. Another lost Commentary—one on the Book of Proverbs by the famous Abraham ibn Ezra—has been acquired for the library by Dr. Neubauer, who brought it from Italy, where he spent the greater part of last term engaged in researches at the Vatican. A Syriac MS. containing anonymous dialogues on grammar has been sent to Prof. Merx, of Heidelberg, and an Arabic MS. containing specimens of early poetry has been forwarded to the same university for Prof. Thorbecke. A MS. of Tabari has further been sent to Prof. Rosen at St. Petersburg; while an Arabic MS. relating to the history of Sana' in Southern Arabia, and recently obtained by the Bodleian, has been lent to Prof. H. D. Müller, of Vienna, who is preparing a history of the ancient fortresses of Yemen. A volume of the Index to the Dodsworth MSS. has appeared, as well as the third part of the list of the periodicals to be found in the library. This part of the list is concerned with the foreign serials.

CORRESPONDENCE.

"ARYAN" AND "CAUCASIAN."

London: May 28, 1880.

In your notice of my monograph on the relations of the Indo-Chinese and Inter-Oceanic peoples there occurs the sentence:—"It is strange to find so experienced a scholar as Mr. Keane encouraging the popular fallacy that Aryan and white man are synonymous terms." This certainly would be strange, but I am unaware of having anywhere written anything at all calculated to encourage such a fallacy. The misconception may have arisen from a passage at p. 6, in which the Aryan Hindus are said to belong to "the white race." But this occurs in a quotation from Quatrefages, made for the purpose of showing that too much importance must not be attached to the colour element, and that within the same ethnical group the transition from fair to brown and even dark is conceivable, and does take place within the Aryan, Semitic, and Hamitic groups.

The writer adds, "The Aryan race is a linguistic expression, and has nothing to do with race in the ethnological sense of the word." I cannot go this length, though I have always contended, as in *Nature*, March 18, 1880, that "Aryan is much more a linguistic than an ethnical term." At a time when race and language were supposed to be convertible terms, Aryan was naturally taken to be as much a racial as a linguistic designation. But since the discovery that race and language are not necessarily coincident, there has been a tendency to assume that they are not at all coincident. Such violent reactions from one false extreme to another seem inseparable from the beginnings of all except the exact sciences. They are as natural in the physical as analogous reactions are in the moral order. Hence, probably, it is that the writer denies all ethnical significance to the expression "Aryan." But after the pendulum has oscillated sufficiently between the two extremes, an equilibrium will doubtless be established, and it will be seen that racial and linguistic terms are not necessarily antagonistic or mutually exclusive. We shall then hear no more of the somewhat extravagant assumption that Aryan "has nothing to do with race in the ethnological sense of the word."

The writer further asserts that "few anthropologists nowadays will be disposed to admit, as Mr. Keane seems inclined to do, that . . . 'the Aryans ought to be called a Caucasian race at all.'" The sense in which I use the expression "Caucasian" is explained at p. 5 of the monograph, and in that sense all anthropologists must necessarily group the Aryans with the Caucasian ethnical stock. Else who are they, or to what racial type can they be referred? No doubt writers who have not grasped the subject constantly treat the two terms as co-extensive. But your reviewer cannot belong to this category, and he must see on reflection that, although all Caucasians are not Aryans, all Aryans, apart from miscegenation, belong to the great ethnical type now commonly described by German anthropologists as "Mediterranean," by others conventionally as "Caucasian." Until better terms are suggested and adopted, nothing but confusion can arise from the habit some have contracted of loftily sneering at this nomenclature. It is very harmless, beside being at present quite indispensable, when used judiciously. A. H. KEANE.

"SAINT LOY" IN CHAUCER.

3 St. George's Square, N.W.: May 29, 1880.

It must be so plain to everyone that the omniscience of my friend Prof. Skeat enables him to know better than I what I meant by my "&c.," and what suggestions have been made to me about St. Loy,* that I need not argue against his assertion.

But what satisfies him as the right solution of "Saint Loy" in the Prioress's mouth has never satisfied me, possibly because I am known to have studied Chaucer so much less than he has. The metre of the carter's line requires that he should pray "Saint Eloy," as well as God, to bless his horse for pulling so hard. And as St. Eloy or St. Eligius was the patron of farriers, the prayer is quite appropriate in the carter's mouth. But what has St. Eloy to do with the dainty Prioress, the courtly Lady-Principal of a fashionable young ladies' school, the Head of a Religious House? Will Prof. Skeat answer "Much, because she swore like a carter: 'shotted her discourse' in the usual mediaeval manner"? I have never (so far as I recollect) accepted the Loy = Eloy† as the Prioress's oath, and have always looked forward to some possible female saint turning up, either with the name Eloy, or that of Loy,‡ in which latter case we might adopt the reading of the Corpus MS. "seint-e," which Mr. Henry Nicol so interestingly justifies.

Now, Sister Mary suggests that Loy is no real saint; and the feminine *loy*, law, at once removes her religious difficulty about the oath, mine about the inappropriateness of the carter's saint in the Prioress's mouth, and that of all Chaucer students about the metre, which had made Mr. A. J. Ellis read *se-ynt* as two syllables.

Having thus duly "waited for someone else with a better head" than mine to solve the difficulty, I trust that now I have found her, though she is not Prof. Skeat.

For Mr. Mackenzie Walcott's suggestions and information I am grateful. Sister Mary's explanation of the position of the Prioress I left out of her letter in order not to make it too long. The Prioress was evidently a Benedictine.

* They include the Norman St. Lo (Lat. *Leodus*), an Englishman born, 568; St. Leufroi, 738; St. Illidus, 745. But the forms do not suit.

† Dr. Morris gives two other late instances of it. The Parker Society Index gives "Eligius (St.), otherwise Eloi, or Loy . . . invoked for the cure of horses 1 *Becon* 139, 2 *Becon* 536, 1 *Hooper* 310," and "St. Lays" or "Louis IX. (St.) King of France . . . invoked for horses, *Royers* 226."

‡ St. Lioba (779) of English-Saxon family, a possible St. Aloysia, &c., have been suggested to me.

Had Chaucer meant her to swear by St. Eligius in respect of her riding, I do not doubt that he would have given us a hint on that point. But he evidently meant to give her usual exclamation in talk at table, &c. Into the Monk's mouth he might well have put the oath "by St. Eloy."

F. J. FURNIVALL.

Athenaeum Club: June 1, 1880.

Is the name of this saint really so very rare? In the parish of Heavitree, and about a mile from the city of Exeter, is a half-ruined chapel called St. Loyes, which gives its name to the adjoining property. Dr. Oliver gives a sketch of it in his *Ecclesiastical Antiquities in Devon*. He calls it St. Eligius' or Eloy's Chapel.

A. H. A. HAMILTON.

THE EARLY PRINTED BOOKS OF ST. ALBANS AND WESTMINSTER.

London: May 28, 1880.

A paragraph in the *ACADEMY* of the 8th inst. stated that a copy of the St. Albans Chronicle, one of the most rare and interesting works which issued from the English press in the fifteenth century, had been catalogued and sold by Messrs. Sotheby in error as a Caxton, and that Mr. Quaritch (who was the purchaser for £116) was the fortunate discoverer of the mistake. As the signs by which a Caxton-printed Chronicle may readily be distinguished from a St. Albans Chronicle may be useful in the future, I beg to space for a few remarks thereupon.

The public interest which has of late years been warmly excited about the town of St. Albans and its beautiful Abbey has developed a tendency in some writers to exaggerate unimportant matters. Thus too much has been made of the resemblance—and it is only a resemblance—between some books printed in the fifteenth century at St. Albans and some books from the press of Caxton, one writer going to the absurd length of suggesting that all the undated books usually attributed to the Westminster Press were really printed at St. Albans.

Permit me, then, to place on record a few facts about the eight books which form the whole list, at present known, of the books printed in the fifteenth century at St. Albans; and to show at the same time how the three works which alone bear a resemblance to books of Caxton's printing may readily be distinguished. The simplest way of doing this will be to arrange them according to their types.

TYPE NO. 1.—This is a very small Secretary type, twenty lines in depth, measuring only three inches and a-half. Only one book is known to be printed with it, although it is used for signatures—and signatures only—in several others. No one could possibly confound this, which is much smaller than any Westminster type, with a Caxton.

(i.) *Augustini Dacti elegancie*. 4to. No date.

TYPE NO. 2.—This character is the only one at all like any of Caxton's. Apart they may be mistaken; place them side by side, and all doubt vanishes. But as practical are always preferable to opinionative tests, I would give the simple measurement as a sure guide. Take any page where the text is continuous for twenty lines, and if the measurement from the top of a letter in the first line to the top of a letter in the twenty-first is five inches it is a St. Albans book; if it is four inches it is a Caxton. But, as a fact, two of the three books in this type can never be so mistaken, and it is the *Fructus Temporum* or the St. Albans Chronicle which is the only work about which there has ever been any difficulty. For this work, then, further tests will be given below. The books in type No. 2 are:—

(ii.) *Laurentii de Saona Rhetorica nova*. 4to. 1480. This is all in Latin.

(iii.) *Fructus Temporum; or, the Book of St. Albans*. Folio. 1483. This is a reprint of Caxton's *Chronicles of England*, of which two editions had been printed—one in 1490, and one in 1482. Caxton's translation is, however, interpolated throughout with an ecclesiastical history, the origin of which is unknown to me. To discriminate between these two Chronicles, note further that the St. Albans Chronicle has printed initials and Caxton's Chronicle has none, or, if any, they are manuscript; also that there are no woodcuts in Caxton, but there are a few in the St. Albans Chronicle; also, and this is the easiest and surest test, look to the signatures: if you find that every single leaf has its signature under the bottom line, it is the St. Albans Chronicle; while if each signature has four signed followed by four unsigned leaves, it is not from that press, but may be a Caxton or a Machlinia. The St. Albans Chronicle has thirty-two lines to a page; the Machlinia Chronicle, which is very like it, has thirty-three lines to a page; the Caxton Chronicle has forty lines to a page.

(iv.) *The Book of Hawking and Hunting and of Coat Armour*. Folio. 1486. The subject of this book is so plainly impressed on every page that, independently of the types, there is quite sufficient in the subject-matter to distinguish it from any book of the Westminster Press.

TYPE NO. 3.—This is a small semi-roman type, with a foreign aspect. It can never be taken for a Caxton. The following books are printed with it:—

(v.) *Alberti Questiones de Mudo significandi*. 4to. 1480.

(vi.) *Joanni canonici Questiones super Physica Aristotelis*. Folio. 1481.

(vii.) *Exempla sacre Scripture*. 4to. 1481.

(viii.) *Antonii Andreae super Logica Aristotelis*. 4to. No date.

TYPE NO. 4.—This completes the list of St. Albans types, and was the last to make its appearance. So far as is known, no book was ever printed with this fount, it being used only for head-lines in *The Book of Hawking and Hunting*, 1486, the latest date upon any book of this series.

The type itself is the same in face as Caxton's No. 3, but differs slightly in body. It was used also by W. de Worde, by Machlinia, and other printers.

WILLIAM BLAYDES.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 7, 5 p.m. Royal Institution: General Monthly Meeting.

8 p.m. British Architects.

TUESDAY, June 8, 8 p.m. Anthropological Institute: "Camps on the Malvern Hills," by F. G. Hilton Price; "Religious Beliefs and Practices in Malacasia," by the Rev. R. H. Collingridge; "The Aborigines of Victoria," by P. Somerville.

8 p.m. Colonial Institute: "New Zealand," by A. F. Halcombe.

8 p.m. Victoria Institute (Annual Meeting): Address by Bishop Cotterill.

8 p.m. Photographic.

WEDNESDAY, June 9, 8 p.m. Geological: "On the Pre-Devonian Rocks of Bohemia," by J. E. Marr; "On the Occurrence of Marine Shells at Different Heights above the Present Level of the Sea," by Dr. J. Gwyn Jeffreys; "On the Pre-Cambrian Rocks of the North-Western and Central Highlands of Scotland," by Dr. H. Hicks; "On the Terminations of Some Ammonites from the Inferior Oolite of Dorset and Somerset," by J. Buckman; "Farøe Islands: Note upon the Old fossiliferous Siderite," by A. H. Stokes; "On Some New Cretaceous Comatulæ," by P. H. Carpenter.

8 p.m. Microscopical: "Life History of the Diatomaceæ," by Prof. H. Smith; "A New Binocular Microscope, with Isoptical Prism," by S. Holmes; "Structure and Functions of the Scale-leaves of *Lathraea squamaria*," by W. H. Gilbert; "On the Relative Visibility of Minute Structures when mounted in Phosphorus, Bisulphide of Carbon, or other Media," by J. W. Stephenson.

THURSDAY, June 10, 4.30 p.m. Royal.

8 p.m. Mathematical: "On a Binomial Bifurcinal and the Arbitrary Constants of its Complete Solution," by Sir J. Cockle; "On the Focal Conics of a Bicircular Quartic," by H. Hart; "Preliminary Note on an Extension

of Pfaff's Theorem," by H. W. Lloyd Tanner; "On the Resultant of a Cubic and a Quadric Binary Form," by Prof. Cayley; "On the Theory of the Focal Distances of Points on Plane Curves," by W. J. Curran Sharp.
8 p.m. Historical.
8.30 p.m. Antiquaries.
Friday, June 11, 8 p.m. Astronomical.
8 p.m. Quaker.
8 p.m. New Shakspere Society: "On the Seasons of Shakspere's Plays," by the Rev. H. N. Eliaombe; "On the Utter Failure of Mr. Weinburae's Meritorious Argument against Fletcher's Share in *Henry VIII.*," by F. J. Furnivall; "On Suicide in *Shakspere*," by the Rev. J. Kirkman.
Saturday, June 12, 8 p.m. Physical: "On the Earth's Rotation as influenced by Solar Energy," by Dr. R. O. Shettle; "Note on a Simple Method of amplifying Small Motions," by R. H. Ridout.

SCIENCE.

Sylvan Spring. By Francis George Heath, Author of "Our Woodland Trees," "The Fern World," &c. With twelve coloured plates. (Sampson Low & Co.)

THIS is another elegant book from the now familiar pen of Mr. Heath—a thick octavo, tastily got up, with gilt edges, and twelve coloured plates of flowers and butterflies from Mr. Hulme's well-known pencil; in addition to which it contains sixteen full-page wood engravings from drawings by Mr. Birket Foster, Harrison Weir, &c., which will guarantee the excellence of their character; while an abundance of wood engravings illustrative of wild flowers and their structure are interspersed through the text.

Part I. treats us to rambles by "Lane and Hedge-banks," through "Woods in Early Spring," by "Hedge and Copse," &c., the author chatting sometimes pleasantly enough, but somewhat sentimentally, about the flowers and trees one meets with.

Parts ii. to iv. contain similar rambling descriptions of flowers of the months from January to May respectively. Any passage chosen at random will give an idea of the book; thus, opening at p. 134, we read:—

"Wandering on, deeper into the greenwood, we pass among some hollies. The Holly (*Ilex aquifolium*) is always delightful. But perhaps its season of greatest beauty is the winter, when it is conspicuous in the woodland by reason of its permanent verdancy among the prevailing deadness of deciduous vegetation. Its depth of glossy green and the rich colouring of its berries add a charm to the wintry woods that few other plants can lend. In the spring, the new wealth of sylvan greenness put on by plants which have been sleeping during the months of cold and frost serve to dim, by comparison, the lustre of the holly, though it does not detract from the intrinsic beauty of the spiny-leaved tree."

And so on and on and on throughout the book.

It is useless to look for much scientific botany, for whenever Mr. Heath does talk a little science he soon pulls himself up short, as if he caught his readers yawning. Nor is he always to be trusted; thus he uses the word *cyme* where he means *corymb*. He describes violet blossoms as growing from the root. An orchis is styled *liliaceous*, and the description of the secretion of honey in the violet is all wrong, &c. He alludes to the Linnean system of classification as if it were in vogue, whereas the reader should know that it has been abandoned for the last quarter of a century or more.

The book would have been much more interesting and far more valuable had the author taken advantage of the rich literature on insect

fertilisation, and introduced something about the processes, say, of climbing plants or of carnivorous plants, or, again, of the innumerable contrivances for warding off unwelcome guests. For it is not enough nowadays (as our forefathers thought) merely to observe and wonder at curious details of structure. It is to know the *why* and the *wherefore* which adds real interest to the study.

Still the book may have its use if it induce any person with just a taste for wild flowers to learn a little more about them, and so be led on to try more substantial botanical food.

As an elegant gift-book, the same recommendation that I proposed for the author's *Fern World* may equally apply to the present volume—that it is admirably adapted to lie on a drawing-room table or to serve as a prize for botany in a young ladies' seminary.

GEORGE HENSLOW.

DISCOVERY OF SAYANA'S COMMENTARY ON THE ATHARVA-VEDA.

Bombay: April 10, 1880.

I trust you will kindly allow me the use of your columns to announce the discovery of Sāyana's long-sought Commentary on the Atharva-Veda. Hitherto scholars had almost given up all hopes of finding the Commentary, which there was reason to believe did exist. And as all attempts to find it made throughout the length and breadth of India had failed, and no trace had been found of it, scholars had already begun to say that it was never written by Sāyana, or, at any rate, that it had perished, like numerous other books which one hears so much about in Indian literature, and which, if found, would go very far to solve some knotty questions connected with Sanskrit literature.

The MS. of which I am now in possession contains Sāyana's Commentary on the *Saunakī Sāktā* of the Atharva-Veda, and was discovered in the South through the kind offices of an enlightened friend, himself a Sanskrit scholar, Mr. V. N. Narasimayengar, of the Mysore Commission. It is written on palmyra leaves, in what I suppose is called the Nandi-Nāgarī character, a form of Devanāgarī still in use in some parts of the Madras Presidency, especially on the Malabar Coast. Many in India had no doubt that the Commentary did exist; and as Sāyana, the great Vedic interpreter, lived in the South, and as that part of the country is still celebrated for Sanskrit lore and the preservation of ancient Sanskrit MSS., I directed my enquiries to centres of Sanskrit interest in that Presidency, and it is a matter for congratulation, in the interest of Vedic philology, that the long-lost thing has been found at last.

It is a pity, however, that the MS. does not contain the whole of Sāyana's Commentary on the Atharva-Veda. Of the twenty *Kāndas*, or chapters, into which the Atharva *Saṁhitā* is divided, the MS. contains the commentary on nine *Kāndas*, viz., the first four *Kāndas*, the three *Kāndas* from 6 to 8, and the four *Kāndas* from 17 to 20. We have thus three fragments of the Commentary, but put together they form about two-thirds of the whole. I am in hopes of getting some portions of the *Kāndas* that are missing, as some have been already traced; but I may not be sure of completing the Commentary without waiting for an indefinite length of time.

The MS., so far as it goes, is correct, and it will be possible to edit the Commentary from it even if no other copies are obtained. And I have already been working at the *Saṁhitā* and the MS. with a view to place before scholars the results of this happy find of the year 1879.

It is fortunate that the first portion of the

Commentary has been found. We have there Sāyana's usual introduction. And here we learn some interesting facts. The author says that he was ordered to write the Commentary by King *Harihara*, the son of King *Bukka*, with whom Sāyana's Commentary on the *Rig-Veda* edited by Prof. Max Müller has acquainted the students of the Veda. From the introductory verses, when taken with the opening of the Commentary on the *Rig-Veda*, it would appear that Sāyana and Mādhava are one and the same person. For, according to the present Commentary, *Harihara* commanded Sāyanāchārya to compose—and it is Sāyanāchārya that composes—the Commentary; and the author, farther on, says that he proceeds, therefore, to write his Commentary, having already written his Commentaries on the other three Vedas. In Sāyana's Commentary on the *Rig-Veda* it is *Bukka* who commands Mādhavāchārya to explain the *Rig-Veda*, and it is that Mādhavāchārya who composes the Commentary. The question, therefore, whether Mādhava and Sāyana were one and the same person, or, as has been supposed by some, different individuals, may be said to be set at rest by the Commentary now found.

The Preface distinctly says that the Atharva-Veda Commentary was written after three other Vedas had been explained by the author by commentary.

Sāyana quotes an authority which says that the Atharva-Veda has five "*upavedas*" or *Vedāṅgas*, which are *sarpaveda* (the *veda* about snakes), *piśāhaveda* (the *veda* about ghosts and devils), *asuraveda* (the *veda* about demons), *itihāsaveda* (the *veda* of legends), and *purāṇaveda* (the *veda* of the *Purāṇas*).

According to Sāyana, there are nine branches, or *Sākhās* (he calls them *bhedas*), of the Atharva-Veda, which he enumerates as follows:—(1) the *Paippalādas*, (2) the *Taudās* (3) the *Maudās*, (4) the *Saunakīyās*, (5) *Akshalās*, (6) the *Jaladās*, (7) *Brahmavādās*, (8) the *Devadarśas*, and (9) the *Chāṇanavāidyās*. And he goes on to say that the ritualistic use of the verses of the four *Sākhās* of the *Saunakīyās*, the *Akshalās*, the *Jaladās*, and the *Brahmavādās* is given, in accordance with the *Gopatha Brāhmaṇa*, in five *Kalpasūtras*, which he names as (1) the *Kausikam*, (2) the *Vaitānam*, (3) the *Nakshatrakalpa*, (4) the *Āngirasakalpa*, and (5) the *Santikālpā*.

* The introductory verses are as follow:—

Vāgīdyaḥ sumanasaḥ sarvārthānām upakrame |
Yam natvā kritakṛityāḥ syus tam namāmi Gajā-
nanam ||
Yasya nivasitam vedā yo vedebhyo'khilam jagat |
Nirmame tam aham vande Vidyātīrtamasesvaram ||
Avidyābhānusantapo Vidyāraṇyam aham bhaje |
Yadarkakarataptānām aranyam pritikāraṇam ||
Tatka'kshena tadṛṇam dadhato Bukkabhūpateḥ |
Abhūdnariharo Rājā kehrābheriva chandramāḥ |
Vijitārāvīrāto vīraḥ Hariharaḥ kṣamādhīśaḥ |
Dharmabrahmādhivanyah Kalim svaoharitena Kṛita-
yugam kurute ||
Sādhyatvā Mahim sarvām śrīmān Hariharsvaraḥ |
Bhunkte bahuvīdhān bhogān asakto Rāmavāt
sudhīḥ ||
Vijayi Hariharabhūpāḥsamudvahan sakalabhūbhā-
ram |
Shodasa mahāntī dānānyanisam sarvasya tusthaye
kurvan |
Tanmūlabhūtam ālochya vedam Atharvanābhi-
dham |
Adisat Sāyanāchāryam tadarthasya prakāśane ||
Ye purvottaramimāṇe te vyākhyāyātisangrahāt |
Kripānāḥ Sāyanāchāryo Vedārtham vaktum udyat-
aḥ ||
Vyākhyāya vedatritayam āmushmikaphalāpra-
dam |
Aihikāmushmikaphalam chaturtham vyāchikīr-
shati ||

It will be observed that the reading *taikatāśhena tadṛṇam* in line 7 gives a better sense than *yatkatāśhena*, &c., as found in Prof. Max Müller's most valuable edition of the *Rig-Veda-Commentary*,

Sâyana shows how the Kausika Sûtra is the chief of the five Kalpa Sûtras, and promises that, though he will give the substance of the other Sûtras in explaining the Vinîyoga of the Atharva-Veda-Samhitâ, he will chiefly and largely quote from the Kausika.

As for the object and the use of the Atharva-Veda-Samhitâ, according to the author of the Kalpa-Sûtras, Sâyana summarises the Kausika as follows:—The performance of the fortnightly sacrifices; the creation of brain; obtaining success of the vow of celibacy; the acquisition of villages, towns, forts, and kingdoms; the acquisition of sons, cattle, wealth, corn, subjects, wives, elephants, horses, chariots, sedan-chairs, and other means of comfort; the acquisition of unity among the people; acquisition of good feeling; frightening away enemies and elephants; acquisition of victory in battles; the fencing away of shafts; the fencing away of swords and other weapons; the stupefying, routing, stopping, and destroying of hostile armies; the inspiring with bravery and the protection of one's own armies; finding out whether victory or defeat is to attend a given battle; the destruction of the commander of an army and similar high men; the throwing, in tracts travelled over by hostile armies, of charmed nets, swords, &c.; the mounting a chariot by a king desirous of victory; the beating of drums and all other instruments which have been charmed; the destruction of enemies; the restoration of a king dethroned by an enemy; the coronation of a king; the destruction of sin; about calamity; about fattening; the fattening of cows; the acquisition of prosperity; the tying of a talisman; the prosperity of cattle; the enriching of houses; the building of new halls; the letting-off of a bull; the application of medicinal remedies to curable diseases caused by sins committed in former existences; medicine for all diseases; medicines for fever, looseness, diabetes; stopping of blood flowing out from wounds made by weapons; the laying of devils, ghosts, demons, paroxysms, Brahma râkshasas, and evil spirits haunting children; medicines for bile, cough, and wind; removal of heart-diseases and jaundice; the curing of intermittent, diurnal, and remittent fever, of consumption and dropsy; destruction of worms; curing of vegetable, snake's, scorpion's, and other poison derived from immoveable or moveable things; medicines for diseases of the head, of the eyes, of the nose, of the ear, of the tongue, of the throat, &c.; antidote against the curse of Brahmans and others; medicines for various diseases, such as carbuncles, easy parturition, consumption, and formation of the foetus; appeasing of the ire of kings and others; the knowledge of the means of obtaining what is desired; the warding off storms, lightning, and excessive rain; victory in meetings, in disputations, and reconciliations; making the rivers flow according to one's own desires; digging up of treasures; victory in gambling; reconciliation between the cow and the calf; obtaining peace to horses; obtaining profits in trade; liberating a woman from sin; entering a new house; purification of a house defiled by a dove, a crow, &c.; the warding off the effects of improper receipt of largesses; of improper sacrificing and officiating; warding off the effects of an evil dream; warding off the effects of a boy's birth under inauspicious stars; the repaying of debts; warding off the evil effects of bad auspices; warding off the effects of magic practised by others; performance of ceremonies connected with the birth, the naming, the saving, and the initiation of children; the performance of petty sacrifices; pacification on the occasion of many accidents, such as bleeding, the meeting with a demigod (Yaksha) and demon, an earthquake, the sight of a comet, lunar and solar eclipses, &c.

Then follow similar but shorter summaries of contents of the other four Kalpa-sûtras.

As might have been expected the Commentary (which contains both the text and the explanation) comes to the help of the reader of the edition of the text published by Profs. Whitney and Roth by supplying more correct and intelligible readings. This is especially the case, so far as I have hitherto seen, in the last two Kândas. In many places the readings of the MSS. relied upon by the editors are confirmed, and in some places their emendations are shown to have been correctly made. Thus in Kânda xix. 1, 3, Sâyana reads and explains *gambhîre-apasah* instead of *gambhîravepasah* of the printed edition. In xix. 4, 1, 8, Sâyana reads and explains *mâ mrityorudagâ vasam* instead of *mâ mrityorupagâ vasam*. In xix. 4, 2, 2, Sâyana reads and explains *dvishatâstâpayan* . . . *ivâbhîn santâpayan* instead of *dvishatâstapanam* . . . *ivâbhîsantâpaya*, which appears to have been substituted as an emendation in the printed edition. In xix. 7, last verse but one, instead of *vandamând*, Sâyana correctly reads and explains *vedamâtâ*, which is obviously the proper reading.

From the Commentary on the Rigveda we learn that Sâyana was the minister (*dhurandhara*) of King Bukka; here he calls himself the minister of King Harihara (*Śrīmadrājādhirājaparameśvaraśrī-Hariharamahārājasāmrajyadhurandharena Sâyanaśāhāryena virachite mādhyavi Atharvavedasamhitābhāṣhye vedārthaprakāśe, &c., &c.*).

The MS. is not very old, but may have been written within the present century. This justifies us in hoping that the missing portions of the Commentary may yet be found. But the portions in hand being on the most important parts of the Atharva collection, I propose editing the Commentary, incomplete as it is.

SHANKAR PANDURANG PANDIT.

PS.—From Sâyana's introductory verses already quoted it also appears that he was different from Vidyâranya. Popularly Sâyana and Vidyâranya are believed to be one and the same individual, and Sâyana's Commentary on whatever work is called Vidyâranya-bhāṣhya. Sâyana's respectful mention of Vidyâranya made in these verses now shows that the latter was a different individual from Sâyana, and different again from Sâyana's Guru or Teacher, whom Sâyana constantly mentions and refers to in language worthy of the Divine Being only, under the name of Vidyâstīrtha-Mahesvara.

S. P. P.

NOTES OF TRAVEL.

DR. PANAGIORES POTAGOS, a Greek physician, has recently returned from a series of exploratory journeys which rival in extent those of Marco Polo, and far exceed them in variety. Starting in 1867 he traversed Syria and Persia, into Afghanistan, and resided for some time at Herat, Kandahar, and Cabul. He then crossed the Hindu Kush into Badakshan, and, by way of Kashgar and Turfan, reached Hami in 1871. On his arrival at Uliasutai the Chinese authorities forbade farther progress. He was sent back to Hami, and kept a close prisoner there for more than a year, his quality as a physician alone saving his life, but in the end managed to escape to Kulja, whence he returned through Russia to Saloniki. The collections made during this extensive journey were stolen by the Chinese. After a two years' residence at his native town, Dr. Potagos once more started for the East. The English authorities at Peshawar having refused to permit his entrance into Afghanistan, he descended the Indus, embarked at Karachi for Bender Abbas, and reached Kabul by way of Persia and Seistan. When descending from the plateau through the Kurum Valley into India he met Major Cavagnari, whose

tragic fate is still fresh in our memories. Even more interesting geographically is Dr. Potagos' third journey, into the regions of the Upper White Nile. He there explored the upper basin of the Bahr el Arab, and crossed its western watershed into the valley of the Mamun, a river flowing north-west into Wadai. He then penetrated to the south as far as lat. 3° N., where, between long. 23° 40' and 25° 40' E., he found the Bere (Schweinfurth's Welle) flowing to the westward. M. Duveyrier is still inclined to look upon the Welle as the head stream of the Shari; but, if the position assigned to that river by the Greek traveller can be depended on, it would certainly appear to belong to the basin of the Congo.

UNDER the title of *Acclimatement des Européens dans l'Afrique intertropicale*, Dr. Dutrieux, formerly medical officer of the first Belgian expedition in Africa, has just published at Ghent (Eug. Vanderhaeghen) a brochure which should prove useful to intending travellers in that region. Without professing to deal exhaustively with the subject of diseases, he treats successively of African fever, dysentery, and some maladies of smaller importance, and then discusses the question of acclimatisation. In the latter section he points out that some parts of intertropical Africa, though subject to meteorological influences peculiar to that zone, are yet really healthy, of which he gives as an instance the mountainous country of Usagara, in which, as we have before mentioned, the French scientific station under M. Bloyet is shortly to be organised. Other tracts, again, such as the vast plains of Ugogo, are relatively healthy; but the greater part of the other countries are unhealthy. Under the most favourable conditions, however, Dr. Dutrieux is of opinion that European immigrants would never be able to engage in the cultivation of the soil, and that, in default of indigenous labour, they will have to avail themselves of races which could be most readily acclimatised, such as the Chinese and Hindoo.

At the anniversary meeting of the Royal Geographical Society last Monday Lord Aberdare was elected president for the ensuing year, and among the new members of Council are Sir G. S. Nares, Sir Richard Temple, Lord Reay, and Mr. J. K. Laughton, of the Royal Naval College, Greenwich. After the presentation of the royal medals, Mr. E. H. Bunbury received from the president a copy of a resolution of the Council acknowledging the great value of his recently published work on ancient geography. The Earl of Northbrook afterwards delivered an address on the progress of geography during the past year. He also announced the welcome intelligence that Capt. H. W. Howgate's perseverance in urging upon the United States Congress his scheme of Polar exploration has at length been crowned with success, and that the little steamer *Gulnare* is to be despatched to the Arctic regions to establish a station, which will be shifted nearer and nearer to the Pole as opportunity offers. Lord Northbrook further stated that our Admiralty Board had placed at Capt. Howgate's disposal all the provisions and other stores left behind by Sir George Nares' expedition—a graceful act of liberality which will, no doubt, be fully appreciated in the United States.

MR. McCaul, of the Congo Inland Mission, has recently left England for the West Coast of Africa, and intends to endeavour to make his way into the interior by the northern bank of the Congo.

THE Rev. John Milum has sent home an account of his return journey from Bida, in Nupe, West Central Africa. He travelled by land for some eighteen miles to Dokomba, on the River Kaduma, or Layan, which he descended in canoes provided by King Ormurū. The

Kaduma, he says, is a beautiful stream, navigable for steamers, and flows through the country of the Tapas, who formerly had flourishing towns on both banks, since destroyed by the Foulahs. The sand-banks along the river were peopled with pelicans, crown-birds, wild duck, curlew, and other birds of beautiful plumage. After a journey of eight hours and a-half in a south-westerly direction, Mr. Milum arrived at Muraji, situated at the confluence of the Kaduma and the Kwara. Thence his general course was north-west, by the inner bank of the Kwara, called there and for many miles farther on by the Yoruba name of Oya. After experiencing many difficulties, he reached Shonga, situated upon the lowermost branch of the River Kwara (or Niger), almost due south from Rabba. Neither the town nor the hills in the neighbourhood are marked on the chart or ordinary maps.

RECENT discoveries in Queensland have led to a determination to examine the great stretch of country lying between Cloncurry and the northern gold-fields, which is said to be a virgin district as far as gold miners are concerned. A party has recently started to explore thoroughly the auriferous country at Wills' Creek.

In the course of his recent journey from the head of the Great Australian Bight towards the Musgrave Ranges, to which we have previously referred, Mr. W. H. Tietkins was chiefly engaged in searching for water with the view of making this region available for pastoral purposes, and he appears to have been, on the whole, fairly successful. He is of opinion, as the result of careful observation, that there is an uninterrupted rise in the country from the latitude of Oldea to that of the Musgrave and Mann Ranges.

CAPT. A. H. MARKHAM, who is in command of H.M.S. *Triumph*, the flagship on the Pacific station, has recently paid a visit to the Galapagos Islands, a most interesting group belonging to Ecuador. He has sent home collections which he made there, as well as notes on the geography of the islands.

THE interoceanic canal question still attracts much attention in the United States, and the Board of Trade of San Francisco recently appointed a special committee to examine into the subject. Their report has lately been made, and a memorial to Congress adopted. Though it is much longer, they are distinctly in favour of the Nicaragua route. They urge that a canal by this route could be made at about half the cost of that proposed by M. de Lesseps, and that it would pass through a country of great but only slightly developed resources; it would also possess the advantages of fresh water and a splendid inland harbour, in addition to which materials for construction and maintenance are mostly to be found in the country. It would run through a region with an average annual rainfall of fifty-eight inches against 124 inches on the Panama route; in the former case the drainage is received by the lake, while in the latter the country is liable to very high floods.

SCIENCE NOTES.

The Oligocene Strata of the Hampshire Basin.—This is the title of an important memoir recently contributed by Prof. J. W. Judd to the Geological Society of London, and published in the last number of the society's *Quarterly Journal*. In the Isle of Wight and on the mainland of Hampshire there exists a series of beds, partly marine and partly fresh-water, which have long been a prolific source of controversy among geologists. Prof. Judd, correcting a popular misinterpretation of one of the sections in the Isle of Wight, shows, both on physical and on palaeontological evidence, that the strata which are exposed at the

base of Headon Hill are not, as commonly supposed, a mere repetition of those seen in Colwell and Totland Bays, but must be referred to a distinctly lower geological horizon. The fluvi-marine series is proved to have a thickness of between eight and nine hundred feet, which is much greater than the estimate generally received by geologists. The marine beds above the estuarine series of the Headon group are distinguished by the author as the *Brockenhurst series*—a name borrowed from the well-known fossil-bearing locality in the New Forest, where these beds are well developed. Correlating the fluvi-marine series of the Hampshire basin with Continental deposits, Prof. Judd is led to place them in that division of the Tertiary system to which Beyrich applied the term *Oligocene*. The existence of the Oligocene formation—including those strata which lie above the Eocene and below the Miocene beds—has not hitherto been distinctly recognised in this country.

By his continued investigations of the orbit of Winnecke's periodical comet, Prof. Oppolzer, of Vienna, has been led to the interesting result that the observations of the comet made during its three returns to perihelion in 1858, 1869, and 1875 cannot be properly represented without the assumption that its motion is affected in a manner similar to that which manifests itself so decidedly in the case of Encke's comet, and the simplest explanation of which is to be found in the resistance of the medium through which the comet passes. The considerations which, sixty years ago, induced Encke to adopt the hypothesis of a resisting medium have gained strength at each re-appearance of the comet which bears his name; and the elaborate researches of the late Dr. von Asten especially have done much to clear away any lingering doubt of the correctness of the hypothesis. But, of course, it is of importance that the proofs of this correctness should be corroborated by the evidence afforded by the observations of other periodical comets, and this evidence has hitherto been too scanty and too complicated to allow any decided inferences to be drawn. In the case of Faye's comet, which was first observed in 1843, and has since re-appeared at its four succeeding returns to perihelion, the effect of a resisting medium has not yet shown itself to be sensible; but, as the comet does not approach the sun to a nearer distance than 1.7 times that of the earth from the sun, their negative evidence is inconclusive. It is, therefore, highly interesting that, according to Oppolzer's researches, the observations of Winnecke's comet show an acceleration of the mean motion such as can be explained in the simplest way as the effect of a resisting medium. The constant of resistance differs little from that in the case of Encke's comet—a rather curious fact, as this constant depends partly on the size and form of the moving body, and may be very different for different comets. The assumption of a similar value of the constant of resistance in the case of Faye's comet gives such a small acceleration of the mean motion that it is easily explicable that the effect has yet remained hidden. The approaching return of Faye's comet to perihelion may perhaps furnish observations in which the effect will be traceable. Winnecke's periodical comet returns to perihelion early in December, but it will be placed so unfavourably for observation that it is doubtful whether any good positions will be secured. The comet discovered by Mr. Schaberle at Ann Arbor, Michigan, on April 6, will reach its perihelion early in July, and will become observable again in August, and probably remain so till the end of the year.

MEETINGS OF SOCIETIES.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, May 26.)

SIR P. DE COLQUHOUN, Q.C., in the Chair.—Prof. Abel read a paper "On the Diversity of National Thought as reflected by Language," in which he endeavoured to show that, with the exception of terms denoting material objects or expressing most ordinary sensations, the words of all languages are really different in meaning from their reputed representatives in other tongues. As nations differ in their notions, the signs expressive of these notions—i.e., the words—could not but differ in the senses they conveyed. By a comparison between French, German, and English, Prof. Abel sought to show that there was a considerable diversity between words seemingly identical in meaning. Such words often only corresponded partially with each other, the one either having some additional meanings not found in the other, or the various ingredients of their meanings being combined in different proportions, even when otherwise identical. Then, again, there were terms found in some languages, but not occurring in others; in which cases, in order to make up for the deficiency, it was necessary to use paraphrases. Prof. Abel then showed that only thoughts common to a whole nation, or to large sections of a nation, are embodied in single words, and hence drew the conclusion that the finer shades of national character are most effectually ascertained by a comparison of synonyms.

SOCIETY OF ANTIQUARIES.—(Thursday, May 27.)

EDWIN FRESHFIELD, Esq., V.-P., in the Chair.—Mr. C. K. Watson exhibited two European morions with hoods of quilted work and Oriental chain-mail added to them; two steel armplates, inlaid with gold, with mail gauntlets; two mail shirts and a Persian target with gold ornaments, which had been found by Col. Gordon in the interior of Africa. The tradition in the place where they were found was that they were brought thither by Saracens in the time of the Crusades, but the European armour was of the sixteenth century and the Persian early-eighteenth. Col. Weston was of opinion that the arm-plates were not of Oriental workmanship, but native copies, perhaps of specimens brought into Africa by Abyssinians who had served in the Persian or Turkish armies.—Mr. Latham also exhibited a shirt composed of mail and plates of horn and a Spanish morion which had been found in the possession of a Borneo pirate, and were lent for exhibition by Mr. Pretyman.—Mr. Franks exhibited a gold ring engraved with a man-headed winged bull, wearing a Persian tiara; and a caduceus without a handle, which is the zodiacal sign for Taurus. From a Pehlevi inscription on the seal, Mr. Percy Gardner identified it as belonging to the Persian king Vahaspes, who reigned about seventy years after the death of Alexander the Great.—Dr. Ridding, head-master of Winchester School, exhibited a *martel de fer* found in the ruins of Wolvesey Palace, near Winchester, built by Cardinal Henry de Blois, brother of King Stephen.—A paper was also read, written by Mr. J. H. Parker, containing a sketch of the history of Ardea, illustrated by photographs of the walls and other buildings in the town.

FINE ART.

Milet et le Golfe Latmique: Fouilles et Explorations archéologiques. Par O. Rayet et A. Thomas. Parties II., III. (Paris: Baudry.)

THE first part of this work appeared in 1877, and at the time was received with the favour it deserved. The plates, then principally devoted to architecture—that is to say, to the Temple of Athene Polias at Priene—were held to possess almost every good quality in work of this kind; while, as regards the reproduction of sculpture, there was, in particular, one plate which left nothing to be desired. This was the very delicate and very beautiful archaic bronze Apollo of the Louvre. The two large maps of the district had evidently

been produced with every care; and what was to be expected in views of natural scenery could be seen from the plate representing the scattered ruins of the Temple at Priene, with its background of hill. In this latter respect, the two new parts of the work are again very successful. More is added to the architecture of Athena's Temple, and in sculpture the process of photogravure has been employed, so as to give by far the best representations that have yet appeared of certain statues which play an important part in the study of early Greek art. This may be said, for example, of the marble statue of Chares, from Branchidae, and, perhaps with even more justice, of the Strangford Apollo; not to mention the sculptures found at Miletus by MM. Rayet and Thomas, and now in the Louvre. It is the publication of these sculptures, and of the results obtained from an exploration of the architectural remains, the local features, and the history of Miletus and its neighbourhood, that is the primary object of the work. Where other sculptures from this quarter are introduced, as in the statues from Branchidae now in the British Museum, it must be to render the book more complete; and, when a figure is reproduced which is not known to have any connexion with the district, the intention is, I suppose, to illustrate some question of artistic style. That it should be necessary to suppose anything at all in the matter is due to the circumstance that the text and the plates, as they are issued, do not always present that mutual relation which no doubt will be clear enough when the work is complete.

In the third part the text is occupied with the Temple at Priene, which, as is known, had been explored by Mr. Pullan, at the instance of the Dilettanti Society, previously to the arrival of MM. Rayet and Thomas on the scene. Examples of architectural members, numerous inscriptions, and all that could be found of sculpture were at the time sent home and presented to the British Museum, the intention of the Dilettanti being to publish the results of their mission. Meantime, M. Rayet begins with a short sketch of the ruins of the Temple, an enquiry into the date of its erection, and an account of its architect, Pythios, he who also took part in the construction and in the sculpture of the Mausoleum at Halicarnassus. Then M. Thomas proceeds with the details of the architecture and the remains of sculpture. These remains are given from drawings, and, so far as concerns the fragments of frieze, do not receive justice. Nor need the hope of explaining the subject have been so readily relinquished, since some of the groups evidently belong to a gigantomachia. One of the figures is an anguipede giant, with the peculiarity of having wings also.

In the second part of the text, M. Rayet traces with great fullness and clearness the history of Magnesia on the Maeander, just as before he had done that of Tralles.

A. S. MURRAY.

THE SCULPTURES FROM PERGAMUM.

Berlin: May 26, 1880.

As I have seen English papers only very irregularly for some weeks I am not aware whether due attention has been directed to the

sculptures from Pergamum recently acquired by the Berlin Museum. But in any case some of your readers may not be indisposed to read a short account of them as they strike one who comes to them straight from the British Museum. The astonishment and admiration with which they must inspire anyone accustomed to Greek art is extreme; and their acquisition has at once raised the Berlin Museum into the very first rank from the point of view of classical archaeology.

A fortnight ago the *savants* of Berlin were fêting M. Humann, and not without reason, for to him the discovery of these extraordinary sculptures is due. It had long been known, on the testimony of an obscure writer named Ampelius, that there existed in his time at Pergamum a vast altar, forty feet high, adorned with reliefs which portrayed a battle between gods and giants. It is probable, says Prof. Conze, that this altar was erected by King Eumenes II. (B.C. 197-159) to commemorate the victories of himself and his predecessor over the Gauls, who, under the name of Galatians, at that time threatened the very existence of the little Pergamene kingdom. This altar was reckoned among the wonders of the world. Its position has been for some time known and its foundations recognised. It stood on the acropolis of Pergamum, at a height of some 750 feet above the sea. Its size is proved by the existing remains of foundations which cover an area of some ten or twelve thousand square feet. Around the height whereon it stood there was until two years ago a rude wall formed of fragments of masonry of all kinds, and evidently thrown up in haste in Byzantine times at the approach of some invader. Good fortune or his own genius inspired M. Humann with the idea that some of the reliefs from the altar might, in the pressure of the moment, have been thrown into this wall. He searched, and his search was successful. Piece by piece there emerged from the wall the fragments of two great reliefs, one truly colossal in its proportions, as well as many fragments of works of Greek and Roman art.

We must think of the great altar of Pergamum, which was probably dedicated to Athene, as consisting of a square solid mass of masonry, of which each side was about one hundred feet long and forty high. Around the outside ran a huge relief representing the war of gods and giants—a relief about eight feet in height and of such depth that many parts of the figures are entirely detached from the background. The altar was ascended by means of steps; and when the top was reached it would be found to be a platform enclosed by ranges of pillars and by smaller reliefs facing inward. In the midst was a huge pile of ashes, which formed the actual altar of sacrifice. Of this inner relief many portions are preserved, and their subject has been recognised as the life and deeds of Telephus.

Great blocks of relief now lie scattered about the floor of the Assyrian gallery in the old Museum of Berlin. To place these blocks in order and connect them into continuous friezes must be a long and difficult task. This task is in the hands of Prof. Conze and his able assistants, and it makes daily progress. The architectural relations of each frieze render it lighter than it would otherwise be. But perhaps the greatest aid is offered by the inscriptions recording the names of deities and of giants represented in the frieze containing the gigantomachia. These names were, it appears, inscribed on the altar, in the case of the gods above and in the case of the giants below the figures to which they belonged. If, as is to be hoped, the names can be independently brought into some sequence, it will be an easier task to settle the order of precedence among the many disjointed groups which at present appear.

Of the lesser frieze, which represented the story of Telephus, I shall have nothing to say, partly because the fragments of it are fewer and less complete, partly because the style in which they are executed is far less original and striking.

The main or principal frieze which adorned the external face of the huge square altar has for its subject, as I have stated, the war of the gods and giants. And the treatment is worthy of the subject. The band of relief is about eight feet high, and the depth of the sculpture from the background about a foot. The figures are in size colossal and not less colossal in treatment. Already a few groups can be made out.

In one of these stands the stately figure of Zeus, clad in the simple Greek mantle over shoulder and loins. His opponents are three giants. Of these, two, who are young and somewhat slight of form, are already overthrown; in the leg of one of them a solid thunderbolt sticks as an arrow might stick; the other kneels and his face is raised in agony. The third giant still rears himself on serpent legs against the great deity, and tries to shield himself with the skin of a lion from the unerring thunderbolt. Above the group flies an eagle bearing to his master a fresh thunderbolt.

In another group stands Pallas victorious. By the hair she seizes her opponent, a giant with serpent legs and four wings, who is already enveloped in the folds of her sacred creature, the serpent, a figure in attitude and detail irresistibly reminding one of Laocoon. Victory hovers in the air, ready to place a wreath on the head of Pallas. Beside the vanquished giant is a figure of Earth, Gê, the upper part of her body alone rising out of the ground, a Niobe-like figure who bewails the inevitable destruction of her presumptuous sons.

As Pallas is aided by her serpent so is Artemis by her dog, which seizes one of her opponents, while she herself discharges an arrow in the face of another, who seems more human than most of his brothers, bears helmet and shield, and has, like many of the giants, human legs. Near Artemis is a deity who must apparently be Hecate, having three (or two) heads and six arms. She attacks one of the giants with three weapons at once—spear, sword, and torch; and a hound, which accompanies her, aids in the assault. The snake-legs of the giant seem to have an independent life, and, with their jaws, seize the edge of her dress and her shield, but it is clear that their bite is that of despair and not that of hopeful attack.

In another group Helios drives the four horses of his chariot against a giant, who has no defence but the vain one of a lion's hide, and whom the god strikes with spear or torch. Before Helios rides on a horse a goddess whom Prof. Conze conjectures to be Eôs or the Dawn.

In yet another group stands Apollo, who is here distinct from Helios, shooting arrows at the foe. The attitude of the god is much that of the Apollo Belvedere, but his figure is more robust and manly; the head is unfortunately wanting. Elsewhere, Dionysus (or a female follower of Dionysus, for the sex is disputed) advances with a dog or panther at his side, and two young satyrs at his heels. In another place Kybele appears riding on a lion and shooting arrows against a giant. In yet another are two stately pairs of deities, each of a god and goddess, moving on in victorious conflict. One of the female deities is supposed, from the finlike pattern which adorns her sandals, to be a sea-goddess; but it is easier in such cases to conjecture than to prove. Amid the vast diversity of other fragments we find part of a chariot drawn by winged horses, a sea-Centaur, a Hippocamp, and other beings, human and animal, which it would be a long task to mention in detail.

It is, however, impossible quite to pass by one group, though it be as yet unexplained. In it we see a male figure, probably a deity, straggling in his arms a being of strange form with the body and legs of a man, the head and neck of a lion, and human arms ending in lion's claws, which are buried in the flesh of his victor. Here the strangler is of sligher and less powerful build than the strangled.

And here, indeed, we touch on what seems the underlying idea of the whole frieze. The power which confounds the giants in hopeless overthrow is not physical. Physically, indeed, there is a great contrast between gods and giants, and the contrast is in favour of the latter.

It is remarkable how many of the victorious deities are female. And even some of those who are male are clad in the long flowing dress which we naturally associate rather with Asiatics than Greeks; nor are their faces and hair unlike those of women. Helios, for example, was at first taken for a female figure. Nor even in the cases of Zeus and other more masculine figures is the physical development excessive. But the artist in treating the giants has taxed all his faculties of expression, and used his utmost knowledge of anatomy to give them the appearance of vast physical power.

As I have mentioned, some of these giants have wings, some not; some have human limbs, and some serpents for legs; but in nearly all the same type prevails. A head of massive proportions, of which the enormous brows, the deep-set eyes, and thick noses give the idea of energy and ferocity; hair standing up in thick masses or clumps over the forehead, and beard curling in dense masses; huge chests, and arms of vast muscular power; and enormous thighs—all indicate unlimited physical power. Yet this physical force is everywhere racked with agony or writhing in despair; while the conquering gods are calm and untroubled.

The artist seems to imply the divine superiority which he cannot directly portray in three ways. First, the gods are usually closely draped, while the giants are almost naked; secondly, the gods have a great superiority in the variety and excellence of their offensive weapons; thirdly, all animals of force and spirit accompany the cause of the gods, and help in crushing their foes. The lion, the panther, the dog take the field with their patron deities; the serpent accompanies Athene, and the eagle brings thunderbolts to Zeus.

Though it is, of course, no new doctrine, I may here once more point out how it was that the subject of the gigantomachia became a favourite with the sculptors of Pergamum. In the victory of gods over giants they saw a parallel to the brilliant victory just achieved by the military science of the Asiatic Greeks under Attalus and Eumenes over the great physical force and headlong courage of the Gaulish invaders. We before possessed several figures from the monument erected at Athens by Attalus I. in memory of his Gaulish victories. Among these figures are not only vanquished Gauls, but also overthrown Persians, with an Amazon and a giant. In the treatment of the latter there is a very strong resemblance to that of the giants on our frieze, though the work is less bold. The giant of the Athenian trophy has the immense eyebrows and erect hair of which we have already spoken, and in which we may perhaps see the imitation of physical features of the Gaulish race. He holds, like the giants of the frieze, a lion's skin, and, like some of them, lies on a shield.

A candid critic might be puzzled to find, either in the idea or the treatment of this frieze, signs of the decay which is supposed to have crept over Greek art in that second century to which it belongs. Some of the figures of deities are possibly wanting in masculine vigour, and

it may be that in some points the composition is fitter for the painter than the sculptor. But the grouping is noble and still thoroughly Greek; and that mastery of anatomy which marks the works of later Greek art, such as the Laocoon and the Borghese warrior, is here strikingly present. And the whole idea of the frieze, if I have rightly read it, seems to me in no wise inferior to those which inspire earlier works of Greek art, if of a more modern and possibly more sentimental character than they. The Greek world in the centuries after the conquests of Alexander was far nearer to us in feeling and thought than we are prone to imagine.

With the piecing together of the frieze, and on its diligent study, many new questions will arise. One of the most important of these, considering the close likeness between the Pergamene statues and the group of Laocoon, will be as to the relations existing between the later schools of Greek art. The Laocoon is Rhodian, but how like in style to what is Pergamene! This and many such matters must be left to other and more competent investigators. One of the ablest of archaeologists, Prof. Conze, is at work on the reliefs, has already written a brief account of them, to which I owe some of the facts above set forth, and is about to publish a more complete description of them illustrated by woodcuts. When it appears it will doubtless add much to our knowledge; and that these few remarks may perhaps direct attention to his forthcoming work is my chief wish in communicating them.

PERCY GARDNER.

THE SALON OF 1880.

[Third and Concluding Notice.]

AMONG the more ambitious work of this year M. Gormon's *Cain* commands notice, partly on account of its great size, partly on account of the vigorous talent which it displays, and partly, it must be confessed, because it is an unnecessarily preposterous failure. Cain rushes onwards, his face half-hidden by his beard, and overshadowed by masses of tangled hair; he is followed by his sons, two of whom support in front an enormous litter, on which are borne the women and children of the family; others, one of whom carries a young girl in his arms, run at the side. The litter is heaped high with the bleeding skins and carcases of beasts, on which the women sit, and the whole group is relieved on a red expanse of sand and band of gray sky. But the sand is not sand, and the sky is not sky, and the tone of that which does duty for sand and sky is unpleasant, and both are out of relation to the figures in character and treatment; and the whole does not make a good impression, although it is impossible to deny the presence of power which would, perhaps, be more felt if it were not accompanied by something like extravagance; but power of any kind is sufficiently rare not to be left unnoticed. M. Boulanger, for instance, able as he is, will never fail from excess of vigour or a touch of extravagance; of his two monumental works—*Patrie* and *Mariage*—the latter, the subject of which requires the least energy and animation, is the most successful; it is full of pretty things, but (owing, I think, to the attempt made to frame the white of the central group—the bride and bridegroom seated on their marriage throne—in broken colour to right and left of nearly equal value) the whole does not pull together, and there seems to be no strong determining point. Great interest is excited among the visitors by the fact that nearly all the heads in the group of men on the right are portraits of some of the best-known artists in Paris. Guillaume, the sculptor, holds the contract out for signature by the witnesses, and foremost among the witnesses stands Gérôme.

Another portrait of Guillaume—not in char-

acter, but Guillaume as he lives and works, with his modelling stool and tools about him—has been contributed by M. Baudry. It is an excellent portrait, and renders all the intelligence as well as the exterior aspect of the model; but M. Baudry must be held to have done even better with *M. Jules B...* Turned a little to the right, he stands, seen at half-length, his left hand resting on his hip, while the right catches at a pocket; the dull rose-purple of his tie tells against the tawny hues of the flesh, and the background is lightly rubbed in in brown and stone colour. The whole work is as simple and unpretentious as can be, but alive with brilliant intelligence. The dark head of *M. Jules B...* really thinks; all is there, all is told; the most minute points of construction are seized and indicated, not only largely, but with a fine style of which previous portraits by M. Baudry scarcely afford an equal example. Powerful as is M. Bonnat's portrait of *M. Grévy, Président de la République*, if we turn to it from this it seems to be lacking in some of the finer qualities which go to a thoroughly competent rendering. The masterly painter seems to miss the signs which betray the history of the inner man, and to lend his forcible talent wholly to the reproduction of those more patent and visible marks which bear witness rather to the circumstances of the external life. *M. Bonnat's* portrait of *M. Grévy* is also awkwardly hung. It both injures *Mlle. de Jacquemart's* half-length of the *Duc de Broglie*, and is injured by it; for, while it makes *Mlle. Jacquemart's* handling look weak and wanting in grip, the refinement and skill with which she has characterized the head of her subject (the hands are not so good) gives an air of heaviness and coarseness to *M. Bonnat's* rather commonplace conception of the President of the Republic. It is, however, curious to note that, just as *Mlle. Jacquemart* suggests that Bonnat is somewhat heavy, even so Bonnat makes *M. Becker's* dashing full-length of *Gen. Gallifet* look exaggerated. Bonnat's great merit is, I think, the perfect sobriety of his force; no other painter of equal power is so uniformly sage. *Carolus Duran*—who sends this year one very fine portrait, that of *Mme. G... P...* (*Georges Petit*)—is constantly overstepping the limits which separate dash from vulgarity, and even in the present instance, which must count as one of his ablest works, there are signs of this tendency in the harshness which comes of habitually dwelling on violent contrasts of colour—the dark and light blues of *Mme. Petit's* gown stare from a background of red, in spite of the theoretically skilful manner in which the painter has contrived to run the pale blues into the white-gray furs on which she stands, and leave the darker shade against the deep red of the background, marrying the lighter hues of the base to this deep red by the crimson table-cloth whose border of gold and blue touches the furs on the left, and placing in a tall glass a single rose, which, close to the head of the figure, seems to repeat the carnations of the face.

But something must be said of at least one or two landscape painters before we turn to the sculptures of the garden—of Harpignies, whose *Retour de Chasse: Effet du Soir*, hangs in the central room, a work which is not a very good example, for it displeases by a strange and monotonous effect as of faded tapestry, but in which, on looking close, one finds evidence of the same masterly powers of drawing and firmly indicating exact variations of distance which make his water-colour sketches both effective and instructive. But Harpignies is seen to better advantage in his *Panneau décoratif pour l'Escalier du Sénat*. Through the solid tree trunks—which rise out of the rose-spotted foreground, crowned with deep-green foliage against which shows the gray of the olive—a

break of sea is seen, rippling beneath the blue sky, across which floats a puff or two of white cloud—a simple arrangement and yet simpler effect of colour, but laid in with enviable distinctness of sight and certainty of brush. With a brush, too, of even more effective sweep, M. Yon has put in his rolling sky across a bend of the Marne—deep bedded in verdure, growing rank beneath the heavy rain-laden clouds, not a specially interesting subject, but which imposes itself in virtue of the painter's vigorous hand. M. Yon never, indeed, seizes on the more suggestive aspects of nature which appeal to those who, gifted with less power than he, redeem their weakness by some grace of imagination. An echo of Corot's charm attracts us to M. Lefortier's *Etang d'un vieux Moulin en Sologne*, in which the old mill is seen thrust out from a long, low line of buildings into the very centre of the middle distance between the waters of the foreground, surrounded by green growth of grass and the splendidly luminous sky of the background. How much, too, a man may legitimately owe to wise choice of subject may be seen in M. Herpin's admirably selected effect, and equally admirable drawing, of the complicated lines of country about *Château Gaillard*; for I fancy that M. Herpin hardly equals M. Yon in the physical endowments of a painter; yet in virtue of those other qualities, moral and mental, without which even the man who owns the most practised hand is but half an artist, M. Herpin contrives to invite us to return once and again to his picture, in the expectation of learning something more from it and about it; whereas, at one look, we know all that the strong and forcible talent of M. Yon has to tell us of the shores of the Marne.

For the moment, the gift by which the younger men set chief store is precisely this one of admirable physical excellence; the reaction against the intellectual pretensions of the school of David, and against the moral pretensions of the Romanticists, has brought this in its train, and by-and-by a fresh swing of the pendulum will give us a movement of counterbalance. Meanwhile the extravagances and absurdities of the crowd work rather good than harm; so few men are really endowed by nature with that trinity of gifts without which a perfect work of art is impossible; if they have these, no one-sided tendency of their age will prevent them from showing them forth; and for the rest, does it matter much whether they wreak themselves on impossible compositions and call their labour "high art," or fall to thinking "fat" paint and what they are pleased to call "realism" the new gospel of the inspired "modern"? Probably they will give us as little pleasure in the one line as in the other, and the last invention has at least the merit of admitting of very little self-deception as to the degree of attainment or of failure.

The sculpture now shows exactly the same evidences of what is called the "modern" spirit as began to make their way in the picture galleries ten years ago. The "academies" which would once have done duty as Hercules or Ajax, as athletes or as men of war, now make their appearance as *Gilliat* (Oarlier), as *Le Harponneur* (Richard), or *Le Pilleur de Mer* (Ogé). There are any quantity of busts, supposed to embody *La République*; and even the topics of the day, such as *Les Droits de l'Homme* (Icard), *La Libre Pensée* (Raffegaud), and *L'Enfant mort d'Hydrophobie* (Cérémonie), which do not seem to offer a very lively source of artistic inspiration, are represented, if not expressed, in bronze and marble. But the level of general attainment is not changed simply by the substitution of a so-called "modern" type for that of the well-known conventional or classic models. At first, indeed, one's judgment is disturbed and surprised by being presented with a class of forms to which one is not accus-

tomed; blankets seem to drape far more intelligently than wet linen, and features which are only vulgar appear to have the merit of character. Unfortunately, the novelty wears off, and the moment in which one had been tempted to hail with enthusiasm a new departure in art gives place to the conviction that her rules are unchanging; and that that which was common yesterday is common to-day, to-morrow, and for ever; that it is easy to make an eccentric choice of subject and hard to make a wise one; and, finally, that no amount of courage and "go" will replace the passion of patience and the love of sacrifice and labour.

And it seems as if of old the main body of French sculptors worked under more severe restrictions than they are now willing to accept; and it seems also that they better understood the special demands made in the treatment of the different materials with which they had to deal. The casts do not seem made as if they were ever meant to be executed in marble, and the bronzes look like casts. M. Denécheau sends a *Chanteuse du Moyen-âge* whose robes are all covered with pattern such as Villa might paint on a brocade gown, but which it would be pure waste of time to put into marble; and M. Schœnewerk's bronze *Cet Age est sans Pitié*—a young lad who has shot the dead bird at his feet, and who is preparing to take aim at another—looks like a painted cast, so dabbled is it all over in that detestable fashion which is now supposed to give a charm to plaster, but which one had hardly expected to see applied to metal.

Tricks of this sort, however cleverly employed, cannot in the long run atone for the lack of thorough workmanship, for the mechanical mannerisms, which may look suggestive enough in the cast, must eventually be replaced by sound finish in the marble—that is, if the marble is to hold its own. Again and again a strange disappointment overtakes us, as in the case of M. Cuyper's *Hallali*, which looked well enough last year in plaster, but which now in marble scarcely fulfils the promise it then gave. Again and again we come on projects like M. Beer's *Aurore*, or M. Enderlin's *Joueur de Billes*, which show graceful indications of form and pretty original movement—conceptions which ought to be charming statues by-and-by—that is, if the sculptors know enough to thoroughly work them out. There is M. Dumilatre's great seated figure of *Montesquieu*, which in its present state looks full of life and colour, and shows, one would say, much intelligent study of Nanteuil's brilliant engravings, from which has been got, perhaps, the sculptor's admirably vivid conception of how the gentleman of that day really lived in his ponderous wig and no less ponderous clothes; but what will it be next year? Will the unfinished finger tips, which look suggestive enough now, be made to tell their perfect story?

Millet's *Denis Papin* is, perhaps, of the completed works on a large scale, the most satisfactory. Denis Papin, the French inventor of the steam-engine, was a native of the town of Blois, and for the town of Blois the bronze statue, now finished by M. Millet, is destined, and the town may be congratulated on the possession of so scholarly and interesting a work. Papin, dressed in the simplest form of seventeenth-century costume, stands bowed a little to the right, and is about to lay his right hand on the instrument of his experiments, lifting his left in a simple action of arrested attention, and the gentle, thoughtful movement contributes to an effect which is at once sober and unconventional.

To avoid the conventional by remaining simple and natural is a rare achievement, and M. Chappu, who has more than once done very charming work, has this year contributed a *Génte de l'Immortalité* which is disappointingly

commonplace. Funeral monuments are nearly always rocks of shipwreck, and the *Ange pour un Tombeau* by M. Delaplanche, although a portrait, has none of the individuality of life; his angel is a stook angel, such as may be seen in many a church and chapel, and in his little group of *L'Enfance d'Orphée*, if he escapes the conventional, it is only by an exaggeration of attitude and action which renders the unlucky muse, who drums a lyre with Orpheus sprawling in her lap, a graceless and unsculpturesque object; but M. Mercier's solemn and original little *Judith* standing near looks all the better for the contrast. Something, too, of originality and of grace there is in a large bas-relief of *St. Cecilia*—sent, I think, by a young sculptor named Lombard, though I cannot identify either the work or the name in the catalogue. *St. Cecilia* plays, watched from the opposite side of her instrument by an entranced little lad, who looks almost as if he might have grown beneath the fingers of Donatello.

One or two busts are also noteworthy, especially that of M. Berthelot by M. Iselin, and Gemito's bronze head of M. Meissonier. Upstairs there is also a little statuette of the painter by the same sculptor, which is a brilliantly clever bit of portraiture. It is M. Meissonier just as he stands in his studio, looking aside to talk when a visitor interests him, palette in hand, confident, bold, ready, with a look of interrogation. The grip of the hands has the exact character of M. Meissonier's grasp, muscular and delicately sensitive at the same time. The great attraction of the upstairs room is, however, M. de Saint-Marceaux's *Clown*. Last year M. de Saint-Marceaux borrowed from Michelangelo; this year he has asked help of Watteau, and has placed upon a pedestal a droll and witty clown, agile and light, who seems, legs apart and arms folded, to have just descended on his feet after a marvellous leap. The whole figure is instinct with mischief, and behind his mask the eyes gleam out full of youth and mockery. I cannot yet identify the work to which, in this instance, M. de Saint-Marceaux has owed his inspiration; but this notice must not be closed without mention of M. Delorme's open plagiarism from Pigalle. The marble *Mercury* which he has sent to the Salon is more than a mere reminiscence of the mysterious and attractive creation which, in spite of all the ill-usage and neglect from which it has suffered, still forms one of the chief treasures of the Musée de Sculptures Modernes in the Louvre.

E. F. S. PATTISON.

NOTES ON ART AND ARCHAEOLOGY.

WE understand that the Royal Scottish Academy are organising an exhibition of the works of deceased Scottish artists to be held in Edinburgh during the autumn meetings of the Royal Association in that city. The display cannot fail to be an instructive one if it is made at all representative of the last eighty or a hundred years of Scottish art. The Academy would do a service to the public and an honour to itself by bringing together a typical collection of the works of such of its deceased members as Sir William Allan, Thomas Duncan, Sir John Watson Gordon, D. O. Hill, and the two Lauders. The figure-subjects of their late president, Sir George Harvey, are well known and popular, but a series of his landscapes would show a phase of his art which has hardly yet been sufficiently appreciated. It is to be hoped that Scottish art, in its most imaginative mood, will be well represented by the pictures of David Scott. Among the portraitists it would be easy to acquire many admirable examples of Sir Henry Raeburn that were not included in his exhibition of 1876—rich as that

exhibition was; Allan Ramsay is a painter about whom we should like to know more, judging from that singularly tender and delicate portrait of his brown-eyed wife in the Scottish National Gallery; and Andrew Geddes is hardly known to the public except through his etchings and such of William Ward's powerful mezzotints from his portraits as the *Sicily Brydone*, the *Wilkie*, and the *Dr. Baird*.

AN exhibition of the paintings of two deceased Scottish Academicians, Sam Bough and G. Paul Chalmers, and of works in black and white by living artists, is to be held in Glasgow in August, under the auspices of the Glasgow Institute of Fine Arts.

IN characterising the reply he received to his question on the National Gallery as unsatisfactory Mr. Coope undoubtedly rightly interpreted the general sentiment of the public, and those specially interested in art. And, unfortunately, the reply was as inaccurate as it was unsatisfactory. We are therefore glad that Mr. Coope intends embodying his question in the form of a motion, being assured that neither the Government nor the officials of the National Gallery will care to maintain the position assumed in the statement of the Commissioner of Works. A solution of the question of the admission of the public on students' days has been put forward which, though coming from a serious contemporary, must surely be a ponderous joke. The proposal for a great nation to charge twopence for admission to its collection of paintings can be considered in no other light. The originator of the notion might have gone one step farther, and suggested that the Director should stand at the portico, calling, "Walk up, ladies and gentlemen! All the Old Masters on view; admission only twopence. A lively and spirited Rubens just added to the collection; only twopence. Walk up, walk up!" No; the English public can be trusted to respect works of art equally with its neighbours, and needs not the restriction of antiquated regulations or twopenny entrance fees.

A PORTRAIT of M. Ernest Renan, by E. Long, R.A., is now to be seen (on presentation of a card) at the rooms of Mr. Arthur Lucas, 37 Duke Street, Piccadilly. The artist has grasped with great power the character and features of the fine head. M. Renan is sitting in a natural attitude upon a sofa, with his hands (and their long nails) upon his knees, the face a little turned towards his left shoulder. He is simply dressed in black, and shelves of books form the background. As we understand that the celebrated Frenchman could give but two or three sittings, and only one of any length, the portrait would be remarkable simply as a *tour de force*. It is, however, difficult to see how its success either as a portrait or a work of art could have been increased by additional time and labour; the head is finely modelled, and the flesh and hair are rendered with great truth and delicacy; even in the dress and accessories the work, though slight, is sure and dexterous.

IN our account of "Paintings on China" in last week's issue, the name of the manufacturer of pottery and porcelain who was the first to succeed in placing glaze over gilt was wrongly printed as Diet. It should have been M. Deck.

A SCHEME has been set on foot at Dublin which has for its aim the formation of a permanent museum of modern paintings and other works of art in that city. It is proposed first to form a society, to which the subscription shall not be less than one guinea a year; and then, with the funds obtained by subscriptions and donations, to purchase modern pictures, by both British and Continental artists, and exhibit them in a suitable gallery, to which Irish artists and the public in general will be admitted

on certain conditions not as yet agreed upon. All the works purchased by the society will be afterwards placed in the Royal Hibernian Academy. There will not probably be much difficulty about the formation of the proposed society, but whether it will gain sufficient support to enable it to achieve its purpose remains to be seen.

THE sixth exhibition of the Union Centrale des Beaux-Arts appliqués à l'Industrie will open on July 31. The metal industries only will be represented.

THE monument to Corot at Ville d'Avray was inaugurated on the 27th ult.

THE hillock near Strassburg where Goethe met Friederike has naturally been, ever since the restoration of that town to Germany, one of the attractions of the neighbourhood; and lately, when it was proposed to convert it into a kind of monument of the poet's stay in Strassburg, an opportunity arose to settle the question whether the hillock was an ancient tumulus, as some had thought. It has now been opened, and found to have been a burying place, as others must have known long ago, since it proved to have been ransacked. Still, some few objects of interest had escaped to bear witness to the age of the interments, including two gold rings—the one a foreign ring, the other for the arm—and a small copper coin, reading D(ominus) N(oster) BADVILA REX, and on the reverse, FELIX T . . . VS, which latter word is completed as Ticinus, the old name of Pavia. Badvila is the Totilas of ancient historians, and fell in A.D. 552, on which event the kingdom of the East Goths succumbed. It is, however, thought in Strassburg, judging from other remains found in the excavations, that the tumulus had originally been made considerably before this date for earlier interments.

A BOSTON firm of publishers has hit upon a novelty in offering the sum of £400 in prizes for four original designs for Christmas cards, painted in water-colour or oil. The designs are to be eventually exhibited.

AN engraving of the grand Beethoven monument inaugurated last month at Vienna is given in the *Zeitschrift für bildende Kunst*. This monument, designed by Kaspar Zumbusch, the sculptor of the national monument to King Max II. at Munich, and executed by him and his scholars, is about the most satisfactory work of its kind that Germany has produced for some time. One could wish it, however, to have been without the inevitable female figure holding a wreath. Even if wreaths are absolutely necessary in exultant national monuments, surely there can be no need to inflict them on a poor musician.

THE distinguished Danish painter, Prof. Christian Gotfred Bump, died at Frederiksborg on the 25th ult. He was born in that town in 1816, studied under Lund at Copenhagen, and began to be successful as a landscape painter in 1848, when he won the gold medal of the Danish Academy. His finest works, the series of *The Four Seasons*, are now in the Moltke collection, and the national collection possesses several of his best landscapes. He takes a very high rank among Scandinavian artists.

A PLEASANT article, which will no doubt interest a large number of readers, is contributed by Mr. John Oldcastle to the *Magazine of Art* this month. It is entitled "Queen Victoria and Art," and is illustrated by some etchings of favourite dogs and of a little girl in two different positions executed by her Majesty in 1840. They are not, of course, very remarkable as works of art, but are interesting as showing how some of the moments of leisure were utilised and enjoyed amid the cares of State. There are many records in the *Queen's Journals* of the pleasure she took in sketching

the scenes she saw; and she and the Prince seem often to have worked together in making drawings on stone and etching copper-plates.

M. BARBIAS has been selected as the sculptor of the allegorical monument of the Defence of Paris in 1870 to be erected at Courbevoie.

A MONUMENT to the late Swiss Bundesrichter, Dr. Dubs, of Zürich, is about to be erected on the summit of the Uetliberg. It will stand in a niche formed by bushes on the south-east point. It is to consist of a marble pyramid, and a bust of the jurist in high relief will be placed in a hollow upon the surface turned toward Zürich.

SEBASTIAN BUFF, one of the few painters of Appenzell, died at Herisau a few days ago in his fifty-second year. He studied at Munich and Paris, and obtained some name in Switzerland as a portrait painter. Many of the pictures of the Landammanns of the two Appenzells in the Rathhaus at Trogen and the Rathhaus at Herisau are from his hand. He lived chiefly at St. Gall, but was well known in all the principal Swiss towns. His *genre* pictures are much sought after.

IN a recent note on the site of Monte Leone (ACADEMY, May 15, p. 374, col. ii, line 64) for "unhealthiness" read "healthiness." The writer meant to imply that the Etruscan towns were formerly more healthy than at present.

THE Salon review in *L'Art* is written this year by M. Ph. Burty, who somehow seems to find more to blame than to praise in the present exhibition. His articles contain much valuable and outspoken criticism that can scarcely fail to have weight. The illustrations consist mostly of artists' sketches for their pictures, excellently reproduced.

A VIGOROUS etching by W. Unger is given in *L'Art* this week. It is from a wild-boar hunt by Snyders in the Vienna Gallery, a picture of marvellous power in its representation of excited animal nature. It is rendered by Unger with great understanding and skill.

THE French Government are making praiseworthy efforts for the encouragement of the development of art in the provinces. It is now proposed that a grant of 50,000 frs. should be voted in aid of exhibitions of painting and sculpture to be organised by the departments after the manner of the Paris Salon. Popular concerts, organised in various provincial towns, are likewise to receive a certain grant. Moreover, it is thought desirable that a Review of fine-art societies should be started analogous to that already organised by the learned societies, so that provincial societies may be able to find a means for publishing their work. These three propositions have been admitted in principle by the sub-commission of the Budget, though they have been somewhat modified by the towns and the departments being called on to contribute their share toward the subvention, so that it may not weigh so heavily on the State.

MESSRS. DEBENHAM, TEWSON, FARMER, AND BRIDGEWATER are to sell by auction at 37 Porchester Terrace, on June 9 and following days, a collection of oil paintings and water-colours, including examples by Turner, Birket Foster, Angelica Kaufmann, J. J. Tissot, R. P. Bonington, &c.

THE Agent-General for New South Wales has received a telegram stating that the art collection sent out by the Sydney Commission will be taken over and exhibited at Melbourne by the International Exhibition Commission. The pictures, &c., displayed at the Sydney Exhibition and not sold there will be returned to the owners or accounted for by the Melbourne Commissioners after the close of their exhibition.

THE STAGE.

THE ill-advised performance of *Les Enfants d'Edouard* which followed that of *Adrienne Lecouvreur* at the Gaiety has again, in its turn, been followed by the representation of *Frou Frou*, and M. Pierre Berton has joined Mdlle. Sarah Bernhardt, and has strengthened the company thereby. *Frou Frou*, unlike much of the French comedy of the last few years, is not very good as a piece of literature, and it contains distasteful situations—such as that when the eloping couple yawn for the Boulevard amid the illegitimate romance of the Grand Canal; but it is, in competent hands, always an exceedingly effective stage play, and it would suit Miss Ellen Terry as well as it suits Mdlle. Bernhardt, and perhaps almost as well as it suited Mdlle. Desclée. The piece, by-the-by, was not written, as is generally supposed, for Mdlle. Desclée, though hers was the most incontestable triumph ever thus far achieved in it. It was written for Mdlle. Delaporte, then the leading actress of the Gymnase—the original Jeannine of *Les Idées de Madame Aubray*. This refined and ingenious actress going to St. Petersburg—where French acting is far better remunerated by money and diamonds and social success than it has ever been in Paris, as Mdlle. Sarah Bernhardt means shortly to discover—the part and the piece lay begging. At length it was produced, and the extraordinary success of Mdlle. Desclée at the Gymnase was not equalled, though it was perhaps well-nigh equalled, by Mdlle. Delaporte, into whose hands the part fell only at St. Petersburg. M. Berton, the actor who has joined Mdlle. Bernhardt, is of very different stage rank from most of her associates. The son of a famous actor—Berton père, of the old Vaudeville—and of an esteemed writer who was the daughter of the great comedian of the Français, M. Sanson, M. Berton *fil* comes before the English public as one imbued with the best theatrical and artistic traditions, and his success at the new Vaudeville, like his earlier success at the Gymnase, has been exceedingly marked.

Two deaths are to be recorded this week of persons long intimately connected with the theatre. Mr. Planché, whose literary and antiquarian works have been mentioned elsewhere, was in the eighty-fifth year of his age, and as a writer he belonged not even to the last generation, but to the last generation but one. To say that he was the author of "several" successful burlesques and extravaganzas would be to do him but scant justice. He was in truth the originator of what is best in extravaganzas; he was the brightest contributor to the light-literature stage during at least the best part of the career of Mdlle. Vestris. Wit, fancy, and finish of work characterised all his stage productions, and the tribute recently paid to him of collecting his writings into an elegant "testimonial" edition of five volumes was one which his writings and the character of their author completely deserved, even though it may not be given to these brilliant *pièces de circonstance* to live again behind the footlights or to be much perused in the closet.

THE second death is that of Mr. George Honey, an unctuous and popular comedian, some of whose work was intellectual in conception, and he could scarcely, therefore, be called wholly a "low" comedian. Mr. Honey made his first appearance so long ago as 1840, it seems, and not, as has generally been believed, at a considerably later date. His two most conspicuous successes were, perhaps, those achieved in comparatively recent years, as *Eccles*, the drunken father and demagogue, who inveighs virtuously against the "gauds" of his grandchild in *Caste*—Robertson did not believe in the lower classes—and, again, as Our Mr. Jenkins, the good-natured and bene-

ficent bagman of Mr. Albery's *Two Roses*, a part in which Mr. David James succeeded him, and of which he also was able to make much. Grimace is perhaps the most indispensable property of the low comedian. Extreme personal ugliness is likewise a boon. We do not remember that Mr. Honey enjoyed the latter advantage conspicuously, but his features were at least mobile, and lent themselves easily to voluntary contortion. But he understood his part, played it with diligence and good effect invariably, and did not always pass from comedy into farce. We shall be sure to have occasion to miss this lively and painstaking actor.

MR. ALBERY'S new piece is another disappointment. *Jacks and Jills*, of which much was expected, does not rival the *Two Roses*—a formidable comparison, we admit—and was not on the first night of the performance found pleasing to the varied audience that had gathered to receive it. The interpretation was, as far as the men are concerned, very competent. As regards the women, the theatre is less fortunate, for though in Miss Larkin and Miss Cicely Richards the Vaudeville possesses actresses of distinct talent and attractiveness, it is not so fortunate in all the ladies apt to be prominently concerned in its productions.

As You Like It, having been one of the most pronounced successes of the season, is transferred by Miss Litton from the boards of the Imperial to those of Drury Lane to make room for the Dutch players in Miss Litton's habitual abode. We are sorry for the necessity of the transfer, having no sort of confidence in the effect of gentle and poetical acting in the vast spaces which, one is obliged to remember, were yet successfully filled by a Garrick and a Kean. But it would have been a pity if arrangements previously made at the Imperial had resulted in prematurely closing the representations of *As You Like It*, and Miss Litton at Drury Lane is better than no Miss Litton.

MUSIC.

RICHTER CONCERTS, "LOHENGRIN," ETC.

ANTON DVORAK'S third Slavonic Rhapsody was performed for the first time in England at the fourth Richter concert (May 27). The title "rhapsody" might lead us indeed to expect something wild and rambling, but the music is remarkably clear and coherent. A beautiful and characteristic theme is first announced by the harp and presented throughout the composition in ever-changing form, and the process of metamorphosis is so pleasing and natural that it is not a disguise, but rather a variation and development, of the theme. There is another subject introduced *fortissimo* by the full orchestra, which plays an important part, and the two themes are also combined in a happy and ingenious manner. The orchestration is particularly graceful, delicate, and original. The work was played to perfection, and much applauded. Anton Dvorak has already achieved success as a composer at the Crystal Palace and the Monday Popular Concerts. Mr. C. Hallé has quite recently introduced his pianoforte trio in G minor, and the musical public will gladly welcome any fresh work from the pen of a composer so gifted and original. The concert commenced with Wagner's sombre but fine *Parsifal* overture. Mr. C. Hallé gave an unusually fine rendering of Beethoven's concerto in G major. The performance of Beethoven's symphony in B flat was a perfect triumph for Herr Richter. Schubert's glorious symphony in C major concluded the programme. Everyone expected a great treat, and certainly no one was disappointed; though several times in the soft passages the magic wand of the conductor failed to exert its wonted influence. This was the first time Herr Richter conducted a symphony with the score before

him, and, as concerned the orchestra, this may have proved a hindrance rather than a help.

VOLKMAN'S concerto in A minor (op. 33) for violoncello and orchestra was the novelty at the fifth concert (May 31). A glance at the analytical remarks by C. A. B. shows us that the work is not strikingly original, for we learn (and but too truly) that the principal subject "closely resembles" one of Schubert's, and that another motive "has already done excellent service" in Schumann's E flat symphony. The work is well written for the solo instrument, and contains many difficult but showy and brilliant passages. It was admirably played by Herr Sigmund Bürger, who possesses an excellent tone and fine technique. The programme included Haydn's symphony in D and Beethoven's symphony in C minor, both splendidly performed. Signor W. Candidus sang the "Preislied" from *Die Meistersinger*, and Miss L. Bailey gave three songs by Beethoven, with piano, violin, and violoncello accompaniment (Herrn Franzen, Franke, and Bürger). With the exception of the Dvorak rhapsody, the novelties have not been of great interest, and at the remaining five concerts only two absolutely new works are promised. Since the first announcement the programmes have been considerably altered, and we think they may be still further altered and rendered more interesting and attractive.

Herr Richter conducted a performance of *Lohengrin* at Her Majesty's Theatre on Saturday evening (May 29), and the orchestral music was rendered with wonderful power and finish. Signor Candidus was not successful as Lohengrin; his rendering of the part was dull and cold. It is not necessary to speak of the other artists, who assumed old parts. The stage arrangements were by no means perfect.

The programme of Mr. Ganz's third orchestral concert, on Saturday last, contained two novelties. The first was a fantasia, *Romeo and Juliet*, for orchestra, by J. S. Svendsen. It is a well-written work, but has no special character either as programme or as absolute music. Mdlle. Montigny Rémaury brought forward an introduction and rondo for pianoforte and orchestra (op. 49) by Benjamin Godard. This bright and pleasing composition was written expressly for these concerts; it was charmingly played by Mdlle. Rémaury; and we shall probably soon hear more of the young French composer who won the City of Paris prize in 1878 with a "Symphonie dramatique," and who has written several important works successfully performed at the Châtelet Concerts and at the Concerts Populaires. The programme included Mozart's *Jupiter* symphony, Weber's *Concertstück*, and a rhapsody for orchestra by Raff (only played once before in England, at the Crystal Palace in 1874). Mdlle. Cummings was the vocalist.

J. S. SHEDLOCK.

MR. JOHN CURWEN.

WE regret to announce the death of Mr. J. Curwen, the celebrated founder of the Tonic Sol-fa system. He was born in 1816, and died on Wednesday, May 26, after a brief illness. He was educated for the ministry, and elected pastor at Plaistow, in Essex, in 1844. In 1853 he established the Tonic Sol-fa Association, and in 1862 the Tonic Sol-fa College. He must also be mentioned as having started the *Tonic Sol-fa Reporter*, and as having published many works connected with his system. He wrote the excellent "Tonic Sol-fa Primer" in the Novello series. He was a great teacher, and fought with industry and success against prejudice and ignorance. He accomplished a great work, and his name will be held in grateful remembrance by very many thousands of his countrymen.

YATES & ALEXANDER, PRINTERS OF

PEPPER'S QUININE and IRON TONIC
Purifies and Enriches the Blood.
Strengthens the Nerves and vascular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly recruits the general bodily health, and induces a proper
healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A
solid combination for Derangement of the Liver, particularly whe-
arising from slight congestion. By gently stimulating the action of the
liver, and slightly moving the bowels, the heavy, drowsy feeling, with
sensations of fulness, headache, pain beneath the shoulders, and other
indications of dyspepsia are removed. Taraxacum and Podophyllin
much safer than calomel or blue pill, and quite as effective for removal,
bilio.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose
name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by a
Chemists.

PEPPER'S QUININE and IRON TONIC.
Bottle containing 32 measured doses, 4s. 6d.
Sold by all Chemists.
In the preparation of this Tonic the greatest care is exercised. It is a
faithful compound of Quinine, the active principle of Yellow Cinchona, or
Feverish Bark, blended with a refined, trustworthy preparation of Iron.
produced in a form which the experience of many years has proved the
best. It offers a ready means of gaining the strength and other benefits
afforded by Quinine and Iron, without any fear of ill consequences.—The
name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTS

Morwell-street, W.C. Established 1862

MR. G. H. JONES, Surgeon-Dentist, 57, Great Russell Street, London,

Will be glad to forward his Pamphlet on PAINLESS DENTISTRY, free, enclosed by Post, which
explains the most unique system of the adjustment of ARTIFICIAL TEETH without pain, to which the
following Testimonials refer. Consultation free 10 to 5.

"MY DEAR SIR,
"Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial
Teeth, which renders my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's
Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services,
you are at liberty to use my name."
"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.
PROFESSOR GARDENER, late of the Royal Polytechnic Institution, in a certificate to Mr. G. H. Jones, Surgeon Dentist of
57, Great Russell Street, London, says:—"I have examined and tested your Painless System of adjusting Artificial Teeth;
it is quite perfect, and is the most successful application of scientific laws for securing a natural wear and comfort yet introduced."

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

Food, Water, and Air, Edited by Dr. HASSELL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR LIEBIG COMPANY'S EXTRACT OF MEAT.

CAUTION.—In consequence
of numerous inferior and low-
priced substitutes being in
the market (sometimes accom-
panied by misleading chemical
analyses) purchasers must in-
sist on being supplied with
the Company's Extract, which,
for fine flavour and perfect
clearness, is pronounced by all
competent authorities to be
the best.

** In use in most households throughout the Kingdom.
N.B.—Genuine ONLY with fac-simile of Baron Liebig's
Signature in Blue Ink across Label.
Ask for the COMPANY'S Extract, and see that no other is substituted
for it.

"THREE CASTLES."

WILLS' "THREE CASTLES" TOBACCO.

"There's no sweeter Tobacco comes from Virginia, and no better Brand
than the 'THREE CASTLES.'—Vide 'The Virginians.' Only in
Packets and Cigarettes, protected by the Name and Trade Mark.

W. D. & H. O. WILLS.

NELSON'S GELATINE.—For JELLIES.
An Economical Recipe in each packet.

NELSON'S CITRIC ACID.—For
JELLIES, with their Gelatine and Essence of Lemon.

NELSON'S ESSENCE of LEMON.—For
JELLIES, with their Gelatine and Citric Acid.

LIBRARY OF VOCAL AND INSTRUMENTAL MUSIC;

A Reference Library;

READING, WRITING, AND NEWS ROOMS,

Supplied with the Daily and Weekly Journals;

LADIES' DRAWING ROOM,

DINING AND LUNCHEON ROOMS, SMOKING ROOM,

And all the appliances and comforts of a FIRST-CLASS CLUB.

Subscription to the Circulating Library	- - - - -	{ ONE GUINEA per Annum.
Subscription for Club Membership	- - - - -	{ TWO GUINEAS per Annum.
Subscription for Club Membership, together with Six Volumes delivered free from the Circulating Library	- - - - -	{ THREE GUINEAS per Annum.

COUNTRY SUBSCRIBERS.—An Annual Subscription of Five Guineas entitles a Country Subscriber to Fifteen Volumes and the use of the Club for himself and one other member of the Family.

SUBSCRIPTIONS CAN COMMENCE FROM ANY DATE.

The Directors beg to inform the Subscribers to the Circulating Library that a constant endeavour will be made to provide a punctual and ample supply of all new works of interest and authority; and in order to carry out this intention efficiently, they must rely in some measure upon the co-operation and assistance of the Subscribers themselves. It is notorious that a large number of new books of a wholly trivial character are now put into circulation, for which there is no real demand, and the publication of such works is in many instances only rendered possible by the system upon which Circulating Libraries have hitherto been conducted. The expenditure upon works of this class will be strictly curtailed, and the funds will be applied as far as possible to the purchase and circulation of books of a higher order and a really popular character, such as the majority of readers are anxious to obtain upon the date of their publication. The Directors trust by this means to render the Circulating Library, in the truest sense of the word, select, while they will seek at the same time to avoid the kind of interested and arbitrary censorship that has been found alike vexatious to authors and the public.

All the Books in the Library are available for Subscribers, without distinction as to amounts of Subscription.

Full details of Subscriptions, both for Town and Country Members, on application to Mr. C. ALLEN
the GROSVENOR GALLERY LIBRARY (Limited), 135, New Bond Street, W.

Berks.—An Ancient Foundation. Buildings spacious and modern, in a healthy district. Thorough education for the Sons of Gentlemen. Fees moderate. Boys prepared for Commerce, the Professions, and the Universities.—Apply to HEAD MASTER

BRITISH ASSOCIATION for the
ADVANCEMENT OF SCIENCE, 23, Abchurch-lane, London, W.
The NEXT ANNUAL GENERAL MEETING will be held at SWANSEA, commencing on WEDNESDAY, AUGUST 25.
President-Elect—
ANDREW CROMBIE RAMSAY, Esq., LL.D., F.R.S., V.P.G.S.,
Director-General of the Geological Survey of the United Kingdom and of the Museum of Practical Geology.

NOTICE TO CONTRIBUTORS OF MEMOIRS.—Authors are reminded that, under an arrangement dating from 1871, the acceptance of Memoirs, and the days on which they are to be read, are now, as far as possible, determined by the General Committee for the several Sections before the beginning of the Meeting. It has therefore become necessary, in order to give an opportunity to the Committees of doing justice to the several Communications, that each Author should prepare an Abstract of his Memoir, of a length suitable for insertion in the published Transactions of the Association, and the Council request that he will send it, together with the original Memoir, by book-post, on or before July 24, addressed thus:—"General Secretaries, British Association, 23, Abchurch-lane, London, W. For Section". Authors who comply with this request, and whose Papers are accepted, will be furnished before the Meeting with printed copies of their Reports or Abstracts. If it should be inconvenient to the Author that his Paper should be read on any particular day, he is requested to send information thereof to the SECRETARIES in a separate note.

Reports on the Progress of Science, and of Researches entrusted to individuals or Committees, must be forwarded to the ASSISTANT-SECRETARY, for presentation to the Organising Committee, accompanied by a statement whether the Author will be present at the Annual Meeting.

No Report, Paper, or Abstract can be inserted in the Report of the Association unless it is in the Assistant-Secretary's hands before the conclusion of the Meeting.

J. E. H. GORDON, Assistant-Secretary.

UNIVERSITY COLLEGE, LONDON.
The PROFESSORSHIP OF ITALIAN is VACANT.
Applications for the Appointment will be received on or before JUNE 30TH, at the Office of the College, where further information may be obtained.
TALFOURD ELY, M.A., Secretary.

Mr. BRYCE-WRIGHT begs to call the attention of Collectors of Gems and Precious Stones to his large Series, including Diamonds, Sapphires, Rubies, Topazes, Opals, Jargons, Tourmalines, Cats-eyes, Peridots, Garnets, Hyacinths, Moonstones, Alexandrites, Chrysolites, Turquoise, Aquamarines, &c., &c.
BRYCE-WRIGHT, Mineralogist and Expert in Gems and Precious Stones, 90, Great Russell-street, Bloomsbury, London, W.C.

SOCIETY OF BRITISH ARTISTS.

FIFTY-SEVENTH ANNUAL EXHIBITION NOW OPEN, at the SUFFOLK STREET GALLERIES, FILL MALL EAST, from 9 to 6 Daily. Admission, 1s. THOS. ROBERTS, Secretary.

GROSVENOR GALLERY

SUMMER EXHIBITION
NOW OPEN
From 9 till 7.
Admission, One Shilling. Season Tickets, Five Shillings.

JOHN FISKE, Esq., will repeat the

THREE LECTURES recently delivered at the Royal Institution, on the "EVOLUTION OF AMERICAN POLITICAL IDEAS," at SOUTH PLACE INSTITUTE, FINSBURY, on the Evenings of JUNE 12, 21, and 25, at 8 o'clock. Fee for the Course, 5s. 6d.; Single Lecture, 1s. Nominations and Tickets may be obtained at the Institute on the Evenings of the Lectures, or upon application, by post, to the Hon. Secretary, CONRAD TRILES, 70, Graham-road, Hackney, E.

THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Muller's Library).
The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are:—

- 1st. The absolutely facsimile nature of the result.
- 2nd. Its Cheapness for Small Editions of 250, 500, &c.
- 3rd. The Prints being direct on the Paper, there is an absence of all coloring and that disagreeable effect inherent to all Mounted Prints.

* For Terms and Specimens apply to the Manager.

NOW OPEN. EXHIBITION OF THE PAINTINGS by F. W. LAWSON, illustrating "CHILDREN OF THE GREAT CITY," "DAWN." This important painting by F. W. LAWSON is on view by the courtesy of the MARQUESS BURNETT COURT.

Part V. THE WINTER'S TALE. Price 3s.

Completing Vol. I.

"With praiseworthy but surprising expedition Mr. Paton has successfully reached another stage in what is evidently a labour of love as well as of love. His theory grows swiftly, if also with wonderful minuteness, into a substance that must claim a large space in any future textual criticism of Shakspeare."—*Daily Review*.

"Mr. Allan Paton continues to display an enormous amount of industry in dealing with his theory of the important part played by empha-sis-capitals in Shakspeare's Plays."—*Daily Chronicle*.

"Apart from his theory, Mr. Paton has shown great and commendable industry in collating the four folios, and his work is an admirably printed and very handsome edition of the poet."—*Manchester News*.

"The editor of the 'Hamnet Shakspeare' pursues his ingenious theory of the emphasis-capitals, to which we have already called attention. This play, like those which have preceded it, is a model of clear printing and careful editing."—*Bookeller*.

"The whole subject is one of great interest, and Mr. Paton pursues it with extraordinary industry. His examinations and corrections of the text are as interesting as ever, while the beauty of the typography and the care in editing are as pronounced in this number as in its predecessors. Mr. Paton has taken on himself a prodigious labour, which he seems to have both the industry and the ability to complete. The Hamnet Edition promises to be a work of immense value."—*Ugawye Herald*.

London: LONGMANS & Co.

Just published, super royal 8vo, with 232 Illustrations and working drawings, and 386 pp. of text, price £2 12s. 6d., cloth.

A MANUAL of the ALKALI TRADE,

Including the Manufacture of Sulphuric Acid, Sulphate of Soda, and Bleaching Powder. By JOHN LOMAS, Alkali Manufacturer, Newcastle-upon-Tyne, and London.

This Work provides (1) a complete Handbook for intending Alkali and Sulphuric Acid Manufacturers, and for those already in the field who desire to improve their plant, or to become practically acquainted with the latest processes and developments of the trade; (2) a handy volume which Manufacturers can put into the hands of their Managers and Foremen as a useful guide in their daily rounds of duty.

MUDIE'S SELECT LIBRARY.

MUDIE'S SELECT LIBRARY was established in 1842, in order to meet the growing demand of the age for a Higher Class of Books than could then be readily obtained on moderate terms from the ordinary Circulating Libraries.

From its commencement the original purpose of the Library has been kept steadily in view. The best Books of every shade of opinion, on all subjects of general interest, have been taken in large numbers—Hundreds, and in some instances Thousands, of Copies of the Leading Works of every Season having been placed in circulation.

Great care has always been taken in the selection of Books to study the wishes of Subscribers, and to make the Library, not only "Select," but comprehensive.

The whole Collection now exceeds One Million Volumes.

Additional Copies of all the Best New Works in History, Biography, Religion, Philosophy, Travel and Adventure, and the Higher Class of Fiction continue to be added as the demand increases; and arrangements are made with the leading Publishers for an ample supply of all Forthcoming Books of general interest as they appear.

FIRST-CLASS SUBSCRIPTION, ONE GUINEA PER ANNUM.

This Subscription allows of a Constant Succession of the Newest Books.

LONDON BOOK SOCIETY SUBSCRIPTION, TWO GUINEAS PER ANNUM.

For the Free Delivery of Books in every part of London.

COUNTRY SUBSCRIPTION, TWO GUINEAS PER ANNUM AND UPWARDS.

According to the Number of Volumes required.

Book Societies and Literary Institutions supplied on Liberal Terms.

THE NAMES OF NEW SUBSCRIBERS ARE ENTERED DAILY.

Revised Lists of Works recently added, and Catalogues of Surplus Copies withdrawn for Sale at greatly reduced prices, are now ready, and will be forwarded postage free on application.

§ 25—All the Books in Circulation and on Sale at MUDIE'S SELECT LIBRARY may also be obtained, with the least possible delay, by all Subscribers to

MUDIE'S LIBRARY, BARTON ARCADE, MANCHESTER,

And (by order) from all Booksellers in connexion with the Library.

MUDIE'S SELECT LIBRARY (LIMITED),

NEW OXFORD STREET, LONDON,

CITY OFFICE: 2, KING STREET, CHEAPSIDE.

GROSVENOR GALLERY LIBRARY

NEW BOND STREET,

NOW OPEN.

AVAILABLE FOR BOTH LADIES AND GENTLEMEN.

COMPRISES AN

English and Foreign Circulating Library,

Provided with all the Best and Newest Literature ; a

LIBRARY OF VOCAL AND INSTRUMENTAL MUSIC ;

A Reference Library ;

READING, WRITING, AND NEWS ROOMS,

Supplied with the Daily and Weekly Journals ;

LADIES' DRAWING ROOM,

DINING AND LUNCHEON ROOMS, SMOKING ROOM,

And all the appliances and comforts of a FIRST-CLASS CLUB.

Subscription to the Circulating Library	- - - - -	{	ONE GUINEA per Annum.
Subscription for Club Membership	- - - - -	{	TWO GUINEAS per Annum.
Subscription for Club Membership, together with Six Volumes delivered free from the Circulating Library	- - - - -	{	THREE GUINEAS per Annum.

COUNTRY SUBSCRIBERS.—An Annual Subscription of Five Guineas entitles a Country Subscriber to Fifteen Volumes and the use of the Club for himself and one other member of the Family.

SUBSCRIPTIONS CAN COMMENCE FROM ANY DATE.

The Directors beg to inform the Subscribers to the Circulating Library that a constant endeavour will be made to provide a punctual and ample supply of all new works of interest and authority ; and in order to carry out this intention efficiently, they must rely in some measure upon the co-operation and assistance of the Subscribers themselves. It is notorious that a large number of new books of a wholly trivial character are now put into circulation, for which there is no real demand, and the publication of such works is in many instances only rendered possible by the system upon which Circulating Libraries have hitherto been conducted. The expenditure upon works of this class will be strictly curtailed, and the funds will be applied as far as possible to the purchase and circulation of books of a higher order and a really popular character, such as the majority of readers are anxious to obtain upon the date of their publication. The Directors trust by this means to render the Circulating Library, in the truest sense of the word, select, while they will seek at the same time to avoid the kind of interested and arbitrary censorship that has been found alike vexatious to authors and the public.

All the Books in the Library are available for Subscribers, without distinction as to amounts of Subscription.

Full details of Subscriptions, both for Town and Country Members, on application to Mr. C. ALLEN, the GROSVENOR GALLERY LIBRARY (Limited), 135, New Bond Street, W.

MISS BROUGHTON'S NEW NOVEL.

NOW READY, AT ALL LIBRARIES.

SECOND THOUGHTS.

BY

RHODA BROUGHTON,

Author of "Red as a Rose is She,"
"Good-bye, Sweetheart," &c.

2 vols., crown 8vo.

THREE NEW NOVELS

AT ALL LIBRARIES.

NEW NOVEL BY THE AUTHOR OF "ROBIN ADAIR."

ALAN DERING. By the Hon.

Mrs. FETHERSTONHAUGH, Author of "Kilcorran,"
"Robin Adair," &c. 2 vols., crown 8vo.

BY THE AUTHOR OF "LADY GRIZEL."

IN HER MAJESTY'S KEEPING.

By the Hon. LEWIS WINGFIELD, Author of "My Lords
of Strogue," "Lady Grizel," &c. 3 vols., crown 8vo.

"The author has given us a novel that surpasses any of
his former efforts, and that is saying a great deal."

Graphic.

BY THE AUTHOR OF "UNCLE SILAS."

THE PURCELL PAPERS. By the

late J. SHERIDAN LE FANU, Author of "The House
by the Churchyard," "Uncle Silas," &c. 3 vols.,
crown 8vo.

"They display great literary vigour and dramatic power
of a high class."—*Graphic.*

"Mr. Le Fanu possessed a peculiar—an almost unique—
faculty for combining the weird and the romantic. His
fancy had no limit in its ranges amongst themes and images
of terror, yet he knew how to invest them with a romantic
charm which ended in exerting over his readers an irresist-
ible fascination."—*Daily News.*

UNIFORM EDITION.

EDINBURGH: ADAM & CHARLES BLACK.

SAMPSON LOW, MARSTON, & CO.'S NEW PUBLICATIONS.

NEW NOVEL BY EDMOND ABOUT.

THE STORY of an HONEST MAN.

3 vols., price 31s. 6d.

A NEW SERIES OF

ILLUSTRATED TEXT-BOOKS OF ART EDUCATION.

Edited by EDWARD J. POYNTER, R.A.

Each Volume contains numerous Illustrations, and is strongly bound for
the use of Students. Price 5s.

N.B.—These volumes were first announced last year as a 3s. 6d. Series.
Mr. POYNTER, the Editor, has, however, found it desirable to enlarge the
scope of each volume, and to add at least 100 pages of Text and many
additional Illustrations. The price, therefore, has necessarily been increased
to 5s.

The Volumes now ready are

PAINTING.

ITALIAN and CLASSIC. By Percy R.

HEAD, Lincoln College, Oxford; and EDWARD J. POYNTER, R.A.
Upwards of Eighty Full-page and other Illustrations. Bound in extra
cloth limp, 5s.

"* This Volume contains an Introductory Preface on Art Education by
Mr. POYNTER, who also contributes a chapter on Egyptian Art, and
succinct notices of the various Italian schools, &c."

ARCHITECTURE.

GOTHIC and RENAISSANCE. By T.

ROGER SMITH, F.R.I.B.A. 120 Illustrations. 5s.

"* This Volume treats of the history of Architecture from the rise of the
Gothic style to the general depression which overtook the Renaissance
style at the close of the Eighteenth Century."

MARY ANERLEY: a Yorkshire Story.

By R. D. BLACKMORE, Author of "Lorna Doone," "Alice Lorraine,"
"Craddock Nowell," &c. 3 vols., crown 8vo, 31s. 6d.

[Now ready at every Library.]

"One of his happiest productions. It is full of the fine touches of observa-
tion and description, whether of people or of places, that have belonged to
most of his novels, and there is a strong dramatic interest to be found in it."

"Mr. Blackmore's wealth of material has made his story rich and full to
overflowing."—*Daily News.*

A PHYSICAL TREATISE ON ELEC-

TRICITY and MAGNETISM. By J. E. H. GORDON, B.A. Camb.,
Assistant Secretary of the British Association. 2 vols., demy 8vo, cloth

SATURDAY, JUNE 12, 1880.

No. 423, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Six Life Studies of Famous Women. By M. Betham-Edwards. (Griffith & Farran.)

FOR such a work as this professes to be there is plenty of scope, but, unfortunately, it is by no means free from faults that could have been easily avoided. In the first place the people whose careers have been selected for comment are not in all cases persons of sufficient interest or importance to call for notice nowadays, when every avenue is crowded by really remarkable women. Of the half-dozen sketches gathered into the volume two at least relate to people in whom the reading world will take little or no interest, and of one only can the subject be styled "famous." The initial position is very appropriately assigned to "Fernan Caballero;" but Miss Edwards has contrived to compress so many mistakes into the few pages she allots to the renowned Spanish novelist, and has so signally failed to furnish any fresh information about her, that readers possessing any acquaintance with the subject may be deterred from further perusal of the volume, or, at the best, prejudiced against it. And this is the more to be regretted because "Fernan Caballero" is not only deservedly famous, but is, also, a woman about whom much of interest has been said, and about whom much that is interesting remains to be said. "Fortunately, in each case," says the authoress of these six sketches, "material is forthcoming for a biography on a small scale; and if the portrait is a miniature, at least we may congratulate ourselves that the likeness has been preserved." Material for a sketch of "Fernan Caballero" is readily obtainable, and she has been so frequently written about of late that an average amount of research, one would think, might have enabled the authoress of this "Study" to avoid the errors into which she has fallen. While in some instances these mistakes may be attributed to a want of knowledge of the subject, in others they are only explicable upon the ground of undue haste. The article upon "Fernan Caballero," indeed, exhibits every proof of hurried execution, if not of hasty conception. More leisurely perusal of her proof sheets would certainly have prevented Miss Edwards—to cite one instance out of many—assigning only seventy-seven years of existence to "Fernan Caballero," after she had not only furnished dates of birth and death antagonistic to such a statement, but had even, in a previous page, given the age correctly. Dates may be deemed of minor importance in studies of character, but it is far better to ignore them altogether than to bewilder the reader by misstating them. But more important errors

abound in the sketch—errors that completely stultify its utility. "Fernan Caballero's" birthplace is not the matter of doubt Miss Edwards supposes; she was born at Morges, in Switzerland. Her mother was of Irish parentage, her father of German; and that she was so familiar with her paternal tongue need not have excited surprise seeing that it was in Germany she was educated and not in Spain. No one acquainted with the position of literature in the Peninsula, of a few years ago at least, would have expressed astonishment at the fact that the works of Spain's greatest modern writer had to be published at the expense of royalty; nor have imagined their publication certain to prove a lucrative matter.

With much of what Miss Edwards says of "Fernan Caballero's" literary capacity we can cordially agree, without, however, going to the extent of deeming her "the most natural writer in the world," but must blame her critic for not affording the reader any specimen by which to form a judgment of the heroine's capabilities. There is so much material to be gleaned from the works of "Fernan Caballero" to interest and charm that the sketch devoted to her might easily, in the experienced hands of Miss Edwards, have been made the most attractive in the whole series, but, as it is, it is the most disappointing.

The account of Alexandrine Tinné possesses much greater novelty for the public. The romantic career of the self-willed young Dutchwoman who sacrificed relatives, fortune, and finally life, in her craze for African travel, forms a fascinating story well worth the telling. Beyond occasional paragraphs in the papers little has been told in England of the adventurous lady traveller, although German journals have kept their readers informed of her doings. This sketch of Miss Edwards has, therefore, a good *raison d'être*. The account of Madame Pape-Carpantier, the French educational reformer, is also the history of a woman whose career should not be unknown in this country; and although her adventures possess neither the romance nor the strangeness of the preceding heroine's, they are much worthier of attention from a social point of view. The appliances for aiding youthful study, and calling forth the latent intelligence of the young, which were so advantageously used by Madame Pape-Carpantier, may not always have been original with her, but she was often, when not the inventor, the first practical manipulator of them. Her philanthropy was genuine, and her methods of organising its suggestions excellent.

Mrs. John Herschel's fascinating *Memoir of Caroline Herschel* has supplied the material for another of the sketches in this series; and, although Miss Edwards's abridgment furnishes no fresh information for those who have read the work whence it is derived, for those who have not had that pleasure it will prove extremely interesting—in fact, the most attractive in the whole volume. The life of Caroline Herschel affords another of those numerous but seldom publicly known examples of devoted women who sacrifice everything for another's happiness. Inspired by that noblest, purest, most unselfish of all

affections, a sister's love, she willingly and unrepiningly subordinated all her hopes and aspirations to the promotion of her brother William's welfare, working for him and caring for him with all the combined ardour of mother, wife, and devotee. Although the story of this true-hearted woman and industrious astronomer has been so recently told *in extenso*, Miss Edwards is certainly justified in placing her interesting abridgment of it before the public, in a form so readily accessible. This bright little memoir preserves a noteworthy example, not, perhaps, of what woman should be, but of what woman can be, and has been.

It is somewhat difficult to divine what induced Miss Edwards to attempt a resuscitation of the irretrievably forgotten Elizabeth Carter, the erstwhile noted translator of Epictetus; the acquaintance of "the great Dr. Johnson," and the detester of "the principle displayed in Mary Woolstonecraft's [*sic*] *Rights of Women*." In the eminently respectable and commonplace existence of this fortunate old lady there is really nothing calling for comment. Nor is there apparently anything remarkable to record of the last lady of the series save that it was her good fortune to have known Charles and Mary Lamb. The authoress doubtless retains an affectionate remembrance of her aunt, but beyond an excuse, if such were needed, for the introduction of some interesting and characteristic letters by Coleridge and the Lambs, Miss Matilda Betham's history scarcely appears to call for record outside the limits of her own personal circle.

The idea of this work, although necessarily not original, was a good one; but the plan has not been worked out with the care and finish that might have been expected from the literary experience and past work of Miss Betham-Edwards. However, the volume will probably circulate among a class of readers not disposed to be too critical, and by it may be received with ungrudging favour. As a present for girls it may be safely commended, for, while it contains much to amuse, it is perfectly free from any drawback of a non-literary character. JOHN H. INGRAM.

The Pushto Manual. By Major H. G. Raverty. (W. H. Allen & Co.)

MAJOR RAVERTY is at once the oldest and the best authority on the language and literature of the Afghans. Many years ago, when these subjects were almost tabooed for English officers and other officials, and were ignominiously left to Russians and Germans, he published his great dictionary of the Pushtu language, his Grammar of it, and his Translations from the Poetry of the Afghans, which latter work, we do not hesitate to say, was one of the most valuable contributions ever afforded by any individual translator to an understanding of the character and literature of any people. These works have stood the test of time and criticism; and if any man is entitled to publish a handy manual of the Afghan language, that man is Major Raverty. Circumstances are very different now from those in which he first published his monumental works. In no respect have those works been superseded or substantially

improved upon. Some time before there was any word of our present movement upon Afghanistan, some knowledge of the Afghan language was required from Deputy-Commissioners and other officers in the trans-Indus district, or at least they were encouraged to acquire such knowledge. Now, of course, the demand for this knowledge is greater than ever; and especially for the Afghan language proper, as distinguished from the dialect of the Indian border, which is so much corrupted by Panjabi and Peshwari provincialisms. The representation of Asiatic sounds and words in English is in such a state of confusion at present that Major Raverty might have indicated more clearly the system which he follows in doing so, and the more so as (rightly or wrongly) the day is past when a practical smattering of a language will allow any clever officer to pass an examination in it. There is an old story in the Bombay Presidency of a young Irish subaltern who managed, about fifty years ago, to get through his examination in Hindústhani on the strength of his answer to the searching question as to what he would say to his servant if he wished his horse placed under the shade of a tree; the answer was that he would go under the tree himself and say, "*Ghora idhur lao*"—"Bring the horse here"—and this proved so satisfactory that he was immediately passed in the language. Not a little of our Indian empire was built up on a linguistic basis of that kind. But something more is required now, and, at least, an intelligible pronunciation to begin with.

The grammar of this Manual occupies about a third of it, and is valuably compressed. The next section, occupying about a fifth of the volume, is of more doubtful value, being Aesop's Fables turned into Púshṭú, with the English in parallel columns. This comes under the heading of "Exercises and Dialogues," but it is not very good for either. Aesop's Fables turned into Púshṭú might be useful in a manual intended to instruct Afghans in the English language, because the fables would hit the Afghan humour, and so give an interest to their study of English. For Englishmen wishing to learn a little Púshṭú this section is not well selected, and seems to have been put in because Major Raverty had previously published a translation of James's *Aesop* into the Afghan language. The third section—that of Idiomatic Sentences—is more likely to be useful, but might have been better. As it is, it affords some amusing sentences which it is to be hoped the English student will not try to put into use. If we get rid of the platitudes of the old Guide Books to Conversation in French and German—such as "How do you find yourself to-day?" "I hope you find yourself a little better"—we have decidedly more dangerous, though quite as useless, idiomatic sentences.

"I saw Farid while he was beaten." "I beat Khalil. I gave him such a beating that he will remember it." "Do not act like an ass." "That is a very pretty girl." "I understand that thou art in love with Násir's daughter." "This boy is very bashful." "Those maidens are very modest."

If the British subaltern in Afghanistan is to engage himself largely in such idiomatical

exercises, I should strongly recommend him to pay, at the same time, serious attention to those more vulnerable points of the human body into which the Afghan has been trained to suddenly insert his knife. It only remains to add that about a fifth of the volume is composed of an English and Púshṭú vocabulary, of which an obvious fault is that too many Púshṭú equivalents are given for the English word without sufficient indication of their shades of meaning. On the whole, this is a useful Manual; but, like many other works got up to meet a special demand, it might easily have been improved.

ANDREW WILSON.

The Religions of China: Confucianism and Taoism described and compared with Christianity. By James Legge. (Hodder & Stoughton.)

THERE are few people better entitled to speak on the subject of the religions of China, more especially of Confucianism, than Dr. Legge. His knowledge of the early classical literature of China has been gained, as he tells us, by an intimate study extending over nearly half-a-century. Not only is he thoroughly acquainted with the texts, but he has drunk deeply of the wisdom which the native commentators have brought to bear in the elucidation of them. On the other hand his long service as a clergyman in China must have given him endless opportunities, by means of observation and discussion, of comparing the faiths which he sought to overturn with that which he offered in their places. From both sides, therefore, he is able to approach the question of a comparison between the religions of China and of Christianity at a manifest advantage.

There is naturally a tendency among missionaries to be so much impressed with the pre-eminent superiority of the particular creed which they profess over all others that they have no room even for consideration for the beliefs of the people among whom they are sent. Not being Christians, they are outcasts; and just as to a man standing on a mountain peak the lower ridges of the hill are undistinguishable from the plain below, so too often the missionary fails to recognise the varying degrees of moral culture observable among the peoples of the non-Christian world. From this failing Dr. Legge is exempt; indeed, as was made plain at the recent missionary conference at Shanghai, there are some who are inclined to accuse him of a leaning towards the opposite direction. But, however this may be, all students of the Chinese classics must agree with him that, from the earliest dawn of their history, the Chinese were as a nation worshippers of one supreme God. In one of the first chapters of the *Shuking* we are told that the sovereign Shun (2255-2207 B.C.) sacrificed to Shang Ti, or God; and throughout the whole work we have constant references to the same form of worship, coupled, it is true, with rites of a less purely religious nature, but still preserved as a memorial of the monotheistic faith which they had received from their ancestors. In later times, and under the sway of degenerate sovereigns, this worship was neglected, and in the time of

Confucius it was little more than a tradition. As a matter of ceremony, it received the support of the Sage, but he never rose to the level of the religious faith felt and expressed by the heroic characters of the *Shuking*. After his day, many centuries of religious darkness settled on the land, and probably at no period has there been so marked a revival of the primitive religious worship as during the last two dynasties. A consideration of these matters forms the subject of the first two lectures in the work before us, where they will be found carefully worked out in all their bearings on the religious, political, and social conditions of the people.

In the third lecture Dr. Legge treats of the more thorny subject of Taoism, but, as his object is to compare it as a religion with Christianity, he is led rather to regard its later developments, produced by its contact with Buddhism—its polytheistic worship, its doctrine of purgatory and hell, and its superstitions and sacrifices—than the original teachings of its founder, Lao-tse. To such beliefs the *Tao tek king*, the one work of Lao-tse, lends no countenance. It contains nothing which can strictly speaking be described as religious, but merely embodies a politico-ethical system, in which the "old philosopher" gives "vent to a heart-searching protest against the literalism, hypocrisy, formality, and scholasticism of his time."

The comparison, as instituted by Dr. Legge in his concluding lecture, between Christianity and Confucianism and Taoism, brings out into strong relief the incomparable superiority of Christianity as a religious system. The difficulty is rather to find any points of agreement between them, and an examination of the few beams of light which might have illumined the religions of China shows them to be but murky rays which, distorted by vain imaginations, mislead instead of guide, and darken where they should shed brightness.

ROBERT K. DOUGLAS.

The City of Dreadful Night. By James Thomson. (Reeves & Turner.)

READERS of the ACADEMY will remember the interest which was excited by the publication some six or seven years ago in a little-read periodical of "*The City of Dreadful Night*," extracts from which appeared with comment in our columns. The republication of the complete poem with others of earlier and later composition is very welcome for more reasons than one. The poems comprised in the volume range over twenty years, and do not quite fill ten times that number of pages. Now nothing can be more certain than that it is for the soul's health of English poetry that the present deplorable fashion of rapid composition should come to an end. In other days, when a poet had produced something that was liked, he did not think it necessary thenceforward to be delivered yearly of a new volume. Considering especially that the poets who make money out of poetry nowadays may be counted on one hand, this haste of production is nearly as inexplicable as it is lamentable. Evidently Mr. Thomson has escaped the contagion, and, in the case of a poet whose work was so favourably received as was "*The City of Dreadful Night*," this is

something to compliment him upon. The results, as well as the mere fact of this reticence, justify the compliment. The present volume of verse is an unusually interesting one, testifying, indeed, to a certain lack of range in the author's thought, and to a concentration of his ideas upon certain riddles which the wise indifference of the wise is apt to leave unattempted, but singularly melodious in expression, dignified and full in meaning, and bearing witness to reading as well as to meditation. "The City of Dreadful Night" is, as may be readily apprehended, the abode of those who, seeing no hereafter, fret themselves at the prospect or, rather, the lack of it. The author justifies himself beforehand against the warning *μη κίλει Καμάριναν*. He writes, he says,

"Because a cold rage seizes one at times
To show the bitter, old, and wrinkled truth
Stripped naked of all vesture that beguiles,
False dreams, false hopes, false masks and
modes of youth,
Because it gives some sense of power and passion
In helpless impotence to try to fashion
Our woes in living words, howe'er uncouth."

Mr. Thomson's words, however, are by no means uncouth, as this stanza and, still more, the following will testify:—

"For life is but a dream, whose shapes return,
Some frequently, some seldom, some by night,
And some by day, some night and day: we learn
The while all change and many vanish quite,
In their recurrence with recurrent changes
A certain seeming order. Where this ranges
We count things real. Such is memory's
might."

This is good poetry and good philosophy. We cannot follow the lugubrious visions of the seer, the most powerful of which perhaps is that of a great cathedral, whither everyone presses and enters with a pass-verse, each describing some occupation of civilised life, and all ending with the refrain "I wake from day dreams to this real night." The congregation are addressed by a preacher who announces blank atheism to them, and requests them to be comforted thereby, which as a rule they fail to be. The poem ends with two descriptively allegorical passages of extreme beauty, but unfortunately too long to quote. The one is a vision of a sphinx and an angel, who face each other, undergoing metamorphoses as the spectator gazes, so that the angel, at first armed and winged, loses his wings, then his sword, and then falls prostrate at the feet of the unchanging sphinx. The other is a description of the *Melencolia* not unworthy to be inscribed as a legend under the print itself.

The smaller poems give not merely bulk but variety to the book, and relieve Mr. Thomson from the charge of seeing all things in black, though they display for the most part a certain inconsolableness. "Sunday at Hampstead" and "Sunday up the River" have cheerful passages in praise of love and whisky. "Life's Hebe" is an allegorical poem of considerable beauty, telling how the golden cup of life is received, rejected, or misused by those to whom it is offered; and "The Naked Goddess" has something of the same moral. Some smaller and directly philosophical and religious poems please us less, and indeed it must be confessed that the determination to preach occasionally possesses Mr. Thomson with undue strength. His

"Lord of the Castle of Indolence" has the drawback of being conceived and written in a key and a language utterly different from those of Thomson's masterpiece; and the two Browningsque poems, "A Polish Insurgent" and "L'Ancien Régime," are not very successful. But it is exceedingly rare to find a volume in which so large a number of the pieces contained have a distinct and individual poetic attractiveness. Mr. Thomson suffers, as we have said, from a want of range in his verse, and also from a certain lack of spontaneity, in which he by no means stands alone nowadays. Sometimes, but rarely, his language is not what it might be. For instance, "tenebriously" is a form which we cannot possibly consent to. But, as a rule, no objections on the ground of scholarship can be brought against him. The echo of the pulpit drone is occasionally obvious—a drone which is terribly frequent in modern poetry, and which is apt to sound in the critic's ears very much as that of Io's gadfly did in hers. However, we have endeavoured to preserve our own equanimity, and indeed the pleasure of reading Mr. Thomson has decidedly the better of the pain. That he has what somebody once called a fine gloomy imagination is not contestable, and, fortunately, he is not always given up to it. His book, if it were ever possible to induce Englishmen to buy poetry except as they buy wine—not because of its goodness, but because of the name of the seller—ought to be widely read. The two passages which we have already noted as the gems of the book are too long to be quotable, and we must content ourselves with a sonnet in addition to the stanzas cited. Though not of Mr. Thomson's best brand, it is sufficiently characteristic of his thought and style.

"A RECUSANT."

"The church stands there beyond the orchard blooms.

How yearningly I gaze upon its spire,
Lifted mysterious through the twilight glooms,
Dissolving in the sunset's golden fire,
Or dim as slender incense, morn by morn,
Ascending to the blue and open sky.
For ever, when my heart seems most forlorn,
It murmurs to me with a weary sigh,
'How sweet to enter in, to kneel and pray
With all the others that we love so well,
All disbelief and doubt might pass away;
All peace float to us on its Sabbath bell.'
Conscience replies, 'There is but one good rest
Whose head is pillowed upon truth's pure
breast.'

The volume closes with some translations from Heine, modestly called "Attempts," and really as fair endeavours at the impossible as we have seen. On the whole, the interest and the attraction of the volume are of the most considerable, though we cannot help wishing that Mr. Thomson had read Shakspeare more and Leopardi less. Byronism was bad enough, but Leopardism would be something to shudder at.

GEORGE SAINTSBURY.

Indian Fairy Tales. Collected by Maive Stokes. (Ellis & White.)

IN modern times a science has grown out of collections of stories made in many lands, chiefly by grown-up people. "Grown-ups," as they are styled by a young lady who may herself grow up if she lives long enough, are

apt to forget that they ever were young. But some who are old may yet remember how they thought long ago. Old boys and girls and childish creatures will find in this collection something to remind them of days when the world seemed full of wonders—so full that nothing was too wonderful to be real or too strange to be true. A bright, fair child who was bilingual, and her dark attendants, lived in India, as such human creatures do everywhere, in worlds of their own. They had their working life of prose, and laid it aside to live a life of fancy. They had a bodily and a mental existence as all have who live and think.

"Grown-ups" have their ways of thought; children and nurses have theirs; and they differ materially. Statesmen and members of Parliament, merchants and shopkeepers, mathematicians and muddle-headed mortals; all who have ceased to be fed and tended, think for themselves:—about daily food and money, and how to get them; of seats, and how to win them; of ladders, and how to climb, so as to get the better of somebody else. Children and nurses, like the rest of human creatures, aspire. They hope to rise, to grow up, to come out, to win prizes at school, prizes in life, and after it. "Promotion" is the desire of mankind, and "cometh neither from the East nor from the West." The simple, be they young or old, have no limit to their ambition. According to the religious creed of Buddhists, any man may be promoted by his own merits, and rise in his next birth to any rank on earth or elsewhere, to return to live a Buddha, and attain the end of felicity in repose. But Buddha was a reformer of an older Hindü religion, which yet survives in India. Nursery tales told by Hindus and other simple untaught natives of India are human, to begin with; and their mainspring is ambition and hope. But their possibilities of promotion are boundless as the native creeds. There is nothing incredible in a monkey prince, who is a man, where whole herds of holy apes surround temples; and one of the gods of these shrines is the chief hero of the best-known popular epic. Hanuman was an avatar of Vishnu, and wore the form of an ape. To a child nothing is improbable or impossible, so a Hindü story is as charming as anything real: even as that "Pons," which delights Pundits, is a fact though an abstraction.

This book of stories, in the estimation of the writer of this notice, is as precious as any case in the British Museum is to any seeker after material facts. It is a genuine bit of mind; as genuine as a sidereolite, and as rare. Nothing is between the reader and the storyteller but the clear glaze of a child's simple words, and the gentle hand of the wise "mother" who wrote them down and sorted specimens which her child gathered.

Let all students of human thought who care for childish stories look at this collection, for it is one of the truest that ever was printed.

To it Mr. Ralston has added something from his grown-up workings in the chemistry of stories. It is something to know how stories are classified and where they have been found; that they, like the atmosphere, are made of divers materials which surround the world. But it is pleasant to breathe the

fresh air of the Simla hills and remember the merry days when we were young, and breathed ignorantly and enjoyed it.

For Pundits the work of Mr. Ralston has the value of the skilled labour of an artist in this sort of work. As it is, this little book is about the best of its kind, according to a collector of popular tales in Eurasia, east and west, and at Benares and elsewhere in India.

J. F. CAMPBELL.

Desert Life: Recollections of an Expedition in the Soudan. By B. Solymos (B. E. Falkenberg), Civil Engineer. (W. H. Allen & Co.)

Desert Life will exercise a mysterious fascination on persons of an imaginative turn. From the very title-page it possesses what St. Athanasius is reported to have regarded as a necessary divine attribute—it is incomprehensible. What is the meaning of such an arrangement of appellations as B. Solymos (B. E. Falkenberg), Civil Engineer? Is it one civil engineer or two engineers? And, if one, is he to be preferably addressed as Solymos or Falkenberg? Our own impression is that the two names are intended to designate two separate manifestations of Kyrios-Herr Solymos-Falkenberg. Just as scholars separate the "Mosaic" revelations into Elohist and Jehovistic traditions, so it is possible to trace the work of the Hellenic Solymos as distinct from the Teutonic Falkenberg in *Desert Life*. Speaking in the person of Solymos, the author quotes "tomelets with spoils from Patrological folios," declaims "sparkling sand-spouts" of metre by "the ostrich-hunting Squire-Bishop of Ptolemais," or whispers Anacreon's views as to "Big Spiders," talks of "argic begging," admires Sir Noel Paton in Prof. Blackie's Greek, and supports every opinion with a reference to the Septuagint or Josephus. It is under the irresistible impulse of his Hellenic impersonation that he writes on camel-back (p. 277):

"Is this amble not glorious! Wing away then faster still: as you like, my winged supreme steed! I cannot resist forcing contortingly something classical on this rush, this blaze. 'Soft-footed Lydian [Libyan], over pebbly Hermes [Desert] hie thee' Ἀνδρᾶ [Ἀλβυ] ποδαβρεῖ, πολυπόδιδα παρ' Ἑρμοῦ [ἑρμού] φεύγειν [Herodot. Clio, 55]."

It is not so much in quotations that we detect the author in his German character—though he does now and then break his paragraphs with a few lines of German verse, and asks, Where is the German Fatherland?—as in the Teutonic qualities of his style. His manner is not, perhaps, what Mr. Matthew Arnold would call "the grand style," but it is certainly grandiose. He has a fine way of collecting epithets and piling them on the back of some devoted noun till it totters with its dignity; he prefers long words to short ones—he is devoted to parentheses, especially with square brackets; and he is indifferent as to the meaning to be gathered from his collocations of words. It is a great charm about this book that it contains such opposing elements as the Greek and the German. If the author has not been able quite to throw himself into the Hellenic spirit, he has at least been lavish in Greek type; while in

German he has been eminently successful in catching the Teutonic afflatus and the German period. It would, however, be unfair to give the author the credit of inventing this plan of a double manifestation, which constitutes the main attraction of his work.

It is difficult to convey any definite impression of the nature of this wonderful book. If it be not irreverent, we would suggest that this is perhaps a first instalment of those immortal "Typical Developments" of which only a few precious fragments have as yet been revealed. In style and in the wide reach of the subjects *Desert Life* bears a close resemblance to those fragments. The author begins with what he calls "Dreaming by the Way—A Fantastic Beginning," and tells us about the "Jove-sprung river, panting under waves five or six feet high," the "fine old gentleman—parental Nile," whose "teeth—the venerable massive columns and other colossi—are damaged," though "that little furrow in his features, the crocodile, forbids mockery"—until, by his own admission, he is "startled" (very unnecessarily) by reaching

"That point where sense and dulness meet,"

and so awakes, quotes a little Tasso, and introduces us to "Book I., chap. I., paragraph i." This first chapter is entitled "Climatic Experiences," and consists chiefly of selections from readings of Fahrenheit's thermometer. The Soudan, where the author's desert experiences are laid, appears to have been very cold at the time he was there, and he says that though snow "does not lay" (*sic*) there, ice and frost are recorded—in the Psalms apparently, as well as in other works. He is much excited about the electric condition of the beards of his fellow-engineers, and we learn on this occasion what he understands by poetry. "A poet," he says,

"might describe this electric phenomenon as combing out the last fire drops after the long past shower of hot dry light. This is that weather during which at night horses and lions shake stars from their manes, and whip off with their astrifex tails the terrified flies, or a scorpion" (p. 15).

Mr. Solymos is full of these imaginations. His poetic fancy is ever carrying him out of sight; but it is no wonder he soars when he tells us

"our soles were on embers, or rather our feet wading in a sand furnace. I sometimes felt as I did one night when lost in the brands of a fresh-burnt reed prairie in Hungary—the sparks I kicked up with hot boots from under the soot at every step making me think of the shining nails in a black velvet coffin" (p. 17).

He is not, however, always in the poet's *fine* frenzy. Sometimes it is the frenzy of despair, as when he is suffering from the Khamseen winds.

"In desponding moments one would call this state a plague, during which each serpentine current of the air is hissing forth darting projectiles in the form of precious burning glasses of transparent sand globules or shrapnels bursting into heat-gorged salt particles. Under a clear sky, with cool northern winds, the pointed particles are mere wild oats of youth, or feel like snow-pelts from children" (p. 19).

A long journal of this description, "Aug. 9.—106°. Pleasant wind," and a notice of

"the restless wallowing of the deozonising samum," bring this account of the climate to its much-desired close.

Book I. comprises six other chapters, on "Sky and Ground," "Wells and Thirst," "Vegetation," "Animation," "Large Animals," and "Small Creatures." Of course a man cannot live for any time in the Soudan without having something to say about common desert objects and sights, but it is scarcely possible to imagine a more useless collection of words than Mr. Solymos has heaped around the various subjects he pretends to discuss. What, for instance, is the use of a section like this:—(the voice of)

"THE FROGS

we heard, after some rain, in a billowy, rocky plain, sprinkled with torch ends of grasses by way of vegetation. They must have had a long spell of tropical torpor—proportionately as much as Edmond About's resuscitated mummy in *L'Homme à l'Oreille cassée*."

That is all we are to learn about frogs. Scorpions are more fully treated, especially the author's personal precautions. "Our usual matitudinal [*sic*] brushing was supplemented by our brushing with the pencil of our visual rays even the interior of our sleeves, pockets, and the like" (p. 118). Another section begins thus:—"The Big Spiders. It is a species of Galeodes." None of these sections or chapters contains anything approaching to scientific notes, and the general reader will not find them amusing unless he has a very keen sense of the ridiculous.

The chapter on "Animation," however, cannot be dismissed without separate and emphatic notice. It contains some of the choicest specimens of style in the volume. Leading us through the "wonders of nature" up to animal life, the author tells us how "the fitful tumble of tremendous deluges periodically tears and drives along the gaping brute rocks, and groups and drills the stupid fragments from meaningless heaps into designed channels" (p. 86); and then bursts into a rapture about animation and "the next sublimation":—

"Inherent aspirations of the soul themselves sublimate through ages, and nations, and families, till they, in their due seasons, emit the phenomena of disinfecting and gladdening odour-puffs (let me call them) distilled from the hearts and brains of prophetic poets, who have grown exalted during a life of crushing sufferings, which would have dwarfed, gnarled, blighted, putrefied, and rendered contagion-spreading, more stubborn because coarser souls" (p. 87).

Mr. Solymos calls this, and much more of the same kind which follows it, "poetic ecstasies." We are tempted to regard it as manifestations of Mr. Ruskin in a weak brain.

Most readers will probably be amply satisfied with the perusal of Book I.; but those of an inquisitive disposition will rejoice to learn that, in our author's words, "the best of the recreative joys are still untasted, and the amusing toys still unpacked;" or, in plain English, there are two Books more, treating (nominally) the one of "Men" the other of "The Caravan." These are designed after the pattern of the first book. There are the same weighty sentences; the same quotations from the Greek Testament—varied, however, with one from "that noble

athlete, the present Archbishop of York," and another from "that learned Sybil, Miss Rogers;" a murder of Browning (on p. 279) to match that of Herodotus quoted before; the same indifference to space and subject.

Mr. Solymos says he has put his whole heart and soul into the work, and the admission almost disarms criticism; but one may express the wish that he had put his heart and soul into a smaller compass, or, at least, within the bounds of grammar. When an author himself confesses that he is "full of characteristic angularities like a cluster of crystals," and that his words "may seem the weariness of inane roars," the reviewer has little to add.

S. L. POOLE.

CURRENT THEOLOGY.

The Cambridge Bible for Schools.—*St. Luke*, edited by Canon Farrar. (Cambridge University Press.) *The Commentary for Schools*, edited by Bishop Ellicott.—*St. Luke*, by E. H. Plumptre, D.D. (Cassell, Petter, Galpin and Co.) The all but simultaneous appearance of these two books, in their respective series, provokes a comparison between them. The second is substantially a reproduction of the *St. Luke* in the larger "Commentary for English Readers" under the same editorship, but completed by the insertion of notes where in that work references to the other Gospels sufficed, and carefully revised throughout. Of the two, Canon Farrar's is the more instructive and practical. The small compass of the book restrains the luxuriant verbiage that is the weakness of his larger works, and confines the Talmudical illustrations, which, as in them, he is fond of giving, to such as are really relevant; and a student of any age might use the volume with the sense that he was really learning from it. The chief fault is the constant desire to over-translate—to call attention to grammatical minutiae which deserve a passing notice in reading the Greek text, but which it is useless to try to impress on "English readers." From this Dr. Plumptre's Commentary is free; in other respects it is not so much less valuable as less adapted for its purpose; e.g., on iv. 20, a student wants to be told what a very subordinate official the "minister" was, rather than to have a gloss supplied on ver. 22.

The Genesis of Evil, and other Sermons. By Samuel Cox. (O. Kegan Paul and Co.) Though described on the title-page as "mainly expository," these sermons have the character and object which is, of course, the proper one for sermons—they aim at inculcating on the hearers the preacher's ideal of the religious life, and at commending to them his views of religious truth. And as they are genuine sermons, not ashamed of being so, and written to be preached rather than to be read, so one must pronounce them very good sermons—suggestive even when not convincing, and marked by a manliness of tone and a candour in recognising the facts of human nature which are the qualities generally desiderated in modern preaching. Still, the author is hardly as much in his element as a preacher as when he seeks to be an "expositor" only. For one thing, he is very much hampered by the assumed necessity of interpreting in harmony with his universalist theology the passages from the New Testament which appear to contradict it; and, for another, he is not free from the weakness of moral judgment to which universalism is supposed by its opponents to lead. No one, indeed, would charge Mr. Cox with underrating the distinction between holiness and sin; but it may fairly be thought that he underrates the distinction between saints and sinners—that he forgets

that there have been men whose religious life was habitually on a higher level than that of the average church- or chapel-goer, and that between them and ourselves at our worst there is a difference which, even if we do not hold it to be really infinite, at any rate is vastly greater than the difference between our own best and worst, so that their experience may supply models, but hardly illustrations, of ours.

Studies in Religion under German Masters. By J. Frederick Smith. (Williams and Norgate.) The title of this thoughtful little book describes its contents very accurately. Having matured his own religious belief "under German masters," he gives us "Studies" of the views of the men who influenced him—Sebastian Franck, the liberal mystic of the age of the Reformation, Lessing, Herder, Goethe, and Heinrich Lang of Zürich. These Studies were made, he tells us, "when the writer was in more than general sympathy with the thoughts and aims of his masters;" but he not only to some extent examines their doctrines while stating them—he adds at the end an "Estimate of Results" "written from a position of greater independence." Both sections of his plan are very well executed; the small compass of the book is a proof both of the thoroughness and familiarity of the author's knowledge of his "masters" and of his skill in summarising their teaching. And whether the "estimate" his readers or theirs may form of the masters' "results"—their contribution to the final form of religious thought—be the same as Mr. Smith's own or not, it will probably be felt by most that he looks in the right direction for what is needed to supplement them, that he is right in recognising that the first test of the true religion is that it shall give a *raison d'être* to devotion. And he very properly argues that, when men, whose religious system did not give one, were yet devout, the conclusion is, not that their devotion was insincere or rested on self-deceit, but that their system answered imperfectly to the conditions of the problem which they rightly recognised.

Hebraisms in the Greek Testament, exhibited and illustrated by Notes and Extracts from the Sacred Text. With Specimens of (1) the Influence of the Septuagint on its Character and Construction; (2) the Deviations in it from Pure Greek Style. By William Henry Guillemard, D.D. (Cambridge: Deighton, Bell and Co.) An edition of the Greek Testament exhibiting—by means of altered type or other distinguishing marks—every Hebraism, every phrase derived from or dependent on the Septuagint, and, lastly, every deviation from classical Greek through the natural degeneracy of the language, would be a contribution to Biblical study of unquestionable value. Such would seem to have been the original design of Dr. Guillemard, and it must be regretted that it has not been carried out in the present work, which, as he himself points out, is of "an incomplete and fragmentary character." The text of St. Matthew as previously edited by him is here reproduced entire; but the remaining books of the New Testament are represented by the merest notes, in which no attempt is made at completeness. In the event of the original design being resumed, we would suggest that every Hebraism, however often it may recur, should be noted; or, at any rate, that some uniform rule should be observed, which is not here the case. And why should not the quotations from the Old Testament, wherever they nearly correspond with, or seem to be derived from, the Septuagint, be printed in the uncial characters which are here adopted to intimate the influence of the Alexandrine version? The book, imperfect as it is, will be very serviceable to the student who will take it in his hands to accompany his reading of the Greek Testament.

The English-Greek Testament; uniting the Precision of the Original Greek with the Text of the Authorised Version. By Thomas Newberry. (Bagster.) What is English-Greek? It is, in this case, the English text of the New Testament interspersed with a variety of ingenious little marks designed to enable the reader, with the aid of a key, to determine at once the grammatical structure of the original and give its proper force to each word or combination of words. In order to test how far it is possible to accomplish this object, and how far it is of use when accomplished, let us take a single example. Matt. ii. 7:—"Then Herod, when he had privily called the wise men, enquired of them diligently what time the star appeared." We do not reproduce the marks, but will faithfully report. "When he had," then, is made, by means of connecting hyphens, to appear as one word, and "called" as a separate word; whereas, in the original, "when he had called" is one word. The reader also understands that "when he had" is an aorist participle, but can think as he pleases about "called." In the original, "enquired diligently" is one word, but, in consequence of the intervention of "of them," is not here so marked. "Wise men," on the other hand, might have been noted as a single word, but is not. "Appeared," the reader perceives, is in the Greek a present participle, but does he really gain anything by having this pointed out to him? We are not making any complaint of the book on the score of accuracy, and, though our example chanced to contain one oversight, we have not lighted on more than one or two others. There is, indeed, abundant evidence of great industry and care, and our only doubt is whether they have been usefully applied. The marginal notes are decidedly the best part of the work; but will the Greek words now and then introduced be of much use to the mere reader of English-Greek?

La Vérité chrétienne et le Doute moderne: Conférences données à Paris pendant l'Exposition universelle, 1878, par la Société de Londres pour la Défense du Christianisme. (Paris: Sandoz, and Fischbacher.) This volume, which is edited with a Preface by M. de Pressensé, represents a series of lectures by eminent French divines delivered during the Paris Exhibition at the suggestion of the Christian Evidence Society. Some of the lecturers, notably M. de Pressensé and Godet, have probably as wide a reputation in this country as in their own. The lectures are characterised by all—and even more than all—the French clearness and lucidity of style. They are throughout temperate in tone and competent in treatment. It is perhaps worthy of note that in France the theory of evolution seems to meet with more uncompromising antagonism than it would here in England. For instance, in the better sort of English apologetics there would hardly be found such a description of it as this:—

"L'évolution, c'est-à-dire un mouvement sans cause et sans objet, hasard dans son principe, fatalité dans ses résultats, et qui oublie d'expliquer seulement ces deux choses: la pensée dans mon esprit et la liberté dans ma conscience."

Yet M. Doumergue does not stand alone in this view of evolution. Even M. de Pressensé himself seems to be scarcely more qualified in his opposition. Probably much of this state of feeling is due to the influence of M. de Quatre-fages.

Church Comprehension and Christian Re-union. By J. R. Pretyman, M.A. (Longmans.) In a short volume, of which the first part appeared in substance last year in the *Contemporary Review*, the author, after recapitulating the salient historical points of the question, makes a forcible appeal from a broad, Christian, common-sense point of view, alike to moderate

Churchmen and to orthodox Dissenters, to terminate the scandal of disunion, to which the lapse of time has rendered both parties almost indifferent. He recapitulates the salient historical points of the question, showing clearly therefrom how nearly, on more than one occasion in early post-Reformation times, the problem reached a solution; and from various circumstances he argues that the present moment is especially favourable to re-union, a conclusion which, as he points out, must be a thing to be desired by the religious Dissenter, and which, while enlarging the bases and increasing the legitimate influence of the national Church, would satisfy almost all the feelings which now give force to the cry for disestablishment.

THE REV. A. NICHOLSON, LL.D., has published a small book of sixty pages on *Apostolical Succession in the Church of Sweden* (Rivingtons) which has some value for those who are not specially interested in the theological question involved in the discussion. For the history of the change of religion in Sweden from Roman Catholicism to Lutheranism, issuing in the remarkable fact that Sweden is now the only Protestant country where intolerance of the old seventeenth-century type is still upheld by penal laws against nonconformity to the State creed, is so curious that students will gladly welcome any information which throws even a side-light on its more difficult problems. And this Dr. Nicholson may fairly claim to have supplied, since his booklet is neither a translation nor an adaptation of any existing Swedish treatise, but the result of original search in the Swedish archives, as well as of diligent study of such printed authorities as bear on the subject, so that he has done for Swedes themselves that which none of their native writers had anticipated him in doing. One point he has left obscure (no doubt as not directly relevant to the single issue with which he is occupied)—namely, how it was that King Gustaf Wasa should have been so eager to procure a bishop from Rome itself only just before his final breach with the Pope. The actual changes are taken for granted, and we are simply given certain particulars about the principal ecclesiastics engaged in carrying those changes out, which establish the fact of strong pressure having been put upon them to wring their reluctant consent to the King's proceedings. Dr. Nicholson would do well to expatiate a little in any future edition on these matters, for Swedish Church history lies so remote from the ordinary ranges of study that most readers require somewhat more help than he gives them.

A Sketch of the Life and Mission of St. Benedict. By a Monk of St. Gregory's Priory, Downside. (Hodges.) This is only a thin pamphlet of fifty-four pages, but it contains a mass of useful matter. We apprehend that, notwithstanding all the controversy of recent days, there are but few people who really comprehend what mediæval monasticism was like. To such, whatever their theological costume may be, this pamphlet will be useful. As the work of an ardent member of the Latin Church it of course contains passages which might be the text for endless jangling; but its purpose is historical, not controversial, and it really does give much condensed information. Saint Benedict was the founder of monasticism in the West, and all the Orders we had in England might have looked upon him, and indeed most of them did look upon him, as their common father. It was not till the Reformation period that in Jesuitism a new and really independent growth arose. The Appendix contains a list of the principal English churches dedicated to Saint Benedict, and a chronological list of the English Benedictine houses. This latter will be found most useful by students of local history.

We would suggest that if ever this little book reaches a new edition its author should add after each name the volume and page of the *Monasticon* in which an account of the house may be found. It would not add more than a single page to the bulk of the pamphlet, and would render it much more useful.

NOTES AND NEWS.

MESSRS. MACMILLAN AND Co. have in the press, and will shortly publish, *A Visit to Wazan, the Sacred City of Morocco*, by Mr. Robert Spence Watson, which should be of special interest at the present time, in relation to the conference that has just been held upon the internal administration of Morocco. Mr. Watson's journey was of peculiar interest, as he was travelling over ground very little known, and his visit to Wazan was the first that has been made by any European proclaiming himself as such.

It is announced by the Spinoza Committee at the Hague that the statue of Spinoza will probably be completed and in its place in the month of August. The unveiling will take place on or about September 1, and foreign subscribers and members of local sub-committees are invited to attend.

PROF. TH. KOLDE, whose very careful work on Staupitz and the Augustinian Order in Germany was favourably noticed in our issue of May 22, is now visiting and systematically examining the archives of Germany, Switzerland, and Belgium in order to lay them under contribution for a new *Life of Martin Luther* which he has just taken in hand. Dr. Kolde will select in the first place Luther's correspondence with his friends as the basis of his book, and hopes thus to throw new light on several points in the great Reformer's life and doctrine. The new biography will appear on the fourhundredth anniversary of Luther's birth, November 10, 1883.

MR. MORFILL will continue his series of Slavonic Essays in the *Westminster Review* which have created such interest abroad by a paper in the next (July) number on the "Peasant Poets of Russia."

MR. DAVID BOGUE has now at press and will shortly publish a new work, viz., *Birds, Fishes, and Cetacea of Belfast Lough*, by Mr. R. Lloyd Patterson, Vice-President of the Belfast Natural History Society and President of the Belfast Chamber of Commerce—son of the late Robert Patterson, F.R.S. The book should form an interesting and valuable addition to this branch of natural history.

THE third part of Prof. Skeat's *English Etymological Dictionary*, which was advertised to appear on July 1, is nearly ready. It ends with the word "Reduplicate." Part iv. will probably not appear for a year, as it will contain various indexes and word-lists, with a list of Aryan roots occurring in English, the preparation of which will occupy a considerable time.

THE German journalist, Mr. Leopold Katscher, will shortly publish a volume of sketches embodying his observations on life in London and English life in general.

THE English Dialect Society have this week issued the second part of the *Dictionary of English Plant Names*, by Mr. James Britten, F.L.S., and Mr. Robert Holland, containing the letters F to O. This completes the society's issues for the year 1879. For the present year the proposed publications are already far advanced, and will probably be issued together early in August next. They comprise a *Glossary of Cornwall, East and West*, by Miss M. A. Courtney and Mr. Thomas Q. Couch,

F.S.A.; a *Glossary of Words in Use in Down and Antrim*, by Mr. W. H. Patterson, M.R.I.A.; a work on the Dialect of Leicestershire, by Dr. Sebastian Evans; and a collection of Old Country and Farming Words, gleaned from various agricultural books, by Mr. James Britten. The last will form the thirtieth volume of the society's issues.

PROF. HENRICI has been appointed to the professorship of Applied Mathematics in University College, London, formerly held by the late Prof. Clifford. The professorship of Italian in the same college is vacant, through the resignation of Prof. Volpe in consequence of ill-health.

PROF. STANLEY JEVONS has in the press a volume of *Studies in Deductive Logic*, being a series of logical problems, exercises, and questions prepared with the view of placing logic more on a par with mathematics as an instrument of intellectual training. It is, in fact, a fuller development of the idea which Prof. Jevons had before him in writing his *Elementary Lessons in Logic*. Messrs. Macmillan and Co. are the publishers.

CERTAIN patriotic Slovaks have undertaken to collect the popular songs current among their fellow-countrymen, and to publish them with their tunes. The first part of the collection will appear in August. As it is expected that many Russians and other Eastern Slavs will be included among the subscribers to the work, which will be completed in about twelve parts, the texts of the songs will be printed in "Slavo-Russ" as well as in Roman characters. The Slovaks used to have a flourishing literary society, the *Matitsa Slovenska*, which could have well afforded to defray the expenses of the undertaking. But the Austrian Government closed its doors a few years ago, and is said to have confiscated its property.

MR. JOHN FENTON, whose papers on Hebrew Sociology in the *Theological Review* a year or two ago were noticed in the ACADEMY, is about to publish the results of his researches in an essay on *Early Hebrew Life*. He will endeavour to determine the sociological age of some of the Pentateuchal laws apart from the question of the literary date of the records. Some light, too, it is hoped, will be thrown upon the origin of the "immoral" stories of the Pentateuch.

DR. J. JUSSERAND, as his last work in England, is collecting material for an essay on fourteenth-century English Pardoners in general, and Chaucer's Pardoner in particular, for the Chaucer Society's *Essays on Chaucer*.

THE Harness Prize Essays on the first quarto of *Hamlet*, by Mr. C. H. Herford and Mr. Widgery, will be published forthwith by Messrs. Smith, Elder and Co. Both writers hold that the first quarto represents Shakspeare's first sketch of his play. Mr. Herford's argument is founded on the differences in the leading characters in the first quarto and their full development in the second, and also on the higher poetic qualities of the completed play.

DR. W. W. HUNTER will take the chair at the annual meeting of the Spelling Reform Association on the 21st inst. The first number of the Journal of the association will appear on July 1, under the title of *The Spelling Reformer*.

MR. C. E. ROBINSON, whose yachting *Cruise of the "Widgeon"* has had some popularity, is about to publish a volume of poems. *The Golden Hind*, the principal piece, is a tale of the Invincible Armada, its scene being the Dorset coast, in the neighbourhood of Swanage. Messrs. Bell will publish the volume.

Spirit Gravities, a very complete series of tables prepared by Dr. Thos. Stevenson, is in the press, and will shortly be published by Mr. Van Voorst.

For the Early-English Text Society Dr. Moritz Trautmann, of Gohlis bei Leipzig, is to edit the short-line version of the verse *Sege of Jerusalem*. He knows of seven MSS. of this poem—three at the Bodleian: Laud 622, which he proposes to print, Digby 230, Douce 78; one in the British Museum, Additional 10036; one in the Bedford Library; and one each belonging to Lord Monson and Lord Cardigan. He will be much obliged for information as to other MSS. Of the long-line alliterative poem on the same subject, to be edited hereafter, six MSS. are known, the last that has turned up being in R. Thornton's MS. Additional 31042 in the British Museum.

SINCE the completion of his version of the whole Bible in the Aneityumese language, it is interesting to learn that the Rev. J. Inglis has prepared a translation of part of *The Pilgrim's Progress*, accompanied by some psalms and hymns for use among the inhabitants of this little island of the New Hebrides Group.

THE *Scotsman* states that Mr. Longfellow has in hand the libretto of an opera the music of which will be composed by Mr. Alfred Cellier, the author of *The Sultan of Mocha*, who went to America with Messrs. Gilbert and Sullivan, and has remained there conducting several of his works.

MR. J. THOMAS SCHARF has just published at Baltimore a popular *History of Maryland from the Earliest Period to the Present Day*.

TRÜBNER'S *Record* remarks, under the heading of "Bibliotheca Scallawagiana," that the first time the word "Scallawag" has ever been seen in connexion with bibliography is in the catalogue of the matchless collection of books, pamphlets, autographs, pictures, &c., relating to Mormonism and the Mormons, the ten years' gatherings of Charles L. Woodward. Messrs. Bangs and Co., of Broadway, New York, advertised the above books to be sold at Vendire on January 19, 1880, so they are no doubt long since dispersed; but that does not do away with the value of the catalogue as a bibliography of Mormon literature, the "Saints" having never compiled one of their own.

PROF. REIN, of Marburg, who was delegated by the Prussian Government to visit Japan, will publish shortly the first portion of his researches on that country, under the title of *Natur und Volk des Mikado-Reiches*.

MRS. GEORGE LILLIE CRAIK, authoress of *John Halifax, Gentleman*, requests us to correct an error into which our reviewer has fallen in attributing to her the authorship of a novel entitled *Two Women*. The book in question is by Miss Georgiana M. Craik, also a well-known writer, and Mrs. Craik's cousin by marriage.

MR. RICHARD GRANT WHITE is publishing a work on *Every-Day English* with Messrs. Houghton, Mifflin and Co.

M. VERTHEIMER, author of a work on the projected marriage of Queen Elizabeth and the Archduke Charles of Austria, is preparing an edition of the correspondence of Vergennes preserved in the National Archives at Paris.

MESSRS. HACHETTE have just begun the publication of the inedited writings of Saint-Simon, under the editorship of M. P. Faugère. The first volume, containing the *Parallèle des trois premiers Rois Bourbons*, has just appeared. The second will follow speedily, and will contain *Les DUCHES et PAIRIES*. The work will be complete in seven volumes.

THE death is announced of Mr. Alexander Dunlop of Clober, aged eighty-eight.

WE learn from the New York *Nation* that Mr. S. W. Pennypacker's "Settlement of Germantown" is now procurable in pamphlet form. It contains "the first public protest ever made

on [the American] continent against the holding of slaves," namely, that sent from the Germantown monthly meeting on February 18, 1638, "to the monthly meeting at Richard Warrels," and bearing, among others, the signature of Francis Daniel Pastorius, in whose handwriting the still-preserved document seems to be.

PROF. CHURCHILL BABINGTON writes:—

"While thanking your reviewer of the *Dictionary of Christian Antiquities* for his favourable notice of my articles, allow me to point out that he has given me credit for more than is my due. 'Money, a most erudite paper,' is for the earlier and larger part wholly by Mr. Madden; and so far as the modern nations are concerned almost entirely by Mr. Keary. The last part, which treats of medals, is my work."

VIRGINITY.

LIKE sunlight on a windy mountain-side :

Or, on a height, snow bathed in summer air :

Or like a drifting cloud, serene and fair :

Or a white leaping fountain's royal pride

That scatters radiant gems on every side—

The nameless charm of beauty that these wear,

Undimmed by sorrow, never worn by care,

Is the sole dower of my girlish bride.

This clings to her, this sits upon her brow,

Perfumes her lip, shoots from her earnest eye,

Clothes her slight form, and gloves her warm white

hand ;

Methinks it makes an angel of her now,

As in the free air fearless doth she stand.

It has no name but pure Virginity.

EDWARD ROSE.

MAGAZINES AND REVIEWS.

THE April number of the *Library Journal* opens with an interesting paper by Mr. W. E. Foster, of the Providence Public Library, on "The Relation of the Libraries to the School System." The paper is addressed to teachers rather than librarians, and urges them to turn the minds of their pupils to books that will illustrate and develop the work of the school-room. Mr. Foster gives instances in which the methods suggested have been tried in his own and other cities. Farther on in the number are given four of Mr. Foster's Reference Lists on Special Topics—viz., Herbert Spencer, Channing, International Copyright, and Mr. Gladstone's Political Integrity. The usual bibliographical notices and general notes conclude the number.

THE latest number of the Hungarian Review, *Buda-pesti Szemle*, contains an article, by Dr. Lánzy, on *Wirkner's Memoirs*. In the course of the article, the writer alludes to our notice (ACADEMY, February 22, 1879, p. 167) of his essay on "The Development of the Ideas of Reform in Hungary," which appeared in the *Literarische Berichte aus Ungarn*. Dr. Lánzy defends himself against the "censure" which he seems to think conveyed in our observation, "The Western reader will probably remark that the name of Deák does not once occur." The writer of the notice in the ACADEMY was very far from meaning to find fault with the omission, but noticed it as striking to the English reader, whose ideas about modern Hungarian history are summed up in one, two, or at most three names—Deák, Kossuth, and Count Stephen Széchenyi. In explaining the omission, which he tells us was also noticed by the *Allgemeine Zeitung*, Dr. Lánzy is led to define Deák's position before 1843, when his great powers had been already recognised, although his actual share in public affairs had been comparatively small. The whole of the review abounds in subtle and instructive observations, its main theme being the necessity the future historian of Hungary will be under of doing justice to the conservative officials who carried on the government of that country during the thirty years which preceded 1848. Dr. Lánzy would have these obscure martyrs rescued from

the dust of their own pedantry, modesty, and loyalty.

IN the *Revista Contemporanea* of May 13 D. Chaulis announces the discovery that the celebrated "Cueva del Monje," in the neighbourhood of La Granja, is really a magnificent dolmen forming part of an almost perfect megalithic circle. V. Barrantes continues his valuable catalogue of Spanish printers up to the year 1600; the present number includes the names from F to P. A sketch by an eye-witness of a pilgrimage to N. S. del Pilar in Zaragoza, in April last, shows that in numbers of devotees the Spanish shrines are now far behind that of N. D. de Lourdes and other places of pilgrimage in France, Switzerland, and Germany. An article by Luis Vidart gives an opportune account of the translations of *Os Lusíadas* of Camoens into Spanish.

SHAKSPERE IN OLD SPELLING.

THE following proposal for an edition of Shakspeare in old spelling has been sent by Mr. F. J. Furnivall to the members of the New Shakspeare Society:—

"In the prospectus of the NEW SHAKSPERE SOCIETY issued in the autumn of 1873, I said, 'It is surely time that the patent absurdity should cease, of printing 16th- and 17th-century plays, for English scholars, in nineteenth-century spelling. Assuredly the Folio spelling must be nearer SHAKSPERE'S than that; and nothing perpetuates the absurdity (I imagine) but publishers' thinking the old spelling would make the book sell less.'"

"Accordingly, all the editions of Shakspeare's single Plays issued by the NEW SHAKSPERE SOCIETY—*Romeo and Juliet*, by Mr. P. A. Daniel; *Henry V.*, by Mr. W. G. Stone; *The Two Noble Kinsmen*, (? partly Shakspeare's), by Mr. Harold Littledale;—have kept the spelling of the Quarto or Folio on which they were respectively based. But the handsome Quartos of the Society, with their full Introductions and Notes, cost so much, that most likely all our present members will be dead before our Society's edition of Shakspeare's Plays in old spelling can be completed. Now I, for one, want such an edition, and have long wanted it, every day of my life,—a handy, working, clear-type edition, with Acts, Scenes, Lines, duly numbered, with Text corrected—though only where such correction is absolutely necessary,—so that I may be able (as far as possible) to read and quote Shakspeare's words in the spelling in which his contemporaries of Elizabeth's and James I.'s days read them. To see Shakspeare's words in Victorian dress is just as offensive to me as it would be to see his bust or picture in Victorian dress. The latter offence, being one against the history of Costume and Art, would meet with such shouts of contempt that it has never yet been tried, and never will be; but the former offence, being one only against the history of the English Language,—which the general reader does not care one brass farthing about—is received with the utmost complacency and approval; and self-satisfied ignorance even pours scorn on the proposal to familiarise Shakspeare-students with the look and spelling of their master's words as they appeared to his contemporaries, and as they are necessary for the due appreciation of his text. For instance, if the *Hamlet* put into students' hands had always been founded on that Second Quarto which first gave the real play to the world, and, by the side of its 'dram of eale' (sign. D, back, p. 19), men had always read the line in which *devil* is twice spelt 'deale'—

'The spirit that I haue feene
May be a deale, and the deale hath power
T' assume a pleasing shape.'

sign. G. (p. 42), II. ii. 627-9—

who can doubt that the parallel *deale* - *devil*, *eale* - *evil*, would have gone far to settle the meaning of *eale*, and have spared us nearly all the emendations of that word? Again, if the text of the *Tempest* had always printed its

'Gon. But the rariety of it is, which is indeed almost beyond credit.

Seb. As many voucht rarieties are,'

as the First Folio, p. 6, col. 2, stands, we should surely have been saved the later assertion that *variety* was 'Another word indiscoverable in any genuine play of Shakespeare.'

"MR. HORACE HOWARD FURNES, the Editor of the noble new Variorum edition of Shakspeare, has said in his last volume—*Lear*, Preface, p. vi.—

'Happily, the day is fast declining when it is thought necessary to modernise Shakespeare's text. *Why should it be modernised?* We do not so treat SPENSER. Is SHAKESPEARE's text less sacred?'

Surely as the Stage has banished Garrick's long wig and George EL. coat and ruffles, in *Hamlet*, from its boards, we Shakspeare-students should turn our absurd Victorian spelling out of Shakspeare's text.

"I do not say that for the benefit of people who cannot spell, or whose brains get muddled by old spelling, or to whom it is a hindrance, there should not be a modernised Shakspeare always on sale; but I do say that for folk who can spell, and who know that the English language has a history, with every phrase of which they wish to be familiar, a handy working edition of Shakspeare in the spelling of his time should be provided. *And I am resolved to provide it*, for the first time since Shakspeare's death.

'Every user of the reprint or facsimile of the First Folio knows what an unworkable, un-working, book it is. Its want of proper division into Acts and Scenes, its having no line-numbers or head-line figures, its often misrepresentation of the text, its turning verse into prose, and prose into verse, its need of continual correction by a modern text, &c., make it a 'book of reference' only, and not a working book for daily, hourly use. Moreover, it does not contain *Pericles*, the *Two Noble Kinsmen*, or the *Poems and Sonnets*. It is not 'Shakspeare's Works,' but only the greater number of his Dramas. It cannot fill the place of the edition that I insist is needed.

"After many unsuccessful tries to find that rare being, a Publisher who is English-scholar enough to care about bringing out an old-spelling *Shakspeare*, I have at length found one in MR. GEORGE BELL, of London and Cambridge, who, as an old member of the Philological Society, naturally takes no mere trade view of the proposed edition. But I promised him money-help in it, either from the New Shakspeare Society or myself.

"He has offered to sell the Society 500 large-paper copies of an old-spelling *Shakspeare's Works* (edited by me, with such help from fellow-workers in the Society as I can get,*) in the style of his Singer's edition, in 8 vols., bound in cloth, for 35s. a copy, to be issued at not more than 2 volumes a year, so as to suit the Society's funds.†

"The Committee of the Society felt that they could not pledge for four years nearly half the subscriptions of Members, without first finding out whether Members approved of the suggested application of their money. The Committee therefore directed me to send a Circular to every Member of the *New Shakspeare Society* asking him whether he would like, or not, to have 8s. 9d. out of his yearly guinea subscription, applied for four years to getting him two bound volumes of an octavo old-spelling *Shakspeare*.

"Here, accordingly, is the Circular—for the words of which I alone am evidently responsible;—and with it is a Post-Card addressed to our Honorary Secretary, on the back of which I ask you to say soon that

1. You wish, or you don't wish, 8s. 9d. of your Subscription to be spent in 2 vols. of the old-spelling *Shakspeare* yearly, till the 8 vols. are out.
2. Whether you will take the book at 4s. 6d. a volume, from Messrs. G. Bell and Sons, if the majority of our Members decide that the *New Shakspeare Society* shall not, as a Society, join in the edition.

* The basis of each Play in Quarto and Folio will be Quarto or Folio as either is, on the whole, better than the other. Of the Plays only in the Folio, that will of course be the basis-text. Every change from the basis-text will be plainly marked, and the reading altered will be given at the foot of the page. The collations will not include mistakes, or, unless exceptionally, emendations.

† The edition will be sold to the public too.

"I need not say that I hope you will answer Yes on both points; but whether or not, the old-spelling edition will be put through, if health of body and mind is left to me.

"FREDK. J. FURNIVALL.

"23 May, 1886.

"P. S. Any friend of yours can have the book on the same terms as yourself."

THE "AGAMEMNON" OF AESCHYLUS AT OXFORD.

ON June 3 the *Agamemnon* of Aeschylus was performed in the original Greek in the hall of Balliol College by members (mostly undergraduate) of Balliol, Trinity, Merton, Corpus, and New College, assisted in the matter of dresses and *mise en scène* by Mr. Burne Jones and Prof. Richmond. The attempt was a courageous one, and successful beyond all that the actors or their friends had dared to anticipate. We hope that it may be the precursor of fresh efforts in the same direction, for nothing can be better calculated to transport the mind from the region of criticism into that of enjoyment, to make us forget our grammar and analysis in the happy air of magnificent poetry.

What will they do with the chorus? was a question asked with misgiving by many before the performance, and no doubt the chorus was the difficulty. Nothing, however, deserves more praise than the way in which this part of the problem was dealt with. A few bars of austere music were composed by Mr. Parratt, the admirable organist of Magdalen College, for the beginning of the opening chorus, and for the short strain sung just before Agamemnon's cry is heard. The rest was partly recited in monotone, ending with a simple cadence, partly spoken as dialogue, distributed among the fifteen members of the chorus. Thus these wonderful choric odes, which enshrine the golden thoughts and music won by the genius of Aeschylus from the rough ore of Greek legend, produced something, we may hope, of their legitimate effect in sustaining, setting off, and varying the simple action of the tragedy. We could have wished for a little more of Mr. Parratt's music, and a little less monotone; but the idea of assigning parts of the chorus as dialogue to different speakers was an excellent one. A difficulty which might have been regarded as almost insoluble was got rid of, much interest was created and sustained, and much creditable acting was brought out by this simple and happy device. It should be added that the action and by-play of some of the members of the chorus was in our opinion as good, perhaps, as anything in the whole performance.

The part of Clytemnestra was taken by Mr. F. R. Benson, of New College, whose conception of the character was in all respects a worthy one. Mr. Benson's delivery was at times, perhaps, somewhat deficient in variety and play of voice; but the dignity, reserve, and refinement of his manner and action showed that his idea was quite adequate to the presentation of a great tragic rôle. A somewhat different remark suggests itself with regard to the presentation of the part of Cassandra, by Mr. G. Lawrence, of Corpus. Mr. Lawrence has a voice of great beauty and flexibility, and we therefore at times looked for more variety in his acting of a part in which variety is an essential element. There was much beauty and pathos in his delivery of many passages, but to some he failed, we thought, to give the due emphasis and relief. This was notably the case in his rendering of the lines beginning—

Ὅρατε τοῦδε τοὺς δόμοις ἐρημένους,
Νέους, δνείρων προσφερέεις μορφώματιν.

With more advantages of voice and delivery than Mr. Benson, Mr. Lawrence hardly struck us as coming so near to realising the awful and beautiful conception of Aeschylus.

Agamemnon (Mr. Bruce, of Balliol) was placed at a disadvantage by reason of his chariot, which was symbolised by a wheel appearing at the right corner of the stage. Thus he had to declaim from an obscure corner, and never arrived at the centre of the situation. We could have wished that the business of the chariot and of Agamemnon's descent upon the stage could have been differently managed. Agamemnon must, of course, descend upon the purple; the Queen will not be satisfied till she has induced him to walk upon purple like an Oriental despot, and thus provoke the jealousy and insult the majesty of the gods. He has already outraged her maternal love; perhaps (she may think) the gods will look with more favour on her deed if Agamemnon commits himself irretrievably in their sight:

εὐθὺς γενέσθω πορφύρεσσαντος πέδου,
ἐς δάμ' ἀελπτον ὅς ἂν ἡγήται δίκη.

If the chariot cannot be abolished, as is perhaps to be wished, the meaning of this very antique and characteristic scene might at least be better brought out. There should be some better way of suggesting the purple-covered ground than the unrolling of a few yards of red cloth.

We will conclude with another expression of the hope that this attempt may not be the last of its kind. The freshness, refinement, and simplicity of the acting, together with the general beauty of the costumes and the grouping, fairly carried away the audience; and not the least pleasant reflection which was left on our minds was this, that poetic feeling, education, and refinement will after all carry an actor a great way towards the effective representation of tragic parts, without the dressing of false conventionalism which a long familiarity with the London stage might make us think essential to the very existence of tragic acting. There the mirror is indeed held up to Nature; but the mirror is too often, alas! shaped like a spoon, and the image distorted accordingly.

CORRESPONDENCE.

DISCOVERY OF SĀYANA'S COMMENTARY ON THE ATHARVA-VEDA.

Oxford: June 5, 1880.

I have just read Prof. Shankar Pandurang Pandit's able and interesting letter on the discovery of a MS. of Sāyana's Commentary on the Atharvaveda-samhitā, and I feel tempted to say again what I said the other day, when I had to announce the discovery of Sanskrit texts in Japan, "It never rains but it pours." After we had been looking for years for a single MS. of Sāyana's Commentary on the so-called Fourth Veda, the same week brings us tidings of the discovery of two MSS. That a Commentary by Sāyana or Mādhava on that Veda had once existed could hardly be doubted, but in reply to repeated enquiries addressed by me to my friends in India I always received the same answer, *Non est inventum*. The reason why I did not give up my belief in the existence of such a Commentary was because, so far back as 1846, in some statistic accounts of Vedic literature sent to Mr. J. Muir, and published by him in the *Journal of the Asiatic Society of Bengal*, not only the name of the author of the Commentary, *scil.* Mādhava, but the number of lines of his Commentary on the Samhitā and on the Brāhmaṇa was mentioned—viz., 80,000 for the former, 20,000 for the latter. That information seemed to me so important that I thought it right to call the attention of Sanskrit scholars to it afresh, particularly of those who were exploring India in search of MSS., and had it published therefore once more in my *Introduction to the Science of Religion*, 1873, p. 109. But though my friends Dr. Bühler, Kielhorn, Burnell, and others have kept a keen look-out for "Sāyana on the Atharva-veda," and though rumours of its existence reached them from time to time, nothing tangible has ever come to light. So late as March 10, 1874, Dr. Burnell, that most indefatigable explorer of the ancient literature of India, wrote to me from Mangalore:—"For the same reason I doubt the report of the Benares Brahmans to Dr. Muir about an Atharva-veda Commentary. I have so often had tales told me quite as precise which I have ascertained afterwards to be untrue that I am very little inclined to believe mere assertions." (See Preface to the sixth volume of my edition of Rig-Veda, p. xvii. note.) Now, at almost the same time that Mr. V. N. Narsimaiyengar discovered the MS. in Nandi Nāgari described by Prof. Shankar Pandurang Pandit, Dr. Bühler writes to me that he had an offer from a learned Brahman at Madras of a copy of Sāyana's long-sought-for Commentary on the Atharva-veda, written in the Grantha alphabet. While the copy in Nandi Nāgari is incomplete, that in Grantha is said to be complete, so that Dr. Bühler hopes we may at last obtain, not only the missing Kuntāpa hymns, but also a more readable text of the nineteenth book of the Atharva-veda than that hitherto accessible. In the same letter (dated Ahmedabad, May 7, 1880) in which Dr. Bühler informs me of the discovery of the Grantha MS. of Sāyana he

sends me several other items of information which may be of interest to Sanskrit scholars, and which I feel at liberty to publish. "Among our new finds," he writes, "you will see a long list of Vedica. There is a Pada-pāṭha of the Mantras of the Maitrāyaṇīyā Samhitā, which is unique. It seems most opportune, as Dr. Schroeder intends publishing the book. I found that in Gujerat, north of the Narmadā, there are still many Maitrāyaṇīyas, among them three so-called Suklas, who recite the whole Samhitā from day to day. The others know little of their sacred writings. The Northern Atharvavedins are really, as the Karana-vyūha-bhāṣya asserts, all Paippalādins. But as they have lost their books they study the Saunaka-Samhitā or the Samhitā of any other Veda." "What I have bought this year of Vedica consists of nearly one hundred numbers. For the other Sāstras there is also some new material, even some historical texts, and such scarce works as the *Pañikasiddhāntikā* of Varāhamihira. The Sāsvata Kōsha, according to Aufrecht the oldest Kōsha, has been found. A little time ago a portion of a very old MS. of Sāyana's Commentary on the Rig-veda-samhitā was brought to me. It is written *initio saec. XV*! I collated some passages with your edition, and found that the MS. belonged to what you designate as the C. family. It is wonderful that that family should be so old. I shall go on collating some more of it."

The same letter contains some very important information about the discovery of new inscriptions and their bearing on the date of Buddha's death in 477 B.C.; but in regard to these matters I do not like to anticipate Dr. Bühler's own statements.

What is a matter of real congratulation in these discoveries is that they have been made on the very spot where they were expected to be made, and that hope deferred has at last been rewarded. We seldom find what we are looking for in exactly the place where we think it ought to be, and therefore the discovery of Sāyana's Commentary on the Atharva-veda, after thirty-four years of search, in the South of India, i.e., in exactly the locality where it ought to have been, like the discovery of Sanskrit texts in Japan, is the best encouragement that could have happened in this field of research.

I cannot close this letter without stating that not only Japan but China, too, is at last surrendering some of the literary treasures which, beginning with the first century of our era, and not with the seventh, were poured into it from India. I have now the Sanskrit text of the *Vāgrā-khchedika* and some other Sūtras published in China, and I hope soon to find leisure to report more fully on those new *trouvailles*.

F. MAX MÜLLER.

"SAINT LOY" IN CHAUCER.

Cambridge: June 7, 1880.

I do not write this so much by way of rejoinder as by way of contributing new observations; the more evidence we have the better.

It is now clear, at any rate, that if Saint Loy is a saint at all, he is St. Eligius. We have got rid both of "St. Louis" and of the "&c." His name was very well known, as is clear from the quotations already given, to which I add some more.

"Sum makis offrande to sanct Eloye,
That he thare hors may weill conuoye."
Lyndesay, *Monarchie*, l. 2,367.

"And Loye the smith doth looke to horse, and
smithes of all degree,
If they with iron meddle here, or if they golde-
smithes bee."

Barnaby Googe; as cited in Brand's *Popular Antiquities*, on "All the Holy Angels."

"When St. Eloy (who is the saint for smiths)

doth hammer his irons, is he not instead of God Vulcan?"—"World of Wonders," in Brand.

I notice this in order to show that the patron saint of goldsmiths and of farriers was the same.

That, in the line about the carter, the metre absolutely requires the reading *Eloy* is not proved. That is the very point under discussion. It has yet to be explained why *all* the MSS. (I mean the Six-text and Harleian) have *Loy* without exception; and the old editions of 1532 and 1561 (to which alone I have access just now) have the same. This is ignored as being an inconvenient fact. If, in the one passage, we are bound to read *Eloy* because all the MSS. have *Loy*, we are equally bound to do so in the other.

We are now introduced to a new canon; we are told that *seint* is monosyllabic when masculine, and dissyllabic when feminine. Both assertions are contradicted by evidence.

1. When feminine, it is commonly dissyllabic, as in "O *seinte* Marie, ben'cite;" B. 1974. But not always, as is clear from the following:—

"Thou mene I, mayde and martir, *seynt* Cecillie;"
G. 23. (And G. 85.)
"When ended was the lyf of *seint* Cecillie;"
G. 554.

The explanation is obvious; human ingenuity cannot hitch *seinte Cecillie* into a line.

2. When masculine, it is commonly monosyllabic. But Mr. Ellis has pointed out at least one remarkable exception beside the two under discussion.

"That *seint* Peter hadde, when that he wente;"
A. 697.

The difficulty here is so great that Tyrwhitt actually invented the impossible form *Thattē* for *That*. I suspect the truth to be (but only offer it as a conjecture) that Chaucer used *seint* or *seinte* just as he pleased, without any regard to gender—just as he used *ost* or *ostē* for *host*, *fortun* or *fortune* for *fortune*, and the like (see my *Introduction to the Prioress's Tale*, p. lxiv.). It is clear we cannot, from the form used, infer the gender. I know of no instance in Chaucer in which the gender of an adjective is marked by difference of form; the assumption that it is so here, is pure guess-work. I note that Gower has *comun*, feminine, but *comunē*, neuter; C. A. i. 216, iii. 152.

On the use of *loy* in the sense of *law*, it is necessary to note these facts.

1. When Chaucer wants to use this word, he calls it *lay*.

"He kepte his *lay* to which that he was sworn;"
F. 18. (And in B. 572.)
"And seyde him, that she wolde reneye hir *lay*;"
B. 375.

As it rhymes with *day*, there is no mistake.

2. Everyone else calls it *lay*; see the references in Stratmann, s. v. *lei*.

3. If *lay* be the Anglo-French form, what is *loy*? Mr. Nicol could tell us. If it be a Parisian form, it is remarkable that Chaucer himself cuts us off from this supposition.

"For French of Paris was to hire unknowe;"
A. 126.

Owing to these difficulties, I am still inclined to think that *loy*, in this passage, means precisely what it, *admittedly*, means in the other about the carter. I cannot see the difficulty when we remark that it was usual to mention the holy name *as well as* that of a saint. Examples:—

"Now for the love of God and of *seint* John;"
ed. Tyrwhitt, l. 4,438.
"Now, dame, quod he, by God and by *seint* John;"
5,746.
"Wel met, quod he, by God and by *seint* Jame;"
7,025.
"As *gounne*-cloth, by God and by *seint* John;"
7,834.

And so on; see l. 6,065, &c.

For a specimen of a woman's oath, we may note:—

"Aha, by God, I have my tale again ;"

6,168.

These are sufficient samples of strong language. I have already explained that the Prioress did not swear like a carter; she omits the sacred name, which just makes all the difference.

Why Chaucer pitched upon the name of *Loy* we need not too curiously enquire. It suffices that he stands on a far lower level than the saints of the New Testament and of the early Church, although (as Sir T. More says) his day came to be more thought of than even Easter-day itself. He is not necessarily mentioned, as suggested, with reference to the stumbling of the Prioress's horse, because Chaucer seems rather to be describing her in her daily life when not on horseback. But, if we must invent a reason, we may say that he was the patron saint of goldsmiths, and her only fault was a trifling love of finery.

"Full fetis was hir cloke, as I was war ;
Of smal corall about hir arm she bar
A paire of bedes gauded al with grene,
And thereon heng a broche of gold ful shene," &c.

Hers was no common brooch, but a triumph of St. Eligius' art, with a crowned A and a conspicuous legend.

Briefly, the new suggestion seems to me quite as unnecessary as it is unproven. See *P. Plowman*, c. vii. 28-50.

WALTER W. SKELAT.

DR. SMITH'S "DICTIONARY OF CHRISTIAN ANTIQUITIES."

47 Fyland Road, Highbury New Park, N. :
June 8, 1880.

In connexion with Dr. Littledale's suggestive criticisms of the second volume of the *Dictionary of Christian Antiquities* in your last number, I should be glad, while very sensible of the leniency of his strictures, to say one word by way of self-exculpation.

As the volume approached completion, the editor—to whose judgment and advice I have, in common, I apprehend, with many of the contributors, been under no slight obligation—found the amount of material assuming so large an aggregate as to render a process, not simply of pruning, but of excision, necessary, even in those articles which had already been sent to press. Under these circumstances, my article on "Pope" was curtailed by nearly one-fourth, and there thus disappeared much of that "ante-Nicene evidence" which Dr. Littledale desiderates. This was not the only one of my contributions which suffered in a similar manner, but the cutting down of the articles generally had become unavoidable.

J. BASS MULLINGER.

GNEISSEN.

VOOGA, Ireland : June 8, 1880.

I should be greatly obliged if any petrologist would send me, to the above address, his experience in reference to the rocks called "Gneissen" by Cotta, or "quartz rock" by Jukes and others—the rocks which, in the *Geology of Ireland*, I have included among the eruptive rocks. Such a classification, I am aware, is scoffed at by many chemists and geologists, yet, in every place where I have observed them in Ireland, they partake more of the nature of eruptive than of metamorphic rocks.

G. H. KINAHAN.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 14, 8 p.m. Victoria Institute: Paper by Lord O'Neill.

8.30 p.m. Geographical: "The Highway from the Indus to Candahar," by Sir Richard Temple, Bart.

TUESDAY, June 15, 7.4 p.m. Statistical: "On the Increase

of Population in England and Wales," by R. Price Williams.

8.30 p.m. Zoological: "On Additions to the Menagerie during the Month of May," by the Secretary; "On the Anatomy of *Leptosoma discolor*," by W. A. Forbes; "On *Antechinomys* and its Allies," by E. R. Alston; "On Some New or Rare Species of Chiroptera in the Collection of the Göttingen Museum," by G. E. Dobson.

WEDNESDAY, June 16, 7 p.m. Meteorological.

7.30 p.m. Education Society: "Comenius," by C. H. Lake.

THURSDAY, June 17, 4.30 p.m. Royal.

7 p.m. Numismatic: Anniversary.

8 p.m. Linnæan: "On a Stridulating Organ in *Lynphia terricola* and in *Steatoda guttata*," by F. M. Campbell; "On Two Cases of Incorporation by Sponges of Spicules foreign to them," by S. O. Ridley; "On Certain Glands in the Maxillæ of Spiders," by F. M. Campbell.

8 p.m. Chemical.

8.30 p.m. Antiquaries.

FRIDAY, June 18, 8 p.m. Philological: "On Some Vocabulary of Polish," by W. R. Morrell.

SCIENCE.

CURRENT SCIENTIFIC LITERATURE.

Lecture Notes on Physics. By Charles Bird, B.A., F.R.A.S. (Simpkin, Marshall and Co.) The author of these notes had apparently two objects in view in printing them—viz., to supply teachers with the basis of a course of lessons and schoolboys with ready-made notes of lectures to be learned by heart. We cannot imagine of what use the book is likely to be to teachers. It presents no new experiments or improvements in old ones, nor has it any merits in the way of arrangement. It is merely a collection of statements of fact and definitions taken from the ordinary text-books. To Mr. Bird's own pupils the book may possibly be of service, as it will save them the trouble of taking notes of his lectures. But to students in general it will be valueless; it may be even pernicious, unless they have a teacher at hand to explain its vague and incomplete statements and correct its blunders, which are more numerous than we could have believed possible in so small a volume. We will enumerate a few of them. On the second page the velocity of sound in air is stated to be given by the formula $v = \sqrt{\frac{2}{3}} \times 1.41$, which is incorrect, and if correct would be incomplete since the temperature is not given. A few pages farther on we are told that a Chladni square plate may divide into any even number of segments! On the top of p. 46 is the following astounding sentence:—"The term *temperature* is employed to express the heat in a substance which is evident to the touch." It would be difficult to cram more false teaching into so short a sentence. The author confounds *temperature* and *heat*, and for an evidence of *temperature* refers to the sensation of touch. The error involved in the statement that calcium was discovered by Bunsen and Kirchhoff (p. 33) is trifling in comparison. It is stated on p. 79 that an electrical condenser "is an instrument consisting of two insulated conductors, one of which is moveable, separated by a non-conductor," and immediately afterwards "that the amount of electricity which a [Leyden] jar can store up depends inversely on the square of the thickness of the glass. This is in accordance with the law of squares." Mr. Bird ought to know that the charge of a Leyden jar does not vary inversely as the square of the thickness of the glass, and that if it did the law of squares would not be responsible. Again, "the striking distance—that is, the interval across which the two electricities of a jar will leap—depends on the amount of the charge, and on the extent of the coatings over which it is spread." Surely the latter determines the former; and has the potential of the jar nothing to do with the striking distance? On the same page with the last quotation we are told that electrometers are instruments for comparing different quantities of electricities. But we need quote no farther. The book is full of errors. Even when the author is not actually

wrong, his language is so loose and inaccurate as often seriously to mislead. We might give many instances in proof of this assertion, but it is unnecessary. The passages we have already quoted will probably be enough to show that Mr. Bird is scarcely suited to write a text-book for the guidance of students in physics. More than one-third of the volume—and the only useful portion of it—consists of questions set in the Science and Art Department Examinations, 1867-79. These have always been readily accessible, but it is well to have them in a collected form.

The Care of the Insane and their Legal Control.

By John Charles Bucknill, M.D., F.R.S. (Macmillan.) This is a collection of articles, revised and enlarged, which appeared anonymously in one of the medical journals during the course of last year. The name of their distinguished author will ensure for them a larger audience and a wider range of influence than they could have attained to in their original form. For the numerous evils inherent in our existing system of provision for the insane of the middle and upper class—evils exposed with great fullness of illustration and detail—Dr. Bucknill regards the substitution of State for private-adventure asylums as the only adequate remedy. A very considerable proportion of insane persons now in confinement might and should, he believes, be set at liberty. Not dangerous either to themselves or to others, the control and guidance they require would be sufficiently provided in many private families. Their mental and moral condition would be improved and their happiness greatly increased by allowing them to mingle with their sane fellow-creatures in domestic life. There would then be left only two classes of lunatics requiring incarceration—those who are destitute and those who are not; and there ought, accordingly, to be only two authorities to administer the lunacy laws, and two laws for them to administer, as they severally regard these two distinct classes of the insane. The destitute would be under the care of the Local Government Board; those who are not destitute, under that of the Lord Chancellor, with his subordinate officers in lunacy. The present Board of Commissioners would disappear. Proprietary asylums would eventually disappear also; and with their abolition all inducement to imprison those lunatics who might safely be permitted to go at large, and to prolong the incarceration of such as are ready for discharge, would cease to exist. The certificate system now in force is shown to bear hardly both on the public and on the medical profession. Dr. Bucknill points out that a medical certificate ought to be nothing more than a statement of evidence furnished by a scientific expert, and that the responsibility of weighing this evidence and of depriving any individual of his or her liberty ought to rest immediately and exclusively upon the civil power. Such are the principal suggestions to the development of which the present volume is devoted. Whether the reader be or be not converted to the author's views, he cannot fail to appreciate the force and clearness with which they are stated and advocated.

SOME PHILOLOGICAL BOOKS.

The Manuel de Philologie classique recently issued by M. Saloman Reinach (Paris: Hachette) is professedly based upon the *Triennium Philologicum* of Dr. W. Freund, but also owes much to the posthumous *Enkyklopaedie und Methodologie der Philologischen Wissenschaften* of the lamented Boeckh. Freund's sketch of history, literary and political, has been, for good reasons, entirely suppressed. On the other hand, epigraphy, numismatics, Greek private law, general bibliography, and especially grammar and comp.

parative mythology have been considerably developed. The author writes of his work with attractive modesty, which prepossesses the critic in its favour. On examination it will be found to contain a vast amount of valuable matter put together in a convenient and handy form. It would not be difficult to point out omissions here and there, and a few judgments to which exception might be taken. Markland is not generally recognised as "le plus grand critique anglais," nor are we accustomed to place Blomfield and Shilleto side by side as editors of Thucydides. It is more satisfactory to national pride than to the critical conscience to find Anthon's *Anabasis* and Maclean's *Horace* the only editions recommended. But although M. Reinach does not venture to assume a knowledge of German on the part of those to whom he acts as guide, he does not fail to take note of the work of the great German scholars in the proper place, and shows a competent acquaintance with periodical literature. The text is written with grace and clearness; the notes abound with proofs of a wide and well-directed reading. In its present form the work is better adapted for French than for English students; but an English adaptation of it would be an immense boon, not only to our younger scholars, but to all who have not the leisure or the opportunity to keep up with the more recent developments of philological science.

MESSRS. SIMMEL AND CO., of Leipzig, advertise what they call an "editio nova" of C. O. Müller's edition of *Festus*. Intending purchasers should be informed that the volume so entitled is not even a reprint of Müller's edition, but consists of the old sheets, exceedingly badly printed, with the date and place of printing covered up with a small slip of paper, and an Appendix of eighteen pages containing some of the conjectures upon *Festus* made since the date of Müller's work in 1839. This Appendix has been compiled by an anonymous scholar "de iunioribus Philologis," and is acknowledged by the publisher to be a very hurried and incomplete production. Such treatment of a standard work contrasts very unfavourably with the careful and thorough way in which another great work of Müller's, *Die Etrusker*, has been re-edited by Dr. Deecke for the publisher into whose hands it had come. It may be added that the new edition of *Festus* is as dear as it is bad, the price being twenty-two marks.

PROF. GÖTZ, of Jena, in issuing the *Curculio* as a new part of his edition of *Plautus* (Leipzig: Teubner), has shown the same patient exactness and soundness of judgment for which his text of the *Epidicus* was so honourably distinguished. Although he has not here the guidance of the famous Ambrosian palimpsest, he has been fortunate enough to exhume from the treasures of the Milan Library a MS. hitherto unknown, which is decidedly superior to the J of the British Museum. Of this, Dr. Götz has given a full collation, which has often proved of service in establishing the text of a play in many passages seriously corrupt. This new instalment may be pronounced, like its predecessor, well worthy of its association with the honoured name of Ritschl.

THE new instalment of Ussing's edition of *Plautus*, vol. iii., part ii. (Hauniae), contains the *Epidicus*, the *Mostellaria*, and the *Menæchmi*. Prof. Ussing explains in his Preface that vol. iii., part i., which has not yet been issued, has been kept back, at the request of Prof. Studemund, that the editor may have for the *Cistellaria* the advantage of his latest collation of the Ambrosian palimpsest. The critical principles on which Ussing works have already been set forth in these columns. They may be shortly but not unfairly stated as the ignoring or abjuring of Ritschl and all his works. To those scholars—and they are the great majority

both at home and abroad—who regard Ritschl as the founder of a truly scientific knowledge of early Latin, Ussing's edition can only appear hopelessly behind the present stage of scholarship. His commentary contains much that is useful, especially in the way of explaining the language of his author; it contains also some portentous blunders; and it is utterly untrustworthy as a guide. Prof. Ussing's own attempts at emendation are sometimes inconceivably bad; it is fairly astounding to find an editor at the end of his eighth published play proposing as an ending for an iambic line *quinquaginta mnas*.

MESSRS. WILLIAMS AND NORGATE have issued two parts of *Linguistic Notes*, fortunately anonymous. They are of interest only as showing how it is possible for a writer to possess sufficient acquaintance with the standard works on philology to quote them on every page without the faintest glimmering of the principles of the science. It is not enough to say that every suggestion made is absurd; it is evident that it would be an utterly hopeless task to attempt to convince their propounder why it is absurd. A writer who finds the stem *al*, fire, in *algeo* (*al-geeo*!), in *φλέγω* (*ép-pleγω*) and *ἥλιος*, "although Curtius assigns to this latter a different origin," and who is equally indifferent to breathings and to accents, is, for very sufficient reasons, beyond the pale of criticism.

NOTES OF TRAVEL.

DR. E. BESSELS has projected an Arctic expedition for the year 1881, the cost of which will be defrayed by a public subscription. A portion of his scientific staff is to pass the winter at the entrance of Jones Sound, while the exploring vessel *Medeia* will push along the western coast of Grinnell Land as far north as possible.

THE forthcoming number of the *Geographische Mittheilungen* contains Dr. Regel's account of a trip from Kulja to Turfan, in Chinese Turkestan, which no European traveller appears to have visited since Father Goes did so in the seventeenth century. The new town consists of two fortresses, inhabited by several thousand Taranchi, Dungan, and Chinese. It lies in the midst of the desert, its fields being irrigated by water conveyed through underground canals from the foot of the Thian-shan. The Russian traveller, notwithstanding the obstacles placed in his way by the authorities, succeeded in paying a flying visit to the ruins of ancient Turfan, about thirty miles farther east, near a famous place of pilgrimage (Mazar). The ruins cover an immense area. They consist of walls, towers, and the remains of solidly constructed dwelling-houses with arched windows. Dr. Regel thinks that the founders of this town must have been far more civilised than were the nomadic Uigurs or Khuikhoi, the probable ancestors of the modern Dungan.

THE information received from the members of the Italian Mission in Shoa is of a satisfactory nature. Antinori has returned from a journey through the country of the Adda Gallas, in the course of which he discovered four lakes. Chiarini and Cecchi, who left Shoa in June 1878 for Kaffa, have at last been heard of, though only indirectly. They are reported to have started from Kaffa in May 1879 for the south, and, unless they meet with an accident, may be expected to turn up at an early date somewhere on the Upper Nile. Martini, who had intended to proceed to Kaffa in quest of them, now proposes to travel by a more easterly route from Shoa to the East Coast. We sincerely hope that these Italian explorers may succeed in their efforts, thus letting a flood of light into a region hitherto only laid down upon our maps from very fragmentary native information.

CHIEF JUSTICE DALY's annual address on the geographical work of the world in 1878 and 1879 fills the whole of the latest number of the *Bulletin* of the American Geographical Society. It is an exhaustive survey, more especially interesting on account of the information furnished on American explorations. We are glad to learn that the surveys in the Western territories have been re-organised and placed in charge of a Topographical Bureau attached to the Department of the Interior. Mr. Clarence King, a very able practical surveyor, has been appointed director of this bureau.

CORA's *Cosmos* contains a translation of Hellmann's Report on the exploration of the Amu Darya, in 1878, originally published in the *Zapiski* of the Caucasian section of the Russian Geographical Society. The article is accompanied by a fine map exhibiting the districts inundated in 1878.

SIGNOR MANZONI paid a third visit to Sana in March last. He has returned to Italy. The results of his three years' exploration in South-western Arabia will be published in Cora's *Cosmos*, together with a set of elaborate maps.

DR. OSCAR LENZ has thus far been fortunate in his explorations of Morocco. He has visited Fez, Mekinez, and Marakesh, the capital, travelling for the most part by routes not previously trodden by European travellers, and is now on the road to Timbuktu. In a letter to the editor of the *Mittheilungen* he speaks hopefully of his venture. A sheriff, whose acquaintance he made at Tanger, had offered to act as his protector, and in his company he has arrived at Tarudant, in Wad Sus. The inhabitants of that town threatened his life, but the intervention of the friendly sheriff turned aside their wrath. On March 27 Dr. Lenz proposed to join a caravan bound for Sidi Hesham, whence he will make his way to Tendaf, a place on the margin of the Desert, where caravans bound for Timbuktu usually gather. It was not far from here that Davidson, bound on the same errand, was murdered in 1837. May the German traveller meet with better fortune!

THE June number of the *Monthly Record of Geography* contains papers on *Miasa* and the Rovuma district of East Africa, by the Rev. Chauncy Maples; on Uganda and the Victoria Nyanza, by the Rev. O. T. Wilson; and on his journey to and from the same lake via the Nile, by Mr. R. W. Felkin. There is also an official report on the recent volcanic eruption at the Grande Soufrière in the Island of Dominica. Among the Geographical Notes there is a useful table of latitudes of places in South Africa, determined by Father A. H. Law, an experienced observer; and a brief account of Mr. E. Whympers' mountain ascents in Ecuador after his exploit on Chimborazo, to which we have before alluded. After a note on the Sanpo River of Thibet, we find an account of northern and eastern Somali-land, based on a report by Col. Graves, an Egyptian staff officer, and containing much information in regard to the Mijjertain Somalis and their little-known country. Nor must we omit to mention a note on the subject of a supposed recent survivor of Leichhardt's expedition across Australia in 1848. The Obituary includes notices of Gen. W. C. Macleod's career (by Col. Yule) and of Prof. Ansted's life. The present number contains a map of Central South Africa to illustrate Dr. Holub's account of his journeys published in previous issues.

THE Surveyor-General at Perth, West Australia, has just published a large map, showing the route from Nickol Bay in that colony to the South Australian overland telegraph line followed by Mr. Alex. Forrest's expedition in 1879. There is also an inset map,

showing the geological features of the country traversed, from data furnished by Mr. F. W. Hill. At the foot of the map a detailed description is given of the country between De Grey River, Beagle Bay, and Katherine Station on the overland telegraph line. The nature of Mr. Forrest's discoveries in regard to the resources and capabilities of the region he passed through is considered so important that suggestions are already being made of the advisability of separating it from West Australia and forming it into a new colony.

By the last mail from Australia we learn that M. Miklukho-Maklai had left Thursday Island for Sydney in the missionary steamer *Ellangowan* early in April, after a journey of twelve months in Melanesia. Capt. Redeich, the naturalist and explorer, also left New Guinea in the *Ellangowan*, but was accidentally drowned the day after sailing from Port Moresby.

MR. R. JACK, the Government geologist, whose journey in Northern Queensland we have previously mentioned, arrived at Somerset, at the north end of Cape York Peninsula, on April 2. He has, however, made no discovery of auriferous country, as was somewhat confidently expected, the whole of the region traversed being covered with desert sandstone. The party were attacked by blacks on March 9, when near Cape Grenville (S. lat. 12°), and Mr. Jack received a spear wound in the neck.

THE German branch of the International African Association are understood to have engaged the services of Herr Flögel for the exploration of the Upper Binué in West Africa and the thorough examination of the systems of that river and the Shary, and it is probable that the expedition will achieve important results. Herr Flögel, it will be remembered, accompanied Mr. Ashcroft, of the Church Missionary Society, in his preliminary survey of the Binué last year in the little steamer *Henry Venn*, and brought home an excellent chart of the river, reductions of which have recently appeared in the *Monthly Record of Geography*, as well as in Petermann's *Mittheilungen*.

IN referring last week to Mr. Andrew Chirnside's pamphlet on what we may term missionary difficulties in Eastern Africa, which has lately attracted much attention in various quarters, the *Athenæum* somewhat enigmatically observes that "Mr. Blantyre, of the Scotch mission, and his party have been forced to act as judges and executioners in the case of a murderer." To make this mysterious remark slightly intelligible it may be well to state, without mentioning the name of the person really concerned, that Blantyre is the name, not of a missionary, but of a mission station in the Nyassa region, and is so called after Livingstone's birthplace. This station was, we believe, founded in his memory by the Established Church of Scotland, as was that at Livingstonia, at the south end of the lake, by the Free Church. Our contemporary hardly appears to be in possession of all the circumstances of the case, to which it is unnecessary to make further allusion here.

THE Council of the Royal Geographical Society have recently had under consideration the construction of terrestrial globes to illustrate the physical geography of the earth's surface; and, in order to encourage the production of educational instruments of so much importance as these are likely to prove, they have requested Sir J. H. Lefroy to superintend the outline engraving of two experimental globes, each of 30° on either side of the meridian of Greenwich, for a globe thirty-two inches in diameter. The drawings are afterwards to be submitted to various scientific authorities for filling up with details,

SCIENCE NOTES.

AT a meeting of the Linnean Society on June 3 (Prof. Allman in the chair) a paper was read by Mr. George Murray "On the Application of the Results of Pringsheim's Recent Researches on Chlorophyll to the Life of the Lichen." Summarising the results of Pringsheim's labours, the author considered the suggestion of Dr. Vines that, by the aid of an artificial chlorophyll screen, the protoplasm of fungi might be excited to the decomposition of carbonic acid, and contended that this proposed experiment is proceeding naturally in lichens. He pointed out that in these organisms we have the fungal tissues in the body of the thallus, and the chlorophyll screen in the gonidia; and that light traversing the chlorophyll-containing gonidia—often occurring as a dense layer—excites in the fungal tissues the decomposition of carbonic acid. In evidence he adduced the plentiful occurrence in the fungal hyphae of starch, or rather lichenin—a substance of the same chemical composition as starch ($C_{12}H_{10}O_{10}$) and formed from it by the action of the free acids of the plant. In conclusion, he submitted that this process tended to explain the nature of the consortium of the fungal and algal elements in the lichen, and thus to support the views of Schwendener. The paper was discussed by Prof. Allman, Mr. Carruthers, Mr. Bennett, Prof. Martin Duncan, Dr. Stewart, &c.

The Origin of Non-calcareous Stratified Rocks.—The valuable address which Dr. H. C. Sorby delivered before the Geological Society of London last February, on the occasion of his retirement from the presidential chair, is printed in the current number of the Society's *Journal*. Although in the nature of an address, it is really an original memoir on the structure and origin of the various stratified rocks other than limestones. At the preceding anniversary meeting Dr. Sorby had discussed similar problems in connexion with limestone rocks, and hence the one address is complementary to the other. With characteristic originality, the author has taken up the microscopic study of sands and clays, which are the raw materials of most stratified deposits, and has been able to deduce important conclusions, not only as to the nature of the parent-rocks from which these detrital materials have been derived, but also as to the mechanical and physical agencies which have been concerned in their formation. The address is one of great solidity and value.

MR. B. DAYDON JACKSON, the recently elected botanical secretary of the Linnean Society, contributes to the *Journal of Botany* (June) some valuable "Remarks on Botanical Bibliography." Mr. Jackson is engaged in preparing a guide to the literature of botany (now almost completed) for the Index Society.

MR. H. N. RIDLEY has been appointed an assistant in the department of botany, British Museum.

MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, June 1.)

WALTER MORRISON, Esq., V.-P., in the Chair.—Lieut.-Col. Warren, R.E., read a paper on "The Site of the Temples of the Jews." The writer stated that, in his opinion, the explorations at Jerusalem tend to confirm the authenticity of the traditional sites of the Holy Sepulchre and Temple of the Jews, and have completely overthrown the theory advanced by Mr. Fergusson that the dome of the rock covers the Holy Sepulchre. He first showed that the Zion to which the ark of the Lord was brought by King David was a totally distinct hill from Moriah on which the Temple of Solomon was built, and pointed out that the confusion existing in the minds of many on the subject arises from the fact that, of the principal poetical works, the psalms referring specially to Zion were com-

posed by David during the period when Zion was the Holy Hill, while the psalms written after the building of the Temple only refer to Zion in parallelisms. He then pointed out that, of the three hills on which Jerusalem is built, there is a general concurrence between the Bible, Josephus, and Macabees that Moriah, the Temple mount, is that to the east, that to the south-west is the upper city of Josephus, and that to the north-west is the Akra, formerly the city of David (Zion), which was cut down by the Macabees to prevent it dominating the Temple. He then spoke of the stupendous walls by which the sides of the Temple mount are begirt, and showed that the west, south, and east walls as far as, and together with, the northern edge of the dome of the rock platform indicate the limits of the Temple Courts of Herod, the large marginal drafted stones of which form the actual walls that existed or were built in his day. These walls were examined in detail, the general results of the excavations described, and it was shown that they accord with the historical account. It was then shown that the threshing floor of Araunah, the Jebusite, was at the top of the hill of Moriah; and historical evidence was brought forward proving that the Temple was on the top of the hill, the position of the Temple was indicated, and it was shown that the local indications in favour of this position over all others are numerous. Plans illustrating the subject were exhibited. In conclusion the writer referred to a recent paper of Col. Wilson, on the masonry of the noble sanctuary, and pointed out the alleged inconsistencies which exist in his conclusions, and that, while asserting that the larger marginal drafted stones are to be referred to one epoch, he makes that epoch extend for 1,000 years, from the time of Nehemiah to Justinian, and suggests that the heaviest and best masonry in the sanctuary was erected by the latter.—A paper on "The Papyrus of Bek-en-Amen, preserved in the Municipal Museum of Bologna," by Prof. Giovanni Kminek-Szedlo, was read by the Secretary.

PHILOLOGICAL SOCIETY.—(Friday, June 4.)

A. J. ELLIS, Esq., F.R.S., President, in the Chair.—The papers read were (1) "On the History of the Word 'Aisle,'" by Dr. J. A. H. Murray. The extracts sent in for the society's Dictionary showed that this word, after having first had its Old-French form in English, was confused with *île*, island, spelt *ile*, and translated *insula*, and that its present spelling *aisle* was not found till Burke's time. (2) "On Some Differences between the Speech of Edinburgh and London," by T. B. Sprague, M.A. They were such as had struck the writer, a Londoner living for the last six years in Edinburgh; for instance, *divider* for a soup-ladle; *flesher* for a butcher, the *butcher* being the slaughterer, or man who killed the beasts; *beast* for any animal, however small, a caterpillar or a bug; *house* for a flat, so that twelve or sixteen "houses" would be under the same roof, in the same "tenement;" *wrongous* (Anglo-Saxon *wrangwisa*, the converse of *rihtwis*, righteous) imprisonment, for what we absurdly call "false imprisonment," the confinement being "real" enough; "sort the children before they are put to bed," tidy them, "fix" them in Yankee phrase; *soft* weather, showery; *presently*, at once—the writer was much surprised on telling a clerk to do a thing presently, to find him go off and do it directly; &c. (3) "On the Makua Language" (a branch of the Bantu group, near Zanzibar, South Africa), by the Rev. Chauncy Maples, a missionary there. Dr. Bleek's sixteen "genders" or classes of nouns with differing prefixes were completed, the grammar and structure of the language were explained, and its affinities stated. "Sister" was "female brother;" the original numerals went up only to five; the relative was wanting; "the man whom I saw" was "the man he saw [or was seen, for there was no passive] my." The people were very kindly, clever, and interesting, and very untruthful, but very honest—an old chlorodyne bottle was the only thing ever lost; but it was soon restored, the thief being handed over to the mission to be hanged if they thought fit. Unlimited power was attributed to the missionaries. Some time back there was an earthquake, and the native chiefs sent up to ask what they had done to offend the missionaries; they would make amends to the utmost of their power if only the missionaries would stop the earthquake they had set going.

ROYAL ASIATIC SOCIETY.—(Monday, June 7.)

SIR H. C. RAWLINSON, K.C.B., President, in the Chair.—Prof. Carl Abel read a paper "On the Origin of Language as traced through the Egyptian Tongue," in which he pointed out that, in the most ancient hieroglyphical period, the Egyptian language was, to a large extent, a language of homonyms and synonyms, in which many roots had a variety of meanings, while many of these meanings could be expressed by a great variety of roots. Dr. Abel then compared this primitive stage of language with the later Coptic, and, finding the synonyms gone or replaced by distinct derivatives, came to the conclusion that language was only gradually developed to an intelligible state. The general nature of this process divests it of much of its surrounding mystery, as numerous words are invented for every conception, or tentatively used by succeeding generations. A continuous choice must then have been made, until a sound most responsive to the national sense was fixed upon, and more or less extensively adopted. Each root had, no doubt, originally a variety of significations. Dr. Abel then proceeded to demonstrate two important facts in this gradual evolution of sense and sound—namely, the intellectual and phonetical inversion of roots. In Egyptian, many roots, he remarked, mean one thing, and its opposite, too; and, where there is no variation in sound, the context alone can decide which signification is required in the particular case. In other words, two opposite notions, each expressed by separate words, are formed into a compound, denoting neither the one nor the other of the two conflicting meanings.

FINE ART.

Lectures on Art. By Henry Weekes, R.A. (Bickers & Son.)

THE Lectures on Art contained in the present volume are prefaced by a brief biography of their writer, and accompanied by photographs from his principal works; the publication is intended as a memorial of one whose life in many respects deserves to be held up as worthy of imitation and emulation, for Mr. Weekes seems to have been actuated from first to last by an honourable, uncalculating, and unswerving devotion to his profession.

He was born in 1807 at Canterbury, where he received, in the King's School, the rudiments of a scholarly education. While still very young he attracted attention by modelling, on an enlarged scale, the St. George and Dragon on a crown-piece; and at the age of fifteen, his future profession was decided on, and he was articled to Behnes—then in great reputation for his portrait busts—for the term of five years. On the period of his apprenticeship expiring, Mr. Weekes found employment with Chantrey, who behaved to him with great generosity, leaving him at his death, which occurred in 1841, a liberal legacy, by the aid of which Weekes was enabled to purchase the studio in which he had worked so long, and to place himself before the world as the successor of his old employer. From this date his position steadily strengthened; in 1851 he became an associate of the Royal Academy, and in 1863 he was elected a full member. In 1869 he succeeded Mr. Westmacott as professor of sculpture, in which capacity he delivered at different intervals the lectures which have been collected in the volume now before us. At the close of his first term of office (five years) Mr. Weekes was re-elected for a second, which, however, he did not live to complete. As early as 1876 he was obliged

to give up work, and in the following year, on the 28th of May, he died.

There was nothing very novel or very striking in Mr. Weekes' work, just as there is nothing very novel or very striking in his lectures; but his work and his lectures alike present us with the picture of a mind both liberal and modest. He fell on days in which such special talent as he possessed could not find, at home, sound or adequate schooling; he was well aware of his own shortcomings, and earnestly desirous of improving as far as he could the education of the students of his own profession. Throughout his lectures he is constantly inculcating the necessity of severe study, which, while based on the sound rules which are our inheritance from past experience, shall not reject any source of interest or any means of development in sympathy with the needs of to-day. How sound were Mr. Weekes' own instincts may be inferred from the place which he accords to Sir Joshua Reynolds' discourses, to selections from which—on account of their great educational value—three of the lectures are devoted; how open-minded he was may as readily be inferred from his paper on Colour in Sculpture. It is clear to see that he, on the whole, disliked it; yet he honestly weighs every argument in its favour, can find merit in its application to Marochetti's bust of Duleep Singh, and, at p. 166, records his intense admiration of the delightful examples of partially coloured sculpture afforded by the works of Della Robbia. With these, Mr. Weekes said, he was perhaps more delighted on his visit to Italy than with any other kind of art. He singles out for special notice the peculiarly religious sentiment embodied in them, their purity of line and simplicity of composition, and expresses his wish that casts of them should be procured for the Academy schools, so that, if the students should be called on, by the turn of modern taste, to apply colour to sculpture, they should at least have faultless models as their guide. To the efforts of Gibson in this direction, and to the attempts of others—whom, being then alive, he was prevented by a rule of the Academy from mentioning by name—Mr. Weekes also refers; to Gibson he recurrd again in a later lecture, in which he compares the character of his career with that of Chantrey and of Behnes, and this later paper closes with words of warning which, duly qualified, are so applicable to tendencies still existent and pregnant with evil to the future of English art that they deserve quotation here. "He [Gibson], may," says Mr. Weekes, "serve you as a warning that your art is called upon to illustrate new ideas, not to repeat old ones; to associate itself with the feelings of the present day, not to carry us back to times of the past, and to things that are dead and gone."

But Mr. Weekes spoke this in no narrow spirit. Again and again he urges on his hearers the study of the classics, and of all great literature within their reach. Read Homer, he says—read him in Greek if you can, in translations if you cannot read him in Greek, but, at all events, read him; and, with the same desire to inculcate the advisability of seeking every source of knowledge and strength, he counsels

artists to attempt, for their own benefit, to put their ideas concerning their art on paper, so that they may the more clearly appreciate their bearing. Mr. Weekes himself evidently found the practice a useful one, although here and there, when he approaches abstruse questions of theory, we feel that he narrowly escapes shipwreck, as in the chapter in which he at one and the same time adheres to the theory that "physical beauty is indicative of moral excellence" (p. 71), and lays down with equal force that "beauty is utility" (p. 79). The volume, however, abounds with excellent hints and criticisms of a practical character, sufficiently clear in statement; and though the style has much of the wordiness necessarily pertaining to spoken discourse, it is never windy, for the author is always bent on finding valid reasons in support of his own opinions and his own practice.

The care with which the Lectures are edited, and the unaffected simplicity of the short biographical Preface, are an excellent example to those engaged in the production of similar work; our attention is never drawn from the subject of the memoir, and Mr. Weekes' modest estimate of himself and his own powers conciliates our regard for the works and writings in which is recorded his active and unpretentious life.

E. F. S. PATTISON.

ENGLISH WATER-COLOURS AT THE BURLINGTON CLUB.

It is evidently no fault of the Burlington Fine Arts Club that few water-colour painters of high power were born during the first twenty or thirty years of the present century—that is, were born "since 1800" and are "now deceased." No doubt considerable effort has been made to render the present exhibition a worthy sequel to that of 1871, which was one of the most remarkable ever held within the walls of the Club; and there can be no two opinions as to the present exhibition being one of some historical value. It illustrates the work of a transition period which has been characterised as without the genius of the great earlier period and without quite the skill and the artistic feeling possessed by many of the painters of our own day. Yet the transition period is decidedly interesting as a subject for study if not for unqualified admiration. The exhibition, like nearly all those that have preceded it, has been prepared with care. Its catalogue seems a model of what this kind of work should be; and, if we are not able to agree wholly with the writer of the thoughtful introductory notice in the rank he assigns to certain artists under discussion, we are yet able to appreciate the general excellence of the labour.

To address ourselves to the exhibition itself, it may be said that, as it includes the representation of a few of our elder artists born before 1800 but still living in 1871, and therefore excluded from the admirable exhibition of that year, we have yet a trace remaining here of that research of style, that predominance of artificial yet not unlovely composition, which characterised such earlier men as Barrett and Varley, and was inherited by them, it may be, from Wilson, and by him, it may be, from Claude. It is the works of Finch (Nos. 63, 67, and 181) which best exhibit the survival in the present show of the manner and method of a now passed away art, with which the earlier art of Turner, and not the earliest alone, had

something in common. In the present exhibition much is made of the art of Müller. One really beautiful drawing from his hand is lent by Mr. Vaughan, and there are exhibited also among drawings by Müller several rather brilliant and very dashing sketches; but—confessedly banishing sentiment or dramatic interest—these seem to us at times almost as much wanting in subtlety of treatment and in the true glory of colour as in the virtues they more deliberately eschew; and we venture, indeed, to doubt whether the work of Müller generally has not, of late years, been overrated. He had the knack of sketching adroitly and solidly. He was a skilled and successful craftsman. And he was little besides. Bonington's reputation, again, is one which we do not expect to see advanced. The somewhat chilly exactitude of his art—betraying nothing of the personality of the artist—has been already rated sufficiently highly. Cattermole, who is excellently represented at the Burlington Club, is now admittedly at a discount. We are glad to see something of the best of his work. He dealt dexterously, though never very subtly, with romantic themes. He was like Sir John Gilbert—only when Sir John Gilbert allows himself to be tame.

John Lewis, alike an elaborate draughtsman and a brilliant colourist, is an attractive element in the present show. The finest of his five drawings—at all events, the drawing in which his deficiencies interfere the least with the enjoyment of his great qualities—is that numbered 57, *Lilium Auratum*. It represents two Eastern girls in an Eastern garden; it is of expressive and intricate design and studious draughtsmanship, but is yet more remarkable for the ordered opulence of its hues. Our English painters of the East have never gone further than this in realising such beauty as the East may possess; and, though the present fashions in art may have turned aside from the Orient as a land less interesting for artistic purposes than the men of the last generation deemed it, sound judgment must continue to allow to John Lewis, at all events, an unqualified success in the treatment of the subject of his choice. The control of brilliant and gem-like colour which he here exhibits is in singular contrast to much inadequate and inartistic dealing with vivid hues betrayed too often by many of his contemporaries. See, for instance, the example of Wehnert—a large drawing of a woman kneeling at her bed.

Among those artists who were distinctly colourists remaining to be noticed James Holland is foremost. But Holland is not represented quite so characteristically as Lewis, beautiful undoubtedly as is his drawing of Dover. Two examples of brilliant yet softened and harmonised colour appear from the hand of W. W. Deane, and will revive his memory. The Cathedral of Chartres is the motive rather than actually the subject of the one (No. 101), so much is the drawing an experiment in red and rose-gray. A Venetian canal and house front is the theme of the other, which, indeed, is not at all less admirable. McKewan is shown as a master of tone if not precisely of colour in interiors. By Lundgren there is a very happy example in No. 110. E. W. Cooke is seen at his best. He had an immense facility for doing all things tolerably—he did nothing supremely well. Earlier and less-known men, such as W. Riviere, do not fail to be represented. By him there is one of the best and soberest drawings in the exhibition—a large sketch of the sea-front of Dover, the quaint parade of long ago, and the sunny-white cliffs in showery weather (No. 167). Here the execution is as frank and simple as the result is unobtrusive and pleasant. By W. Evans, of Bristol, there is a fine, stormy, and passion-

ate landscape among the few exhibited on the ground floor and not in the gallery. Its subject is professedly *A Welsh Water Mill*; in reality, a bridge crossing a turbid mountain stream swept over by wind. Drawings of the character of many we have mentioned may reconcile the amateur to the perhaps inevitable presence of many somewhat crude works representative of men who were popular in their own day, but about whom the art collectors of the future will not be expected to concern themselves. Much has been done, no doubt, to repress within proper limits the representation of the inartistic and the sentimental; but the inartistic and the sentimental—at all events, in figure-pieces—were the fashion forty years ago, when the "Annual" had become the privileged debaucher of the public taste. We note, but we need not take exception to, the small and partial representation of the art of brilliant young painters like Frederick Walker and George Pinwell, for their presence here at all is, as it were, an accident; they died so lately and so young that their work belongs wholly to our own day; and the organisers of the present exhibition were chiefly concerned with the work of at least one generation ago. **FREDERICK WEDMORE.**

EXHIBITIONS.

AN exhibition of ancient helmets was opened a few days ago at the rooms of the Royal Archaeological Institute in New Burlington Street. We understand that the excellent arrangement of the objects is in great part due to the exertions of Mr. W. Burgess and the Baron de Cosson, who have each of them contributed many fine examples to the collection. One of the earliest and most interesting specimens in the collection is a bronze helmet found in the Tigris, which there is good ground for believing to be of Greek manufacture. It does not require a great strain on the imagination to believe that it may have been worn by some one of the Ten Thousand during their celebrated retreat. This precious relic is the property of Mr. Matthew Holbeach Bloxam. There is also a Roman helmet of great interest. It may probably be of Italian make, but was found in the fens at Witcham. Viewed as works of art, by far the most beautiful things in the collection are the Italian helmets of the sixteenth century; there are several of these with engraved patterns upon them of excellent design and almost faultless execution. The cap of a French judge of the sixteenth century can hardly be called a helmet, but it is well worthy of a place in the collection. It is made of thin steel bars, so constructed as to fold into a very small compass. Such things were probably never needed in this country. An object of this sort helps us to realise more forcibly than many pages of history the state of violence and disorganisation from which France suffered when it was needful for the administrators of the law thus secretly to protect themselves. The tournament helm of Sir Giles Capel, one of the knights who, with Henry VIII., challenged all comers for thirty days at the Field of the Cloth of Gold, is a fine example of a kind of helmet now of the utmost rarity. It used to hang over the tomb of the Capels in Bayne Church, Essex, until about forty years ago, when the old church was pulled down. It is now the property of the Baron de Cosson, to whom it was presented by a lady, who bought it of the son of the builder of the new church. Though the special object of the exhibition is to show a chronological series of helmets, a few examples of chain mail are given. Most of it is Oriental, for in the East chain armour is worn at this moment; but there are some good fragments which are almost certainly of Western make. We noticed particularly part of a hauberk, found in the Phoenix Park, Dublin. There seems no reason for thinking this Eastern,

and, if not, it is probably part of the equipment of one of the Norman invaders of Ireland. It would have been interesting to have had a full account of its discovery. There are no specimens of banded mail in the collection; in fact, so far as we know, no single example is now in existence, although it is frequently represented on seals, and there are three English sculptured effigies which show it. How it was made is by no means certain. Some carefully constructed models are here exhibited for the purpose of showing the manner in which those best able to form an opinion believe it to have been constructed. It may not be amiss to note that one special characteristic of this exhibition is that there can be no doubt as to the genuineness of almost every specimen shown. Forgers have been at work on helmets as well as on almost every other object of archaeological interest, but there cannot well be a mistake here, for all those which are in any degree doubtful are put in a class apart.

NOTES FROM ROME.

FROM vol. xvi. of the *Atti dell' Accademia di Scienze morali e politiche di Napoli* has been extracted a recent work of Prof. Ruggiero Bonghi on a subject of Roman history. He examines the accounts given by Livy and by Dionysius of the enterprise of Appius Herdonius (294 A.U.C.), and, having enumerated the variations made in the story by other ancient writers who have made mention of the same undertaking, passes in review all the opinions propounded on the subject by modern critics, beginning with Niebuhr. The author endeavours to indicate the manner in which, from various reasons, the most contradictory conclusions have been arrived at in the attempt to better explain the fact. In his opinion, Appius Herdonius belonged to those powerful Sabine families who, reversing the course taken forty years before by Appius Claudius with his clan, imagined they could best provide for the safety of their country by seeking the subjugation of Rome, from whence arose danger to their own independence. Actuated by this motive, with the co-operation of the exiles, and with the hope of being powerfully assisted by the slaves, and by as many, in Rome itself, as were discontented with the actual state of affairs, he occupied the Capitol, where, as is well known, he met his death.

PROF. BONGHI, who for some years has been engaged in writing the history of Rome, promises us shortly a new critical essay on Publius Volero, and another on the territory surrounding Rome, and on the Roman conquests of the first four centuries; and, finally, a fourth work on the credit deserved by the ancient sources of history relative to that period. The first volume of Bonghi's Roman History will be published within the current year, and will bring the account up to the death of Camillus.

In the excavations near the banks of the Tiber have been discovered some inscribed stones which formed part of the sepulchre of C. Sulpicius Platorinus. The relationships, however, which existed between the various persons whose memory has been recalled to us by the epigraphs discovered are not yet decided. The last stone bears the name Antonia Furnilla. In the vicinity of the sepulchre have been found some marble pillars, also with inscriptions. One formed part of an *aedícula* dedicated to the god Silvanus, another belongs to the number of those dedicated to the *Lares Augusti*, while the third is one of those destined to indicate the limits of the public path on the banks of the Tiber. Many thousands of bronze coins of the later times of the Empire have also been discovered.

A MONOGRAPH has just been published by Prof. G. G. Ascoli, entitled *Iscrizioni inedite o*

mal note greche, latine, ebraiche di antichi sepolcri giudaici del Napoletano. It is a reprint from the *Transactions* of the fourth International Congress of Orientalists, held in Florence in 1878. If the author's name were not enough, a simple glance at the summary of the subjects dealt with in the book would suffice to show the importance of its contents. The author examines the two classes of Jewish sepulchral inscriptions hitherto known, the Greco-Latin and the Hebrew. The first, which consists in great part of the stones discovered in the Jews' cemetery at Rome, carries us back to the period which elapsed between the first and fourth centuries of the Christian era. The second, or mediæval class, in which the inscriptions are all in Hebrew, goes back to the eleventh or the end of the tenth century. To explain this long interval of silence, the author records the various opinions which have been put forward by scholars, and the errors to which their acceptance may lead. He points out that even scholars themselves till lately neglected one most important fact—that, namely, of the discovery of the Jewish cemetery of Venosa, the inscriptions of which belong precisely to this intermediate epoch, and conspicuously supply the missing link in the chain of historical continuity. He prefaces the examination of the Hebrew inscriptions with an account of the discovery at Venosa, and of the first studies written upon it, which remained in MS. in the archives of the National Museum of Naples. Prof. Ascoli ends with the expression of a hope, which, we trust, may be realised by the Minister of Public Instruction, that the exploration of the subterranean cemetery of Venosa may be methodically continued.

At the last sitting of the Royal Academy of the Lincei (May 30) Senator Fiorelli exhibited three new *lamine* of gold, with Greek inscriptions, discovered in the territory of Sybaris in prosecuting the fresh excavations undertaken there by the Italian Government. A monograph was read on these *lamine* by Prof. Compagetti, who reconstituted the text, recognising in it references to Orphic worship, which set forth at some length the beliefs of that organisation concerning the soul and the future life.

ART SALES.

We chronicle this week—independently of a print sale noticed below—two art sales of interest to various collectors: the one a sale at Messrs. Christie, Manson and Woods, last Saturday week, of a collection chiefly of modern pictures, though including a few examples of earlier English painters; and the other a sale of fine porcelain, in which Bristol china predominated. This is a ware generally found, in the opinion of many, more remarkable for rarity and for fineness of the paste than for actual beauty. At the picture sale of Saturday week Mr. Philip Calderon's *Toujours Fidèle* sold for £189; *Orwick's The Approach to an English Village*, the figures being by Mr. W. P. Frith, R.A., £210; Mr. Frith's *Sir Roger de Coverley and the Widow*, £314 10s.; Mr. Faed's *Worn Out*—the extremely pathetic picture of about eleven years since at the Royal Academy, one of the sensations of its year—£1,438. This was bought by Mr. Agnew. By Peter Graham there was a *Scotch Landscape*, which realised £438; by Mr. J. O. Horsly, R.A., the *Poet's Theme*, which obtained £210, and likewise by the same artist, *Lady Jane Grey and Roger Ascham*, which reached £315. By Mr. J. O. Hook there was the attractive picture, *The Gold of the Sea*, £1,785 (Wertheimer), and the *Fishing Haven*, which fell to a liberal bid from Mr. Vokins. By John Linnall there was noted *The Timber Wagon*—a good example of the veteran's work in the year 1867—£392 (Agnew). By Mr. Pettie, a small replica of the large and

striking picture of *Treason*, painted in 1867, sold for £483 to Mr. Vokins. By Frederick Goodall, *The Head of the House at Prayer*, a picture painted only two years ago, sold for £789 to Mr. Maclean. Considerable interest was caused by the appearance in the auction room of what has long been known to be a masterpiece of William Müller's, *The Slave Market at Cairo*. It was knocked down to Mr. Agnew for £2,058. It is worth while to note that, according to the statements of the press, this picture had changed hands a few years ago at the price of nearly £3,000, from which it would appear that the sometime overrated art of this undoubtedly skilful artist is likely henceforth to be in less active demand. Of portraits by the elder English masters we note especially George Romney's *Lady Elizabeth Berkeley*, which fell for £387 10s.; *Her Serene Highness Elizabeth Margravine of Anspach*, first wife of Lord William Craven, which fell for £387 10s. There were likewise minor examples of this artist and of Sir Joshua Reynolds and Gainsborough. More than £22,000 was realised by the day's sale, which was one of the most important of a season thus far somewhat barren in sales of real interest.

The sale of fine porcelain mentioned above, and which took place at an earlier date than the picture sale, was that of the collection of Mr. Callender, the surgeon, and it comprised not only fine figures and other specimens of old Bristol porcelain—many of which form illustrations to Owen's book, *Two Centuries of Ceramic Art in Bristol*—but also specimens of other English fabrics, of the latter part of the last century and the earlier part of the present: such as Chelsea, Derby, Bow, Plymouth, Swansea, and Worcester. There was likewise a little Wedgwood ware. The catalogue, interesting to the collector of porcelain, contained rude but effective cuts of the principal Bristol figure pieces. We note, in Derby ware, a pair of Derby candlesticks, with figures of children, £5 15s. 6d. (Hawes), and a pair of deep-blue Derby vases with white-and-gold handles, each painted with a landscape and cattle by Lucas, £8 10s. (Hawes). Of Worcester, a pair of cups and saucers painted with exotic birds and butterflies in blue scale borders, £14 3s. 6d. (Reidpath). Of Wedgwood, a pair of large black figures of Neptune and a Triton, £23 5s. (Philpot), and a large black vase and cover, the handles formed as female arabesque figures, and a group of Prometheus devoured by a vulture in high relief on each side—and the piece signed "F. Voyez, sculp. 1769," £21 (Rhodes). Of Bristol porcelain the following pieces and prices are best worth chronicling:—One of Champion's white Bristol hard porcelain flower plaques, the group of flowers modelled in biscuit, in the original black and gold frame, *vide* Owen, £9 19s. 6d. (Philpot); a beautiful Bristol centre-piece formed of shells embedded in rockwork of shell and corals and enamelled in brilliant colours (from the Elkins collection), £11 (Oshroth); a pair of portrait plaques with profile busts of a lady and gentleman, modelled in biscuit, in the costume of the period, the point lace, cap, and frill of the lady of singular and exquisite finish, £21 10s. 6d. (Rhodes), also—as, indeed, were many succeeding pieces—from the Elkins collection. A pair of salt cellars, engraved in Owen, and illustrated in the sale catalogue, £14 3s. 6d. (Owen). A Bristol figure, representing one of the elements—*Water*—described in Owen as full of life and beauty, and its modelling recognisable as of high class and finish, £43 1s. (Lichfield); a pair of figures in the Macaroni costume of 1770-72, from the Edkins collection, £37 (Philpot); a superb coloured Bristol figure of *Winter*, rustic series, £64 1s. (Salting); the rare Bristol figure of a *Shepherd and Dog*, coloured and gilt, and the companion figure of a *Milkmaid*, £60 (Hawes);

a pair of hard porcelain Bristol groups of *Children and Goats*, decorated with flowers on scroll-work plinths, one of them having the impressed mark of one of Champion's modellers, £22 1s. (Hawes); and, finally, the classic series of *The Seasons*—as distinguished from the rustic series, one of which has been noticed above. The modelling of this complete set of classic figures is of remarkable excellence and precision. Three out of the four pieces had been, it is no doubt accurately stated, in the possession of an old Bristol family from the time they left the Castle Green works until they came into the possession of Mr. Callender. They were purchased—the set of four—on the present occasion by Dr. Michael for £170. It would appear from the result of Mr. Callender's sale that the interest in this rare fabric is not on the decline; the prices were at least considerable.

MESSRS. SOTHEBY, WILKINSON AND HODGE sold on Tuesday and Wednesday in last week a collection of prints and drawings in which what was most conspicuous and the most attractive of interest was a portion of a collection of the *Liber Studiorum* of Turner, including some of the preparatory etchings, which, in addition to the artistic merits some of them undoubtedly possess, have the collector's merit of extreme rarity, and are therefore now liable to be sought for by the connoisseur, though hardly as yet by the inartistic investor in objects of art. The sale of these was preceded by that of a certain number of impressions from the completed plates, when the mazzotinter working under Turner's direction (or, indeed, sometimes the master himself) had finished that which the pure etching had only begun. Of these impressions of the mazzotinted plates, a few only were "first states;" but there were likewise a few well and carefully selected impressions of later states, such as quite equal the average first state so much in demand among the less accustomed purchasers, though, of course, these impressions cannot equal the selected first states of which only the fine and accustomed eye is the proper judge. Certain incidents even in the present little sale evinced the advantage of trusting to the quality of the impression rather than to its technical "state;" and money is often foolishly spent in the desire of those who are not truly familiar with the subject, or who lack delicacy of eye and of memory, to acquire the print labelled "First State" irrespectively of its real quality. These remarks, of course, might have a wider application than to the *Liber Studiorum* alone, but *Liber Studiorum* at all events affords fit occasion for making them. On the completed *Liber* prints sold last week we may notice *Flint Castle*, a fine impression, £5 (Harvey); *Norham Castle*, a first state, £9 9s. (Harvey); *Hind Head Hill*, a weak impression, £5 15s. (Harvey); *Source of the Arveron*, a first state, £14 5s. (Olnaghi); *Inverary Pier, Loch Fyne, Morning*—one of those, like the *Arveron* and *Suern and Wyg*, engraved wholly by Turner himself—£3 10s. (Binell). This was in a second or third state. Again, *Chepstow*, second state, £6 8s., and *Cilm*, fourth state, £11 15s. (Harvey); *Rizpah*, a first state, £14 14s. (Harvey); *Severn and Wye*, a good second state, which, though in this plate never equal to a first, was still unaccountably cheap at its sale price, £5 10s.; *Martello Towers*, a second state, £5 12s. 6d. (Olnaghi); *Coast of Yorkshire*, second state, £8 (Olnaghi); *Solway Moss*, first state, £36 10s. (Olnaghi); *Procris and Cephalus*, second state, £9 (Olnaghi); and the *Mildmay Marine*, a fine impression of the second state, £4 4s. (Harvey). There followed the preparatory etchings, which vary considerably in artistic merit—some of them, such as the *Isis*, the *Twickenham*, and the *St. Catherine's Hill*, containing not only the leading lines of the picture, but the better part of the pictorial

effect; and others (the majority of them, which we need not particularise) being purely preparatory and occasionally insignificant. Among the fifteen etchings sold at the sale in question we note the following:—*The Frontispiece*, £10 10s. (Harvey); *Inverary Castle and Town*, £6 15s. (Harvey); *Solway Moss*, £10 (Harvey); *Isis*, £10 (Harvey); *Dunblane*, £9 2s. 6d. (Noseda); *Flint Castle*, £10 10s. (Harvey); *Procris and Cephalus*, £12 (Harvey); *Blair Athol*, £21 10s. (Harvey); *Ben Arthur*, £15 (Harvey); *Windmill and Lock*, £8 15s. (Noseda); *Norham*, £10 5s. (Noseda); and *Chepstow*, £6 10s. (Noseda). This collection has been erroneously stated in a contemporary to have been the property of Mr. Mannors, whose possessions were sold on the same day.

It will be of interest to add that a complete collection of the *Liber Studiorum*—the seventy-one engravings which constitute the series—was sold by Messrs. Christie some few days ago for the sum of £756, the purchaser being Mr. Hogarth. A set of the *England and Wales* likewise sold for a considerable sum.

NOTES ON ART AND ARCHAEOLOGY.

MESSRS. WILLIAM MORRIS AND CO., of 264 Oxford Street, have now on view the results of what may be called an experiment in hand-made carpets, after original designs. These designs are all by Mr. William Morris, and he has carefully avoided any tendency towards an Oriental character. They are supposed to be purely English, but the simple and bold conventionalisation of trees and flowers is certainly reminiscent of Italian decoration. The size of those at present to be seen does not exceed that of a large rug, and a good many of the patterns are reproduced in various colours. The designs appear to us to be, if anything, too bold for the size of the pieces and for the colours employed, which are those secondary and tertiary tints which Mr. Morris affects. It may be doubted whether these sober hues, though effective in stained glass and in silk embroidery, are equally fitted for work entirely in wool, and with a piled surface. The appearance of most is faded—an impression strengthened by the force of the fuller tones in comparison with those which are more delicate, as though the rugs had been washed, and only a few colours were fast. A less sparing use of white would, we think, be advisable.

The second number of *The Historic Galleries* of England is quite up to the first, and contains very fine photographs of the now celebrated Arundel Holbein, the splendid full-length of Christine of Denmark, Duchess of Milan, whom Henry VIII. sought for a wife. The other plates are Murillo's *Prodigal Son* from Stafford House, once in the possession of Marshal Soult, and Sir Richard Wallace's *Innocence*, by Greuze, which was sold to the late Marquis of Hertford at the Pourtales sale for 100,200 frs.

A MEETING was held at the Grosvenor Gallery on Tuesday, Sir Coutts Lindsay in the chair, to consider the questions connected with artists' colours which were raised by Mr. Holman Hunt's paper read at a recent meeting of the Society of Arts. Mr. Holman Hunt exhibited some canvases showing practically the result of using unsafe colours, and Prof. Church stated his opinion that colour-men were entirely at the mercy of the oil crushers. Mr. Wallis suggested that the matter should be referred to a body of practical chemists. The meeting terminated without the proposal of any resolution.

MR. ROGERS has on view at his gallery in Maddox Street a collection of water-colour drawings by Mr. A. Ayscough Wilkinson. They are views taken during a stay in Italy, chiefly at Rome and Venice, and in the Riviera.

WE learn from *Nature* that a considerable number of the Fellows of the Royal Society have decided to add a portrait of Sir Joseph Hooker to the valuable collection of historical portraits belonging to the society, and they invite others to join in the subscription. Cheques crossed "Barclay and Co., for the Sir J. Hooker Portrait Fund," to be paid to Messrs. Barclay and Co., 54 Lombard Street, E.C.

MR. THOS. PLUNKETT, M.R.I.A., who has explored so many of the crannogs in Co. Fermanagh, has lately discovered a wooden house, or hut, somewhat similar to that previously found in Drunkelim bog, Inver, Co. Donegal; both structures being at the same depth below the surface of the bog, while the timbers of both were fashioned with stone celts. Mr. Plunkett is the discoverer and explorer of the ossiferous caves of Knockmore.

THE names of Théodore de Banville and Frédéric Régamey give prestige to a little volume issued by Richard Lesclide, of Paris, entitled *Mémoires et Pantomimes des Frères Hanlon-Lees*. The brothers Hanlon-Lees have recently been performing with marked success in London, and the "Memoirs," prefaced by de Banville with his usual grace and brilliancy, and embellished with six boldly conceived and vigorously executed etchings by Régamey, will not fail to amuse those among the English public into whose hands the volume falls.

AN etching by Lawrence B. Phillips, entitled *In Harbour*, is just being published by Messrs. Dowdeswell.

IT is stated that the Government of New South Wales have commissioned Signor Fantasia, an Italian sculptor of repute, who has exhibited some of the statuary most admired at the Sydney Exhibition, to execute three statues for the public offices in Sydney. The subjects will be the Queen, the Prince of Wales, and the Genius of Australia, which is described as an original idea of the sculptor.

THE death is announced of the distinguished Belgian portrait painter, Lievin de Winne, an artist who has long enjoyed a high reputation in Belgium as a painter of Court life and the higher circles of *bourgeois* society. His portraits have somewhat of that refined grace which is to be found in most of Sir Thomas Lawrence's works; and this quality, no doubt, brought the Belgian artist, as well as his English predecessor, many sitters. For the rest, there seems to have been little resemblance between these two masters, for de Winne cared nothing for fashionable society, and, although painter to the Court, could scarcely be got to attend the ceremonies and *fêtes* at which his presence was required. He was born at Ghent in 1832, was a Chevalier of the Légion d'Honneur, and an officer of the Order of Leopold. One of his most celebrated portraits—that of the late King Leopold I.—is now in the Brussels Museum; but for the most part his works, being entirely of a personal character, are confined to private collections. Very probably, however, a collection of some of them will be formed for exhibition shortly.

THE publishing firm of T. O. Weigel, of Leipzig, announce several important works on archaeology and art history to be brought out by them during this year and next. Among them may be mentioned a *Handbook of Classical Art and Archaeology*, by Dr. Ulrichs, of Würzburg; a new edition of Dr. Jacob von Falke's *History of Modern Taste*; and a continuation in two volumes of Prof. Franz Reber's *History of Ancient Art*, consisting of the history of art in the Middle Ages and in modern times. The same firm have just published the fourth and fifth volumes of Prof. E. aus'm Weerth's comprehensive work, entitled *Kunstdenkmäler des Christlichen Mittelalters in den Rheinlanden*,

of which the first three volumes, comprising sculpture only, appeared from 1857 to 1868. The present volumes deal exclusively with painting, especially with the old wall paintings to be found in the Rhineland. They are illustrated with numerous plates, and are of imperial folio size.

M. JULES OLARETTE's article, entitled *Un Livre unique: L'Affaire Clémenceau peinte et illustrée*, which we noticed in the *ACADEMY* of May 15 when it first appeared in the *Gazette des Beaux-Arts*, has since been published as an *édition de luxe*, of which only a hundred copies have been printed. It is illustrated by twenty-three of the charming little engravings given in the *Gazette*, and by two engravings *hors texte* after drawings by the principal artists who assisted in the illustration of this "unique book." A portrait is also added of the author of *L'Affaire Clémenceau* (A. Dumas fils), etched by Mongin from a painting by Meissonier, so that altogether this dainty little work forms a graceful tribute to the popular French novelist.

A BUST of John Churchill, Duke of Marlborough, has been presented to the British Museum by the Rev. T. W. Webb. It is the work of the sculptor Rysbrach, who, in his time, had a high reputation in London. It has been placed in the hall of the Museum.

SOME of the heavy scaffolding that has long hidden from view the beautiful front of the Ducal Palace at Venice has lately been cleared away, and part of the building is now visible, though the rest still remains shaded by the matting that is hung up to protect the workmen from the sun. The distinguished sculptor Monteverde has undertaken to replace the splendid capital of the corner column about which so much difficulty has been experienced, and it is hoped that he will be able to produce a true and fine copy of the ancient work. The restoration commission are adopting the system of Prof. Molmenti, whereby the new portions of the building are coloured to the same brown-and-black tone as the older portions, so as to avoid that patchy appearance which so often prevails when modern restorations have to be inflicted on ancient monuments. It is hoped that the whole of the works at the Ducal Palace will be finished before next winter.

THE competition mentioned by us some weeks ago as having been opened at Venice for an equestrian monument to Victor Emanuel has produced, as is usual with these sculptural competitions, most unsatisfactory results. The exhibition that has been held of the forty-two designs sent in has, indeed, provoked more laughter than anything else, for the wits of Venice have christened it "The Horse Show," owing to the extraordinary animals which the unfortunate Victor Emanuel has been made to stride. The design of a young Roman sculptor named Ferrai gained the first prize, but even his design was not considered worthy of execution, though it is supposed that he will ultimately be entrusted with the carrying out of some modified plan.

THE awards for sculpture at the Paris Salon were made last week. The first *prix* was gained by M. Ernest Lanson for a medallion portrait of M. Ruffin in plaster.

THE third part has appeared of Henry Havard's instructive work entitled *L'Art et les Artistes hollandais*, in which he gives the result of his researches into the history of certain Dutch masters whose lives have hitherto been but little investigated. The present number contains biographies of Pieter de Hooch, Jan Beerstraaten, and Pieter Odde.

THE death is announced of Prof. Karl Friedrich Lessing, director of the picture gallery at Karlsruhe.

A FRANCO-AMERICAN lottery has been instituted in Paris for the purpose of contributing to the enormous cost of the gigantic statue of Liberty which the celebrated French sculptor Bartholdi is executing. We have before given an account of this extraordinary work, which exceeds everything that has ever been attempted in modern times in the way of colossal figures; and so need not repeat its measurements here. It is intended to serve as a lighthouse at the entrance of the harbour at New York, and also to be a token of the warmth of friendship existing between the French and American nations. It was reported at one time that it was to be a present from the French Government to the American, but it now appears that it is to be paid for conjointly by the two nations. To aid in this a lottery has been established of 528 lots, many of them being works of art by well-known artists. These have been exhibited for several months past in Paris, but the interest excited by the great Franco-Spanish lottery has thrown this American one somewhat into the shade. The day for drawing has therefore been a little delayed, but it is now fixed definitely for the 20th inst. Tickets can be had at the office of the Commission, 175 Rue Saint-Honoré, and of all French tobacconists.

THE STAGE.

THE linguistic attainments of the average civil servant are at all events desirable in a week which gives us a performance of *Frou Frou* in French, of the *Agamemnon* in Greek, and of *Anna Mié* in Dutch; and the ignorant are rather grateful to Mr. Toole for that consideration of their condition which doubtless prompted his advertisement to the effect that the members of his company would still continue to perform in their mother tongue. The performance of the *Agamemnon* in the Hall of Balliol on Thursday and on Friday last has been discussed in the *Standard* and the *Daily News*, and is elsewhere mentioned in our columns; and little need here be recorded beyond the fact that to give the work the best dramatic expression in their power, rather than to produce a *facsimile* of a Greek drama, was the aim of the enterprising undergraduates who organised and carried out a performance which roused to enthusiasm an audience from Mr. Browning downwards. In the way of scenery little was attempted, and little was required to be attempted. In the matter of costume, simplicity reigned, but the simplicity was at least well ordered—Cassandra's robes and Clytemnaestra's might have been arranged by Albert Moore. The text chosen was Hermann's, but certain omissions were found necessary. As regards the acting proper, the appearance of the *dramatis personae* in quietude was better than their appearance in action, and the voices and their management were best of all. This is especially true of the two persons on whom the burden of the piece chiefly falls—Clytemnaestra and Cassandra. Both were of admirable appearance and of a most musical utterance. Indeed, faces so splendidly Greek have rarely been seen upon the English stage, nor have voices often been heard—except Sarah Bernhardt's own—so apt to be charged with dramatic expression, so indicative of great and varied emotion. To tell the truth, elaborate art in stage gesture and action cannot come to the most gifted persons in the space of a few weeks. At Oxford, as elsewhere, it is true that it takes years, and not weeks, even for people of genius to become complete actors. To seriously weigh the stage performance of these well-graced gentlemen against that of the leaders of the dramatic profession would only be to show a complete incapacity to appreciate the conditions of the dramatic profession and the years of labour

which precede high success in it. But it may be most truly said with regard to all the Oxford performers that they accomplished more than anyone could have been warranted in expecting; and it may be added of the representatives of Clytemnaestra and Cassandra (Mr. Benson and Mr. Lawrence) that their performance had qualities which gave exquisite pleasure. It has been said in some quarters that the play is likely to be repeated in future years. We believe this is exceedingly doubtful; but, under any circumstances, the success of its repetition must depend upon the presence of those qualified to perform. Cassandra's voice, and her sensitive control of it, must last week have impressed the most accustomed playgoer.

PERFORMING in *Frou Frou* again last Tuesday night, Mdlle. Sarah Bernhardt showed unmistakably that she is this season in the fullest command of her means. Every touch and trait in the character of the volatile and agreeable heroine which it is possible for her to do justice to she did justice to most absolutely. Opinions are divided, and may fairly be divided, upon the merits of her death scene and those of that scene as interpreted by Desclée; but it would be somewhat barbarous to base a comparison of the merits of the actress throughout the whole of the part on one scene only, and that one in which it is not difficult for art greatly below Mdlle. Bernhardt's or Mdlle. Desclée's to obtain a sensational triumph. Death on the stage is like death in the hands of a second-rate novelist—its presentation wins easily an effect that should be won without recourse to that extreme. The earlier and the middle acts of *Frou Frou* are really those on which a comparison should be based, and the following may be found to be about the result of a comparison made by the unprejudiced admirers of both these great artists. A lightness of touch, a girliness of being, splendidly simulated by Desclée, is wanting to Sarah Bernhardt. Sarah Bernhardt, like Desclée, can be a rattle, but she can only be a reckless rattle, and not a thoughtless and childish one. She has not, in modern comedy, the *naïveté* of Desclée. She seems to know too much. It is not many young women who can delicately chaff their fathers on excursions to Bohemia in which the actual Prague of everyday geography is never a destination, and the Gilberte, the "*Frou Frou*," of Mdlle. Bernhardt is not one of those young women. Her raillery wants lightness of heart to excuse or explain its lightness of manner. But the waywardness of Gilberte, the irritation that her vanity suffers when it is found that her sister takes her place in her house as true guardian of her child and truest friend of her husband—that Mdlle. Bernhardt illustrates quite perfectly. And the quarrel scene which follows on Louise's refusal to marry, and thus leave Gilberte with her husband and with the responsibilities of the house, is worked up to a pitch of completeness which no stage art of our day has excelled. This is not a pleasant scene; it is not even a scene that gains on repetition, for the more the art of it is discovered, the less does one desire to pursue the analysis; but there is no question but that the scene is of the most potent order of dramatic performances—a highly organised woman's study of a situation of impatience and misery. Extraordinary mobility of temperament and *physique* and a singular mastery over the technical details of stage work are found here in combination in Mdlle. Sarah Bernhardt, and both are possessed by her in such high degree that it is idle for the spectators of her performance to content themselves with being the extollers of this one's art or that—Rachel's, it may be, or Desclée's—of which their memory must be fading. They are here, with Sarah Bernhardt in the quarrel scene of *Frou Frou*, in presence of a performance

that in its own way can never have been excelled. The actress has found for every passage the look, the gesture, the voice now controlled, now abandoned.

M. COQUELIN has failed to appear, and until the arrival of the Palais Royal company it is upon Mdlle. Sarah Bernhardt that the burden of the Gaiety performance must fall. The actress, for her benefit next Wednesday morning, has composed a bill of the play which is unfamiliar, but which it would be impossible to improve. We have seen her some years since in *Rome vaincue* and in *Jean-Marie*. The parts are more absolutely different than any it would be conceivable to select, and in each the performance of the actress reaches perfection. Playgoers who, having seen her in her great rôles now familiar to England, should omit to see her as the grandmother in the one play for next Wednesday and the resigned young wife of the other will have had but an incomplete understanding of the things that are within her means.

It is doubtful whether the Dutch plays at the Imperial will greatly attract purely English audiences, and the constant changes in the play-bill would seem to be directed at the Dutch colony. But the performance of Monday, when the modern domestic drama of *Anna Mié* was performed by several of the most excellent actors known to Holland, was found interesting. The piece seems well put together; the acting is all that can be desired, and the mounting of the drama is of an eminently satisfactory kind. There is, of course, nothing remarkable in the fact that the costumes have a correctness which they would not have in an English play of which the scene was laid in Holland, seeing that the wearers of the costumes come from that land; but the combined quaintness and picturesqueness of dress and interior—the clean tiled wall and tall clock which English aesthetic decoration has, it is true, to some extent reproduced—are at least interesting. On Tuesday great dignified drama was substituted for drama of homely incident and homely pathos, and Mdlle. Catherine Beersman, who is said to be the leading actress of the Dutch stage, appeared as Marie-Antoinette in a version of the play familiar to some English playgoers through the performance of Ristori. Nor is there here any failure to chronicle, though we should strongly counsel the management to have recourse for the most part during the rest of the performances to the homelier orders of comedy or pathos.

At the Vaudeville Theatre they have revived *Two Roses*.

MESSRS. H. IRVING, CHARLES SANTLEY, S. B. BANCROFT, AND J. L. TOOLE have been appointed trustees of a Fund now being raised for the benefit of those who were dependent on the late George Honey, the comedian whose regretted death we noticed in our last week's issue. Between four and five hundred pounds has been subscribed to the Fund; but this should be materially increased.

MUSIC.

RECENT CONCERTS.

MR. C. HALLÉ produced at his fourth recital a trio in E minor, by Mr. C. H. H. Parry, whose pianoforte concerto in F sharp has been recently heard at the Crystal Palace and at one of the Richter concerts. The first movement of the trio (*allegro appassionato*) contains original and suggestive themes, and these are treated with much skill. The modulations are interesting and unexpected. The movement concludes with a short but effective coda. The *molto vivace*, which stands in place of *scherzo*, is constructed upon three pleasing and well-contrasted themes. The

whole movement is full of life and cheerfulness. The *adagio* is interesting and not too long. The *finale* (*allegro giocoso*) is bright and effective, and the themes are developed with great contrapuntal ingenuity. The pianoforte part throughout the work is well written and very showy, and it was performed by Mr. Hallé in a clear and brilliant manner. The work was well received. We think it a composition of great merit, and one requiring to be heard more than once in order to understand and appreciate its many points of interest. Mme. Norman-Néruda played in her best manner a sonata in D major by Handel, from the twelve sonatas for a violin or German flute published in 1732, and said to have been written expressly for the Prince of Wales. The pianoforte accompaniment played by Mr. Hallé was arranged by him from Handel's original figured bass. Mr. Hallé contributed as solos a *nocturne* and *barcarolle* by Chopin. The concert concluded with Beethoven's B flat trio (op. 97).

At the sixth Richter concert (June 3) was performed Liszt's symphonic poem, *The Battle of the Huns* ("Hunnenschlacht"). Kaulbach's celebrated picture, representing the defeat of the Huns by the Romans, "inspired" Liszt to write this work, which, though clever and imaginative, we cannot consider as one of the best or most interesting of his symphonic poems. It is out-and-out programme music, and an interesting analysis by C. A. B. enabled the audience to follow with ease the various incidents of the dire conflict, ending with the "final victory of Christianity and civilisation over heathendom and barbarism." The work was splendidly performed; the organ part was taken by Mr. Walter Bache. We must also notice two fine performances of Wagner's *Kaisermarsch* and *Tannhäuser* overture. Herr Barth played Beethoven's concerto in E flat, but his interpretation of the work was not all that could be desired. The concert concluded with Beethoven's "Pastoral" symphony.

The seventh concert took place last Monday (June 7). M. Saint-Saëns played his concerto in C minor (No. 4), which had been performed last year at a New Philharmonic concert conducted by Mr. Ganz. M. Saint-Saëns must have written this work specially to show off his great powers as a pianist, for as a composition it possesses but little interest. It is what Lenz would have called "un grand exercice de concert." It was performed with very great skill and energy. The concert opened with Berlioz' "Overture caractéristique," *Le Carnaval Romain*. Schubert's symphony in B minor was given with great finish and delicacy. The concert concluded with a fine rendering of Beethoven's seventh symphony.

Herr Auer was leading violinist at the fifth *matinée* of the Musical Union last Tuesday (June 8). He has not been in London since 1877, and has come expressly from St. Petersburg for the remaining concerts. Beethoven's quintett in C (op. 29), which had not been played here since 1874, was excellently performed by Herr Auer, associated with MM. Wiener, Hollander, Hann, and Lasserre. The other concerted piece was Schumann's quintett in E flat. This work, when first performed in 1853, was harshly criticised; it is now a standard and a popular work. The pianoforte part was rendered in a spirited manner by Mme. Montigny-Rémaury. Herr Auer gave a most charming and delicate performance of Wieniawski's *légende* (op. 17), in memory of his lately deceased friend. Scharwenka's *Scherzo* for two pianos from his concerto (op. 32) was played by Mme. Rémaury and the composer, and they certainly gave a most brilliant rendering of a very excellent and effective arrangement.

J. S. SHEDLOCK.

NEW NOVEL, IN ONE VOLUME, AT ALL LIBRARIES. JULIAN CLOUGHTON: a Norfolk Story.

By GREVILLE J. CHESTER, B.A.,

Author of "Trans-Atlantic Sketches," &c.

"Mr. Chester must be congratulated on a real success. . . . The whole book is charming, and well worth reading."—*Graphic*.

"There is such an aspect of truth about the whole story, it is so artistically rendered, and all the minor details are so lovingly worked out, that the charm of the whole is indescribable."—*Sunday Times*.

"The narrative merits the highest praise. The incidents are natural, the characters admirably described, and a spirit of earnestness runs through the book that will awaken much sympathy for Julian and his friend Stephen."—*Daily Chronicle*.

PEPPER'S QUININE and IRON TONIC
Purifies and Enriches the Blood.
Strengthens the Nerves and Muscular System.
Promotes Appetite and Improves Digestion.
Animates the Spirits and Mental Faculties.
Thoroughly renews the general bodily health, and induces a proper
healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A
Solid combination for Derangement of the Liver, particularly when
arising from slight congestion. By gently stimulating the action of the
liver, and slightly moving the bowels, the heavy, crowsy feeling, with
sensations of fulness, headache, pain beneath the shoulders, and other
indications of Dyspepsia are removed. Taraxacum and Podophyllin is
much safer than calomel or blue pill, and quite as effective for removing
bile.—Prepared by J. PEPPER, 137, Tottenham-court-road, London, whose
name must be on the label.—Bottles 2s. 6d. and 4s. 6d. each. Sold by all
Chemists.

PEPPER'S QUININE and IRON TONIC.
Bottles containing 32 measured doses, 4s. 6d.
Sold by all Chemists.
In the preparation of this Tonic the greatest care is exercised. It is a
faithful compound of Quinine, the active principle of Yellow Cinchona, or
Peruvian Bark, blended with a refined, trustworthy preparation of Iron,
produced in a form which the experience of many years has proved the
best. It offers a really means of gaining the strength and other benefits
afforded by Quinine and Iron, without any fear of ill consequences.—The
name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTS
THROUGHOUT on
MOEDER'S LINE SYSTEM.

MR. G. H. JONES,

Surgeon-Dentist, 57, Great Russell Street, London,

Will be glad to forward his Pamphlet on PAINLESS DENTISTRY, free, enclosed by Post, which
explains the most unique system of the adjustment of ARTIFICIAL TEETH without pain, to which the
following Testimonials refer. Consultation free 10 to 5.

"MY DEAR SIR,
"Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial
Teeth, which renders my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's
Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services,
you are at liberty to use my name."
"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.
PROFESSOR GARDNER, late of the Royal Polytechnic Institution, in a certificate to Mr. G. H. Jones, Surgeon-Dentist of
57, Great Russell Street, London, says:—"I have examined and tested your Painless System of adjusting Artificial Teeth;
it is quite perfect, and is the most successful application of scientific laws for securing a natural wear and comfort yet introduced."

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."
Food, Water, and Air, Edited by Dr. HASSELL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR LIEBIG COMPANY'S EXTRACT OF MEAT.

CAUTION.—In consequence
of numerous inferior and low-
priced substitutes being in
the market (sometimes accom-
panied by misleading chemical
analyses) purchasers must in-
sist on being supplied with
the Company's Extract, which,
for fine flavour and perfect
clearness, is pronounced by all
competent authorities to be
the best.

* * In use in most households throughout the Kingdom.

N.B.—Genuine ONLY with fac-simile of Baron Liebig's
Signature in Blue Ink across Label.

Ask for the COMPANY'S Extract, and see that no other is substituted
for it.

"WESTWARD HO!"

WILLS'

"WESTWARD HO!" NEW SMOKING MIXTURE.

"When all things were made, none were made better than Tobacco;
to be a lone man's Companion, a bachelor's Friend, a hungry man's
Food, a sad man's Cordial, a wakeful man's Sleep, and a chilly man's
Fire. There's no Herb like it under the canopy of heaven."—
Kingsley's "Westward Ho!"

In 1 oz., 2 oz., and 4 oz. packets, lined with tinfoil.

W. D. & H. O. WILLS.

NELSON'S GELATINE.—For JELLIES.

An Economical Recipe in each packet.

NELSON'S CITRIC ACID.—For

JELLIES, with their Gelatine and Essence of Lemon.

NELSON'S ESSENCE OF LEMON.—For

JELLIES, with their Gelatine and Citric Acid.

NELSON'S PURE BEEF TEA.—In 4-

plint packets.
The *Lancet* says—"An excellent preparation. Is
very portable. Its flavour is all that could be
desired."
The *Medical Press* says—"One of the best articles
of the class we have ever examined."

NELSON'S SOUPS.—BEEF with various

kinds of VEGETABLES, CARROTS, CELERY, &c.

—In pint and quart packets.

Miss MARY JOOPER says—"I have found your
Beef Tea and Soup excellent—indeed, in my opinion,
they are by far the best things of the kind ever
before the public."

"The Soup is, besides, so cheap that it cannot fail to
be appreciated by all classes of the community."

ASK YOUR CHEMIST or GROCER

for the above.

"HOME COMFORTS."

This book, neatly bound in cloth, and illustrated
with numerous woodcuts, will be found very useful
to Ladies, or anyone interested in home comforts.
A copy will be sent, post-free, for seven stamps, on
application to the Publishers.

NELSON, DALE, & CO.,
14, DOWGATE HILL, LONDON, E.C.

In consequence of Spurious Imitations of
LEA & PERRINS' SAUCE,
which are calculated to deceive the Public,
LEA & PERRINS have adopted
A NEW LABEL,
bearing their Signature, thus:—

Lea & Perrins

which signature is placed on every bottle of
WORCESTERSHIRE SAUCE,
and without which none is genuine.

of this pure solution as the BEST REMEDY for
Acidity of the Stomach, Heartburn, Headache,
Gout, and Indigestion,

And as the safest Aperient for Delicate Constitutions, Ladies,
Children, and Infants.

DINNEFORD'S MAGNESIA,

MESSRS. MACMILLAN & CO.'S PUBLICATIONS.

CONCLUSION OF GREEN'S HISTORY OF THE ENGLISH PEOPLE.

HISTORY of the ENGLISH PEOPLE. By John RICHARD GREEN.

Vol. IV.—THE REVOLUTION, 1683-1760. MODERN ENGLAND, 1760-1815.
With Three Maps and Index. 8vo, 16s. [Next week.]

THE ENGLISH POETS. Selections, with Critical Introductions, by Various Writers; and a General Introduction by MATTHEW ARNOLD. Edited by T. H. WARD, M.A. 4 vols., crown 8vo, 7s. 6d. each.

Vol. I.—CHAUCER to DONNE. Vol. II.—BEN JONSON to DRYDEN.

[Now ready.]

"The task was one of much complexity and delicacy, and we may say at once that it has been admirably accomplished."—*St. James's Gazette*.

ESSAYS on ART and ARCHAEOLOGY. By C. T. NEWTON, C.B., D.C.L., Keeper of Greek and Roman Antiquities at the British Museum. 8vo, 12s. 6d. [Now ready.]

SELECTIONS from the ATTIC ORATORS—Antiphon, Andokides, Lysias, Isokrates, Isaeos; being a Companion Volume to the "Attic Orators from Antiphon to Isaeos." Edited, with Notes, by R. C. JEBB, M.A., LL.D., Edin., Professor of Greek in the University of Glasgow. 8vo, 12s. 6d. [Now ready.]

MODERN GREECE: Two Lectures delivered before the Philosophical Institutions of Edinburgh, with Papers on "The Progress of Greece" and "Byron in Greece." By Professor R. C. JEBB, LL.D. Crown 8vo, 6s. [Now ready.]

EPHAPHATHA; or, the Amelioration of the World. Sermons preached at Westminster Abbey, with Two Sermons at St. Margaret's, Westminster, at the Opening of Parliament. By F. W. FARRAR, D.D., F.R.S., Canon of Westminster. Crown 8vo, 6s. [This day.]

POEMS of SHELLEY. Selected and Arranged, with Introduction, by STOPFORD A. BROOKE. 18mo, cloth extra, 4s. 6d. "GOLDEN TREASURY SERIES."

* Also, Large Paper Edition, printed on hand-made paper, Indian Proof of Vignette, 8vo, 12s. 6d.

"Of the value of the selection as an introduction to those who have still before them the immense delight of making a first acquaintance with Shelley we have spoken; it need only be added that the volume as a 'Pocket Shelley' ought to be equally welcome to others."—*Pall Mall Gazette*.

THE LIBERTY of the PRESS, SPEECH, and PUBLIC WORSHIP: being Commentaries on the Liberty of the Subject and the Laws of England. By JAMES PATERSON, M.A., Barrister-at-Law. Crown 8vo, 12s. [Now ready.]

COMPARATIVE EMBRYOLOGY, a Treatise on. By F. M. BALFOUR, M.A., F.R.S., Fellow and Lecturer of Trinity College, Cambridge. In 2 vols., medium 8vo, with Illustrations. Vol. I. 18s. [Now ready.]

EARLY MAN in BRITAIN, and his PLACE in the TERTIARY PERIOD. By W. BOYD DAWKINS, F.R.S., Professor of Geology in Owens College, Manchester. Medium 8vo, with numerous Illustrations, 25s.

"It is a work to which the reader, curious to know more about the primitive people who dwell in this land, can confidently refer. The book is full of trustworthy evidence. . . . The weight of learning in its pages is by no means oppressive, since it is relieved by a pleasant style of writing."—*Athenaeum*.

HOUSE ARCHITECTURE. By J. J. STEVENSON, Fellow of the Royal Institute of British Architects. 2 vols., royal 8vo, with numerous Illustrations, cloth extra, 36s.

"The first of these volumes is very fascinating reading, while the second may be recommended as practically valuable to gentlemen who have any intentions of house building. . . . It is admirably and profusely illustrated with suggestively characteristic specimens of European architecture."—*Times*.

THE TRIAL and DEATH of SOCRATES: being the Euthyphron, Apology, Crito, and Phaedo of Plato. Translated into English by F. J. CHURCH. Crown 8vo, 4s. 6d. [Now ready.]

NEW NOVEL—ENGA. By the Author of "The HARBOUR BAR." 2 vols., crown 8vo, 21s. [Now ready.]

NEW NOVEL—VIDA: Study of a Girl. By Amy DUNSMUIR. 2 vols., crown 8vo, 21s.

"It is scarcely doing justice to call this novel hopeful, the epithet which we commonly apply to a meritorious first effort. There is more than hope in it; there is performance. . . . This is an excellent book."—*Spectator*.

ENGLISH MEN of LETTERS. Edited by John MORLEY. New Volume—

POPE. By Leslie Stephen. Crown 8vo, 2s. 6d.

[Now ready.]

SECOND EDITION, WITH ADDITIONAL ESSAYS.
HISTORICAL ESSAYS. By E. A. FREEMAN, D.C.L. Second Series. 8vo, 10s. 6d. [Now ready.]

Admission, One Shilling. Season Tickets, Five Shillings.

THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Mudd's Library).
The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.
Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.
Note.—The special advantages of the Autotype Process for Book Illustrations are:—
1st. The absolutely facsimile nature of the result.
2nd. Its Cheapness for Small Editions of 250, 500, &c.
3rd. The Prints being direct on the Paper, there is an absence of all clogging and that disagreeable effect inherent in all Mounted Prints.
* * * For Terms and Specimens apply to the Manager.

HURST & BLACKETT'S
LIST.

TALES of OUR GREAT

FAMILIES. Second Series. By EDWARD WALFORD, M.A. 3 vols., 21s.

THE VILLAGE of PALACES; or,

Chronicles of Chelsea. By the Rev. A. G. L'ESTRANGE. 2 vols., crown 8vo., 21s.

"Mr. L'Estrange's volumes are pleasantly written."—*Athenæum*."This work has considerable value as a record of a most interesting portion of London. It may be read with pleasure and profit."—*Post*."One of the best going topographical since Leigh Hunt's 'Old Court Suburb.'"—*Daily Telegraph*.

MONSIEUR GUIZOT in PRIVATE

LIFE. (1787—1874.) By his daughter, Madame DE WITT. Translated by Mrs. SIMPSON. 8vo. [Just ready.]

CONVERSATIONS with DIS-

TINGUISHED PERSONS during the SECOND EMPIRE, from 1860 to 1863. By the late NASSAU W. SENIOR. Edited by his Daughter, M. C. M. SIMPSON. 2 vols., 8vo., 30s.

THE NEW NOVELS.
A MODERN GREEK HEROINE.

3 vols.

MERVYN O'CONNOR. By the

EARL OF DESART, Author of "Kilverdale," &c. 3 vols.

"These volumes teem with interest and humour, intermingled with pathos, and will add greatly to Lord Desart's well-earned literary fame."—*Court Journal*.

MISS BOUVERIE. By Mrs. Moles-

WORTH, Author of "Hathorout Rectory," &c. 3 vols.

"Miss Bouverie" is a pure and pretty story."—*The Athenæum*."Miss Bouverie" is one of the prettiest stories which has appeared for years. It is sure to be widely read, and no one who takes it up will lay it down unfinished."—*Post*."A very charming story. In these delightful volumes Mrs. Molesworth has produced a capital book, which will culminate many weary hours."—*Graphic*.

POOR ZEPH. By F. W. Robinson,

Author of "Grandmother's Money," &c. 3 vols.

"The author has written many good stories, and has long since established his reputation as a romancer of every-day life to which in the bulk of the reading public willingly listens. He has done well to reproduce these charming studies and sketches."—*The Athenæum*.

POET and PEER. By Hamilton

AIDE, Author of "Penruddocke," &c. 3 vols. Dedicated to LORD LYTTON.

"A novel of unusual merit, the work of a cultivated man of the world, who describes what he has himself seen. It is the best of Mr. Aide's novels, and will interest and amuse every reader."—*The Athenæum*."An unusually good story. Its chief attraction lies in the easy sketches of character and society which are strewn about it."—*The Academy*."The story is sufficiently relieved with brightness and humour to make it not only interesting, but agreeable reading."—*Saturday Review*.

THREE RECRUITS, and the

GIRLS THEY LEFT BEHIND THEM. By JOSEPH HATTON. 3 vols.

"Mr. Hatton's novel is a most interesting and excellent. The scenes of the good old times when Farmer George was king are excellent."—*Times*."Three Recruits" is one of the best novels of the season."—*Post*.

FOR HER DEAR SAKE. By Mary

CECIL HAY, Author of "Old Myddleton's Money." Second Edition. 3 vols.

WOOLERS and WINNERS. By

Mrs. G. LINNEUS BANKS, Author of "The Manchester Man," &c. 3 vols. [Next week.]

Annals of an Eventful Life. By G. W. Desaut, D.C.L.
David Elginbrod. By George MacDonald, LL.D.
A Brave Lady. By the Author of "John Halifax."
Hannah. By the Author of "John Halifax."
Sam Slick's Americans at Home.
The Golden Wood. By the Author of "John Halifax."
A Rose in June. By Mrs. Oliphant.
My Little Lady. By F. Frances Foynter.
Phebe, Junior. By Mrs. Oliphant.
Life of Maria Antoinette. By Professor C. D. Yonge.

The New Volume (new ready) comprises

SIR GIBBIE.

By GEORGE MACDONALD, LL.D.

J. C. NIMMO & BAIN,
14, KING WILLIAM STREET, STRAND.THE
MODERN FOREIGN LIBRARY.

A SELECTION OF THE

Best Novels of all Foreign Countries.

Edited by HENRI VAN LAUN.

PROSPECTUS.

It is the intention of the Publishers to place before the public Translations of the best Foreign Novels at such a price as will bring them within the easy reach of every class of the community. These Novels will be selected from all languages, contain subjects of the highest and most varied interest, and be rich in promise of engrossing narratives and picturesque descriptions. Care will be taken that nothing objectionable shall be found in them, so that they may be suitable for the domestic circle and for perusal among the family, whilst at the same time they shall possess sufficient literary worth to be appreciated by the scholar and student of foreign tongues. In this manner the intellectual food of different nationalities will be thrown open to many who, until now, have been prevented from enjoying it.

These Translations, printed in an attractive and serviceable form, will make a handsome addition to the library shelves. They will be edited by M. HENRI VAN LAUN, the translator of Molière's Dramatic Works, assisted by some of the most experienced translators of the present day. Each Novel is published with the sanction of the Author, and almost simultaneously with the Original Work, or as soon as possible as the Translation can be made. These reproductions are also authorised by the International Literary Association—a society of eminent literary men of England, France, Germany, Italy, Spain, Portugal, the United States, Denmark, Holland, &c., formed for maintaining the rights of intellectual property.

THE RIVAL DOCTORS. From
the French of A. LAPOINTE. By HENRI VAN LAUN.
[Ready.]THE SERGEANT'S LEGACY.
From the French of E. BERTHE. By GILBERT
VENABLES. [Ready.]A SHEEP in WOLF'S CLOTHING.
From the French of C. DEBANS. By EVELYN JERROLD.THE COUNT of TALAVERA.
From the Dutch of J. VAN LENNEP. By A. ARNOLD.A NEW GENERATION. From
the German of GOLO RAIMUND. By H. E. GOLD-
SCHMIDT.THE CHASE: a Tale of the
Southern States. From the French of J. LERMINA. By
A. SERGEANT.BEWARE of the FIRE. From
the Polish of J. KRASZEWSKI.A HUNGARIAN NABOB. From
the Hungarian of M. TOKAI.A MODERN BARON. From the
French of C. DEBANS.THE BANKER'S SON. From the
German of E. V. KONIG.A GIRL'S DOWER. From the
Italian of SALVATORE FARINA.THE GIPSY. From the French
of JULES CLARETIE.

Price, in French Paper Cover, 2s. 6d.; Cloth, 3s. 6d.

London: J. C. NIMMO & BAIN,
14, King William Street, Strand, W.C.

RICHARD BENTLEY & SON'S LIST.

Four New Novels at all Libraries.

BY MISS BROUGHTON.

SECOND THOUGHTS. By Rhoda BROUGHTON, Author of "Nancy," "Red as a Rose is She," &c. In 2 vols., crown 8vo.

BY THE AUTHOR OF "ROBIN ADAIR."

ALAN DERING. By the Hon. Mrs. FETTERSTONHAUGH, Author of "Kilcorran," "Robin Adair," &c. In 2 vols., crown 8vo.

BY THE AUTHOR OF "LADY GRIZEL."

IN HER MAJESTY'S KEEPING. By the Hon. LEWIS WINGFIELD, Author of "My Lords of Strogue," "Lady Grizel," &c. In 3 vols., crown 8vo.

"The whole work has a powerful attraction."
"With a rare discretion and a consummate art the author has produced a novel of thrilling interest."
"Mr. Wingfield has written a novel that surpasses any of his former efforts, and that is saying a great deal."
Vanity Fair.
Morning Post.
Graphic.

BY THE AUTHOR OF "UNCLE SILAS."

THE PURCELL PAPERS. By the late J. SHERIDAN LE FANT, Author of "The House by the Churchyard," "Uncle Silas," &c. In 3 vols., crown 8vo.

Immediately.

MISS THOMAS'S NEW NOVEL.

THE VIOLIN PLAYER. By BERTHA THOMAS. In 3 vols., crown 8vo.

WORKS RECENTLY PUBLISHED.

LORD PALMERSTON'S LIFE. By the Hon. EVELYN ASHLEY, M.P. 2 vols., 12s.

PRINCE METTERNICH'S AUTOBIOGRAPHY. 2 vols., 36s.

THE OLD REGIME: Court, Salons, and Theatres. By LADY JACKSON. 2 vols., 24s.

DEAN HOOK'S LIFE and LETTERS. 2 vols., 30s.

DUNCKER'S HISTORY of ANTIQUITY. The first 3 vols., in demy 8vo, 21s. each.

THE INGOLDSBY LEGENDS. The New Carmine Edition. 10s. 6d.
THE EDINBURGH EDITION. Thirty-six Illustrations. 6s.

PEN SKETCHES by a VANISHED HAND. Selections from the Papers of the late MORTIMER COLLINS. 2 vols., 21s.

PRECIOUS STONES: their History and Mystery. By WILLIAM JONES, F.S.A. Crown 8vo, 7s. 6d.

LONDON:

RICHARD BENTLEY & SON,
NEW BURLINGTON STREET,
Publishers in Ordinary to Her Majesty the Queen.

MESSRS. HATCHARD'S LIST.

Just published, crown 8vo, 420 pp., cloth, price 6s.

DEEP unto DEEP:

Being an Enquiry into some of the Deeper Experiences of the Christian Life.
By the Rev. Sir EMILUS BAYLEY, Bart.,
Author of "Thorough," &c.

"A practical, searching, and devotional enquiry. For the afflicted especially the work will indeed be of inestimable value."—*English Churchman.*

Second Edition, 1bmo, cloth, price 1s.

OCCUPATION for the SICK;

Or, Practical Suggestions for Invalids and those who have the Care of them.

By ELLICE HOPKINS,
Author of "Work amongst the Lost," &c.

"Exquisitely and gracefully written. It answers fully, in short, to its second title, and to all this second class in particular we recommend this little book as one that will prove an unspeakable help in their difficult avocation."—*Guardian.*

Second Edition, Revised, fcap. 8vo, cloth, 2s.

MORAL EDUCATION of the YOUNG in RELATION to SEX, under MEDICAL and SOCIAL ASPECTS.

By Dr. ELIZABETH BLACKWELL.

"Wise and useful."—*Literary Churchman.*
"A very useful little work upon an important subject. Dr. Blackwell has treated her theme with all the delicacy which we should expect from a cultivated lady who has given a great deal of attention to the subject treated. We can heartily commend the book to the thoughtful perusal of those to whom it is addressed."—*Oxford and Cambridge Undergraduates' Journal.*

Just published, 8vo, price 3d.

MAY a MAN MARRY his DECEASED

WIFE'S SISTER?

By Mrs. COLIN MACKENZIE.
With Preface by Very Rev. A. PAYNE SMITH, Dean of Canterbury.

Just published, New Edition (32nd Thousand), crown 8vo, 1s.

ROME'S TACTICS;

Or, a Lesson for England from the Past.
By the Very Rev. WILLIAM GOODE, D.D., F.S.A., late Dean of Ripon.
(Numbers for distribution at reduced rate.)

Second Edition, square fcap. 8vo, cloth, 2s. 6d.

THE EARNEST CHURCHMAN;

Or, Why am I a Member of the Church of England?
By the Right Rev. BISHOP OKENDEN.

"Earnest in its tone, charitable in its spirit."—*John Bull.*
"Wise, good, and most earnest."—*English Churchman.*

THE IMMORTALITY of the SOUL.

By the Rev. Canon GABBETT, 16mo, cloth, 1s. 6d.; paper, 1s.

"One of the ablest refutations we have yet seen of the erroneous doctrines now abroad concerning the eternity of Punishment."—*English Churchman.*

"A valuable little book, and the parish clergyman should keep a copy by him; for this error is a recent revival and is very rife."—*Literary Churchman.*

BY THE LATE BISHOP TROWER.

Small crown 8vo, cloth, each 5s.

1. READINGS on GENESIS.
2. READINGS on EXODUS, LEVITICUS, NUMBERS.
3. READINGS on NUMBERS and DEUTERONOMY.

"Perhaps the best, though latest, of his works were his 'Readings on the Pentateuch.'—A Correspondent in the *Guardian*, Nov. 14, 1877.

BY G. WASHINGTON MOON, F.R.S.L.

1. THE DEAN'S ENGLISH:
A Criticism on the Dean of Canterbury's Essays on the Queen's English.
Tenth Edition, fcap. 8vo, cloth, 3s. 6d.
Cheaper Edition (the Eleventh), fcap. 8vo, limp, 1s. 6d.
"Demonstrating that, while the Dean undertook to instruct others, he was himself but a castaway in matters of grammar."—*Edinburgh Review.*
"Coming out for wool, in fact, the Dean went back shorn; rushing forth to teach, he went home taught."—*Record.*
2. BAD ENGLISH EXPOSED:
A Series of Criticisms on the Errors of Lindley Murray and others.
Cheap Edition (the Sixth), fcap. 8vo, limp cloth, 2s.

"Well worthy of the careful study of all who aspire to write English elegantly and accurately."—*London Quarterly Review.*
"A useful contribution to the art of writing the English language with accuracy."—*Times.*

LONDON: HATCHARDS, 187, PICCADILLY.

SAMPSON LOW, MARSTON, & CO'S NEW PUBLICATIONS.

GIOTTO. By Harry Quilter, M.A., Trinity College, Cambridge. Illustrated with Photographs of the Frescoes in the Cappella d'Arena, Padua; a Facsimile in Colour of Madonna in the lower Church of Assisi; and Engravings from the Bas-reliefs of the Giotto Campanile at Florence. Small etc., handsomely bound in cloth, with gilt top, price 15s. [Now ready.]

ILLUSTRATED TEXT-BOOKS OF ART EDUCATION.

Edited by EDWARD J. POYNTER, R.A.

Each Volume contains numerous Illustrations, and is strongly bound for the use of Students. Price 5s.

The Volumes now ready are—

PAINTING.

CLASSIC and ITALIAN. By Edward J. POYNTER, R.A.; and PERCY R. HEAD, Lincoln College, Oxford. Upwards of Eighty Full-page and other Illustrations. Bound in extra cloth limp, 5s.

"* This Volume contains an Introductory Preface on Art Education by Mr. POYNTER, who also contributes a chapter on Egyptian Art, and succinct notices of the various Italian schools, &c.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

A Bibliography of Printing. With Notes and Illustrations. Compiled by E. C. Bigmore and C. W. H. Wyman. Vol. I. A-L inclusive. (Bernard Quaritch.)

NOTHING more strikingly shows the interest taken in any art or science than the number of books that are published on the subject. The literature of printing has now become so extensive that several attempts have of late been made to extend alike to the hardworking student and the desultory reader that indispensable aid which good bibliographies and classified indexes afford. But the present work aims still higher, for Messrs. Bigmore and Wyman have not been content merely to collect the titles of all the books, pamphlets, and broadsides which relate to typography and its allied arts, but have undertaken also to give, in many cases, brief analyses of their contents, and some particulars respecting their authors.

Short biographical notices of printers and type-founders are interspersed as occasion offers, and these will to many readers be the most attractive feature of the work. The selection appears, however, to have been somewhat capricious, for while among eminent foreign printers such names as Conrad Fyner of Esslingen, Peter Drach of Spire, Filippo de Lavagna of Milan, and Giunta of Venice are conspicuous by their absence, among well-known English printers we miss the names of John Lettoun, Thomas Berthelet, Richard Faques, John Cawood, Richard Jugge, Christopher and Robert Barker, Nicholas Hill, and Hunte of Oxford, and among Scottish printers those of Walter Chepman, Robert Lekpreuik, Henry Charteris, Thomas Finlason, Andrew Hart, John Forbes, and the Foulises of Glasgow.

Moreover, the notices of the King's Printers begin no earlier than the year 1573, although William Faques, and after him Richard Pynson, held this office in the reign of Henry VII. Pynson was followed, in 1530, by Thomas Berthelet, who was the first royal printer whom we know to have been appointed by patent; and to him succeeded, in 1548, Richard Grafton, who, in 1553, for printing the proclamation of the accession to the throne of Lady Jane Grey, the only extant copy of which is in the library of the Society of Antiquaries, was deprived of his patent, which was given by Mary to John Cawood, who held it conjointly with Richard Jugge in the succeeding reign.

But, notwithstanding these omissions, the particulars given respecting many celebrated typefounders and printers of bygone times are of the greatest interest, derived as they have

been, in several instances, from information contributed by surviving members of their families or firms. Foremost among these may be mentioned the articles upon Baskerville, Bensley, the Bowyers, Bulmer, the Caslons, the Didots, Engelmann, the Enschedés, the Figginses, Benjamin Franklin, William Ged, the Hansards, and the Jameses. The notice of John Baskerville contains some curious facts respecting the vicissitudes after death of the celebrated Birmingham typefounder and typographer, which may be quoted as an example of the way in which much valuable information has been gleaned and condensed.

"A series of articles in *Notes and Queries* has set at rest several disputed points in the history of John Baskerville. G. C. says that he was informed in 1835 that the coffin containing the body of Baskerville was then lying in a timber-yard under a pile of deals, and asks if it is still (1852) in the same place. . . . Mr. St. Johns says that Baskerville was interred in grounds attached to the house in which he lived, near Easy-row, Birmingham. The land became valuable as a building site, and the body was removed, after lying there for nearly half a century. It was taken to the workshop of a lead-merchant named Marston, in Monmouth-street, Birmingham, and while there he (Mr. St. Johns) saw the remains, which were in a wooden coffin enclosed in one of lead. That was about 1826. The person who showed him the coffin was either Mr. Marston or one of his employés. The nose and lips of the body were gone, and two front teeth; but as to the latter, it was known who had them, and they would be restored. The shroud was perfect, but discoloured. . . . Mr. William Cornish (of New-street, Birmingham) says that the body now reposes in the vaults of Christ Church, Birmingham. . . . R. says that one of his great-uncles owned the Baskerville property; that Baskerville was actually buried in the grounds belonging to his house, and that it was solely owing to the growth of the town that his remains were disturbed."

Besides the articles upon Gutenberg, Fust and Schoeffer, and our own William Caxton, that upon Koster deserves especial notice for the care which has been bestowed upon the literary history of the legend that ascribes to Laurens Janszoon Koster of Haarlem the honour of having invented the art of printing with moveable types. It contains a comprehensive survey of the bitter controversy which raged between the partisans of Gutenberg and Koster from the time of the appearance of Scriverius's *Laurens-Orans voor Laurens Coster van Haerlem* in 1628 down to the final collapse of the Haarlem romance and its mythical hero in 1870, when M. van der Linde published his *Haarlemsche Costerlegende*. The Italian story of Castaldi likewise has been concisely told.

By way of contribution to the promised Supplement we would note the omission of Jon Jónsson's *Söguágríp um Prentsmiðjur og Prentara á Íslandi*, published at Reykjavík in 1867, the only Icelandic work upon the art of printing. We also miss the appellants' and respondent's cases in the appeal to the House of Lords in 1717 upon the rival claims of Baskett and Watson respecting the printing of Bibles and Prayer Books in Scotland, as well as the *Reasons that Printing may not be made a Free-Trade* published in 1704 by Mrs. Eleanor James, the widow of John James, and, after her husband's death, for some years City printer. The belief once common,

and here again repeated, that "Holbein died of the Great Plague of 1554" has long since been banished to the region of myths, not only by the fact that there was no plague in the above-named year, but also by the discovery in St. Paul's Cathedral of the great painter's will, which proves that he died in October or November of 1543, in which year Stow tells us that "a great death of pestilence was in London, and therefore Michaelmas terme was adjourned to S. Albons."

Absolute accuracy and completeness in the bibliography of so wide a subject as the history and practice of printing are obviously unattainable, yet the compilers have grappled successfully with the immense difficulties which surrounded their self-imposed task. The work first appeared by monthly instalments in the columns of the *Printing Times and Lithographer*, where it has now reached the end of the letter O, and has since been carefully corrected and revised. It is illustrated by a large number of woodcuts of printers' devices, portraits, and views, and we trust that a copious index may still further enhance its value.

ROBERT EDMUND GRAVES.

An Essay on the Life and Genius of Calderon. By the Archbishop of Dublin. Second Edition. (Macmillan.)

Calderon. By E. J. Hasell. (Blackwood's Foreign Classics.)

THE Archbishop of Dublin has quickly responded to the appeal made to him by Miss Hasell to publish a new edition of his *Essay on Calderon*, which had long been out of print. For this we are grateful. The clever analytical sketch of Miss Hasell has by no means superseded the more thoughtful criticism of the Archbishop.

More than perhaps any other writer, Calderon has suffered from the exaggerated panegyrics of his admirers. To compare Calderon with Shakspeare seems to us to be altogether a mistake. Shakspeare stands out unapproachable among his contemporaries. Not so Calderon. He is indeed the first, but the first only, among peers. To prove this let anyone take any of the selections of Spanish plays, some of which are by anonymous authors, published in Spain and Holland in the seventeenth and eighteenth centuries, and mark how nearly these dramas approach each other in value. Calderon excels the others, indeed, as a poet; as a skilful playwright and composer of plots he is equalled only by Lope de Vega; but as a true dramatist, and a creator of character, and delineator of it in action, as one who gives us an insight into the stirrings of human thought or the complex play of human passions, he is no higher than many of his contemporaries. Skilfully designed as his plots are, they seem to us invariably to have been formed apart from his characters. An intricate scaffolding is set up, which is decked with the choicest flowers and the most graceful ornament which poetic fancy can supply. His characters never grow before us; their utterances never seem what they *must* have said under such circumstances, but are only poems which the author has put into their mouth. In nine cases out of ten they would do just as well for somebody

also. This is clear when, as is often the case, a speech belonging to a character in a "Comedia" is repeated by an abstraction in an "Auto." It frequently suits the latter the better of the two. Thus, Sigismund's celebrated speech in *La Vida es Sueño* is repeated by "El Hombre" (Man before the Fall) in the "Auto" of the same name. As a poem the lines are exquisite, but there is nothing in the situation which makes them peculiarly appropriate to either speaker.

Both our authors speak with intense admiration of Calderon's employment of his allegorical characters in the "Autos." But, far removed as this power of allegorising is from our present mental habits, this representation of ideas only in the concrete is no certain mark of a high order of intelligence. It marks a certain stage of intellectual growth, and when this stage is passed it may be difficult to return to it; but the trick may be learned. Calderon's "Autos" were composed, not for his choicest audience, but for the populace. The peasant will unconsciously speak in allegory, and the educated will fail to understand him. The theme of these "Autos," whatever their titles may be, is fundamentally the same; the variation is simply, as Dr. Trench allows, but as a turn of the kaleidoscope. Calderon's philosophy in these plays is that of *Catene* and the *Summa*; there is no real depth of thought or spiritual insight. The poems of S. Teresa seem to give us far deeper insight into man's spiritual temptations and the mystic relation of the human soul to the Infinite than all Calderon's "Autos."

Cervantes, and not Calderon, is, we think, the Spanish author who should be compared with Shakspeare. We cannot imagine Shakspeare multiplying indefinitely his greatest dramas. Even for him the exhaustion would be too great. Cervantes could write but one *Quixote*. Creations like these take too much out of their authors; but, given the necessary talent and poetical and technical skill, there would seem nothing to hinder Calderon and Lope from spinning out "Comedias" and "Autos" to the very limit of physical exhaustion and of bodily decay.

Still, though unable to agree with those who place Calderon among the world's greatest dramatists, we find it difficult to give him too high a rank as an objective poet. It is his very excellence as a poet which frequently hinders his success as a dramatist. How often do we utterly forget the character which speaks in delighted wonder at the complete and perfect poem which is put into his mouth! Only with reluctance do we resume the thread of the dialogue. Yet even these gems are frequently spoilt by Calderon's fatal facility. He knows not where to stop. The image or illustration has perhaps fully rounded off the sense, and has brought the poem to a perfect whole; but he heaps image on image, and iterates them until the reader's palate is cloyed to satiety. Hence the interminable length of so many of his speeches. We believe that Calderon would stand far higher with an English reader from a judicious selection of these "Beauties" as separate poems than by any specimens of plot and dialogue. Our readers will understand what we mean by referring to pp. 127, 132-33, 149, of Dr.

Trench's volume, and to p. 55 of Miss Hasell's.

Did space permit there are yet many points to which we would gladly direct attention, especially to the curious rôle of the "Gracioso," both in the plays and "Autos." His office seems to be ever to show the reverse side of the tapestry, to parody his master's high-flown sentiment; and he is thus somewhat intermediate between the chorus of the Greeks and the slaves of the Latins and the valets of Molière. We fail to understand Miss Hasell's division of the "Autos." Two are set apart "since they have no human actors;" but this is the case with many others, and with the majority of the "Loas" which precede the "Autos," and which are sometimes nearly as long as the "Autos" themselves.

The after-history of the Spanish stage is most curious, and is but slightly touched upon by our authors. On the one hand, the ecclesiastics eventually forbade the performance of the "Comedias," even privately in the palace of the Prado and at Carnival time, when requested by the then Prince of the Asturias and the Infantas; on the other hand, the "Autos" performed in cathedrals and convents became so revolting to the lay mind that on June 11, 1753, they were suppressed by royal decree, "prohibiendo tanto escandalo y tanto abuso incalificable."

One word of deserved praise for the translations in these volumes; those of the Archbishop are scarcely to be amended. These two works in some sort complement each other; yet neither of them will wholly replace the little work of the late G. H. Lewes on the Spanish Drama. He takes an opposite, but in some respects, we think, a truer, view of Calderon's position both as poet and dramatist.

WENTWORTH WEBSTER.

XXII Ballades in Blue China. By A. Lang.
(C. Kegan Paul & Co.)

THE somewhat self-derisive title of this little book is doubtless meant to indicate that a certain delicate quaintness is the quality at which it primarily aims, "so fantastical are the dainty metres"—or rather arrangements of rhymes—in which it deals. Most of the pieces it contains are in the form of the "ballade," but those who rejoice in such *tours de force* may find here a still completer gratification in both a double ballade and a villanelle, a species indulging in an "iteration" which, under a less skilful hand, might incline to the "damnable." That Mr. Lang's hand is a light and skilful one those who may have had the pleasure of reading his *Ballads and Lyrics of Old France* should know already, and any painful stringency of his self-imposed rules of versification is such as to be felt by the writer rather than the reader. The less curious in such matters are permitted in a few cases to refresh themselves with the comparatively unfettered form of the sonnet. The sonnet is the immortal sister of similar but mortal forms of verse, partly because, consisting virtually of two stanzas, it does not attempt to continue the same rhymes through more than one, nor to multiply the labour without increasing the delight.

Nearly half the twenty-two "ballades" are of a humorous or partly humorous character, and of these perhaps the happiest are the two written in varieties of the Scotch dialect, and called "Ballade of the Tweed" and "Ballade of the Royal Game of Golf." To appreciate the latter rightly it is, of course, needful to have some acquaintance with the ancient and admirable game which is its subject—a game which its exacting demands in the matter of space and soil have unhappily made rare. The verses on the Tweed end with a just imprecation on the recklessness and poisonous avarice that desecrate many of our rivers with pollution and turn their beneficent beauty into a hideous curse.

Among a few minute blemishes may be noticed an inconsistency in counting as a syllable the mute *e* in French words on p. 13 (for here the accents on *manque* and *passé* are obviously misprints), while on p. 61 it is not counted. And to make "Verrochio" four syllables (p. 79) seems hardly legitimate in an Italian name.

That this little volume should be taken too seriously is evidently the last thing its author would desire, and technical skill and half-sportive, half-pensive pleasantry are its chief characteristics. But it seems worth while to indicate that amid the agreeable tinkle of the artful verse are to be heard, here and there, notes of the true music of poetry. That this is so the following "Ballade on his Choice of a Sepulchre" may show:—

"Here I'd come when weariest!
Here the breast
Of the Windburg's tufted over
Deep with bracken; here his crest
Takes the west,
Where the wide-winged hawk doth hover.
"Silent here are lark and plover;
In the cover
Deep below the cushat best
Loves his mate and croons above her
O'er their nest,
Where the wide-winged hawk doth hover.
"Bring me here, life's tired-out guest,
To the blest
Bed that waits the weary rover,
Here should failure be confessed;
Ends my quest,
Where the wide-winged hawk doth hover.

ENVOY.

"Friend, or stranger kind, or lover,
Ah! fulfil a last behest,
Let me rest
Where the wide-winged hawk doth hover."

The following is called a "Ballade of Sleep":—

"The hours are passing slow,
I hear their weary tread
Clang from the tower, and go
Back to their kinsfolk dead.
Sleep! death's twin brother dread!
Why dost thou scorn me so?
The wind's voice overhead
Long wakeful here I know,
And music from the steep
Where waters fall and flow.
Wilt thou not hear me, Sleep?
"All sounds that might bestow
Rest on the fever'd bed,
All slumbrous sounds and low
Are mingled here and wed,
And bring no drowsied,
Shy dreams flit to and fro
With shadowy hair dispread;
With wistful eyes that glow,
And silent robes that sweep.
Thou wilt not hear me; no?
Wilt thou not hear me, Sleep?"

"What cause hast thou to show
Of sacrifice unsped?
Of all thy slaves below
I must have laboured
With service sung and said;
Have culled such buds as blow,
Soft popples, white and red,
Where thy still gardens grow
And Lethe's waters weep.
Why, then, art thou my foe?
Wilt thou not hear me, Sleep?"

"ENVOY.

"Prince, ere the dark be shred
By golden shafts, are low
And long the shadows creep,
Lord of the wand of lead,
Soft-footed as the snow,
Wilt thou not hear me, Sleep?"

Of the sonnets the best seem to be those on Homer and Bion, the latter of which melodiously traces an often-varied melody to its Hellenic source—the source whence European poetry derives half its strength and beauty and far more than half its grace.

"The wall of Moschus on the mountains crying
The Muses heard, and loved it long ago;
They heard the hollows of the hills replying,
They heard the weeping water's overflow;
They winged the sacred strain—the song undying,
The song that all about the world must go—
When poets for a poet dead are sighing,
The minstrels for a minstrel friend laid low.

"And dirge to dirge that answers, and the weeping
For Adonais by the summer sea,
The plaints for Lycidas, and Thyrsis (sleeping
Far from 'the forest ground called Thessaly');
These hold thy memory, Bion, in their keeping,
And are but echoes of the moan for thee."

ERNEST MYERS.

A Forbidden Land: Voyages to the Corea. By Ernest Oppert. (Sampson Low & Co.)

COREA, or, as it is called by the natives, Kaoli or Gaoli, occupies much the same position between Japan and China as Greece between Turkey in Asia and Western Europe. But ever since the expulsion of the Japanese after the death of Fidejosi, the Taikoon, at the end of the sixteenth century, it has successfully enforced its policy of seclusion even against its near neighbours, China and Japan. Though nominally a tributary of China and, till latterly, paying yearly tribute, it has gradually, according to Mr. Oppert at least, assumed the position of a free and independent State like Siam, sending a mission only at long intervals to the Chinese Court with presents of Corean produce, such as paper and ginseng. The only authorised communication between her inhabitants and the outer world was an annual fair on the northern frontier; but even this has been prohibited by the present Regent, whose rule seems to be even more tyrannical and bloody than that of the King of Burmah.

Were the Coreans a contented, well-governed people, wishing to keep themselves to themselves and to remain inoffensive to others, possibly even Mr. Oppert would have been content to leave them and their obscure corner of the world a small sealed chamber of the earth, stored with unknown curiosities—not even the desire to open out the mineral wealth of the country or to traffic in cottons and ginseng would perhaps seem even to him sufficient justification to invade their cherished privacy—but events, happening within the last few years have given reason to doubt their inoffensiveness, and challenged inter-

ference from outside. To prohibit strangers from entering their country is perhaps within their rights; but to enforce the principle by massacring persons shipwrecked on their shores, or to attempt—not unsuccessfully—to stop the spread of Christianity by the wholesale murder of European missionaries and native converts, is to overstep the boundary of tolerable eccentricity. It is one of the many services of Mr. Oppert's book that it goes far to prove that these departures from a neutral attitude toward outsiders were due to the Government and not to the people, who are not only naturally humane, but averse from the policy which prevents them from entering into cordial relations with the rest of the world.

This view of the natural kind-heartedness of the people and the tyranny of the Government is confirmed by the conduct (not mentioned by Mr. Oppert) of the inhabitants of Quelpart on the occasion of the wreck of the *Barbara Taylor* in 1878, who at first showed signs both of fright and hostility, but finally not only treated the shipwrecked party very well, but supplied labour to save the cargo, and kept them until a ship arrived from Japan, taking nothing in return but some Japanese umbrellas. They then burned the hull. They proved on acquaintance to be not only kind, but warm-hearted. The head local official, an old man, was much affected at their departure, saying that he had never seen foreigners before, but his feelings toward them were such that he should feel quite lonely when they were gone.

It is to be feared that the action of Western Powers with regard to the Corea has been productive of no benefit whatever either as concerns the oppressed population or the treatment luckless foreigners are likely to receive from its inhospitable Government. The expedition sent by the French Government after the murder of the missionaries gallantly sacked an unprotected town and retired; and the American frigate sent to enquire into the fate of the crew of the *General Sherman*, who had been shipwrecked and put to death by order of the Corean authorities in 1866, withdrew after receiving an impudent message. The effect has been only to confirm the Government in the belief of their invincibility and the impunity with which they may commit the most barbarous outrages. It is to be doubted whether Mr. Oppert's courageous enterprises will produce a more salutary effect.

It is Mr. Oppert's fault that we have stayed so long before coming to what is most important and original in his book, viz., the account of his own expeditions to the Corea, for, with a modesty which is unusual in travellers, especially of the pioneering kind, he has thought fit to preface his personal narrative with a careful and clearly written account of the singularly uninteresting history of the country, gathered from all available authorities, Chinese, Japanese, and European; as well as with chapters on the manners and customs of the people, their language, and the natural history, products, and manufactures of the country, thus making his book a valuable work of reference for nearly all existing information about the Corea for the last four thousand years, to which his own exploits are appended. In its earlier

chapters his book travels over much the same ground as that by the Rev. John Ross, recently reviewed in the *Academy*, which gives more ample details of some Corean customs and ceremonies and a more lengthy and detailed review of Corean history. On the other hand, Mr. Oppert's matter is arranged with greater skill, and his knowledge of the people and country is in a large measure derived from personal experience gained during his three trips to the country, during which, though not admitted to any large town, he took several long walks in the interior and visited many villages on the islands, the coast of the mainland, and on the banks of the Kang Kiang, the large river leading to the capital (Saoul) and discovered by him.

His first object in visiting the Corea was to discover and ascend this river, and to enter into communication with the authorities with a view of opening up commercial and friendly relations with the people. Although he did not succeed in finding the river on the first voyage, he landed at two places on the coast, and was received in a friendly manner, not only by the people, but by the officials, several of whom came on board his ship. His second trip was more successful, as, in spite of the dangerous character of the coast and the want of a pilot, he found the mouth of the Kang Kiang, and ascended the river to within a few miles of Saoul. The time (shortly after the murder of the French missionaries) was, however, peculiarly unfavourable for negotiations with the Government, who put Mr. Oppert off with a reference to the Emperor of China. It was during this voyage that the author for the first time became aware of the true character of the Regent, previous knowledge of which would probably have deterred him from making his plucky attempt. This voyage, however, confirmed his previous experience as to the friendly and gentle character of the people generally, and proved the sincerity and courage of the Christian converts, then undergoing fearful persecution. It was also a permanent service to navigation and geographical knowledge, and the charts compiled from the surveys made during its progress were of great use to the French admiral in his subsequent expedition before referred to.

Mr. Oppert is not profuse in his dates, but this second voyage and the French expedition both appear to have taken place in 1866. It was two years afterwards that the author undertook his third and last adventure. This was one of the most remarkable enterprises of modern times—at once romantic and grotesque, noble in intention and questionable in morality, its aim being to seize upon certain relics of an ancestor of the Regent to which he attributed superstitious importance, and the "lifting" of which was expected by a French missionary and Mr. Oppert to produce such a terrifying effect upon this unscrupulous tyrant as would make it easy to procure concessions from him for the benefit of trade and the salvation of souls. The attempt was unsuccessful, partly on account of the unexpected strength of the place where the relics were kept. Mr. Oppert does not say of what these relics consisted, but it is evidently this expedition which is alluded to

by Mr. Ross as that "of a young American eager to immortalise his name as a body-lifter." Mr. Ross adds that "a French priest told him [the young American] he could hold the body of a dead king to any ransom." It is plain from Mr. Oppert's book that this latter sentence at least does him injustice.

Altogether, Mr. Oppert may be said to have rendered very valuable service in tearing away part of the veil that has hitherto shrouded the "Forbidden Land." It is good to know that the people are very honest, good-natured, and intelligent, and that both the desire for seclusion from the rest of the world, and the atrocities committed in their country, are not agreeable to the people, who would be only too glad to be freed from an abominable tyrant who, among other iniquities, enforces the currency of debased money by decapitating those who will not pass it. The picture given of the country is very interesting, and not a little melancholy. In it religion and its priests seem to have become so degraded as to be the laughing-stock of the community. The bonzes rank with the lowest castes, and old idols are kicked about in sport. Neither arts nor literature flourish, and the height of learning is a knowledge of Chinese; the architecture is mean, agriculture at the lowest ebb, and the manufactures rude. With regard to what has been by some supposed to be its specialty, the production of pottery and porcelain, the book contains a sentence which is enough to make the late M. Albert Jacquemart turn in his grave. "The manufacture of china," says Mr. Oppert, "is unknown, and the native earthen and crockery ware is of the very commonest description." This is, however, very much the same conclusion as that to which Mr. Franks had arrived some time ago. It is also somewhat surprising to learn that the Koreans do not care much for tea, or take pains in cultivating the plant, which grows wild. Korean industry excels only in two things—the manufacture of paper and the plaiting of wire and straw for hats.

COSMO MONKHOUSE.

The Village of Palaces; or, Chronicles of Chelsea. By the Rev. A. G. L'Estrange. In 2 vols. (London: Hurst & Blackett.)

CHELSEA is one of the most interesting and distinctive in character of the various suburbs of London, and it deserves a fresh historian. Faulkner's work still remains the chief authority, but the appearance of the place has greatly changed since 1810, when it was published, and few can be expected to read its rather heavy pages for entertainment. Mr. L'Estrange is evidently interested in his subject, and has produced a couple of very readable volumes, in which a large number of distinguished persons are made to pass before our eyes; but he has not superseded Faulkner. The reader's faith in the author's trustworthiness is likely to be rather shaken on the threshold, when he reads at p. 1 the following explanation of the name Chelsea:—"From *chesel*, gravel, and *ea*, a strand or bank. It was also called *Cealchylle*." Further on, p. 3, it is written "the manor of Chelsith," and on p. 91, "More's pore house at Chelchith." No attempt is made to ex-

plain these discrepancies of spelling, and we are left to make the latter form agree with the former explanation as best we can. In truth, Chelsea is one of the hythes, or havens, which are so common on the banks of the Thames—as Rotherhithe in the east and Lambhithe (the early form of Lambeth) in the west. It is worthy of note that, although the final syllables of the neighbouring places, Chelsea and Battersea, are identical, they appear to have had a totally different origin.

Whether Chelsea ever deserved the name of the "Village of Palaces" we are not prepared to say, but, without doubt, it is peculiarly rich in the possession of fine houses both among the old mansions that still remain to tell of former glories and the new ones that have lately been erected upon the Embankment. Now that all divisional marks of the suburbs have been destroyed it is not easy to realise what these places were really like when they were actual villages. Yet this abolition of landmarks does not date back many years, for the stage coach from London to Chelsea continued to be an institution even into the second quarter of the present century, and at the end of the last century it was not unusual for the coach to be stopped by highwaymen in the King's Road. The history of Chelsea commences with the residence of Sir Thomas More, and he it was who first attracted public attention to the place. His house has long since passed away, although the garden wall still remains, and the parish church continues to bear record of the most eminent among its worshippers. He built the chapel in the south aisle, and the epitaph which he wrote upon himself and his wives is placed in the chancel near where he sat among the choristers.

Henry VIII. often visited More as a friend and seems to have taken a liking for the place, for after the Chancellor's execution he built himself a palace on the site of Cheyne Walk. This was subsequently the jointure house of Katherine Parr, and after her many distinguished persons lived in it. The Princess Elizabeth, Lady Jane Grey, the Duchess of Northumberland (mother of Robert Dudley), and Anne of Cleves were all at different times inmates of Chelsea Palace. Elizabeth's association with Chelsea is still commemorated by the sign of the public-house which forms the terminus of the Islington and Brompton omnibuses. Burghley lived at Brompton Hall, and report says that on one of Elizabeth's visits she and her Minister were walking in the grounds when a shower came on and they took shelter under the boughs of a mighty elm, which was ever after styled the "Queen's Elm." At all events the tree appears to be mentioned by that name in the parish books of Chelsea in 1586, and was made into an arbour at the expense of the parish. The tree has long since passed away, but the site will long be remembered.

Charles I. bought Salisbury House from Lord Middlesex and gave it to the Duke of Buckingham. After the Duke's assassination it came into the possession of his daughter and her husband—the Duke and Duchess of Richmond and Lennox. The King is said to have spent some of his few happy days when he went in his barge to visit these friends. One of Charles's worthiest courtiers, Sir

Charles Cavendish (afterwards Duke of Newcastle), was connected with Chelsea by the marriage of his daughter Lady Jane to Charles Cheyne (afterwards Lord Cheyne and Viscount Newhaven), who purchased Chelsea Palace and manor. The Duke and his magnificent and fantastic Duchess must often have visited their daughter in her new home.

Sir John Danvers, an early inhabitant of Chelsea, whose name survives in Danvers Street, married Mrs. Herbert, the mother of Lord Herbert of Cherbury and George Herbert the poet. The lady was much the senior of her second husband, and when Dr. Donne preached her funeral sermon in Chelsea Church he alluded to this disparity of years in a very ingenious manner.

"As the well tuning an instrument makes higher and lower strings of one sound, so the inequality of their years was thus reduced to an evenness that she had a cheerfulness agreeable to his youth, and he a sober staidness conformable to her more years; so that I would not consider her as so much more than forty, nor him as so much less than thirty at that time. But as their persons were made one and their fortunes made one by marriage, so I would put their years into one number, and, finding a sixty between them, think them thirty apiece, for as twins of one born they lived."

So many celebrities have lived at Chelsea that Mr. L'Estrange has ample materials for interesting chapters devoted to the sayings and doings of such different characters as the fascinating Hortensia Mancini (Mazarin's niece), the eccentric Digby second Earl of Bristol, the serious Robert Boyle, Walpole the Minister, Sloane the collector, and Smollett the author.

After the persons come the places, and the most important of these is Chelsea College. The history of the changes which resulted in the foundation of an hospital for decayed soldiers on the site of a college for polemical divines forms an interesting chapter of the book. James I. was so much interested in the original college that he was induced to suggest that the City of London should give money toward the furtherance of so good a work. It did not prosper, however, for any length of time, and in 1654 the house and grounds were taken possession of for the nation. During the war with the Dutch, after the Restoration, the place was used for the reception of prisoners of war, and soon afterwards the King presented it to the Royal Society, who did not know what to do with the gift. Mr. L'Estrange does not mention a letter of Evelyn to Lord Ossory, which is calendared in the Sixth Report of the Historical Manuscripts Commission, and from which it appears that Evelyn urged Lord Ossory to buy the college as an excellent investment. In the end Charles bought back his own gift from the Royal Society, and founded the Royal Hospital "for emerited soldiers." Nell Gwyn has been popularly credited with the suggestion, but there seems reason to believe that the honour must be pretty equally divided between John Evelyn and Sir Stephen Fox.

The "physic garden" of the Company of Apothecaries was formed soon after the Fire of London, and many celebrated botanists have been connected with it. Hans Sloane was an early student, and Joseph Banks commenced

his botanical researches in these gardens. When Linnaeus came to England he only visited two gardens—this one, then superintended by Philip Miller, and that at Oxford, which had not long before been founded by Dr. William Sherard. Very different gardens were those attached to such places of entertainment as the "World's End" and the "Star and Garter," or the more renowned "Ranelagh." The last-named gardens flourished from 1742 to 1803, and the usual notification at the end of the advertisements of performances shows that a visit to Ranelagh was not altogether without danger in the "good old times":—"There will be a proper patrol, well armed, continually passing between the Rooms and Hyde Park Corner, and good guard at back of Chelsea College."

No account of Chelsea would be perfect without some notice of the two productions—china and buns—for which it was once famous.

The Chelsea China Manufactory was established about the year 1745, but, although much beautiful porcelain was produced, the establishment was only continued for a few years. The business was purchased by Mr. W. Duesbury, of Derby, who transferred it to that town, and in 1784 the buildings were pulled down.

The buns had a longer reign. They are mentioned by Swift, and continued to be popular until the "Original Old Chelsea Bun House," kept by a succession of members of the family of Hand, was pulled down in 1839. George II. and Queen Caroline, George III. and Queen Charlotte, often visited the bun house, and led the fashion which was followed by their subjects.

There are two plans upon which the history of any district can be written—viz., the topographical and the anecdotal. Mr. L'Estrange has chosen the latter, and has produced a book which can be read through with interest, but which will hardly be referred to as an authority.

HENRY B. WHEATLEY.

CURRENT LITERATURE.

Twenty-one Days in India: being the Tour of Sir Ali Baba, K.C.B. By G. Aberigh-Mackay. (Allen.) This book deserves to be read after a study of Mr. Prinsep's picture in the Royal Academy. It consists of a series of sketches of Indian life and character, from the Viceroy down to the cultivator, done with a freedom of pencil that Mr. Prinsep might well envy. The author, having won his reputation under a pseudonym, now discloses a name which is, we believe, well known in the Education Department in Central India. For Anglo-Indians, his humour and his satire possess a rare charm; and he indulges in a wealth of literary allusions which all readers of culture should appreciate. Whether the ordinary public will recognise his merits we are not so sure. The truth is that Mr. Aberigh-Mackay's wit has contributed in some slight degree to the discredit of a system which was beginning to infect our entire Indian administration. The new-fangled doctrines of imperialism, though sufficiently mischievous in England, here provided their own antidote. In India the same spirit was far more widespread, and far more corrupting. Officialism rampant, disguised under the name of patriotism, had succeeded in evolving a reckless disregard for all sound principles of government among the great majority of Englishmen in India, and

especially in the society of Simla; on the other hand, native public opinion, such as it is, was rising in rebellion against this new form of mal-administration. The result of the general election, the dethronement of Lord Lytton, the *fiasco* in Afghanistan, the budget disclosures—all these have combined to exorcise (we hope for ever) the spirit of imperialism. But something must be allowed to the power of ridicule and the pen of Mr. Aberigh-Mackay.

The Afghan War. Gough's Action at Futtahabad. By the Rev. C. Swinnerton. (Allen.) We have the honour ourselves to know a Bengal chaplain who rallied a British regiment in the crisis of the most doubtful battle we have ever fought in India. Mr. Swinnerton has no such heroic tale to tell. And in good sooth we cannot but think that he might have been better employed than in coming forward as the amateur chronicler of an engagement of little political importance, which, to civilian eyes, looks not unlike a massacre. The Afghans at Futtahabad fought well, but they had no chance. They left four hundred dead on the field; we lost just six men and six horses killed. This is not the kind of fighting that need divert a chaplain from his duties, or stir any great enthusiasm in the breasts of those who sit at home at ease. It is difficult to believe that the survivors will in future years rouse them at the name of Futtahabad.

The Munster Circuit: Tales, Trials, and Traditions. By J. R. O'Flanagan. (Sampson Low and Co.) We incline to suspect that some of the stories told in this volume have already appeared in the same author's *Irish Bar*, which was favourably noticed in the ACADEMY about a year ago. In Ireland, the bar contributes much more largely both to history and to society than it does in England. As might be proved by contemporary instances, the Irish nature is peculiarly adapted to shine in forensic disputation; and few other careers have been open to Irish gentlemen than that of the law. Hence it is that Mr. O'Flanagan's books appear to cover so wide a field. The men of whom he discourses were for the most part the leading Irishmen of their day, whose names are not unknown even in England. Mr. O'Flanagan is a master of the most pleasant, if not the most valuable, duty of a bookmaker. He can string together personal details with a careless art that makes his characters seem to live; and he can pour forth anecdotes which read almost as well as if they were spoken. As an effective picture of various phases of Irish society we can recommend this volume no less warmly than its predecessor.

The Trade of the World: Our Present System of Commerce examined. By Robert G. Webster. (David Bogue.) It is evident that Mr. Webster has travelled much, and also exercised a good deal of thought about his subject. But we cannot honestly pay him any further compliment. His book is written with a single motive—to advocate reciprocity, as it is called, which means the imposition of retaliating tariffs in order to induce foreign countries to reduce their duties on our own exports. No argument is necessary to refute this proposal, for it is not itself based upon argument, but upon a curious misapprehension of the terms of the discussion. Reciprocity has already become a half-forgotten heresy, like "soft money" in the United States. With the beginning of a general revival in trade we may hope to hear less and less of such crotchets. And yet we feel no unkindness towards Mr. Webster. He has collected his facts, and he tells his stories, in the good old-fashioned manner, which always disarms criticism. His information, gathered both from journeys and from books, is his own. His mistiness of exposition is common to his class.

The Races of Afghanistan: being a Brief Account of the Principal Nations Inhabiting that Country. By Surgeon-Major H. W. Bellew, C.S.I. (Calcutta: Thacker, Spink & Co.; London: Trübner.) Rarely has expectation been more disappointed than in the present volume, which has been prematurely brought out only to find its market already fallen away. The author confesses that he had no time or health to do more than put together a few notes under circumstances most adverse to literary composition. So far as these notes are the result of personal experience they are interesting and valuable; but, unfortunately, the greater part of the volume is composed of ethnical speculation, which certainly can be carried on more favourably in England than in camp at Cabul. Dr. Bellew possesses not a few qualifications for his task. Perhaps no English officer has travelled farther and more frequently across the frontier. His profession ought to have taught him the rules of scientific observation; while he has no false modesty about appearing in print. He has recently been employed upon political (i.e., diplomatic) duty in Afghanistan, and is therefore presumably acquainted with some of the hidden causes of events. And yet most readers will be of opinion that the service must be in a bad way that cannot find a better representative penman. As regards the general history of Afghanistan, and British relations with the rulers of that country, Dr. Bellew has nothing very novel to say, beyond indiscriminate abuse of the Afghan character, which is apparently (or was until very recently) the fashion in Anglo-Indian official circles. We should like to know what authority there is for the statement (p. 12) that "the Durrani race has owed the continuance of his [sic] power and authority to our consistent support"; or that "his friendship has at last been discovered to the world as false and treacherous from beginning to end." Was Dost Muhammad "consistently supported" by us, and was he ever "false and treacherous"? Dr. Bellew comments upon the highly favourable report of Afghan character which no less a man than Mountstuart Elphinstone brought back in 1809; but of course Elphinstone was wrong, and our present race of "politicals" are right. So much for Dr. Bellew's impartiality on a subject where information is open to all. But he chiefly prides himself on having added "much that is entirely new" to our knowledge of the races of Afghanistan. It would have been more to the point if he had added anything that is entirely true. His knowledge of the frontier saves him, indeed, from some of the absurd blunders which may be found in works of some authority written in England; but, in compensation, he provides us with a whole stock of wild theories of his own, which we believe to be "entirely new." The nonsense about the lost tribes is, of course, repeated; but Dr. Bellew supplements it by the fatal admission that the physiognomic resemblance to the Jewish type is even more pronounced in the Rajput of India than it is in the Afghan. Then we are introduced to Herodotus, who has much to answer for in his imaginative account of the Far East. The father of history mentions several times the name of a country on the Indian frontier called Paktiuke, which naturally suggests the national names of Pathan and Pakhtu. This much we concede to Dr. Bellew, but this much is not new. Dr. Bellew goes on to trace the same name in the modern Poictiers and the ancient Picts of our own islands. The Scots, so closely associated in our boyish memory with the Picts, are of course the Scythians; while the Cambrians are identified with the Kambari of Beluchistan. Herodotus also mentions a nation called the Aparytae, though in a totally different connexion, whom "it is not difficult to

trace" in the Afridis of the Khyber Pass. It would be unkind to follow Dr. Bellew any farther in his identifications. We could pardon a good deal of wild guessing if only he supplied us with any fresh details concerning the ethnical appearance, the dialects, or the customs of the Afghan races. He does indeed tell us some good legends current concerning their origin; but when we look for facts he merely says, "In personal appearance they [the Waziris] are very different from other Pathan tribes, and retain many customs peculiar to themselves."

Our Imperial Resources. By Alexander Robertson. (Dundee: Mathew.) Mr. Robertson deserves all praise for the industry with which he has ransacked Blue-books in order to acquire the miscellaneous information here collected. Few persons possess any accurate knowledge concerning the comparative statistics of our great empire. The newspapers occasionally give us isolated sets of figures, which some of us read but none can properly appreciate. The Scotch mind revels in statistics, and derives a strange pleasure from percentages of increase and averages per head of population. The contents of this volume were originally delivered in the form of speeches at Dundee, and we think that the audience, no less than the speaker, are to be congratulated on their patience. Two speeches deal with England and the colonies proper, and two with India, the latter being assigned to external and internal relations respectively. Those who have made these subjects their special study might easily find mistakes in detail, but it is more agreeable to bear witness to the general faithfulness of the picture drawn and to the honesty of the conclusions.

Introduction to Roman Law. By Prof. William A. Hunter. (Maxwell.) The growing weight assigned to Roman law in all our legal examinations has led to the production of not a few cram-books which have no higher aim than to help a lazy pupil. The object of Prof. Hunter in issuing this volume is very different. His great work on *Roman Law, in the Order of a Code*, almost marked an epoch in the English study of the subject. What he then did for advanced students he has now done for those who will never aspire to more than an elementary knowledge. The Appendix of questions at the end is the only indication that he has not left examinations altogether out of view. For the rest, the principles of Roman law, mainly following the Institutes of Justinian, are expounded in an orderly and intelligible manner, with due regard to the two considerations that make Roman law so valuable a subject of education—the history of its development, and the corresponding rules of English jurisprudence. Great is the difference between manuals written by a competent and an incompetent hand.

Der Rastatter Congress und die zweite Coalition. Vornehmlich nach ungedruckten archivalischen Urkunden von Hermann Hüffer. Erster Theil. (Bonn: Marcus.) The late lamented Lanfrey used to say that he could knock off a volume of his History, containing a period of from two to three years, in about a twelvemonth. Hüffer's new volume, which begins with the opening of the Congress of Rastatt in November 1797 and ends with the landing of Bonaparte in Egypt, July 1, 1798, is the result, as he explains, of ten years' labour in the archives of Paris, London, Berlin, Vienna, Florence, &c., &c., and critical study of the printed literature of the subject. Hüffer has no particular pretensions as a literary artist, but he has the narrative faculty so rare with Germans, is never dull or too minute, is impartial, and, what is surprising, has prefixed to his volume a proper set of analytical and chronological tables of contents. The six chapters which describe

the Congress of Rastatt, and the accessory Conferences of Selz, supersede all previous accounts of those transactions, and they include many interesting pictures of diplomatists and diplomatic procedure. The historical chapters relate to the French proceedings with regard to the Batavian, Cisalpine, Roman, and Swiss Republics; Bernadotte's mission to Vienna, and Bonaparte's Egyptian expedition. Without a knowledge of the details no adequate notion can be formed of the monstrosity of the usurpations, revolutions, and robberies committed or instigated by the Directory in the affiliated territories. Hüffer does not make reflections, or he would, perhaps, have insisted on the falsity of the assertion so often made, that the conduct of the French in their dealings with other countries during the Consulate and Empire was a new departure of Bonaparte. The Corsican may have invented some additional refinements of international insolence, brutality, and theft, to say nothing of murder; but he took his system from the Directory, whose rascally treatment of Pius VI. and other iniquities carefully described by Hüffer were hardly surpassed by their pupil's finest performances in this line.

NOTES AND NEWS.

THE Council of the Camden Society have accepted an offer from Prof. Pauli to edit two volumes of the Wardrobe Accounts of Henry Earl of Derby, afterwards King Henry IV., kept when he was journeying in Prussia, Lithuania, and other parts of Eastern Europe.

A NEW novel entitled *Foretalled*, by Miss M. Betham-Edwards, will be shortly published in two volumes by Messrs. Hurst and Blackett.

It has been decided by the General Committee of the King's College Lectures to Ladies to take preliminary steps for the foundation of a permanent college for the higher education of women, under the management of an association to be formed in accordance with the Companies Act, and continuing to work in union with the staff of King's College. The attendance at the classes, which now include nearly all branches of academic education, has been very large, and maintained with little variation during the last three years, the number of entries still averaging upwards of 500 in each term. It is therefore proposed to establish the institution on the basis of a regular corporation. A public meeting will be held with that object in the ensuing autumn, and it is hoped that suitable premises for the college will be built or purchased next year, in or near Kensington, where the classes are now conducted.

MR. JOHN FISKE will repeat his three lectures on "The Evolution of American Political Ideas," recently delivered at the Royal Institution, at the South Place Institute on the 22nd, 24th, and 25th inst., at 8 p.m.

THE Catalogue of works relating to Bibliography which has recently been issued by Mr. Gee, of High Street, Oxford, shows that his stock comprises many valuable and curious book treasures. The list of sale-catalogues is especially worthy of notice. It is not often that a second-hand bookseller succeeds in collecting so many volumes on an especial branch of knowledge.

A NEW and enlarged edition of *Clark's Guide to Dunfermline* is about to be published by the old and well-known firm of William Clark and Son, printers and lithographers there. Since the last edition was exhausted several years ago, much regret has been felt by the public at the non-existence of a proper guide-book to a town possessing so much historical and antiquarian interest. The scope of the book has been considerably extended; and the contents

will be profusely illustrated with full-page and other engravings, in addition to a comprehensive Index and a reference map of the town from the Ordnance Survey. From the fact that the publishers now hold the copyright of *The Stranger's Companion* published by the late firm of J. Miller and Son, as well as that of the late Dr. Chalmers' expensively illustrated *History of Dunfermline*, originally published by Blackwood, they are in a position to produce a guide-book to the ancient burgh in a manner that it would be difficult to rival.

ALMOST the whole of the second part of the third volume of Prof. Blass's work on *Attic Eloquence* is now in type. It deals with Aeschines, Hyperides, Dinarchus, and the close of Athenian eloquence.

THE second annual meeting of the Folk-Lore Society will be held on Wednesday, June 23, the Right Hon. the Earl Beauchamp, F.S.A., the new president of the society, in the chair. The council propose that for the future three vice-presidents be appointed, and Dr. Tylor, Mr. Ralston, and Mr. Coote will be nominated for the ensuing year. A motion will be submitted to the meeting for the appointment of a committee to consider and report to the council as to the best means of collecting and arranging English proverbs, and members willing to serve on this committee (either in town or country) are requested to send in their names at once to the hon. secretary.

A NEW story in verse, by Col. Colomb, called *The Cardinal Archbishop*, is in the press, and will be issued by Messrs. C. Kegan Paul and Co.

THE same publishers are also about to issue the translation of the famous *Chanson de Roland*, by Mr. John O'Hagan, Q.C., which we have already mentioned. The book will be interesting as the first attempt to give a complete metrical rendering of the poem into English.

THE "Institut de Droit International," a body consisting of a fixed number of members and associates elected by ballot from among the principal representatives of the study of international law in Europe and America, will hold its annual meeting in the second week of September next at Oxford. It has met since its foundation in 1873 at Geneva, the Hague, Zürich, Paris, and Brussels, under the presidency of MM. Mancini, Bluntschli, Parieu, and Rolin-Jacquemyns respectively. The *Revue de Droit International* is the authorised organ of the Institut, which also publishes an *Annuaire* containing much that is of interest to statesmen and diplomatists.

MESSRS. EYRE AND SPOTTISWOODE are on the point of re-issuing their *Variorum Bible*, edited by Messrs. Cheyne, Driver, Clarke, Goodwin, and Sanday, in a new form, with the old marginal references, and with the Queen's Printers' *Aids to the Student of the Holy Bible*, by Messrs. Leathes, Lumby, Madden, Sayce, Tristram, Cheyne, &c. As considerable care has been given to the correction and completion of the critical matter, we trust the scholarly reader will not be repelled by the slightly sensational title, *The Sunday School Centenary, or Variorum Teacher's Bible*. The price of the book brings it within the reach of all persons. A cheap "Centenary" edition of the *Aids* is also being published in a separate form; and of the well-known *Teacher's Bible*, by the same firm, which includes the *Aids*.

MESSRS. SCRIBNER have purchased for the American book market an edition of Mr. Francis George Heath's *Sylvan Spring*, which will shortly be published by them in New York.

THE third centenary of the death of Camoens was not only celebrated with due solemnity in Lisbon, where the name of the great Portuguese discoverer, Vasco de Gama, was united with

that of the poet to receive the homage of posterity, but it was also made the occasion of a pleasant *fête* in Paris, which was got up by the International Literary Association, the chief Portuguese residents in Paris taking part in it.

MESSRS. W. SWAN SONNENSCHNEID AND ALLEN have just issued a second edition, reduced in price, of Capt. H. M. Hozier's edition of Prof. Müller's *Life of Field-Marshal Count Moltke*.

The final prospectus of the Ligue de l'Enseignement for their Congress at Brussels has recently been issued. The Congress will meet from the 22nd to the 29th inst. Papers can be read, or addresses delivered, in any language, and the members of the committee undertake to translate the substance of such papers or addresses into French for the benefit of those attending. The Congress is composed of effective and honorary members. The subscription for effective members is twenty francs, and includes a copy of all the publications of the Congress. Certificated teachers and some others are accepted at a lower scale, their subscription being ten francs; the subscriptions for honorary members is five francs. Persons wishing to take part in the proceedings of the Congress should apply to M. Buis, the Sheriff of Brussels. Mr. Trueman Wood, the secretary of the Society of Arts, has undertaken to act as honorary secretary for Great Britain, and he will be happy to send a prospectus to any person desiring one.

MR. HORACE COX will shortly publish, from the *Law Times* office, a work entitled *An Anecdotal History of the British Parliament, from the Earliest Period to the Present Time*, by George Henry Jennings. In addition to the historical portion of the subject, the work will comprise notices of the most eminent men who have figured in our Parliamentary annals, with examples of their oratory. It will also include particulars as to the principal changes in Parliamentary rule and usage, election details, &c., brought down to the present session. As one object of the book is to supply the want of a convenient work of reference on such subjects, it will be accompanied by lists of the Parliaments of England, Speakers of the House of Commons, Prime Ministers, &c., and a full Index to the principal names, events, and phrases included in the work.

THE following gentlemen have been appointed to science lectureships at Trinity College, London:—The Rev. Geo. Henslow, M.A., F.L.S., F.G.S., to be Lecturer in Botany; Mr. R. H. Scanes Spicer, B.Sc., F.R.M.S., to be Lecturer in Chemistry; Mr. G. W. Bloxam, M.A., F.L.S., F.Z.S., to be Lecturer in Zoology.

A CORRESPONDENT writes:—

"The Wilson Hall at the University of Melbourne is approaching completion. The experiment of opening colleges in connexion with the Melbourne University promises to be a great success. Trinity College (the Church of England College) is already quite full; and the Ormond College—which was founded and endowed by a wealthy squatter, Mr. Francis Ormond, for the Presbyterian body—promises to be not less a success in its way. The senate have requested the council (who are the governing body of the university) to provide for the regular teaching of French and German as a part of the university course. It is probable that a Bill will be brought in this session for the reform of the university, on the council of which, at the present time, the teaching body is wholly unrepresented. Prof. Charles H. Pearson was re-elected for Castlemaine on the Liberal side. It seems a great pity that he should not be connected with any of the Australian universities, but party spirit runs so high that it is questionable whether any university would have the courage to elect him."

At the annual meeting of the Swedenborg Society it was announced that the translation of Mr. Pandurang's *Reflections* into the Maráthi

language is nearly completed, and that *The New Jerusalem and its Heavenly Doctrine* is to be translated into Greek. The four works which have already been translated into Italian are about to be offered to the libraries of Italy.

DURING the present month the publication will be commenced at Wellington, New Zealand, of a high-class monthly magazine under the title of the *New Zealand Review*.

PROF. MATHYS LUSSY, of Stanz in Unterwalden, has received from the French Academy the first prize of 3,000 frs. for his historical work on musical notation, *Geschichte der musikalischen Notenschrift*. Herr Lussy has been a highly esteemed teacher in Paris for more than thirty years, and one of his early works on musical theory, which has passed through many editions, has been translated into English. A second work, on musical expression, received the first (and only) prize bestowed upon the French department in the Vienna International Exhibition of 1873.

LAST Wednesday, several ladies and gentlemen interested in Egyptology held a private meeting in the Council Room of University College, London, to consider the desirability of promoting research in Egypt. Among those present were Sir Erasmus Wilson, Mr. Villiers Stuart, M.P., Miss Amelia B. Edwards, Mr. Talfourd Ely, Mr. C. T. Newton, Mr. Stuart Poole, M. Naville, Profs. Colvin, Flower, and Ramsay, Sir A. Borthwick, Mr. W. Fowler, the Rev. H. G. Tomkins, and others. Expressions of sympathy were received from Profs. Owen and Sayce, Sir Philip Owen, and Dr. Hermann Adler, and it was ultimately agreed to form a committee in furtherance of the views of the meeting.

A NEW illustrated weekly journal, entitled *The Green Room*, devoted to music and the drama, is announced to appear next week. The journal, which is intended to be of a high-class character, will be illustrated by G. Pilotell.

THE *Times* states that a gentleman in the North of Ireland has lately obtained a "frank" of an earlier date than any hitherto known to exist. It is that of Thurloe, the well-known Secretary of State under Oliver Cromwell, and is dated in 1658. The letter which the "frank" covers is addressed to Henry Cromwell, and would appear to have been written only a few days before the death of the Protector.

MR. ELLIOT STOCK is about to issue *Our Ancient Monuments and the Land around them*, an antiquarian and historical account of the antiquities which it is proposed to preserve by the Ancient Monuments Bill now before Parliament. The work will be illustrated, and will have an Introduction by Sir John Lubbock, Bart., M.P.

THE forthcoming number of the *Modern Review* will open with the first of two articles on "Critical Method," with special reference, of course, to modern modes of Biblical criticism, from the hand of Prof. Kuenen. Dr. Réville, of the Collège de France, and Dr. Rauvenhoff, of Leiden, will discuss from opposite standpoints the action of the French Government against the Jesuits. Mr. Edward Clodd is also a contributor to this number.

MISS AMELIA B. EDWARDS writes:—

"Will you kindly grant me space to say—for perhaps the tenth time within the last twenty years—that my name is neither Betham, nor Betham-Edwards; and that I am not related to the Betham family?"

"It would greatly aid in establishing the necessary distinction between my cousin, Miss Betham-Edwards, and myself if contemporary reviewers observed the hyphen which connects Miss Betham-Edwards's two surnames. This they rarely do. In an article, for instance, which appears in the current number of the ACADEMY, Miss Betham-

Edwards is repeatedly styled Miss Edwards; whereas I believe I am the only writer to whom that name can be correctly applied.

"Finally, may I be permitted to point out that Miss Betham-Edwards is the author of *Kitty, Felicia, John and I, The Sylvestres, Western France, &c., &c.*; and that the writer of *Barbara's History, Debenham's Vow, Untrodden Peaks, A Thousand Miles up the Nile, Lord Brackenbury, and other books which I need not here enumerate, is*

"AMELIA B. (BLANDFORD) EDWARDS?"

OBITUARY.

MR. WILLIAM WATKIN EDWARD WYNNE, one of the most enthusiastic antiquaries that the Principality has ever produced, died at Peniarth on the 9th inst., aged seventy-nine. He was a frequent contributor to the *Archaeologia Cambrensis* and other periodicals chiefly relating to Wales, and enriched with his notes and additions most of the best modern books that have been published within recent times in connexion with his native land. Among the volumes which he printed at his own private press was a pedigree of the family of Wynne of Peniarth. His extensive collection of MSS., historical, legal, and ecclesiastical, with many volumes of Welsh genealogies, are briefly described by Mr. Horwood in the second Report of the Historical MSS. Commission; they are well worthy of a more detailed notice. Mr. Wynne was educated at Westminster School and at Oxford. From 1852 to 1865 he represented the shire of Merioneth.

THE death is likewise announced of the Rev. Dr. Esdaile, author of *Natural History, by a Rural D.D., &c.*; and of Dr. Philipp Feust, one of the foremost journalists in South Germany.

HISTORICAL LITERATURE IN FRANCE.

THE Romans are, perhaps, the only people who have hitherto traversed in its entirety that cycle through which nations, equally with individuals, seem destined to pass, with its varying successions of birth, growth, maturity, decay, and death. Hence, from time immemorial, their history has rivetted in a special fashion the attention of historical enquirers among the sons of Roman civilisation in Western Europe. The spectacle, at once rich in contrast yet logically sequent, presented by Roman history, the marvellous ruin which followed a splendour so amazing, the numerous lessons to be gleaned from an examination into the causes of its prosperity and fall, have called forth works numerous as "the sand by the sea-shore." But hitherto, in France at least, the tendency of these works has been almost exclusively theoretical and speculative. From the *Decades* of Machiavelli, the founder of this school, up to the recent works of M. Fustel de Coulanges, passing by intermediate stages which, for the most part, are masterpieces (as the *Remarques* of St.-Évremond, the *Discours* of Bossuet, the *Grandeur et Décadence des Romains* of Montesquieu), the labour of two centuries has been applied to elucidating by intuition the causes of the unparalleled successes and irreparable reverses of the Roman power. All these works, aiming rather at the discovery of abstruse principles than at the verification of facts, possess no other than a subjective value. The history is worth neither more nor less than the historian. Whether or no the she-wolf suckled the children of Mars and Rea Sylvia, or whether Numa Pompilius consulted the nymph Egeria or no, what mattered it to enquirers who, in these facts, sought merely a theme for dissertations on the rise of empires by war, and on their development under the influence of religion and law?

That great reform of method which, since the beginning of this century, has from philosophy

gradually extended its influence to every branch of intellectual activity; that reform which, before any conclusion can be drawn, insists upon the premisses being established by a minute and careful analysis of facts—this method of investigation has revolutionised the study of Roman history. Timely discoveries, analogous to those of Pompeii and Herculaneum, have given a stimulus to archaeological research and to the study of things and facts in preference to abstract dissertations on ideas and theories. To-day a silent but ceaseless activity, the rise of which must incontestably be traced to the bold theories of certain German writers, is visible in every branch of Roman historical and archaeological studies.

Monographs and essays on isolated points abound, and throw light one by one on the obscurest points of ancient history. The veil which the abundant eloquence of Latin historians has thrown over the truth, and which the clever deductions of modern political expositors have tended to thicken, is little by little being removed.

If the work as a whole is not finished it is in progress, and is even so far advanced that the time seems to have arrived when a man who should happen to be master of the many diverse branches of knowledge necessary might hope to harmonise the whole in one canvas.

Such a task was attempted several years ago by a writer whose exalted political position gave him unusual facilities for uniting in himself a vast amount of different kinds of knowledge. M. V. Duruy, then Minister of Public Instruction, wrote a History of the Romans. The work, notwithstanding its omissions and defects, was nevertheless well received by the general reading public. Since that time events have, in France, transferred power to other hands, and have afforded to the fallen Minister an opportunity of returning to the task of the scholar-Minister. Like those Romans of old whose story he narrates, he has found in study the pleasures and repose which the *forum* denied him.

A new edition of the *Histoire des Romains* is at this moment in course of publication (Hachette), and has already reached the age of Caesar. One may say that M. Duruy is giving to the public a new book, as many different works, which in the lapse of time between the two editions have appeared on one special point or another, have been consulted, sifted, and utilised. The great critical movement of which we were speaking just now makes its animating presence felt in this work. An incisive and clear style, possessing point and vigour if it is lacking in power and grandeur, enhances the merit of so much erudition. It is certainly one of those works which would almost seem beyond the strength of one single mortal. If one is still obliged to regret a few errors of detail; if one perceives, though at rare intervals, a flickering spark, as it were, of the author's former political passions; if the historian of Caesar remembers for a moment that he, too, has been the Minister of a man who wished to be Caesar; if one is obliged to lament the absence in some of the historian's judgments of a just severity; with what grace can these blemishes be urged against an author who occupies his leisure hours with so noble a task? Whatever credit M. Duruy may claim for his efforts to bring the work up to the standard of modern critical science, we must not lose sight of the invaluable assistance he has received from his publishers. The firm of Hachette has in this work followed out a method of illustration which of itself alone doubles the historical value of the book. Engravings scattered in profusion throughout the pages of this magnificent work serve the author as authorities at every step. The illustrations explain the pages of the historian. Maps and

plans, works of art, views of monuments, ruins restored, medals and coins—in short, the everyday life of the ancients lives again in all its varied manifestations. When one reflects on the potent aid which ancient history has received from the studies of epigraphy and archaeology, one cannot help feeling that a similar mode of illustration will in future be an absolute necessity for any work on ancient history which is to be properly understood.

Rome is still the theme in Gen. Favé's book: *L'ancienne Rome: sa Grandeur et sa Décadence expliquées par les Transformations de ses Institutions* (Hachette). But this work, although it is also a complete treatise on Roman history, differs totally from that of M. Duruy. The spirit in which it is written is quite opposite, and is precisely the political and subjective one mentioned by me at the beginning of this letter. The very title, which seems copied from that chosen by Montesquieu, explains clearly enough the author's point of view. It might have chosen for a motto that phrase of Polybius on the battle of Cannæ: "Rome triumphed by virtue of her institutions." It must not be imagined, however, that, in this closely packed work, Gen. Favé has contented himself with simply reproducing the work of his predecessors, and with bringing it up to the level of modern research. The historian in writing these pages has evidently not been actuated by a mere love of historical science; he has written, not *ad narrandum*, but *ad demonstrandum*. What he, a soldier, has sought to show is the fact that the vigour of its military institutions is an infallible index of the vitality of a great nation. This point of view, which is true in the history of all nations, has a peculiar fitness when applied to Roman history. It has been remarked that Rome owed her greatness to two causes—to her military institutions and to her system of jurisprudence. Now, while not long since M. Fustel de Coulanges laid bare, in his *Cité antique*, the foundations of Roman jurisprudence, Gen. Favé has taken upon himself the task of studying the military institutions of the conquerors of the world. Gifted with a less keen historical insight, or with one at least less apparent, with ideas less original and perhaps also less boldly speculative, in a style more massive than brilliant, Gen. Favé has written a book which, though it cannot aspire to the same rank as that in which are to be found the works of his illustrious predecessors, may, in some points at least, be said to complement their labours.

The history of the Middle Ages does not offer to the political historian the same points of interest as that of antiquity. Disorder, confusion, and disorganisation are to be found instead of unity in social organisation and political development. Hence the historian has chosen to work by monographs, and has sought to throw light on special points, and to illustrate the life which each of these little organisations lived. This is why in France mediæval history is local rather than general. The most valuable works, far from rising to general views, are restricted to the narrow field of a single province, and pursue a minutely laborious research among documents and facts.

Quite recently, the Académie des Inscriptions et Belles-Lettres awarded a prize to the *Histoire de la Ville de St.-Omer* by M. Giry. At this moment, another work, equally special, and also written by a pupil of the Ecole des Chartes, is being presented to its suffrages: *Les Etats provinciaux de la France centrale sous Charles VII.*, by A. Thomas (Champion). The patient research of this author has literally rescued from oblivion the existence of the provincial States in the Central provinces at a time when, by the English invasion, all the forces of the country were called into active life to co-operate in the great task

of national defence. There took place at this time a very real and active intervention on the part of the provincial representatives in the government of their districts, and particularly in the voting of taxes. But, as the reign of Charles VII., after having been witness to the evil days of the "Royaume de Bourges," had the fortune to be closed by a period of tranquillity eminently favourable to the extension of the royal power, it so happened that the very time when the institution of the provincial States was at its apogee was not far removed from the epoch when its decadence commenced. These different vicissitudes have been clearly exposed by the labours of M. Thomas. His exact, minute, and laborious work lacks originality and breadth of view, but will ever retain its place among the authorities which throw light on the former existence of local liberties in our country.

The only part of mediæval history which presents any really general interest is the epoch of the Crusades. Hence works dealing with these events feel its influence in a striking degree. It is not altogether beside the mark to notice the fact that this great movement, generally believed to be religious, but which, perhaps, was quite as much political and social, synchronises in France with the birth of a literature in the vulgar tongue. Thus it is that the earliest historians we possess who wrote in French wrote the history of the Crusades. The *Chronicles of Villehardouin*, of Robert de Clary, and of Joinville are the earliest monuments of the French language. To this list we must add the voluminous *corpus* of the *Histoire des Pays d'Outre-Mer*, by Guillaume de Tyr and his continuators. Written originally in Latin, this history was speedily translated into the vulgar tongue, and in this new guise the "Roman d'Eracle," as it was called, rapidly grew in public favour. M. Paulin Paris has just published in two thick quarto volumes (Didot) a new edition of the translation which was so universally popular. This sumptuous edition follows on and complements those of Villehardouin and Joinville given us some time since by M. Wailly. I can hardly venture to say that it equals them. The collation of the different MSS. of his author does not seem to have been made an especial feature in the edition by M. P. Paris. He has contented himself with working on two or three which he considered to be the most important. His choice, however, has perhaps been somewhat arbitrary. The language of the thirteenth century, to which he claims to have approximated in the text of his edition, varied very much according to time and place. The Normans did not speak the same language as the people of Champagne. To attain a perfectly satisfactory text, it would have been necessary to know the MSS. to pick out the best, and to follow those the language of which bore the closest resemblance to that in which the author wrote, giving, at the same time, the various readings from the others. This is not what M. P. Paris has done. He has entirely confined his researches to a few MSS. which happened to be readily accessible, such as those which formed part of the library of the late M. A. Firmin-Didot. In cases of errors or omissions he has tried to reproduce what the original should have contained. This method is surely very unscientific. I will especially note for the use of future editors of the whole or part of the "Histoire d'Eracle," a MS. quite unknown, and which is kept among the archives of the Foreign Office. It comes from the collection of St.-Simon, the author of the *Memoirs* bearing his name. It is beautifully written in thirteenth-century characters, and would certainly furnish more than one useful reading toward the formation of a definitive text. But M. P. Paris has not aimed at producing a text rigorously scientific. His edition, as far as we can

see, is intended rather for the general public than for the use of scholars. The maps of the Holy Land, prepared by M. Longnon with much learning and skill, the vocabulary of the language of the thirteenth century, the parallel drawn between the Latin text of Guillaume de Tyr and the other narrators of the Crusades, make of it, however, a book to be consulted by everyone, and one that will probably be quoted in future as an authority for the section of mediæval history it contains.

I now come to modern history, and here I must first of all speak of the continuation of M. Rosseeuw St.-Hilaire's *Histoire de l'Espagne*, T. xii., xiii., and xiv. (Furne). M. Rosseeuw St.-Hilaire, when he undertook long since to write this voluminous work, imposed on himself a most laborious task. He may congratulate himself on having been able to execute it to the very end. Vol. xii. contains the history of Spain under the Bourbons, from the beginning of the eighteenth century to the Treaty of Paris (1762). The most important passages in this volume are those recounting the power wielded by Mme. des Ursins, together with her fall, and the Ministry and projects of Alberoni. Vol. xiii. finishes the history of the eighteenth century, and even encroaches on that of the nineteenth, narrating the history of the occupation of Spain by the French up to the capitulation of Baylen (1808). Thus it embraces the end of the reign of Charles III., with the expulsion of the Jesuits and the American war, and the reign of Charles IV., together with the first part of the wars of Independence. Finally, the fourteenth and last volume carries on the history till the death of Ferdinand in 1823. Certainly, to trace thus a complete picture of the historical development of a great people was no easy task. From it even a bold spirit might have shrunk. The work appears even more stupendous if we reflect that he who was not afraid to undertake it was a stranger to the country, kept in France by important functions, and that works on the same subject by Spaniards were too few and altogether inadequate to properly prepare the ground on which he has ventured. I will not go so far as absolutely to say that M. Rosseeuw St.-Hilaire has falsified the proverb which declares that fortune favours the brave, nor yet can I say that his work has proved its truth. When one considers the greatness of the enterprise, one inclines to a silent yet respectful astonishment; but, on closely scanning the real worth of the book, the silence every now and then is perforce broken by a murmur of dissent. The three volumes above mentioned should present, and essay to present, the reader with the lamentable spectacle of the decadence of a great people, and to explain its causes. We were just now speaking of the interest presented by such an examination when the history of Rome forms the theme. Well, it is certain that among modern nations Spain alone hitherto furnishes from its history an opportunity for similar studies and similar reflections. M. Rosseeuw St.-Hilaire has proved unable to rise to the height of his subject. To have done so would have required a mighty literary genius or the immense and patient labour of a book-worm. M. Rosseeuw St.-Hilaire has remained half way between these two extremes. In studying facts he has contented himself with gathering from narratives stored up in histories themselves but second-hand, taking indiscriminately the bad with the good. He has, indeed, produced a complete canvas, but on it there are many blots, and even holes. Never throughout the course of his work does one perceive the ardent passion of the seeker in search of new facts and fired with a zeal for the whole truth, nor does one ever have the satisfaction of lighting on one of those new and illustrative facts which the actors in the historic drama never knew because they were actors, and which

history alone can reveal because it is history. From a literary point of view criticism must be still more severe. The only compensation a reader can look for in a work so uncritical is a certain charm of style. Other writers who in France have undertaken to write general history have at least atoned for the insufficiency of their information by a style either classically correct or animated. We can cite the glorious names of Augustin Thierry, of Michelet, and of Henri Martin. But to these authors M. Rosseeuw St.-Hilaire bears the same relation that gilt counters bear to gold sovereigns. He walks on stilts, but he never soars. He has carried to a pitch of perfection a style which our caricaturists have worn threadbare in their cartoons—"le style prudhomme;" that is to say, a certain mixture of worn-out metaphors, of trivial reflections expressed in bombastic language, and of misplaced phrases which, by dint of having been used in every possible book one after another, have no longer any refuge left to them but in the lucubrations of provincial pedants and the volumes of M. Rosseeuw St.-Hilaire's History of Spain. It is to be hoped that this work may prove of service to those unversed in historical lore, and we may well believe that, on seeing its insufficiency, other historians may be led to complete it or to re-write it. But this, after complimenting the author on his courage in following out such a task to the end, is the only wish and hope we can express.

I will end with a few remarks on a work relating to England—*Guillaume III., Stathouder de Hollande et Roi d'Angleterre: Etude historique sur la Vie et les Campagnes de ce Prince*, by Capt. de Lort-Séguin (Dumaine). Our last letter favourably mentioned Capt. Bourelly's volume on Fabert; in the present one we have spoken of Gen. Favé's work. This book by M. de Lort and that by Capt. Jung entitled *La Jeunesse de Bonaparte* bear striking witness to the literary and intellectual activity existing in the French army of to-day. It is a renaissance worthy of all praise, and which it is only proper to notice here. It is but natural that military officers who devote themselves to literary occupations should choose military history as their theme. They bring to this field a competence of judgment we cannot hope to find elsewhere. Unfortunately, in undertaking these studies they too often lack another qualification not less necessary to those who would write history—that is to say, literary method. Their researches are ill directed and badly co-ordinated, so that, after congratulating them on their labours, one is sometimes tempted to regret the inadequacy of the result. The general tenor of these remarks applies with especial force to the book of M. de Lort. That a soldier should take an interest in the career of a general who in the great wars of the seventeenth century played a part so important, who rivalled Condé and Luxembourg, well and good. That a soldier should make himself master of the despatches, letters, and documents kept in the Archives of the Ministry of War, and should try to complement and correct narratives that have been disfigured by the incompetence of preceding historians, is still better. M. de Lort's work, when it is confined to this task, is worthy of all praise, and we do not grudge it. We would especially mention the account of the Battle of Senef, that of the Battle of the Boyne, and the raising of the siege of Limerick. If the author has not been able to consult all the authorities on these points, those he has handled have been judiciously chosen, and have guided his judgment, aided by a soldier's instinct, aright. But when he tries to rise above his level; when he undertakes to tell afresh a story which has been already well told ten times over; when he launches forth into the sea of political and religious controversy, and indulges in allu-

sions to contemporaneous events; when he drags into his history all the party spirit of our own time, and, in historical events, passionately espouses the quarrels of such and such a party—then we are compelled to reluctantly and regretfully admit the defective historical training of our author. We lay to his charge incomplete research, ignorance of many important authorities, and the systematic suppression of any evidence conflicting with his theories. We must lay, too, to his charge that he has not made any effort to place himself in sympathy with the ideas of the time and people whose history he writes. As M. de Lort has thought fit to re-examine evidence which others (as, for instance, Macaulay and M. C. Rousset) had already reviewed, history may perhaps glean a useful fact here and there from his work, but we doubt its considering his narrative as an authority and especially its accepting his judgments.

CORRESPONDENCE.

THE ANTIQUITY OF THE NAME "SOMERSET-SHIRE."

Somerlesaze, Wells, Somerset: June 15, 1880.

The ACADEMY seems the most natural place to correct one's own slips on any historical matter. In my article in *Macmillan's Magazine* for April, "The Shire and the Gá," I attempted, for the first time, as far as I know, to give the historical reason for certain usages of language in the English Chronicles and elsewhere (see *Norman Conquest*, vol. ii., pp. 161, 322, 580, ed. 3). I there said, what is perfectly true, that the tribal form, "Sumorsetan" and "Dorsetan"—i.e., modern form, *Somerset* and *Dorset*—is older than the territorial form, *Somersetshire* and *Dorsetshire*, and that it is often used in marked opposition to the territorial form, *Devonshire*. I said that I did not remember any instance of the later form in the eleventh or twelfth century. I have just lighted on a single one in the twelfth, namely, in the Chronicle under 1122:—"And pes niht viii k' Aug. was swiðe micel eorðdýne ofer eal Sumersete scire and on Gleawecestre scire." I conceive that I missed it because it was not in the part of the Chronicles which I had been most working at lately, and because the passage, being so late, does not come in the Index to the *Monumenta Historica Britannica*, where I looked specially for the various early forms. It should be noticed as an early use of the later form, one which, I believe, stands unique at so early a time. And, if I am not refining too much, I think I can see a special reason for it. It strikes me as in some sort answering to the titles "*calles Englandes cyning*," "*Rex totius Angliæ*," which are borne by Cnut, while no other king is called by a territorial title till after the Norman Conquest, and but rarely till long after (see *Norman Conquest*, vol. i., pp. 595, 596, ed. 3). The *all* seems to make a difference. The phenomenon happened "*ofer eal Sumersete scire and on Gleawecestre scire*." It would be rather difficult to couple the *all* with the tribal name of the *district*. (In 878 "*Sumorsæte ealle*" are the *people*.) The meaning seems rather to be "over all the shire of the Sumorsetan," a form which I had actually in the article suggested as possible.

It is a little unlucky that both Henry of Huntingdon and the Waverley Annals, which so often translate the Chronicle, leave out this entry. In other places they are strict in using the tribal form. EDWARD A. FREEMAN.

THE REDACTION OF THE HOMERIC POEMS BY PISISTRATUS.

Oxford: June 15, 1880.

Mr. Mahaffy has done me the honour of referring in his *History of Classical Greek Literature* (vol. i., p. 28) to the doubts, or rather disbelief, which I expressed to him with regard to the supposed collation or redaction of the Homeric poems by Pisistratus. I shall be glad if you will allow me space to explain that I do not claim the distinction of novelty for this disbelief. Your readers will find the question fully discussed in the excellent work of Nutzhorn, *Die Entstehungsweise der homerischen Gedichte* (Leipzig, 1869).

D. B. MONRO.

"SEINT LOY" IN CHAUCER.

Teignmouth: June 14, 1880.

It would be easy to answer the last sentence of Prof. Skeat's last letter by a *tu quoque* argument, but I prefer to attempt, even in very inadequate space, to throw some light on the philological points he has raised.

1. "If, in the one passage, we are bound to read *Eloy* because all the MSS. have *Loy*, we are equally bound to do so in the other." This

must be ironical. We are bound to introduce, in each case, not the same reading, but merely one which satisfies the metre; and affixing an *e* to *seint* does this just as well as prefixing it to *Loy*. The reading of all the MSS. is not necessarily Chaucer's, who no doubt sometimes overlooked one of the numerous mistakes he complains of in his scribe's work; in fact, in the carter's line, three of the seven MSS. have an additional word, showing that some scribes felt a syllable was wanting.

2. "We are told that *seint* is monosyllabic when masculine, and dissyllabic when feminine. Both assertions are contradicted by evidence. When feminine, it is commonly dissyllabic. . . . But not always." Who said that *seint* was always dissyllabic when feminine? Certainly not I; what I said was, "Chaucer preserves in various half-French phrases the dissyllabic feminine form *sainte*," which is just what Prof. Skeat maintains. The rule seems to be that the feminine *seinte* keeps its final *e* before an accented syllable, and loses it before an unaccented one; the resulting *seint* being thus of distinct origin from the masculine *seint*, which had no *e* to lose.

3. As to the line, "That *seint* Peter hadde, whan that he wente," there is no need to read *seinte*; probably it is one of the numerous cases of deficient unaccented first syllable, or perhaps we ought to read *Which that*. L. 509, which Prof. Skeat does not mention, "And ran to London, unto *seint* Poules," is also a little difficult to make metrical without reading *seinte*, though the long-proposed *unto for to* is not improbably right.

4. Mr. Skeat's conjecture that Chaucer used *seint* or *seinte* without regard to gender deserves examination. But, though it is true that in no instance is the gender of an adjective marked by difference of form, the remark is not to the point; *seint* (so far as I am aware) was never an adjective in English, *seint Jame*, *seinte Marie*, being substantives in apposition, precisely similar to *sir Thopas*, *dame Alis*. We have therefore to deal with two distinct substantives, imported separately from French; an exactly parallel case is *spous* (*spus*) and *spouse* (*spuse*), of which the former in Middle English is masculine only, the latter feminine only, just as their Old-French originals (Modern-French *époux*, *épouse*). It is possible that, even in Chaucer's time, the masculine *seint* and the feminine *seinte* were confused, and the latter used for the former, just as the feminine *spouse* (with *s = z*) has supplanted the masculine *spous* (with sharp *s*); but with our present evidence I think this not at all likely. The same remark applies to the possibility that *seint* had, even in apposition, the regular dative form *seinte*, as well as the shortened *seint*—especially as this explanation would not mend *seint Peter*.

5. Again, this use (if it occurred) of a feminine substantive for a masculine, or of an historically correct inflection, is quite distinct from Chaucer's concurrent use of such forms as *ost* and *oste*; in these, the word had originally *e*, and the form without *e* is a co-existing younger one (which became the sole half-a-century later), whereas the original masculine *seint* never had final *e*. It must be carefully remembered that Chaucer uses only forms actually existing, and consequently never adds final *e* to a word; all he does is, in the case of words which had final *e* (whether inflectional, derivational, or thematic), to often use the form without *e*, which was supplanting the older one, and had done so altogether in the Northern dialect. In the rare cases where he rhymes a word entitled to final *e* on one without it, the best MSS. show, by not writing the *e* of the former word, that it was omitted, just as in the body of a line; the neuter *comune*, quoted by Prof. Skeat from Gower in support of the supposed masculine *seinte*, is a mere scribal (or editorial) blunder,

the word rhyming on *fortune*, and the correct reading being, of course, *comun*, *fortun*.

6. When Prof. Skeat says that *lay* (law) is the Anglo-French form, he begs the question; the co-existence of the other form, especially if (as I presumed) the expression *seinte loy* was borrowed whole, is quite possible at this comparatively late period.

7. "If *lay* be the Anglo-French form, what is *loy*? . . . If it be a Parisian form, it is remarkable that Chaucer himself cuts us off from this supposition." It is, perhaps, hardly as remarkable that Prof. Skeat's own argument cuts him off from his own supposition, *Eloy* (*Loy*); for *loy*, *Eloy*, and *coy* are all certainly Parisian, the Norman (and general Early Old-French) forms being *lei*, *Elei*, *quei*, which gave, or would have given, in Middle-English *lay*, *Elay*, *quay* (Norman kept the *w* of Lat. *qu*). Mr. Skeat might have seen from my article on the French language in the *Encyclopædia Britannica* (a copy of which he had by him when he wrote his letter) that numerous Parisian forms were introduced into Anglo-French long before Chaucer's time; and it was this Anglo-French—very different from the French of Paris, though containing Parisian forms—that the Prioress spoke.

8. In conclusion, I quite admit that the suggestion *loy* = law made by Mr. Furnivall and myself is unproven; but I maintain that Mr. Skeat's assertion that *Loy* in this passage is Eligius is also unproven. Which is the more probable is, I think, a point requiring further investigation of more general questions.

HENRY NICOL.

3 St. George's Square, N.W.: June 14, 1880.

Let me note that the ninepin which Prof. Skeat set up in the last ACADEMY and so easily bowled over—"We are now introduced to a new canon; we are told that *seint* is monosyllabic when masculine, and dissyllabic when feminine"—is his own setting-up, not mine, or Mr. Hy. Nicol's. I have not the slightest objection to look on at Prof. Skeat playing skittles—he does it admirably; but do not let anyone imagine that I set up the ninepins. I said that I "have always looked forward to some possible female saint turning up, either with the name *Eloy* or that of *Loy*, in which latter case we might adopt the reading of the Corpus MS. '*seint-e*;' " but this is quite another thing from saying that the feminine form alone can be used with a female saint's name. No such absurdity did I utter, as Prof. Skeat well knows, nor is any such involved in my words. At the same time, I can say that I have never seen the feminine form *seinte* applied to a male saint.

It is a pity that Prof. Skeat did not say that the "specimen of a woman's oath" he quoted, "by God," came from the Wife of Bath's mouth, as readers would then have been better able to judge how little likely the direct opposite of the coarse, humorous Wife—the dainty, exquisitely "correct" Prioress—was to swear by one of God's saints.

If Prof. Skeat could but turn Benedictine nun for a week, no doubt he would think with Sister Mary, to whom it is "horrid" to suppose that the head of a religious house should (regularly) use an oath contrary to her rules. Also, if he will but realise to himself the difference between the Lawyer, Pardoner, Summoner, Lord, and Wife of Bath—whose oaths he quotes, and with whom it was usual to swear both by God and a saint—and the Prioress, the pink of good manners, who was bound by her rules to swear idly by neither God nor saint, I trust he will yet be able to "see the difficulty" that others and I have long seen so plainly. F. J. FURNIVALL.

PS.—As Prof. Skeat probably did not think it his business to quote the oaths in Chaucer that

made against his view and for mine, I add the parallel of St. Charity (if a saint) to the St. Law that I conceive the Prioress to swear by; and other instances to show that men and the Wife of Bath swore by saints only, without coupling God's name with them:—

"Now syngeth, sire, for seinte Charite" (a Friar).

"Now, Thomas, help, for seynte Charite."

"Gamelyn, seyde Adam, for seynte Charite."

"I had the prynte of seynt[e] Venus sel" (Wife).

"Now helps us, seynte Frideswyde" (Carpenter).

"By me, quod he, or by the sweet seint Anne" (Sompenour).

"By seinte Mary, saide this taverner."

"Now by that lord that cleped is seint Jame" (Wife).

"Adam swor to Gamelyn by seynt Richer."

"By seynt Jame, seyde Adam . . . By seynt Jame."

"Whiles he was on lyve, by seint Martyn!"

"Now Symond, seyde this Johan, by seynt Cuthberd."

"I am adrad, by seynt Thomas" (Carpenter, twice).

"For of yow have I pitee, by seint Gile" (Canon).

"And ylik a prelat, by seint Runyan" (Host).

"I cleped him so, by seint Denis of Fraunce" (a Monk).

"And in his wywes, eek by seint Austyn" (Host).

"And by the precious corpus Madryan" (Host).

I think these and other instances show that an oath by a saint was about the same thing as an oath by God; whichever came handiest came out.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 21, 4 p.m. Asiatic.

TUESDAY, June 22, 4 p.m. Statistical: Anniversary.

8 p.m. Anthropological Institute: "The Aborigines of Victoria," by P. Bembrige; "On a Collection of Crania from the Fiji Islands," by Prof. W. H. Flower; "Land Tenure in Fiji," by the Rev. Lorimer Fison.

WEDNESDAY, June 23, 7.30 p.m. Education Society:

"Jacotot," by Oscar Browning.

8 p.m. Literature: "On the Ethnology of Modern

Midian," by Capt. R. F. Burton.

8 p.m. Geological.

THURSDAY, June 24, 8.30 p.m. Antiquaries.

FRIDAY, June 25, 8 p.m. Quckett: "On the Histology of

Pitcher Plants," by W. H. Gilbert; "Further Observations on *Filices*," by Dr. Patrick Manson.

SATURDAY, June 26, 8 p.m. Physical: "On a Modification of

Bunsen's Calorimeter," by Dr. Balfour Stewart; "On

Magneto-electric Induction," by F. Guthrie and O. V. Boys; "Exhibition of Star Spectra," by Dr. Huggins;

"On the Refraction Equivalents of Isomeric Bodies," by Dr. J. H. Gladstone.

SCIENCE.

A Comparative Grammar of the Gaudian Languages, with Special Reference to the Eastern Hindi. By A. F. Rudolf Hoernle. (Trübner.)

IN regard to Eastern Hindi, it is shown that this is a distinct language from Western, and, indeed, that it is more nearly related to Bangáli and Oriya than to Western Hindi, which last includes the High Hindi, or the language of literature. But it is as a comparative grammar of the Gaudian languages in general that this work will probably be most studied. By "Gaudian" are meant what Mr. Beames calls the modern Aryan languages of India. We have "Dravidian" and "Kolarian" generally received as the names of the two great groups of the non-Aryan languages, but hitherto no name for the "Aryan" group. The name "Gaudian," not being free from objections, will probably be objected to by other scholars for some time to come, but ultimately, if no better name is suggested—from the urgent want of a name—will be generally adopted. The "Introduction" is a very valuable contribution to the early history of the Gaudian languages. There are two main divisions of these languages, one of which includes

the Western Hindi, Panjábi, and Sindhi, or Western Gaudians; the other the Eastern Hindi, Bangáli, and Oriya, or Eastern Gaudians. Beside these languages, there are the Naipáli and the Maráthi, which occupy to some extent a distinct position; but, on the whole, Naipáli is more nearly allied to Western, Maráthi to Eastern Gaudian. All the languages are referred to the Sanskrit as the oldest phase of the original language; but intermediate between Sanskrit and the Gaudians there are certain languages called Prakrits. These Prakrits, however, are not like late Latin or Low Latin, which, though containing many modern words, is still Latin. The Prakrits, on the contrary, are not Sanskrit—that is, they are separated from Sanskrit by very important phonological and other changes. They are also distant by a long interval from the Gaudians; for the relations of nouns are still expressed by case-endings, whereas in the Gaudians these have given way to case-particles or post-positions. The relation of the Prakrit to the Gaudian languages is a subject of much interest. Two principal Prakrits are described by the Prakrit grammarians—the Sauraseni (including the Maháráshtri) and the Mágadhi. The most important characteristics of the phonology and other parts of grammar of each of these Prakrits are described by Dr. Hoernle, by a comparison of which with the two main divisions of the Gaudian languages it is shown that the Western Gaudians are related especially to the Sauraseni Prakrit, the Eastern to the Mágadhi. But of each of these Prakrits, beside the high or literary, there is also an Apabhramsa or low form alluded to by the grammarians, from which, rather than from the high form, as was to be expected, the modern languages are derived. The Páli, it is suggested, may, perhaps, be Ancient Apabhramsa. Gaudian words are distinguished according to their origin as *tadbhava* and *tatsama* words, or "popular" and "learned" words as they are called in Romance grammar—the former having been always in the mouths of the people, and consequently having passed through the Prakrit stage, the latter having been adopted directly from the Sanskrit.

After the "Introduction," the "First Section" of the Grammar treats of letters and sounds. In this section the sound-changes in Gaudian as compared with Sanskrit are described. It is shown, for instance, that in those Gaudian languages which have the two *r* sounds it is not, as commonly supposed, the cerebral *r*, but the dental *r*, which is the new sound. On the other hand, the sounds of the cerebral sibilant and of the *anusvára* have both been lost in Gaudian. The four *n* sounds have been preserved in Sindhi only. In the other languages, at least in the high forms, the dental *n* alone is usually heard. A very full account, too, is given of the letter-changes in Prakrit, and we are thus able to see at once that a great number of Gaudian words are "learned" words—that is, have not come from Prakrit.

The "Second Section" is on Suffixes and Roots. A truly exhaustive account is here given of the suffixes classed as pleonastic and derivative; and especially interesting is the solution of a problem not attempted by Dr. Trumpp (Sindhi Grammar, sec. 6), why

Sanskrit simple stems in *a*, *i*, and *u* end in Gaudian in some words in a short vowel, or drop the vowel; in others end in a long vowel. It is shown by Dr. Hoernle that the long vowels are by origin diminutive or pleonastic suffixes, the use of which, though they were appended to some words in Sanskrit under the form of *aka*, *ika*, *uka*, was greatly extended in Prakrit, such suffixes being great favourites in the popular language, and with some change of form, as *ao*, *ae*, &c., while in Gaudian their use was still further extended, and their form still further changed, a long vowel alone remaining. Other sections are on the Inflection of Nouns, Inflection of Verbs, Indeclinables. Much new light is thrown in these sections on the origin of the Gaudian grammatical forms, which are derived generally from different Prakrit forms. Dr. Hoernle refers to several Prakrit grammars, most of which exist in MS. only. The oblique case, which varies a good deal in the different Gaudians, is thus shown to be derived from the different forms in Prakrit of the old Sanskrit genitive in *śya* m., *yās* f., pl. *nām*. A good account is given of the case-particles or post-positions, which are added to the oblique case of the noun. The origin of most of these is shown to be from Sanskrit nouns in the locative case. The verb also is very fully treated. Thus the universal causal in Gaudian is shown to be derived, not from the common Sanskrit form in *i*, but from the exceptional form in *āpi*. The two forms of the infinitive with *n* and *v* (*b*) as their characteristic letters, of which the former mainly belongs to Western, the latter to Eastern, Gaudian, are shown to be derived from the Skr. fut. part. in *aniya* and *tavya* respectively. The only original tenses preserved in Gaudian are the present indic. and the imperative in all the languages, the future in two or three languages only. The tenses otherwise are generally periphrastic formations from a participle and some auxiliary form added.

Several of the derivations advocated by Dr. Hoernle are new, and it is not likely that they will all escape being questioned by other scholars. Thus, with the exception of the Maráthi fem. and neut. forms of the plural of nouns, he does not derive the other forms from Skr. and Pr. plurals, but supposes each of them to be an oblique form, sometimes of the same, sometimes of some other language, with a collective noun understood. No doubt there is a difficulty in tracing them all to Skr. and Pr. forms, but many more beside the Maráthi are so traced by other scholars: as Sindhi *nar-u* "man," pl. *nar-a*; Pr. *nar-o*, pl. *nar-á*; Skr. *nar-as*, pl. *nar-ás*; though the oblique sing. in Sindhi is also *nar-a* from Pr. gen. *nar-assa*, Skr. *nar-asya*. Again, the old and seemingly obvious reference of most of the modern simple pronouns to the corresponding Skr. simple pronouns—as Hindi *jo* "who" from Skr. *yas*, *ko* "who?" from *kas*—is set aside by Dr. Hoernle, who derives them from pron. adj. of quality or quantity; as, in the above instances, from Skr. *yávat* and *kíyat* (Ved. *kívat*), Ap. Pr. *jeva* and *keva*. But whether or not any of Dr. Hoernle's conclusions are open to objection, there can be no doubt that he shows himself in this book to be one of the first of Gaudian scholars. The

work, too, contains an extraordinary amount of information compressed into a comparatively small volume; and I cannot but think it will be appreciated, not only by regular students of comparative philology, but by some at least of the large number of those who speak one or more of the modern languages of India, and who, in addition to a mere colloquial knowledge, may wish to learn something also of the history and origin of these languages.

E. L. BRANDRETH.

NOTES OF TRAVEL.

It would seem that we have not yet heard the last of changes in the *personnel* of the Belgian expeditions in East Central Africa, as we learn that M. Cambier, who has lately founded the first station for scientific observations at Karema on the east side of Lake Tanganyika, is expected to return to Belgium on the arrival of the expedition under Capt. Rasmackers and Lieuts. Leu and Becker. M. Burdo, whose arrival at Mpwapwa we recently noted, is to accompany M. Popelin in his westward march to Nyangwé, where they hope to meet Mr. H. M. Stanley and the Congo trading expedition. In connexion with these expeditions, we hear that Col. Chailié Long, formerly an officer of the Egyptian staff, has submitted to the King of the Belgians a project for the colonisation of Central Africa by means of civilised negroes.

FROM their annual Report, which has just been issued, we learn a few further particulars respecting the projected work of the French branch of the International African Association. M. Bloyet is to establish his station at Kirassa, near Kiora, some two hundred and fifty kilometres from Bagamoyo, on the East Coast of Africa, and the Government have agreed to hand over to him all the scientific instruments and arms with which the Abbé Debaize had been furnished. M. Savorgnan de Brazza, who will shortly be joined by his old companion, Dr. Ballay, will first found the station in Western Africa, and the two will then resume their former explorations between the Ogowé and the Congo, for which purpose the association has caused a steam launch to be built for them at Havre. In case assistance should be required to keep up the stations, the King of the Belgians has promised to contribute £1,600 from the general funds of the association, and the French Government have already given £880.

INSTEAD of at once attempting to renew his unsuccessful attempt to reach Algeria from Senegal *via* Timbuktu, M. Paul Soleillet has returned to France for a short time, and at the last two meetings of the French Geographical Society he has given an account of his journey in the Adrar country and of the circumstances under which his expedition was compelled to return to Senegal with the loss of nearly all its baggage. M. Soleillet intends to embark again at Bordeaux on July 5 for St. Louis, and will shortly start thence to make his third effort to reach Timbuktu.

MR. W. HOLMAN BENTLEY, of the Baptist Congo Mission, who is stationed at San Salvador, has recently made an interesting journey to Tuka, about twenty miles south by east of that place. He had previously visited Kimpanga, some seven miles on the road, whence, travelling over a fine hilly country, he struck the path from Makuta to Bembe and Ambriz on the coast, and soon entered the Madimba district; after passing through a number of so-called native towns he ascended a steep hill towards a clump of bush on the summit, which proved to be Tuka. From the top of the hill there was a fine view in all directions; and to the northward were seen the Zombo mountains,

on the top of which is a town called Bango. The Ambriz River rises near, or at any rate passes, this place, and tumbles in a straight line down the face of the mountain. Whether the river rises on the top of the range, or whether the hills form the flank of a lofty plateau, is at present unknown. The country round Tuka is described as fairly populous, the inhabitants being distributed among a large number of small towns.

THE Government of Queensland have received intelligence that Heath's party have returned to Thornborough after a prospecting journey which lasted five months. They thoroughly examined the head-waters of the Barron River, but only found colours of gold; they also examined the head-waters of the Johnstone, and found gold, but only in very small quantities. But, although the party were unsuccessful in their search for gold, they have made discoveries which are of some interest to geographers. Near the sources of the Barron they found a conical hill, which, on examination, proved to be a large extinct crater, more than 300 feet in diameter and 250 feet in depth to where the water lies. They also discovered some splendid waterfalls on the Johnstone River.

MR. WILFRID POWELL has lately returned from a six years' yachting cruise along the coasts of New Guinea and New Britain, in the course of which he has been able to collect a large amount of material for the rectification of our defective charts of those islands. His surveys have been placed in the hands of the Hydrographer of the Navy, and will, no doubt, be embodied in the Admiralty charts.

It has, we believe, been commonly assumed that Borneo is larger than New Guinea, but a recent calculation, based on our improved maps of the latter, shows that New Guinea is 785,362 square kilometres in extent, and Borneo but 733,900. The alteration is due to the more correct delineation of the northern coasts and south-east peninsula on the latest maps of New Guinea.

It is stated that the Russian Government intend to expend some £25,000 this year on military and topographical surveys in Central Asia and along the frontiers of China.

COUNT BELA SZECHENYI, the Hungarian traveller, who has just returned to Europe after his unsuccessful attempt to reach Lhasa, the capital of Thibet, is expected to visit London shortly.

A NEW society has lately been founded at Geneva under the name of the Topographical Society of Switzerland, and has commenced the issue of a *Bulletin*, which will appear every two months.

WE regret to learn that Capt. H. W. Howgate's well-considered scheme of polar exploration, which we hoped had at last surmounted all its difficulties, is again placed in jeopardy. The United States Government are reported to have rejected the steamer *Gulnare* as being unsuitable for the proposed expedition to Lady Franklin's Bay, although, as we stated a long time back, she was specially selected for the purpose in London by Dr. John Rae.

MR. LEIGH SMITH, whose name is well known in connexion with yachting excursions in the Arctic seas, is about to undertake another voyage this season which, if circumstances permit, may result in some interesting discoveries being made.

THE quarterly number of the *Alpine Journal* has two excellent contributions to the same province—Mr. W. Penhall's "The Matterhorn from the Zmutt Glacier," read before the club in February, and Mr. A. F. Mummery's "The First Ascent of the Matterhorn by the Zmutt

Arête." There is a clear elucidatory woodcut of the two routes, with the Tiefenmatten glacier as foreground. The Rev. H. F. Tozer has an interesting account of his ascent of Mount Argasus last July. He found the rocks near the top "perforated with ancient human habitations." Mr. George Weld describes his excursions in the South-Western Graians. The editor returns to his criticisms upon the Schreibers of the Rigi, who were attacked last year for giving an imagined preference to a party of seventy tourists sent by Mr. Gaze, the excursion agent, over some gentlemen who were staying at the Kaltbad. Instead of Mr. Cook excluding the Kulm hotels from his list, the very reverse was the fact; the Kulm hotels refused to accept Mr. Cook's coupons, as everyone who read the notices in the hall very well knew. We believe, however, that Mr. Cook has reduced his "royalty" this year, and that his coupons will be accepted at the Kulm on the same terms as those of his rivals. While speaking of the Oberland, the subject of his "Notes on Old Tracks," the editor might have put in a good word for the quiet, prosperous, and lovely Aeschi, under the Niesen—an excellent spot for all who wish to be out of the way of rush, and with help of an "Einspanner" not too distant from work. We see that Mr. W. A. B. Coolidge succeeds Mr. Freshfield in the editorship after the appearance of the August number. The "Alpine Bibliography, 1878-79," which the former has compiled (pp. 503-12), is admirable and approximately complete; it would be hardly attainable for any foreigner to collect an exhaustive list of the often valuable articles which appear in Swiss and German periodicals and journals, even in those of a limited circulation such as the *Davoser Blätter*.

THE Munich Alpenverein has been busy during the winter half-year, several useful lectures having been delivered on the geography, geology, hydrography, and other matters connected mostly with the east Alps. Oberamts-richter Niebler closed the series with an address recommending the collection of materials for the compilation of a "Wasserfallbuch," after the pattern of the "Seebuch." He observed that the waterfalls of the eastern Alps need not fear a comparison with those of Switzerland and Norway. The broadest waterfall in the world, according to Judge Niebler, is the Mosi-watunga fall in Africa, which is 914 metres in breadth, while the Rhine fall at Schaffhausen, which is 115 metres, takes the fourth place among the waterfalls of the world. So far as regards the comparative height of waterfalls, the Königsbach fall on the Königsee, near Berchtesgaden, with eight hundred metres, stands at the head of all known waterfalls. The second is the Yosemite fall in California, the third is the Kuhlflucht fall near Partenkirchen, and the fourth is the Röthbach fall on the Obersee. So that three out of the four highest known waterfalls of the world are to be found in the Bavarian mountains. Judge Niebler's comparison of the number of the waterfalls in the east Alps with those of Switzerland and Norway exhibited a great preponderance in favour of the former, and he contended that, in the point of beauty and magnificence, the waterfalls within the special field of the Bavarian Alpine Club yield to no others.

SCIENCE NOTES.

The Great West.—We have received a copy of an interesting article by Prof. F. V. Hayden, entitled "The Great West." Within compass of some ninety octavo pages, the writer gives a popular description of the scenery, the physical geography, and the geological structure of the vast region which lies to the west of the Missouri. Much of the essay is naturally occupied

by a description of the Yellowstone Park, with its marvellous geysers and lakes. Forty years ago little or nothing was known of the immense districts beyond the States of Ohio, Indiana, and Illinois; and it is only within the last ten or twelve years that we have obtained any correct information as to their topography, geology, and natural history. Prof. Hayden, to whom we are indebted for so much of our knowledge of the Western territories, has done well to popularise his subject by writing the present sketch for the use of those who are not disposed to consult his voluminous reports.

THE French Association for the Advancement of Science will hold its meetings this year at Rheims from August 12 to 19.

American Journal of Mathematics Pure and Applied. Vol. II. No. 4. (Baltimore.) This long-delayed number (dated December 1879) did not reach us until May. It contains, as usual, papers which may be arranged under each of the above heads, but the "Applied" gets but a small portion of space. Mr. C. S. Peirce contributes two papers on the ghosts in Rutherford's diffraction-spectra (nineteen pages) and a quincuncial projection of the sphere (with a figure); this latter is likely to be useful for meteorological and magnetological purposes. Mr. H. A. Rowland contributes preliminary notes on Mr. Hall's recent discovery (just sketched in No. iii.), but it is little more than a statement, the author being still engaged upon the subject of the discovery, which promises to be of considerable interest. The other papers are purely analytical. Prof. Sylvester (with Mr. Franklin) completes his tables of generating functions and ground-forms for simultaneous binary quantics, makes remarks on the above tables, and then (pp. 357-93) contributes a paper on certain ternary cubic-form equations, which consists of an *excursus* on the divisors of cyclotomic functions, and a note on triangles and polygons in- and ex-scribed to a cubic curve, and on 2 and 3 as cubic residues. The remaining papers are a new general method of interpolation (which aims at a saving of trouble in the employment of Newton's method), and on a theorem for expanding functions of functions, by Mr. McClintock (author of the *Calculus of Enlargement*, which we have already noticed); and a certain class of cubic surfaces treated by quaternions, by A. B. Chace. The number closes with two notes on the "15" puzzle by Messrs. Woolsey Johnson and W. E. Story, in which it is demonstrated that the "solution" is not always possible for any original random position of the counters. The editors state that the fact of this puzzle having engaged the attention of "nine out of ten persons of both sexes and of all ages and conditions of the community" in America would not have weighed with them to insert articles upon such a subject, but

"the fact that the principle of the game has its root in what all mathematicians of the present day are aware constitutes the most subtle and characteristic conception of modern algebra—viz., the law of dichotomy applicable to the separation of the terms of every complete system of permutations into two natural and indefeasible groups, a law of the inner world of thought, which may be said to prefigure the polar relation of left- and right-handed screws, or of objects in space and their reflections in a mirror."

Of the game, then, they say, "Whoever has made himself master of it may fairly be said to have taken his first lesson in the theory of determinants."

THE *Basler Nachrichten* states that the Government Geological Atlas of Switzerland is approaching its completion. A session of the Federal Geological Commission was held during the first week of June under the presidency

of Prof. Desor. The reports of the geologists engaged in the task were received, and arrangements made for a general report to the Bundesrath upon the progress of the maps. Several leaves will be published during the course of the present year. Among these are "Blatt 4," which embraces the Molasse district of Thurgau and the eastern portion of the Canton of Zürich; "Blatt 18," which contains the exceedingly difficult rendering of the great mountain world of the Bern Alps, and part of the Alps of Valais on the right bank of the Rhone; and "Blatt 19," the high mountains of Ticino. There is only one map in the series for which the geological survey has not yet been commenced—"Blatt 23," which includes the glacier district of Monte Rosa, where a very arduous task awaits the geological pioneer.

PHILOLOGY NOTES.

THE fourth and concluding part has just appeared of the fourth volume of the *Archiv für slavische Philologie*, so ably edited by Prof. Jagić. He, we observe, has recently been appointed to the Professorship of Slavonic Philology in the University of St. Petersburg, left vacant by the death of Ismail Sreznevsky. The new part contains an interesting article, by Dr. Oskar Asbóth, based on Magyar popular tradition, on the mysterious being known to the people in Hungary under the title of the "Garabonczás diák," and familiar also to South Slavonic folk-lore, a kind of demoniacal Wandering Jew, closely connected with the storm cloud, but capable, if hospitably treated, of beneficent actions. Prof. Vasilevsky's valuable Russian essay on the question, "Who founded the second Bulgarian kingdom?" has been rendered available to German readers. Prof. Leskien has contributed "Remarks upon the *Vocalismus* of the Middle-Bulgarian Records," and also a collection of Lithuanian folk-songs from Willkischken. As he does not supply a translation of these specimens of popular poetry, they are likely to remain unintelligible to most readers. Ph. Fortunatof, of Moscow, supplies the first part of an essay, "Zur vergleichenden Betonungslehre der litau-slavischen Sprachen;" and J. Gebauer a reply to the arguments against the authenticity of the Old-Bohemian Easter-play fragment, "Mastickár," or "Quacksalvers," brought forward last year by A. Šember, who looks upon the MS. as one of Hanka's falsifications.

FINE ART.

ARCHAEOLOGICAL DISCOVERIES IN PIEDMONT.

Rome: May, 1880.

At the beginning of the year 1875 some eminent and learned men—many of whom were already well known in the literary world by their works on history and archaeology—formed themselves into a society with the object of more effectually promoting archaeological research in the chief province of Piedmont.

The "Società di Archeologia e Belle Arti per la Provincia di Torino" had for its founders Count Carlo Baudi di Vesme, a senator of the kingdom, who has done good service to historical studies; the Advocate Paolo Massa; and Count Ernesto di Sambuy (these three representing more especially the interests of the provincial administrative authorities, from whom the infant society received help and protection of every possible kind); the Advocate Pio Agodino; and Commendatore Nicomede Bianchi, the author of some valuable works on the history of the Italian Renaissance, and director of the archives of Piedmont; Baron Gaudenzio Claretta, who is deeply versed in later Turinese history; Count Giancarlo Conestabile of Perugia, the learned author of researches on Etruscan and primitive

Italian civilisation; Baron Francesco Gam-a, custodian of the royal gallery of paintings and statues; Commendatore Bartolomeo Gastaldi, professor of mineralogy and the father of prehistoric research in Italy; Commendatore Gaspare Gorresio, chief librarian of Turin and the esteemed translator of the *Rāmāyana*; Commendatore Ricotti, professor of history; Prof. Ariodante Fabretti, a diligent collector of ancient Italian inscriptions, author of the *Glossarium*, and director of the Royal Museum of Antiquities. These gentlemen soon associated with themselves as fellow-workers the most diligent seekers after the monumental records of the country who happened to be domiciled in the other cities of Piedmont.

While the number of these corresponding members has increased threefold in the space of a very few years, the original founders and Italian archaeology have sustained a very grave loss in the death of Count Baudi, of Count Conestabile, and of Prof. Gastaldi. These two last were snatched by an untimely end from the affection of their friends and from universal esteem. But the work they did so much to further, and for which the world owes them special thanks, still proceeds.

The object of the new society is to reach that goal which the "Giunta di Antichità e Belle Arti," started in 1832, was not able for divers reasons to attain; that is to say, to preserve such monuments as have withstood the wear-and-tear of ages, and to promote the study of history and archaeology. This they propose to accomplish by undertaking new excavations, and by the publication of a periodical designed to expound the results of such excavations, and to cast a clearer light on those points in the history of the province which have not yet received sufficient attention.

From January 1875 to now eleven bulky numbers of the *Transactions* of the society have appeared, the first ten of which form two large volumes, and are accompanied by plates.

The first attempts at excavation were made in the plains of Avigliana, on the borders of the district of *Augusta Taurinorum*, and of the ancient kingdom of Cottius, bounded by the road between Susa and Turin. Near this spot was the city of *Ocelum*, and from this district many epigraphs are forthcoming bearing witness to the worship of the Matronae—divinities held in special veneration in Cisalpine Gaul (*Corpus Inscript. Lat.*, v. 2, pp. 810-14).

Special attention was paid by the association to the monuments of Susa, and particularly to the triumphal arch built by Cottius, the son of King Donnus, in honour of Augustus on his return from Gaul, when he was saluted as Imperator for the thirteenth time. Although it was not found possible to at once set about operations on a large scale, and to bring to light all the remains of the extensive thermal establishment in Susa, it was no small advantage to have preserved this great monument from further ruin.

Subsequently to this the excavation of an ancient necropolis near Carrù was taken in hand. The first traces of this necropolis had come to light during the course of the railway works between Bra and Savona, when, in the place called *L' Abatina*, were found bricks and tiles belonging to sepulchral chambers, and many funeral urns, which were thrown aside by the labourers from ignorance. But many other objects were fortunately saved through the care of the engineer, G. Grossi, who presented them to the municipal museum of Modena in 1874.

The new excavations carried out by the society, and described by Prof. Fabretti, led to the discovery of sixteen unopened tombs, in which were found many pieces of pottery made of red clay in imitation of the ware of Arretium, coming perhaps from the local factory of Pol-

latia, and bearing, for the most part, the maker's mark in the shape of the human foot. Some other pieces of pottery of a very red hue, and hand-made, were obtained which would pass for prehistoric did not the coins found in the tombs furnish proof that the sepulchre belongs to the earlier period of the Roman Empire.

Simultaneously with the Carrù explorations excavations were made in the district of the city of *Industria*, first called *Bodingomagus*, in the plain of Montea da Po; and many foundations of ancient buildings were dug out, and some valuable relics of Roman art found, many of which were in bronze. A paper by Prof. Fabretti treats of these excavations at *Industria*, the first part of which appeared at the beginning of the current year in the last number of the *Transactions of the society*.

Very near this city, an advocate, dal Corno di Crescentino, recently made an excavation which led him to the discovery of another Roman tomb. The fistle ware is also for the most part in red clay, but of very fine execution. Among the objects found that will create the deepest interest is the glass-ware, which has been preserved intact as if it had just come from the furnace. There is no sign of varnish or of iridescence.

Some more glass-ware, in very fine condition, was taken from another Roman sepulchre in Palazzolo Vercellese, near the spot where topographers place the site of the ancient city of *Rigomagus*. I have seen some drinking vessels that came from these tombs still bearing the marks of the oven. There are also a number of little glass rods in various colours, worked in a spiral shape, and used, it is believed, as ornaments of female attire. The tombs in the necropolis of Palazzolo are made from wine amphorae, placed like boundary marks, which contain the calcined bones and the pottery and glass. There are also tombs in the shape of a coffer, made with large stone slabs. All the relics found in these excavations the Società Archeologica presented to the Royal Museum of Antiquities at Turin, the contents of which have been notably enriched of late years through the exertions of Prof. Fabretti.

I must add, by-the-way, that hitherto the Government has not by any means been indifferent to the labours of the eminent members of the society, but has given annual grants, which have been no small assistance in the prosecution of researches. These researches have not been carried out within the limits of the province alone, but excavations have also been made at the society's expense in districts far removed from Piedmont, in order to profit by any casual discoveries, and with a view to obtaining archaeological specimens that might serve to illustrate the history of the country, and that were wanting to the museum of Turin.

Thus the sepulchres on the right bank of the Ticino have been explored, and particularly those of Varallo-Pombia, in which was found a red ware similar in character to that of the tomb of Sesto-Calende and of the tombs of Golasecca. The tomb of Sesto-Calende (which contained the remains of a warrior buried with the fragments of his car in very much the same way as that in which the Gaulish soldiers are buried in the tombs discovered and commented on by Fourdringer, and which were exhibited in the Trocadero in 1878) yielded many relics, now preserved in the archaeological collection of the Palazzo di Brera in Milan. Prof. Biondelli, who was among the first to give attention to the discovery, suggested that the remains were those of a Gaulish tribe, and belonged to a period not very much anterior to the Roman conquest; while other archaeologists of Lombardy recognised in the sepulchre utensils of a date much more remote. These latter drew their arguments from an examina-

tion of the vases, which, like those of Golasecca, are very red and similar to the ware which is generally attributed to the prehistoric age. It is true that we must distinguish two periods in the Golasecca ware—that is to say, that of the ordinary coarse pottery and that of the finer ware covered with a peculiar black glaze, on which geometrical ornaments are traced by means of the burnisher. But, however elegant this ware of the second period may be when contrasted with the earlier, there still remains a vast difference between it and the most common and simply shaped classical vessels. It may be added that those who contend that these relics must be referred to a comparatively recent date base their view on the fact that Roman coins of the age of the Empire have been found in these tombs on the banks of the Ticino.

The new excavations, for which we shall not have to wait long, will doubtless help to clear up this point. The example set by the city of Turin in the foundation of its archaeological society has been imitated in other cities. Thus contemporaneously was founded in Novara the "Società archeologica del Museo patrio Novarese," the number of the members of which has already reached sixty-eight. This association has not been content with merely preparing a more worthy abode for the public museum, but is seeking to enrich the archaeological department by exploring more sepulchres on the right bank of the Ticino.

We shall soon, too, have an archaeological society in the city of Vercelli. This city at present cherishes the hope of seeing the dignity of capital of its own province restored to it, this having been taken from it in 1848. But it would be an injustice to suppose that this veneration for historical and archaeological monuments is displayed for the first time with the intention of giving one proof among many as to the fitness of the town for the coveted distinction. On the contrary, this solicitude in Vercelli for archaic memorials is of no recent date, and the municipality took a deep interest in the collection of inscriptions, commented on with deep learning in the work recently published by Father Don Luigi Bruzza, of the Barnabite Order. But lately, some fresh discoveries having been made, a knot of eminent citizens of Vercelli recognised the fitness of the occasion for founding an association which might at once effectually help the progress of archaeological science and the growth of the museum.

The new discoveries were made on the spot called *Campo della Fiera*, lying north-east of the town, where works are being carried out for the construction of a barrack. While digging the foundations there was found, at the depth of about two metres, the foot—fairly well modelled—of a bronze statue, preserving some vestiges of gilding. The epithet of *Apollineae* given to *Vercellae* (Martial, x. 12, 1) at once suggested the idea that on this spot the temple of Apollo might have stood, and that the foot might have belonged to the statue of the divinity. But through the courtesy of Father Bruzza I had the pleasure of seeing the fragment, and at once perceived that it belonged to an equestrian statue, of which further researches have restored other fragments. Among these are a portion of the dress, ornamented with inlaid work of silver and enamel. In ancient times two marble statues were found on this same spot, and the tradition of the country records the fact that, in the sixteenth century, there were to be seen the remains of an amphitheatre.

Not far from Vercelli, in the plain where, according to tradition, was fought the great battle against the Cimbri, and where at different times discoveries have been made which render it certain that this spot must have been the scene of some great military event, there were

found but a short time since two large *torques* of massive gold, which are now attracting the attention of the learned and curious at the Exhibition of Ancient Art in Turin.

F. BARNABE.

GREEK MARBLES IN THE BRITISH MUSEUM.

THE British Museum has lately acquired the following Greek marbles:—

1. A sepulchral tablet with relief of three male figures reclining at a banquet with a table before them spread with fruits. At each end of the couch sits a female figure, draped and veiled, each having at her side a diminutive figure. Underneath is inscribed—

ΔΙΟΝΥΣΙΑΔΕ ΧΑΙΡΕ ΚΑΙ ΣΤ ΓΕ Ω ΦΙΛΕ
ΤΟ ΝΤΝ ΕΧΟΝΤΕΙΝ ΩΣ ΚΕΜΕ ΩΔΕ ΚΕΙΜΕΝΟΝ
ΚΑΛΟΝ ΚΑΙ ΑΓΑΘΟΝ ΚΑΙ ΚΑΛΩΣ Ε[Τ]ΖΟΚΟΤΑ
· ΙΜΝΑ · ΕΝΗ ΓΕΓΟΝΟΤΑ ΠΑΖΙ ΠΡΟΖΗΛΗ

On the right of this inscription is the figure of a galley incised in outline, and above the galley—

ΔΙΟΝΥΣΙΑΔΕ ΤΟΤ
ΠΡΘΕΟΤ

2. A small *stèle* with draped female figure seated to the left; before her stands a male figure, wearing the *himation*, in which both arms are wrapped; at his feet stands a diminutive figure with legs crossed; below are remains of an inscription:—

· · · ΧΙΛΙ · · · · ·
ΧΑΙΡΕ

3. A small *stèle* wanting the top. A draped male figure reclines at a banquet. At his feet a female figure sits on the couch feeding from a *patra* a serpent, which is coiled round a tree at the back of the couch. Behind is a diminutive female figure, and at the other end of the relief a diminutive male figure. Before the couch is a table with fruits.

4. The upper part of a *stèle*, without reliefs, inscribed—

ΝΙΚΟΣΤΡΑΤΑ ΣΟΤΙΟΝ
ΔΕΙΚΛΑΕΩΕ ΧΑΙΡΕΤΕ

5. Fragment of a *stèle*. On the right sits a female figure, draped and veiled, with her right hand raised as if beckoning on two diminutive figures standing before her.

6. A solid urn, with low, flat relief of a female figure seated on a chair; while two female figures stand, the one before, the other behind her.

7. Part of a sepulchral tablet, with reliefs, nearly complete on the right side, but broken away on the left and along the foot. The reliefs represent three deities, each holding out a *patra* in the right hand. Two of them, Hermes and Hades, are standing; but the third, Persephone, is seated. All three are turned to the front. At the right side of Persephone is seen the head of a diminutive figure, and in the background above her are two warriors, advancing as in battle, with shields and drawn swords. These two figures are on a diminutive scale, as is also another figure sitting apparently on rocks to the left of Hermes. Beyond the rocks is seen the prow of a galley.

8. A marble altar, with the following Latin inscription in large letters:—

L · CVRTIVS
ONESIPHORVS
AIPICIANICE

At present it is uncertain from what part of Greece these marbles have found their way to England; but the presence of two Turkish gravestones along with them would go to prove that they had been brought from somewhere in Asia Minor.

OBITUARY.

GERMAN art, more especially the Düsseldorf school of painters, has lost, by the death of Prof. F. Lessing at Karlsruhe on the 5th inst., one of its most distinguished representatives. For Lessing was regarded by his countrymen as one of the greatest of living historical and landscape painters, and his works have attracted the admiration of many lovers of art on both sides of the Atlantic. He was a richly gifted genius, whose talents quickly reached the height of their power in spite of many hindrances that encountered him in the outset of his career. The deceased artist, a grand-nephew of the well-known poet and critic, G. E. Lessing, was born in Breslau on February 15, 1808. After finishing his studies at the gymnasium of the town, he became a member of the Academy for Architecture in Berlin. But the excellent drawing lessons which he attended at the Academy speedily allured him from the paths of architecture to the canvas and palette; and, on an excursion to the Isle of Rügen, he finally resolved to leave his architectural studies and to become a painter. His first pictures, though of small size (*A Cemetery* and *The Ruins of a Church*), met with great success, and thus enabled him to join the Academy of Düsseldorf, where Schadow, the painter, soon recognised the great talents of the young student. Here in Düsseldorf Lessing finished his first great picture, *A Knight's Castle*, which is now in the possession of the National Gallery of Berlin; then followed *Aus dem Leben Friedrich Barbarossa's*, the *Klosterhof im Schnee*, *Leonore*, and the *Räuber*. All these works are full of deep poetical feeling. They are characterised by earnestness and melancholy, and show, at the same time, a warm sensibility for the inner life of nature and history. Lessing gradually applied himself to historical objects, especially to the great intellectual and religious struggles of mankind, which he portrayed on his canvas with such fresh and healthy realism that many accused him of anti-religious tendencies. But all who have ever looked on his great works, on which his reputation as one of the greatest of modern German painters rests, know these accusations to be wrong. The best-known of these great pictures are *Huss auf dem Concil zu Constanz*, *Ezzelino von München zur Busse ermahnt*, *Huss auf dem Scheiterhaufen*, *Luther die Bannbulle verbrennend*, the *Kreuzfahrer in der Wüste*, and *Luther's Disputation mit Eck*. Lessing painted these in Düsseldorf between 1828 and 1867, where as early as 1830 he was acting as director during Prof. Schadow's absence in Italy. Afterwards he was appointed Director of the Academy, and became more and more the head of a "school" by exercising a great influence upon the younger members of the Academy. In 1858 he was called by the Grand Duke of Baden to the directorship of the Karlsruhe Picture Gallery, and it was in Karlsruhe, during the last ten years of his life, that most of those splendid landscapes were painted which have made his name as the greatest "landschafter" familiar in Germany. His pictures have been acquired by, and are in the possession of, the Berlin National Gallery, the Dresden Picture Gallery, the Gallery of Frankfurt, the Municipal Museum of Cologne, the Ravene Gallery in Berlin, the picture galleries of Düsseldorf and Karlsruhe, and the Municipal Institute of Cincinnati in the United States of America.

THE veteran Bavarian painter, Ernst Willers, died last month. He was one of the youthful band of enthusiasts who grouped themselves around Cornelius and became imbued with his principles. He spent the greater part of his middle life in Italy, but of late years he has been settled in Munich, where his large cartoons have been seen in most of the exhibitions—works conceived with noble aims, but un-

fortunately exciting little interest in the minds of the present generation.

THE Bavarian painter of battle-pieces, Eugene Adam, died at Munich on the 4th inst.

MOST English visitors to Florence will learn with regret that the Chevalier Campani, formerly Inspector of the Galleries and Museums, has lately died. All who had occasion to apply to him for any service in connexion with his duties will always gratefully remember the courtesy with which they were received and their objects facilitated. He was admirably fitted for his position in every way, intimate with the contents of the galleries and museums, possessed of an extensive knowledge of the history of Tuscan art and artists, and always ready to communicate his knowledge to others. In common with other officials of the galleries he was suspended on the discovery of great irregularities on the part of the director, with which he had no concern whatsoever. The injustice with which he was treated so affected him that he was seized with fatal illness, and has now died lamented and respected by all who knew him, and especially by English and other foreign visitors to Florence who had occasion to estimate his ability, worth, and unflinching courtesy.

WE regret to record the death, on the 8th inst., of Mr. James Dafforne. We shall speak of his numerous contributions to art literature in our next issue.

ART SALES.

AT the sale of music copyrights just concluded by Messrs. Puttick and Simpson the large prices obtained for many of the works are worthy of note. We select the following items:—Hemy's *Royal Modern Tutor for the Pianoforte*, £3,010 (Metzler and Co.); Fontaine's *Swing Song*, £736 (ditto); Gabriel (V.), *Only*, £193 4s. (Ashdown and Parry); *Ruby*, £418 10s. (Metzler and Co.); *Weary*, £115 (ditto), and *When Sparrows Build*, £390 (ditto); Robinson's *Organist's Friend*, £189 1s. (J. Williams); Gounod's *Bethlehem*, £117 16s. (Metzler and Co.); and *Ring on, Sweet Angelus*, £180 (ditto); Raff, suite in B flat for piano, £246 15s. (ditto); Benedict's *Brides of Venice*, £181 18s. (ditto); Gounod's *Irene*, £196 1s. 6d. (ditto); Oramer's *Vocal Gems*, £367 (ditto); Pinsuti (O.), *Bedouin Love Song*, £114 15s. (Ashdown and Parry); *I Heard a Voice*, £136 (ditto), and *The Swallow*, £123 15s. (Metzler and Co.); Sullivan (A.), *The Chorister*, £556 10s. (ditto), and *Orpheus with his Lute*, £209 (ditto). The sale occupied six days, and realised upwards of £16,000.

NOTES ON ART AND ARCHAEOLOGY.

THE first exhibition of the Yorkshire Fine Art Society was opened on the 1st inst. at Leeds by Sir P. Cunliffe Owen, Director of the South Kensington Museum. This exhibition is chiefly retrospective, but it includes also a fine collection of modern paintings lent by various possessors. These, in point of fact, form its chief attraction.

THE Council of the Working Men's College and Free Library are still open to receive works of art on loan for the free exhibition they contemplate holding next month at their rooms in Kennington Lane. This is an excellent opportunity for those who desire to bring the culture that can be gained by a taste for the fine arts within the reach of the working classes to contribute their share to an undertaking which certainly appeals more to these classes than to any other. While fashionable London, escaping from the picture exhibitions, concerts, lectures, and all the round of aesthetic enjoyment open

to it during the season in town, is seeking health and fresh excitement in foreign travel, or repose in some pleasant country seat, working London still goes on toiling from morning to night, unrefreshed by new scenes and country air. An art exhibition is, of course, a very poor substitute for all these advantages, but it may afford the weary workpeople of the South of London some refreshment and relaxation during the hot days of August and September to be able to turn into pleasant, artistic rooms and educate their eyes by the sight of work executed by noble artists and skilful workmen of their own class. Lambeth has long been noted for its school of art, which has educated some of the best art-workmen in the country, and this exhibition will doubtless contain a notable collection of Lambeth works.

MR. VICAT COLE, painter, and Mr. John L. Pearson, architect, have been elected Royal Academicians.

WE have received from the Society for Photographing Relics of Old London a series of photographs of the Charterhouse. We are pleased that the society has addressed itself to the task of reproducing interiors, and we are glad it has begun with the interiors of the Charterhouse. London light is atrocious for interiors, and the mechanical means which are alone at the disposal even of what is called the "advanced photographer" are wholly unable to grapple successfully with problems which would be pleasures to the skilled etcher or to the painter in water-colours who betakes himself to such themes. Vast spaces of unaccountable blacks cannot but remain in many of these photographs. Yet wherever the difficulties of light for the mechanical process have not been insuperable, the result now before us gives agreeable evidence of the beauty of house architecture which belonged to the Elizabethan and Jacobean periods. The great hall, with its panellings below and its arches above; the great staircase, with its balusters nobly wrought and splendidly proportioned, come out fairly in the photographs now on our table. With Charterhouse exteriors, of course, the same difficulties that beset the photographer of interiors cannot arise. Besides, an exterior is selected by reason of the effect of building, which covers a considerable area, while interiors are chosen for details which must be seen close if they are to be seen at all. A simplicity of quietude is the charm of the place where Col. Newcombe, when his name was called, said his last "Adsum." The "Preacher's Court" looks an agreeable example of late Tudor; "Wash-house Court" is one of the few relics of the old monastic buildings. The domestic offices of the monastery were here. Altogether, this is a very interesting series of views; far better than some others that have before now appeared.

SIR RICHARD WALLACE has always afforded an example of noble communism by his willingness to share the good things of art that have fallen to his lot with his less favoured brethren. Loan exhibitions in all quarters have been deeply indebted to his splendid collections for many years past; but not content with these loans, he has this summer generously thrown open his own house in Manchester Square, with all it contains in the way of art treasures, to the public, who will be admitted under certain conditions on one day in every week.

IT is stated in the "Art Chronicle" of the *Portfolio* this month that "Mr. Hamerton has hit upon a little device for shortening the process of sketching in oil from nature, which he finds practically useful." Generously wishing to extend the benefit of this "little device" to others, he makes it known to the readers of the *Portfolio*, and we feel sure he will be equally willing that it should be known to the readers of the ACADEMY. We therefore quote in full

the description of this ingenious process for rapid sketching:—

"After dead-colouring the subject with rather thick opaque pigments, as if in preparation for a picture, Mr. Hamerton takes a sheet of the thinnest 'moist' gossamer paper manufactured by Messrs. Field and Tuer for manifold writing, and lays it upon the sketch, flattening it gently with the finger. The gossamer paper is so transparent that the whole of the dead-colouring shows through it perfectly, and the sketch may be proceeded with at once (as if the dead-colouring were already quite dry) and finished in a single sitting. This process is really more rapid than water-colour, as there is no occasion to wait even the length of time necessary for the drying of a wash. It is necessary to bathe the gossamer paper in turpentine for a short time before applying it, to prevent subsequent cockling, which would occur otherwise from the absorption of oil from the dead-colouring. When the second painting is dry a coat of varnish removes the very slight degree of opacity remaining in the paper, which becomes invisible, and would not be detected by anyone not aware of the nature of the process. It is necessary to paint in the first instance upon a smooth and stiff surface, such as that of millboard or panel. The process is particularly useful for skies with a few clouds, the sky itself being painted directly on the millboard, and the clouds added at once on the surface of the gossamer paper. In landscape all minute details can be easily added upon the paper. It has been found convenient to glaze at once with transparent colour in varnish on the surface of the gossamer paper, and add details and corrections at once upon the glaze in opaque colour. This gives practically the effect of three paintings without waiting at all for drying."

M. ROLL's powerfully realistic picture called *La Grève des Mineurs*, now exhibiting in the Paris Salon, has been bought by the French Government, and is to be hung in one of the *salles* of the Ministry of Public Works. Among other pictures that have been already selected by the Government for purchase are mentioned *Un Coin d'Atelier*, by Dantin; *Dans la Campagne*, by Lerolle; *Soir de Septembre*, by Pointelin; *Nuit d'Octobre*, by Eugène Lavielle; *Un Ex-voto*, by Ulysse Butin; *Au Lavoir*, by F. Pelez; *Un Coin de la Halle aux Poissons*, by Victor Gilbert; *Retour de Chasse*, by Harpignies; *Le Port de Pont-Aven*, by Defaux; *Les Voilà!* by Beaumetz; *Charles VI. et Odette*, by Edouard Zier; *La Fin du Réveillon*, by Dominique; *Le Repos du Modèle*, by Bompard; *Ludus pro Patria*, by Puvis de Chavannes; *La Tour d'Auvergne*, by Moreau; and *Les Étangs de Saint-Paul de Varax*, by Léon Barillot.

WE have received the June number of the *Etcher* (Sampson Low and Co.). It contains, as usual, three plates, of which the most important is that by Mrs. Anna Lea Merritt. Mrs. Merritt's work is a three-quarters length portrait of Mrs. Kendal (Miss Madge Robertson) in the part created by her in Mr. Tennyson's *Falcon*, the little play founded on a story of Boccaccio's. The largely pensive attitude of the actress is, we cannot doubt, well transferred to the plate, and about the whole there is the grand air of a Venetian picture—such an air, indeed, as was noticeable in the performance of the actress. The hands are done exceptionally well, the artist having perceived their combination of strength with elegance. An etching of *Burnham Beeches* by Mr. Urwick is a somewhat commonplace record of landscape; nor is there anything masterly in Mr. Huson's *The Village*, which was suggested by, or at least finds itself illustrated by, certain verses of Bloomfield.

A SERIES of articles on "Japanese Art" is being contributed to *L'Art* by M. Blanc du Vernet. In the current number is also a long article on "Algerian Art," but this deals more with the societies and exhibitions of art started in Algeria than with its national productions.

A SOCIETY called the "Donatello Society" has been founded in Florence under the presidency of the Syndic, Prince Tommaso Corsini. It would seem not to deal exclusively with sculpture, as its name would naturally suggest, nor even with the fine arts alone, but to extend its aims to the industrial arts, having especially in view the applications of art to the national manufactures.

THE first exhibition of the Philadelphia Society of Arts was remarkably successful, and a second will be held in November next. M. Bierstadt will be among the artists represented.

A REMARKABLY fine etching by Ed. Ramus is given in *L'Art* this week. It is from a portrait in the present Salon of *Mme. G . . .* painted by van den Bos, an excellent example of modern portraiture.

THE STAGE.

THE DUTCH PLAYERS.

THE Dutch tongue must probably be reckoned among the many things which one does not know, but such ignorance cannot hide from anybody the general excellence of the Dutch players, who are now, nevertheless, receiving too little encouragement at the Imperial Theatre. Their excellence is displayed to perhaps the greatest purpose in the domestic play of *Anne-Mie*, but it comes out also in *Marie-Antoinette*—the Dutch translation of the piece written for Mdme. Ristori by Paul Giacometti; and it is here, and here alone, that one has the interest of the comparison between the Dutch and other methods of interpreting the same thing. In *Anne-Mie* a succession of Dutch Genre pictures, with background of tiled wall and blue Delft-covered dressers, pass before the eye, and pleasantly engage it, but neither scene nor actors can recal or be contrasted with any past experience of the stage. In *Marie-Antoinette*, on the other hand, comparison is possible with the best French and English interpretations of similar dramas, and the Italian play itself comes up usefully to recollection. The play deals with a picturesque period that everybody knows, at least a little. It is easy to judge whether, in the matters of costume and stage management, the performance is the equal of those to which we are accustomed, and the leading actress comes to be weighed against so great an artist as Ristori.

To speak, then, first of the players. Mdme. Catherine Beersmans, who is accounted the chief actress of Holland, has something in common with the great Italian, nothing in common with our leading English actresses. If the art of Mdme. Beersmans were known to the bottom by the English public, the poetic grace of Miss Ellen Terry and the genial intelligence of Mrs. Kendal would be valued precisely as much as they are valued now, for there is nothing in Mdme. Beersmans to supersede them. Mdme. Beersmans is an actress of the classic kind; her art is as unlike the nervous and febrile art of Sarah Bernhardt as it is unlike that of our English artists. With a quietude less beautiful than Ristori's, there is yet that in her which recalls Ristori. She is like Agar, but with greater mobility of countenance. Her gestures are slow and measured, but the due succession of them is ordered by a perfect intelligence of the situation. Because she is classic, or what is

understood by classic, she never irritates by exaggeration, and rarely stirs her audience very deeply by exhibitions of an emotion seemingly personal and overwhelming. Her voice is not the *bel organe*, the delightful physical gift, of Mdle. Bernhardt and of Mdle. Hélène Petit; but it is powerful, for it is that of a strong woman in her maturity, and it is sufficiently effective, for it is that of an artist who has made training accomplish all that training can. She is the mistress of her instrument. She is the mistress of all the mechanism of her art. There is nothing left for anyone to teach her. The deficiencies that she shows are not those which time can in any way lessen.

There is hardly a point, however, in which Mdme. Catherine Beersmans can be said to be distinctively Dutch. In seeing her one adds another name to the short list of entirely accomplished artists of the stage whom one has had the luck to study; but somehow it is hardly for her to produce the freshness of a new impression. She is not quite individual enough for that; she is too much the skilled practitioner of the recognised methods of a school. The charm of several of the other players is that they are individual, and that their individuality is wholly, though differently, Dutch. It is a characteristic of the intelligent Dutch—and the players of whom we speak have all of them this characteristic in common—that, while reticent of gesture and devoid of gesticulation, they are yet highly expressive: little moves except the face; even the head is never turned unnecessarily, or without deliberation; the mobility is only in the facial muscles; the expression of the face is so subtle and so infinitely varied that it was a Dutchman who became the greatest portrait painter of all time. And this characteristic of the Dutchman of expressing much with means the least widely exercised is seen in almost every face that Rembrandt drew. This immense expressiveness and inexhaustible mobility, within limited lines and under an appearance (which is real as far as it goes) of reticence and reserve, gives certain precious advantages in the practice of the dramatic art. The Kembles—Sarah Siddons once said of her family—were not only great readers; they were great pausers. The Dutch know how to move when they do move, but they know perfectly how to be still. There is a long passage in *Marie-Antoinette* which Mrs. Chrispijn Stoetz—who can be very lively at need—acting as the Princesse Marie de Lamballe, hears in silence and absolutely motionless. With a slight figure draped closely in black satin, a large hat covering the head, she stands with her back to the audience, like the young woman whom her parents are gently reproving and reasoning with in Terburg's *Conseil Paternel*. All the while there is a certain by-play in her stillness, for the attitude she has silently assumed, and which she absolutely maintains, is perfectly telling in its quiet picturesqueness. If this actress has to be arch or lively, she is arch or lively like a heroine of one of the higher painters of Dutch character. Her charm is not of formal beauty at all, but of thoroughly and happily occupied intelligence. There is a panel by

Jan van der Meer of Delft in M. Double's collection in Paris—Jacquemart has excellently etched it—in which a warrior, whose face is scarcely seen in the picture, is telling some story to a thin-cheeked, pointed-faced damsel who sits on the farther side of the little table that divides them—bends over it—her hand on her drinking glass, her eyes liquid with pleasure, and her mouth a-smile. With absolute reticence of gesture, and with all expression concentrated in the narrow face which is so absorbed with her companion's story, she is taking in the whole matter—all that belongs to it or may ever come of it. It is called *The Soldier and the Laughing Maiden*. One does not know who the soldier may have been, but the laughing maiden must be Chrispijn Stoetz.

Mr. W. van Zuylen's is a face just as completely Dutch, and just as completely removed from our vulgar conception of Dutch impassiveness. What an Italian would signify by a jump, a spring, and a wringing of the hands, is signified in almost the slightest twitching of this supple, sensitive Dutch face—which is an instrument of countless notes. Van Zuylen recalls a little Joseph Jefferson as Rip van Winkle when Joseph Jefferson was a dozen years younger. Half the charm of that actor was the Dutch charm of expressing much with seemingly scarcely an effort. Again, Mr. le Gras, as Malesherbes, is wonderfully sympathetic—conveys, in the prison scene, a world of meaning with scarcely a sentence to say. Miss van Ryk is an admirable exponent of sympathetic emotion; her pathos wholly without trace of staginess or convention—but suggestive of simple feeling simply rendered. The child—little Miss van Oppel—who plays the Dauphin in *Marie-Antoinette* repeats those early successes of the Terrys as Prince Arthur and as the Princes in *Richard* which we have lately been reading about. Tears and agony are on this blonde little face as the Dauphin is forcibly carried off, and the childish treble rises above the general wailing in a fashion that the audience has to be moved by.

There remain the points of costume and stage management—or furniture and stage business. The dresses are sufficiently appropriate: they never touch magnificence or divert interest from "the necessary business of the play." The accessories may perhaps be mean rather than otherwise. Here there is no furniture to tumble over; nothing to impede free action; no collection of objects of art—two pieces of rather second-rate Delft represent naively enough the mantel-decoration of an apartment in a French palace. The stage management is not conspicuous, just because it is faultless. Not only does everything proceed with practised smoothness, but every natural aid to the effort to make the thing real—to produce an absolute illusion—is at hand, and is skilfully employed. About the end of the first act, which passes in a royal drawing-room, an approaching crowd of the populace is heard pressing toward Versailles. A stage arrival was never better managed. First the noise of distant voices is almost imperceptible; then it is distinct, but dull. Then the tramping of the crowd is louder, the confusion of voices closer; then some one shrill disputant is heard above the general

hubbub, and presently he is quieted as the general sound waxes heavier and more threatening. At last it is a burst of noise that is under the palace windows. The amateur may urge that this is stage trickery, and not art; but good stage management recognises the infinite effect upon the business of the play of arrangements careful and ingenious as these. Again, in the crowd that in the third act invades the Tuileries to press insult upon the royal prisoners—as at Versailles it had been turned aside from pressing threats—there is a young fish-wife (Miss van Velzen, I think) whose varied by-play is a perpetual illumination on the scene that passes. Now sharing all the wishes of her comrades for vengeance and insult, now half-persuaded that respect and compassion are what is more properly due, the action of this supernumerary—one prefers to say, this artist—illustrates every gradation of feeling, the sudden transition or the slow influence. Her vivacity is great—the vivacity of a serving-maid of Jan Steen. Other points might be mentioned which prove the completely tasteful and artistic stage management, which never comes obviously to the front, yet always helps to the fullest effect of the spoken word. But enough has been adduced to show that in these things the Dutch actors are of excellent accomplishment. Of us they have nothing to learn. By their adroit employment of every accessory, by their sense of relation and proportion in this matter, by their pointed and piquant telling, without exaggeration or insufficiency, of the story with which they deal, the Dutch evince themselves in the art of acting, as in the art of painting, the masters of Genre. FREDERICK WEDMORE.

STAGE NOTES.

THE play-bill is again to be changed almost immediately at the Vaudeville Theatre, where a new piece will supply the place of Mr. Albery's *Two Roses*. The change will take place on the occasion of the benefit of Messrs. James and Thorne.

MR. PINERO, who is known as an actor at the Lyceum, and who has already written for the stage, is the author of a brief piece produced a few days since at the Folly Theatre.

M. SARCEY's is an agreeable, gossip account of Lafontaine, the comedian, in M. Jouaust's *Comédiens et Comédiennes*—the new number. Lafontaine was long at the Gymnase, under the iron drill of M. Montigny, and some time at the Français, with his wife, Victoria Lafontaine. Victoria Lafontaine was, we think, a sympathetic woman, but an overrated artist. Having pleased for a while, she began to weary, and Lafontaine, irritated at the receptions she was then getting, left the theatre with her. Accepting from that date—nearly ten years ago, it appears—exceptional engagements for special parts, and these only, he has come but little under the eye of the foreign playgoer, though his figure is still fairly familiar to the true Parisian. But he has had since his wanderings began perhaps no success such as that with which he closed, or almost closed, his career at the Français, and did this prematurely when he was but forty-four years old. By his Sartorius—*le vieux Sartorius*—the artist, the musician of M. Feuillet's *Dalila*—he will be remembered. He gave, as M. Sarcey properly reminds us, a new reading to the part. The musical father of the deserted girl had been played hitherto as a weeping creature. Lafontaine remembered that

Sartorius cared profoundly for his art. He gave dignity and a very rare, because well-controlled, pathos to the scene when, after so much of social wreck and social disaster, he meets the wretch of the story on a pleasure party with Dalila, as he, the old father, is "going to bury his child in Germany." In M. Sarcey's pamphlet all is told about Lafontaine that is characteristic of him, and it is told with that self-satisfied *bonhomie* that is characteristic of M. Sarcey. Why did not M. Gaucherel make his portrait of the actor in the impressive rôle of Sartorius instead of in Lafontaine's part in *La Jeunesse de Louis Quatorze*?

MUSIC.

RICHTER CONCERTS, ETC.

THE programme of the eighth Richter concert (June 10) contained one novelty—an overture in D minor by Herr Henschel. It was written ten years ago, and, though not a work of any great importance, contains pleasing and suggestive themes and some good workmanship. As, however, in the case of the Volkmann concerto, we feel that it could easily have been replaced by an English or German work of equal or greater interest. The chief success of the evening was the very fine rendering of Brahms' second symphony in D. The programme included Bach's concerto in D minor for two violins (Herrn Franke and Schiever), Beethoven's eighth symphony, and songs by Mdle. Friedländer.

An extra concert was given on the following evening (June 11) for the benefit of Herr H. Franke, who is described on the programme books as leader, artistic director, and founder of the Richter Concerts. The chief features of the programme were Liszt's *Faust* symphony, Beethoven's *Leonora* overture (No. 3), and Wagner's *Siegfried* idyll. We spoke about the *Faust* symphony as a composition when it was performed for the first time in England at Mr. W. Bache's annual concert last March. The rendering of this difficult work under Herr Richter's baton is deserving of the highest praise. The third movement ("Mephistopheles") was taken at a more rapid pace, and the interpretation was so brilliant and daring that it made a much greater impression on us than at the first hearing.

An immense audience assembled on the occasion of the ninth and last concert of the series (Monday, June 14). There were only three pieces in the programme, each in its own way a *chef-d'œuvre*. The first was Mozart's symphony in G minor, so admired by Beethoven that, according to tradition, he scored it for himself from a piano arrangement, and so loved by Schubert that he said "you could hear the angels singing in it." The performance was all that could be desired. It was followed by the wonderful introduction and closing scene from Wagner's *Tristan and Isolde*, given with the greatest success at the seventh concert, and repeated at the last by general desire. This short and judicious selection formed a fitting prelude to the third and last piece, Beethoven's choral symphony. It was Herr Richter's last and greatest opportunity, and full well did he avail himself of it. The three instrumental movements were certainly rendered in magnificent style, yet we must not forget the excellent performances at the Crystal Palace. But the second and choral part of the symphony was a great triumph for the conductor. The material, both instrumental and vocal, at his disposal was far from perfect; yet rarely have the power and majesty of the music been more fully revealed than on this occasion. The solo singers were Fräulein Thekla Friedländer, Fräulein Hohenschild, Signor Caudius, and Herr Henschel. The chorus was composed of two hundred members, and [the words were

sung in German. Herr Richter has now accomplished his task, and one is at a loss to know what to admire most in him—whether his unfailing and, to all appearances, inexhaustible memory (for, beside overtures and various pieces, he conducted without book fourteen of the seventeen symphonies produced at these concerts); the catholicity of his taste (for he interprets Haydn and Mozart as well as he does Brahms and Liszt, Beethoven's first symphony as well as he does the ninth, and he bestows the same care on an overture by Herr Henschel as on Cherubini's *Anacreon* or Beethoven's *Leonora* overture); or his marvellous gifts as a conductor, which enable him, without pomp or officiousness, to unfold in a clear and intelligible manner the most difficult and intricate scores. A series of nine concerts has been announced for next season, the programmes to contain works by old and new masters.

We must notice briefly some other important musical events of the past week. We mention first the seventh concert of the Philharmonic Society. The programme was singularly void of novelties, but Herr Scharwenka played Beethoven's concerto in E flat in a very neat and intelligent manner.

Mr. Charles Hallé performed for the first time at his fifth recital a grand sonata in F minor (op. 14) by Schumann. It is in four movements; the third is a series of four variations on a theme the composition of Clara Wieck, afterwards Mme. Schumann. It is one of Schumann's early writings, when pianoforte playing occupied so much of his time and attention. It is very long and very difficult, but contains many "exquisite and heartfelt passages." It was played by Mr. Hallé with great taste and ability, particularly the first and last movements. The concert concluded with a fine performance of Brahms' trio for piano, violin, and horn (Mr. A. Stennebruggen). Mme. Néruda took part in this trio and in one by Mozart, but was unable, through indisposition, to play the solos set down for her.

Mr. Ganz gave his fourth orchestral concert on Saturday, June 12, and Mr. Herbert Reeves, the son of Sims Reeves, made his first appearance in public. He is extremely like his father in face, general appearance, and manner. He has a voice of pleasing quality, which time and study will most probably develop and strengthen. He sings with great taste, accuracy, and purity; he phrases in a most artistic manner, pronounces his words with great distinctness—in fact, gives every sign of good and careful training. He was greeted on his first appearance with great applause, which encouraged him perhaps a little as a *débutant*, but reminded him by way of warning that, as the son of an illustrious father, much would be expected of him. His *début* was, therefore, by no means an easy one, and he had good cause for feeling anxious. He sang three times—first a recitative and air from Donizetti's *Maria di Rohan*, then a song from Sullivan's *Light of the World*, and lastly Schubert's *Ave Maria*. The programme, which was long and interesting, concluded with an orchestral piece, *Kermesse*, by Benjamin Godard. This work, performed for the first time in England, was written for the Concerts Populaires in Paris, where it has been given several times. It is a short but pleasing work. The themes are graceful and characteristic; the orchestration is bright and effective. The piece is intended to represent the bustle and amusement of a "Kermesse," or fair. M. Joseph Wieniawski played Liszt's *Fantaisie Hongroise* and Herr Hugo Heermann Goetz' violin concerto; the latter subsequently performed with great taste and expression two Spanish dances by Sarasate.

J. S. SHEDLOCK.

CHATTO & WINDUS'S NEW BOOKS.

NEW VOLUME OF COLLECTED STORIES BY OUIDA.

Now ready, at every Library.

PIPISTRELLO, and other Stories. By Ouida.

Also now ready, in 1 vol., crown 8vo, price 5s., a New and Cheaper Edition of

MOTHS. By Ouida.

MUDIE'S SELECT LIBRARY.

FIRST-CLASS SUBSCRIPTION - - - - One Guinea per Annum.

FIRST-CLASS COUNTRY SUBSCRIPTION Three Guineas per Annum and upwards.

Many Copies of each of the following Books are at home this day:—The Life of the Prince Consort, The Life of Bishop Wilberforce, Memoirs of Rev. Henry Venn, Canon Farrar's St. Paul, Dixon's Royal Windsor, Sala's Paris, Autobiography of Prince Metternich, Memoirs of Madame de Remusat, Séguin's Country of the Passion Play, nearly all the Best Recent Novels, and many other Works of acknowledged merit and general interest.

Revised Lists of Books lately added to the Library, and Catalogues of Surplus Copies withdrawn for Sale, are now ready, and will be forwarded on application.

NEW OXFORD STREET, June 19th, 1880.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.
Madame MODJESKA will appear to-night, at 8, in Mr. J. MORTIMER'S successful Play, **HEARTS REASSED**.
Mesdames Modjeska, Emory, Varra, Giffard, and Le Thière; Messrs. Dacre, Price, Holman, Darley, Douglas, Phillips, and Anson.
Box-office open from 11 to 5. No fees.

DRURY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.
AS YOU LIKE IT.
To-night, under the direction of Miss Linton, in which Messrs. Hermann Vestin, Lionel Brough, W. Farren, Kyrie Bellew, F. Everill, R. F. Edgar, J. Bannister, E. Cox, F. Charles, Miss Creswell, Miss Sylvia Hodson, Miss Roberts, and Miss Lytton will appear. The scenery painted by Mr. Perkins, the dresses by Mr. Forbes-Robertson, the music arranged by Mr. Bernard. The piece and incidental music will be given by an increased chorus, together with the new Wedding March composed by Mrs. TOM TAYLOR.
At 7.30, **NO. 1 ROUND THE CORNER.**
Mr. Lionel Brough and Mr. Everill.
At 8.10, **AS YOU LIKE IT.**
Doors open at 7. Carriages at 11. Box-office now open.

DUKE'S THEATRE, Holborn.

Mr. C. WILMOT, Lessee and Manager.
PAUL MERITT'S great Drama, **NEW BABYLON**.
Miss CAROLINE HILL and powerful company.
The Collision at Sea—Tattersall's—Bal Masque at Cremorne—Goodwood Races—Thames Embankment by Night—Seven Dials, &c.
"Startlingly realistic." "The greatest spectacle ever seen."—Vide Press.

FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.
To-night, 75th time, at 8.15, a new and original Comedy, in three acts, by HENRY J. BYRON, called
THE UPPER CRUST.
Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D. Ward; Misses Lillian Cavaller, Alfred Brindley, and Emily Thorne.
Preceded, at 7.45, by a new and original Comedy, in one act, by A. W. PINERO, **HESTER'S MYSTERY**.
Messrs. J. Caroe, Shelton, and Westland; Misses Johnstone and Linton.
Doors open at 7.15. Prices 1s. to 23s. No free list. No fees for booking.

GLOBE THEATRE.

Manager, Mr. ALEX. HENDERSON.
This evening, at 8.15, the celebrated
LES CLOCHES DE CORNEVILLE.
Supported by Mesdames Violet Cameron, Emma Chambers; Messrs. Harry Paulton, Lordan, Darrell, Ashford, and Silci Barry. Full chorus.
Preceded, at 7.30, by
THE AREA BELLE.
Mesdames Hilton, Graham; Messrs. Osborn, Ashford, &c.
Doors open at 7.

DUTCH PLAYS.

IMPERIAL THEATRE.

Every afternoon at 2.30, every night at 8.

LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.
Every evening (except Saturdays), at 7.45.
THE MERCHANT OF VENICE—217th time.
Terminating with the Trial Scene.
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Concluding with an Idyll by W. G. WILLS, entitled
IOLANTHE.
IOLANTHE—Miss ELLEN TERRY. COUNT TRISTAN—Mr. IRVING.
"Iolanthe" was received with the utmost enthusiasm, and is a pronounced success."—Morning Post.
Every Saturday evening, at 8.30, **THE BELLS** (MATTHIAS—Mr. IRVING) and IOLANTHE (Mr. IRVING and Miss ELLEN TERRY).
MORNING PERFORMANCES
every SATURDAY at 2 o'clock.
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Box-office, under direction of Mr. HURST, open from 10 to 5.

NEW SADLER'S WELLS.

Proprietor and Manager, Mrs. S. F. BATHMAN.
THE DANIELS.
JOAQUIN MILLER'S famous American play descriptive of life in the Far West, as depicted by Bret Harte.
SANDY MCGEE (a Miner)—Mr. RANKIN.
Messrs. W. E. Sheridan, G. Waldron, M. Lingham, E. Holland, L. Harris, J. Peckos, H. Lee, J. Richardson, and Harry Hawk; Mrs. McKee Rankin, Misses Cora Tanner, J. Waldron, and E. Marble.
New Scenery, depicting the mountain passes, rude log huts, and giant trees of California, painted by Thos. W. Hall and assistants.

PRINCE OF WALES'S THEATRE.

Lessee and Manager, Mr. EDGAR BRUCE.
This evening, at 7.50, an original Comedietta.
A HAPPY PAIR.
By S. THAYER SMITH.
At 8.40, HERMAN MERVILLE and F. C. GROVES'S original Play,
FORGET-ME-NOT.
(By arrangement with Miss Genevieve Ward).
Characters by Miss Genevieve Ward, Mrs. Leigh Murray, Miss Kate Pattison, Miss Annie Layton, Miss Gertrude Tompset, Mrs. Bernard Boore, Mr. John Clayton, Mr. Fleckton, Mr. Beerholm Tree, Mr. Edwin Bailey, Mr. Ian Robertson, and Mr. Edgar Bruce.
Doors open at 7.30. No Fees of any description.

ROYAL CONNAUGHT THEATRE.

This evening, at 8, BAIN'S Opera Comique, "Le Voyage en Chine" or **THE OBSTINATE BRETONS**.
Messrs. Hallam, Craven, Carson, White, Morton; Mesdames Petrolin, Muncy, Benton, and May Bulmer. Middle. Hokay in French Revels.
Preceded, at 7.30, by **A HAPPY PAIR**.
Mr. Craven and Miss May Bulmer.

ROYALTY THEATRE

will RE-OPEN THIS DAY, JUNE 19, under the management of Miss KATE LAWLER, with FRANK MARSHALL'S beautiful Comedy, **FALSE SHAME**, and BYRON'S Barlesque **SON AMBULANCE**.
Supported by a powerful company, comprising Messrs. Charles Saglen, Charles Groves, George Canning, H. Hamilton, Frank Wyatt, and Edward Righton; Misses Maude Brennan, Marion West, Annie Lawler, Amy Hatherley, and Kate Lawler.
Box-office now open.

Crown 8vo, cloth, price 2s., post-free.

STUDIES in PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds; Glaciers; the Telephone. By W. J. MILLAR, C.E., Secretary to the Institution of Engineers and Shipbuilders in Scotland; Author of "Principles of Mechanics," &c.

"This work consists of chapters from several sciences—astronomy, electricity, heat, light, &c. They cover a good deal of ground, and include objects as wide apart as whirlwinds and spectrum analysis, glaciers and the telephone."—*Liverpool Advertiser*.

A Pamphlet, with full particulars, on application.

31st March, 1880. FRANCIS HAVENSCROFT, Manager.

LOCKYER'S SULPHUR HAIR RESTORER.

Large Bottles, 1s. 6d. Restores the Colour to Gray Hair in a few days. The best, safest, and cheapest. Quite equal to expensive ones. Sold by Chemists and Hairdressers.

BRAND & CO.'S OWN SAUCE,**SOUPS, PRESERVED PROVISIONS, and****POTTED MEATS & YORK & GAME PIES.**

Also

ESSENCE of BEEF, BEEF TEA.**TURTLE SOUP, and JELLY, and other****SPECIALITIES for INVALIDS.**

CAUTION—BEWARE of IMITATIONS.

SOLE ADDRESS:—

11, LITTLE STANHOPE STREET,
MAYFAIR, W.**PEPPER'S QUININE and IRON TONIC**

Purifies and Enriches the Blood.

Strengthens the Nerves and Muscular System.

Promotes Appetite and Improves Digestion.

Animates the Spirits and Mental Faculties.

Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

TARAXACUM and PODOPHYLLIN.—A

suft combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, headache, pain beneath the shoulders, and other indications of dyspepsia. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile. Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTSTHROUGHOUT on
MOEDER'S HIRE SYSTEM.

MORE CURES OF RHEUMATISM (this week) BY

DR. LOCOCK'S PULMONIC WAFERS.

Mr. Hornman, 1, Spring-street, Sussex-gardens, London, writes:—

"I have found your Pulmonic Wafers most effective in Rheumatism, relieving the most acute suffering. Everyone who tries them speaks very highly in their favour."

They taste pleasantly. Price 1s. 1½d. and 2s. 9d. per Box.

MR. G. H. JONES,

Surgeon-Dentist, 57, Great Russell Street, London,

Will be glad to forward his Pamphlet on PAINLESS DENTISTRY, free, enclosed by Post, which explains the most unique system of the adjustment of ARTIFICIAL TEETH without pain, to which the following Testimonials refer. Consultation free 10 to 5.

"MY DEAR SIR,

"Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which renders my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name.

"G. H. JONES, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

PROFESSOR GARDNER, late of the Royal Polytechnic Institution, in a certificate to Mr. G. H. Jones, Surgeon Dentist of 57, Great Russell Street, London, says:—"I have examined and tested your Painless System of adjusting Artificial Teeth; it is quite perfect, and is the most successful application of scientific laws for securing actual wear and comfort yet introduced."

And all the appliances and comforts of a FIRST-CLASS CLUB.

Subscription to the Circulating Library	- - - - -	{ ONE GUINEA per Annum.
Subscription for Club Membership	- - - - -	{ TWO GUINEAS per Annum.
Subscription for Club Membership, together with Six Volumes delivered free from the Circulating Library	- - - - -	{ THREE GUINEAS per Annum.
COUNTRY SUBSCRIBERS.—An Annual Subscription of Five Guineas entitles a Country Subscriber to Fifteen Volumes and the use of the Club for himself and one other member of the Family.		

SUBSCRIPTIONS CAN COMMENCE FROM ANY DATE.

The Directors beg to inform the Subscribers to the Circulating Library that a constant endeavour will be made to provide a punctual and ample supply of all new works of interest and authority; and in order to carry out this intention efficiently, they must rely in some measure upon the co-operation and assistance of the Subscribers themselves. It is notorious that a large number of new books of a wholly trivial character are now put into circulation, for which there is no real demand, and the publication of such works is in many instances only rendered possible by the system upon which Circulating Libraries have hitherto been conducted. The expenditure upon works of this class will be strictly curtailed, and the funds will be applied as far as possible to the purchase and circulation of books of a higher order and a really popular character, such as the majority of readers are anxious to obtain upon the date of their publication. The Directors trust by this means to render the Circulating Library, in the truest sense of the word, select, while they will seek at the same time to avoid the kind of interested and arbitrary censorship that has been found alike vexatious to authors and the public.

All the Books in the Library are available for Subscribers, without distinction as to amounts of Subscription.

Full details of Subscriptions, both for Town and Country Members, on application to Mr. C. ALLEN, the GROSVENOR GALLERY LIBRARY (Limited), 135, New Bond Street, W.

BRITISH ASSOCIATION for the

ADVANCEMENT OF SCIENCE, 23, Albemarle-street, London, W.

THE NEXT ANNUAL GENERAL MEETING will be held at SWANSEA, commencing on WEDNESDAY, AUGUST 25.

President-Elect—

ANDREW CROMBIE RAMSAY, Esq., LL.D., F.R.S., V.P.G.S., Director-General of the Geological Survey of the United Kingdom and of the Museum of Practical Geology.

NOTICE TO CONTRIBUTORS OF MEMOIRS.—Authors are reminded that, under an arrangement dating from 1871, the acceptance of Memoirs, and the days on which they are to be read, are now, as far as possible, determined by Organising Committees for the several Sections before the beginning of the Meeting. It has therefore become necessary, in order to give an opportunity to the Committees of doing justice to the several Communications, that each Author should prepare an Abstract of his Memoir, of a length suitable for insertion in the published Transactions of the Association, and the Council request that he will send it, together with the original Memoir, by book-post, on or before July 24, addressed thus:—"General Secretaries, British Association, 23, Albemarle-street, London, W. For Section" Authors who comply with this request, and whose papers are accepted, will be furnished before the Meeting with printed copies of their Reports or Abstracts. If it should be inconvenient to the Author that his paper should be read on any particular day, he is requested to send information thereof to the SECRETARIES in a separate note.

Reports on the Progress of Science, and of Researches entrusted to individuals or Committees, must be forwarded to the ASSISTANT-SECRETARY, for presentation to the Organising Committee, accompanied by a statement whether the Author will be present at the Annual Meeting.

No Report, Paper, or Abstract can be inserted in the Report of the Association unless it is in the Assistant-Secretary's hands before the conclusion of the Meeting.

J. E. H. GORDON, Assistant-Secretary.

UNIVERSITY COLLEGE, LONDON.

The PROFESSORSHIP OF ITALIAN is VACANT.

Applications for the Appointment will be received on or before JUNE 30TH, at the Office of the College, where further information may be obtained.

THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Mudie's Library).

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are:—

- 1st. The absolutely facsimile nature of the result.
- 2nd. Its Cheapness for Small Editions of 250, 500, &c.
- 3rd. The Prints being direct on the Paper, there is an absence of all cooking and that disagreeable effect inherent to all Mounted Prints.

* For Terms and Specimens apply to the Manager.

NOW OPEN. EXHIBITION of the PAINTINGS by F. W. LAWSON, illustrating "CHILDREN of the GREAT CITY," "DAWN." This important painting by F. W. Lawson is on view by the courtesy of the HARRONS BURDETT COURTS.

School Board Chronicle.

Fifth Thousand.

IN PRISON and OUT. No Gaol for Children. By HESBA STRETTON, Author of "Jessica's First Prayer." With Twelve Illustrations by R. BARNES. Crown 8vo, 2s. 6d.

"A powerful illustration of the way in which the laws and the police together make criminals."—*Literary World.*

HANDBOOKS OF ART AND MUSIC.

THE OLD MASTERS and their PICTURES. By SARAH TYTLER. Third Edition. Crown 8vo, 4s. 6d.

MODERN PAINTERS and their PAINTINGS. By SARAH TYTLER. Third Edition. Crown 8vo, 4s. 6d.

"An excellent introduction to the history of art."
Daily News.

"The 'Old Masters' really supplies what has long been a want. It gives a good general idea of the various schools of painting, distinguishes them in a broad and efficient manner, and is written with just so much enthusiasm for art as to temper detail and make the reading of it attractive. We are quite sure 'Modern Painters' will be much in demand, for hitherto there has been nothing like it—so complete, simple, and succinct."
British Quarterly Review.

MUSICAL COMPOSERS and their WORKS. By SARAH TYTLER. Third Edition. Crown 8vo, 4s. 6d.

"The best simple handbook on the subject that has yet appeared in England."—*Academy.*

Now ready, in 4to, cloth, price 30s.

WM. ISBISTER, LIMITED, 56, Ludgate Hill, E.C.

GROSVENOR GALLERY LIBRARY

NEW BOND STREET,

NOW OPEN.

AVAILABLE FOR BOTH LADIES AND GENTLEMEN.

COMPRISES AN

English and Foreign Circulating Library,

Provided with all the Best and Newest Literature; a

LIBRARY OF VOCAL AND INSTRUMENTAL MUSIC;

A Reference Library;

READING, WRITING, AND NEWS ROOMS,

Supplied with the Daily and Weekly Journals;

LADIES' DRAWING ROOM,

DINING AND LUNCHEON ROOMS, SMOKING ROOM,

And all the appliances and comforts of a FIRST-CLASS CLUB.

Subscription to the Circulating Library	- - - - -	{ ONE GUINEA per Annum.
Subscription for Club Membership	- - - - -	{ TWO GUINEAS per Annum.
Subscription for Club Membership, together with Six Volumes delivered free from the Circulating Library	- - - - -	{ THREE GUINEAS per Annum.
COUNTRY SUBSCRIBERS.—An Annual Subscription of Five Guineas entitles a Country Subscriber to Fifteen Volumes and the use of the Club for himself and one other member of the Family.		

SUBSCRIPTIONS CAN COMMENCE FROM ANY DATE.

The Directors beg to inform the Subscribers to the Circulating Library that a constant endeavour will be made to provide a punctual and ample supply of all new works of interest and authority; and in order to carry out this intention efficiently, they must rely in some measure upon the co-operation and assistance of the Subscribers themselves. It is notorious that a large number of new books of a wholly trivial character are now put into circulation, for which there is no real demand, and the publication of such works is in many instances only rendered possible by the system upon which Circulating Libraries have hitherto been conducted. The expenditure upon works of this class will be strictly curtailed, and the funds will be applied as far as possible to the purchase and circulation of books of a higher order and a really popular character, such as the majority of readers are anxious to obtain upon the date of their publication. The Directors trust by this means to render the Circulating Library, in the truest sense of the word, select, while they will seek at the same time to avoid the kind of interested and arbitrary censorship that has been found alike vexatious to authors and the public.

All the Books in the Library are available for Subscribers, without distinction as to amounts of Subscription.

Full details of Subscriptions, both for Town and Country Members, on application to Mr. C. ALLEN,
the GROSVENOR GALLERY LIBRARY (Limited), 135, New Bond Street, W.

MISS BROUGHTON'S
NEW NOVEL.
NOW READY AT ALL LIBRARIES.
SECOND THOUGHTS.

BY
RHODA BROUGHTON,

Author of "Red as a Rose is She," "Cometh up
as a Flower," &c. In 2 vols., crown 8vo.

Four New Novels at all Libraries.

BY MISS BROUGHTON.
SECOND THOUGHTS. By Rhoda
Broughton, Author of "Red as a Rose is She,"
"Nancy," &c. In 2 vols., crown 8vo.

NEW NOVEL BY THE AUTHOR OF "ROBIN ADAIR."
ALAN DERING. By the Hon.
Mrs. FETHERSTONHAUGH, Author of "Kilcorran,"
"Robin Adair," &c. In 2 vols., crown 8vo.

BY THE AUTHOR OF "LADY GRIZEL."
IN HER MAJESTY'S KEEPING.
By the Hon. LEWIS WINGFIELD, Author of "My Lords
of Strogue," "Lady Grizel," &c. In 3 vols., crown 8vo.
"The whole work has a powerful attraction."

Vanity Fair.
"With a rare discretion and a consummate art the author
has produced a novel of thrilling interest."
Morning Post.
"Mr. Wingfield has given us a novel that surpasses any of
his former efforts, and that is saying a great deal."
Graphic.

BY THE AUTHOR OF "UNCLE SILAS."
THE PURCELL PAPERS. By the
late J. SHERIDAN LE FANU, Author of "Uncle Silas,"
"The House by the Churchyard," &c. In 3 vols.,
crown 8vo.
"They display great literary vigour and dramatic powers
of a high class."—*Graphic.*
"They are told with a raciness and nerve that should
ensure their success."—*Whitchall Review.*

Also, just published.
MISS THOMAS'S NEW NOVEL.
THE VIOLIN PLAYER. By
BERTHA THOMAS. In 3 vols., crown 8vo.

NOTICE.—The Two New Serial
Stories, "ADAM and EVE"
and "THE REBEL of the
FAMILY," will be continued in
the July number of "TEMPLE
BAR," ready on Monday next.

On June 28, price One Shilling.
THE TEMPLE BAR MAGAZINE.
CONTENTS FOR JULY, 1880.

- I. ADAM and EVE. (Continued.)

"Phyllis," 3 vols.

LONDON:

SMITH, ELDER, & CO., 15, WATERLOO PLACE.

A SECOND EDITION IS READY
OF
MR. R. D. BLACKMORE'S
NEW NOVEL,
MARY ANERLEY:
A Yorkshire Story.

3 vols., crown 8vo, 31s. 6d.

SATURDAY REVIEW.

"Mr. Blackmore's latest work is, we are inclined
to think, one of his happiest productions."

ATHENAEUM.

"A better novel we have not read for a long time.
... Racy language, quaint conceits, rich humour,
keen observation, and a talent for apt allusions are
not every man's gifts."

DAILY NEWS.

"'Mary Anerley' is not so much a story, though
it is an admirably constructed story, as a fund of
deep studies, of splendid pictures, of most amusing
and graphic sketches of the quaintest, queerest
people that every believed themselves to be the salt
of the earth. It is in such books as Mr. Black-
more's novels that the student of English human
nature will find much explanation of its slow accept-
ance of new ideas, its faith in its own growth of
experience, its steady attachment to the land, and
its strength both in prejudice and principle.
There is such a bluff and hearty open-airiness
over it all, such a healthy tone of strong sense and
true feeling, such sincerity of plain, natural solid-
ness of thinking, that one feels to stand more
firmly in the social system which is built on such
broadly based, firm foundations after reading such
a book. It is all so true. One feels that the author
thoroughly knows and believes what he describes.
And who shall say with what humour, what grave
acceptance of the comic side of the rustic nature,
what sympathetic enjoyment and comprehension of
the oddities of folk he does describe?"

YORKSHIRE OPINION
OF THIS
YORKSHIRE STORY.

HULL NEWS.

"'Mary Anerley' is Yorkshire throughout—racy
of the soil. We can with confidence recommend it
to our readers, and we trust it may find its way into
every Yorkshire library, both public and private."

SHEFFIELD AND ROTHERHAM
INDEPENDENT.

"'Mary Anerley' will probably take rank as the
best of Mr. Blackmore's few but choice novels."

YORKSHIRE GAZETTE.

"We have probably said sufficient to induce our
readers to take up this Yorkshire novel, and if they
do we promise them they will be rewarded for their
trouble."

LEEDS MERCURY.

"No reader will be satisfied with less than all."

YORK HERALD.

"Anything more realistic, more original in
conception and execution, more self-consistent and
attractive, we never remember to have read."

At every Library. Second Edition.

LONDON:

SAMPSON LOW, MARSTON, SEARLE, & RIVINGTON,

No. 425, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The English Poets. Selections, with Critical Introductions. Edited by T. H. Ward, M.A. Vols. I., II. (Macmillan.)

HAZLITT paid a real compliment to Steele's sympathetic quality, and his capacity as a literary guide, when he praised him for the aptness of his quotations. The power of talking at or round about a subject is sometimes found, on careful inspection, to be the chief gift of an assertive critic, just as it is the sole resource of a literary carpet knight. Now, of course, it is not criticism (whatever rank and value it may possess as small talk) to elaborate into an airy paragraph a condensed single utterance with which some comprehensive and emphatic authority may have contented himself. If it is one's function to hand on to an audience, entirely uninitiated, the dogmatic results of generations, then a process of such exposition may be indispensable; otherwise, it is a pathetic beating of the air, or an unproductive threshing of straw. There is a strong tendency at the present time, among English speakers and writers, towards such sagacious vacuity as this, such persistent agility in the distribution of platitudes. It would appear that the hurry and the crush of modern necessities prevent that direct personal attention to recognised classic works which is an indispensable element in the formation of opinion, and that a majority allows its literary importance to rest on a skilful reproduction of able reviews, or an elaboration of convenient handbooks and primers. There is thus ample room for criticism like Steele's, through which readers will be forced to some consideration of books themselves, instead of merely listening to the reflections of a "parson in a tye-wig," or the thin comments and exposition of his followers. So many excellent exhaustive text-books exist that we are in danger of simply knowing these without going farther; we painfully learn criticism and rest in it, instead of allowing our critic to guide us and to place us where we shall be able to form opinions of our own.

Such a work as this series of selections from the English poets, edited by Mr. T. H. Ward, is in keeping with the critical method of Steele. The critic is careful to restrict his own personal activity, and to give those under his guidance ample opportunity for forming their own conclusions. He is wise enough to subordinate himself to the importance of that which it behoves him to set forth. Then every critic knows exactly what he ought to say, for the work is prepared on the assumption that no one man is sufficiently herculean to grapple with everything. Every

writer has been chosen to introduce his author because of his assumed special fitness for the task. In this way the work forms an anthology of a particularly strong, varied, and trustworthy kind. It is undoubtedly interesting to see one mind at work on a great variety of subjects, and there are of course those who are capable of touching to good purpose on all the great landmarks of our literature. Should a man, for example, happen to be at once a true poet and an exceptionally vigorous critic, like Campbell, he will command the undivided attention of his reader on any point in the whole range of English poetry. So, too, a sympathetic insight and a ready and comprehensive appreciation like Leigh Hunt's will traverse a wide field, and touch upon a great variety of themes, without flagging of activity or the least abatement of charm. Wide knowledge, broad catholic sympathy, and a judicial calmness of temper will enable a professional literary critic to come forward as a popular guide to the English authors of all ages; and it is in such a consideration that we find the explanation of Prof. Morley's success with his *Library of English Literature*, and of Mr. Stopford Brooke's achievement in the form of his *Literature Primer*. But in cases like these much is due to the author's recognised character and reputation; his authority is admitted because of himself. And those familiar both with his speciality and with the work immediately under his care know where to look for knowledge and conclusive opinion, and where to expect rhetoric and assumptions. In *The English Poets* every writer must be assumed to be an authority on his special subjects, and, indeed, the majority of those the editor has been fortunate enough to engage are just those whose position clearly indicated particular fitness.

The first volume represents the poets from Chaucer to Donne, while the second comprises specimens of those included between Ben Jonson and Dryden. In regard to the leading features thus far, it will at once be understood what quality of work is to be looked for when it is stated that Prof. Skeat, in addition to his inevitable special treatment of Langland, shares with the editor the responsibility for all the texts down to Douglas; that the editor himself undertakes Chaucer; while to the Dean of St. Paul's, Prof. Dowden, Mr. Mark Pattison, and Prof. Ward are assigned, respectively, Spenser, Shakspeare, Milton, and Dryden. To mention that is enough to show that competent men are at work on themes with which they are specially familiar. It may be said, at once, that the editor has shown excellent judgment and taste, as well as competent knowledge, in his treatment of Chaucer. He shows himself abreast of recent criticism, and the selections he gives are thoroughly judicious and illustrative. With Prof. Skeat at his elbow, there was little fear of his wrecking himself (even granting the tendency to it) on such perilous rocks as *The Court of Love*, &c. It is pleasant to find that the doubtful poems are relegated to their proper place in a kind of appendix to the real Chaucer. Dean Church writes as delightfully about Spenser as usual, and he is not severe on the poet (as he is sometimes) for

condescending to flatter the Queen. The introduction is a model of sympathetic yet discriminating criticism, and the selections given are representative in the best sense. Prof. Dowden's opinions on the sonnets of Shakspeare are well known, and they are expressed here with customary appreciation and lucidity. There is no rashness in saying that no better introduction to Milton exists than that given here by Mr. Pattison. It is at once an exhaustive, limpid narrative, an instructive commentary, and an acute criticism. Those who read all of Milton that is given here will probably have a clearer idea of him, and will have got over far more of his writings than the majority of those who possess his entire works. Prof. Ward does not flatter Dryden, but he is confident about his strength and his poetic energy. The poems he gives will enable readers to estimate the judgment of their guide, and it is almost a certainty that the majority will in the main agree with him.

Among the minor poets yeoman service is rendered by Mr. E. W. Gosse. He deals with, among others, Greene and Lodge, Carew and Herrick, Suckling and Lovelace, Waller and Denham and Davenant. It is curious to compare his opinion of Herrick with that of Hazlitt, who called him "a writer of epigrams—not of lyrics." Mr. Gosse writes:—"As a lyrist generally he is scarcely excelled except by Shelley." The reader is more likely to incline toward the later than the earlier critic, though he will do well to consider both. No man living is better qualified than Mr. Gosse to give an opinion on lyric poetry; hence the value of all he has to say not only about Herrick but the other lyrists with whom he deals. It is not necessary to specify all the details of such a work as this, but it is impossible to overlook the excellent treatment given by Mr. A. Lang and the editor, respectively, to the "Ballads" and the "Elizabethan Miscellanies." It is also important to state that Lyly, Dekker, Ford, and Shirley are in charge of Mr. W. Minto, and when that is said no more needs to be added about these writers. And it is a pleasure to record that Mr. W. T. Arnold gives an exact transcript of Wither's *Resolution in a Sonnet* from the original edition of *Fidelia*. There should now be an end of the various readings that have hitherto vexed the admirers of this dainty pastoral.

Mr. Matthew Arnold, in his incisive, discriminating, and luminous Introduction to the work, points out that readers must not attach too much importance to the historical and personal estimates of authors introduced or omitted. The warning is undoubtedly as necessary as it is wise, and it is well calculated to prevent captious criticism. At the same time, the historical element in a work of this kind might have been important enough to warrant a small space for Laurence Minot and Barnabe Googe. The mere fact of slight priority to Chaucer need not have told against Minot's claims, as the important consideration of method and diction might well have affected Gower. A work that can include Sandys, Randolph, and the Earl of Dorset, with distinguished worth as to nothing in particular, might have spared a few pages for the first English writer of war

lyrics and for Spenser's predecessor in the sphere of allegorical pastoral. Mr. Churton Collins makes rather much of Surrey's and Wyatt's versification, while he undoubtedly misses a point in not giving Surrey's playful address to the London citizens after he had been imprisoned for breaking their windows. Prof. Skeat shows good reason for supposing that the writer of *Piers the Plowman* may have been in reality William Langley, and not Langland, as is commonly written; but Prof. Dowden changes his usual orthography of Shakspeare's name without any apparent cause. Prof. Ward gives as Ben Jonson's the *Epitaph on the Countess of Pembroke*, without saying in his short explanatory foot-note that there is any doubt as to the authorship. These are but trifling objections to a work of the very highest excellence, which promises to be a most valuable addition to the standard criticism of English literature.

THOMAS BAYNE.

Brazil, the Amazons, and the Coast. By Herbert H. Smith. (Sampson Low & Co.)

IN this book Mr. Smith, an American who has lived and travelled for the greater part of eight years in Brazil, gives so excellent an account of that country that we cannot regret this addition to the already extensive literature of the subject. The book is a very successful attempt to present a comprehensive picture, drawn both from the experience of the author and from that of previous Brazilian and foreign writers, of the present state of Brazil. It would, however, be improved by the entire suppression of the author's personal adventures, which are introduced only at such very long intervals, and in so disconnected a form, that they fail to be interesting in themselves, and only result in making obscure the "series of essays with a general loose connexion" in which the author has presented his subject. Moreover, the extremely colloquial style is tiresome and inappropriate. The constant direct address to the reader—"Imagine, if you can, this matted forest;" "You have heard that marvellous story"—and such expressions as "a big caruaná [a fish] is squirming about in the bottom of the canoe," are unworthy of the matter of which the author has to tell. The very frequent use of Americanisms is also a disfigurement, at least for the English reader. Again, the too frequent and lengthy quotations from well-known books add unnecessarily to the inconveniently great size of the volume.

The author writes both of the natural and of the sociological features of Brazil. Of the former class he describes the configuration and appearance of the Amazons, its plain and its tributaries, the forests, the vegetation, the zoological and geological features of the district; and of the latter class, the history, social life, agriculture, and commerce of Brazil. Perhaps the account of life in Rio and Para might be spared, as there is little or nothing new told of this matter; but the description of the commercial and agricultural prospects of immigrants to Brazil is better and more true than any that has yet been given.

As a specimen of Mr. Smith's matter and

manner we will quote his general description of the plain of the Amazons, or rather of that river and of the Orinoco, condensing his words where necessary and putting into juxtaposition passages from various parts of the book referring to this subject.

"The North-Eastern part of South America is a plain—a low one, with gentle slopes. On the western side this plain is bordered by the Andes, snowy peaks away up in the cloud region. To the north the Andes sweep round through New Grenada and Venezuela; to the south there are high table-lands in Central Brazil. The plain is in fact a great basin, shut in on three sides, but open toward the east" (p. 3).

Into this basin, which is that of the Amazons and the Orinoco—"brother rivers" the Indians aptly call them—the warm, moist trade-winds blow freely from the Atlantic. These winds on reaching the South-American coast are met by cool land breezes, which, condensing some of the moisture, cause much rain to fall even on the coast. But the trade-winds, passing on westward, carry much of their moisture with them till they meet the icy winds from the Andes; so that on the Upper Amazons—that is, under the Andes—far more rain falls than on the coast.

"This great basin that I have described receives more rain than any other region of the world of like extent. The water is collected in channels—brooks from the Andes and streams on the dripping lowlands, and rivers pouring toward the east; finally, the whole is gathered into two great troughs, the Amazon and the Orinoco" (p. 5).

And these two run eastward into the Atlantic.

"The tides below and the river-floods above must spread themselves through a hundred courses in every possible direction, for the Amazons is not so much a single river as a network of large and small channels. Generally we find a main stream, sometimes two, with smaller ones on either side, with islands and swamps and lakes innumerable, forming that great labyrinth to which the Brazilians give the name of *varzea*; geographers call it the flood-plain of the Amazons. It is perfectly flat, never raised more than a few inches above high-water level, and everywhere the islands are formed of silt and mud from the river itself. The flood-plain varies greatly in outline, and there are long projections of it where the tributaries come in" (p. 13). . . . "Our first step, then, is to distinguish between the mainland and the flood-plain; we must divide these two in our minds as sharply as they are in nature. The mainland is always beyond reach of the floods, though it may be only a few inches above them; it has a foundation of older rock, which crops up in many places. The flood-plain, on the contrary, has clearly been formed by the river itself; its islands and flats have clearly been built up of mud and clay, with an occasional sand-bank; but they are never stony, and only isolated points are a few inches above the highest floods" (p. 78).

. . . "These plains are not distinctive features of the Amazons. Nearly all great rivers have flood-plains near their mouths. . . . But on other streams the plains narrow off as we ascend, and are soon lost; on the Amazons alone they extend nearly to the headwaters, as if a sea had been filled in, leaving deep ditches for the water-flow and countless pools over the surface. From Maniós to the Atlantic the width of this alluvial flat varies from fifteen miles to a hundred or more; on

the Upper Amazons it is probably still wider" (p. 79).

From the side of the stream "the ground slopes gradually away from the river" down to the general level of the flood-plain. On this slope (for reasons which the author fully explains) the vegetation is different from that on the flood-plain.

"To explain these features we must remember that the islands and flats have been formed by the river itself. Every year, in February and March, the Amazons rises to a height of thirty feet or more above its ordinary level, and overflows the meadow-land in all directions. Now in the river the particles of mud and clay are held in suspension by the swift current; but as the water flows over the meadows it becomes quiet, and the particles sink to the bottom. Naturally, the coarser detritus is deposited first, near the river, and at last it builds up a ridge, as we have seen" (p. 93). . . . "Now, this great band [of the flood-plain] running across the continent is a world in itself, with trees and flowers, with quadrupeds and birds and insects, all different from those of the *terra firme* (or mainland) on either side of it" (p. 14).

"The whole flora of the lowland is distinct from that of the *terra firme*. . . . Comparing the *varzea* trees with those of the *terra firme*, we are at once struck with their general resemblance. The species are different, but the genera are commonly the same. . . . Thus your woodsman will tell of one *taixi* on the *varzea* and another on the highland. There are *varzea* cedros (*Cedrela*), *ingás* (*Inga*), and so on. Among palms the familiar *varzea javary* (*Astrocaryum javary*) can hardly be distinguished by a novice from the highland *tucumá* (*A. tucumá*); and the low *curutú* (*Attalea*, sp. var.) of the dry forest are represented by the tall *urucurys* (*A. excelsa*) of the raised forest" (p. 102). . . . "A large proportion of the lowland animals are different from those of the *terra firme*. A certain number are found indifferently in both regions, but in this case they generally show a marked preference for one or the other. . . . The difference between the two faunas is very strongly marked" (p. 103). . . . "Of the lowland birds, we shall find that a large proportion are different from *terra firme* forms, not only the wading and swimming species, such as we see about the channels, but a great many arboreal kinds also. So with reptiles and batrachians, there are semi-aquatic snakes in the meadows, species that are never found in the dry woods. At night we hear the lowland frogs piping in one chorus, but the highland toads have quite another one. We might even make a distinction of the fishes. . . . Insects depend on the plants that they feed upon or the ground they live on; so a vast proportion of the lowland forms are distinct from those of the *terra firme*" (pp. 105, 106).

In these extracts, which we have collected from various parts of the book, we think that Mr. Smith is represented at his best; and yet the greater part of the book is of equal merit. But these same extracts also represent his chief defect. It will be noticed that after each passage we have indicated the number of the page from which it is taken. The pages are pp. 3, 5, 13, 78, 79, 93, 14, 103, 105. Many other passages on the same subject might be collected. It is a pity that Mr. Smith has left to his readers the task of picking out so excellent a description from much other matter. Most of the other subjects are discussed in passages as scattered as are those which we have cited.

The zoological notes, though not very numerous, are highly interesting. Mr. Smith

is especially an entomologist. His collecting must have been most successful, if we may judge from the fact that in one single day, working for eight hours, he collected 394 beetles of 275 species; on another day, 188 beetles of 132 species; and on a third day, 471 beetles of 268 species. His notes on various cases of mimicry in insects are striking. One of these we may quote:—

"Smallmoths (*Pyratidae*, *Tortricidae*, *Tinacidae*) sit on leaves, with their wings folded over their backs. In this position many of the species resemble sticks, moss, bird-droppings, &c.; other kinds appear inverted. . . . Certain narrow-winged kinds, when at rest, are very much longer than broad; and some of these have a singular habit of spinning about on the leaf when alarmed, moving the body rapidly around the head as a pivot. One genus that has this habit is marked by a bright red head; but one or two of the species have the head plain, and red spots on the ends of their wings—i.e., on the ends of their tails as they sit on the leaf; these species spin about their tails instead of their heads. All these cases point to one supposition. The insects, for some reason, derive an advantage from apparent inversion of the two extremities of the body. Now, in collecting, we often find that these inverted species escape us. We have learned to make allowances for the insect's flight when we throw our net over it; we always aim to throw a little in front of the head; but with the inverted species we are deceived, and throw a little behind the tail, when the insect immediately flies away. I can suppose that the birds are deceived just as we are; that they pick a little in front of the insect's tail instead of a little in front of its head; and hence that the species is protected by its inversion of colouring."

We wish that we had space to illustrate the author's ethnological gleanings. Perhaps the most remarkable of these is that broken pottery and other traces of the old Indian population of the Amazons are almost always found only in tracts of black earth or loam. The same fact has been noticed in other parts of South America. As the common food product of South-American Indians, the cassava, or manihot, thrives best in very sandy soil, this apparent partiality of the old Indians for black ground for their homes is curious.

EVERARD F. IM THURN.

The Emotions. By James McCosh, D.D., LL.D. (Macmillan.)

Dr. McCosh is not satisfied with the account of the emotions given in modern works on psychology, and especially in those of the prevalent physiological school. "The vagueness of existing ideas upon the subject tends, he thinks, to favour the resolution of all feelings into mere nervous states. To meet the want which he thus conceives, he has put forth the present little volume on the emotions. At the outset he confesses to a certain amount of conscious dogmatism. "I enter little into controversy," he says in his Preface; "my aim has been to expound the truth, and leave it to shine in its own light." Accordingly, we start prepared for a somewhat didactic strain, which we actually find maintained throughout the whole work. Parts of it, indeed, read more like a sermon than a treatise on mental science. The President of Princeton College is always prone to let his theology flavour his philosophy; and he has

done so very conspicuously even on a subject so apparently remote from its influence as that of which he treats in the present volume.

An emotion, according to Dr. McCosh, may be analysed into four elements. First, there is the affection or *appetence*. Second, there is an idea or *phantasm*, fitted to gratify or disappoint the appetite. Third, there is the *conscious feeling*. Fourth, there is an *organic affection*. Each of these four elements has been separately treated by one or other school of psychologists; but no school has given to all four their proper prominence. Dr. McCosh endeavours to exhibit them in their combination and their mutual relation.

The *appetence* is a spring of action, a "tendency in the mind to crave for an object for its own sake." It is the statical element of emotion, the condition ever present, but ready to be aroused only on the occurrence of the proper idea or *phantasm*. Appetences are primary, as love of pleasure and aversion from pain; or secondary, as love of money, of country, and of science. They differ in individuals according to temperament and circumstances. Some are dominant and others undeveloped.

The *phantasm* or idea which awakens feeling in accordance with an appetite is not abstract, but concrete and generally single. Not the notion of hunger, but a hungry man, arouses commiseration. "The phantasm must be an object which addresses the appetite in the way of gratifying or disappointing it." It is the pulling of the trigger which liberates the pent-up energy of the appetite.

The *conscious feeling* consists of an "excitement with attachment and repugnance." Of the appetite as such we are not conscious; but when the phantasm arouses its dormant force, we perceive at once the excitement arising from the attractions and repulsions which it involves.

The *organic affection*, treated as an effect, not as a cause nor as a concomitant, of the conscious feeling, is briefly illustrated, mainly on the lines of Sir Charles Bell and Mr. Darwin.

Emotions are divisible into two classes—those directed to animate and those directed to inanimate objects. The former class are divided into retrospective, immediate, and prospective emotions. The latter class are, somewhat singularly, restricted to the aesthetic feelings, the consideration of which occupies a relatively large space. The continuous and complex emotions are treated in a final book.

It will be obvious from this slight analysis that Dr. McCosh has set forth his views with a considerable display of schematism, which gives them at first sight an appearance of studied accuracy. But when we look a little closer, we discover many vulnerable points in his argument or arrangement. To begin with, we can hardly call either the "appetence" or the "phantasm" *elements* of emotion; they seem rather its *conditions*. Indeed, only the third of Dr. McCosh's elements is, strictly speaking, any part of the emotion proper; and that is not an element of emotion, but the emotion itself. Dr. McCosh accuses physiological psychologists of dwelling little upon the conscious feeling, and telling

us chiefly about its physical concomitants. Yet no physiological psychologist has ever dwelt so little upon this central fact of emotion as Dr. McCosh himself. Mr. Herbert Spencer, though he treats psychology mainly from the standpoint of evolution, and so deals little with what may be called its statical aspect, has always represented the subjective feeling as the really important point; while Prof. Bain, who alone has given a full specific description of all the emotions *seriatim*, has devoted far more space than Dr. McCosh to the analysis of the subjective feeling in every case. So, again, the phrase "excitement, with attachment and repugnance," can hardly cover the whole ground of emotion, as, for instance, in the cases of surprise, wonder, shame, and amusement. The division of all emotions into those having respectively animate and inanimate objects seems somewhat arbitrary, since many emotions, such as anger, fear, and the ludicrous, may be felt towards either class of objects. Once more, the immediate emotions are treated after the retrospective, whereas they ought obviously to have preceded them, the primitive naturally preceding the derivative. And the identification of the whole class of emotions towards inanimate objects with the aesthetic feelings alone is certainly misleading. Altogether, Dr. McCosh's schematism breaks down on a close inspection as rather formal than materialy useful.

The section of the work devoted to aesthetics allows the importance of the agreeable sensations as a groundwork of aesthetic feeling, but only as a groundwork. "Mere sentient stimulation," says Dr. McCosh, criticising the views of his present reviewer,

"however restricted or enlarged, never constitutes the beautiful. We must have other and higher elements added. . . . This earth-philosophy gives us a mere chemical analysis of the soil in which the plant grows, but does not show us the plant itself."

Yet it may be objected, on the other hand, that Dr. McCosh's philosophy does not tell us anything about the sense of beauty itself at all, but merely about certain transcendental ideas indirectly suggested by a beautiful object to his own particular mind. When a child or an adult admires a flower or a view its sense of beauty seems in the main to be a mere effect of sensuous perception; the associations aroused by the object, more or less numerous in either case, are something apart from the beauty, though closely allied with it. We call a daisy pretty, primarily, not because it is poetical, or familiar, or shrinking, but because it is pink, and white, and yellow, and has its rays arranged in a neat symmetrical circle. If we had never seen or heard of a daisy before we should call it pretty at first sight none the less.

Dr. McCosh's style is as lucid, vigorous, and often beautiful as of old. There is never any doubt as to his meaning nor any hesitation in his utterance. As to the meaning of others, however, he is not always equally clear. Much of his argument against the double-aspect psychologists really hinges upon his inability to read himself into their position. He constantly accuses them of materialism and of entirely ignoring the subjective side of humanity. Now there is a great difference

between saying that A and B co-exist in strict parallelism as diverse aspects of the same reality, and saying that A does not exist at all, while B is the only true entity in the universe. But this difference Dr. McCosh and his school will not for a moment allow. If any man asserts that the white side of the shield is but the obverse of the black side, they at once accuse him of asserting that there is no white side at all, and of degrading the entire shield to a uniform dead level of hopeless blackness. GRANT ALLEN.

Crosby Records: a Cavalier's Note Book.
Being Notes, Anecdotes, and Observations
of William Blundell of Crosby, Lancashire.
Edited by the Rev. T. Ellison Gibson.
(Longmans.)

THE Blundells have owned Crosby from a very remote period. We do not suppose that anything like proof could be given that they came over with William the Norman, but it is not at all improbable that they may have done so. Blundell is a Norman name which occurs in the Roll of Battle Abbey; but then all instructed persons, except those who make a trade of genealogy, have come to consider the documents which go under that name but very doubtful evidence. Whether the Blundells were at Hastings or not, they are certainly one of the oldest houses in Lancashire. The evidence of charters carries them back to the days of the second Henry. At the Reformation they, like many other of the Lancashire families, adhered to the older form of faith, and it was their proud boast in the seventeenth century that none of the Blundells of Crosby or their kin had ever conformed to the Anglican mode of worship. The editor gives in his Preface a memoir of the father of William Blundell, who wrote the "Note Book." He seems to have been a zealous and worthy man, whose whole life was made bitter to him on account of his faith. The same thing may be said of his son, the note-maker, though his sorrows were in part the result of his taking the unsuccessful side in politics. He was heart and soul a Cavalier, though he could do but little active work for the cause he espoused, as he was severely wounded in an attack on Lancaster in the early part of 1643, and became in consequence lame for life. His early retirement from military service did not save him from fines and confiscations during the *interregnum* any more than his well-known ardent loyalty preserved him from persecution as a "Papist" when the third Stuart king came back to misgovern us for a season. William Blundell must have been not only a good Christian man, but also an admirable manager of his property, or the family would have been absolutely ruined by what he had to undergo. His education seems to have been a fair one, if not of the highest class. He evidently knew Latin well, for not only do we find incidental notices of his reading books in that language, but on occasion he spoke it, and he complains more than once of the vile form the language was wont to assume in the writings of some of his contemporaries. French he did not know one word of till he was past middle life, and it speaks well for his energy and

perseverance that he began to learn it in his fifty-eighth year, and made such progress that he could soon fluently read French books.

We evidently have not the whole of William Blundell's notes before us, but from what is given we may conclude without much hesitation that the selection has been wisely made. Indeed, if there be room for fault-finding at all (which we doubt), it is that certain trivial things, from common printed books, have been inserted which occupy space needlessly. The bulk of the notes were certainly well worth printing. They do not, for the most part, relate, as the title might have led us to suppose, to the actions of William Blundell as a Cavalier, but are memoranda jotted down from day to day of what he saw, read, or had heard in conversation. There is very little of a theological and nothing of a controversial nature to be found, but we see on every page that the collection is the work of a man of high moral tone and deep religious feeling. That he was fond of harmless gaiety is evident; but that he shrank from the great vices of the age with almost womanly detestation comes out on occasions too numerous to mention. Though a strict member of the Latin Church, suffering for his faith almost daily, he seems to have had the pleasantest relations with his Protestant neighbours, and often speaks in the highest terms of them. The hatred of duelling, which was a distinctive note of Puritanism, did not fail to attract his attention and win his admiration. "Col. Daniel," he says, "who had been a soldier for the Parliament and Commonwealth from about the beginning of the war, and in many great employments, told me that during the whole time of his service on that side, which continued till the King came in A.D. 1660, he never knew of any officers in their armies that ever fought a single duel, saving a corporal and a drummer. The corporal, having killed the drummer, was presently hanged at Edinborough, two regiments being drawn up for that purpose."

With his mind no doubt full of the nonsense his neighbours were wont to talk as to duelling being a proof of bravery, he adds, "I hope it will not be denied that these armies consisted of valiant men." The Puritan colonel might have gone on to add that though Parliamentary officers did not fight duels it was not for lack of opportunity. As an instance in point, we may remind our readers of the fact that Denzil Holles once gave Ireton a challenge near the House of Commons, and that when the latter refused to fight him Clarendon affirms that Holles "in choler pulled him by the nose." Those who understand what sort of men Clarendon and Holles were will not be inclined to give credit to the latter part of the story. It is now quite unimportant to us to discover which of the two invented it, but we may rest assured that if Holles had done such an act he would have brought dire punishment on himself. We are in the habit of thinking that drunkenness was more distinctly a vice of the eighteenth century than of that which preceded it. This is perhaps an error. Blundell records the death of more than one person who was challenged and shot by his host because he refused to drink as deeply as he was required.

The Note Book of an observant man whose

mind was active in many directions cannot be given in epitome. We may skim most novels and many histories and yet carry away in the memory nearly everything that is worth harbouring there; but in these Notes almost every paragraph is on a separate subject, and has to be read through before we know whether the information therein be or be not important. A fair proportion of them contain useful things. For instance, on p. 67 we have a love epistle—a model of its kind, which we most seriously commend to the attention of all persons of the male sex who wish to perfect their style in that proverbially difficult branch of letters. In another place we have directions how to prepare gorse as a food for cattle. We have other witnesses beside Mr. Blundell to the fact that the branches of this shrub have been used in this country as fodder for ages, but it is not amiss that his mention of it should be noted, for we have recently heard it confidently asserted that the use of gorse as a cattle food in England was unknown until after the Peninsular War, when Wellington's soldiers imported this new knowledge from Spain.

The book contains some important evidence derived from eye-witnesses of the way in which the Irish were treated in the seventeenth century. We hear of an English clergyman, born at Wirral, in Cheshire, but beneficed in Ireland, who one Sunday morning killed fifty-three of his own parishioners, most of them women and children; of the slaughter of between one and two hundred unarmed Irish who had climbed trees for safety; of a Major Morice who hanged a gentlewoman because she looked "like an Irish lady." When we call to mind crimes of which these are a specimen, and remember over how long a period they continued to be perpetrated, we can forgive some wildness of speech in certain modern orators, and even understand how it has come to pass that there are men in Ireland who do not set a high value on human life.

The book is conscientiously edited, and the notes, as far as we have been able to test them, extremely accurate. It has been a mistake, however, to modernise the spelling.

EDWARD PEACOCK.

CURRENT LITERATURE.

PROF. JEBB's handy little book on *Modern Greece* (Macmillan) has appeared at an opportune moment. Now that questions relating to that country occupy such a large place in the public mind, and are so freely discussed in the newspapers, there are many persons who will be glad to learn something more about its antecedents, to receive trustworthy information about its present condition, and to be able to judge for themselves whether the Greek kingdom is really the "spoiled child of Europe," and whether the enthusiasm of fifty years ago in its favour, which was aroused throughout Europe by the War of Independence, was anything more than a fit of unreasoning sentiment. Of the four chapters which make up the volume, the first two were delivered as lectures, and the third has appeared as a magazine article. The first, which is the most important, sketches the history of the Greek nation from the time of Alexander the Great to the present day. It is, of course, little more than an outline, but the salient points are brought clearly out to view, and thus the reader can discover

not only the continuity of the Greek race and of Greek history, but also the progress of events and the development of institutions and social influences the force of which is at work at the present day. An acquaintance with this is all-important for an intelligent judgment of the whole question; and without a knowledge in particular of the different races that inhabit South-Eastern Europe, of the circumstances under which they settled in the country, of their national organisation, and of the vicissitudes to which they have been exposed, Eastern politics are an insoluble riddle. The Greeks themselves are learning more and more that their mediæval history, which, for a while, they were disposed to ignore, is an indispensable link in the chain which binds them to the past; and their critics, whether friendly or unfriendly, cannot afford to dispense with a knowledge of this period. The second chapter, which is an account of a tour in Greece, is intended primarily to illustrate the chief traits of the aspect and condition of the country by recording a traveller's impressions. It abounds in that pleasant combination of modern experiences and classical associations which constitutes the charm of a journey in Hellenic lands. The third treats of the progress of Greece, and contains well-chosen statistics to illustrate the present condition and future prospects of the people. The last, which is entitled "Byron in Greece," recalls us to the time of the heroic struggle by which the Greeks obtained their freedom, and brings out prominently to view the Englishman whose participation in their cause, and early death on their soil, did so much to enlist the sympathies of Europe in their behalf. Prof. Jebb rightly lays stress on the shrewd and practical views of Byron in the matter, and his insight into the strong and weak points of the Greek character. His being a poet and his fervid temperament have caused this to be ignored; but Finlay, the historian, who was constantly in his company during his residence in Greece, was fully aware of this. He said of him:—

"It seemed as if two different souls occupied his body alternately. One was feminine, and full of sympathy; the other masculine, and characterised by clear judgment, and by a rare power of presenting for consideration those facts only which were required for forming a decision. . . . No stranger estimated the character of the Greeks more correctly than Lord Byron."

We shall be glad if Prof. Jebb's sketch recalls attention to the (must we say it?) half-forgotten works of one of our greatest poets.

Life of the Prince Imperial of France. With Portrait. Compiled by Ellen Barlee. (Griffith and Farran.) It was inevitable that the flood of sentiment evoked last year by the pitiful death of the young Prince should be registered in some such permanent form as this; and it is no less fitting that the would-be biographer should be a woman. The publishers have done their best to render the book handsome, both inside and out; but otherwise it has little claim to rank with literature. The mythopoetic faculty has already been busy with the name of one whose actual life was more strange than fiction itself. The episode of M. Regnier in connexion with the Siege of Metz here appears in a new and highly improbable form. The story of a barebacked steed (p. 221) has similarly been coloured by imagination. This horse, we may add, did not belong to the Duke of Hamilton, but was one of Mr. Drew's stud of Clydesdales, inspected by the Prince Imperial one Sunday afternoon when on a visit to the Duke in Scotland. These, however, are details. But what are we to say of the historical perception of a writer who can see nothing but a domestic drama in the Franco-German War, a traitor in Trochu, and cowards in the defenders of Paris?

After this it is not difficult to understand why some Englishmen should be unwilling to enshrine the Napoleonic legend within the walls of Westminster Abbey.

India, Past and Present. With Minor Essays on Cognate Subjects. By Shoshee Chunder Dutt. (Chatto and Windus.) The sluggish mind of the critic stands aghast at the literary productiveness of this Indian gentleman. Our shelves already support three considerable volumes of his manufacture, and here is a fourth of nearly five hundred pages. It consists of a collection of essays of very various degrees of merit. Those dealing with the early history of India have no intrinsic value; but when the Babu comes to the present condition of Bengal, his facts and his criticism are equally valuable. There is a fashion just now to despise native opinion, and to assert that its mouthpieces are not truly representative. This is always the argument of a governing class; and the measure of truth in it can easily be discounted by an impartial reader. What we really want to get at is both sides of the case. It is not enough that our Indian service should be pure in its motives. It is scarcely less important to know how far its policy adapts itself to native ideas, and avoids friction in working. We have taught the natives our language; and our profit on it is that they know how to criticise in good round terms. Some of the Babu's objections may seem to us unjust and far-fetched, but they are no less interesting on that account. He concludes his book with an exposition of his religious opinions, which we can only describe as theosophic.

A Winter Tour through India, Burmah, and the Straits. By H. E. Falk. (Longmans.) When read in connexion with the preceding, this little brochure almost obtains political importance. It fairly represents the opinions of the ordinary Englishman of the last generation, who could never understand why India could not be made to pay (i.e., pay England) better. To Mr. Falk, India is merely a field for English commerce, English capital, and English enterprise. If the natives do not regard their own country from the same point of view, that is only the result of original sin. We are glad, however, to vouch Mr. Falk as witness to the "general unpopularity which the Government of India at present labours under, as compared with the full tide of well-deserved popularity under Lord Northbrook's rule."

Folkdiktning. Samlad och upptecknad i Skåne. Af Eva Wigström. (Köbenhavn.) This collection of popular fiction is a valuable addition to our stock of folk-lore, carefully brought together from one province, Scåne, in South Sweden. First we have forty ballads, local variants. Then a large group (pp. 81-241) of local legends, superstitions, &c., many of them of great value, some quite peculiar to this Swedish district. These are followed by eight popular tales of the kind published in 1844-49 by Cavallius and Stephens. All this is in the Swedish book-language. But next we have riddles and proverbs, &c., in the Sconian dialect. Last come dances, games, and lullabies in the ordinary Swedish. There is much excellent material here for students of Soando-Gothic popular archaeology. In another generation the greater part will have disappeared, so rapid is the progress of "the new learning" in Sweden, as elsewhere.

Lettres et Mémoires de Marie, Reine d'Angleterre, Epouse de Guillaume III. (La Haye: Martinus Nijhoff; London: Nutt.) This pleasing collection of letters, edited by the Countess Bentinck, throws a deeper light on the character of Queen Mary. It displays in every page her devotion for the religion in which she

had been educated, and her love of theological controversy, in which, as she herself confesses, she was better versed than most of her sex. The freshest and most valuable portion of the work consists of a diary of her life in 1688, the anxious period spent by the Prince of Orange in preparing for his expedition to England. It is evident from the letters of her sister Anne that the popular distrust in the legitimacy of the Old Pretender was shared by the daughters of James II. Queen Mary sent to the Princess Anne a series of searching questions on the condition of her stepmother and on the circumstances attending the birth of her half-brother. They are fully answered by the Princess, and the answers probably contain the most authentic information we possess on an event which precipitated the ruin of James. His reckless infatuation and ignorance of the intensity of the popular feeling in England are manifested in the first letter of the collection. The sentiments with which his counsellors were regarded did not lose in force in their transmission to the Court of the Prince of Orange by his sister-in-law. It is difficult to say whether the Princess Anne held Lord Sunderland or his wife in greater detestation. These letters and papers certainly repay perusal.

Episodes of Anglo-Indian History. By W. H. Davenport Adams. (Marlborough.) We grant Mr. Davenport Adams' premise that "the English public know little of India;" and we are further ready to admit that, so far as literary industry and a popular style go, he has himself some qualifications to stand forth as their instructor. But unfortunately he has somewhat misunderstood the character of English ignorance, and has thus been led into the wrong path of study. It is the history of the Indian people about which we know little or nothing. Of Anglo-Indian history and of British battle-fields we are fairly well informed. It is quite a mistake to suppose that the episodes of the Mutiny are not as much common knowledge as those of the Crimean War. The conquest of India has been told and retold to the glorification of British valour. But if we are not wrong, popular interest has shifted, or is now in process of shifting, to another aspect of the matter. The public are beginning to care more about the condition of the Indian cultivator than about "the scientific frontier." Here, however, Mr. Davenport Adams fails his readers altogether. Probably he was judicious in keeping silence where he knew nothing, for it may be inferred from the quantity of absurd misprints which occur that his acquaintance with Indian history has been but rapidly acquired at second hand. Altogether, we incline to think that his work would have been equally attractive, and no less trustworthy, if it did not affect the garb of history, but had been thrown into the form of military fiction.

A Handbook of Parliamentary Procedure. By Henry W. Lucy. (Chatto and Windus.) This little book fairly answers its object as being "an attempt to describe, in simple language and within moderate compass, the manner in which business is conducted in the House of Commons." The present time, however, seems scarcely appropriate to hold up our parliamentary procedure as a model to be imitated. It would have been more to the point, though it would have taken more labour, to institute a comparison between our own system and the Continental system as typified in France, or that followed in the United States. The ideal rules for governing and limiting parliamentary debate have yet to be discovered. Mr. Lucy, however, has accomplished in a way that is both adequate and interesting the minor task which he has undertaken.

I and my Property; or, the Experiences of an

Owner in Dealing with his Legal Estate. By Verax. (Sampson Low and Co.) The title of this book is sufficient to show that it is written by a layman. Not that it is on that account the less useful as a contribution to the reform of our land laws. Until the public take the matter up in earnest, the dead weight of professional obstructiveness will maintain the existing state of things. In the meantime, satire is not the least effective weapon that can be used, and we think that "Verax" might have gained a wider audience if he had confined himself to the tale of his own experiences, and left practical suggestions alone.

The New Parliament, 1880. By William Saunders. (Cassell, Petter, Galpin and Co.) A book like this shows the rapidity of the age in which we live. Only a few weeks have passed since the members of the new Parliament met together for the first time in the newness of life at St. Stephen's, but the interval is long enough for an enthusiastic politician to draw up a summary of the last electoral campaign, from the speech of Sir Stafford Northcote announcing the death of the old Parliament, to the formation of the new Ministry. But for the circumstance that the position of Mr. Saunders in connexion with a great centre of telegraphic news enabled him to collect with more than ordinary speed a mass of facts on the recent struggle for ascendancy by means of "moral attributes," the publication of this volume must necessarily have been deferred. The addresses of the chief members of the late and present Governments, and the abstracts of the speeches delivered by the leaders of political opinion, will possess more than a fleeting value. Lord Hartington was the most active speaker on behalf of the Liberals. He delivered twenty-four speeches, the present Prime Minister contenting himself with fifteen. Mr. Saunders may be congratulated on the completeness of the information which he has succeeded in obtaining on the lives of the new members. Rarely indeed has a Parliament been returned numbering in its ranks more men of culture and character. *Cedant arma togæ.* The warriors have passed away, and their places are occupied with followers of the law and the press. The compiler of this work deserves considerable credit for the energetic spirit with which he has obtained and digested his facts and his figures.

THE late Mr. Townshend Mayer republished very opportunely his enquiry as to *Who was the Founder of Sunday Schools?* (Moxon). He enters into the matter very minutely, and proves by conclusive evidence that the Rev. Thomas Stock, Rector of St. John the Baptist and St. Aldate, Gloucester, has at least an equal claim with Mr. Robert Raikes to be regarded as the originator of the system. The first Sunday-school in Gloucester was opened by these two gentlemen in 1780, and thus the present year is rightly styled the centenary of the institution. Whether it has fulfilled all the anticipations of its first founders is a question which we doubt not will be discussed in all its bearings at the approaching festival.

NOTES AND NEWS.

A VOLUME of collected lectures and essays on education, by the late Mr. Joseph Payne, formerly Professor of the Science and Art of Education at the College of Preceptors, will shortly appear, with an introduction by the Rev. R. H. Quick. It will be published by Messrs. Longmans.

MR. H. A. ROGERS, who has for many years been collecting prints and notices about London Bridge Old and New, has now placed his collection—Thomson's Chronicles of the Bridge inter-

leaved—in five volumes folio, in the hands of Mr. Albert Jackson, 224 Great Portland Street, for sale. The price asked is 175 guineas, which includes the right of publication of all the new material got together by Mr. Rogers.

IT appears that the discovery by the Padre F. Fita, lately announced in the *Revista Euskara*, of a Basco-Navarra dictionary of the twelfth century is really limited to a vocabulary of some twenty Basque words; but even these are important, as they show no variation from the actual dialect.

MR. DAVID BOGUE will issue next week a new illustrated work, by Mr. Edward Walford, entitled *Holidays in Home Counties*. It will form a companion volume to his *Pleasant Days in Pleasant Places*, published two years ago.

WALT WHITMAN is at present on a visit to Canada, where he is the guest of Dr. B. M. Bucke, of London, Ont. Dr. Bucke is engaged on a Study of Whitman, his life and his genius, and desires to receive communications from those personally acquainted with the poet. On its way a Canadian reporter boarded the express train and interviewed Mr. Whitman, who courteously received him.

"The first copy of *Leaves of Grass* which I wrote," said Whitman, "I threw into the sea. I said to myself, 'What better is this than ten thousand other poems?' and tore it up. I knew I had an idea that had not been expressed by other poets, so I tried three or four more times, until at last the illustrious work—I may say—appeared."

Of books, Whitman likes Walter Scott's best, and, in chief, *The Heart of Midlothian*. George Sand is a great favourite with him.

"I am not an admirer of Dickens, but easily see why his works take, and ought to take. At the same time, I would not like to go on record as not being an admirer of Dickens, Bret Harte, and that class of humorists. They offend my democracy, however. They present the most of working people in a kind of *delirium tremens* spirit."

Whitman is still lame from his paralytic stroke, but is cheerful, rosy-cheeked, and with undimmed blue eyes.

THE Correspondence of the Russian historian, Michael Pogodin, with Schafarik, Kopitar, and the chief Slavists of the first half of the present century has just been published at Moscow under the editorship of M. Nil Popov. The contents of the three volumes are of a highly interesting character.

Nature's Bye-paths: a Series of Recreative Papers in Natural History, is the title of a new volume by Dr. J. E. Taylor, editor of *Science Gossip*, which Mr. Bogue has in the press.

A *Catalogue of Works relating to William Shakespeare and his Writings in the Barton Collection*, Boston Public Library, by James Mascarene Hubbard, has been issued. It consists of 227 pages, a work of much labour, and admirably executed. The books are both catalogued under authors' names and grouped under subjects, and thus it becomes doubly useful.

THE new Russian Minister of Worship and Education, von Saburoff, has bestowed the title of an honorary correspondent of the Russian Educational Ministry upon Prof. Michaud, of the Old-Catholic Theological Faculty in the University of Bern. Prof. Michaud's work on the Seven Oecumenical Councils is regarded as a classic in Russia, and it was introduced by Count Tolstoy, Saburoff's predecessor, into the clerical seminaries of the Russian empire.

THE Council of the Society of Arts have awarded medals to the following gentlemen for papers read during the session which is just over:—Major-Gen. H. Y. D. Scott, C.B., F.R.S., for his paper on "Suggestions for Dealing with the Sewage of London;" Mr. A. J. Ellis,

F.R.S., for his paper on "The History of Musical Pitch;" Mr. John Sparkes, for his paper on "Recent Advances in the Production of Lambeth Art Pottery;" Mr. Henry B. Wheatley, F.S.A., for his paper on "The History and Art of Bookbinding;" Mr. W. Holman Hunt, for his paper on "The Present System of obtaining Materials in Use by Artist Painters, as compared with that of the Old Masters;" Mr. Thomas Fletcher, for his paper on "Recent Improvements in Gas Furnaces for Domestic and Laboratory Purposes;" Mr. John C. Morton, for his paper on "The Last Forty Years of Agricultural Experience;" Prof. Heaton, F.O.S., for his paper on "Balmain's Luminous Paint;" Capt. Abney, R.E., F.R.S., for his paper on "Recent Advances in the Science of Photography."

MR. H. H. MORGAN, editor of *The Western*, has published at St. Louis (Jones and Co.) a volume entitled *Topical Shakspeariana*—a collection of English books, &c., on Shakspeare, arranged under headings to facilitate reference to special subjects of investigation. Some items not given in Lowndes, Allibone, and Thimm will be found in it. The volume is interleaved for the introduction of MS. additions.

THE special meeting of the Philological Society for the discussion of Mr. Henry Sweet's lists of words in reformed spelling is fixed for Friday, July 9.

THE first part of Mr. Henry Ward's comparison of Chaucer's "Knight's Tale" with Boccaccio's *Teseide* and Statius' *Thebais* will go to the printer next week for the Chaucer Society.

WHO in the present century has modernised, single-handed, the whole of Chaucer's *Canterbury Tales*, together with the "Tale of Gamelyn" and the "Tale of Beryn"? Prof. Dowden has obtained a quarto volume of MS., lettered "Chaucer's Canterbury Tales Modernised, Vol. 2," containing the second half of such a version of Chaucer—probably over 12,000 lines. Neither the writer's name nor that of any former owner appears in the volume. The water-mark of the paper is 1811. The variations of metre in Chaucer are followed by the writer. The following is a specimen from the "Prioresse Tale" of the little martyr in Asia:—

"Among these children was a widow's son,
A little sprout of clerkship, seven years old,
Whose daily joy it was to school to run;
And, if he chanced an image to behold
Of Christ's blest mother, as he had been told
He ought, he never failed to kneel and say
An Ave Maria, as he past the way.

"Before the altar, while the mass was saying,
Stretch'd on his bier the little martyr lay;
Which o'er, the fathers, without more delaying,
Proceed to have the body clad in clay;
But lo! no sooner was the holy spray
Upon him sprinkled, than once more his tongue
He mov'd, and *Alma Redemptoris* sung."

Where is the first volume of this nineteenth-century Chaucer to be found?

IN his Forewords to the second quarto of *Hamlet* (1604) in Mr. Griggs's series of facsimiles, Mr. Furnivall shows how much more important for the character of *Hamlet* and the play the second quarto is than the first folio. He attacks the view of the Clarendon Press editors that so large a part of the first quarto is due to the writer of the old *Revenge Hamlet*, and contends that Shakspeare was the creator, and not merely the painter and glazier, of the *Hamlet* we all know; for all the main lines of both character and play are in quarto 1. He shows in how great need of some "sign-post criticism" the denouncers of it stand in this matter. He turns against his opponents their argument from the folio that the first quarto was not a first sketch of the play, and shows that the

folio evidence is in favour of the first sketch. The book will be ready on July 1.

DR. B. W. RICHARDSON, F.R.S., contributes an article entitled "Food Thrift" to the July number of *Modern Thought*. The article will, we are informed, include the substance of the address delivered by Dr. Richardson at the Mansion House Conference on Thrift.

SIR HENRY BARKLY, K.C.B., F.R.S., Sir Joseph Favrer, G.C.S.I., F.R.S., Mr. J. E. Howard, F.R.S., Mr. J. F. Bateman, F.R.S., the Bishop of Bedford, and Bishop Perry, being members, have been elected to the vacant seats on the council of the Victoria (Philosophical) Institute.

THERE has just been published at Richmond, Virginia, a somewhat novel work, entitled *Housekeeping in Old Virginia*. It contains contributions from no fewer than two hundred and fifty ladies in Virginia and her sister States distinguished for their skill in the culinary art and other branches of domestic economy. The work is edited by Mrs. Marion Cabell Tyree.

THE *Life and Letters of Horace Bushnell, D.D.*, will shortly be issued by Messrs. Harper, Brothers and Co., of New York.

MESSRS. CECIL BROOKS AND CO. will shortly issue a midsummer annual under the title of *The Editor's Box*, containing contributions by Bret Harte, F. C. Burnand, Florence Marryat, Richard Dowling, Mrs. Lynn Linton, and others; also a portrait of Bret Harte, by Frank Miles; and an original pen-and-ink sketch of Thackeray's reproduced in facsimile.

THE *Rassegna Settimanale* announces the speedy publication at Naples (tip. Giannini) of the *Codex Diplomaticus Ducati Neapolitani*. The volume, which will be copiously illustrated and annotated, is printed at the charge of the Historical Society of Naples.

M. HENRI TESTARD will bring out shortly a second edition of his *Essai sur la Vie et les Œuvres de Théodore Parker*, revised and rewritten expressly for the Bibliothèque Zilon (Verriers).

The New Parliament, by Mr. William Saunders, is already reprinting, and the second edition will be ready early next month.

DON MARIANO AGUILO, head of the provincial library of Barcelona, has in preparation a new edition of the works of Ausias-March, the great Valencian Troubadour of the fifteenth century. His various wills, containing many interesting details of the poet's life, were discovered some years ago, and, with other fresh matter, will be made use of for this edition.

MESSRS. VEIT AND CO., of Leipzig, propose to publish shortly, under the editorship of Prof. G. Wattenbach, the first part of a revised and enlarged edition of Jaffé's *Regesta Pontificum Romanorum*.

MESSRS. GEORGE BELL AND SONS will shortly publish, under the title of *The Condition of Nations*, a translation of G. Fr. Kolb's *Comparative Statistics*. The work has been translated, edited, and brought down to the present time from authentic documents by Mrs. Brewer, with Kolb's personal supervision of the proof-sheets. Original notes on the precious metals have been contributed by Mr. Streeter, author of *Precious Stones and Gems*, &c.

WE have received an *Alphabetical Manual of Blototype Analysis*, by Lieut.-Col. W. A. Ross (Trübner); *The Centenary Commemoration of the Birth of Dr. William Ellery Channing* (British and Foreign Unitarian Association); *Science a Stronghold of Belief*, by Richard Budd Painter, M.D. (Sampson Low and Co.); *Practical Hints for Pupil Teachers on Class Management*, by James Saunders, fourth edition, revised and enlarged (Laurie); *Life: its true Genesis*, by

R. W. Wright (Putnam); *Le Belle Arti a Torino*, da F. Filippi (Milano: Ottino); *The Kinder-Garten*, by Emily Shirreff, second edition (Sonnenschein and Allen); *Change-ringing disentangled*, by the Rev. Woolmore Wigram, M.A., second edition (Bell); *Histoire Grecque*, par Ernest Curtius, traduite par A. Bouché Leclercq, fasc. 1 (Paris: Leroux); &c.

THE EARL OF MANCHESTER AND OLIVER CROMWELL.

MRS. EVERETT GREEN, in calendaring the Domestic State Papers of the Commonwealth and Protectorate, has come across a misplaced bundle of examinations relating to the complaint brought by Cromwell against the Earl of Manchester in 1644. Cromwell's own deposition is as follows:—

"Tuesday, 10th 10th, 1644.

"Lieutenant General Cromwell sayth,—
"That the kings armie marching from Dunnington Castle and being drawn up on Winterborne heath, the army belonging to the Parlemtent drew out of the towne of Newberry and Newberry feild into Shawfeild about a mile from the kings army, and the Earle of Manchester with diverse of the cheife officers having viewed the same did a little after repayre into a cottage in or neere the said feild to consult what to doe, and amongst other debates it was urged by this examinate that if wee should beate the kings army it would hinder his affayres in France and might prevent the coming of French forces into this kingdome, which wee heard was indeavoured; to which his lordshippe gave answer that he did assure them, meaning the counsell of warre then present, there was noe such thing as any forces to be brought from France, which undertaking of his lordshippe this examinate wondered at, considering whatt hee, this examinate had heard concerning endeavours of that nature, and this examinate still pressing towards engagement his lordshippe urged further that hee was against fighting, giving this as his reason and saying that if wee should beate the king never soe often, yet he would be king still and his posterity; but if hee should beate us but once, we must be hanged, and our posterity undone, or words to that effect; to which this examinate replied that, if this principle was true, it condemned all our former fighting as foolish, and was an argument against fighting for the future, and a ground for making a peace how dishonourable soever.

"OLIVER CROMWELL."

MAGAZINES AND REVIEWS.

THE first two parts of the *South African Folklore Journal* contain five stories. The first describes how two chiefs escaped from the hands of cannibals. The second illustrates a Secoana maxim to the effect that "Much searching disturbs things that were lying still." In the third a slaughtered ox is brought to life by an incantation, and in the fourth another ox is devoured by "the ancestral spirits" during the absence of its slayers. The fifth tells "how the children of the Bafurutsi separated from their fathers." Among the other papers are "A Draught Sketch for an Anthropological Institute," by the late Dr. Bleek, and three articles on South African customs and beliefs. Some of the Zulu peculiarities described by Mrs. Hugh Lancaster Carbutt are worthy of notice. When a child is about ten days old it is partially buried "at a spot, or beneath some tree, that has been struck by lightning," in order that it may render it courageous. When diseases are prevalent, "all the girls and unmarried women of a kraal rise early in the morning, dress themselves entirely in their brothers' skins, and taking their 'knobkerries' and sticks, open the cattle pen or kraal, and drive the cattle away from the vicinity of the homestead," not returning till sunset. "No one of the opposite sex dares to go near the girls on this day," a

fact which closely links the Zulu remedy with that employed in Russia to avert a cattle plague. Mrs. Carbutt does not think that the Zulus "actually kill a deformed child in cold blood." But she knew of a case in which the father of a small cripple left it in the forest by the side of a kid, which he tied up beside a leopard's hiding-place. Zulu babies receive their "great" or true name a few weeks after their birth. But they are also called by many nicknames, or "names of mischief," according to the course of events. "This year, for instance, many children will receive the name of Cetshwayo, or of some battle-field or impi." Both the Kaffirs and the Bayeye believe that "at the creation the black men were impatient, and cried out, 'Give us our things, and let us go.' The whites were patient and waited, and so received all the best gifts, wisdom, riches, &c."

THE current number of the *China Review* consists mainly of continuations from the preceding number. The chapter of the Lü-li which Mr. Jamieson translates for us is one on inheritance and succession, and is interesting as making plain much which requires explanation in Chinese family life. The facts that the family is the unit of Chinese society, that succession is strictly regulated by definitely fixed rules, that women cannot inherit; and that all goods are common in the family until the death of the father, are the chief points illustrated. Mr. Walters continues to find fault with Messrs. Beal's and Giles's translations of Fa-hien's travels; and Mr. McIntyre gives us another chapter on the Korean language, or, more properly, the Sinico-Korean dialect. The only new article is a "Syllabary of the Hakka Language or Dialect" by an anonymous contributor. The Hakka is one of the richest of the Chinese dialects, having about seven hundred separate syllables. The Cantonese has about the same number, while Pekingese has no more than 420. The books noticed at the end of the number testify to the literary activity of the consular and missionary staffs, who have of late years shown most commendable zeal in the pursuit of religious, historical, and linguistic researches.

The Antiquary. June. (Elliot Stock.) The best article in this month's *Antiquary* is Mr. T. H. North's "Marlowe's Women." He knows his subject well, and deals with it discreetly. There is, however, another side to the picture. Marlowe had an unhappy life, and died young, with powers only half developed; but there are traces to be found in his writings that he saw the ideal side of womanhood as well as the physical. He was a true poet of a high order, whose gloominess might have passed away had he lived to the full maturity of his powers. Mr. Blaydes, who is the great authority on Caxton and everything that is his, contributes an amusing article on "The Game and Playe of Chess;" and Mr. Wallis discourses again learnedly on book plates.

In the *Revista de Ciencias Históricas* for May, P. Nanot Renart begins an historical sketch of the "Decadence of Catalonia." The present number gives examples of the haughty arrogance of the Catalan *Concelleres* toward the early Austrian Sovereigns, and the consequent dislike of the Castilian Court. Don Enrique Heriz makes an essay toward a physiological alphabet. S. Sanpere y Miguel, in a long article, retorts warmly on his French critics—Prof. J. Vinson and M. Blanc. The latter calls in question the genuineness of the remains alleged to have been found in the "Cerro de los Santos." If any serious doubt exists on this point, it should be set at rest without delay by a full and authentic account of all the circumstances of the discovery. Elias de Molins prints here the first chapter, embracing works on epigraphy and on inscriptions, of an important "Bibliography of the History of

Catalonia." The complete work will be published shortly.

"CENDREUSETTE," THE MENTONESE VARIANT OF CENDRILLON, OR CINDERELLA.

MR. J. B. ANDREWS, of the Villa Pigautié, Mentone, has kindly given me permission to insert this version of Cinderella in the ACADEMY. Mentone was, till some twenty years since, a very primitive little place; and even the young women of the district remember the traditional stories which they learned from their grandmothers. But, as this tale shows, they either remember them badly, or grow lazy in the course of telling them. Nor is it easy to make a peasant girl or crone understand why grown-up foreigners are so eager to hear nursery legends. It is an odd instance of the way in which the names in these tales get distorted that one of Mr. Andrews's authorities called Cendreuseite *Sainte Rosette*!

"CENDREUSETTE."

"Once there was a man who had two daughters, one named Catherine and the other Cendreuseite, and their mother was not over-fond of Cendreuseite. One day she sent her to mind a cow, and gave her a kilo of cotton to spin, which she did not in the least know how to do. She began to cry, and then the cow said to her, 'Tie the distaff on my horns and the spindle on my tail, and put me where there is good grass and water, and I will spin it.' When she went home her mother was content with what she had done. The sister asked leave to go with the cow the next day, and her mother gave her also thread to spin. When she was on the road she began to cry; then said the cow, 'Put the distaff on my horns and the spindle on my tail, and I will spin it.' The girl led her where other cows had already refused the grass, and so, instead of spinning, the cow gathered cabbages for her. The mother, being angry, then said to them to kill and eat the cow. Cendreuseite went to warn her, when she told her, 'Take care to eat some of it, and you must then keep the bones and put them in a box; whenever you wish a fine gown, take a bone and it will turn into one.' Once her mother was going to high mass with the sister; they left Cendreuseite in the kitchen. When they had gone she took a bone, and said, 'I wish this to turn into a fine gown and on it a sun shining, and a slipper which walks by itself.' She put them on and went to church, and seated herself on a bench near her mother, who did not know her, but took her for some fine lady. She had a fan, and on it was pictured the sea; she let it fall, her mother took it, and she said to her, 'You may keep it; I do not wish it any more.' She hurried home after mass to undress, so that her mother should not know. The next day she went again to mass, now dressed in a gown on which was the sea, and fishes swimming about in it. She put herself again on the bench near her mother. She had a handkerchief with the moon upon it, she let it fall, her mother took it, and she would not take it back. After the high mass she ran away, losing in her hurry a slipper. The king's son found it, and had it cried everywhere that she who had lost it should come and claim it, and he would make her his wife. All the young women tried it, but it would not fit. He bade Cendreuseite's mother bring her daughters. Cendreuseite went dressed in her gown on which were the fishes, and wearing the other slipper, and the prince took her for his wife."

Here we have a popular traditional form, untouched by literary influences, of the tale that Perrault published as "Cendrillon"—see *Contes de Charles Perrault* (Paris: Lemerre, 1880). What first strikes one is that the Mentonese girl's tale coincides with the Servian, Scottish, and Celtic forms of the *Märchen*, and differs from Perrault's form in the following particulars. We have here no fairy godmother. Cendreuseite—like Rashin-Coatie in Scotland, like the Breton girl in *Le Chat Noir*, like Pepelluga in the Servian tale—is aided by a cow. But this cow is in no way connected (as in Scotland, in Servia, &c.) with her dead mother.

On the other hand, the cow aids Cendreuseite, and does not aid Catherine, for a moral reason—because the former is good and kind, and the latter unkind. So far Cendreuseite answers to the good girl in the story whose lips drop rubies and pearls. This moral element in the tale appears very strongly in an African variant published in a late number of the *South African Folk-Lore Journal*. In the Mentonese version (as in the Scotch, Servian, &c.) the cow is killed; but we have not the incident of the collection of the bones in the hide—an incident illustrated by South African folk-lore (*Folk-Lore Journal*, March 1880). Cendreuseite is told to eat some part of the cow, but this looks like a blunder of the narrator. In other European variants she is warned to eat none of the friendly animal—which, by-the-way, is a sheep in the West Highland Celtic story. It is needless to say that in Cendreuseite we have none of Perrault's humorous metamorphoses of rats into coachmen, and so forth. The girl's fine dresses correspond to those in the modern Greek variant: "On one was the sky with its stars, on another the spring with its flowers, on a third the sea with its waves." The narrator has "scamped" the conclusion—the part in which the pretenders to the slipper cut away their own heels and toes. Indeed, the whole Mentonese story is blurred by the hurry or ignorance of the narrator. It seems important, because it proves that the truly popular form of the tale everywhere differs (by the introduction of a benevolent animal) from Perrault's story of a fairy godmother, derived probably from the literary Italian version (*Pentamerone*, 1637; cf. W. E. S. Ralston in the *Nineteenth Century*, November 1879, and Dr. Köhler on two Scotch *Märchen* collected by me, *Revue Celtique*, vol. iii., p. 370).

As to the origin of *Cinderella*, are we to say, with Perrault's last editor, that she is "the cosmogonic personification of the Light"? that she is "the Dawn, hidden in clouds," i.e., cinders? Are we to go with Prof. de Gubernatis, and connect her with Apollon, the footless or unshod Aurora of the Vedas? M. Dillaye, the editor of Perrault, is responsible for this statement of Prof. de Gubernatis' view, which I have not verified. But we know that "the still morn goes out with sandals gray;" Cinderella has a "sandal," and therefore Cinderella is the Morning!

Before rushing to these conclusions, we should at least ask how the cow and the cannibalism (in the modern Greek version) came into this myth of the Dawn, which, in these respects, corresponds to the character and incidents of Bushman fiction. Perhaps the theory of the Dawn is as premature as it is obviously incomplete.

An idea has occurred to me which I do not put forward as more than a guess and a hint.

Why is Cinderella, Aschenpüttel, Ashypet, Pepelluga always a cinder wench? In this respect she answers to the Norse Boots, the youngest son, who is always chaffed for sitting in the hearth among the ashes. Can there, in this association of the youngest of the family with the hearth, be any reference to the old English custom, which is found as far away as Siam—the custom that, on the father's death, and at the division of his property, gives the hearth, the *aster*, to the youngest child? By-the-way, Mr. Ralston's reference of the "husk" or "skin" which hides "Peau d'Ane," "Hairy Betty," and many other Cinderella-like figures need not necessarily be connected with Indian more than with any other mythology.

The Red Indians of America have a superstitious magical practice which, if it can be shown to be widely spread, offers as plausible an explanation. We are only beginning to see the difficulty of the science of mythology, which

cannot be completed without the aid of a full investigation of savage practices, savage fictions, and the conditions of the savage imagination. A. LANG.

OBITUARY.

MR. CHARLES HAY CAMERON, who died in Ceylon on May 4, was probably the last survivor of the personal disciples of Bentham. His exact age we do not know; and it would be misleading to argue from the venerable appearance of hair and beard which distinguished him, for we believe the colour of his hair turned to white while he was yet in his teens. As, however, he was called to the bar at Lincoln's Inn in 1820 he must have exceeded his eightieth year. His grandfather was Dr. Archibald Cameron, of whom he used himself to say with pride that his head was displayed on Temple Bar. To this grandfather he erected a handsome monument in the Savoy Chapel; and when that monument was destroyed in the fire of 1864 he substituted for it a painted window. Though he was called to the bar, we are not aware that Mr. Cameron ever practised. Like his master, Bentham, he devoted himself from the first to the more congenial task of law reform. One of his first efforts in this direction was a letter addressed to the Secretary of the Colonies advocating changes in the law of Ceylon, an island in which he was destined to spend his last years. When the Indian Law Commission was appointed in 1835, he was selected by the Whig Government of the day as the English member. For twelve years he lived at Calcutta, and worked on that Commission, first as member, and afterwards as president. If little was brought to completion in that time, the fault rests not with the Commission, still less with Mr. Cameron himself, but with the irresistible spirit of obstruction then dominant in high quarters. As a matter of fact, the existing Indian Codes, commonly associated with the name of Macaulay, were largely the work of Mr. Cameron. During the twelve years of his residence in Calcutta, he occupied also the far more agreeable post of member and president of the Council of Education for Bengal. In addition, he served as fourth or legal member of the Council of India from 1843 to 1848, being the successor next but one after Macaulay. In 1853, after his return to England, he published *An Address to Parliament on the Duties of Great Britain to India, in Respect of the Education of the Natives and their Official Employment*, which will well bear reading at the present day. The main objects of his advocacy were—the instruction of the natives in English rather than in the classical languages of the East, the foundation of universities in India, and the admission of natives to the covenanted service. Here, again, success crowned his efforts, though the glory of the result did not fall to him. In his old age Mr. Cameron lived mostly at Freshwater in the Isle of Wight, until, a few years ago, he emigrated to Ceylon, where he had long possessed a property, and whither his sons had preceded him as coffee-planters. Those who were privileged to be admitted to his society will not readily forget the dignity with which he sustained the great traditions of the now extinct generation of Benthamites. His wife by a second marriage was Julia Margaret Cameron, well known by her photographs, who predeceased her husband by little more than a year.

MR. WILLIAM THOMAS THORNTON, C.B., who died on June 17, was born in 1813, the youngest son of Mr. T. Thornton, president of the Levant Company's establishment at Constantinople. In 1836 he was appointed to a clerkship in the East India House; and when the Government of India passed to the Crown, he became Secretary for Public Works in the India Office, a post which he held to the day of his death. Like not a few

other members of the permanent Civil Service, his leisure hours were given to literature. His chief works are—*Over-population and its Remedy* (1846); *A Plea for Peasant Proprietors* (1848); *Labour* (1873); *Zohrab: a Poem* (1854); *Word for Word from Horace* (1878), reviewed in the *ACADEMY* for June 29, 1878; and *Indian Public Works* (1875). His last publication was a paper read before the Society of Arts on February 22, 1878, entitled *Irrigation regarded as a Preventative of Indian Famines*. Mr. J. S. Mill, his life-long friend and colleague in the India House, has acknowledged his indebtedness to Mr. Thornton in the field of political economy, where his views are characterised both by originality of speculation and personal study of the facts.

DR. ENNEN, archivist and librarian of the city of Cologne, and author of a well-known *History of Cologne*, died on the 14th inst. The death is also recorded of M. Paul Albert, lecturer on the French language and literature at the Collège de France; of M. Nadault de Buffon; and of Prof. K. W. Nitzsch, of Berlin, author of *Die Römische Annalistik*, &c.

CORRESPONDENCE.

"NUK PU NUK;"

USE OF OBELISKS AS LIGHTNING CONDUCTORS.

Cambridge: June 19, 1880.

1. THE very friendly review * of my Hibbert Lectures, which appeared in the *ACADEMY* of May 22, did not seem to call for any remarks, though I privately demurred to the statement that I "reject, as a definition of the Deity, the literal translation of *nuk pu nuk*—'I am that I am'—because the passages of the Book of the Dead, where they occur, do not contain any mysterious doctrine about the Divine nature." But as an article in the *Inquirer* of June 5 repeats in more precise terms that I "reject the literal translation of *nuk pu nuk*—'I am that I am'—not on grammatical grounds, but because the passages," &c., I think it right to say that this is a mistake. It is distinctly upon grammatical grounds that I reject the translation in question, which is not a literal but simply an erroneous one. Neither in the Book of the Dead nor in any other known Egyptian text do the words *nuk pu nuk* occur as a sentence. Wherever they occur the pronoun *nuk* is the grammatical subject of which something is predicated immediately afterwards. The repetition of the pronoun is simply emphatic. This emphatic repetition of the pronoun is frequent in the Semitic languages (cf. *ani ani hu*, Deut. xxxii. 39; *anoxi anoxi hu*, Isa. xliii. 25), and especially in Syriac. It also exists in Coptic. *Anok pe anok* is "I, even I." I am at this moment correcting the proofs of a Coptic document translated from Greek. The Martyr says in the original text, "I am a Christian," but the Coptic renders this *Anok gar anok ouchrēstianos*.

I do not believe that *nuk pu nuk* could, under any circumstances, be translated "I am that I am;" but this translation, even if it were a possible one, could only acquire a religious meaning by being considered as a Divine utterance. There is no "definition of the Deity" in St. Paul's words—"by the grace of God I am what I am." And in none of the passages where the words *nuk pu nuk* occur is God spoken of.

2. A good deal was written some time ago on the subject of obelisks. I am not aware that attention has ever yet been called to an important piece of evidence as to the use of this kind of monument. This evidence is found in an inscription from the temple at Edfu, published by Brugsch-Bey in the *Zeitschrift für Aegyptische Sprache*, September 1875. In the thirty-fourth line of this text "two large obelisks" are expressly said to have been constructed, *her tekes shenū enen en Nu*, "for the purpose of cleaving asunder the storm-cloud of heaven." Brugsch had already, in the *Zeitschrift* of 1871, p. 143, quoted a similar text in reference to the great flagstaffs of the pylones.

P. LE PAGE RENOUE.

PROF. SUSEMIHL'S EDITION OF THE "NICOMACHEAN ETHICS."

14 Winchester Road, Oxford: June 19, 1880.

I am under great obligations to Prof. Susemihl for honouring my study of *Nic. Eth.*, vii. 1-10, with various notices in his edition of the *Nicomachean Ethics* which has just appeared; and the more so as my pamphlet did not reach him till his book was in the press. He will not, I hope, think me ungrateful if I point out that in some places he seems to have misunderstood me.

* May I be allowed to correct an unfortunate misprint in the first line of p. 117 of my *Lectures*? In this passage, which is quoted by Mr. Hoare, there should be a full stop after "weights," the next sentence being, "The ancient Egyptian cubit is called the cubit of Techu."

At the foot of the tabular *conspexus* of my conjectures, added at the end of his edition, occurs this note on my view of the relation between 1151 a 11-18 to 1151 a 19-28: "haec sunt falsissima: perversa interpretatione continuationem sententiarum ipse demum corruptit Wilson: nam ἀπερὴ 1151 a 15 non ἀἐκπαρτεῖται tendit sed ἀσφρασίζην." In the first place, I never imagined that ἀπερὴ referred to ἐκπαρτεῖται; as I have maintained (*Arist. Stud.*, par. 44, init., 46 γ), it refers here in the first instance to the good element in the disposition of the ἀκρὰ τῆς (cf. 1151 a 14-16, and 1151 a 24-5). In the second place, as to the connexion of ἀπερὴ in 1151 a 15 with ἀσφρασίζην, the very argument which Prof. Susemihl alludes to (there are other arguments) turns on the supposition that, if the text were a continuous whole, σάφην in 1151 a 19 would seem necessarily to designate the character which has the ἀπερὴ meant in 1151 a 15, this apparent reference being itself the difficulty, because of the above-mentioned connexion of ἀπερὴ here with ἀκρὰ. I may refer to *Arist. Stud.* 10 γ init., 12, 43 β, 44, 46 γ.

My opinions on the authorship are not quite accurately stated. (1) In Prolegg., p. xvi., line 12, I am said to have denied both Aristotelian and Eudemian origin to the passages in the columns B C D of the Table; "certe B C D neque ab Aristotele neque ab Eudemo profecta esse contendit." My words (*Arist. Stud.*, 92 fin., 93) only concern the first group of these passages, 1146 b 8-1147, b 17, the first half of the second group, 1147 b 23 *et seqq.* (the second half 1148 a 22 *et seqq.* is more doubtfully implicated by A. S. 83-84), the fourth group, 1150 a 9-b 19, and 1149 a 24-b 23; and only of the first of these is anything said which suits the expression quoted above. In the other cases the evidence is admittedly more inconclusive. (2) Prolegg. xvi. ll. 19-24, Prof. Susemihl objects that, since I have inferred with some probability (as he thinks) two passages to be earlier than the Eudemian Ethics, he does not see how a passage included between them (ch. ii. 1-11), or at least the greater part of it, could be pronounced un-Aristotelian. I have not pronounced this chapter un-Aristotelian; I have cited the first five sections of it as a specimen of what appears Aristotelian (A. S. 93 fin.), but by no means intended that the remaining sections might not be in great part from the same source. (3) The remark in Prolegg. xvii. ll. 7-10 may give the impression that I hold all the parts of the book there named un-Aristotelian. I do not any more than Prof. Susemihl see reason why, e.g., 1150 b 29-36, 1151 a 5-11, should not be Aristotle's; indeed, I have risked the conjecture that it may be the earliest of three versions; the same holds of 1151 a 25-27 (which, however, is rightly classed in the Table), and also of 1149 b 25-1150 a 5, which, though not mentioned here (Prolegg. xvii.), is put in column B of the Table as if un-Aristotelian. I have found no fault with 1151 b 33-1152 a 4 (see Table, col. B, last passage but one), and there are some other passages included in those mentioned, Prolegg. xvii. 9-10, in which I have not professed to find anything un-Aristotelian. (4) 1151 a 1-5 is put in column A, but I have not ventured an opinion on its authorship, nor on that of the associated passages 1150 b 19 *et seqq.*, 1152 a 27 *et seqq.*, which are in columns B and C—see A. S. 53, 54. If any misunderstanding has been caused by want of clearness in my treatise I owe Prof. Susemihl an apology. J. COOK WILSON.

"SAINT LOY" IN CHAUCER.

Wakefield: June 21, 1880.

I incline strongly to the view that St. Loy is St. Eloi (or Eloy), a saint almost as popular in France in the Middle Ages as either St. Denis

or St. Remi, and also exceedingly popular in England. St. Eloi, beside being the patron saint of blacksmiths, farriers, &c., was the patron invoked "pour les chevaux et contre les chevaux méchants" (see Cahier's learned *Caractéristiques des Saints dans l'Art populaire*, ii. 613). The reason why St. Eloi was thus invoked will be found in the Life of the saint written by St. Ouen. A horse belonging to the saint gradually wasted away and went mad while in the hands of some who stole it from the monastery where St. Eloi had it, but on being restored to the abbey it became sound and quiet as before.

JAMES FOWLER.

London: June 21, 1880.

The legend of "Seint Loye" or "Loey," identical with that of St. Eligius, occurs in the *Golden Legend* of Caxton, 1483, fo. clxxxix. Eloy in the French of Stratford, Loye or Loey in the vernacular, are only variations of one name, and alike dissyllabic.

The festival of St. Charity was kept on August 1. Her name is not unknown in English writers.

"Ah! dear Lord, and sweet saint Charity."

(Spenser, *Ecl.*, v. 255.)

"Give us some of your spendynges
For Saynt Charyte."

(*A lytell Geste of Robyn Hode.*)

"They say, 'Give your alms in the worship of God and sweet Saint Charity,' and the father teacheth his son to say, 'Blessing, father, for Saint Charity.'"

(Tyndale, *Answer*, iii. 21.)

"OPHELIA. Indeed without an oath I'll make an end on't. By Gis and by Saint Charity."

(*Hamlet*, act IV., sc. v.)

This expression "without an oath" exactly suits the adjuration or invocation of St. Loye's or Eloy's name by the Prioress Eglantine.

MACKENZIE E. C. WALOOT.

MR. SWINBURNE AND FLETCHER'S SHARE IN "HENRY VIII."

3 St. George's Square, N.W.: June 19, 1880.

Some of your readers may remember that in 1876 Mr. Swinburne stated that there were no triple endings in Fletcher's part of his and Shakespeare's *Henry VIII.*, and that therefore the part assigned to Fletcher by Mr. Spedding and Mr. Tennyson could not be his. I at once pointed out, what most people knew, that there were some *thirty* triple endings in the Fletcher part of *Henry VIII.*, and I gave a list of them. They are some heavy and some light; of the heavy, *ig-nor-ance*, *cham-ber-lain* (three times), *cer-e-mo-ny* (a 4-syllable, treated for the argument as a three), *Buck-ing-ham*, *con-sta-ble*, *Ban-is-ter*, *sec-re-tar-y* (twice), *ar-ti-cles*, *Can-ter-bur-y*; of the light endings, *fi-re-works*, *car-di-nal* (six times), *pit-y-ing*, *em-pe-ror*, *slav-er-y*, *vir-tu-ous*, *mur-mur-ers*, *dif-fer-ence*, *pol-i-cy*, *gen-tle-man*, *Kath-a-rine*, *prod-i-gal*. I accordingly called on Mr. Swinburne to admit and correct his mistake. But, instead of doing so, he tried to justify it, to insinuate that the heavy triple endings I had cited—among which were the 4-syllable *ceremony*, and *Canterbury*—might easily be used as two syllables, and that my light triple endings, such as *ignorance* (his classification), *difference*, *emperor*, &c., had "been reckoned in verse as dissyllables—at least from the time of Spenser." He went on: "every poet, then and since, who violates this rule must do so in defiance of an established law of metre, for the sake of some special and exceptional effect."

This statement was in such plain defiance of facts that I at once cited in the *ACADEMY* of January 29, 1876, all Shakespeare's uses of (one of Mr. Swinburne's specimens) *ignorance*, and showed that Shakespeare used it twenty-three times as three syllables, and only four times as two syllables, while Milton always used the

word as three syllables, thus telling us that it was *not* a dissyllable.

"Though so | esteem'd | by | shal | low | ig | nor-
ance." *Comus*, 514.

Mr. Swinburne saw that he was beaten and must change his ground, though he did not admit the fact in words. Accordingly, four years later, when he returned to the attack, he altered the form of his assertion, and, instead of his old words, that there were *no* triple endings in the Fletcher part of *Henry VIII.*, said that in it there was not "the perpetual predominance of those triple terminations so peculiarly dear to" Fletcher, and he therefore again decided that Fletcher wrote no part of *Henry VIII.*, and that we faithful workers at Shakespeare were but critics "of the finger-counting or syllabic school," and were reduced to "unimaginable shifts" to attack his position. But it was plain as daylight that Mr. Swinburne had never thought of the bearing of the Shakespeare and Fletcher play of *The Two Noble Kinsmen* on the question—a play in which he so insists that both poets joined—and that his ear had failed to tell him that there were fewer triple endings in the Fletcher part of that play than in the same poet's part of *Henry VIII.*, which fact made *absolutely worthless* his argument from the absence of these endings in Fletcher's part of *Henry VIII.* Evidently just the same recklessness that Mr. Swinburne had displayed in his *Edward II.* article about Shakespeare's words—I made him admit that he was wrong in five instances out of seven—Mr. Swinburne had shown again in his argument about *Henry VIII.*

I accordingly, in an early number of the *ACADEMY* of this year, challenged Mr. Swinburne to produce his "perpetual predominance" of triple endings in the Fletcher part of *The Two Noble Kinsmen*. This challenge he has never answered. But though Mr. Swinburne has not acknowledged that there is no "perpetual predominance" of triple endings in Fletcher's part of *The Two Noble Kinsmen*, I can prove it. Here is the list:—Two heavy endings—*banishment*, *presently*; nineteen light ones—*prisoners*, *prisoner*, *Pulamon* (five times), *reverence*, *con-tinually*, *Barbary*, *nullity*, *in-different*, *mutual*, *E-nalitia* (twice), *hon-ourable*, *bravery*, *company*, *E-lysium*. Mr. Swinburne's metrical argument against the Fletcher part of *Henry VIII.* therefore stands thus:—

"1. Fletcher's share in a joint play by him and Shakespeare is known by the perpetual predominance of those triple terminations so peculiarly and notably dear to him.

"2. The share in *The Two Noble Kinsmen* which I assign to him only contains two of these triple terminations;

"3. Therefore, my opinion on his share, or on the test of his work, is worth nothing.

"But far better judges than I say Fletcher had a share in *The 2 N. K.*; therefore my test is worth nothing—like my assertions about Shakespeare not having used *rariety*, &c., were. Still, worthless as the test is, let us apply it to the share assumed to be Fletcher's in *Henry VIII.* :

"1. That work is most Fletcher's which has most 'of those triple terminations so peculiarly and notably dear to him.'

"2. His *2 Noble Kinsmen* has 2; his *Henry VIII.* has 14, which even I cannot deny him.

"3. Therefore his *Henry VIII.* work (which I say is not his) is 7 times more his than his *2 Noble Kinsmen* work, which I say is wholly his, which is absurd."

I claim, therefore, to have shown that Mr. Swinburne's metrical argument against Fletcher's share in *Henry VIII.* has utterly failed. And I challenge dispute of my facts and argument.

On Mr. Swinburne's comical notion that *Henry VIII.* is an early second-period play of Shakespeare's, an experiment in metre, I need

only allude to the desperate poverty of much of Fletcher's work—Buckingham's death-speech, &c., &c.—in *Henry VIII.*, and the contrast it shows to the fullness of power and ease of most of Shakespeare's share of the play, which has every characteristic of his latest work, and then quote the words of my friend and colleague, Mr. F. D. Matthew, in the last part of the New Shakespeare Society's *Transactions*:—

"The special characteristic of Shakespeare's style is its utter sincerity, its constant aim to make the words fit as a garment or very skin to the thought. It is this continued progress in directness of expression and disregard of formal metrical rules which make style and cadence a test of the period when the plays were written. Is it possible to imagine Shakespeare in his ripe age* repressing a crowd of thoughts and images for the sake of a new metrical effect?"

A more crude and contradictory theory of the structure of *Henry VIII.* than that which Mr. Swinburne has put forth I never saw. I have something more to say about triple endings, and "the perpetual predominance of those triple terminations so peculiarly dear to Fletcher" in his plays, and can show that in one at least of them there is not a larger proportion than in Fletcher's part of *Henry VIII.*, while another has much less.

F. J. FURNIVALL.

APPOINTMENTS FOR NEXT WEEK.

WEDNESDAY, June 30, 4 p.m. Statistical: Anniversary.
7 p.m. Cymmrodorion Society: "Welsh Books printed on the Continent in the Sixteenth and Seventeenth Centuries," by Howell W. Lloyd.
7.30 p.m. Education Society: "Rousseau," by B. Buisson.
THURSDAY, July 1, 4 p.m. Archaeological Institute.

SCIENCE.

A Sanskrit Grammar, including both the Classical Language, and the older Dialects, of Veda and Brahmana. By W. D. Whitney, Professor of Sanskrit and Comparative Philology in Yale College, New Haven, &c. (Trübner.)

[First Notice.]

PROF. WHITNEY's book forms vol. ii. of the series of Indo-European Grammars projected by Messrs. Breitkopf and Härtel, of Leipzig; it is published concurrently in English and German. That every page of it is carefully executed is only what might have been expected; my examination of the author's facts has in almost every instance resulted in their verification. But I am at issue with him on the scope of the work, the principle on which it has been composed.

A grammar of the language of the Veda from the practised hand of the editor of the *Atharva-V.* would have been a more welcome contribution; therein he could have set forth the observed facts, without reference to the traditions of the Hindu grammarians. What he has here given us is a mixed grammar, in which he utilises, indeed, much of the traditional grammar, but frequently overlays or upsets the long-consecrated teachings by modern statistics. The result to a student cannot be other than confusing, as he is left the liberty of choosing what to learn and what to omit. Until the science of the West has completely ransacked the whole contents of Sanskrit literature, and set forth the results finally, an accurate knowledge of the traditional grammar should be enforced. Till that thorough and definitive investigation

* In 1613, the date of *Henry VIII.*, he was forty-nine.

shall have been completed, I venture to hope that the sūtras of Pāṇini will be deemed worthy to keep the place they have so long held, and to form the basis of all Sanskrit scholarship. As Prof. Whitney says:—"To assemble and sift and compare it [the material in the Brāhmaṇas, &c.] is now one of the pressing needs of Vedic study." This is admitted; but the task should be undertaken in an attitude of conservatism towards the traditional science of the East, and by those only who have mastered thoroughly all that the native grammars teach. Now, the first, and probably lasting, effect of a study of this grammar ought to be a general distrust of the statements of Hindu grammarians on the facts of their own language.

The position Prof. Whitney takes up has some analogy with that of the non-Euclidian school of modern geometry, who would eliminate Euclid, as apparently the modern linguistic school* would eliminate Pāṇini, after having abandoned Sāyana. Like some of the modern geometers, too, Prof. Whitney has put new wine into old bottles, with like result—a failure to blend two incongruous systems, one based on the historic tradition of centuries, the other a quite modern growth. I confess I do not think there is any safety for a learner outside of Pāṇini. From a merely practical point of view, until Pāṇini be replaced, what is to be the test of knowledge in this field?

It does not seem unreasonable to hold that no man is duly prepared for investigations in any language unless he has attained sufficient skill to write a fair composition in it, or to translate into it an ordinary piece of his mother-tongue. But whether a learner would ever write Sanskrit correctly from the study of this grammar I feel inclined to doubt.

Ex. gr., what would a beginner make the 2 sg. pft. of √ *dhr*? As it is not told him in the paradigm (§ 800 f), he must hunt it up; now √ *kr* makes *cakartha*, without the union-vowel *i*, but then (§ 797 b, c) √ *kr* is a root that always rejects this *i*, and, on the other hand, "this *i* is taken (in 2 sg.) by many verbs which reject it in other formations," so that he would be thrown on the general rule of § 796, by which the termination *-iḥa* would be got; and, in that case, he would infallibly, if he had read his grammar carefully, write *dadhritha* (unless he remembered § 786, and ventured on *dādhriṭha*), especially as on p. 263, line 1, he will see *cakrse*, but *dadhrise*.

The form of the 2 sg. pft. of √ *kr*, "to scatter," would never, I think, be collected

from the grammar (not to speak of such forms as *prati-cakare*, of which no mention is made anywhere, or of *apaskirate*, *upaskirati*, remotely alluded to in § 1087 d).

By §§ 802, 803, the ending *-vāṁs* (of pft. ptp.) is added to the weak form of the pft. stem—as shown in the dual and plu. of the active inflection; thus *cakrva*, and so ptp. *cakrvāṁs*. What, then, would the student choose for √ *dhr* (*-rivāṁs*, by this rule, or *-rvāṁs*, on the analogy of *ninivāṁs*?), or how would he obtain the ptp. of √ *str*?

Again, by § 935 b, √ *sidh* should by the grammarians' rule, take *-sya* in the fut., with no union-vowel; would Prof. Whitney regard *sedh-i-syati*, then, as an infringement of the maxims of the grammarians?

In fact, this whole question of the union-vowel *i* is insufficiently treated throughout the book. Thus, in the formation of the pass. ptp. past, as to whether *-ta* or *-ita* is to be used, all the information given is that "some roots require the prefixion of the *i* to the suffix," §§ 953, 956; what, then, will the student do with √ *pū*? If, despairing of a rule, he sought a parallel, and, on the analogy of *lūna* from √ *lū* (§ 957 a), ventured on *pūna* as the ptp. of √ *pū*, "to purify;" would the fear of Vopadeva (xxvi. 95) or of Siddh.-Kaum. ii. 347, line 10, be sufficient to deter him, or would Prof. Whitney rebuke him—agnostically? The defect of definite information as to the concrete forms of the language is even more felt here, because the (common) suffix *-tvā* has considerable agreement with the ptp. *-ta* in this matter of the insertion of the *i*, § 991.

To take other examples: it is by no means certain that a student who has got *caturṇām* into his head, and who has learnt to write *trīṇāman* with lingual *n* (and is, moreover, instructed, § 199 b, to lingualise the initial of *navati* in *sānnavati*), would write his *trīṇavati*, *cāturṇavati*, with dental *n* correctly, from § 476, where the concrete forms for the numbers 91–99 are not given, with a doubtful economy of space.

Again, how would a student form the fem. of *yuvan*? Of this there are three forms given in the grammars, viz.—*yuvatī*, *yuvatī'*, and *yūnī'* (Pān. iv. 1, 77; Vopad. iv. 27; Colebrooke, p. 119, No. 15, §; Benf. § 699, 5, d, β); Prof. Whitney has not, I believe, given any direction on the matter. (Of course the student could look into the BR. lexicon and find out for himself; but this method, besides doing away with the need for a grammar at all, is only available for those who have already made considerable progress.) Or how would a student form the voc. sg. of any gender of *sumānas* when told (§ 418) that, omitting the nom. and acc., "the other cases are alike in all genders, *save the vocative*"? This should infer a difference of form for the three genders, in *voc. sg.* too?

In his account of the declension of monosyllabic stems in composition (§ 352), Prof. Whitney writes:

"The grammarians prescribe *iy* and *uv* when the monosyll. stem has more the character of a noun, and *y* and *v* when it is more purely a verbal root with ptepal value. No such distinction, however, is to be seen in the Veda—where, moreover, the difference of the two forms is only graphic, since the *yā* and *vā* forms are always to be read as dissyllabic, *ūā* and *ūūā*."

I cannot think, however, that the Hindu grammarians merely invented the distinction they give (*pradhyam*, but *sudhyam*), and I should hold it an error in Sanskrit to write either *pradhyam* or *sudhyam*. The forms were, let us say, co-existent in Vedic times, but we know that specialisation of co-existent forms exerts no small influence in linguistic developments; to destroy or ignore any distinction of this kind on the ground that it is not in the earlier language would be to deny the possibility of growth, a position which Prof. Whitney would be the last man in the world to maintain. I particularly deprecate the omission or (seemingly) depreciatory statement of the grammarians' rules on the ground that examples are *not quotable*. Thus, on § 403: "the root *vah* . . . is said by the grammarians to be . . . contracted into *ūh*, &c.;" the forms actually quotable do not show this, but I would ask, Are we to infer that these grammarian forms are all fictitious? If so, we should merely fling away our Pāṇini, and cast ourselves loose from the historic tradition altogether. Prof. Whitney admits for the fem. stem of *anadvāḥ* the two forms, *anadvāḥī'* and *anadvāḥī*, given in the grammars (Pān. vii. 1, 98, v.; Vopad. iv. 27; both oxytone, Benf. p. 288, line 4). Naturally, these are of infrequent occurrence, but, as they do occur, their right to a place in the grammar is not disputed. These, then, are given by Prof. Whitney; but, on the other hand, of the forms given in Siddh.-Kaum. i. 196, line 3, "*tiryak*, *tiraçci*, *tiryāñci*, *pūjāyāntu tiryāñ*, *tiryāñci*, *tiryāñci*," (cf. Vopad. iv. 12), there should be mention made in a Sanskrit grammar, even though examples might not have been quoted, or be now possible to quote, of these forms with their differentiation *pūjāyām*. In the pronominal declension, paragraphs §§ 522–26 are particularly unsatisfactory to a Pāṇinist: "yet other words follow the same model usually, or in some of their significations, or optionally; but in other senses, or without known rule, lapse into the adj. inflection." Now, I would hold here that a grammar editor should either—(1) give the grammarians' statements and differentiations exactly, so far as they are known, or (2) absolutely set down the facts of the language so far as they are known. Prof. Whitney in this case has done neither. The principle of subjective selection makes the task of judging the work the more difficult, because one can hardly decide whether an omission of customary forms is merely accidental or intentional; e.g., § 665, where, in the imperat. of √ *hā*, Prof. Whitney gives only *jahāhi*, to which Pāṇini's alternative [*ā ca hau*] should give no exclusive right in preference to *jahāhi*.

In addition to this fusion of tradition and discovery, which I hold to be wrong in principle, and very difficult, if not impossible, in execution, there are some other objections which I may here briefly mention. The first of these is the adoption of Roman letters. No one would think of applying this to Greek or Hebrew. No doubt, in a book intended for beginners or *dilettanti*, it is advisable to have what aids can be got, but Prof. Whitney's is not a book of that class. In a case like *sas* (*sakṣ*), which is declared to become in inflection *satsu* (§§ 146, 199 b),

* As an example of the action of the new school in reference to the native grammarians, I may quote an instance, in which I am glad to see that Prof. Whitney has not followed Delbrück. On the first page of the excellent *Vedische Chrest.* published by the latter occurs a line from R.-V. i. 23, 7, "*vēda nāvāḥ samudriyāḥ*," in which he regards (see the glossary) *nāvāḥ* as acc. pl. Now, it is a maxim of the grammarians that, as Prof. Whitney puts it (§ 361), "the acc. pl. is said (it does not appear in accented texts) to be like the nom. pl.," thus (*ai*) *nāvas*, (*rās*) *nāvas* (Pān. vi. 1, 168, 171; Benf. § 760, iv. 1). Hence Grassmann, equally with Sāyana, explains this *nāvāḥ* as gen. sg. dependent on *padām* of the previous part of the verse. Delbrück, however, has no note of any liberty taken in his interpretation, though it can hardly be supposed that he was unaware that he was infringing a grammatical rule.

unless the learner has acquired sufficient knowledge of the language to have an instantaneous intuition of this correctly, he has not really learnt anything. The eye should be trained from the beginning to see what it *has* to see—viz., the language in its own characters.

Prof. Whitney has further "had regard to the practical needs of the learner," and has attempted, "by the use of different sizes of type, &c., to make the work as usable by one whose object it is to acquire a knowledge of the classical Sanskrit alone as those are in which the earlier forms are not included." I do not see, however, that this is possible; at least, it is not always done. Thus the origin of common forms like *utthātum* (§ 233 a), *vatsyāmi* (§ 167), is given in the smallest type. This leads me to speak of the need in the book of a complete index of the concrete forms discussed; where a beginner is to look for information on the above words, *utthātum*, *vatsyāmi*, there is nothing in the Index to show. In fact, I do not think the book should be read by beginners, or be taken in hand at all until the student has worked through some accurate smaller grammar (preferably Kielhorn's, as he has not troubled the reader with transliteration), in which he will have gained sufficient knowledge to handle suitably the matters discussed in Prof. Whitney's work. ROBERT ATKINSON.

NOTES OF TRAVEL.

THE annual festival of the Swiss Alpine Club will take place this year on Saturday, Sunday, and Monday, August 21, 22, and 23. On Saturday the meeting of deputies will assemble at Büti; on Sunday the general meeting and the banquet will be held at Rapperswil, on the Lake of Zürich; on Monday there will be an excursion on the Bachtel.

THE Surveyor-General of South Australia has received two reports from Mr. Charles Winnecke, the leader of the Herbert River Exploring and Surveying Expedition, in the first of which he gives a brief account of his journey for 130 miles east of Tennant's Creek. For the first fourteen miles the country traversed was very good, hard, well-grassed, and open, while for the next ninety-two miles it consisted of small patches of grass and spinifex, and for the last twenty-four miles it was a plain, magnificently covered with Mitchell grass. This plain, which was slightly undulating, was apparently of vast extent, and Mr. Winnecke reported his intention of mapping it as far as possible, in addition to ascertaining the position of Buchanan's Creek. In his second letter he reports the arrival of his party at a point twenty miles west of the junction of the Herbert and James Rivers, and that the whole of the country traversed after leaving Tennant's Creek (about 30,000 square miles in all) consists, with the exception above noted, of rich alluvial plains with splendid grass. The eastern portion also is plentifully watered by considerable creeks or rivers, containing many large and permanent water-holes, some of which, indeed, deserve the name of small lakes. The soil on the plain chiefly consists of black and brown loam, mixed with clay, and is well suited for both agricultural and pastoral purposes; the scrub land is described as being red loam and sand in places. As this tract of country is not adapted for triangulation, Mr. Winnecke has endeavoured to map the features in detail by means of numerous observations and bearings. It is also interesting to learn

that large number of natives were met with during the journey, and that no trouble was experienced with them.

NOT content with endeavouring to reach the centre of Africa by means of expeditions from the east coast through the lake region, and from the west by way of the Congo, the King of the Belgians is about to despatch two officers to undertake explorations in Southern Egypt, with a view to the opening of communications by that route also. The new East Coast expedition, under Capt. Raemackers, to which we have before alluded, is to take out a small steamer in pieces, which is to be placed on Lake Tanganyika. M. de Meuse, of the Military Cartographical Institute at Brussels, is to accompany the exhibition as photographer and mechanician.

REINFORCEMENTS have recently been sent out to Père Depelchin's missionary expedition in the Upper Zambesi country, to which we referred on May 8. They left Kimberley on March 19, and expected to reach Tati, in the south of the Matabele country, about the middle of May. A portion of the party will then take a north-westerly route, cross the Zambesi, probably to the westward of the Victoria Falls, and endeavour to establish themselves in the Marutse-Mabunda country, in which Dr. Holub claims to have conducted extensive explorations. The remainder of the reinforcements will join Père Depelchin at Gubuluwayo, whence another expedition will be despatched to King Umzila's country, and, according to present accounts, they expect to meet with a friendly reception. We regret to learn that Père Charles Fuchs, a member of Père Depelchin's party, died at Tati on January 28 from the effects of the privations which the expedition underwent on the journey from Shoshong to Tati.

LIEUT.-COL. FLATTERS has just returned to Paris from his preliminary surveying and exploring expedition in connexion with the projected Trans-Sahara Railway. He left Wargla at the beginning of March, and succeeded in penetrating without much apparent difficulty as far south as the 26th parallel of latitude, to a distance of about 750 kilometres from Wargla. He will resume his explorations in the autumn. M. Choisy, the leader of another of the principal surveying parties, has also recently returned to France, and has addressed a report to the Governor-General of Algeria on the subject of his operations, but the surveys, &c., made by the expedition had not been sufficiently examined to enable him to afford much information as to the value of the results obtained.

A USEFUL addition has lately been made to our knowledge of the Western portion of the Argentine Republic, which still offers a fine field for the adventurous explorer, as much of the Andes region has never yet been mapped. The River Neuquen has now been surveyed and mapped from its source down to its junction with the River Limay. The basins of both these rivers, which form the Rio Negro, have also been surveyed, as well as a large affluent of the Neuquen, which was previously quite unknown. The operations of the surveying parties farther extended to the ridge of the Andes, on the Chilean border, which they mapped for a considerable distance.

DR. E. PIEROTTI, an experienced traveller, is stated to be organising a journey to Egypt, Palestine, &c. The party is to leave Marseilles on September 2, returning on November 1.

SCIENCE NOTES.

Geology of Victoria.—In continuation of the series of works issued by the Geological Survey of Victoria to illustrate the palaeontology of this colony, Prof. McCoy has recently published the sixth *Decade*, or group of ten plates. These plates include, among other things, figures of the gigantic extinct kangaroo, called *Macropus Titan*; of the extinct marsupial genus *Procyptodon*; of the ear-bones of whales (*Cetololites*), similar to those which occur in our Suffolk Crag; and of a gigantic fossil species of spermaceti-whale termed *Physcetodon Bailey*. The figures are admirably executed, and are accompanied by technical descriptions from the experienced pen of Prof. McCoy.

PROF. A. FOREL has published a report on the earthquake of May 7, which seems to have been very local in its operation. The motion of the earth was felt most perceptibly in Villeneuve, Chillon, and Rennaz, more feebly in Montréux and Aigle. The air-line within whose range the earthquake was felt only extended to the distance of thirteen kilometres; whereas that of the earthquake of December 30, 1879, extended from Chambery to Basel, a line of two hundred and fifty kilometres. Villeneuve was the centre of the earthquake of May 7. It is the fifth which has been observed in Switzerland since the beginning of the present year.

PHILOLOGY NOTES.

THE first part of the thirty-fourth volume of the *Journal* of the German Oriental Society is mainly occupied with a treatise on the Sassanian Pehlevi coins by the late Dr. Mordtmann, who died before he could finish correcting the proof-sheets. The article, which is 162 pages long, brings the results of Pehlevi discovery up to the end of 1879, and forms a complete work in itself, though the former works of the author on the same subject must be referred to for many descriptions which he has not repeated, but to which he has given full references. The other papers are on Abraham Firkowitsch, the forger, by Dr. Strack, and on the monks Maximus and Dumatémós, by Dr. Cornill; on a rare verbal form in Sanskrit, by Prof. Aufrecht, and on a find of Mohammedan silver coins, of the Samanide dynasty, in Saxon Oberlausitz, by Prof. Fleischer. The last is of some importance in its bearing on mediæval commerce. The catalogue of the printed books in the library of the Society has been published by Prof. Müller; it consists of over 215 pages, and is divided into four sections—(1) periodical literature, (2) languages, (3) sciences, (4) miscellanea; and the number of separate entries reaches 3,855.

DRS. KUHN AND SOCIN, assisted by Salemann, Delitzsch, Kautzsch, Landauer, Erman, and Pietschmann, have issued the second part of their *Wissenschaftlicher Jahresbericht* of Oriental studies from October 1876 to December 1877. It contains short notices, arranged in a perspicuous order, of all works published during that time in the various branches of Iranian, Armenian, Hebrew, Rabbinical, Aramaic, Arabic, Turkish, Egyptian, and North African scholarship; and cites reviews of most of the books in the principal literary journals, including a very large number in the ACADEMY.

MEETINGS OF SOCIETIES.

NEW SHAKSPEARE SOCIETY.—(Friday, June 11.)

F. J. FURNIVALL, Esq., Director, in the Chair.—The papers read were (1) "On the Seasons of Shakspeare's Plays," by the Rev. H. N. Ellacombe, M.A.; (2) "On the Utter Failure of Mr. Swinburne's Metrical Argument against Fletcher's Share in *Henry VIII.*," by F. J. Furnivall, M.A.; (3)

"On Suicide in Shakspeare," by the Rev. J. Kirkman. Mr. Ellacombe found the seasons marked in eight of Shakspeare's Comedies, five Histories, and eight Tragedies. For instance, in *Hamlet*, "Ophelia's madness must be placed in the early summer, i.e., in the end of May or the beginning of June; no other time will all the flowers mentioned fit, but for that time they are exact. The violets were 'all withered;' but she could pick fennel and columbines, daisies and pansies, in abundance, while the evergreen rosemary and rue ('which we may call Herb of Grace on Sundays') would be always ready. It was the time of year when trees were in their full leafage, and so the 'willow growing ascaunt the brook would show its hoar leaves in the glassy stream,' while its 'slivers' would help her in making 'fantastic garlands' 'of crow-flowers, nettles, daisies, and long purples,' or 'dead men's fingers,' all of which she would then be able to pick in abundance in the meadows, but which in a few weeks would be all gone. Perhaps the time of year may have suggested to Laertes that pretty but sad address to his sister—

"O Rose of May!

Dear maid, kind sister, sweet Ophelia!"

—Mr. Furnivall argued that Mr. Swinburne had neglected to find out the number of triple endings in the part of the *Two Noble Kinsmen* which he had declared to be Fletcher's. Had he done so, he would have found them fewer than those in the Fletcher part of *Henry VIII.*, which he declared was not Fletcher's; wherefore their fewness in *Henry VIII.* was no argument at all against Fletcher having written that part of *Henry VIII.* which Mr. Spedding, Mr. Tennyson, and all the best modern critics assign to him.—Mr. Kirkman contended that Shakspeare cared less for the act than the motive of suicide. He classified the sixteen cases of it in Shakspeare's works. Three only of them were English—that is, Keltic—and all women: Lady Macbeth, Goneril, Cymbeline's Queen. These sprang from inability to restrain remorse or disappointment; Othello's from desire to make atonement for his crime; Ophelia's from temporary insanity. Timon's was a self-ministration of euthanasia. To Romeo and Juliet's love everything else was as nothing, death but a trifle—a seal to their union. With Brutus and the Romans suicide was part of their philosophy; with Cleopatra, a means to avoid annoyance. Hamlet was safe from suicide because he talked so much about it.

PHILOLOGICAL SOCIETY.—(Friday, June 18.)

A. J. ELLIS, Esq., President, in the Chair.—Mr. W. R. Morfill read a paper on "Some Polabish Vocabularies." This language (belonging to the Slavonic family) became extinct in the earlier part of last century; a few lists of words, a song composed in it, some versions of the Lord's Prayer, &c., are all that remain. These vocabularies were examined at some length in the paper, and many interesting words cited. Some of the blunders made by the transcribers on account of their ignorance of Slavonic were also given. A careful reprint of these *reliquiae Wendicæ*, annotated by Dr. Pfuhl, will be found in the *Journal of the Sorbisch Literary Society*. The labours of Schleicher and Hilferding were discussed; the former considered Polabish to belong to the Polish, or Lechish (to use his own phraseology), division of the Western Slavonic family, Kashubish being the link between it and the Polish properly so called. To this branch its laws of sound clearly assign it, especially the prevalence of nasals.—Mr. Walter K. Browne read a paper on the "Distribution of English Place Names," in which he gave a table of the results obtained by examining 10,492 names in Dugdale's *England*. The names were classified under sixty separate headings, according to the endings. Those ending in *-ton* formed nearly one quarter of the whole, being 2,545. *-ham* and *-ley* came next with 702 and 653 respectively, while 1,703 were placed under miscellaneous. The endings were roughly grouped according to their origin, whether English, British, or Norse, and remarks were made on some of them where the distribution threw light on their meaning or was otherwise curious. Thus Mr. Kemble's theory that names ending in "*-ing*" indicate the original seat of an English colony was apparently negatived

by the fact that the ending is almost entirely absent in South Suffolk. An animated discussion followed, in which the President, Mr. Sweet, Dr. Murray, Dr. Morris, and others took part, and which turned partly on the general principles of such classification and partly on the meaning of particular endings, as *-ham*, *-ley*, *-side*, *-hope*, and *-wick*.

ENGLISH SPELLING REFORM ASSOCIATION.—(Annual Meeting, Monday, June 21.)

DR. W. W. HUNTER in the Chair.—The Report stated that considerable progress had been made in the classification of schemes of spelling reform, and in making the subject known to the public. The Chairman, in moving the adoption of the Report, said that the association had accomplished two important steps in their work. They were all agreed as to the necessity of the reform, and what they now had to do was to convince the public of the extreme unreasonableness of the present system and of the possibility of remedying it. Next they must impartially consider the various schemes laid before them, and decide upon the one they should select as best fitted to attain its object. When they had done that, it would require an earnest propaganda to secure the adoption of any scheme by the public. Reviewing the history of the association, Dr. Hunter congratulated the members on the progress made during the first year, and the foundation they had laid for the work of the second year. He then spoke of the reform in the spelling of names of persons and places which had been carried out in India. In order to properly compile the statistical returns it became absolutely necessary to have one uniform method of spelling. Great objections were raised in many quarters at first; but by patience the opposition was gradually overcome, and many of the objectors were now the first in acknowledging the utility of the reform, and in helping to perfect it. "That," said Dr. Hunter, "is our position this evening. We have done something, and by patience we shall do more. We have got common sense on our side, we have got the testimony of the most eminent philologists on our side, we have got an earnest conviction and a willingness to work on our side. Against us we have routine, laziness, the common disinclination of mankind to any change that may involve trouble. I feel convinced that if we will only work and be patient, the victory will in the end be on the side of earnest conviction, scientific principles, and common sense." The resolution was seconded by Sir Charles Trevelyan, supported by Mr. A. J. Ellis, and unanimously adopted.—Dr. Gladstone moved the election of the governing body, with Prof. Sayce as president. The motion was seconded by Mr. R. N. Cust, and also unanimously adopted.—After the transaction of the routine business, the proceedings terminated with a vote of thanks to the Chairman.

FINE ART.

Synopsis of the Contents of the British Museum. Department of Coins and Medals. A Guide to the Select Greek and Roman Coins exhibited in Electrotypes. (British Museum.)

THE present administration of the Department of Coins and Medals at the British Museum may be pointed to as the model to be followed by all the other establishments of the kind in Europe. England may well be proud of it. There is nowhere existing a more fruitful and intelligent scientific activity, serving to better profit the interests of scholarship and the requirements of the public. The great task of editing and publishing the Catalogue, so well performed by Mr. R. S. Poole and his able colleagues, Messrs. Barclay V. Head and Percy Gardner, is an enterprise which reflects the greatest honour on the learning of its authors, and also on the liberality of the Trustees of the British Museum, who generously defray the expense. Thanks to the three

gentlemen just mentioned, London has, within the last few years, become one of the chief centres of the study of ancient medals; Berlin alone can claim to rival it, for unfortunately Paris, through circumstances which need not here be enquired into, has allowed the sceptre of numismatics, which she had so long wielded, to drop from her hands.

Among the happiest ideas realised by the Department of Coins and Medals in the British Museum must be reckoned the execution of a series of reproductions in electrotypes of the coins in the collection which possess the greatest interest from the point of view of art and history. These reproductions are exhibited in one of the rooms at the Museum, and copies of them can be purchased on such terms that local museums, educational bodies, and private persons can now possess at small cost a collection of the chief monetary types of antiquity, brought within the reach of students under conditions almost equivalent to the examination of the originals, and far beyond the powers of any book to supply. Mionnet had this object in view in his collection of sulphur casts from the Cabinet de France, which rendered such good service to science; but here we have the same idea carried into execution with a very superior selection of types, and above all by the employment of a far more perfect process, the products of which are not subject to the same risks of destruction. There can be no more important contribution toward the popularisation of numismatics, and toward the improvement of classical education by the invaluable aid of antiquities of this class.

To complete the usefulness of this series of reproductions, which forms a history of monetary art from its beginning in Lydia in the seventh century B.C. down to the establishment of the Roman Empire, a Catalogue has just been published, accompanied by seven plates admirably executed by the autotype process. Each of these plates represents one of the seven epochs into which the successive ages of Greek and Italian coinage are divided, according to an excellent classification, which can only be regarded with approval. The Catalogue is the work of Mr. Barclay V. Head, who has succeeded in making this volume, intended for general use, an excellent historical manual of the science of medals, in which, by his other works, he has already attained the rank of a master. I cannot too strongly recommend the study of this Catalogue to those who wish to take up the subject of numismatics. It is in its way a masterpiece, by the accuracy of its attributions, which are fully abreast of the latest results of science; by the clearness and sober precision of its descriptions; by the solid and ever ingenious scholarship of the notes that fix the date of minting of the various specimens.

And here I have only two or three criticisms to make, or rather to indicate, on certain points of detail and matters of opinion whereon I differ from the author. Thus, I cannot agree with him in making the coinage of the silver tetradrachms of Athens belonging to the new type end with the capture of the city by Sylla. In fact, nearly half of these

pieces are certainly later in date than those which bear the name of King Mithridates and Aristion, particularly the series with two names of magistrates only and those with monograms. We must therefore admit that Sylla did not deprive Athens of the right of coining silver, and that the city of Minerva struck her tetradrachms down to the time of Augustus. Mr. Head himself has furnished indisputable proofs of this by his publication of the imitations of these tetradrachms forged in South Arabia. The learned writer considers the fine tetradrachm of Pyrrhus which he describes under No. VB 11, to be of Epirote manufacture. I cannot agree with this view, and the piece in question appears to me to be of Italian manufacture, coined at Locri, as proved by the remarkable likeness of the head of Zeus on the obverse to that of the silver coin of Locri bearing the figures of POMH and ΠΙΣΤΙΣ, as well as in the close analogy of the work on the reverse to that on the large bronze coins of the Locrians, which are pretty nearly contemporary. I may add that when I travelled in Epirus in 1862 I did not meet with a single specimen of these tetradrachms; while in my recent tour in Calabria I saw numbers in all the collections, public and private, in the district, and the peasants brought me for sale specimens in a more or less perfect state of preservation at Strongoli, at Cotrone, and on the site of Locri itself; in the last-named locality there were twelve found together in the soil. From all this I conclude that the coins in question were minted at Locri on the return of Pyrrhus from Sicily with the money which he carried off, to supply his pressing needs, from the treasury of the temple of Persephone. And it is, if I am not mistaken, the image of this goddess which he caused to be represented on the reverse by way of expiation and to appease the wrath of Persephone, whose presence he recognised in the tempest that shattered his fleet immediately after the pillage of the temple. The numismatic history of Pyrrhus is still in need of revision. We have already set aside the coins bearing his name which were minted at Syracuse; we now have to distinguish his Italian from his Epirote coinage. And I think I can easily prove that there were pieces of the King of Epirus, recognisable by their types and workmanship, which were coined, not only at Locri, but also at Metapontum and among the Bruttians.

I have pointed out these two specimens to show the exact nature of the points of detail on which I occasionally differ from Mr. Head. But they are very few in number, and in the great majority of cases I entirely agree with his criticisms, in which there is much that is novel and much that is very valuable. He has given us one excellent book the more, and I am glad to have an opportunity of publicly saying as much. FR. LENORMANT.

THE BLACK-AND-WHITE EXHIBITION.

THOSE who go to this exhibition with the hope of seeing studies and drawings by our most distinguished painters will be disappointed. No dashing sketch by Mr. Millais, or harmony in line by Sir Frederick Leighton; no study in *chiaroscuro* by Mr. Pettie, or melody in monochrome by Mr. Albert Moore; no learned design

by Mr. Poynter, or refined arrangement of drapery by Mr. Burne Jones will delight their eyes. Mr. Marks is the only Academician represented here, and he principally by two large designs of *Seeing and Hearing*, somewhat stiff and uninteresting. It would almost seem from this exhibition that colourists and artists in black and white in England belonged to different sects, and it would certainly have added to the interest and variety of it if there had been more studies for pictures in colour, and fewer works in black and white carried to such a point of finish as makes the absence of colour an obvious matter for regret. There are, however, more than one excellent contribution of the kind alluded to—viz., Mr. Rooke's elaborate, but unfortunately damaged, *Drapery Studies for King Ahab's Coveting* (559), and Mr. Hamilton Macoullum's masterly sketch for his picture of *Water-frolic* (560). It is also a drawback that so many of the etchings have already made their appearance in periodicals and shop-windows. Such etchings as Mr. Herkomer's *Blind Shepherd* and Mr. Macbeth's *Weary of Waiting* it is always pleasant to see, and to view the *ipsissimæ lineæ* of Mr. du Maurier's and Mr. Linley Sambourne's designs for *Punch* is agreeable enough; but the desire for novelty is never stronger than in a current exhibition, and it meets with a good many checks at the Egyptian Hall.

There is, nevertheless, plenty to interest and not a little novelty here. Even the art which aims at the highest imaginative expression is not altogether unrepresented. In Mr. Jacob-Hood's *"Traye Zaravâ"* (8), a study of the head of Christ for a picture of the Temptation, there is much promise, if not performance. Though the effects of exposure and fasting are plainly apparent in the wild hair and hollow cheeks, the face is not without dignity, and there is something calmer than mere human peremptoriness in the commanding eyes. The same artist's etching in illustration of the first line of Spenser's *Fairy Queen* (326) is a good beginning.

Nor can an exhibition be said to be wanting in efforts of imaginative design which contains Mr. Waterhouse's *A Greek Play*, representing a section of the audience in the theatre. The principal figure is a woman of a grand type holding in her hand a fan of feathers which, by its shape, unobtrusively focusses the composition. Behind, seated on other rows, are a few more figures in various well-studied attitudes of attention. The benches of unornamented massive stone give much simplicity and dignity to the design, which is grandly decorative without too obvious artifices.

Equally good in different ways are Mr. Frank Dadd's *Waiting* (558), a duel scene on a cheerless morning on the sea-shore; and Mr. Dollman's *Stage-struck* (283), two little village children gazing with awe on a child belonging to a strolling troop of players and dressed up like a little columbine. There are also several other clever imaginative figure-drawings by English artists, such as Mr. Edgar Hanley's sentimental *Song Without Words* (40), and Mr. A. O. H. Luxmoore's humorous *Stimulants for the Mind and Body* (430, 431); but it must be admitted that the attraction of the exhibition in this as in other classes of design depends greatly upon the work of foreign artists. In drawings to illustrate children's books we are, however, here, as elsewhere, supreme, and no one is a greater master of such semi-decorative work than Mr. Walter Crane, some of whose designs in this exhibition are in his finest manner.

For distinction and character and for perfect mastery over pen and brush few artists can compare with Señor Jimenez y Aranda, whose spirited and exquisitely manipulated studies of Spanish life are models of expression and

drawing. Whether showing us the truculence of a Spanish peasant (313), the delights of idleness (34), the charms of a humorous *tête-à-tête* (383), or an *Etude de Nude* (484), he is equally accomplished and delightful. More wonderful still perhaps as triumphs of dexterity in the use of limited means are the charcoal drawings of M. Léon Lhermitte, who manages to get surprising effects of light and texture out of this gritty substance. It is difficult to know whether to admire most the wonderful sunniness of his butcher's shop (82), with its extraordinary suggestion of raw meat; the clever composition of *Les Glaneuses* (14), the perfect lighting of the *Choir of Notre Dame* with its carved woodwork (345), or the subtle gradations and picturesque composition of the old houses at Morlaix, with their time-roughened beams and glinting panes (605). If it were not for the trunks of the trees, which seem to be out of atmospheric perspective, his *Soup Market at Paris* (160) would be equally satisfactory. Very masterly also are the drawings in chalk and pencil of Glindoni.

In "heads" more or less beautiful and interesting the exhibition is rich. None is more worthy of study than Mr. Rooke's delicate pencil *Portrait* (186), which in technical dexterity and low scale of light and shade comes near to the old exquisite work in silverpoint.

In landscape Mr. Seymour Haden's daring attempt to use mezzotint in combination with etched lines after the manner of the *Liber Studiorum* deserves careful attention. The sky and the castle are fine, but the composition is not wholly satisfactory, and the loss of his skilful work with the needle is more obvious than the gain in *chiaroscuro*. Mr. James Aumonier's fine breezy drawing of *Southwold, Suffolk* (102), Mr. John O'Connor's *The River from Waterloo Bridge—Sunrise* (222), and Mr. Alfred Parsons' charcoal study of *Through the Trees* (211) are additional indications that at least some of our landscape painters seek to base their effects on a system of *chiaroscuro*; and many another bold study of the same kind might be mentioned, such as Mr. George Lucas' *A Stormy Day off Margate* (229), Mr. Arthur Lemon's *Homewards* (235), Mr. H. Fowler's *Study on the Co'ne* (245), and Mr. Winkfield's *River Steam Tugs* (361). Of the more finished drawings of landscape none, we think, excels in simple beauty of composition and accomplished rendering of light and distance Mr. J. J. Banuatyne's *Archonnael Castle, Loch Awe* (310), and there is much charm of atmospheric effect in Mr. H. A. Harper's *Acropolis* (13) and *Quiet Nook on the Nile* (100); while for their bold endeavours to tell all that can be told in black and white of the mist of mountain heights and the fury of mountain streams *The Birth-place of a River* (81), by Mr. W. Olifton, and Mr. F. T. Sibley's *Stream from Llyn Idwal* (492), deserve especial notice. Of other landscapes showing great technical skill, earnest study of nature, power to seize transitory effects of light and shadow—the healthy, happy exercise of an artistic faculty satisfied mainly with skill in imitation—the gallery is full. Without much striving after beauty of composition, and inspired with little sentiment, the prevailing landscape art of this exhibition is unaffected and sincere. Such praise is, however, too slight for many we have not space to mention—Mr. David Law's two etchings (24 and 25), for example, and Mr. O. H. Cox's *Midnight in the Channel* (509). The gallery also contains some clever studies of animals by M. Lançon, Mr. Heywood Hardy, Mr. Couldery, Mr. S. T. Dadd, Mr. Frank E. Cox, &c.

COSMO MONKHOUSE.

ART SALES.

WE notice below an important sale of pictures held by Messrs. Christie, Manson and Woods only a few days ago; but the sale of the late Mr. Nathaniel Caine's collection of pictures and drawings also demands some detail, which will be found annexed.

Among this rich collection of English water-colours we notice, by H. Goodwin, *Verona, Piazza del Erbe*, £44 2s. (Franklin); *La Certosa, near Florence*, £43 1s. (Franklin); *Water Babies*, £42; *A Pilgrimage*, £35 4s. (Powell). By J. W. North there was *A Trout Stream*, £152 5s. (Franklin), and some pleasant minor designs. By A. B. Houghton, one of the younger generation of artists, who died prematurely, there was *Hiawatha and Minnehaha*, £44 2s. (Bell). By A. H. Marsh, *The Old Sexton*, £21; and, among oil pictures, *Waiting for the Boats*, £57 (Bartholomew). Returning to the drawings, we find by J. D. Watson, *Meeting Daddy*, £26 5s.; and another minor design. By W. M. Hale, *Glen Grudie, Ross-shire*, £34 13s. By Basil Bradley, *Spanish Oxen Ploughing on the South Downs*, £71 8s. (Powell). There followed a beautiful series of drawings by Mr. Alfred Hunt, of which we note the following:—*Burying Ground of Kinloch, Ewe, Head of Loch Maree*, £39 18s. (Brice); *The Lledi Valley*, £24 3s. (Fine Art Society); *Ulleswater*, £52 10s. (Fine Art Society); *Llyn Teewyn*, an attractive drawing exhibited at the old Water-Colour Society—the place to which the artist is an habitual contributor—and also at the special Water-Colour Exhibition of the Grosvenor Gallery held eighteen months ago—£147 (Barth). Also by Mr. Hunt were *Barnard Castle*, £31 10s. (Grindlay); *November 11, 1 p.m.*—exhibited at the Grosvenor Gallery about ten years after its first exhibition in Pall Mall—£173 5s. (Barth); *Scandale Beck, by Ambleside*, £19 19s. (Macnab); *Study of Birches, Capel Curig*, £21 (Vokins); *Lucerne*, £31 10s. (Penmain); *Loch Torridon*, £40 19s. (Grindlay); *Clovelly*, £10 10s. (Penmain); *Durham, from the Red Hills*—the fine drawing seen at the Grosvenor Gallery—£63 (Vokins); *Near Capel Curig*, £12 1s. 6d. (Powell); and *Half Speed*, £10 10s. (Penmain). Of the pictures that followed, by various artists, few obtained considerable prices, and many fell for very small sums. The following, however, are to be remarked:—*The Robbers' Cave*, by Heywood Hardy, £57 10s. (Ellis); *A Puritan's Sunday in New England*, £85 1s. (Maclean); *Sweet Anne Page*, by P. H. Calderon, R.A., £57 15s. (Williams); *The Conspirators*—Mr. Paul Falconer Poole's rendering of William Tell in the cave of the Bay of Uri, Lake of Lucerne—£236 (Powell); the same poetical painter's *Imogen and Pisanio*, £55 13s. (Franklin); Mr. Yeames's picture *Pleading the Old Cause*, £105 (Broadhead); C. N. Henry's picture of *Whitby Harbour*, £48 6s. (Williams); Mr. Alfred Hunt's picture of *A Sea Fret hanging over Dunstanborough*, £220 (Ellis); his *Pont-y-Gelli, Capel Curig*, exhibited at the Royal Academy seven years ago, £236 5s. (Grant); Mr. Keeley's Halswelle's *A Roman Fruit Stall*, painted with the artist's usual command of Southern colour, £210 (Corbett); *Solitude*, by Josef Israels, £141 (Bentley); and *The Last Breath*, which is, perhaps, the masterpiece of this pathetic and simple poet, £850 (Agnew). This was the highest price of the sale. Mr. Caine's collection in all realised over £5,000, and consisted of nearly one hundred works of art in oil and water-colour. On the same day there were sold a few important pictures described as "another property." Here was Mr. Boughton's *Siren*, £215 5s. (Barth), and his *Path of Roses*, £141 15s. (Agnew). We notice also Mr. Long's *La Gitana*, painted in 1869, £147 (Hall); a *Lullaby*, a finely coloured work of Mr. Hook, £446 (Lewis); and *Venus at the Bath*, by Mr. Albert Moore, £115 10s.

(Williams). The pictures of Mr. Albert Moore—admittedly among the most distinguished of modern times—have appeared, we believe, but rarely in an auction-room. The present example was of large size, but not of high finish. Its title to some extent distinguishes it from the majority of the artist's works, as he would here seem to have aimed at the rendering of definite subject. His *Venus*, an admirable ideal of beauty—a pretty piece of "modernité" studied with a reminiscence of the Greek—is, unlike the more recent of his decorative women, entirely nude. The draperies of which Mr. Albert Moore in his later practice makes so much, not only as regards the exquisiteness of their folds, but as regards their texture and hue, are here very much subordinated to the display of the figure, and serve only as an agreeable and suitable back-ground of raiment maintained behind the figure. This admirable work, which, though as we said less elaborate than usual, and more decidedly sketchy, is yet studied from the figure with the greatest refinement of perception and sureness of hand, was knocked down for the sum of £115 (Williams). Few, except the pictures we have named are worth any full record.

Mr. Rougier's collection of pictures, sold by Messrs. Christie, Manson and Woods last Saturday, contained some good modern pictures by various artists; but it was chiefly noticeable for the collector's possession of several of the finest works of John Phillip—those in which he dealt almost exclusively with Southern subjects, and chiefly with subjects drawn directly from his long sojourn in Spain. Phillip is probably a painter whom the aesthetic tastes of the day have been somewhat inclined until lately to underrate; and it is well that there should be some reaction, even though such reaction should never go so far as wholly to reinstate this brilliant artist in the position which he occupied during the period of his greatest popularity—the last few years of his life. Phillip was certainly—as was elsewhere said of him, *à propos* of this sale—a master of colour and of character. It is no less true that he was deficient in chastened design, in accuracy of draughtsmanship, and in the expression of sentiment. The chief picture sold from his brush on Saturday was *The Chat round the Brassero*—a vivacious and nobly coloured group of Spanish middle-class and lower-class folk, priest and woman and girl, warming themselves by the fire in the middle of the room. The work displays the artist's gifts most thoroughly—his humorous appreciation of character as well as his command over fine colour. It is stated in a daily contemporary that the owner of this picture had refused 3,000 guineas for this work, but that the sum of 2,040 guineas which it reached in Saturday's sale was no doubt much in excess of what John Phillip received for it. Its purchaser on Saturday last, we may add, was Mr. Wertheimer. *The Evil Eye*—a vivid scene in the open-air vegetable and fruit market of a Spanish street or piazza—sold for 210 guineas (Agnew). *Dolores, a Spanish Widow*—an exceedingly noble study of colour and an accurate rendering of Spanish character—sold for 700 guineas. *The Grape Gatherer, Andalusia*—a single female figure under the cool shadow of vine leaves—realised 490 guineas, Mr. Agnew being the purchaser. *The Toilet* went for 100 guineas. It was considered a less desirable and characteristic possession, though it possessed talent. *Pasquicia, a Roman Girl*, which had been the round of several exhibitions, sold for 200 guineas. On the whole, it would appear from this sale that the exceptional and sterling merits of Phillip as a colourist will tend to command for his work in the future at least as high a level as it has been accustomed to attain during the last few years. Many artists who made their fame at

the time when he made his—a quarter of a century ago or rather better—have been unable to retain it. There are sufficient examples of the failure of refined sentiment when unsupported by the adequate means of pictorial expression. John Phillip had but little sentiment, or put little of what he had into his art. But there can be no doubt that his control of splendid colour ensures him a rank in art which many of his contemporaries now living cannot hope to preserve.

Among other pictures belonging to Mr. Rougier and sold on Saturday, along with the examples of Phillip, there occurred *The Avenue*, by Thomas Creswick, R.A., 280 guineas (Maclean); the *Salmon Trap on the Tees*, by the same, 260 guineas (Colnaghi); *Pineapple, Grapes, and Plums*—a sufficiently brilliant, if not really beautiful, specimen of modern still-life painting by W. Duffield—124 guineas (Arthur Tooth); *The Quarrel of Doll Tearsheet*, a picture by Augustus Egg, and by no means his best work, 84 guineas (Peck); *The Last Sunday at Whitehall in the time of Charles the Second*, by W. P. Frith, R.A.—an exceedingly skilful smaller version, we believe, of the famous picture, possessing qualities of colour and expression not always to be found in Mr. Frith's pictures—250 guineas (Agnew); *Shelling Peas*, by Edouard Frère, 220 guineas (Agnew); *The Frightened Lady*, by W. P. Frith, R.A., 132 guineas (Tooth); *In the Triforium*—a study of a red-robed Cardinal in an *entourage* of Gothic architecture—by W. Orchardson, 121 guineas (Arthur Tooth); and *Getting Rid of State Secrets*, by John Pettie—a luminous and dramatic painting of a Cardinal burning dangerous documents—175 guineas (Agnew).

OBITUARY.

MR. JAMES DAFFORNE, who died on the 8th of this month, is a writer who is known chiefly by his connexion with the *Art Journal*, of which he has been for many years associate-editor. Although the *Art Journal* has now several competitors, it must not be forgotten that at the time when it was started, more than forty years ago, it stood entirely alone in its endeavour to diffuse a knowledge of, and a taste for good art in a very inartistic generation. It has, in fact, done good service to art through a long and successful career, and much of this service has been due to Mr. James Dafforne, whose biographies of many of our great English artists have been published in its pages. Mr. Dafforne was not a brilliant writer, nor had he that keen critical insight which distinguishes several of our writers upon art at the present day; but his style was unaffected, his information large, and his industry unabating.

THE death is announced of Mr. John Webb, who, in the early days of the South Kensington Museum, acted as agent to that institution and to the British Museum, and was instrumental in securing for the country portions of the Bernal and Soulages collections; of Mr. Charles George Lewis, the engraver of several of Sir E. Landseer's and Rosa Bonheur's pictures; and of Prof. Strack, chief architect to the German Emperor, and architect of the Berlin National Gallery and of the Column of Victory.

NOTES ON ART AND ARCHAEOLOGY.

THE annual meeting of the Cambrian Archaeological Association will be held this year at Pembroke, and will begin on Monday, August 23. Mr. C. E. G. Phillips, of Picton Castle, has accepted the office of president for the ensuing year. A list of members has just been published, by which it appears that the society continues in a flourishing condition.

CONSIDERING the great difficulties which had to be overcome, the photographs of the *tableaux vivants* at Cromwell House, taken by Mr. van der Weyde, now on exhibition at his rooms in Regent Street, are very successful. The exquisite gradations of light and shade which can be obtained by his management of electric light are too well known to need mention. Although he was not able to use his most delicate arrangements or safest plates on this occasion, and some of the groups are therefore not as sharp or focussed quite as well as they might be, many of them have resulted in beautiful pictures. Luckily the most artistic groups seem to have come out best. The *tableaux* of the figures of the Master of Ravenswood (Mr. Arthur Gwynne James) and Lucy Ashton (Miss Eva Otway), grouped by Mr. Millais, and of Boland Græme (Mr. A. Wedderburn) and Catherine Seyton (Miss Mortlock), arranged by Mr. Sant, are particularly good. Other charming groups are those of Minna (Miss Williams) and Brenda (Miss A. Greville), posed by Mr. Fildes; and of Bowena (Mrs. Arthur Fairfield) and Rebecca (Lady Garvagh). The last-named lady, however, appears to most advantage in a scene with Ivanhoe (Mr. Frewen), arranged by Mr. Sant. The most successful of the larger groups are those from *The Antiquary* arranged by Mr. G. D. Leslie. Mrs. Langtry as Effie Deans, posed by Mr. Millais after his well-known picture, was one of the most successful *tableaux*, and will shortly be added to the gallery.

DR. J. P. RICHTER proposes to issue by subscription, with Messrs. Sampson Low and Co., *The Literary Works of Leonardo da Vinci*. Dr. Richter has carefully examined, among others, the nine MSS. of Leonardo preserved in England, and has discovered the original text of the *Trattato della Pittura*, with a number of chapters not found in the current editions. This text he will now publish, with exact reproductions of numerous diagrams, sketches, and drawings, by Leonardo's own hand. Among other hitherto unknown materials, the book will contain Leonardo's projects for his works of art, his opinions on sculpture, numerous architectural studies for the construction of cupolas, &c., notes on pupils and other artists who lived in his house, suggestions and plans for the construction of a painter's studio, remarks on events of his own life and on more or less distinguished contemporaries, notes on an eruption of Mount Aetna, on the Alps, on the Island of Cyprus, and on the Nile; a plan for an arched bridge over the Golden Horn, &c., as well as his humorous writings, "facetiae," rebuses, &c. The publication of the original text will be accompanied by a translation, and by explanatory notes by the editor. Leonardo's writings on architecture will be commented on by Baron Henry de Geymuller, of Paris. The subscription price will be eight guineas.

WE are very glad to hear that the proprietors of the *Graphic* are going to set up a school for wood engraving. The art is not out of fashion at all; the more or less detestable processes of mechanical reproduction are not going to supersede it; but it has been feared that they would, and this and other causes have done something to diminish the supply of those who bade fair to be excellent wood engravers. In the *Graphic* school no premium will be required, and those without some gifts will not be instructed at all. Selection of candidates for the five years' gratuitous teaching will be based upon the quality of such drawings as may be submitted under cover to the manager of the *Graphic*. The working hours which will be fixed upon will not interfere with attendance upon the evening classes of the Government schools of design. Much artistic work has now fallen into the hands of foreigners, and the rest will probably follow unless some such step as that

now to be taken by the proprietors of the *Graphic* should succeed. We trust it will in the land that produced Bewick, the reviver of this beautiful art.

WE have already given from time to time an account of the chief purchases and acquisitions made by the Department of Prints and Drawings in the British Museum during the past year; it therefore only remains to notice a few of the arrangements chronicled in the new Report that have been carried out for facilitating the labours of art students and promoting art research. In the first place it may be mentioned that the library of books of reference, kept in the Print Room, has been re-arranged and provided with press marks, and the catalogue has been finished, and is now bound in five volumes, containing 1,206 titles. This will save the student much trouble, by preventing the need of continual recourse to the Reading Room. The vast series of reproductions by Braun of Dornach, from drawings by Old Masters in all the public galleries in Europe, has been completed by the mounting of 671 carbon photographs from the Dresden Gallery. These will now all be re-arranged, and the work of each master placed together, so that the student will be able to compare all the known examples of a master's work, existing in great foreign collections, without the need of leaving his seat in the Print Room. Such an advantage, as the report well remarks, it is "hardly possible to overrate." The prints, &c., of the Slade Collection, hitherto kept separate, have been incorporated with the other works of the masters whom they represent; an index of artists' names has been prepared to the collection of English drawings; the collection of British Institution catalogues has been arranged; a translation has been begun of Heller's vast catalogue of Albrecht Dürer's works; titles have been prepared in large numbers for the proposed printed catalogue of the department; and a vast amount of other work has been done, all with the view of making the Print Room more generally useful for purposes of study and research. The chief bequest of late has been that of the Henderson Collection of drawings by Girtin, Müller, Turner, and others, noticed in the *ACADEMY* of January 25, 1879. These drawings have been arranged this year on screens in the King's Library, together with the early playing cards of various countries presented by Gen. Meyrick. The acquisitions of the year amount altogether to 4,750, of which 242 have been by presentation. Want of space, unfortunately, prevents our describing any of these in detail, but we may state that they include 460 examples of the Italian school, 363 of the German, 531 of the Dutch and Flemish schools, 1,002 of the French and 1,976 of the English school.

AT the last meeting of the Cambridge Antiquarian Society, Mr. Redfarn exhibited an ancient tally-board, which he described as probably of late sixteenth- or early seventeenth-century work, of dark oak, carved in relief, and divided into small panels, each of which contains a representation of a peacock, a hooded falcon, a swan, or some other bird; the lower part is formed as a shield, which has on its face two smaller shields, suspended from a hunting horn. One of these shields bears the arms of the Lucy family, and the other what appears to be the arms of the city of Amsterdam. This tally-board is supposed to have been used for keeping the record of the game supply at some house of importance. Shakspeare makes mention of the tally in the play of *Henry VI.* and in *Sonnet cxxii.*

A BUST of the poet Moore has just been unveiled in the Central Park, New York. The sculptor is Mr. D. B. Sheahan.

A VERY successful etching of Mr. Dante G.

Bossetti has just been produced by Mr. M. L. Menpes, an artist who recently executed a full-length etching of Miss Ellen Terry.

THE *Prix de Salon* has been gained this year by a sculptor, M. Suchetet, who also gained a second-class medal, for his beautiful plaster figure of *Byblis*, a daughter of Miletos, who, falling into love-melancholy, was changed by the gods into a river.

THE jury of the Paris Salon have made the following awards:—The *prix d'honneur* for painting to M. Morot for his picture *Le Bon Samaritain*; the *prix d'honneur* in sculpture to M. Thomas, for his statue of *Mgr. Landriot*; four first-class medals in painting to MM. Dagnan-Bouveret, Lerolle, Fernand Pelez, and Cazin; in sculpture one first-class medal, as already stated, to M. Lanson, and seven second-class to MM. Suchetet, Boisseau, Lefebvre, Barran, Dumaige, Gemito, and Lombard; in engraving one first-class medal to M. Waltner; in architecture one first-class medal to M. Paulin.

THE seventh number of the *American Art Review* is hardly up to the usual level. There is, it is true, a charming etching by Mr. A. F. Bellows, *A Mill-pond at Windsor, Connecticut*; and a rather powerful rendering in black and white, by Mr. S. J. Ferris, of Gérôme's *Old Clothes Dealer, Cairo*; but the bulk of the letter-press and many of the other illustrations are uninteresting. Mr. W. J. Linton's third chapter, on the history of wood-engraving in America, is not without value, but the cuts which illustrate it are by the nature of the case very ordinary. Mr. C. H. Hart sends a second article on the gallery of the Philadelphian collector, Mr. H. C. Gibson, one of those millionaires in whom the soul of the Parisian dealers rejoices. Perhaps the most useful pages in the number are those two in which Mr. C. C. Perkins proceeds with his "Ancient Literary Sources of the History of the Formative Arts among the Greeks," dealing this time with the Telchines, the Rhodian ministers of Poseidon, with functions like those of the Daktyles and the Cyclopes. Mr. Perkins gives a full catalogue of all the passages, from Strabo, Eustathius, Nonnus, Statius, &c., in which they are mentioned.

THE STAGE.

WE hear that the next Shaksperian revival conducted by Miss Litton at the Imperial Theatre will be that of *Much Ado about Nothing*, in which the admirable actress of Rosalind will perform the part of Beatrice. This revival is likely to take place about the beginning of the month of October.

WE doubt if the company of the Palais Royal, which is playing here this week, has not had its day. It includes some excellent comic actors, and no doubt an adequate supply of attractive young women; but as its performances cannot claim to be of a classic order, they must be subject to caprices of fashion. And in Paris of late these caprices have not, we think, been in their favour. The actors generally play very well together, and one has only to regret that that which is set down for them to play is often so little worth playing. The Palais Royal has long been the recognised home of vulgar fun. Coarseness was there at its ease, and bad taste was there exquisitely satisfied. The Palais Royal actors were admirably versed in the business of putting an artistic aspect upon ugly things. The mind of the licenser of plays has, it seems, been greatly exercised on the subject of licensing for performance in England many of the more famous plays of this theatre, and Mr. Pigott's favours have been naturally restrained within the narrowest limits. This has put

Mr. Hollingshead into an awkward position, as it appeared doubtful whether the appetites of the English subscriber could fairly be appeased by the *Cagnotte*, or by pieces equally innocuous. A certain portion of the public will fail to sympathise with Mr. Hollingshead in his difficulties, but it should at least remember that the manager of the Gaiety is a consistent free-trader. More than this, he is, like the most celebrated inhabitant of Westbourne Grove, a "universal provider." If the one gentleman can be persuaded to supply every material and social want, from bedding to knick-knacks, and from confectionery to a footman—or even, as rumour relates, a guest—at a dinner party, the other deals in commodities scarcely less varied, and drives a brisk trade now in the legs of the Hanlon-Lees and now in the genius of Sarah Bernhardt. If we do not personally suffer much by the fact that the repertory of the Palais Royal is somewhat curtailed at the Gaiety, we may yet regret what may interfere with the enterprise of the most enterprising and the most modern of theatrical managers. For the sight of innumerable novelties the playgoer is indebted to Mr. Hollingshead, and his services in the display of Mdlle. Sarah Bernhardt's art would alone atone for the occasional insistence upon less tasteful performance. It is proper to add that the performance of *La Cagnotte* on Monday gave great satisfaction to many among the audience.

THE new little piece at the Folly Theatre—*Hester's Mystery*, by Mr. Pinero—we have only lately had the opportunity of seeing. It is probably the brightest short piece now being played in London, and in some respects is even better worth going to than Mr. Byron's *Upper Crust*, which is the principal piece of the evening at the same play-house. The *Upper Crust*, of course, has the attraction of Mr. Byron's sharp wit; Mr. Pinero's talent is rather of genial humour than of wit. The *Upper Crust*, too, has the advantage of Mr. Toole's acting, and the excellent low comedian has never been less merely grotesque and funny than in the part he is now playing. But Mr. Byron's comedy is not well interpreted throughout. If Mr. Toole's Doublechicks is both entertaining and touching, and Mr. Billington's Lord Hesketh natural and appropriate, we could also name in this comedy certain very ill-played parts, while in *Hester's Mystery* everything is well done. The story counts for next to nothing in this agreeable little piece, but it is most adroitly told; it is enlivened with humour, and with true touches of character. Certainly we take exception to one of the personages. The clerical looking son of the schoolmistress bears painful resemblance to the politer villains of melodrama. He is to be classed among unreal and conventional things. But the shrewish farming woman is good, and is acted shrewishly by Miss Eliza Johnstone; the young husband who seeks employment as a labourer is represented by a manly performer; the old rustic, whose heart is good but whose wits are hopelessly dull, is played with great freshness, truth, and simplicity by Mr. G. Shelton; and the heroine, Hester, has as her representative a young actress of excellent liveliness and mobility of expression and of great variety of resource—indeed, Miss Effie Liston plays the part in a way that could not possibly be bettered, so brightly and naturally that her performance alone would make the thing worth seeing. The theatre is fortunate in having found in Mr. Pinero a writer who combines with stage knowledge the will and the faculty to be realistic and vivid rather than artificial and mannered, and Mr. Pinero is fortunate in having his work interpreted with worthy success.

THE Dutch actors have taken their leave of us—they return to their own land with few spoils but with much honour. Had they had

the courage to stay a week or so longer, the great public would probably have proffered its money profusely at the doors of their entertainment, for the press has spoken with complete unanimity as to their merits, and the audiences have nightly increased and been nightly getting more fashionable, though they began by being terribly thin. Among the more intellectual playgoers the impression the Dutch actors have made is so profound that we have little doubt that a well-organised re-engagement of them on another occasion might be made thoroughly remunerative. For the time, however, they are lost to us—perhaps for a long time—and with them the most unremittingly artistic entertainment that London has seen this season. Such an ensemble exists nowhere else within the four seas.

At Sadler's Wells Theatre *The Danites* is immediately to be succeeded by a carefully organised revival of the *Midsummer Night's Dream*.

WE read in the *Pall Mall Gazette* of a few days ago so appropriate an occasional note on the question of the theatre that we now put its substance before the readers of this journal. It is written *à propos* of the endeavour now being made by the Comédie Française to wrest heavy "damages" from Mdlle. Sarah Bernhardt on account of her having left that society. Maître Allou appears to have been instructed to assure the court that the "punishment" of Mdlle. Bernhardt had already begun in the shape of the encouragement and applause bestowed upon her successors—notably on Mdlle. Bartet. "This," remarks the *Pall Mall*, "is equivalent to an insinuation that the Comédie Française can very well afford to dispense with Mdlle. Bernhardt's services, yet they proceed to claim 300,000 frs. from her as damages for her running away." "The truth is," adds our contemporary, "that the conventional stars of the Maison de Molière dislike and are as jealous of the unconventional Sarah as their predecessors, a generation since, disliked and were jealous of Rachel." The original salary of that wonderful actress as a *pensionnaire* of the Française was, it appears, about a hundred and fifty pounds a year. When the receipts of the theatre on the nights on which she appeared increased sixfold, her salary was considerably raised, though with "infinite reluctance and dismal grumbling." It continued to be increased as her genius became the great attraction to the theatre and the source of its fortunes. "But," says the *Pall Mall Gazette*, very truly, "the Comédie Française, faithful to corporate and academic traditions all over the world, never ceased to disparage the talent of its unconventional member."

MUSIC.

RECENT CONCERTS.

THE London Musical Society gave a concert at St. James's Hall on Thursday, June 17, and attempted a performance of Cherubini's Requiem in C minor. This mass, composed in 1816 for the anniversary of the death of King Louis XVI., is one of the purest and noblest examples of sacred art. The rendering of this great work by the new society was not good; indeed we may frankly say that it was very bad. The *tempi* were hurried, the numerous *pp* marks were all but ignored, and the whole performance was so sadly wanting in accuracy, precision, and light and shade that the solemn power and marvellous delicacy of the music were completely lost. Mr. Barnby, the conductor, tried repeatedly by violent means to improve the state of things; with his *baton* he beat his score in a most unmerciful manner, but produced only an additional and very

unmusical accompaniment. The second part of the concert commenced with an overture in F, *Des Teufel's Lustschloss*, by F. Schubert. It gives one an interesting proof of the composer's youthful and lively imagination, for it was written when he was but seventeen years old, and forms the introduction to an opera of the same name. The original score was given by Schubert to a Herr Hüttenbrenner, who valued it so little that in 1848 his servants used the second act to light the house fires. The overture, performed here for the first time in England, was first publicly played at Vienna in 1861. The concert concluded with Smart's *Bride of Dunkerron*; the solo parts were well rendered by Viscountess Folkestone, Messrs. Charles Wade, and Frederic King.

Mdme. Sainton-Dolby gave her annual concert on Thursday afternoon, June 17, at the Steinway Hall. Miss Frances Carew, Miss Blackwell, and others sang various solos, showing the agreeable and natural result of careful and experienced training. The concerted music (Schubert's *God in Nature* and a chorus by Gabussi) was rendered with precision and delicacy. The second part of the concert was principally devoted to Franz Abt's light and pleasing cantata for female voices, *Cinderella*. Miss Julia Wigan and Miss Adela Vernon, two former pupils of Mdme. Sainton, sang in place of Miss Kelly, who, through illness, was absent. The concerted music was conducted in a vigorous and able manner by M. Sainton. Herr Leopold, by his excellent accompaniments, greatly added to the general success.

At the sixth concert of the Musical Union last Tuesday, Herr Auer was again leading violinist, and M. Joseph Wieniawski pianist. The concerted pieces were quartets by Haydn and Beethoven and Mendelssohn's C minor trio. Herr Auer contributed two solos: a melody by Rubinstein, and a difficult and effective *tarentella* of his own, both of which were given with great charm and purity of intonation. M. Wieniawski played Chopin's *ballade* in G minor, a mazurka of his own, and for an *encore* Chopin's *Tarentelle*. Prof. Ella came forward, and in a few simple words announced that, with the last *Matinée* on June 29, the concerts of the Musical Union would come to a close, but that he intended, however, health and strength permitting, to give once a year a *Grand Matinée*.

M. J. Wieniawski gave a pianoforte recital at St. James's Hall on Wednesday, June 16. The attendance was very large. He played Beethoven's sonata in E flat (op. 31), and pieces by Schumann, Chopin, Liszt, &c. He has a firm and powerful touch neat and brilliant execution, but his playing is lacking in delicacy and charm.

Messrs. Ludwig and Daubert gave the last of their fourth series of concerts at the Royal Academy last Saturday. These concerts deserve a word of notice. The programmes are always well selected, and the performances bear traces of careful and patient rehearsal. The quartetts on Saturday were Schumann in A major (op. 41) and Beethoven in C sharp minor (op. 132). Beethoven's sonata in D (op. 102) for piano and violoncello was well rendered by Miss Agnes Zimmermann and Herr Daubert. The difficult *finale* (*allegro fugato*) was specially well played by both artists. Mr. J. Sauvage was the vocalist.

A recital was given at the Royal Academy on Wednesday, June 16, by Herr Max Laistner. He possesses excellent fingers, and plays with much taste and refinement. His most important solos were Weber's very difficult sonata in A flat and three pieces by Chopin. Herr Emil Mahr gave a good reading of Bach's *chaconne* for violin. The concert concluded with Brahms' pianoforte quintett. J. S. SHEDLOCK.

THEATRES.

COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.
Madame MODJESKA will appear to-night, at 8, in Mr. J. MORTIMER'S successful PLAY *HEARTS & ASSES*.
Messdames Modjeska, Emery, Varre, Giffard, and Le Thibre; Messrs. Deane, Price, Holman, Darley, Douglas, Phipps, and Anson.
Box-office open from 11 to 5. No fees.

DURRY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.
AS YOU LIKE IT.
To-night, under the direction of Miss Litton, in which Messrs. Hermann Veslin, Lionel Brough, W. Farron, Kyrie Bellow, F. Everill, E. F. Edgar, J. Bammer, E. Cox, F. Charles, Miss Creswell, Miss Sylvia Hodson, Miss Roberts, and Miss Lytton will appear. The scenery painted by Mr. Perkins, the Dresses by Mr. Forbes-Robertson, the Music arranged by Mr. Baruaud. The glee and incidental music will be given by an increased chorus, together with the new Wedding March composed by Mrs. TOM TAYLOR.
At 7.30, NO. 1 ROUND THE CORNER.
Mr. Lionel Brough and Mr. Everill.
At 8.10, AS YOU LIKE IT.
Doors open at 7. Carriages at 11. Box-office now open.

DUKE'S THEATRE, Holborn.

Mr. C. WILSON, Lessee and Manager.
PAUL MERITT'S great Drama,
NEW BABYLON.
Miss CAROLINE HILL and powerful company.
The Collision at Sea—Tattersall's—Bal Masque at Cremorne—Goodwood Races—Thames Embankment by Night—Seven Dials, &c.
"Startlingly realistic." "The greatest spectacle ever seen."—*Vide Press*.

FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.
To-night, 8.15 time, at 8.45, a new and original Comedy, in three acts, by HENRY J. BYRON, called
THE UPPER CRUST.
Messrs. J. L. Toole, John Billington, K. W. Garden, T. Sidney, and E. D. Ward; Misses Lillian Cavalier, Roland Phillips, and Emily Thorne.
Preceded, at 7.45, by a new and original Comedy, in one act, by A. W. PINERO, *HESTER'S MYSTERY*.
Messrs. J. Carne, Shelton, and Westland; Misses Johnstone and Liston.
Doors open at 7.15. Prices 1s. to 2s. 3s. No free list. No fees for booking.

GLOBE THEATRE.

Manager, Mr. ALEX. HENDERSON.
This evening, at 8.15, the celebrated
LES CLOCHES DE CORNEVILLE.
Supported by Messdames Violet Cameron, Emma Chambers; Messrs. Harry Paulton, Lordan, Darrell, Ashford, and Ethel Barry. Full chorus.
Preceded, at 7.30, by
THE AREA BELE.
Messdames Hilton, Graham; Messrs. Osborn, Ashford, &c.
Doors open at 7.

LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.
Every evening (except Saturday), at 7.45,
THE MERCHANT OF VENICE—223rd time.
Terminating with the Trial Scene.
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.
Concluding with an Idyll by W. G. WILLS, entitled
IOLANthe.
IOLANthe—Miss ELLEN TERRY. COUNT TRISTAN—Mr. IRVING.
"Iolanthe" was received with the utmost enthusiasm, and is a pronounced success."—*Morning Post*.
Every Saturday evening, at 8.30, THE BELLS (MATTHIAS—Mr. IRVING) and IOLANthe (Mr. IRVING and Miss ELLEN TERRY).
MORNING PERFORMANCES of

NEW SADLER'S WELLS.

Proprietor and Manager, Mrs. S. F. BATEMAN.
Shakespeare's
MIDSUMMER NIGHTS DREAM.
For a limited number of nights. Produced by Mr. EDWARD SAKER, of the Alexandra Theatre, with the completeness which has commanded success in Liverpool, Dublin, Brighton, &c. An efficient dramatic company, beautiful classic scenery, splendid magnificent dresses and appointments, an orchestra and chorus expressly selected for the performance of Mendelssohn's music, and a troupe of gifted child-artists as Oberon, Titania, Puck, &c. (who have gained extraordinary favour wherever they have appeared by their remarkable ability), will, Mrs. Bateman trusts, gain for Mr. Saker's production of this exquisite Play the same popularity it has won elsewhere.

PRINCE OF WALES'S THEATRE.

Lessee and Manager, Mr. EDGAR BRUCE.
This evening, at 7.30, an original Comedietta,
A HAPPY PAIR,
By S. THREME SMITH.
At 8.40, HERMAN MERIVALE and F. C. GROSVENOR'S original Play,
FORGET ME NOT
(By arrangement with Miss (Gascogne Ward).
Characters by Miss Genevieve Ward, Miss Leigh Murray, Miss Kate Pattison, Miss Annie Layton, Miss Gertrude Tempst, Mr. Bernard Beere; Mr. John Clayton, Mr. Fleckton, Mr. Bercloum Tree, Mr. Edwin Bailey, Mr. Ian Robertson, and Mr. Edgar Bruce.
Doors open at 7.30. No Fees of any description.

ROYAL CONNAUGHT THEATRE.

This evening, at 8, BAZIN'S Opera Comique, "Le Voyage on Chine," or,
THE OBSCURITE BRETONNE.
Messrs. Hallam, Craven, Carson, Granville, Williams; Messdames Petrelli, Minney, Seaton, and May Belmer. Mlle. Rokoy in French Revue.
Preceded, at 7.30, by THE BLIND BEGGARS.
Messrs. Peyton and Wilton.

ROYALTY THEATRE.

Manageress, Miss KATE LAWLER.
Every evening, at 8, enthusiastic reception of the Comedy of
FALSTAFF'S HOME.
SONNAMBULA.

Doors open at 7.30. Box-office daily. No booking fees.

DR. GORDON HAKE'S NEW POEMS.

Small 4to, cloth extra, 8s.

MAIDEN ECSTASY.

By THOMAS GORDON HAKE,

Author of "Parables and Tales," "New Symbols," "Legends of the Morrow," &c.

"Dr. Hake holds a separate position in modern poetic literature, of which, indeed, he is an interesting phenomenon. The 'Betrothed,' the 'Heart-Broken,' the 'Self-Conscious'—self-conscious of new-awakened passion—these are subjects with which Dr. Hake deals sympathetically and in the manner of a 'subtle-souled psychologist.'"—*Pall Mall Gazette*.
"He not only tells us that he sees the vision of beauty, but he opens the eyes to behold it. Again and again, in language of unsurpassed felicity, Dr. Hake flashes that very light which illuminates his own vision upon the mind's eye of the reader."—*Examiner*.

"Dr. Hake differs from Wordsworth as far as poet can differ from poet; nor have we ever read anything that sounded the same note of feeling as that of these poems. . . . His book is altogether a memorable one."—*Pen*.

CAUTION—BEWARE OF IMITATIONS.

SOLE ADDRESS—

11, LITTLE STANHOPE STREET,
MAYFAIR, W.

TARAXACUM and PODOPHYLLIN.—A

solid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver, and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fulness, bowdache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237, Tottenham-court-road, London, whose name must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d.

Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined, trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

FURNISH your HOUSES or APARTMENTS

THROUGHOUT on
MOEDER'S HIRE SYSTEM.
The original, best, and most liberal.

No extra charge for time given.

Illustrated Price Catalogue, with full particulars of terms, post-free

Morwell-street, W.C. Established 1862

MR. G. H. JONES,

Surgeon-Dentist, 57, Great Russell Street, London,

Will be glad to forward his Pamphlet on PAINLESS DENTISTRY, free, enclosed by Post, which explains the most unique system of the adjustment of ARTIFICIAL TEETH without pain, to which the following Testimonials refer. Consultation free 10 to 5.

"MY DEAR SIR,

"Allow me to express my sincere thanks for the skill and attention displayed in the construction of my Artificial Teeth, which renders my mastication and articulation excellent. I am glad to hear that you have obtained Her Majesty's Royal Letters Patent to protect what I consider the perfection of Painless Dentistry. In recognition of your valuable services, you are at liberty to use my name.

"G. H. Jones, Esq."

"S. G. HUTCHINS, by Appointment Surgeon-Dentist to the Queen.

PROFESSOR GARDNER, late of the Royal Polytechnic Institution, in a certificate to Mr. G. H. Jones, Surgeon Dentist of 57, Great Russell Street, London, says:—"I have examined and tested your Painless System of adjusting Artificial Teeth; it is quite perfect, and is the most successful application of scientific laws for securing actual wear and comfort yet introduced."

GOLD MEDAL PARIS EXHIBITION.

FRY'S COCOA EXTRACT,

IN PACKETS AND TINS.

Pure Cocoa only, with the superfluous oil extracted.

It is strongly recommended to all who appreciate the full flavour and fine aroma of Cocoa.

"It is strictly pure, and well manufactured in every way."

W. W. STODDART, F.I.C., F.C.S., City Analyst, Bristol.

"If properly prepared, there is no nicer or more wholesome preparation of Cocoa."

Food, Water, and Air, Edited by Dr. HASSELL.

J. S. FRY & SONS, BRISTOL AND LONDON.

Try also FRY'S CARACAS COCOA.—"A delicious preparation."

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT.

CAUTION.—In consequence of numerous inferior and low-priced substitutes being in the market (sometimes accompanied by misleading chemical analyses) purchasers must insist on being supplied with the Company's Extract, which, for fine flavour and perfect clearness, is pronounced by all competent authorities to be the best.

** In use in most households throughout the Kingdom.

N.B.—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label.

Ask for the COMPANY'S Extract, and see that no other is substituted for it.

- 18mo, with Illustrations.
- A FIRST HISTORY of ENGLAND.** By Louise CREIGHTON, Author of "Life of the Black Prince," "England and a Contin Power," &c. [In the press]
- This little book is intended for children between the ages of seven and eleven. It aims at being accurate and trustworthy within the limits which it has chosen, such a view of history as may be interesting and comprehensible to a beginner. It is written simply, and contains many stories and descriptions of events the hope that it may be found useful as a reading-book for young children. At the same time it is methodical and is provided with sufficient genealogical tables and dates to make it answer the purpose of a first History in Schools.
- Crown 8vo.
- THE BEGINNER'S LATIN EXERCISE BOOK.** Adapted to "Bennett's Latin Accidence." By C. J. SHERWILL DAWES, Assistant Chaplain at St. Mark's College, Chelsea. [In preparation]
- Small 8vo, 3s. 6d.
- ARMY and CIVIL SERVICE EXAMINATION PAPERS in ARITHMETIC,** including Mensuration and Logarithms set in examinations for the Army, Woolwich, Cooper's Hill, Home Civil Service, &c. Arithmetical Rules, Tables, Formulae and Answers, for the use of Students preparing Examination. By A. DAWSON CLARKE, B.A., St. John's College, Cambridge.
- Small 8vo, 2s.
- ROMEO and JULIET.** Edited by Charles E. Moberly, M.A., formerly Scholar of Balliol College, Oxford. Forming one of the Rugby Edition of Shakespeare's Plays.
- Small 8vo.
- HOMER'S ILIAD.** Edited, with Notes at the End for the Use of Junior Students, by ARTHUR SIDGWICK, M.A., Tutor of Corpus Christi College, Oxford; late Assistant-Master at Rugby School, and Fellow of Trinity College, Cambridge.
- Books I. and II., 2s. 6d. Book XXI. (Nearly ready).
- Book XXII., 1s. 6d.
- VIRGIL.—BUCOLICS.** By C. G. Gepp, M.A., Head-Master of King Edward VI. Grammar School, Stratford-on-Avon. [In the press]
- Part I., crown 8vo, 3s. 6d.
- A PRACTICAL GREEK METHOD for BEGINNERS** being a Graduated Application of Grammar to Translation and Composition. By RITCHIE, M.A., and E. H. MOORE, M.A., Assistant-Masters at the High School, Plymouth.
- Containing the Substantives, Adjectives, Pronouns, and Regular Pure Verbs, with Exercises (Each Greek and Greek-English), introducing the Main Rules of Syntax of the Simple Sentence.
- The aim of this book, which is at once a Grammar and Exercise book, is to secure a uniform method of teaching Grammar, and to afford abundant practice in inflection, &c., at the time that the Grammar is learnt.
- PART II. will contain the remaining Classes of Regular and Irregular Verbs, Consecutive Pieces for Translation, introducing progressively the Syntax of the Compound Sentence. [In preparation]
- Small 8vo, each 1s. 6d.
- SCENES from GREEK PLAYS.** Rugby Edition. Abridged and Adapted for the Use of Schools, by ARTHUR SIDGWICK, M.A., Tutor of Corpus Christi College, Oxford; late Assistant-Master at Rugby School, and Fellow of Trinity College, Cambridge.
- ARISTOPHANES—The Clouds, The Frogs, The Knights, Plutus**
- EURIPIDES—Iphigenia in Tauris, The Cyclops, Ion, Electra, Alceste, Bacchæ, Hecuba.**
